

Kanchenjunga - Announcement

Kanchenjunga is a font family for the Kirat Rai script of South Asia. It is named after the third highest mountain in the world.

The Kirat Rai script was officially encoded in the Unicode Standard version 16.0. Kanchenjunga version 1.000 was released in 2023 with provisional codepoints. However, those codepoints did not change, so if you used Kanchenjunga version 1.000, no data conversion will be necessary.

Changes for this version (2.001):

- Updated documentation to indicate Unicode 16.0 support for the script

Prior changes for 2.000:

- Official release of Regular, Medium, SemiBold, and Bold using official Unicode codepoints
- Added support for TypeTuner

Download the release package from the [Download Page](#).

A Keyman keyboard for the Kirat Rai script is also available:

- [Kirat Rai Inscript](#)
