- void [needs_keyboard](#) (bool needs)

Sets whether this widget needs a keyboard.
- unsigned int [output](#) () const

Returns if a widget is used for output only.
- [FI_Group](#) * [parent](#) () const

Returns a pointer to the parent widget.
- void [parent](#) ([FI_Group](#) *p)

Internal use only - "for hacks only".
- void [position](#) (int X, int Y)

Repositions the window or widget.
- void [redraw](#) ()

Schedules the drawing of the widget.
- void [redraw_label](#) ()

Schedules the drawing of the label.
- [FI_Color](#) [selection_color](#) () const

Gets the selection color.
- void [selection_color](#) ([FI_Color](#) a)

Sets the selection color.
- void [set_active](#) ()

Marks the widget as active without sending events or changing focus.
- void [set_changed](#) ()

Marks the value of the widget as changed.
- void [set_output](#) ()

Sets a widget to output only.
- void [set_visible](#) ()

Makes the widget visible.
- void [set_visible_focus](#) ()

Enables keyboard focus navigation with this widget.
- int [shortcut_label](#) () const

Returns whether the widget's label uses '&' to indicate shortcuts.
- void [shortcut_label](#) (int value)

Sets whether the widget's label uses '&' to indicate shortcuts.
- virtual void [show](#) ()

Makes a widget visible.
- void [size](#) (int W, int H)

Changes the size of the widget.

- int [take_focus](#) ()
Gives the widget the keyboard focus.
- unsigned int [takeevents](#) () const
Returns if the widget is able to take events.
- int [test_shortcut](#) ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * [tooltip](#) () const
Gets the current tooltip text.
- void [tooltip](#) (const char *text)
Sets the current tooltip text.
- [FI_Window](#) * [top_window](#) () const
Returns a pointer to the top-level window for the widget.
- [FI_Window](#) * [top_window_offset](#) (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- uchar [type](#) () const
Gets the widget type.
- void [type](#) (uchar t)
Sets the widget type.
- int [use_accents_menu](#) ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * [user_data](#) () const
Gets the user data for this widget.
- void [user_data](#) ([FI_Callback_User_Data](#) *v, bool auto_free)
Sets the user data for this widget.
- void [user_data](#) (void *v)
Sets the user data for this widget.
- int [vertical_label_margin](#) ()
Get the spacing between the label and the vertical edge of the widget.
- void [vertical_label_margin](#) (int px)
Set the spacing between the label and the vertical edge of the widget.
- unsigned int [visible](#) () const
Returns whether a widget is visible.
- unsigned int [visible_focus](#) () const
Checks whether this widget has a visible focus.
- void [visible_focus](#) (int v)
Modifies keyboard focus navigation.
- int [visible_r](#) () const
Returns whether a widget and all its parents are visible.
- int [w](#) () const
Gets the widget width.
- [FI_When](#) [when](#) () const
Returns the conditions under which the callback is called.
- void [when](#) (uchar i)
Sets the flags used to decide when a callback is called.
- [FI_Window](#) * [window](#) () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int [x](#) () const
Gets the widget position in its window.
- int [y](#) () const
Gets the widget position in its window.
- virtual [~FI_Widget](#) ()
Destroys the widget.

Static Public Attributes

- static const char * **copy_menu_text** = "Copy"
[this text may be customized at run-time]

Protected Member Functions

- void **draw** () **FL_OVERRIDE**
Draws the [FL_Help_View](#) widget.

Protected Member Functions inherited from [FI_Group](#)

- [FI_Rect](#) * **bounds** ()
Returns the internal array of widget sizes and positions.
- void **draw_child** ([FI_Widget](#) &widget) const
Forces a child to redraw.
- void **draw_children** ()
Draws all children of the group.
- void **draw_outside_label** (const [FI_Widget](#) &widget) const
Parents normally call this to draw outside labels of child widgets.
- virtual int **on_insert** ([FI_Widget](#) *, int)
Allow derived groups to act when a widget is added as a child.
- virtual int **on_move** (int, int)
Allow derived groups to act when a widget is moved within the group.
- virtual void **on_remove** (int)
Allow derived groups to act when a child widget is removed from the group.
- int * **sizes** ()
Returns the internal array of widget sizes and positions.
- void **update_child** ([FI_Widget](#) &widget) const
Draws a child only if it needs it.

Protected Member Functions inherited from [FI_Widget](#)

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If [FL_ALIGN_IMAGE_BACKDROP](#) is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** ([FI_Boxtype](#) t, [FI_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const
Draws a focus rectangle around the widget.
- void **draw_focus** ([FI_Boxtype](#) t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void **draw_focus** ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) bg) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.

- `FI_Widget` (int `x`, int `y`, int `w`, int `h`, const char *`label`=0L)
Creates a widget at the given position and size.
- unsigned int `flags` () const
Gets the widget flags mask.
- void `h` (int `v`)
Internal use only.
- void `set_flag` (unsigned int `c`)
Sets a flag in the flags mask.
- void `w` (int `v`)
Internal use only.
- void `x` (int `v`)
Internal use only.
- void `y` (int `v`)
Internal use only.

Additional Inherited Members

Static Public Member Functions inherited from `FI_Group`

- static `FI_Group` * `current` ()
Returns the currently active group.
- static void `current` (`FI_Group` *`g`)
Sets the current group.

Static Public Member Functions inherited from `FI_Widget`

- static void `default_callback` (`FI_Widget` *`widget`, void *`data`)
The default callback for all widgets that don't set a callback.
- static unsigned int `label_shortcut` (const char *`t`)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int `test_shortcut` (const char *`s`, const bool `require_alt`=false)
Returns true if the given text `t` contains the entered '&x' shortcut.

Protected Types inherited from `FI_Widget`

- enum {
`INACTIVE` = 1<<0 , `INVISIBLE` = 1<<1 , `OUTPUT` = 1<<2 , `NOBORDER` = 1<<3 ,
`FORCE_POSITION` = 1<<4 , `NON_MODAL` = 1<<5 , `SHORTCUT_LABEL` = 1<<6 , `CHANGED` = 1<<7
, `OVERRIDE` = 1<<8 , `VISIBLE_FOCUS` = 1<<9 , `COPIED_LABEL` = 1<<10 , `CLIP_CHILDREN` = 1<<11
, `MENU_WINDOW` = 1<<12 , `TOOLTIP_WINDOW` = 1<<13 , `MODAL` = 1<<14 , `NO_OVERLAY` = 1<<15
, `GROUP_RELATIVE` = 1<<16 , `COPIED_TOOLTIP` = 1<<17 , `FULLSCREEN` = 1<<18 , `MAC_USE_ACCENTS_MENU`
= 1<<19 ,
`NEEDS_KEYBOARD` = 1<<20 , `IMAGE_BOUND` = 1<<21 , `DEIMAGE_BOUND` = 1<<22 ,
`AUTO_DELETE_USER_DATA` = 1<<23 ,
`MAXIMIZED` = 1<<24 , `POPUP` = 1<<25 , `USERFLAG3` = 1<<29 , `USERFLAG2` = 1<<30 ,
`USERFLAG1` = 1<<31 }
flags possible values enumeration.

11.64.1 Detailed Description

The [Fl_Help_View](#) widget displays HTML text.

Most HTML 2.0 elements are supported, as well as a primitive implementation of tables. GIF, JPEG, and PNG images are displayed inline.

Supported HTML tags:

- A: HREF/NAME
- B
- BODY: BGCOLOR/TEXT/LINK
- BR
- CENTER
- CODE
- DD
- DL
- DT
- EM
- FONT: COLOR/SIZE/FACE=(helvetica/arial/sans/times/serif/symbol/courier)
- H1/H2/H3/H4/H5/H6
- HEAD
- HR
- I
- IMG: SRC/WIDTH/HEIGHT/ALT
- KBD
- LI
- OL
- P
- PRE
- STRONG
- TABLE: TH/TD/TR/BORDER/BGCOLOR/COLSPAN/ALIGN=CENTER|RIGHT|LEFT
- TITLE
- TT
- U
- UL
- VAR

Supported color names:

- black,red,green,yellow,blue,magenta,fuchsia,cyan,aqua,white,gray,grey,lime,maroon,navy,olive,purple,silver,teal.

Supported urls:

- Internal: file:

- External: http: ftp: https: ipp: mailto: news:

Quoted char names:

- Aacute aacute Acirc acirc acute AElig aelig Agrave agrave amp Aring aring Atilde atilde Auml auml
- brvbar bull
- Ccedil ccedil cedil cent copy curren
- dagger deg divide
- Eacute eacute Ecirc ecirc Egrave egrave ETH eth Euml euml euro
- frac12 frac14 frac34
- gt
- Iacute iacute Icirc icirc Iexcl lgrave lgrave lquest luml iuml
- laquo lt
- macr micro middot
- nbsp not Ntilde ntilde
- Oacute oacute Ocirc ocirc Ograve ograve ordf ordm Oslash oslash Otilde otilde Ouml ouml
- para permil plusmn pound
- quot
- raquo reg
- sect shy sup1 sup2 sup3 szlig
- THORN thorn times trade
- Uacute uacute Ucirc ucirc Ugrave ugrave uml Uuml uuml
- Yacute yacute
- yen Yuml yuml

Note

You can't effectively set the `box()` to `FL_NO_BOX`, this would result in `FL_DOWN_BOX` being used as the boxtype of the widget. This is unexpected but can't be changed for backwards compatibility. If you don't want a frame around the widget you can use `FL_FLAT_BOX` instead.

11.64.2 Constructor & Destructor Documentation

11.64.2.1 ~Fl_Help_View()

`Fl_Help_View::~Fl_Help_View ()`

Destroys the [Fl_Help_View](#) widget.

The destructor destroys the widget and frees all memory that has been allocated for the current document.

11.64.3 Member Function Documentation

11.64.3.1 copy()

```
int Fl_Help_View::copy (
    int clipboard = 1)
```

If text is selected in this view, copy it to a clipboard.

Parameters

in	<i>clipboard</i>	for x11 only, 0=selection buffer, 1=clipboard, 2=both
----	------------------	---

Returns

1 if text is selected, 0 if no text is selected

11.64.3.2 draw()

```
void Fl_Help_View::draw (
    void ) [protected], [virtual]
```

Draws the [Fl_Help_View](#) widget.

Reimplemented from [Fl_Group](#).

11.64.3.3 find()

```
int Fl_Help_View::find (
    const char * s,
    int p = 0)
```

Finds the specified string *s* at starting position *p*.

The argument *p* and the return value are offsets in [Fl_Help_View::value\(\)](#), counting from 0. If *p* is out of range, 0 is used.

The string comparison is simple but honors some special cases:

- the specified string *s* must be in UTF-8 encoding
- HTML tags in [value\(\)](#) are filtered (not compared as such, they never match)
- HTML entities like '<' or 'ac;' are converted to Unicode (UTF-8)
- ASCII characters (7-bit, < 0x80) are compared case insensitive
- every newline (LF, '\n') in [value\(\)](#) is treated like a single space
- all other strings are compared as-is (byte by byte)

Parameters

in	<i>s</i>	search string in UTF-8 encoding
in	<i>p</i>	starting position for search (0,...), Default = 0

Returns

the matching position or -1 if not found

11.64.3.4 handle()

```
int Fl_Help_View::handle (
    int event) [virtual]
```

Handles events in the widget.

Reimplemented from [Fl_Group](#).

11.64.3.5 leftline()

```
void Fl_Help_View::leftline (
    int left)
```

Scrolls the text to the indicated position, given a pixel column.

If the given pixel value *left* is out of range, then the text is scrolled to the left or right side of the document, resp.

Parameters

in	left	left column number in pixels (0 = left side)
----	------	--

11.64.3.6 link()

```
void Fl_Help_View::link (
    Fl_Help_Func * fn) [inline]
```

This method assigns a callback function to use when a link is followed or a file is loaded (via [Fl_Help_View::load\(\)](#)) that requires a different file or path.

The callback function receives a pointer to the [Fl_Help_View](#) widget and the URI or full pathname for the file in question. It must return a pathname that can be opened as a local file or NULL:

```
const char *fn(Fl_Widget *w, const char *uri);
```

The link function can be used to retrieve remote or virtual documents, returning a temporary file that contains the actual data. If the link function returns NULL, the value of the [Fl_Help_View](#) widget will remain unchanged.

If the link callback cannot handle the URI scheme, it should return the uri value unchanged or set the [value\(\)](#) of the widget before returning NULL.

11.64.3.7 load()

```
int Fl_Help_View::load (
    const char * f)
```

Loads the specified file.

This method loads the specified file or URL. The filename may end in a `#name` style target.

If the URL starts with *ftp*, *http*, *https*, *ipp*, *mailto*, or *news*, followed by a colon, FLTK will use [fl_open_uri\(\)](#) to show the requested page in an external browser.

In all other cases, the URL is interpreted as a filename. The file is read and displayed in this browser. Note that Windows style backslashes are not supported in the file name.

Parameters

in	f	filename or URL
----	---	-----------------

Returns

0 on success, -1 on error

See also

[fl_open_uri\(\)](#)

11.64.3.8 resize()

```
void Fl_Help_View::resize (
    int xx,
    int yy,
    int ww,
    int hh) [virtual]
```

Resizes the help widget.

Reimplemented from [Fl_Group](#).

11.64.3.9 scrollbar_size() [1/2]

```
int Fl_Help_View::scrollbar_size () const [inline]
```

Gets the current size of the scrollbars' troughs, in pixels.

If this value is zero (default), this widget will use the [Fl::scrollbar_size\(\)](#) value as the scrollbar's width.

Returns

Scrollbar size in pixels, or 0 if the global [Fl::scrollbar_size\(\)](#) is being used.

See also

[Fl::scrollbar_size\(int\)](#)

11.64.3.10 scrollbar_size() [2/2]

```
void Fl_Help_View::scrollbar_size (
    int newSize) [inline]
```

Sets the pixel size of the scrollbars' troughs to `newSize`, in pixels.

Normally you should not need this method, and should use [Fl::scrollbar_size\(int\)](#) instead to manage the size of ALL your widgets' scrollbars. This ensures your application has a consistent UI, is the default behavior, and is normally what you want.

Only use THIS method if you really need to override the global scrollbar size. The need for this should be rare.

Setting `newSize` to the special value of 0 causes the widget to track the global [Fl::scrollbar_size\(\)](#), which is the default.

Parameters

in	<i>newSize</i>	Sets the scrollbar size in pixels. If 0 (default), scrollbar size tracks the global Fl::scrollbar_size()
----	----------------	---

See also

[Fl::scrollbar_size\(\)](#)

11.64.3.11 text_selected()

```
int Fl_Help_View::text_selected ()
```

Check if the user selected text in this view.

Returns

1 if text is selected, 0 if no text is selected

11.64.3.12 topline() [1/2]

```
void Fl_Help_View::topline (
    const char * n)
```

Scrolls the text to the indicated position, given a named destination.

Parameters

in	<i>n</i>	target name
----	----------	-------------

11.64.3.13 topline() [2/2]

```
void Fl_Help_View::topline (
    int top)
```

Scrolls the text to the indicated position, given a pixel line.

If the given pixel value `top` is out of range, then the text is scrolled to the top or bottom of the document, resp.

Parameters

in	<i>top</i>	top line number in pixels (0 = start of document)
----	------------	---

11.64.3.14 value()

```
void Fl_Help_View::value (
    const char * val)
```

Sets the current help text buffer to the string provided and reformats the text.

The provided character string `val` is copied internally and will be freed when `value()` is called again, or when the widget is destroyed.

If `val` is NULL, then the widget is cleared.

The documentation for this class was generated from the following files:

- `Fl_Help_View.H`
- `Fl_Help_View.cxx`

11.65 Fl_Hold_Browser Class Reference

The `Fl_Hold_Browser` is a subclass of `Fl_Browser` which lets the user select a single item, or no items by clicking on the empty space.

```
#include <Fl_Hold_Browser.H>
```

Inheritance diagram for `Fl_Hold_Browser`:

Public Member Functions

- `Fl_Hold_Browser` (int X, int Y, int W, int H, const char *L=0)
Creates a new `Fl_Hold_Browser` widget using the given position, size, and label string.

Public Member Functions inherited from `Fl_Browser`

- void `add` (const char *newtext, void *d=0)
Adds a new line to the end of the browser.
- void `bottomline` (int line)
Scrolls the browser so the bottom item in the browser is showing the specified `line`.
- void `clear` ()
Removes all the lines in the browser.
- char `column_char` () const
Gets the current column separator character.
- void `column_char` (char c)
Sets the column separator to `c`.
- const int * `column_widths` () const
Gets the current column width array.
- void `column_widths` (const int *arr)
Sets the current array to `arr`.
- void * `data` (int line) const

- Returns the user [data\(\)](#) for specified `line`.*

 - void [data](#) (int line, void *d)

Sets the user data for specified `line` to `d`.

- void [display](#) (int line, int val=1)

For back compatibility.

- int [displayed](#) (int line) const

Returns non-zero if `line` has been scrolled to a position where it is being displayed.

- [FL_Browser](#) (int X, int Y, int W, int H, const char *L=0)

The constructor makes an empty browser.

- char [format_char](#) () const

Gets the current format code prefix character, which by default is '@'.

- void [format_char](#) (char c)

Sets the current format code prefix character to `c`.

- void [hide](#) () [FL_OVERRIDE](#)

Hides the entire [FL_Browser](#) widget – opposite of [show\(\)](#).

- void [hide](#) (int line)

Makes `line` invisible, preventing selection by the user.

- [FL_Image](#) * [icon](#) (int line) const

Returns the icon currently defined for `line`.

- void [icon](#) (int line, [FL_Image](#) *icon)

Set the image icon for `line` to the value `icon`.

- void [insert](#) (int line, const char *newtext, void *d=0)

Insert a new entry whose label is `newtext` above given `line`, optional data `d`.

- void [lineposition](#) (int line, [FL_Line_Position](#) pos)

Updates the browser so that `line` is shown at position `pos`.

- int [load](#) (const char *filename)

Clears the browser and reads the file, adding each line from the file to the browser.

- void [make_visible](#) (int line)

Make the item at the specified `line` [visible\(\)](#).

- void [middleline](#) (int line)

Scrolls the browser so the middle item in the browser is showing the specified `line`.

- void [move](#) (int to, int from)

Line `from` is removed and reinserted at `to`.

- void [remove](#) (int line)

Remove entry for given `line` number, making the browser one line shorter.

- void [remove_icon](#) (int line)

Removes the icon for `line`.

- void [replace](#) (int a, const char *b)

For back compatibility only.

- int [select](#) (int line, int val=1)

Sets the selection state of the item at `line` to the value `val`.

- int [selected](#) (int line) const

Returns 1 if specified `line` is selected, 0 if not.

- void [show](#) () [FL_OVERRIDE](#)

Shows the entire [FL_Browser](#) widget – opposite of [hide\(\)](#).

- void [show](#) (int line)

Makes `line` visible, and available for selection by user.

- int [size](#) () const

Returns how many lines are in the browser.

- void [size](#) (int W, int H)
- void [swap](#) (int a, int b)

- Swaps two browser lines `a` and `b`.*
- `const char * text` (int line) const
 - Returns the label text for the specified `line`.*
- `void text` (int line, const char *newtext)
 - Sets the text for the specified `line` to `newtext`.*
- `FI_Fontsize textsize` () const
 - Gets the default text size (in pixels) for the lines in the browser.*
- `void textsize` (FI_Fontsize newSize)
 - Sets the default text size (in pixels) for the lines in the browser to `newSize`.*
- `int topline` () const
 - Returns the line that is currently visible at the top of the browser.*
- `void topline` (int line)
 - Scrolls the browser so the top item in the browser is showing the specified `line`.*
- `int value` () const
 - Returns the line number of the currently selected line, or 0 if none selected.*
- `void value` (int line)
 - Sets the browser's `value()`, which selects the specified `line`.*
- `int visible` (int line) const
 - Returns non-zero if the specified `line` is visible, 0 if hidden.*
- `~FI_Browser` ()
 - The destructor deletes all list items and destroys the browser.*

Public Member Functions inherited from FI_Browser_

- `int deselect` (int docallbacks=0)
 - Deselects all items in the list and returns 1 if the state changed or 0 if it did not.*
- `void display` (void *item)
 - Displays the `item`, scrolling the list as necessary.*
- `int handle` (int event) FL_OVERRIDE
 - Handles the `event` within the normal widget bounding box.*
- `uchar has_scrollbar` () const
 - Returns the current scrollbar mode, see `FI_Browser_::has_scrollbar(uchar)`*
- `void has_scrollbar` (uchar mode)
 - Sets whether the widget should have scrollbars or not (default `FI_Browser_::BOTH`).*
- `int hposition` () const
 - Gets the horizontal scroll position of the list as a pixel position `pos`.*
- `void hposition` (int)
 - Sets the horizontal scroll position of the list to pixel position `pos`.*
- `int linespacing` () const
 - Return the height of additional spacing between browser lines.*
- `void linespacing` (int pixels)
 - Add some space between browser lines.*
- `int position` () const
- `void position` (int pos)
- `void position` (int x, int y)
- `void resize` (int X, int Y, int W, int H) FL_OVERRIDE
 - Repositions and/or resizes the browser.*
- `void scrollbar_left` ()
 - Moves the vertical scrollbar to the lefthand side of the list.*
- `void scrollbar_right` ()
 - Moves the vertical scrollbar to the righthand side of the list.*

- `int scrollbar_size () const`
Gets the current size of the scrollbars' troughs, in pixels.
- `void scrollbar_size (int newSize)`
Sets the pixel size of the scrollbars' troughs to `newSize`, in pixels.
- `int scrollbar_width () const`
Returns the global value `Fl::scrollbar_size()`.
- `void scrollbar_width (int width)`
Sets the global `Fl::scrollbar_size()`, and forces this instance of the widget to use it.
- `int select (void *item, int val=1, int docallbacks=0)`
Sets the selection state of `item` to `val`, and returns 1 if the state changed or 0 if it did not.
- `int select_only (void *item, int docallbacks=0)`
Selects `item` and returns 1 if the state changed or 0 if it did not.
- `void sort (int flags=0)`
Sort the items in the browser based on `flags`.
- `Fl_Color textcolor () const`
Gets the default text color for the lines in the browser.
- `void textcolor (Fl_Color col)`
Sets the default text color for the lines in the browser to color `col`.
- `Fl_Font textfont () const`
Gets the default text font for the lines in the browser.
- `void textfont (Fl_Font font)`
Sets the default text font for the lines in the browser to `font`.
- `Fl_Fontsize textsize () const`
Gets the default text size (in pixels) for the lines in the browser.
- `void textsize (Fl_Fontsize newSize)`
Sets the default text size (in pixels) for the lines in the browser to `size`.
- `int vposition () const`
Gets the vertical scroll position of the list as a pixel position `pos`.
- `void vposition (int pos)`
Sets the vertical scroll position of the list to pixel position `pos`.

Public Member Functions inherited from `Fl_Group`

- `Fl_Widget *&_ddfdesign_kludge ()`
This is for forms compatibility only.
- `void add (Fl_Widget &)`
The widget is removed from its current group (if any) and then added to the end of this group.
- `void add (Fl_Widget *o)`
See void `Fl_Group::add(Fl_Widget &w)`
- `void add_resizable (Fl_Widget &o)`
Adds a widget to the group and makes it the resizable widget.
- `Fl_Widget *const * array () const`
Returns a pointer to the array of children.
- `Fl_Group const * as_group () const FL_OVERRIDE`
- `Fl_Group * as_group () FL_OVERRIDE`
Returns an `Fl_Group` pointer if this widget is an `Fl_Group`.
- `void begin ()`
Sets the current group so you can build the widget tree by just constructing the widgets.
- `Fl_Widget * child (int n) const`
Returns the `n`'th child.
- `int children () const`

- Returns how many child widgets the group has.*

 - void **clear** ()

Deletes all child widgets from memory recursively.
- unsigned int **clip_children** ()

Returns the current clipping mode.
- void **clip_children** (int c)

Controls whether the group widget clips the drawing of child widgets to its bounding box.
- virtual int **delete_child** (int n)

Removes the widget at `index` from the group and deletes it.
- void **end** ()

Exactly the same as `current(this->parent())`.
- int **find** (const FL_Widget &o) const

*See `int FL_Group::find(const FL_Widget *w) const`.*
- int **find** (const FL_Widget *) const

Searches the child array for the widget and returns the index.
- **FL_Group** (int, int, int, int, const char *s=0)

Creates a new `FL_Group` widget using the given position, size, and label string.
- void **focus** (FL_Widget *W)
- void **forms_end** ()

This is for forms compatibility only.
- int **handle** (int) **FL_OVERRIDE**

Handles the specified event.
- void **init_sizes** ()

Resets the internal array of widget sizes and positions.
- void **insert** (FL_Widget &, int i)

The widget is removed from its current group (if any) and then inserted into this group.
- void **insert** (FL_Widget &o, FL_Widget *before)

This does `insert(w, find(before))`.
- void **remove** (FL_Widget &)

Removes a widget from the group but does not delete it.
- void **remove** (FL_Widget *o)

Removes the widget `o` from the group.
- void **remove** (int index)

Removes the widget at `index` from the group but does not delete it.
- **FL_Widget *resizable** () const

Returns the group's resizable widget.
- void **resizable** (FL_Widget &o)

Sets the group's resizable widget.
- void **resizable** (FL_Widget *o)

The resizable widget defines both the resizing box and the resizing behavior of the group and its children.
- void **resize** (int, int, int, int) **FL_OVERRIDE**

Resizes the `FL_Group` widget and all of its children.
- virtual **~FL_Group** ()

The destructor also deletes all the children.

Public Member Functions inherited from [FI_Widget](#)

- void [_clear_fullscreen](#) ()
- void [_set_fullscreen](#) ()
- void [activate](#) ()
Activates the widget.
- unsigned int [active](#) () const
Returns whether the widget is active.
- int [active_r](#) () const
Returns whether the widget and all of its parents are active.
- [FI_Align](#) [align](#) () const
Gets the label alignment.
- void [align](#) ([FI_Align](#) alignment)
Sets the label alignment.
- long [argument](#) () const
Gets the current user data (long) argument that is passed to the callback function.
- void [argument](#) (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class [FI_Gl_Window](#) * [as_gl_window](#) ()
Returns an [FI_Gl_Window](#) pointer if this widget is an [FI_Gl_Window](#).
- virtual class [FI_Gl_Window](#) const * [as_gl_window](#) () const
- virtual [FI_Window](#) * [as_window](#) ()
Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).
- virtual [FI_Window](#) const * [as_window](#) () const
- void [bind_deimage](#) ([FI_Image](#) *img)
Sets the image to use as part of the widget label when in the inactive state.
- void [bind_deimage](#) (int f)
Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.
- void [bind_image](#) ([FI_Image](#) *img)
Sets the image to use as part of the widget label when in the active state.
- void [bind_image](#) (int f)
Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- [FI_Boxtype](#) [box](#) () const
Gets the box type of the widget.
- void [box](#) ([FI_Boxtype](#) new_box)
Sets the box type for the widget.
- [FI_Callback_p](#) [callback](#) () const
Gets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb, [FI_Callback_User_Data](#) *p, bool auto_free)
Sets the current callback function and managed user data for the widget.
- void [callback](#) ([FI_Callback](#) *cb, void *p)
Sets the current callback function and data for the widget.
- void [callback](#) ([FI_Callback0](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback1](#) *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int [changed](#) () const
Checks if the widget value changed since the last callback.
- void [clear_active](#) ()

- Marks the widget as inactive without sending events or changing focus.*

 - void `clear_changed` ()
- Marks the value of the widget as unchanged.*

 - void `clear_damage` (uchar c=0)
- Clears or sets the damage flags.*

 - void `clear_output` ()
- Sets a widget to accept input.*

 - void `clear_visible` ()
- Hides the widget.*

 - void `clear_visible_focus` ()
- Disables keyboard focus navigation with this widget.*

 - `FL_Color` `color` () const
- Gets the background color of the widget.*

 - void `color` (FL_Color bg)
- Sets the background color of the widget.*

 - void `color` (FL_Color bg, FL_Color sel)
- Sets the background and selection color of the widget.*

 - `FL_Color` `color2` () const
- For back compatibility only.*

 - void `color2` (unsigned a)
- For back compatibility only.*

 - int `contains` (const FL_Widget *w) const
- Checks if w is a child of this widget.*

 - void `copy_label` (const char *new_label)
- Sets the current label.*

 - void `copy_tooltip` (const char *text)
- Sets the current tooltip text.*

 - uchar `damage` () const
- Returns non-zero if `draw()` needs to be called.*

 - void `damage` (uchar c)
- Sets the damage bits for the widget.*

 - void `damage` (uchar c, int x, int y, int w, int h)
- Sets the damage bits for an area inside the widget.*

 - int `damage_resize` (int, int, int, int)
- Internal use only.*

 - void `deactivate` ()
- Deactivates the widget.*

 - `FL_Image` * `deimage` ()
- Gets the image that is used as part of the widget label when in the inactive state.*

 - const `FL_Image` * `deimage` () const
- Gets the image that is used as part of the widget label when in the inactive state.*

 - void `deimage` (FL_Image &img)
- Sets the image to use as part of the widget label when in the inactive state.*

 - void `deimage` (FL_Image *img)
- Sets the image to use as part of the widget label when in the inactive state.*

 - int `deimage_bound` () const
- Returns whether the inactive image is managed by the widget.*

 - void `do_callback` (FL_Callback_Reason reason=FL_REASON_UNKNOWN)
- Calls the widget callback function with default arguments.*

 - void `do_callback` (FL_Widget *widget, long arg, FL_Callback_Reason reason=FL_REASON_UNKNOWN)
- Calls the widget callback function with arbitrary arguments.*

- void `do_callback` (`FL_Widget` *widget, void *arg=0, `FL_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with arbitrary arguments.
- void `draw_label` (int, int, int, int, `FL_Align`) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const
Gets the widget height.
- int `horizontal_label_margin` ()
Get the spacing between the label and the horizontal edge of the widget.
- void `horizontal_label_margin` (int px)
Set the spacing between the label and the horizontal edge of the widget.
- `FL_Image` * `image` ()
Gets the image that is used as part of the widget label when in the active state.
- const `FL_Image` * `image` () const
Gets the image that is used as part of the widget label when in the active state.
- void `image` (`FL_Image` &img)
Sets the image to use as part of the widget label when in the active state.
- void `image` (`FL_Image` *img)
Sets the image to use as part of the widget label when in the active state.
- int `image_bound` () const
Returns whether the image is managed by the widget.
- int `inside` (const `FL_Widget` *wgt) const
Checks if this widget is a child of wgt.
- int `is_label_copied` () const
Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const
Gets the current label text.
- void `label` (const char *text)
Sets the current label pointer.
- void `label` (`FL_Labeltype` a, const char *b)
Shortcut to set the label text and type in one call.
- int `label_image_spacing` ()
Return the gap size between the label and the image.
- void `label_image_spacing` (int gap)
Set the gap between the label and the image in pixels.
- `FL_Color` `labelcolor` () const
Gets the label color.
- void `labelcolor` (`FL_Color` c)
Sets the label color.
- `FL_Font` `labelfont` () const
Gets the font to use.
- void `labelfont` (`FL_Font` f)
Sets the font to use.
- `FL_Fonsize` `labelsize` () const
Gets the font size in pixels.
- void `labelsize` (`FL_Fonsize` pix)
Sets the font size in pixels.
- `FL_Labeltype` `labeltype` () const
Gets the label type.
- void `labeltype` (`FL_Labeltype` a)
Sets the label type.
- void `measure_label` (int &ww, int &hh) const

- Sets width ww and height hh accordingly with the label size.*

 - bool `needs_keyboard` () const

Returns whether this widget needs a keyboard.
- void `needs_keyboard` (bool needs)

Sets whether this widget needs a keyboard.
- unsigned int `output` () const

Returns if a widget is used for output only.
- `Fl_Group` * `parent` () const

Returns a pointer to the parent widget.
- void `parent` (`Fl_Group` *p)

Internal use only - "for hacks only".
- void `position` (int X, int Y)

Repositions the window or widget.
- void `redraw` ()

Schedules the drawing of the widget.
- void `redraw_label` ()

Schedules the drawing of the label.
- `Fl_Color` `selection_color` () const

Gets the selection color.
- void `selection_color` (`Fl_Color` a)

Sets the selection color.
- void `set_active` ()

Marks the widget as active without sending events or changing focus.
- void `set_changed` ()

Marks the value of the widget as changed.
- void `set_output` ()

Sets a widget to output only.
- void `set_visible` ()

Makes the widget visible.
- void `set_visible_focus` ()

Enables keyboard focus navigation with this widget.
- int `shortcut_label` () const

Returns whether the widget's label uses '&' to indicate shortcuts.
- void `shortcut_label` (int value)

Sets whether the widget's label uses '&' to indicate shortcuts.
- void `size` (int W, int H)

Changes the size of the widget.
- int `take_focus` ()

Gives the widget the keyboard focus.
- unsigned int `takeevents` () const

Returns if the widget is able to take events.
- int `test_shortcut` ()

Returns true if the widget's label contains the entered '&x' shortcut.
- const char * `tooltip` () const

Gets the current tooltip text.
- void `tooltip` (const char *text)

Sets the current tooltip text.
- `Fl_Window` * `top_window` () const

Returns a pointer to the top-level window for the widget.
- `Fl_Window` * `top_window_offset` (int &xoff, int &yoff) const

Finds the x/y offset of the current widget relative to the top-level window.

- `uchar type () const`
Gets the widget type.
- `void type (uchar t)`
Sets the widget type.
- `int use_accents_menu ()`
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- `void * user_data () const`
Gets the user data for this widget.
- `void user_data (Fl_Callback_User_Data *v, bool auto_free)`
Sets the user data for this widget.
- `void user_data (void *v)`
Sets the user data for this widget.
- `int vertical_label_margin ()`
Get the spacing between the label and the vertical edge of the widget.
- `void vertical_label_margin (int px)`
Set the spacing between the label and the vertical edge of the widget.
- `unsigned int visible () const`
Returns whether a widget is visible.
- `unsigned int visible_focus () const`
Checks whether this widget has a visible focus.
- `void visible_focus (int v)`
Modifies keyboard focus navigation.
- `int visible_r () const`
Returns whether a widget and all its parents are visible.
- `int w () const`
Gets the widget width.
- `Fl_When when () const`
Returns the conditions under which the callback is called.
- `void when (uchar i)`
Sets the flags used to decide when a callback is called.
- `Fl_Window * window () const`
Returns a pointer to the nearest parent window up the widget hierarchy.
- `int x () const`
Gets the widget position in its window.
- `int y () const`
Gets the widget position in its window.
- `virtual ~Fl_Widget ()`
Destroys the widget.

Additional Inherited Members

Public Types inherited from `Fl_Browser`

- `enum Fl_Line_Position { TOP , BOTTOM , MIDDLE }`
For internal use only?

Public Types inherited from `Fl_Browser_`

- `enum {`
`HORIZONTAL = 1 , VERTICAL = 2 , BOTH = 3 , ALWAYS_ON = 4 ,`
`HORIZONTAL_ALWAYS = 5 , VERTICAL_ALWAYS = 6 , BOTH_ALWAYS = 7 }`
Values for `has_scrollbar()`.

Static Public Member Functions inherited from FI_Group

- static [FI_Group * current](#) ()
Returns the currently active group.
- static void [current](#) ([FI_Group *g](#))
Sets the current group.

Static Public Member Functions inherited from FI_Widget

- static void [default_callback](#) ([FI_Widget *widget](#), void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int [label_shortcut](#) (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int [test_shortcut](#) (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Public Attributes inherited from FI_Browser_

- [FI_Scrollbar hscrollbar](#)
Horizontal scrollbar.
- [FI_Scrollbar scrollbar](#)
Vertical scrollbar.

Protected Types inherited from FI_Widget

- enum {
[INACTIVE](#) = 1<<0 , [INVISIBLE](#) = 1<<1 , [OUTPUT](#) = 1<<2 , [NOBORDER](#) = 1<<3 ,
[FORCE_POSITION](#) = 1<<4 , [NON_MODAL](#) = 1<<5 , [SHORTCUT_LABEL](#) = 1<<6 , [CHANGED](#) = 1<<7
, [OVERRIDE](#) = 1<<8 , [VISIBLE_FOCUS](#) = 1<<9 , [COPIED_LABEL](#) = 1<<10 , [CLIP_CHILDREN](#) = 1<<11
, [MENU_WINDOW](#) = 1<<12 , [TOOLTIP_WINDOW](#) = 1<<13 , [MODAL](#) = 1<<14 , [NO_OVERLAY](#) = 1<<15
, [GROUP_RELATIVE](#) = 1<<16 , [COPIED_TOOLTIP](#) = 1<<17 , [FULLSCREEN](#) = 1<<18 , [MAC_USE_ACCENTS_MENU](#)
= 1<<19 ,
[NEEDS_KEYBOARD](#) = 1<<20 , [IMAGE_BOUND](#) = 1<<21 , [DEIMAGE_BOUND](#) = 1<<22 ,
[AUTO_DELETE_USER_DATA](#) = 1<<23 ,
[MAXIMIZED](#) = 1<<24 , [POPUP](#) = 1<<25 , [USERFLAG3](#) = 1<<29 , [USERFLAG2](#) = 1<<30 ,
[USERFLAG1](#) = 1<<31 }
flags possible values enumeration.

Protected Member Functions inherited from FI_Browser

- [FL_BLINE * _remove](#) (int line)
Removes the item at the specified line.
- [FL_BLINE * find_line](#) (int line) const
Returns the item for specified line.
- int [full_height](#) () const [FL_OVERRIDE](#)
The height of the entire list of all [visible\(\)](#) items in pixels.
- int [incr_height](#) () const [FL_OVERRIDE](#)
The default 'average' item height (including inter-item spacing) in pixels.
- void [insert](#) (int line, [FL_BLINE *item](#))
Insert specified item above line.
- void * [item_at](#) (int line) const [FL_OVERRIDE](#)
Return the item at specified line.

- void [item_draw](#) (void *item, int X, int Y, int W, int H) const [FL_OVERRIDE](#)

Draws `item` at the position specified by `X Y W H`.

- void * [item_first](#) () const [FL_OVERRIDE](#)

Returns the very first item in the list.

- int [item_height](#) (void *item) const [FL_OVERRIDE](#)

Returns height of `item` in pixels.

- void * [item_last](#) () const [FL_OVERRIDE](#)

Returns the very last item in the list.

- void * [item_next](#) (void *item) const [FL_OVERRIDE](#)

Returns the next item after `item`.

- void * [item_prev](#) (void *item) const [FL_OVERRIDE](#)

Returns the previous item before `item`.

- void [item_select](#) (void *item, int val) [FL_OVERRIDE](#)

Change the selection state of `item` to the value `val`.

- int [item_selected](#) (void *item) const [FL_OVERRIDE](#)

See if `item` is selected.

- void [item_swap](#) (void *a, void *b) [FL_OVERRIDE](#)

Swap the items `a` and `b`.

- const char * [item_text](#) (void *item) const [FL_OVERRIDE](#)

Returns the label text for `item`.

- int [item_width](#) (void *item) const [FL_OVERRIDE](#)

Returns width of `item` in pixels.

- int [lineno](#) (void *item) const

Returns line number corresponding to `item`, or zero if not found.

- void [swap](#) (FL_BLINE *a, FL_BLINE *b)

Swap the two items `a` and `b`.

Protected Member Functions inherited from [Fl_Browser_](#)

- void [bbox](#) (int &X, int &Y, int &W, int &H) const

Returns the bounding box for the interior of the list's display window, inside the scrollbars.

- void [deleting](#) (void *item)

This method should be used when `item` is being deleted from the list.

- int [displayed](#) (void *item) const

Returns non-zero if `item` has been scrolled to a position where it is being displayed.

- void [draw](#) () [FL_OVERRIDE](#)

Draws the list within the normal widget bounding box.

- void * [find_item](#) (int ypos)

This method returns the item under mouse y position `ypos`.

- [Fl_Browser_](#) (int X, int Y, int W, int H, const char *L=0)

The constructor makes an empty browser.

- virtual int [full_width](#) () const

This method may be provided by the subclass to indicate the full width of the item list, in pixels.

- void [inserting](#) (void *a, void *b)

This method should be used when an item is in the process of being inserted into the list.

- virtual int [item_quick_height](#) (void *item) const

This method may be provided by the subclass to return the height of the `item`, in pixels.

- int [leftedge](#) () const

This method returns the X position of the left edge of the list area after adjusting for the scrollbar and border, if any.

- void [new_list](#) ()

This method should be called when the list data is completely replaced or cleared.

- void **redraw_line** (void *item)
This method should be called when the contents of `item` has changed, but not its height.
- void **redraw_lines** ()
This method will cause the entire list to be redrawn.
- void **replacing** (void *a, void *b)
This method should be used when item `a` is being replaced by item `b`.
- void * **selection** () const
Returns the item currently selected, or NULL if there is no selection.
- void **swapping** (void *a, void *b)
This method should be used when two items `a` and `b` are being swapped.
- void * **top** () const
Returns the item that appears at the top of the list.

Protected Member Functions inherited from FL_Group

- **FL_Rect** * **bounds** ()
Returns the internal array of widget sizes and positions.
- void **draw** () **FL_OVERRIDE**
Draws the widget.
- void **draw_child** (FL_Widget &widget) const
Forces a child to redraw.
- void **draw_children** ()
Draws all children of the group.
- void **draw_outside_label** (const FL_Widget &widget) const
Parents normally call this to draw outside labels of child widgets.
- virtual int **on_insert** (FL_Widget *, int)
Allow derived groups to act when a widget is added as a child.
- virtual int **on_move** (int, int)
Allow derived groups to act when a widget is moved within the group.
- virtual void **on_remove** (int)
Allow derived groups to act when a child widget is removed from the group.
- int * **sizes** ()
Returns the internal array of widget sizes and positions.
- void **update_child** (FL_Widget &widget) const
Draws a child only if it needs it.

Protected Member Functions inherited from FL_Widget

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **drawBackdrop** () const
If `FL_ALIGN_IMAGE_BACKDROP` is set, the image or deimage will be drawn.
- void **drawBox** () const
Draws the widget box according its box style.
- void **drawBox** (FL_Boxtype t, FL_Color c) const
Draws a box of type `t`, of color `c` at the widget's position and size.
- void **drawBox** (FL_Boxtype t, int x, int y, int w, int h, FL_Color c) const
Draws a box of type `t`, of color `c` at the position `X,Y` and size `W,H`.
- void **drawFocus** () const
Draws a focus rectangle around the widget.
- void **drawFocus** (FL_Boxtype t, int X, int Y, int W, int H) const

- Draws a focus rectangle around the widget.*
- void `draw_focus` (`Fl_Boxtype` t, int x, int y, int w, int h, `Fl_Color` bg) const
Draws a focus box for the widget at the given position and size.
- void `draw_label` () const
Draws the widget's label at the defined label position.
- void `draw_label` (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- `Fl_Widget` (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int `flags` () const
Gets the widget flags mask.
- void `h` (int v)
Internal use only.
- void `set_flag` (unsigned int c)
Sets a flag in the flags mask.
- void `w` (int v)
Internal use only.
- void `x` (int v)
Internal use only.
- void `y` (int v)
Internal use only.

11.65.1 Detailed Description

The `Fl_Hold_Browser` is a subclass of `Fl_Browser` which lets the user select a single item, or no items by clicking on the empty space.

Figure 11.24 `Fl_Hold_Browser`

As long as the mouse button is held down the item pointed to by it is highlighted, and this highlighting remains on when the mouse button is released. Normally the callback is done when the user releases the mouse, but you can change this with `when()`.

See `Fl_Browser` for methods to add and remove lines from the browser.

11.65.2 Constructor & Destructor Documentation

11.65.2.1 `Fl_Hold_Browser()`

```
Fl_Hold_Browser::Fl_Hold_Browser (
    int X,
    int Y,
    int W,
    int H,
    const char * L = 0)
```

Creates a new `Fl_Hold_Browser` widget using the given position, size, and label string.

The default boxttype is `FL_DOWN_BOX`. The constructor specializes `Fl_Browser()` by setting the type to `FL_HOLD_BROWSER`. The destructor destroys the widget and frees all memory that has been allocated.

The documentation for this class was generated from the following files:

- `Fl_Hold_Browser.H`
- `Fl_Browser.cxx`

11.66 FI_Hor_Fill_Slider Class Reference

Inheritance diagram for FI_Hor_Fill_Slider:

Public Member Functions

- **FI_Hor_Fill_Slider** (int X, int Y, int W, int H, const char *L=0)

Public Member Functions inherited from FI_Slider

- void **bounds** (double a, double b)
Sets the minimum (a) and maximum (b) values for the valuator widget.
- **FI_Slider** (int X, int Y, int W, int H, const char *L=0)
Creates a new FI_Slider widget using the given position, size, and label string.
- **FI_Slider** (uchar t, int X, int Y, int W, int H, const char *L)
Creates a new FI_Slider widget using the given type, position, size, and label string.
- int **handle** (int) **FL_OVERRIDE**
Handles the specified event.
- int **scrollvalue** (int pos, int size, int first, int total)
Sets the size and position of the sliding knob in the box.
- **FI_Boxtype slider** () const
Gets the slider box type.
- void **slider** (FI_Boxtype c)
Sets the slider box type.
- float **slider_size** () const
Get the dimensions of the moving piece of slider.
- void **slider_size** (double v)
Set the dimensions of the moving piece of slider.

Public Member Functions inherited from FI_Valuator

- void **bounds** (double a, double b)
Sets the minimum (a) and maximum (b) values for the valuator widget.
- double **clamp** (double)
Clamps the passed value to the valuator range.
- virtual int **format** (char *)
Uses internal rules to format the fields numerical value into the character array pointed to by the passed parameter.
- double **increment** (double, int)
Adds n times the step value to the passed value.
- double **maximum** () const
Gets the maximum value for the valuator.
- void **maximum** (double a)

- *Sets the maximum value for the valuator.*
- double **minimum** () const
- *Gets the minimum value for the valuator.*
- void **minimum** (double a)
- *Sets the minimum value for the valuator.*
- void **precision** (int digits)
- *Sets the step value to $1.0 / 10^{\text{digits}}$.*
- void **range** (double a, double b)
- *Sets the minimum and maximum values for the valuator.*
- double **round** (double)
- *Round the passed value to the nearest step increment.*
- double **step** () const
- *Gets or sets the step value.*
- void **step** (double a, int b)
- *See double [FI_Valuator::step\(\)](#) const.*
- void **step** (double s)
- *See double [FI_Valuator::step\(\)](#) const.*
- void **step** (int a)
- *See double [FI_Valuator::step\(\)](#) const.*
- double **value** () const
- *Gets the floating point(double) value.*
- int **value** (double)
- *Sets the current value.*
- **~FI_Valuator** () **FL_OVERRIDE**
- *Destructor is accessible despite protected constructor.*

Public Member Functions inherited from [FI_Widget](#)

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
- *Activates the widget.*
- unsigned int **active** () const
- *Returns whether the widget is active.*
- int **active_r** () const
- *Returns whether the widget and all of its parents are active.*
- [FI_Align](#) **align** () const
- *Gets the label alignment.*
- void **align** ([FI_Align](#) alignment)
- *Sets the label alignment.*
- long **argument** () const
- *Gets the current user data (long) argument that is passed to the callback function.*
- void **argument** (long v)
- *Sets the current user data (long) argument that is passed to the callback function.*
- virtual class [FI_Gl_Window](#) * **as_gl_window** ()
- *Returns an [FI_Gl_Window](#) pointer if this widget is an [FI_Gl_Window](#).*
- virtual class [FI_Gl_Window](#) const * **as_gl_window** () const
- virtual [FI_Group](#) * **as_group** ()
- *Returns an [FI_Group](#) pointer if this widget is an [FI_Group](#).*
- virtual [FI_Group](#) const * **as_group** () const
- virtual [FI_Window](#) * **as_window** ()

- Returns an *FL_Window* pointer if this widget is an *FL_Window*.

 - virtual *FL_Window* const * **as_window** () const
- void **bind_deimage** (*FL_Image* *img)

Sets the image to use as part of the widget label when in the inactive state.
- void **bind_deimage** (int f)

Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.
- void **bind_image** (*FL_Image* *img)

Sets the image to use as part of the widget label when in the active state.
- void **bind_image** (int f)

Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- *FL_Boxtype* **box** () const

Gets the box type of the widget.
- void **box** (*FL_Boxtype* new_box)

Sets the box type for the widget.
- *FL_Callback_p* **callback** () const

Gets the current callback function for the widget.
- void **callback** (*FL_Callback* *cb)

Sets the current callback function for the widget.
- void **callback** (*FL_Callback* *cb, *FL_Callback_User_Data* *p, bool auto_free)

Sets the current callback function and managed user data for the widget.
- void **callback** (*FL_Callback* *cb, void *p)

Sets the current callback function and data for the widget.
- void **callback** (*FL_Callback0* *cb)

Sets the current callback function for the widget.
- void **callback** (*FL_Callback1* *cb, long p=0)

Sets the current callback function for the widget.
- unsigned int **changed** () const

Checks if the widget value changed since the last callback.
- void **clear_active** ()

Marks the widget as inactive without sending events or changing focus.
- void **clear_changed** ()

Marks the value of the widget as unchanged.
- void **clear_damage** (uchar c=0)

Clears or sets the damage flags.
- void **clear_output** ()

Sets a widget to accept input.
- void **clear_visible** ()

Hides the widget.
- void **clear_visible_focus** ()

Disables keyboard focus navigation with this widget.
- *FL_Color* **color** () const

Gets the background color of the widget.
- void **color** (*FL_Color* bg)

Sets the background color of the widget.
- void **color** (*FL_Color* bg, *FL_Color* sel)

Sets the background and selection color of the widget.
- *FL_Color* **color2** () const

For back compatibility only.
- void **color2** (unsigned a)

For back compatibility only.
- int **contains** (const *FL_Widget* *w) const

- Checks if w is a child of this widget.*

 - void [copy_label](#) (const char *new_label)

Sets the current label.
- void [copy_tooltip](#) (const char *text)

Sets the current tooltip text.
- [uchar damage](#) () const

Returns non-zero if [draw\(\)](#) needs to be called.
- void [damage](#) (uchar c)

Sets the damage bits for the widget.
- void [damage](#) (uchar c, int x, int y, int w, int h)

Sets the damage bits for an area inside the widget.
- int [damage_resize](#) (int, int, int, int)

Internal use only.
- void [deactivate](#) ()

Deactivates the widget.
- [FL_Image * deimage](#) ()

Gets the image that is used as part of the widget label when in the inactive state.
- const [FL_Image * deimage](#) () const

Gets the image that is used as part of the widget label when in the inactive state.
- void [deimage](#) ([FL_Image](#) &img)

Sets the image to use as part of the widget label when in the inactive state.
- void [deimage](#) ([FL_Image](#) *img)

Sets the image to use as part of the widget label when in the inactive state.
- int [deimage_bound](#) () const

Returns whether the inactive image is managed by the widget.
- void [do_callback](#) ([FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))

Calls the widget callback function with default arguments.
- void [do_callback](#) ([FL_Widget](#) *widget, long arg, [FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))

Calls the widget callback function with arbitrary arguments.
- void [do_callback](#) ([FL_Widget](#) *widget, void *arg=0, [FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))

Calls the widget callback function with arbitrary arguments.
- void [draw_label](#) (int, int, int, int, [FL_Align](#)) const

Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int [h](#) () const

Gets the widget height.
- virtual void [hide](#) ()

Makes a widget invisible.
- int [horizontal_label_margin](#) ()

Get the spacing between the label and the horizontal edge of the widget.
- void [horizontal_label_margin](#) (int px)

Set the spacing between the label and the horizontal edge of the widget.
- [FL_Image * image](#) ()

Gets the image that is used as part of the widget label when in the active state.
- const [FL_Image * image](#) () const

Gets the image that is used as part of the widget label when in the active state.
- void [image](#) ([FL_Image](#) &img)

Sets the image to use as part of the widget label when in the active state.
- void [image](#) ([FL_Image](#) *img)

Sets the image to use as part of the widget label when in the active state.
- int [image_bound](#) () const

Returns whether the image is managed by the widget.

- int [inside](#) (const [Fl_Widget](#) *wgt) const
Checks if this widget is a child of wgt.
- int [is_label_copied](#) () const
Returns whether the current label was assigned with [copy_label\(\)](#).
- const char * [label](#) () const
Gets the current label text.
- void [label](#) (const char *text)
Sets the current label pointer.
- void [label](#) ([Fl_Labeltype](#) a, const char *b)
Shortcut to set the label text and type in one call.
- int [label_image_spacing](#) ()
Return the gap size between the label and the image.
- void [label_image_spacing](#) (int gap)
Set the gap between the label and the image in pixels.
- [Fl_Color](#) [labelcolor](#) () const
Gets the label color.
- void [labelcolor](#) ([Fl_Color](#) c)
Sets the label color.
- [Fl_Font](#) [labelfont](#) () const
Gets the font to use.
- void [labelfont](#) ([Fl_Font](#) f)
Sets the font to use.
- [Fl_Fontsize](#) [labelsize](#) () const
Gets the font size in pixels.
- void [labelsize](#) ([Fl_Fontsize](#) pix)
Sets the font size in pixels.
- [Fl_Labeltype](#) [labeltype](#) () const
Gets the label type.
- void [labeltype](#) ([Fl_Labeltype](#) a)
Sets the label type.
- void [measure_label](#) (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- bool [needs_keyboard](#) () const
Returns whether this widget needs a keyboard.
- void [needs_keyboard](#) (bool needs)
Sets whether this widget needs a keyboard.
- unsigned int [output](#) () const
Returns if a widget is used for output only.
- [Fl_Group](#) * [parent](#) () const
Returns a pointer to the parent widget.
- void [parent](#) ([Fl_Group](#) *p)
Internal use only - "for hacks only".
- void [position](#) (int X, int Y)
Repositions the window or widget.
- void [redraw](#) ()
Schedules the drawing of the widget.
- void [redraw_label](#) ()
Schedules the drawing of the label.
- virtual void [resize](#) (int x, int y, int w, int h)
Changes the size or position of the widget.
- [Fl_Color](#) [selection_color](#) () const

- Gets the selection color.*

 - void **selection_color** (**Fl_Color** a)

Sets the selection color.
- void **set_active** ()

Marks the widget as active without sending events or changing focus.
- void **set_changed** ()

Marks the value of the widget as changed.
- void **set_output** ()

Sets a widget to output only.
- void **set_visible** ()

Makes the widget visible.
- void **set_visible_focus** ()

Enables keyboard focus navigation with this widget.
- int **shortcut_label** () const

Returns whether the widget's label uses '&' to indicate shortcuts.
- void **shortcut_label** (int value)

Sets whether the widget's label uses '&' to indicate shortcuts.
- virtual void **show** ()

Makes a widget visible.
- void **size** (int W, int H)

Changes the size of the widget.
- int **take_focus** ()

Gives the widget the keyboard focus.
- unsigned int **takeevents** () const

Returns if the widget is able to take events.
- int **test_shortcut** ()

Returns true if the widget's label contains the entered '&x' shortcut.
- const char * **tooltip** () const

Gets the current tooltip text.
- void **tooltip** (const char *text)

Sets the current tooltip text.
- **Fl_Window** * **top_window** () const

Returns a pointer to the top-level window for the widget.
- **Fl_Window** * **top_window_offset** (int &xoff, int &yoff) const

Finds the x/y offset of the current widget relative to the top-level window.
- **uchar** **type** () const

Gets the widget type.
- void **type** (**uchar** t)

Sets the widget type.
- int **use_accents_menu** ()

Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * **user_data** () const

Gets the user data for this widget.
- void **user_data** (**Fl_Callback_User_Data** *v, bool auto_free)

Sets the user data for this widget.
- void **user_data** (void *v)

Sets the user data for this widget.
- int **vertical_label_margin** ()

Get the spacing between the label and the vertical edge of the widget.
- void **vertical_label_margin** (int px)

Set the spacing between the label and the vertical edge of the widget.

- unsigned int `visible` () const
Returns whether a widget is visible.
- unsigned int `visible_focus` () const
Checks whether this widget has a visible focus.
- void `visible_focus` (int v)
Modifies keyboard focus navigation.
- int `visible_r` () const
Returns whether a widget and all its parents are visible.
- int `w` () const
Gets the widget width.
- `Fl_When` `when` () const
Returns the conditions under which the callback is called.
- void `when` (uchar i)
Sets the flags used to decide when a callback is called.
- `Fl_Window` * `window` () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int `x` () const
Gets the widget position in its window.
- int `y` () const
Gets the widget position in its window.
- virtual `~Fl_Widget` ()
Destroys the widget.

Additional Inherited Members

Static Public Member Functions inherited from `Fl_Widget`

- static void `default_callback` (`Fl_Widget` *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int `label_shortcut` (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int `test_shortcut` (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from `Fl_Widget`

- enum {
`INACTIVE` = 1<<0 , `INVISIBLE` = 1<<1 , `OUTPUT` = 1<<2 , `NOBORDER` = 1<<3 ,
`FORCE_POSITION` = 1<<4 , `NON_MODAL` = 1<<5 , `SHORTCUT_LABEL` = 1<<6 , `CHANGED` = 1<<7
, `OVERRIDE` = 1<<8 , `VISIBLE_FOCUS` = 1<<9 , `COPIED_LABEL` = 1<<10 , `CLIP_CHILDREN` = 1<<11
, `MENU_WINDOW` = 1<<12 , `TOOLTIP_WINDOW` = 1<<13 , `MODAL` = 1<<14 , `NO_OVERLAY` = 1<<15
, `GROUP_RELATIVE` = 1<<16 , `COPIED_TOOLTIP` = 1<<17 , `FULLSCREEN` = 1<<18 , `MAC_USE_ACCENTS_MENU`
= 1<<19 ,
`NEEDS_KEYBOARD` = 1<<20 , `IMAGE_BOUND` = 1<<21 , `DEIMAGE_BOUND` = 1<<22 ,
`AUTO_DELETE_USER_DATA` = 1<<23 ,
`MAXIMIZED` = 1<<24 , `POPUP` = 1<<25 , `USERFLAG3` = 1<<29 , `USERFLAG2` = 1<<30 ,
`USERFLAG1` = 1<<31 }
flags possible values enumeration.

Protected Member Functions inherited from [FI_Slider](#)

- void [draw](#) () [FL_OVERRIDE](#)
Draws the widget.
- void **draw** (int, int, int, int)
- int **handle** (int, int, int, int, int)

Protected Member Functions inherited from [FI_Valuator](#)

- [FI_Valuator](#) (int X, int Y, int W, int H, const char *L)
Creates a new [FI_Valuator](#) widget using the given position, size, and label string.
- void **handle_drag** (double newvalue)
Called during a drag operation, after an [FL_WHEN_CHANGED](#) event is received and before the callback.
- void **handle_push** ()
Stores the current value in the previous value.
- void **handle_release** ()
Called after an [FL_WHEN_RELEASE](#) event is received and before the callback.
- int **horizontal** () const
Tells if the valuator is an [FL_HORIZONTAL](#) one.
- double **previous_value** () const
Gets the previous floating point value before an event changed it.
- void **set_value** (double v)
Sets the current floating point value.
- double **softclamp** (double)
Clamps the value, but accepts v if the previous value is not already out of range.
- virtual void [value_damage](#) ()
Asks for partial redraw.

Protected Member Functions inherited from [FI_Widget](#)

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If [FL_ALIGN_IMAGE_BACKDROP](#) is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** ([FI_Boxtype](#) t, [FI_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const
Draws a focus rectangle around the widget.
- void **draw_focus** ([FI_Boxtype](#) t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void **draw_focus** ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) bg) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [FI_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.

- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

The documentation for this class was generated from the following files:

- Fl_Hor_Fill_Slider.H
- Fl_Slider.cxx

11.67 Fl_Hor_Nice_Slider Class Reference

Single thumb tab slider.

```
#include <Fl_Hor_Nice_Slider.H>
```

Inheritance diagram for Fl_Hor_Nice_Slider:

Public Member Functions

- **Fl_Hor_Nice_Slider** (int X, int Y, int W, int H, const char *L=0)

Public Member Functions inherited from **Fl_Slider**

- void **bounds** (double a, double b)
Sets the minimum (a) and maximum (b) values for the valuator widget.
- **Fl_Slider** (int X, int Y, int W, int H, const char *L=0)
*Creates a new **Fl_Slider** widget using the given position, size, and label string.*
- **Fl_Slider** (uchar t, int X, int Y, int W, int H, const char *L)
*Creates a new **Fl_Slider** widget using the given type, position, size, and label string.*
- int **handle** (int) **FL_OVERRIDE**
Handles the specified event.
- int **scrollvalue** (int pos, int **size**, int first, int total)
Sets the size and position of the sliding knob in the box.
- **Fl_Boxtype slider** () const
Gets the slider box type.
- void **slider** (**Fl_Boxtype** c)

- *Sets the slider box type.*
- float **slider_size** () const
Get the dimensions of the moving piece of slider.
- void **slider_size** (double v)
Set the dimensions of the moving piece of slider.

Public Member Functions inherited from [FI_Valuator](#)

- void **bounds** (double a, double b)
Sets the minimum (a) and maximum (b) values for the valuator widget.
- double **clamp** (double)
Clamps the passed value to the valuator range.
- virtual int **format** (char *)
Uses internal rules to format the fields numerical value into the character array pointed to by the passed parameter.
- double **increment** (double, int)
Adds n times the step value to the passed value.
- double **maximum** () const
Gets the maximum value for the valuator.
- void **maximum** (double a)
Sets the maximum value for the valuator.
- double **minimum** () const
Gets the minimum value for the valuator.
- void **minimum** (double a)
Sets the minimum value for the valuator.
- void **precision** (int digits)
Sets the step value to $1.0 / 10^{\text{digits}}$.
- void **range** (double a, double b)
Sets the minimum and maximum values for the valuator.
- double **round** (double)
Round the passed value to the nearest step increment.
- double **step** () const
Gets or sets the step value.
- void **step** (double a, int b)
See double [FI_Valuator::step\(\)](#) const.
- void **step** (double s)
See double [FI_Valuator::step\(\)](#) const.
- void **step** (int a)
See double [FI_Valuator::step\(\)](#) const.
- double **value** () const
Gets the floating point(double) value.
- int **value** (double)
Sets the current value.
- **~FI_Valuator** () **FL_OVERRIDE**
Destructor is accessible despite protected constructor.

Public Member Functions inherited from FI_Widget

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
Activates the widget.
- unsigned int **active** () const
Returns whether the widget is active.
- int **active_r** () const
Returns whether the widget and all of its parents are active.
- **FI_Align align** () const
Gets the label alignment.
- void **align** (**FI_Align** alignment)
Sets the label alignment.
- long **argument** () const
Gets the current user data (long) argument that is passed to the callback function.
- void **argument** (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class **FI_Gl_Window** * **as_gl_window** ()
Returns an FI_Gl_Window pointer if this widget is an FI_Gl_Window.
- virtual class **FI_Gl_Window** const * **as_gl_window** () const
- virtual **FI_Group** * **as_group** ()
Returns an FI_Group pointer if this widget is an FI_Group.
- virtual **FI_Group** const * **as_group** () const
- virtual **FI_Window** * **as_window** ()
Returns an FI_Window pointer if this widget is an FI_Window.
- virtual **FI_Window** const * **as_window** () const
- void **bind_deimage** (**FI_Image** *img)
Sets the image to use as part of the widget label when in the inactive state.
- void **bind_deimage** (int f)
Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.
- void **bind_image** (**FI_Image** *img)
Sets the image to use as part of the widget label when in the active state.
- void **bind_image** (int f)
Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- **FI_Boxtype box** () const
Gets the box type of the widget.
- void **box** (**FI_Boxtype** new_box)
Sets the box type for the widget.
- **FI_Callback_p callback** () const
Gets the current callback function for the widget.
- void **callback** (**FI_Callback** *cb)
Sets the current callback function for the widget.
- void **callback** (**FI_Callback** *cb, **FI_Callback_User_Data** *p, bool auto_free)
Sets the current callback function and managed user data for the widget.
- void **callback** (**FI_Callback** *cb, void *p)
Sets the current callback function and data for the widget.
- void **callback** (**FI_Callback0** *cb)
Sets the current callback function for the widget.
- void **callback** (**FI_Callback1** *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int **changed** () const

- Checks if the widget value changed since the last callback.*

 - void `clear_active` ()

Marks the widget as inactive without sending events or changing focus.
- void `clear_changed` ()

Marks the value of the widget as unchanged.
- void `clear_damage` (uchar c=0)

Clears or sets the damage flags.
- void `clear_output` ()

Sets a widget to accept input.
- void `clear_visible` ()

Hides the widget.
- void `clear_visible_focus` ()

Disables keyboard focus navigation with this widget.
- `FL_Color` `color` () const

Gets the background color of the widget.
- void `color` (`FL_Color` bg)

Sets the background color of the widget.
- void `color` (`FL_Color` bg, `FL_Color` sel)

Sets the background and selection color of the widget.
- `FL_Color` `color2` () const

For back compatibility only.
- void `color2` (unsigned a)

For back compatibility only.
- int `contains` (const `FL_Widget` *w) const

Checks if w is a child of this widget.
- void `copy_label` (const char *new_label)

Sets the current label.
- void `copy_tooltip` (const char *text)

Sets the current tooltip text.
- `uchar` `damage` () const

Returns non-zero if `draw()` needs to be called.
- void `damage` (uchar c)

Sets the damage bits for the widget.
- void `damage` (uchar c, int x, int y, int w, int h)

Sets the damage bits for an area inside the widget.
- int `damage_resize` (int, int, int, int)

Internal use only.
- void `deactivate` ()

Deactivates the widget.
- `FL_Image` * `deimage` ()

Gets the image that is used as part of the widget label when in the inactive state.
- const `FL_Image` * `deimage` () const

Gets the image that is used as part of the widget label when in the inactive state.
- void `deimage` (`FL_Image` &img)

Sets the image to use as part of the widget label when in the inactive state.
- void `deimage` (`FL_Image` *img)

Sets the image to use as part of the widget label when in the inactive state.
- int `deimage_bound` () const

Returns whether the inactive image is managed by the widget.
- void `do_callback` (`FL_Callback_Reason` reason=`FL_REASON_UNKNOWN`)

Calls the widget callback function with default arguments.

- void `do_callback` (`FI_Widget` *widget, long arg, `FI_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with arbitrary arguments.
- void `do_callback` (`FI_Widget` *widget, void *arg=0, `FI_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with arbitrary arguments.
- void `draw_label` (int, int, int, int, `FI_Align`) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const
Gets the widget height.
- virtual void `hide` ()
Makes a widget invisible.
- int `horizontal_label_margin` ()
Get the spacing between the label and the horizontal edge of the widget.
- void `horizontal_label_margin` (int px)
Set the spacing between the label and the horizontal edge of the widget.
- `FI_Image` * `image` ()
Gets the image that is used as part of the widget label when in the active state.
- const `FI_Image` * `image` () const
Gets the image that is used as part of the widget label when in the active state.
- void `image` (`FI_Image` &img)
Sets the image to use as part of the widget label when in the active state.
- void `image` (`FI_Image` *img)
Sets the image to use as part of the widget label when in the active state.
- int `image_bound` () const
Returns whether the image is managed by the widget.
- int `inside` (const `FI_Widget` *wgt) const
Checks if this widget is a child of wgt.
- int `is_label_copied` () const
Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const
Gets the current label text.
- void `label` (const char *text)
Sets the current label pointer.
- void `label` (`FI_Labeltype` a, const char *b)
Shortcut to set the label text and type in one call.
- int `label_image_spacing` ()
Return the gap size between the label and the image.
- void `label_image_spacing` (int gap)
Set the gap between the label and the image in pixels.
- `FI_Color` `labelcolor` () const
Gets the label color.
- void `labelcolor` (`FI_Color` c)
Sets the label color.
- `FI_Font` `labelfont` () const
Gets the font to use.
- void `labelfont` (`FI_Font` f)
Sets the font to use.
- `FI_Fonsize` `labelsize` () const
Gets the font size in pixels.
- void `labelsize` (`FI_Fonsize` pix)
Sets the font size in pixels.
- `FI_Labeltype` `labeltype` () const

- Gets the label type.*

 - void [labeltype](#) ([Fl_Labeltype](#) a)
- Sets the label type.*

 - void [measure_label](#) (int &ww, int &hh) const
- Sets width ww and height hh accordingly with the label size.*

 - bool [needs_keyboard](#) () const
- Returns whether this widget needs a keyboard.*

 - void [needs_keyboard](#) (bool needs)
- Sets whether this widget needs a keyboard.*

 - unsigned int [output](#) () const
- Returns if a widget is used for output only.*

 - [Fl_Group](#) * [parent](#) () const
- Returns a pointer to the parent widget.*

 - void [parent](#) ([Fl_Group](#) *p)
- Internal use only - "for hacks only".*

 - void [position](#) (int X, int Y)
- Repositions the window or widget.*

 - void [redraw](#) ()
- Schedules the drawing of the widget.*

 - void [redraw_label](#) ()
- Schedules the drawing of the label.*

 - virtual void [resize](#) (int x, int y, int w, int h)
- Changes the size or position of the widget.*

 - [Fl_Color](#) [selection_color](#) () const
- Gets the selection color.*

 - void [selection_color](#) ([Fl_Color](#) a)
- Sets the selection color.*

 - void [set_active](#) ()
- Marks the widget as active without sending events or changing focus.*

 - void [set_changed](#) ()
- Marks the value of the widget as changed.*

 - void [set_output](#) ()
- Sets a widget to output only.*

 - void [set_visible](#) ()
- Makes the widget visible.*

 - void [set_visible_focus](#) ()
- Enables keyboard focus navigation with this widget.*

 - int [shortcut_label](#) () const
- Returns whether the widget's label uses '&' to indicate shortcuts.*

 - void [shortcut_label](#) (int value)
- Sets whether the widget's label uses '&' to indicate shortcuts.*

 - virtual void [show](#) ()
- Makes a widget visible.*

 - void [size](#) (int W, int H)
- Changes the size of the widget.*

 - int [take_focus](#) ()
- Gives the widget the keyboard focus.*

 - unsigned int [takeevents](#) () const
- Returns if the widget is able to take events.*

 - int [test_shortcut](#) ()
- Returns true if the widget's label contains the entered '&x' shortcut.*

- `const char * tooltip () const`
Gets the current tooltip text.
- `void tooltip (const char *text)`
Sets the current tooltip text.
- `Fl_Window * top_window () const`
Returns a pointer to the top-level window for the widget.
- `Fl_Window * top_window_offset (int &xoff, int &yoff) const`
Finds the x/y offset of the current widget relative to the top-level window.
- `uchar type () const`
Gets the widget type.
- `void type (uchar t)`
Sets the widget type.
- `int use_accents_menu ()`
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- `void * user_data () const`
Gets the user data for this widget.
- `void user_data (Fl_Callback_User_Data *v, bool auto_free)`
Sets the user data for this widget.
- `void user_data (void *v)`
Sets the user data for this widget.
- `int vertical_label_margin ()`
Get the spacing between the label and the vertical edge of the widget.
- `void vertical_label_margin (int px)`
Set the spacing between the label and the vertical edge of the widget.
- `unsigned int visible () const`
Returns whether a widget is visible.
- `unsigned int visible_focus () const`
Checks whether this widget has a visible focus.
- `void visible_focus (int v)`
Modifies keyboard focus navigation.
- `int visible_r () const`
Returns whether a widget and all its parents are visible.
- `int w () const`
Gets the widget width.
- `Fl_When when () const`
Returns the conditions under which the callback is called.
- `void when (uchar i)`
Sets the flags used to decide when a callback is called.
- `Fl_Window * window () const`
Returns a pointer to the nearest parent window up the widget hierarchy.
- `int x () const`
Gets the widget position in its window.
- `int y () const`
Gets the widget position in its window.
- `virtual ~Fl_Widget ()`
Destroys the widget.

Additional Inherited Members

Static Public Member Functions inherited from [FL_Widget](#)

- static void [default_callback](#) ([FL_Widget](#) *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int [label_shortcut](#) (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int [test_shortcut](#) (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from [FL_Widget](#)

- enum {
[INACTIVE](#) = 1<<0 , [INVISIBLE](#) = 1<<1 , [OUTPUT](#) = 1<<2 , [NOBORDER](#) = 1<<3 ,
[FORCE_POSITION](#) = 1<<4 , [NON_MODAL](#) = 1<<5 , [SHORTCUT_LABEL](#) = 1<<6 , [CHANGED](#) = 1<<7
, [OVERRIDE](#) = 1<<8 , [VISIBLE_FOCUS](#) = 1<<9 , [COPIED_LABEL](#) = 1<<10 , [CLIP_CHILDREN](#) = 1<<11
, [MENU_WINDOW](#) = 1<<12 , [TOOLTIP_WINDOW](#) = 1<<13 , [MODAL](#) = 1<<14 , [NO_OVERLAY](#) = 1<<15

[USERFLAG1](#) = 1<<31 }
flags possible values enumeration.

Protected Member Functions inherited from [FL_Slider](#)

- void [draw](#) () [FL_OVERRIDE](#)
Draws the widget.
- void [draw](#) (int, int, int, int)
- int [handle](#) (int, int, int, int, int)

Protected Member Functions inherited from [FL_Valuator](#)

- [FL_Valuator](#) (int X, int Y, int W, int H, const char *L)
Creates a new [FL_Valuator](#) widget using the given position, size, and label string.
- void [handle_drag](#) (double newvalue)
Called during a drag operation, after an FL_WHEN_CHANGED event is received and before the callback.
- void [handle_push](#) ()
Stores the current value in the previous value.
- void [handle_release](#) ()
Called after an FL_WHEN_RELEASE event is received and before the callback.
- int [horizontal](#) () const
Tells if the valuator is an FL_HORIZONTAL one.
- double [previous_value](#) () const
Gets the previous floating point value before an event changed it.
- void [set_value](#) (double v)
Sets the current floating point value.
- double [softclamp](#) (double)
Clamps the value, but accepts v if the previous value is not already out of range.
- virtual void [value_damage](#) ()
Asks for partial redraw.

Protected Member Functions inherited from [Fl_Widget](#)

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** (Fl_Boxtype t, Fl_Color c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** (Fl_Boxtype t, int x, int y, int w, int h, Fl_Color c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const
Draws a focus rectangle around the widget.
- void **draw_focus** (Fl_Boxtype t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void **draw_focus** (Fl_Boxtype t, int x, int y, int w, int h, Fl_Color bg) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- **Fl_Widget** (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

11.67.1 Detailed Description

Single thumb tab slider.

Figure 11.25 `Fl_Hor_Nice_Slider` with various `Fl::scheme()` values

The documentation for this class was generated from the following files:

- `Fl_Hor_Nice_Slider.H`
- `Fl_Slider.cxx`

11.68 FI_Hor_Slider Class Reference

Horizontal Slider class.

```
#include <Fl_Hor_Slider.H>
```

Inheritance diagram for `FI_Hor_Slider`:

Public Member Functions

- **FI_Hor_Slider** (int X, int Y, int W, int H, const char *l=0)
Creates a new [FI_Hor_Slider](#) widget using the given position, size, and label string.

Public Member Functions inherited from [FI_Slider](#)

- void **bounds** (double a, double b)
Sets the minimum (a) and maximum (b) values for the valuator widget.
- [FI_Slider](#) (int X, int Y, int W, int H, const char *L=0)
Creates a new [FI_Slider](#) widget using the given position, size, and label string.
- **FI_Slider** (uchar t, int X, int Y, int W, int H, const char *L)
Creates a new [FI_Slider](#) widget using the given type, position, size, and label string.
- int **handle** (int) [FL_OVERRIDE](#)
Handles the specified event.
- int **scrollvalue** (int pos, int size, int first, int total)
Sets the size and position of the sliding knob in the box.
- [FI_Boxtype](#) **slider** () const
Gets the slider box type.
- void **slider** ([FI_Boxtype](#) c)
Sets the slider box type.
- float **slider_size** () const
Get the dimensions of the moving piece of slider.
- void **slider_size** (double v)
Set the dimensions of the moving piece of slider.

Public Member Functions inherited from [FI_Valuator](#)

- void **bounds** (double a, double b)
Sets the minimum (a) and maximum (b) values for the valuator widget.
- double **clamp** (double)
Clamps the passed value to the valuator range.
- virtual int **format** (char *)
Uses internal rules to format the fields numerical value into the character array pointed to by the passed parameter.
- double **increment** (double, int)
Adds n times the step value to the passed value.
- double **maximum** () const

- Gets the maximum value for the valuator.*

 - void **maximum** (double a)

Sets the maximum value for the valuator.

 - double **minimum** () const

Gets the minimum value for the valuator.

 - void **minimum** (double a)

Sets the minimum value for the valuator.

 - void **precision** (int digits)

Sets the step value to $1.0 / 10^{\text{digits}}$.

 - void **range** (double a, double b)

Sets the minimum and maximum values for the valuator.

 - double **round** (double)

Round the passed value to the nearest step increment.

 - double **step** () const

Gets or sets the step value.

 - void **step** (double a, int b)

See double [FI_Valuator::step\(\)](#) const.

 - void **step** (double s)

See double [FI_Valuator::step\(\)](#) const.

 - void **step** (int a)

See double [FI_Valuator::step\(\)](#) const.

 - double **value** () const

Gets the floating point(double) value.

 - int **value** (double)

Sets the current value.

 - ~**FI_Valuator** () **FL_OVERRIDE**

Destructor is accessible despite protected constructor.

Public Member Functions inherited from [FI_Widget](#)

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
- Activates the widget.*

 - unsigned int **active** () const

Returns whether the widget is active.

 - int **active_r** () const

Returns whether the widget and all of its parents are active.
- [FI_Align](#) **align** () const
- Gets the label alignment.*

 - void **align** ([FI_Align](#) alignment)

Sets the label alignment.
- long **argument** () const
- Gets the current user data (long) argument that is passed to the callback function.*

 - void **argument** (long v)

Sets the current user data (long) argument that is passed to the callback function.
- virtual class [FI_Gl_Window](#) * **as_gl_window** ()
- Returns an [FI_Gl_Window](#) pointer if this widget is an [FI_Gl_Window](#).*

 - virtual class [FI_Gl_Window](#) const * **as_gl_window** () const
- virtual [FI_Group](#) * **as_group** ()
- Returns an [FI_Group](#) pointer if this widget is an [FI_Group](#).*

- virtual [FI_Group](#) const * **as_group** () const
- virtual [FI_Window](#) * **as_window** ()
 - Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).*
- virtual [FI_Window](#) const * **as_window** () const
- void **bind_deimage** ([FI_Image](#) *img)
 - Sets the image to use as part of the widget label when in the inactive state.*
- void **bind_deimage** (int f)
 - Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.*
- void **bind_image** ([FI_Image](#) *img)
 - Sets the image to use as part of the widget label when in the active state.*
- void **bind_image** (int f)
 - Bind the image to the widget, so the widget will delete the image when it is no longer needed.*
- [FI_Boxtype](#) **box** () const
 - Gets the box type of the widget.*
- void **box** ([FI_Boxtype](#) new_box)
 - Sets the box type for the widget.*
- [FI_Callback_p](#) **callback** () const
 - Gets the current callback function for the widget.*
- void **callback** ([FI_Callback](#) *cb)
 - Sets the current callback function for the widget.*
- void **callback** ([FI_Callback](#) *cb, [FI_Callback_User_Data](#) *p, bool auto_free)
 - Sets the current callback function and managed user data for the widget.*
- void **callback** ([FI_Callback](#) *cb, void *p)
 - Sets the current callback function and data for the widget.*
- void **callback** ([FI_Callback0](#) *cb)
 - Sets the current callback function for the widget.*
- void **callback** ([FI_Callback1](#) *cb, long p=0)
 - Sets the current callback function for the widget.*
- unsigned int **changed** () const
 - Checks if the widget value changed since the last callback.*
- void **clear_active** ()
 - Marks the widget as inactive without sending events or changing focus.*
- void **clear_changed** ()
 - Marks the value of the widget as unchanged.*
- void **clear_damage** (uchar c=0)
 - Clears or sets the damage flags.*
- void **clear_output** ()
 - Sets a widget to accept input.*
- void **clear_visible** ()
 - Hides the widget.*
- void **clear_visible_focus** ()
 - Disables keyboard focus navigation with this widget.*
- [FI_Color](#) **color** () const
 - Gets the background color of the widget.*
- void **color** ([FI_Color](#) bg)
 - Sets the background color of the widget.*
- void **color** ([FI_Color](#) bg, [FI_Color](#) sel)
 - Sets the background and selection color of the widget.*
- [FI_Color](#) **color2** () const
 - For back compatibility only.*
- void **color2** (unsigned a)

- For back compatibility only.*

 - int **contains** (const **FI_Widget** *w) const
Checks if w is a child of this widget.
 - void **copy_label** (const char *new_label)
Sets the current label.
 - void **copy_tooltip** (const char *text)
Sets the current tooltip text.
 - **uchar damage** () const
*Returns non-zero if **draw()** needs to be called.*
 - void **damage** (**uchar** c)
Sets the damage bits for the widget.
 - void **damage** (**uchar** c, int x, int y, int w, int h)
Sets the damage bits for an area inside the widget.
 - int **damage_resize** (int, int, int, int)
Internal use only.
 - void **deactivate** ()
Deactivates the widget.
 - **FI_Image** * **deimage** ()
Gets the image that is used as part of the widget label when in the inactive state.
 - const **FI_Image** * **deimage** () const
Gets the image that is used as part of the widget label when in the inactive state.
 - void **deimage** (**FI_Image** &img)
Sets the image to use as part of the widget label when in the inactive state.
 - void **deimage** (**FI_Image** *img)
Sets the image to use as part of the widget label when in the inactive state.
 - int **deimage_bound** () const
Returns whether the inactive image is managed by the widget.
 - void **do_callback** (**FI_Callback_Reason** reason=**FL_REASON_UNKNOWN**)
Calls the widget callback function with default arguments.
 - void **do_callback** (**FI_Widget** *widget, long arg, **FI_Callback_Reason** reason=**FL_REASON_UNKNOWN**)
Calls the widget callback function with arbitrary arguments.
 - void **do_callback** (**FI_Widget** *widget, void *arg=0, **FI_Callback_Reason** reason=**FL_REASON_UNKNOWN**)
Calls the widget callback function with arbitrary arguments.
 - void **draw_label** (int, int, int, int, **FI_Align**) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
 - int **h** () const
Gets the widget height.
 - virtual void **hide** ()
Makes a widget invisible.
 - int **horizontal_label_margin** ()
Get the spacing between the label and the horizontal edge of the widget.
 - void **horizontal_label_margin** (int px)
Set the spacing between the label and the horizontal edge of the widget.
 - **FI_Image** * **image** ()
Gets the image that is used as part of the widget label when in the active state.
 - const **FI_Image** * **image** () const
Gets the image that is used as part of the widget label when in the active state.
 - void **image** (**FI_Image** &img)
Sets the image to use as part of the widget label when in the active state.
 - void **image** (**FI_Image** *img)
Sets the image to use as part of the widget label when in the active state.

- int `image_bound` () const
Returns whether the image is managed by the widget.
- int `inside` (const `FL_Widget` *wgt) const
Checks if this widget is a child of wgt.
- int `is_label_copied` () const
Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const
Gets the current label text.
- void `label` (const char *text)
Sets the current label pointer.
- void `label` (`FL_Labeltype` a, const char *b)
Shortcut to set the label text and type in one call.
- int `label_image_spacing` ()
Return the gap size between the label and the image.
- void `label_image_spacing` (int gap)
Set the gap between the label and the image in pixels.
- `FL_Color` `labelcolor` () const
Gets the label color.
- void `labelcolor` (`FL_Color` c)
Sets the label color.
- `FL_Font` `labelfont` () const
Gets the font to use.
- void `labelfont` (`FL_Font` f)
Sets the font to use.
- `FL_Fonsize` `labelsize` () const
Gets the font size in pixels.
- void `labelsize` (`FL_Fonsize` pix)
Sets the font size in pixels.
- `FL_Labeltype` `labeltype` () const
Gets the label type.
- void `labeltype` (`FL_Labeltype` a)
Sets the label type.
- void `measure_label` (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- bool `needs_keyboard` () const
Returns whether this widget needs a keyboard.
- void `needs_keyboard` (bool needs)
Sets whether this widget needs a keyboard.
- unsigned int `output` () const
Returns if a widget is used for output only.
- `FL_Group` * `parent` () const
Returns a pointer to the parent widget.
- void `parent` (`FL_Group` *p)
Internal use only - "for hacks only".
- void `position` (int X, int Y)
Repositions the window or widget.
- void `redraw` ()
Schedules the drawing of the widget.
- void `redraw_label` ()
Schedules the drawing of the label.
- virtual void `resize` (int x, int y, int w, int h)

- Changes the size or position of the widget.*
- [FI_Color selection_color](#) () const
Gets the selection color.
- void [selection_color](#) ([FI_Color](#) a)
Sets the selection color.
- void [set_active](#) ()
Marks the widget as active without sending events or changing focus.
- void [set_changed](#) ()
Marks the value of the widget as changed.
- void [set_output](#) ()
Sets a widget to output only.
- void [set_visible](#) ()
Makes the widget visible.
- void [set_visible_focus](#) ()
Enables keyboard focus navigation with this widget.
- int [shortcut_label](#) () const
Returns whether the widget's label uses '&' to indicate shortcuts.
- void [shortcut_label](#) (int value)
Sets whether the widget's label uses '&' to indicate shortcuts.
- virtual void [show](#) ()
Makes a widget visible.
- void [size](#) (int W, int H)
Changes the size of the widget.
- int [take_focus](#) ()
Gives the widget the keyboard focus.
- unsigned int [takeevents](#) () const
Returns if the widget is able to take events.
- int [test_shortcut](#) ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * [tooltip](#) () const
Gets the current tooltip text.
- void [tooltip](#) (const char *text)
Sets the current tooltip text.
- [FI_Window](#) * [top_window](#) () const
Returns a pointer to the top-level window for the widget.
- [FI_Window](#) * [top_window_offset](#) (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- [uchar](#) [type](#) () const
Gets the widget type.
- void [type](#) ([uchar](#) t)
Sets the widget type.
- int [use_accents_menu](#) ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * [user_data](#) () const
Gets the user data for this widget.
- void [user_data](#) ([FI_Callback_User_Data](#) *v, bool auto_free)
Sets the user data for this widget.
- void [user_data](#) (void *v)
Sets the user data for this widget.
- int [vertical_label_margin](#) ()
Get the spacing between the label and the vertical edge of the widget.

- void `vertical_label_margin` (int px)
Set the spacing between the label and the vertical edge of the widget.
- unsigned int `visible` () const
Returns whether a widget is visible.
- unsigned int `visible_focus` () const
Checks whether this widget has a visible focus.
- void `visible_focus` (int v)
Modifies keyboard focus navigation.
- int `visible_r` () const
Returns whether a widget and all its parents are visible.
- int `w` () const
Gets the widget width.
- `FL_When` `when` () const
Returns the conditions under which the callback is called.
- void `when` (uchar i)
Sets the flags used to decide when a callback is called.
- `FL_Window` * `window` () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int `x` () const
Gets the widget position in its window.
- int `y` () const
Gets the widget position in its window.
- virtual `~FL_Widget` ()
Destroys the widget.

Additional Inherited Members

Static Public Member Functions inherited from `FL_Widget`

- static void `default_callback` (`FL_Widget` *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int `label_shortcut` (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int `test_shortcut` (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from `FL_Widget`

- enum {
`INACTIVE` = 1<<0 , `INVISIBLE` = 1<<1 , `OUTPUT` = 1<<2 , `NOBORDER` = 1<<3 ,
`FORCE_POSITION` = 1<<4 , `NON_MODAL` = 1<<5 , `SHORTCUT_LABEL` = 1<<6 , `CHANGED` = 1<<7
, `OVERRIDE` = 1<<8 , `VISIBLE_FOCUS` = 1<<9 , `COPIED_LABEL` = 1<<10 , `CLIP_CHILDREN` = 1<<11
, `MENU_WINDOW` = 1<<12 , `TOOLTIP_WINDOW` = 1<<13 , `MODAL` = 1<<14 , `NO_OVERLAY` = 1<<15
, `GROUP_RELATIVE` = 1<<16 , `COPIED_TOOLTIP` = 1<<17 , `FULLSCREEN` = 1<<18 , `MAC_USE_ACCENTS_MENU`
= 1<<19 ,
`NEEDS_KEYBOARD` = 1<<20 , `IMAGE_BOUND` = 1<<21 , `DEIMAGE_BOUND` = 1<<22 ,
`AUTO_DELETE_USER_DATA` = 1<<23 ,
`MAXIMIZED` = 1<<24 , `POPUP` = 1<<25 , `USERFLAG3` = 1<<29 , `USERFLAG2` = 1<<30 ,
`USERFLAG1` = 1<<31 }
flags possible values enumeration.

Protected Member Functions inherited from [FL_Slider](#)

- void [draw](#) () [FL_OVERRIDE](#)
Draws the widget.
- void **draw** (int, int, int, int)
- int **handle** (int, int, int, int, int)

Protected Member Functions inherited from [FL_Valuator](#)

- [FL_Valuator](#) (int X, int Y, int W, int H, const char *L)
Creates a new [FL_Valuator](#) widget using the given position, size, and label string.
- void **handle_drag** (double newvalue)
Called during a drag operation, after an FL_WHEN_CHANGED event is received and before the callback.
- void **handle_push** ()
Stores the current value in the previous value.
- void **handle_release** ()
Called after an FL_WHEN_RELEASE event is received and before the callback.
- int **horizontal** () const
Tells if the valuator is an FL_HORIZONTAL one.
- double **previous_value** () const
Gets the previous floating point value before an event changed it.
- void **set_value** (double v)
Sets the current floating point value.
- double **softclamp** (double)
Clamps the value, but accepts v if the previous value is not already out of range.
- virtual void [value_damage](#) ()
Asks for partial redraw.

Protected Member Functions inherited from [FL_Widget](#)

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** ([FL_Boxtype](#) t, [FL_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** ([FL_Boxtype](#) t, int x, int y, int w, int h, [FL_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const
Draws a focus rectangle around the widget.
- void **draw_focus** ([FL_Boxtype](#) t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void **draw_focus** ([FL_Boxtype](#) t, int x, int y, int w, int h, [FL_Color](#) bg) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [FL_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.

- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

11.68.1 Detailed Description

Horizontal Slider class.

See also

class [Fl_Slider](#).

The documentation for this class was generated from the following files:

- [Fl_Hor_Slider.H](#)
- [Fl_Slider.cxx](#)

11.69 Fl_Hor_Value_Slider Class Reference

Inheritance diagram for [Fl_Hor_Value_Slider](#):

Public Member Functions

- **Fl_Hor_Value_Slider** (int X, int Y, int W, int H, const char *l=0)

Public Member Functions inherited from [Fl_Value_Slider](#)

- [Fl_Value_Slider](#) (int x, int y, int w, int h, const char *l=0)
Creates a new [Fl_Value_Slider](#) widget using the given position, size, and label string.
- int [handle](#) (int) [FL_OVERRIDE](#)
Handles the specified event.
- [Fl_Color](#) **textcolor** () const
Gets the color of the text in the value box.
- void **textcolor** ([Fl_Color](#) s)

- Sets the color of the text in the value box.*
- **FI_Font** **textfont** () const
Gets the typeface of the text in the value box.
- void **textfont** (FI_Font s)
Sets the typeface of the text in the value box.
- **FI_Fontsize** **textsize** () const
Gets the size of the text in the value box.
- void **textsize** (FI_Fontsize s)
Sets the size of the text in the value box.
- int **value_height** () const
Gets the height of the value box in pixels (vertical mode only).
- void **value_height** (int s)
Sets the height of the value box in pixels (vertical mode only).
- int **value_width** () const
Gets the width of the value box in pixels (horizontal mode only).
- void **value_width** (int s)
Sets the width of the value box in pixels (horizontal mode only).

Public Member Functions inherited from FI_Slider

- void **bounds** (double a, double b)
Sets the minimum (a) and maximum (b) values for the valuator widget.
- **FI_Slider** (int X, int Y, int W, int H, const char *L=0)
Creates a new FI_Slider widget using the given position, size, and label string.
- **FI_Slider** (uchar t, int X, int Y, int W, int H, const char *L)
Creates a new FI_Slider widget using the given type, position, size, and label string.
- int **scrollvalue** (int pos, int size, int first, int total)
Sets the size and position of the sliding knob in the box.
- **FI_Boxtype** **slider** () const
Gets the slider box type.
- void **slider** (FI_Boxtype c)
Sets the slider box type.
- float **slider_size** () const
Get the dimensions of the moving piece of slider.
- void **slider_size** (double v)
Set the dimensions of the moving piece of slider.

Public Member Functions inherited from FI_Valuator

- void **bounds** (double a, double b)
Sets the minimum (a) and maximum (b) values for the valuator widget.
- double **clamp** (double)
Clamps the passed value to the valuator range.
- virtual int **format** (char *)
Uses internal rules to format the fields numerical value into the character array pointed to by the passed parameter.
- double **increment** (double, int)
Adds n times the step value to the passed value.
- double **maximum** () const
Gets the maximum value for the valuator.
- void **maximum** (double a)
Sets the maximum value for the valuator.
- double **minimum** () const

- Gets the minimum value for the valuator.*
- void **minimum** (double a)
 - Sets the minimum value for the valuator.*
- void **precision** (int digits)
 - Sets the step value to $1.0 / 10^{\text{digits}}$.*
- void **range** (double a, double b)
 - Sets the minimum and maximum values for the valuator.*
- double **round** (double)
 - Round the passed value to the nearest step increment.*
- double **step** () const
 - Gets or sets the step value.*
- void **step** (double a, int b)
 - See double [FI_Valuator::step\(\)](#) const.*
- void **step** (double s)
 - See double [FI_Valuator::step\(\)](#) const.*
- void **step** (int a)
 - See double [FI_Valuator::step\(\)](#) const.*
- double **value** () const
 - Gets the floating point(double) value.*
- int **value** (double)
 - Sets the current value.*
- **~FI_Valuator** () **FL_OVERRIDE**
 - Destructor is accessible despite protected constructor.*

Public Member Functions inherited from [FI_Widget](#)

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
 - Activates the widget.*
- unsigned int **active** () const
 - Returns whether the widget is active.*
- int **active_r** () const
 - Returns whether the widget and all of its parents are active.*
- [FI_Align](#) **align** () const
 - Gets the label alignment.*
- void **align** ([FI_Align](#) alignment)
 - Sets the label alignment.*
- long **argument** () const
 - Gets the current user data (long) argument that is passed to the callback function.*
- void **argument** (long v)
 - Sets the current user data (long) argument that is passed to the callback function.*
- virtual class [FI_Gl_Window](#) * **as_gl_window** ()
 - Returns an [FI_Gl_Window](#) pointer if this widget is an [FI_Gl_Window](#).*
- virtual class [FI_Gl_Window](#) const * **as_gl_window** () const
- virtual [FI_Group](#) * **as_group** ()
 - Returns an [FI_Group](#) pointer if this widget is an [FI_Group](#).*
- virtual [FI_Group](#) const * **as_group** () const
- virtual [FI_Window](#) * **as_window** ()
 - Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).*
- virtual [FI_Window](#) const * **as_window** () const

- void [bind_deimage](#) ([FI_Image](#) *img)
Sets the image to use as part of the widget label when in the inactive state.
- void [bind_deimage](#) (int f)
Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.
- void [bind_image](#) ([FI_Image](#) *img)
Sets the image to use as part of the widget label when in the active state.
- void [bind_image](#) (int f)
Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- [FI_Boxtype](#) [box](#) () const
Gets the box type of the widget.
- void [box](#) ([FI_Boxtype](#) new_box)
Sets the box type for the widget.
- [FI_Callback_p](#) [callback](#) () const
Gets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb, [FI_Callback_User_Data](#) *p, bool auto_free)
Sets the current callback function and managed user data for the widget.
- void [callback](#) ([FI_Callback](#) *cb, void *p)
Sets the current callback function and data for the widget.
- void [callback](#) ([FI_Callback0](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback1](#) *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int [changed](#) () const
Checks if the widget value changed since the last callback.
- void [clear_active](#) ()
Marks the widget as inactive without sending events or changing focus.
- void [clear_changed](#) ()
Marks the value of the widget as unchanged.
- void [clear_damage](#) ([uchar](#) c=0)
Clears or sets the damage flags.
- void [clear_output](#) ()
Sets a widget to accept input.
- void [clear_visible](#) ()
Hides the widget.
- void [clear_visible_focus](#) ()
Disables keyboard focus navigation with this widget.
- [FI_Color](#) [color](#) () const
Gets the background color of the widget.
- void [color](#) ([FI_Color](#) bg)
Sets the background color of the widget.
- void [color](#) ([FI_Color](#) bg, [FI_Color](#) sel)
Sets the background and selection color of the widget.
- [FI_Color](#) [color2](#) () const
For back compatibility only.
- void [color2](#) (unsigned a)
For back compatibility only.
- int [contains](#) (const [FI_Widget](#) *w) const
Checks if w is a child of this widget.
- void [copy_label](#) (const char *new_label)

- Sets the current label.*

 - void `copy_tooltip` (const char *text)

Sets the current tooltip text.
- `uchar damage` () const

Returns non-zero if `draw()` needs to be called.
- void `damage` (uchar c)

Sets the damage bits for the widget.
- void `damage` (uchar c, int x, int y, int w, int h)

Sets the damage bits for an area inside the widget.
- int `damage_resize` (int, int, int, int)

Internal use only.
- void `deactivate` ()

Deactivates the widget.
- `FL_Image * deimage` ()

Gets the image that is used as part of the widget label when in the inactive state.
- const `FL_Image * deimage` () const

Gets the image that is used as part of the widget label when in the inactive state.
- void `deimage` (FL_Image &img)

Sets the image to use as part of the widget label when in the inactive state.
- void `deimage` (FL_Image *img)

Sets the image to use as part of the widget label when in the inactive state.
- int `deimage_bound` () const

Returns whether the inactive image is managed by the widget.
- void `do_callback` (FL_Callback_Reason reason=FL_REASON_UNKNOWN)

Calls the widget callback function with default arguments.
- void `do_callback` (FL_Widget *widget, long arg, FL_Callback_Reason reason=FL_REASON_UNKNOWN)

Calls the widget callback function with arbitrary arguments.
- void `do_callback` (FL_Widget *widget, void *arg=0, FL_Callback_Reason reason=FL_REASON_UNKNOWN)

Calls the widget callback function with arbitrary arguments.
- void `draw_label` (int, int, int, int, FL_Align) const

Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const

Gets the widget height.
- virtual void `hide` ()

Makes a widget invisible.
- int `horizontal_label_margin` ()

Get the spacing between the label and the horizontal edge of the widget.
- void `horizontal_label_margin` (int px)

Set the spacing between the label and the horizontal edge of the widget.
- `FL_Image * image` ()

Gets the image that is used as part of the widget label when in the active state.
- const `FL_Image * image` () const

Gets the image that is used as part of the widget label when in the active state.
- void `image` (FL_Image &img)

Sets the image to use as part of the widget label when in the active state.
- void `image` (FL_Image *img)

Sets the image to use as part of the widget label when in the active state.
- int `image_bound` () const

Returns whether the image is managed by the widget.
- int `inside` (const FL_Widget *wgt) const

Checks if this widget is a child of wgt.

- `int is_label_copied () const`
Returns whether the current label was assigned with `copy_label()`.
- `const char * label () const`
Gets the current label text.
- `void label (const char *text)`
Sets the current label pointer.
- `void label (FI_Labeltype a, const char *b)`
Shortcut to set the label text and type in one call.
- `int label_image_spacing ()`
Return the gap size between the label and the image.
- `void label_image_spacing (int gap)`
Set the gap between the label and the image in pixels.
- `FI_Color labelcolor () const`
Gets the label color.
- `void labelcolor (FI_Color c)`
Sets the label color.
- `FI_Font labelfont () const`
Gets the font to use.
- `void labelfont (FI_Font f)`
Sets the font to use.
- `FI_Fonsize labelsz () const`
Gets the font size in pixels.
- `void labelsz (FI_Fonsize pix)`
Sets the font size in pixels.
- `FI_Labeltype labeltype () const`
Gets the label type.
- `void labeltype (FI_Labeltype a)`
Sets the label type.
- `void measure_label (int &ww, int &hh) const`
Sets width ww and height hh accordingly with the label size.
- `bool needs_keyboard () const`
Returns whether this widget needs a keyboard.
- `void needs_keyboard (bool needs)`
Sets whether this widget needs a keyboard.
- `unsigned int output () const`
Returns if a widget is used for output only.
- `FI_Group * parent () const`
Returns a pointer to the parent widget.
- `void parent (FI_Group *p)`
Internal use only - "for hacks only".
- `void position (int X, int Y)`
Repositions the window or widget.
- `void redraw ()`
Schedules the drawing of the widget.
- `void redraw_label ()`
Schedules the drawing of the label.
- `virtual void resize (int x, int y, int w, int h)`
Changes the size or position of the widget.
- `FI_Color selection_color () const`
Gets the selection color.
- `void selection_color (FI_Color a)`

- Sets the selection color.*

 - void `set_active` ()
- Marks the widget as active without sending events or changing focus.*

 - void `set_changed` ()
- Marks the value of the widget as changed.*

 - void `set_output` ()
- Sets a widget to output only.*

 - void `set_visible` ()
- Makes the widget visible.*

 - void `set_visible_focus` ()
- Enables keyboard focus navigation with this widget.*

 - int `shortcut_label` () const
- Returns whether the widget's label uses '&' to indicate shortcuts.*

 - void `shortcut_label` (int value)
- Sets whether the widget's label uses '&' to indicate shortcuts.*

 - virtual void `show` ()
- Makes a widget visible.*

 - void `size` (int W, int H)
- Changes the size of the widget.*

 - int `take_focus` ()
- Gives the widget the keyboard focus.*

 - unsigned int `takeevents` () const
- Returns if the widget is able to take events.*

 - int `test_shortcut` ()
- Returns true if the widget's label contains the entered '&x' shortcut.*

 - const char * `tooltip` () const
- Gets the current tooltip text.*

 - void `tooltip` (const char *text)
- Sets the current tooltip text.*

 - `Fl_Window` * `top_window` () const
- Returns a pointer to the top-level window for the widget.*

 - `Fl_Window` * `top_window_offset` (int &xoff, int &yoff) const
- Finds the x/y offset of the current widget relative to the top-level window.*

 - `uchar` `type` () const
- Gets the widget type.*

 - void `type` (`uchar` t)
- Sets the widget type.*

 - int `use_accents_menu` ()
- Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.*

 - void * `user_data` () const
- Gets the user data for this widget.*

 - void `user_data` (`Fl_Callback_User_Data` *v, bool auto_free)
- Sets the user data for this widget.*

 - void `user_data` (void *v)
- Sets the user data for this widget.*

 - int `vertical_label_margin` ()
- Get the spacing between the label and the vertical edge of the widget.*

 - void `vertical_label_margin` (int px)
- Set the spacing between the label and the vertical edge of the widget.*

 - unsigned int `visible` () const
- Returns whether a widget is visible.*

- unsigned int `visible_focus` () const
Checks whether this widget has a visible focus.
- void `visible_focus` (int v)
Modifies keyboard focus navigation.
- int `visible_r` () const
Returns whether a widget and all its parents are visible.
- int `w` () const
Gets the widget width.
- `FI_When` when () const
Returns the conditions under which the callback is called.
- void `when` (uchar i)
Sets the flags used to decide when a callback is called.
- `FI_Window` * `window` () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int `x` () const
Gets the widget position in its window.
- int `y` () const
Gets the widget position in its window.
- virtual `~FI_Widget` ()
Destroys the widget.

Additional Inherited Members

Static Public Member Functions inherited from `FI_Widget`

- static void `default_callback` (`FI_Widget` *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int `label_shortcut` (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int `test_shortcut` (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from `FI_Widget`

- enum {
`INACTIVE` = 1<<0 , `INVISIBLE` = 1<<1 , `OUTPUT` = 1<<2 , `NOBORDER` = 1<<3 ,
`FORCE_POSITION` = 1<<4 , `NON_MODAL` = 1<<5 , `SHORTCUT_LABEL` = 1<<6 , `CHANGED` = 1<<7
, `OVERRIDE` = 1<<8 , `VISIBLE_FOCUS` = 1<<9 , `COPIED_LABEL` = 1<<10 , `CLIP_CHILDREN` = 1<<11
, `MENU_WINDOW` = 1<<12 , `TOOLTIP_WINDOW` = 1<<13 , `MODAL` = 1<<14 , `NO_OVERLAY` = 1<<15
, `GROUP_RELATIVE` = 1<<16 , `COPIED_TOOLTIP` = 1<<17 , `FULLSCREEN` = 1<<18 , `MAC_USE_ACCENTS_MENU`
= 1<<19 ,
`NEEDS_KEYBOARD` = 1<<20 , `IMAGE_BOUND` = 1<<21 , `DEIMAGE_BOUND` = 1<<22 ,
`AUTO_DELETE_USER_DATA` = 1<<23 ,
`MAXIMIZED` = 1<<24 , `POPUP` = 1<<25 , `USERFLAG3` = 1<<29 , `USERFLAG2` = 1<<30 ,
`USERFLAG1` = 1<<31 }
flags possible values enumeration.

Protected Member Functions inherited from `FI_Value_Slider`

- void `draw` () `FL_OVERRIDE`
Draws the widget.

Protected Member Functions inherited from [FI_Slider](#)

- void **draw** (int, int, int, int)
- int **handle** (int, int, int, int, int)

Protected Member Functions inherited from [FI_Valuator](#)

- [FI_Valuator](#) (int X, int Y, int W, int H, const char *L)
Creates a new [FI_Valuator](#) widget using the given position, size, and label string.
- void **handle_drag** (double newvalue)
Called during a drag operation, after an FL_WHEN_CHANGED event is received and before the callback.
- void **handle_push** ()
Stores the current value in the previous value.
- void **handle_release** ()
Called after an FL_WHEN_RELEASE event is received and before the callback.
- int **horizontal** () const
Tells if the valuator is an FL_HORIZONTAL one.
- double **previous_value** () const
Gets the previous floating point value before an event changed it.
- void **set_value** (double v)
Sets the current floating point value.
- double **softclamp** (double)
Clamps the value, but accepts v if the previous value is not already out of range.
- virtual void **value_damage** ()
Asks for partial redraw.

Protected Member Functions inherited from [FI_Widget](#)

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** ([FI_Boxtype](#) t, [FI_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const
Draws a focus rectangle around the widget.
- void **draw_focus** ([FI_Boxtype](#) t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void **draw_focus** ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) bg) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [FI_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.

- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

The documentation for this class was generated from the following files:

- FI_Hor_Value_Slider.H
- FI_Value_Slider.cxx

11.70 FI_ICO_Image Class Reference

The [FI_ICO_Image](#) class supports loading, caching, and drawing of Windows icon (.ico) files.

```
#include <FI_ICO_Image.H>
```

Inheritance diagram for FI_ICO_Image:

Classes

- struct [IconDirEntry](#)
Windows ICONDIRENTRY structure.

Public Member Functions

- [FI_ICO_Image](#) (const char *filename, int id=-1, const unsigned char *data=NULL, const size_t datasize=0)
Loads the named icon image from the given .ico filename or from memory.
- const [IconDirEntry](#) * **icondirentry** () const
Returns the array of [idcount\(\)](#) loaded [IconDirEntry](#) structures.
- int **idcount** () const
Returns the number of icons of various resolutions present in the ICO object.
- **~FI_ICO_Image** ()
Destructor.

Public Member Functions inherited from [FI_BMP_Image](#)

- [FI_BMP_Image](#) (const char *filename)
This constructor loads the named BMP image from the given BMP filename.
- [FI_BMP_Image](#) (const char *imagenam, const unsigned char *data, const long length=-1)
This constructor loads a BMP image from memory.

Public Member Functions inherited from [FI_RGB_Image](#)

- virtual [FI_SVG_Image](#) * [as_svg_image](#) ()
Returns whether an image is an [FI_SVG_Image](#) or not.
- int [cache_h](#) ()
- int [cache_w](#) ()
- void [color_average](#) ([FI_Color](#) c, float i) [FL_OVERRIDE](#)
The [color_average\(\)](#) method averages the colors in the image with the provided FLTK color value.
- [FI_Image](#) * [copy](#) () const
- [FI_Image](#) * [copy](#) (int W, int H) const [FL_OVERRIDE](#)
Creates a resized copy of the image.
- void [desaturate](#) () [FL_OVERRIDE](#)
The [desaturate\(\)](#) method converts an image to grayscale.
- void [draw](#) (int X, int Y)
- void [draw](#) (int X, int Y, int W, int H, int cx=0, int cy=0) [FL_OVERRIDE](#)
Draws the image to the current drawing surface with a bounding box.
- [FI_RGB_Image](#) (const [FI_Pixmap](#) *pxm, [FI_Color](#) bg=[FL_GRAY](#))
The constructor creates a new RGBA image from the specified [FI_Pixmap](#).
- [FI_RGB_Image](#) (const [uchar](#) *bits, int bits_length, int W, int H, int D, int LD)
The constructor creates a new image from the specified data.
- [FI_RGB_Image](#) (const [uchar](#) *bits, int W, int H, int D=3, int LD=0)
The constructor creates a new image from the specified data.
- void [label](#) ([FI_Menu_Item](#) *m) [FL_OVERRIDE](#)
This method is an obsolete way to set the image attribute of a menu item.
- void [label](#) ([FI_Widget](#) *w) [FL_OVERRIDE](#)
This method is an obsolete way to set the image attribute of a widget or menu item.
- virtual void [normalize](#) ()
Makes sure the object is fully initialized.
- void [uncache](#) () [FL_OVERRIDE](#)
If the image has been cached for display, delete the cache data.
- ~[FI_RGB_Image](#) () [FL_OVERRIDE](#)
The destructor frees all memory and server resources that are used by the image.

Public Member Functions inherited from [FI_Image](#)

- virtual class [FI_Shared_Image](#) * [as_shared_image](#) ()
Returns whether an image is an [FI_Shared_Image](#) or not.
- [FI_Image](#) * [copy](#) () const
Creates a copy of the image in the same size.
- int [count](#) () const
Returns the number of data values associated with the image.
- int [d](#) () const
Returns the image depth.
- const char *const * [data](#) () const
Returns a pointer to the current image data array.
- int [data_h](#) () const
Returns the height of the image data.
- int [data_w](#) () const
Returns the width of the image data.
- void [draw](#) (int X, int Y)
Draws the image to the current drawing surface.
- int [fail](#) () const

- Returns a value that is not 0 if there is currently no image available.*
- [FI_Image](#) (int W, int H, int D)
 - The constructor creates an empty image with the specified width, height, and depth.*
- int [h](#) () const
 - Returns the current image drawing height in FLTK units.*
- void [inactive](#) ()
 - The [inactive\(\)](#) method calls [color_average\(FI_BACKGROUND_COLOR, 0.33f\)](#) to produce an image that appears grayed out.*
- int [ld](#) () const
 - Returns the current line data size in bytes.*
- virtual void [release](#) ()
 - Releases an [FI_Image](#) - the same as 'delete this'.*
- virtual void [scale](#) (int width, int height, int proportional=1, int can_expand=0)
 - Sets the drawing size of the image.*
- int [w](#) () const
 - Returns the current image drawing width in FLTK units.*
- virtual [~FI_Image](#) ()
 - The destructor is a virtual method that frees all memory used by the image.*

Additional Inherited Members

Static Public Member Functions inherited from [FI_RGB_Image](#)

- static size_t [max_size](#) ()
 - Returns the maximum allowed image size in bytes when creating an [FI_RGB_Image](#) object.*
- static void [max_size](#) (size_t size)
 - Sets the maximum allowed image size in bytes when creating an [FI_RGB_Image](#) object.*

Static Public Member Functions inherited from [FI_Image](#)

- static [FI_Labeltype](#) [define_FL_IMAGE_LABEL](#) ()
- static [FI_RGB_Scaling](#) [RGB_scaling](#) ()
 - Returns the currently used RGB image scaling method.*
- static void [RGB_scaling](#) ([FI_RGB_Scaling](#))
 - Sets the RGB image scaling method used for copy(int, int).*
- static [FI_RGB_Scaling](#) [scaling_algorithm](#) ()
 - Gets what algorithm is used when resizing a source image to draw it.*
- static void [scaling_algorithm](#) ([FI_RGB_Scaling](#) algorithm)
 - Sets what algorithm is used when resizing a source image to draw it.*

Public Attributes inherited from [FI_RGB_Image](#)

- int [alloc_array](#)
 - If non-zero, the object's data array is delete[]'d when deleting the object.*
- const [uchar](#) * [array](#)
 - Points to the start of the object's data array.*

Static Public Attributes inherited from [FI_Image](#)

- static const int [ERR_FILE_ACCESS](#) = -2
- static const int [ERR_FORMAT](#) = -3
- static const int [ERR_MEMORY_ACCESS](#) = -4
- static const int [ERR_NO_IMAGE](#) = -1
- static bool [register_images_done](#) = false
 - True after [fl_register_images\(\)](#) was called, false before.*

Protected Member Functions inherited from [FI_BMP_Image](#)

- void **load_bmp_** (class [FI_Image_Reader](#) &rdr, int ico_height=0, int ico_width=0)

Protected Member Functions inherited from [FI_Image](#)

- void **d** (int D)
Sets the current image depth.
- void **data** (const char *const *p, int c)
Sets the current data pointer and count of pointers in the array.
- void **draw_empty** (int X, int Y)
The protected method [draw_empty\(\)](#) draws a box with an X in it.
- int **draw_scaled** (int X, int Y, int W, int H)
Draw the image to the current drawing surface rescaled to a given width and height.
- void **h** (int H)
Sets the height of the image data.
- void **ld** (int LD)
Sets the current line data size in bytes.
- void **w** (int W)
Sets the width of the image data.

Static Protected Member Functions inherited from [FI_Image](#)

- static void **labeltype** (const [FI_Label](#) *lo, int lx, int ly, int lw, int lh, [FI_Align](#) la)
- static void **measure** (const [FI_Label](#) *lo, int &lw, int &lh)

11.70.1 Detailed Description

The [FI_ICO_Image](#) class supports loading, caching, and drawing of Windows icon (.ico) files.

11.70.2 Constructor & Destructor Documentation

11.70.2.1 [FI_ICO_Image](#)()

```
FI_ICO_Image::FI_ICO_Image (
    const char * filename,
    int id = -1,
    const unsigned char * data = NULL,
    const size_t datasize = 0)
```

Loads the named icon image from the given .ico filename or from memory.

Parameters

<i>filename</i>	Name of a .ico file, or of the in-memory image
<i>id</i>	When id is -1 (default), the highest-resolution icon is loaded; when id 0, load the icon with this ID; when id = -2, load all IconDirEntry structures but no image.
<i>data</i>	NULL, or in-memory icon data
<i>datasize</i>	Size in bytes of the <i>data</i> byte array (used when <i>data</i> is not NULL)

The documentation for this class was generated from the following files:

- [FI_ICO_Image.H](#)
- [FI_ICO_Image.cxx](#)

11.71 Fl_Image Class Reference

Base class for image caching, scaling and drawing.

```
#include <Fl_Image.H>
```

Inheritance diagram for Fl_Image:

Public Member Functions

- virtual class `Fl_Shared_Image *` `as_shared_image ()`
Returns whether an image is an `Fl_Shared_Image` or not.
- virtual void `color_average (Fl_Color c, float i)`
The `color_average()` method averages the colors in the image with the provided FLTK color value.
- `Fl_Image *` `copy ()` const
Creates a copy of the image in the same size.
- virtual `Fl_Image *` `copy (int W, int H)` const
Creates a resized copy of the image.
- int `count ()` const
Returns the number of data values associated with the image.
- int `d ()` const
Returns the image depth.
- const char *const * `data ()` const
Returns a pointer to the current image data array.
- int `data_h ()` const
Returns the height of the image data.
- int `data_w ()` const
Returns the width of the image data.
- virtual void `desaturate ()`
The `desaturate()` method converts an image to grayscale.
- void `draw (int X, int Y)`
Draws the image to the current drawing surface.
- virtual void `draw (int X, int Y, int W, int H, int cx=0, int cy=0)`
Draws the image to the current drawing surface with a bounding box.
- int `fail ()` const
Returns a value that is not 0 if there is currently no image available.
- `Fl_Image` (int W, int H, int D)
The constructor creates an empty image with the specified width, height, and depth.
- int `h ()` const
Returns the current image drawing height in FLTK units.
- void `inactive ()`

The *inactive()* method calls *color_average(FL_BACKGROUND_COLOR, 0.33f)* to produce an image that appears grayed out.

- virtual void *label* (*FL_Menu_Item* *m)
This method is an obsolete way to set the image attribute of a menu item.
- virtual void *label* (*FL_Widget* *w)
This method is an obsolete way to set the image attribute of a widget or menu item.
- int *ld* () const
Returns the current line data size in bytes.
- virtual void *release* ()
Releases an FL_Image - the same as 'delete this'.
- virtual void *scale* (int width, int height, int proportional=1, int can_expand=0)
Sets the drawing size of the image.
- virtual void *uncache* ()
If the image has been cached for display, delete the cache data.
- int *w* () const
Returns the current image drawing width in FLTK units.
- virtual ~*FL_Image* ()
The destructor is a virtual method that frees all memory used by the image.

Static Public Member Functions

- static *FL_Labeltype* *define_FL_IMAGE_LABEL* ()
- static *FL_RGB_Scaling* *RGB_scaling* ()
Returns the currently used RGB image scaling method.
- static void *RGB_scaling* (*FL_RGB_Scaling*)
Sets the RGB image scaling method used for copy(int, int).
- static *FL_RGB_Scaling* *scaling_algorithm* ()
Gets what algorithm is used when resizing a source image to draw it.
- static void *scaling_algorithm* (*FL_RGB_Scaling* algorithm)
Sets what algorithm is used when resizing a source image to draw it.

Static Public Attributes

- static const int *ERR_FILE_ACCESS* = -2
- static const int *ERR_FORMAT* = -3
- static const int *ERR_MEMORY_ACCESS* = -4
- static const int *ERR_NO_IMAGE* = -1
- static bool *register_images_done* = false
True after fl_register_images() was called, false before.

Protected Member Functions

- void *d* (int D)
Sets the current image depth.
- void *data* (const char *const *p, int c)
Sets the current data pointer and count of pointers in the array.
- void *draw_empty* (int X, int Y)
The protected method draw_empty() draws a box with an X in it.
- int *draw_scaled* (int X, int Y, int W, int H)
Draw the image to the current drawing surface rescaled to a given width and height.
- void *h* (int H)
Sets the height of the image data.
- void *ld* (int LD)

Sets the current line data size in bytes.

- void [w](#) (int W)

Sets the width of the image data.

Static Protected Member Functions

- static void **labeltype** (const [Fl_Label](#) *lo, int lx, int ly, int lw, int lh, [Fl_Align](#) la)
- static void **measure** (const [Fl_Label](#) *lo, int &lw, int &lh)

Friends

- class [Fl_Graphics_Driver](#)

11.71.1 Detailed Description

Base class for image caching, scaling and drawing.

[Fl_Image](#) is the base class used for caching, scaling and drawing all kinds of images in FLTK. This class keeps track of common image data such as the pixels, colormap, width, height, and depth. Virtual methods are used to provide type-specific image handling.

Each image possesses two (width, height) pairs:

1. The width and height of the raw image data are returned by [data_w\(\)](#) and [data_h\(\)](#). These values are set when the image is created and remain unchanged.
2. The width and height of the area filled by the image when it gets drawn are returned by [w\(\)](#) and [h\(\)](#). These values are equal to [data_w\(\)](#) and [data_h\(\)](#) when the image is created and can be changed by the [scale\(\)](#) member function.

Since the [Fl_Image](#) class does not support image drawing by itself, calling the [Fl_Image::draw\(\)](#) method results in a box with an X in it being drawn instead.

11.71.2 Constructor & Destructor Documentation

11.71.2.1 Fl_Image()

```
Fl_Image::Fl_Image (
    int W,
    int H,
    int D)
```

The constructor creates an empty image with the specified width, height, and depth.

The width and height are in pixels. The depth is 0 for bitmaps, 1 for pixmap (colormap) images, and 1 to 4 for color images.

11.71.3 Member Function Documentation

11.71.3.1 as_shared_image()

```
virtual class Fl\_Shared\_Image * Fl_Image::as_shared_image () [inline], [virtual]
```

Returns whether an image is an [Fl_Shared_Image](#) or not.

This virtual method returns a pointer to an [Fl_Shared_Image](#) if this object is an instance of [Fl_Shared_Image](#) or NULL if not. This can be used to detect if a given [Fl_Image](#) object is a shared image, i.e. derived from [Fl_Shared_Image](#).

Since

1.4.0

Reimplemented in [Fl_Shared_Image](#).

11.71.3.2 color_average()

```
void Fl_Image::color_average (
    Fl_Color c,
    float i) [virtual]
```

The `color_average()` method averages the colors in the image with the provided FLTK color value.

The first argument specifies the FLTK color to be used.

The second argument specifies the amount of the original image to combine with the color, so a value of 1.0 results in no color blend, and a value of 0.0 results in a constant image of the specified color.

An internal copy is made of the original image data before changes are applied, to avoid modifying the original image data in memory.

Reimplemented in [Fl_Anim_GIF_Image](#), [Fl_Pixmap](#), [Fl_RGB_Image](#), [Fl_Shared_Image](#), [Fl_SVG_Image](#), and [Fl_Tiled_Image](#).

11.71.3.3 copy() [1/2]

```
Fl_Image * Fl_Image::copy () const [inline]
```

Creates a copy of the image in the same size.

The new image should be released when you are done with it.

This does exactly the same as '[Fl_Image::copy\(int W, int H\) const](#)' where `W` and `H` are the width and height of the source image, respectively. This applies also to all subclasses of [Fl_Image](#) in the FLTK library.

The following two `copy()` calls are equivalent:

```
Fl_Image *img1 = new Fl_Image(...);
// ...
Fl_Image *img2 = img1->copy();
Fl_Image *img3 = img1->copy(img1->w(), img1->h());
```

For details see '[Fl_Image::copy\(int w, int h\) const](#)'.

See also

[Fl_Image::release\(\)](#)

Note

Since FLTK 1.4.0 this method is 'const'. If you derive your own class from [Fl_Image](#) or any subclass your overridden methods of '[Fl_Image::copy\(\) const](#)' and '[Fl_Image::copy\(int, int\) const](#)' **must** also be 'const' for inheritance to work properly. This is different than in FLTK 1.3.x and earlier where these methods have not been 'const'.

11.71.3.4 copy() [2/2]

```
Fl_Image * Fl_Image::copy (
    int W,
    int H) const [virtual]
```

Creates a resized copy of the image.

It is recommended not to call this member function to reduce the size of an image to the size of the area where this image will be drawn, and to use [Fl_Image::scale\(\)](#) instead.

The new image should be released when you are done with it.

Note: since FLTK 1.4.0 you can use [Fl_Image::release\(\)](#) for all types of images (i.e. all subclasses of [Fl_Image](#)) instead of operator `delete` for [Fl_Image](#)'s and [Fl_Image::release\(\)](#) for [Fl_Shared_Image](#)'s.

The new image data will be converted to the requested size. RGB images are resized using the algorithm set by [Fl_Image::RGB_scaling\(\)](#).

For the new image the following equations are true:

- `w() == data_w() == W`
- `h() == data_h() == H`

Parameters

in	<i>W,H</i>	Requested width and height of the new image
----	------------	---

Note

The returned image can be safely cast to the same image type as that of the source image provided this type is one of [Fl_RGB_Image](#), [Fl_SVG_Image](#), [Fl_Pixmap](#), [Fl_Bitmap](#), [Fl_Tiled_Image](#), [Fl_Anim_GIF_Image](#) and [Fl_Shared_Image](#). Returned objects copied from images of other, derived, image classes belong to the parent class appearing in this list. For example, the copy of an [Fl_GIF_Image](#) is an object of class [Fl_Pixmap](#).

Since FLTK 1.4.0 this method is 'const'. If you derive your own class from [Fl_Image](#) or any subclass your overridden methods of '[Fl_Image::copy\(\) const](#)' and '[Fl_Image::copy\(int, int\) const](#)' **must** also be 'const' for inheritance to work properly. This is different than in FLTK 1.3.x and earlier where these methods have not been 'const'.

Reimplemented in [Fl_Anim_GIF_Image](#), [Fl_Bitmap](#), [Fl_Pixmap](#), [Fl_RGB_Image](#), [Fl_Shared_Image](#), [Fl_SVG_Image](#), and [Fl_Tiled_Image](#).

11.71.3.5 count()

```
int Fl_Image::count () const [inline]
```

Returns the number of data values associated with the image.

The value will be 0 for images with no associated data, 1 for bitmap and color images, and greater than 2 for pixmap images.

See also

[data\(\)](#)

11.71.3.6 d()

```
int Fl_Image::d () const [inline]
```

Returns the image depth.

The return value will be 0 for bitmaps, 1 for pixmaps, and 1 to 4 for color images.

11.71.3.7 data() [1/2]

```
const char *const * Fl_Image::data () const [inline]
```

Returns a pointer to the current image data array.

There can be 0, 1, or more pointers to actual image data in an image.

Use the [count\(\)](#) method to find the size of the data array. You must not dereference the [data\(\)](#) pointer if [count\(\)](#) equals zero.

Note

[data\(\)](#) **may** return NULL.

Example:

[Fl_RGB_Image](#) has exactly one pointer which points at the R, G, B [, A] data array of the image. The total size of this array depends on several attributes like [data_w\(\)](#), [data_h\(\)](#), [d\(\)](#) and [ld\(\)](#) and is basically [data_w\(\)](#) * [data_h\(\)](#) * [d\(\)](#) but there are exceptions if [ld\(\)](#) is non-zero: see description of [ld\(\)](#). Since FLTK 1.4.0 [w\(\)](#) and [h\(\)](#) are no longer significant for the image data size if [scale\(\)](#) has been called on the image to set a different display size.

Other image types have different numbers and types of data pointers which are implementation details and not documented here.

See also

[count\(\)](#), [w\(\)](#), [h\(\)](#), [data_w\(\)](#), [data_h\(\)](#), [d\(\)](#), [ld\(\)](#)

11.71.3.8 data() [2/2]

```
void Fl_Image::data (
    const char *const * p,
    int c) [inline], [protected]
```

Sets the current data pointer and count of pointers in the array.

There can be 0, 1, or more pointers to actual image data in an image.

See also

`const char* const* data\(\), count\(\), w\(\), h\(\), data_w\(\), data_h\(\), d\(\), ld\(\)`

11.71.3.9 [desaturate\(\)](#)

```
void Fl_Image::desaturate () [virtual]
```

The [desaturate\(\)](#) method converts an image to grayscale.

If the image contains an alpha channel (depth = 4), the alpha channel is preserved.

An internal copy is made of the original image data before changes are applied, to avoid modifying the original image data in memory.

Reimplemented in [Fl_Anim_GIF_Image](#), [Fl_Pixmap](#), [Fl_RGB_Image](#), [Fl_Shared_Image](#), [Fl_SVG_Image](#), and [Fl_Tiled_Image](#).

11.71.3.10 [draw\(\)](#) [1/2]

```
void Fl_Image::draw (
    int X,
    int Y) [inline]
```

Draws the image to the current drawing surface.

Parameters

X,Y	specify the upper-lefthand corner of the image.
-----	---

11.71.3.11 [draw\(\)](#) [2/2]

```
void Fl_Image::draw (
    int X,
    int Y,
    int W,
    int H,
    int cx = 0,
    int cy = 0) [virtual]
```

Draws the image to the current drawing surface with a bounding box.

Arguments X, Y, W, H specify a bounding box for the image, with the origin (upper-left corner) of the image offset by the cx and cy arguments.

Another way to see what part of the image gets drawn and where, is to consider this alternative writing producing the same output:

```
fl_push_clip(X,Y,W,H);
this->draw(X - cx, Y - cy);
fl_pop_clip();
```

Repeated calls to this member function with the same image but varying W, H, cx, or cy arguments may be more efficiently processed using the above alternative writing.

Reimplemented in [Fl_Anim_GIF_Image](#), [Fl_Bitmap](#), [Fl_Pixmap](#), [Fl_RGB_Image](#), [Fl_Shared_Image](#), [Fl_SVG_Image](#), and [Fl_Tiled_Image](#).

11.71.3.12 [draw_empty\(\)](#)

```
void Fl_Image::draw_empty (
    int X,
    int Y) [protected]
```

The protected method [draw_empty\(\)](#) draws a box with an X in it.

It can be used to draw any image that lacks image data.

11.71.3.13 draw_scaled()

```
int Fl_Image::draw_scaled (
    int X,
    int Y,
    int W,
    int H) [protected]
```

Draw the image to the current drawing surface rescaled to a given width and height. Intended for internal use by the FLTK library.

Parameters

<i>X,Y</i>	position of the image's top-left
<i>W,H</i>	width and height for the drawn image

Returns

1

Deprecated Only for API compatibility with FLTK 1.3.4.

11.71.3.14 fail()

```
int Fl_Image::fail () const
```

Returns a value that is not 0 if there is currently no image available.

Example use:

```
// [...]
Fl_Box box(X, Y, W, H);
Fl_JPEG_Image jpg("/tmp/foo.jpg");
switch (jpg.fail()) {
    case Fl_Image::ERR_NO_IMAGE:
    case Fl_Image::ERR_FILE_ACCESS:
        fl_alert("/tmp/foo.jpg: %s", strerror(errno)); // shows actual os error to user
        exit(1);
    case Fl_Image::ERR_FORMAT:
        fl_alert("/tmp/foo.jpg: couldn't decode image");
        exit(1);
}
box.image(jpg);
```

Returns

Image load failure if non-zero

Return values

<i>0</i>	the image was loaded successfully
<i>ERR_NO_IMAGE</i>	no image was found
<i>ERR_FILE_ACCESS</i>	there was a file access related error (errno should be set)
<i>ERR_FORMAT</i>	image decoding failed
<i>ERR_MEMORY_ACCESS</i>	image decoder tried to access memory outside of given memory block

11.71.3.15 h() [1/2]

```
int Fl_Image::h () const [inline]
```

Returns the current image drawing height in FLTK units.

The values of [h\(\)](#) and [data_h\(\)](#) are identical unless [scale\(\)](#) has been called after which they may differ.

11.71.3.16 h() [2/2]

```
void Fl_Image::h (
    int H) [inline], [protected]
```

Sets the height of the image data.

This protected function sets both image heights: the height of the image data returned by [data_h\(\)](#) and the image drawing height in FLTK units returned by [h\(\)](#).

11.71.3.17 inactive()

```
void Fl_Image::inactive () [inline]
```

The [inactive\(\)](#) method calls [color_average\(FL_BACKGROUND_COLOR, 0.33f\)](#) to produce an image that appears grayed out.

An internal copy is made of the original image before changes are applied, to avoid modifying the original image.

Note

The RGB color of [FL_BACKGROUND_COLOR](#) may change when the connection to the display is made. See [fl_open_display\(\)](#).

11.71.3.18 label() [1/2]

```
void Fl_Image::label (
    Fl_Menu_Item * m) [virtual]
```

This method is an obsolete way to set the image attribute of a menu item.

Deprecated Please use [Fl_Menu_Item::image\(\)](#) instead.

Reimplemented in [Fl_Bitmap](#), [Fl_Pixmap](#), and [Fl_RGB_Image](#).

11.71.3.19 label() [2/2]

```
void Fl_Image::label (
    Fl_Widget * widget) [virtual]
```

This method is an obsolete way to set the image attribute of a widget or menu item.

Deprecated Please use [Fl_Widget::image\(\)](#) or [Fl_Widget::deimage\(\)](#) instead.

Reimplemented in [Fl_Bitmap](#), [Fl_Pixmap](#), and [Fl_RGB_Image](#).

11.71.3.20 ld() [1/2]

```
int Fl_Image::ld () const [inline]
```

Returns the current line data size in bytes.

See also

[ld\(int\)](#)

11.71.3.21 ld() [2/2]

```
void Fl_Image::ld (
    int LD) [inline], [protected]
```

Sets the current line data size in bytes.

Color images may contain extra data (padding) that is included after every line of color image data and is normally not present.

If [LD](#) is zero, then line data size is assumed to be [data_w\(\)](#) * [d\(\)](#) bytes.

If [LD](#) is non-zero, then it must be positive and larger than [data_w\(\)](#) * [d\(\)](#) to account for the extra data per line.

11.71.3.22 release()

```
virtual void Fl_Image::release () [inline], [virtual]
```

Releases an [Fl_Image](#) - the same as 'delete this'.

This virtual method is for almost all image classes the same as calling

```
delete image;
```

where image is an [Fl_Image](#) * pointer.

However, for subclass [Fl_Shared_Image](#) and its subclasses this virtual method is reimplemented and maintains shared images.

This virtual method makes it possible to destroy all image types in the same way by calling

```
image->release();
```

Reasoning: If you have an 'Fl_Image *' base class pointer and don't know if the object is one of the class [Fl_Shared_Image](#) or any other subclass of [Fl_Image](#) (for instance [Fl_RGB_Image](#)) then you can't just use operator delete since this is not appropriate for [Fl_Shared_Image](#) objects.

The virtual method [release\(\)](#) handles this properly.

Since

1.4.0 in the base class [Fl_Image](#) and virtual in [Fl_Shared_Image](#)

Reimplemented in [Fl_Shared_Image](#).

11.71.3.23 RGB_scaling()

```
void Fl_Image::RGB_scaling (
    Fl\_RGB\_Scaling method) [static]
```

Sets the RGB image scaling method used for copy(int, int).

Applies to all RGB images, defaults to FL_RGB_SCALING_NEAREST.

11.71.3.24 scale()

```
void Fl_Image::scale (
    int width,
    int height,
    int proportional = 1,
    int can_expand = 0) [virtual]
```

Sets the drawing size of the image.

This function controls the values returned by member functions [w\(\)](#) and [h\(\)](#) which in turn control how the image is drawn: the full image data (whose size is given by [data_w\(\)](#) and [data_h\(\)](#)) are drawn scaled to an area of the drawing surface sized at [w\(\)](#) x [h\(\)](#) FLTK units. This can make a difference if the drawing surface has more than 1 pixel per FLTK unit because the image can be drawn at the full resolution of the drawing surface. Examples of such drawing surfaces: HiDPI displays, laser printers, PostScript files, PDF printers.

Parameters

<i>width,height</i>	maximum values, in FLTK units, that w() and h() should return
<i>proportional</i>	if not null, keep the values returned by w() and h() proportional to data_w() and data_h()
<i>can_expand</i>	if null, the values returned by w() and h() will not be larger than data_w() and data_h() , respectively

Note

This function generally changes the values returned by the [w\(\)](#) and [h\(\)](#) member functions. In contrast, the values returned by [data_w\(\)](#) and [data_h\(\)](#) remain unchanged.

Version

1.4 (1.3.4 and FL_ABI_VERSION for [Fl_Shared_Image](#) only)

Example code: scale an image to fit in a box

```
Fl_Box *b = ... // a box
Fl_Image *img = new Fl_PNG_Image("/path/to/picture.png"); // read a picture file
// set the drawing size of the image to the size of the box keeping its aspect ratio
img->scale(b->w(), b->h());
b->image(img); // use the image as the box image
```

11.71.3.25 scaling_algorithm()

```
static void Fl_Image::scaling_algorithm (
    Fl\_RGB\_Scaling algorithm) [inline], [static]
```

Sets what algorithm is used when resizing a source image to draw it.

The default algorithm is `FL_RGB_SCALING_BILINEAR`. Drawing an [Fl_Image](#) is sometimes performed by first resizing the source image and then drawing the resized copy. This occurs, e.g., when drawing to screen under X11 without Xrender support after having called [scale\(\)](#). This function controls what method is used when the image to be resized is an [Fl_RGB_Image](#).

Version

1.4

11.71.3.26 uncache()

```
void Fl_Image::uncache () [virtual]
```

If the image has been cached for display, delete the cache data.

This allows you to change the data used for the image and then redraw it without recreating an image object.

Reimplemented in [Fl_Anim_GIF_Image](#), [Fl_Bitmap](#), [Fl_Pixmap](#), [Fl_RGB_Image](#), and [Fl_Shared_Image](#).

11.71.3.27 w() [1/2]

```
int Fl_Image::w () const [inline]
```

Returns the current image drawing width in FLTK units.

The values of [w\(\)](#) and [data_w\(\)](#) are identical unless [scale\(\)](#) has been called after which they may differ.

11.71.3.28 w() [2/2]

```
void Fl_Image::w (
    int W) [inline], [protected]
```

Sets the width of the image data.

This protected function sets both image widths: the width of the image data returned by [data_w\(\)](#) and the image drawing width in FLTK units returned by [w\(\)](#).

11.73 `Fl_Image_Surface` Class Reference

Directs all graphics requests to an `Fl_Image`.

```
#include <Fl_Image_Surface.H>
```

Inheritance diagram for `Fl_Image_Surface`:

Public Member Functions

- `Fl_Image_Surface` (int w, int h, int high_res=0, `Fl_Offscreen` off=0)
Constructor with optional high resolution.
- `Fl_Shared_Image * highres_image` ()
Returns a possibly high resolution image made of all drawings sent to the `Fl_Image_Surface` object.
- `Fl_RGB_Image * image` ()
Returns a depth-3 image made of all drawings sent to the `Fl_Image_Surface` object.
- bool `is_current` () `FL_OVERRIDE`
Is this surface the current drawing surface?
- void `mask` (const `Fl_RGB_Image *`)
Defines a mask applied to drawings made after use of this function.
- `Fl_Offscreen offscreen` ()
Returns the `Fl_Offscreen` object associated to the image surface.
- void `origin` (int *x, int *y) `FL_OVERRIDE`
Computes the coordinates of the current origin of graphics functions.
- void `origin` (int x, int y) `FL_OVERRIDE`
Sets the position of the origin of graphics in the drawable part of the drawing surface.
- int `printable_rect` (int *w, int *h) `FL_OVERRIDE`
Computes the width and height of the drawable area of the drawing surface.
- void `rescale` ()
Adapts the `Fl_Image_Surface` object to the new value of the GUI scale factor.
- void `set_current` () `FL_OVERRIDE`
Make this surface the current drawing surface.
- `~Fl_Image_Surface` ()
The destructor.

Public Member Functions inherited from `Fl_Widget_Surface`

- void `draw` (`Fl_Widget *`widget, int delta_x=0, int delta_y=0)
Draws the widget on the drawing surface.
- void `draw_decorated_window` (`Fl_Window *`win, int x_offset=0, int y_offset=0)
Draws a window with its title bar and frame if any.
- void `print_window_part` (`Fl_Window *`win, int x, int y, int w, int h, int delta_x=0, int delta_y=0)
Draws a rectangular part of an on-screen window.

Public Member Functions inherited from [FI_Surface_Device](#)

- [FI_Graphics_Driver](#) * **driver** ()
Returns the graphics driver of this drawing surface.
- virtual ~[FI_Surface_Device](#) ()
The destructor.

Protected Member Functions

- void [translate](#) (int x, int y) [FL_OVERRIDE](#)
Translates the current graphics origin accounting for the current rotation.
- void [untranslate](#) () [FL_OVERRIDE](#)
Undoes the effect of a previous [translate\(\)](#) call.

Protected Member Functions inherited from [FI_Widget_Surface](#)

- [FI_Widget_Surface](#) ([FI_Graphics_Driver](#) *d)
The constructor.

Protected Member Functions inherited from [FI_Surface_Device](#)

- void **driver** ([FI_Graphics_Driver](#) *graphics_driver)
Sets the graphics driver of this drawing surface.
- virtual void [end_current](#) ()
FLTK calls this each time a surface ceases to be the current drawing surface.
- [FI_Surface_Device](#) ([FI_Graphics_Driver](#) *graphics_driver)
Constructor that sets the graphics driver to use for the created surface.

Friends

- class [FI_Graphics_Driver](#)

Additional Inherited Members

Static Public Member Functions inherited from [FI_Surface_Device](#)

- static [FI_Surface_Device](#) * [pop_current](#) ()
Removes the top element from the current drawing surface stack, and makes the new top element current.
- static void [push_current](#) ([FI_Surface_Device](#) *new_current)
*Pushes *new_current* on top of the stack of current drawing surfaces, and makes it current.*
- static [FI_Surface_Device](#) * [surface](#) ()
The current drawing surface.

Protected Attributes inherited from [FI_Widget_Surface](#)

- int **x_offset**
horizontal offset to the origin of graphics coordinates
- int **y_offset**
vertical offset to the origin of graphics coordinates

11.73.1 Detailed Description

Directs all graphics requests to an [Fl_Image](#).

After creation of an [Fl_Image_Surface](#) object, make it the current drawing surface calling [Fl_Surface_Device::push_current\(\)](#), and all subsequent graphics requests will be recorded in the image. It's possible to draw widgets (using [Fl_Image_Surface::draw\(\)](#)) or to use any of the [Drawing functions](#) or the [Color & Font functions](#). Finally, call [image\(\)](#) on the object to obtain a newly allocated [Fl_RGB_Image](#) object. [Fl_Gl_Window](#) objects can be drawn in the image as well.

Usage example:

```
// this is the widget that you want to draw into an image
Fl_Widget *g = ...;

// create an Fl_Image_Surface object
Fl_Image_Surface *image_surface = new Fl_Image_Surface(g->w(), g->h());

// direct all further graphics requests to the image
Fl_Surface_Device::push_current(image_surface);

// draw a white background
fl_color(FL_WHITE);
fl_rectf(0, 0, g->w(), g->h());

// draw the g widget in the image
image_surface->draw(g);

// get the resulting image
Fl_RGB_Image* image = image_surface->image();

// direct graphics requests back to their previous destination
Fl_Surface_Device::pop_current();

// delete the image_surface object, but not the image itself
delete image_surface;
```

11.73.2 Constructor & Destructor Documentation

11.73.2.1 Fl_Image_Surface()

```
Fl_Image_Surface::Fl_Image_Surface (
    int w,
    int h,
    int high_res = 0,
    Fl_Offscreen off = 0)
```

Constructor with optional high resolution.

Parameters

<i>w,h</i>	Width and height of the resulting image. The value of the <code>high_res</code> parameter controls whether <code>w</code> and <code>h</code> are interpreted as pixels or FLTK units.
<i>high_res</i>	If zero, the created image surface is sized at <code>w</code> x <code>h</code> pixels. If non-zero, the pixel size of the created image surface depends on the value of the display scale factor (see Fl::screen_scale(int)): the resulting image has the same number of pixels as an area of the display of size <code>w</code> x <code>h</code> expressed in FLTK units.
<i>off</i>	If not null, the image surface is constructed around a pre-existing Fl_Offscreen . The caller is responsible for both construction and destruction of this Fl_Offscreen object. Is mostly intended for internal use by FLTK.

Version

1.3.4 (1.3.3 without the `highres` parameter)

11.73.3 Member Function Documentation

11.73.3.1 highres_image()

```
Fl_Shared_Image * Fl_Image_Surface::highres_image ()
```

Returns a possibly high resolution image made of all drawings sent to the [Fl_Image_Surface](#) object.

The `Fl_Image_Surface` object should have been constructed with `Fl_Image_Surface(W, H, 1)`. The returned `Fl_Shared_Image` object is scaled to a size of WxH FLTK units and may have a pixel size larger than these values. The returned object should be deallocated with `Fl_Shared_Image::release()` after use.

Deprecated Use `image()` instead.

Version

1.4 (1.3.4 for MacOS platform only)

11.73.3.2 image()

```
Fl_RGB_Image * Fl_Image_Surface::image ()
```

Returns a depth-3 image made of all drawings sent to the `Fl_Image_Surface` object.

The returned object contains its own copy of the RGB data; the caller is responsible for deleting it.

See also

`Fl_Image_Surface::mask(Fl_RGB_Image*)`

11.73.3.3 is_current()

```
bool Fl_Image_Surface::is_current () [virtual]
```

Is this surface the current drawing surface?

Reimplemented from `Fl_Surface_Device`.

11.73.3.4 mask()

```
void Fl_Image_Surface::mask (
    const Fl_RGB_Image * mask)
```

Defines a mask applied to drawings made after use of this function.

The mask is an `Fl_RGB_Image` made of a white scene drawn on a solid black background; the drawable part of the image surface is reduced to the white areas of the mask after this member function gets called. If necessary, the `mask` image is internally replaced by a copy resized to the surface's pixel size. Overall, the image returned by `Fl_Image_Surface::image()` contains all drawings made until the `mask()` method assigned a mask, at which point subsequent drawing operations to the image surface were passed through the white areas of the mask. On some platforms, shades of gray in the mask image control the blending of foreground and background pixels; mask pixels closer in color to white produce image pixels closer to the image surface pixel, those closer to black produce image pixels closer to what the image surface pixel was before the call to `mask()`.

The mask is easily constructed using an `Fl_Image_Surface` object, drawing white areas on a black background there, and calling `Fl_Image_Surface::image()`.

Parameters

<i>mask</i>	A depth-3 image determining the drawable areas of the image surface. The <code>mask</code> object is not used after return from this member function.
-------------	---

Note

- The image surface must not be the current drawing surface when this function gets called.
- The mask can have any size but is best when it has the size of the image surface.
- It's possible to use several masks in succession on the same image surface provided member function `Fl_Image_Surface::image()` is called between successive calls to `Fl_Image_Surface::mask(const Fl_RGB_Image*)`.

Example of procedure to construct a masked image:

```
int W = ..., H = ...; // width and height of the image under construction
Fl_Image_Surface *surf = new Fl_Image_Surface(W, H, 1);
// first, construct the mask
Fl_Surface_Device::push_current(surf);
fl_color(FL_BLACK); // draw a black background
```

```

fl_rectf(0, 0, W, H);
fl_color(FL_WHITE); // next, draw in white what the mask should not filter out
fl_pie(0, 0, W, H, 0, 360); // here, an ellipse with axes lengths WxH
Fl_RGB_Image *mask = surf->image(); // get the mask
// second, draw the image background
fl_color(FL_YELLOW); // here, draw a yellow background
fl_rectf(0, 0, W, H);
// third, apply the mask
Fl_Surface_Device::pop_current();
surf->mask(mask);
delete mask; // the mask image can be safely deleted at this point
Fl_Surface_Device::push_current(surf);
// fourth, draw the image foreground, part of which will be filtered out by the mask
surf->draw(widget, 0, 0); // here the foreground is a drawn widget
// fifth, get the final result, masked_image, as a depth-3 Fl_RGB_Image
Fl_RGB_Image *masked_image = surf->image();
// Only the part of the foreground, here a drawn widget, that has not been
// filtered out by the mask, here the white ellipse, is in masked_image;
// the background, here solid yellow, shows up in the remaining areas of masked_image.
Fl_Surface_Device::pop_current();
delete surf;

```

Since

1.4.0

11.73.3.5 offscreen()

```
Fl_Offscreen Fl_Image_Surface::offscreen ()
```

Returns the [Fl_Offscreen](#) object associated to the image surface.

The returned [Fl_Offscreen](#) object is deleted when the [Fl_Image_Surface](#) object is deleted, unless the [Fl_Image_Surface](#) was constructed with non-null [Fl_Offscreen](#) argument.

11.73.3.6 origin() [1/2]

```

void Fl_Image_Surface::origin (
    int * x,
    int * y) [virtual]

```

Computes the coordinates of the current origin of graphics functions.

Parameters

out	x,y	If non-null, *x and *y are set to the horizontal and vertical coordinates of the graphics origin.
-----	-----	---

Reimplemented from [Fl_Widget_Surface](#).

11.73.3.7 origin() [2/2]

```

void Fl_Image_Surface::origin (
    int x,
    int y) [virtual]

```

Sets the position of the origin of graphics in the drawable part of the drawing surface.

Arguments should be expressed relatively to the result of a previous [printable_rect\(\)](#) call. That is, `printable←_rect(&w, &h); origin(w/2, 0);` sets the graphics origin at the top center of the drawable area. Successive [origin\(\)](#) calls don't combine their effects. [Origin\(\)](#) calls are not affected by [rotate\(\)](#) calls (for classes derived from [Fl_Paged_Device](#)).

Parameters

in	x,y	Horizontal and vertical positions in the drawing surface of the desired origin of graphics.
----	-----	---

Reimplemented from [Fl_Widget_Surface](#).

11.73.3.8 printable_rect()

```
int Fl_Image_Surface::printable_rect (
    int * w,
    int * h) [virtual]
```

Computes the width and height of the drawable area of the drawing surface.

Values are in the same unit as that used by FLTK drawing functions and are unchanged by calls to [origin\(\)](#). If the object is derived from class [Fl_Paged_Device](#), values account for the user-selected paper type and print orientation and are changed by [scale\(\)](#) calls.

Returns

0 if OK, non-zero if any error

Reimplemented from [Fl_Widget_Surface](#).

11.73.3.9 rescale()

```
void Fl_Image_Surface::rescale ()
```

Adapts the [Fl_Image_Surface](#) object to the new value of the GUI scale factor.

The [Fl_Image_Surface](#) object must not be the current drawing surface. This function is useful only for an object constructed with non-zero `high_res` parameter.

Version

1.4

11.73.3.10 set_current()

```
void Fl_Image_Surface::set_current (
    void ) [virtual]
```

Make this surface the current drawing surface.

This surface will receive all future graphics requests.

Since FLTK 1.4.0 the preferred API to change the current drawing surface is [Fl_Surface_Device::push_current\(\)](#) / [Fl_Surface_Device::pop_current\(\)](#).

Note

It is recommended to use this function only as follows :

- The current drawing surface is the display;
- make current another surface, e.g., an [Fl_Printer](#) or an [Fl_Image_Surface](#) object, calling [set_current\(\)](#) on this object;
- draw to that surface;
- make the display current again with [Fl_Display_Device::display_device\(\)->set_current\(\)](#);
don't do any other call to [set_current\(\)](#) before this one.

Other scenarios of drawing surface changes should be performed via [Fl_Surface_Device::push_current\(\)](#) and [Fl_Surface_Device::pop_current\(\)](#).

Reimplemented from [Fl_Surface_Device](#).

11.73.3.11 translate()

```
void Fl_Image_Surface::translate (
    int x,
    int y) [protected], [virtual]
```

Translates the current graphics origin accounting for the current rotation.

Each [translate\(\)](#) call must be matched by an [untranslate\(\)](#) call. Successive [translate\(\)](#) calls add up their effects.

Reimplemented from [Fl_Widget_Surface](#).

11.73.3.12 untranslate()

```
void Fl_Image_Surface::untranslate (
    void ) [protected], [virtual]
```

Undoes the effect of a previous [translate\(\)](#) call.

Reimplemented from [Fl_Widget_Surface](#).

The documentation for this class was generated from the following files:

- [Fl_Image_Surface.H](#)
- [Fl_Image_Surface.cxx](#)

11.74 FI_Input Class Reference

This is the FLTK text input widget.

```
#include <Fl_Input.H>
```

Inheritance diagram for [Fl_Input](#):

Public Member Functions

- [Fl_Input](#) (int, int, int, int, const char * = 0)
Creates a new [Fl_Input](#) widget using the given position, size, and label string.
- int [handle](#) (int) [FL_OVERRIDE](#)
Handles the specified event.

Public Member Functions inherited from [Fl_Input_](#)

- int [append](#) (const char *t, int l = 0, char keep_selection = 0)
Append text at the end.
- bool [can_redo](#) () const
Check if there is a redo action available.
- bool [can_undo](#) () const
Check if the last operation can be undone.
- int [copy](#) (int clipboard)
Put the current selection into the clipboard.
- int [copy_cuts](#) ()
Copies the yank buffer to the clipboard.
- [Fl_Color](#) [cursor_color](#) () const
Gets the color of the cursor.
- void [cursor_color](#) ([Fl_Color](#) n)
Sets the color of the cursor.
- int [cut](#) ()
Deletes the current selection.
- int [cut](#) (int a, int b)
Deletes all characters between index a and b.
- int [cut](#) (int n)
Deletes the next n bytes rounded to characters before or after the cursor.
- double [dvalue](#) () const

- Returns the widget text interpreted as a floating point number.*

 - `FL_Input_` (int, int, int, int, const char * = 0)

Creates a new `FL_Input_` widget.
- unsigned int `index` (int i) const

Returns the character at index `i`.
- int `input_type` () const

Gets the input field type.
- void `input_type` (int t)

Sets the input field type.
- int `insert` (const char *t, int l = 0)

Inserts text at the cursor position.
- int `insert_position` () const

Gets the position of the text cursor.
- int `insert_position` (int p)

Sets the cursor position and mark.
- int `insert_position` (int p, int m)

Sets the index for the cursor and mark.
- int `ivalue` () const

Returns the widget text interpreted as a signed integer.
- int `mark` () const

Gets the current selection mark.
- int `mark` (int m)

Sets the current selection mark.
- int `maximum_size` () const

Gets the maximum length of the input field in characters.
- void `maximum_size` (int m)

Sets the maximum length of the input field in characters.
- int `position` () const
- int `position` (int p)
- int `position` (int p, int m)
- int `readonly` () const

Gets the read-only state of the input field.
- void `readonly` (int b)

Sets the read-only state of the input field.
- int `redo` ()

Redo previous undo operation.
- int `replace` (int b, int e, const char *text, int ilen = 0)

Deletes text from `b` to `e` and inserts the new string `text`.
- void `resize` (int, int, int, int) `FL_OVERRIDE`

Changes the size of the widget.
- int `shortcut` () const

Return the shortcut key associated with this widget.
- void `shortcut` (int s)

Sets the shortcut key associated with this widget.
- int `size` () const

Returns the number of bytes in `value()`.
- void `size` (int W, int H)

Sets the width and height of this widget.
- int `static_value` (const char *)

Changes the widget text.
- int `static_value` (const char *, int)

- Changes the widget text.*

 - int [tab_nav](#) () const

Gets whether the Tab key causes focus navigation in multiline input fields or not.

- void [tab_nav](#) (int val)

Sets whether the Tab key does focus navigation, or inserts tab characters into [FI_Multiline_Input](#).

- [FI_Color](#) [textcolor](#) () const

Gets the color of the text in the input field.

- void [textcolor](#) ([FI_Color](#) n)

Sets the color of the text in the input field.

- [FI_Font](#) [textfont](#) () const

Gets the font of the text in the input field.

- void [textfont](#) ([FI_Font](#) s)

Sets the font of the text in the input field.

- [FI_Fontsize](#) [textsize](#) () const

Gets the size of the text in the input field.

- void [textsize](#) ([FI_Fontsize](#) s)

Sets the size of the text in the input field.

- int [undo](#) ()

Undoes previous changes to the text buffer.

- const char * [value](#) () const

Returns the text displayed in the widget.

- int [value](#) (const char *)

Changes the widget text.

- int [value](#) (const char *, int)

Changes the widget text.

- int [value](#) (double value)

Changes the widget text to a floating point number ("%g").

- int [value](#) (int value)

Changes the widget text to a signed integer number.

- int [wrap](#) () const

Gets the word wrapping state of the input field.

- void [wrap](#) (int b)

Sets the word wrapping state of the input field.

- ~[FI_Input](#) ()

Destroys the widget.

Public Member Functions inherited from [FI_Widget](#)

- void [_clear_fullscreen](#) ()
- void [_set_fullscreen](#) ()
- void [activate](#) ()

Activates the widget.

- unsigned int [active](#) () const

Returns whether the widget is active.

- int [active_r](#) () const

Returns whether the widget and all of its parents are active.

- [FI_Align](#) [align](#) () const

Gets the label alignment.

- void [align](#) ([FI_Align](#) alignment)

Sets the label alignment.

- long [argument](#) () const

- Gets the current user data (long) argument that is passed to the callback function.*

 - void [argument](#) (long v)
- Sets the current user data (long) argument that is passed to the callback function.*

 - virtual class [Fl_Gl_Window](#) * [as_gl_window](#) ()
- Returns an [Fl_Gl_Window](#) pointer if this widget is an [Fl_Gl_Window](#).*

 - virtual class [Fl_Gl_Window](#) const * [as_gl_window](#) () const
- Returns an [Fl_Group](#) pointer if this widget is an [Fl_Group](#).*

 - virtual [Fl_Group](#) * [as_group](#) ()
- Returns an [Fl_Window](#) pointer if this widget is an [Fl_Window](#).*

 - virtual [Fl_Group](#) const * [as_group](#) () const
 - virtual [Fl_Window](#) * [as_window](#) ()
- Returns an [Fl_Window](#) pointer if this widget is an [Fl_Window](#).*

 - virtual [Fl_Window](#) const * [as_window](#) () const
- Sets the image to use as part of the widget label when in the inactive state.*

 - void [bind_deimage](#) ([Fl_Image](#) *img)
- Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.*

 - void [bind_deimage](#) (int f)
- Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.*

 - void [bind_image](#) ([Fl_Image](#) *img)
- Sets the image to use as part of the widget label when in the active state.*

 - void [bind_image](#) (int f)
- Bind the image to the widget, so the widget will delete the image when it is no longer needed.*

 - [Fl_Boxtype](#) [box](#) () const
- Gets the box type of the widget.*

 - void [box](#) ([Fl_Boxtype](#) new_box)
- Sets the box type for the widget.*

 - [Fl_Callback_p](#) [callback](#) () const
- Gets the current callback function for the widget.*

 - void [callback](#) ([Fl_Callback](#) *cb)
- Sets the current callback function for the widget.*

 - void [callback](#) ([Fl_Callback](#) *cb, [Fl_Callback_User_Data](#) *p, bool auto_free)
- Sets the current callback function and managed user data for the widget.*

 - void [callback](#) ([Fl_Callback](#) *cb, void *p)
- Sets the current callback function and data for the widget.*

 - void [callback](#) ([Fl_Callback0](#) *cb)
- Sets the current callback function for the widget.*

 - void [callback](#) ([Fl_Callback1](#) *cb, long p=0)
- Sets the current callback function for the widget.*

 - unsigned int [changed](#) () const
- Checks if the widget value changed since the last callback.*

 - void [clear_active](#) ()
- Marks the widget as inactive without sending events or changing focus.*

 - void [clear_changed](#) ()
- Marks the value of the widget as unchanged.*

 - void [clear_damage](#) (uchar c=0)
- Clears or sets the damage flags.*

 - void [clear_output](#) ()
- Sets a widget to accept input.*

 - void [clear_visible](#) ()
- Hides the widget.*

 - void [clear_visible_focus](#) ()
- Disables keyboard focus navigation with this widget.*

 - [Fl_Color](#) [color](#) () const

- Gets the background color of the widget.*
- void [color](#) ([FL_Color](#) bg)
- Sets the background color of the widget.*
- void [color](#) ([FL_Color](#) bg, [FL_Color](#) sel)
- Sets the background and selection color of the widget.*
- [FL_Color](#) [color2](#) () const
- For back compatibility only.*
- void [color2](#) (unsigned a)
- For back compatibility only.*
- int [contains](#) (const [FL_Widget](#) *w) const
- Checks if w is a child of this widget.*
- void [copy_label](#) (const char *new_label)
- Sets the current label.*
- void [copy_tooltip](#) (const char *text)
- Sets the current tooltip text.*
- [uchar](#) [damage](#) () const
- Returns non-zero if [draw\(\)](#) needs to be called.*
- void [damage](#) ([uchar](#) c)
- Sets the damage bits for the widget.*
- void [damage](#) ([uchar](#) c, int x, int y, int w, int h)
- Sets the damage bits for an area inside the widget.*
- int [damage_resize](#) (int, int, int, int)
- Internal use only.*
- void [deactivate](#) ()
- Deactivates the widget.*
- [FL_Image](#) * [deimage](#) ()
- Gets the image that is used as part of the widget label when in the inactive state.*
- const [FL_Image](#) * [deimage](#) () const
- Gets the image that is used as part of the widget label when in the inactive state.*
- void [deimage](#) ([FL_Image](#) &img)
- Sets the image to use as part of the widget label when in the inactive state.*
- void [deimage](#) ([FL_Image](#) *img)
- Sets the image to use as part of the widget label when in the inactive state.*
- int [deimage_bound](#) () const
- Returns whether the inactive image is managed by the widget.*
- void [do_callback](#) ([FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
- Calls the widget callback function with default arguments.*
- void [do_callback](#) ([FL_Widget](#) *widget, long arg, [FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
- Calls the widget callback function with arbitrary arguments.*
- void [do_callback](#) ([FL_Widget](#) *widget, void *arg=0, [FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
- Calls the widget callback function with arbitrary arguments.*
- void [draw_label](#) (int, int, int, int, [FL_Align](#)) const
- Draws the label in an arbitrary bounding box with an arbitrary alignment.*
- int [h](#) () const
- Gets the widget height.*
- virtual void [hide](#) ()
- Makes a widget invisible.*
- int [horizontal_label_margin](#) ()
- Get the spacing between the label and the horizontal edge of the widget.*
- void [horizontal_label_margin](#) (int px)
- Set the spacing between the label and the horizontal edge of the widget.*

- `FL_Image * image ()`
Gets the image that is used as part of the widget label when in the active state.
- `const FL_Image * image () const`
Gets the image that is used as part of the widget label when in the active state.
- `void image (FL_Image &img)`
Sets the image to use as part of the widget label when in the active state.
- `void image (FL_Image *img)`
Sets the image to use as part of the widget label when in the active state.
- `int image_bound () const`
Returns whether the image is managed by the widget.
- `int inside (const FL_Widget *wgt) const`
Checks if this widget is a child of wgt.
- `int is_label_copied () const`
Returns whether the current label was assigned with `copy_label()`.
- `const char * label () const`
Gets the current label text.
- `void label (const char *text)`
Sets the current label pointer.
- `void label (FL_Labeltype a, const char *b)`
Shortcut to set the label text and type in one call.
- `int label_image_spacing ()`
Return the gap size between the label and the image.
- `void label_image_spacing (int gap)`
Set the gap between the label and the image in pixels.
- `FL_Color labelcolor () const`
Gets the label color.
- `void labelcolor (FL_Color c)`
Sets the label color.
- `FL_Font labelfont () const`
Gets the font to use.
- `void labelfont (FL_Font f)`
Sets the font to use.
- `FL_Fonsize labelsize () const`
Gets the font size in pixels.
- `void labelsize (FL_Fonsize pix)`
Sets the font size in pixels.
- `FL_Labeltype labeltype () const`
Gets the label type.
- `void labeltype (FL_Labeltype a)`
Sets the label type.
- `void measure_label (int &ww, int &hh) const`
Sets width ww and height hh accordingly with the label size.
- `bool needs_keyboard () const`
Returns whether this widget needs a keyboard.
- `void needs_keyboard (bool needs)`
Sets whether this widget needs a keyboard.
- `unsigned int output () const`
Returns if a widget is used for output only.
- `FL_Group * parent () const`
Returns a pointer to the parent widget.
- `void parent (FL_Group *p)`

- Internal use only - "for hacks only".*

 - void [position](#) (int X, int Y)
Repositions the window or widget.
 - void [redraw](#) ()
Schedules the drawing of the widget.
 - void [redraw_label](#) ()
Schedules the drawing of the label.
 - [FI_Color selection_color](#) () const
Gets the selection color.
 - void [selection_color](#) ([FI_Color](#) a)
Sets the selection color.
 - void [set_active](#) ()
Marks the widget as active without sending events or changing focus.
 - void [set_changed](#) ()
Marks the value of the widget as changed.
 - void [set_output](#) ()
Sets a widget to output only.
 - void [set_visible](#) ()
Makes the widget visible.
 - void [set_visible_focus](#) ()
Enables keyboard focus navigation with this widget.
 - int [shortcut_label](#) () const
Returns whether the widget's label uses '&' to indicate shortcuts.
 - void [shortcut_label](#) (int value)
Sets whether the widget's label uses '&' to indicate shortcuts.
 - virtual void [show](#) ()
Makes a widget visible.
 - void [size](#) (int W, int H)
Changes the size of the widget.
 - int [take_focus](#) ()
Gives the widget the keyboard focus.
 - unsigned int [takeevents](#) () const
Returns if the widget is able to take events.
 - int [test_shortcut](#) ()
Returns true if the widget's label contains the entered '&x' shortcut.
 - const char * [tooltip](#) () const
Gets the current tooltip text.
 - void [tooltip](#) (const char *text)
Sets the current tooltip text.
 - [FI_Window * top_window](#) () const
Returns a pointer to the top-level window for the widget.
 - [FI_Window * top_window_offset](#) (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
 - [uchar type](#) () const
Gets the widget type.
 - void [type](#) ([uchar](#) t)
Sets the widget type.
 - int [use_accents_menu](#) ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
 - void * [user_data](#) () const
Gets the user data for this widget.

- void **user_data** ([Fl_Callback_User_Data](#) *v, bool auto_free)
Sets the user data for this widget.
- void **user_data** (void *v)
Sets the user data for this widget.
- int [vertical_label_margin](#) ()
Get the spacing between the label and the vertical edge of the widget.
- void [vertical_label_margin](#) (int px)
Set the spacing between the label and the vertical edge of the widget.
- unsigned int [visible](#) () const
Returns whether a widget is visible.
- unsigned int [visible_focus](#) () const
Checks whether this widget has a visible focus.
- void [visible_focus](#) (int v)
Modifies keyboard focus navigation.
- int [visible_r](#) () const
Returns whether a widget and all its parents are visible.
- int [w](#) () const
Gets the widget width.
- [Fl_When](#) [when](#) () const
Returns the conditions under which the callback is called.
- void [when](#) (uchar i)
Sets the flags used to decide when a callback is called.
- [Fl_Window](#) * [window](#) () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int [x](#) () const
Gets the widget position in its window.
- int [y](#) () const
Gets the widget position in its window.
- virtual [~Fl_Widget](#) ()
Destroys the widget.

Static Public Attributes

- static const char * **copy_menu_text** = "Copy"
[this text may be customized at run-time]
- static const char * **cut_menu_text** = "Cut"
[this text may be customized at run-time]
- static const char * **paste_menu_text** = "Paste"
[this text may be customized at run-time]

Protected Member Functions

- void [draw](#) () [FL_OVERRIDE](#)
Draws the widget.
- int [handle_key](#) ()
Handles a keystroke.
- int [handle_rmb](#) ()
Handle right mouse button down events.

Protected Member Functions inherited from FI_Input_

- int [apply_undo](#) ()
Apply the current undo/redo operation.
- void [drawtext](#) (int, int, int, int)
Draws the text in the passed bounding box.
- void [drawtext](#) (int, int, int, int, bool draw_active)
Draws the text in the passed bounding box.
- void [handle_mouse](#) (int, int, int, int, int keepmark=0)
Handles mouse clicks and mouse moves.
- int [handletext](#) (int e, int, int, int, int)
Handles all kinds of text field related events.
- int [line_end](#) (int i) const
Finds the end of a line.
- int [line_start](#) (int i) const
Finds the start of a line.
- int [linesPerPage](#) ()
- void [maybe_do_callback](#) (FI_Callback_Reason reason=FL_REASON_UNKNOWN)
- int [up_down_position](#) (int, int keepmark=0)
Moves the cursor to the column given by up_down_pos.
- int [word_end](#) (int i) const
Finds the end of a word.
- int [word_start](#) (int i) const
Finds the start of a word.
- int [xscroll](#) () const
- int [yscroll](#) () const
- void [yscroll](#) (int yOffset)

Protected Member Functions inherited from FI_Widget

- void [clear_flag](#) (unsigned int c)
Clears a flag in the flags mask.
- void [draw_backdrop](#) () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void [draw_box](#) () const
Draws the widget box according its box style.
- void [draw_box](#) (FI_Boxtype t, FI_Color c) const
Draws a box of type t, of color c at the widget's position and size.
- void [draw_box](#) (FI_Boxtype t, int x, int y, int w, int h, FI_Color c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void [draw_focus](#) () const
Draws a focus rectangle around the widget.
- void [draw_focus](#) (FI_Boxtype t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void [draw_focus](#) (FI_Boxtype t, int x, int y, int w, int h, FI_Color bg) const
Draws a focus box for the widget at the given position and size.
- void [draw_label](#) () const
Draws the widget's label at the defined label position.
- void [draw_label](#) (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- FI_Widget (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.

- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

Additional Inherited Members

Static Public Member Functions inherited from **FI_Widget**

- static void **default_callback** (**FI_Widget** *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int **label_shortcut** (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int **test_shortcut** (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from **FI_Widget**

USERFLAG1 = 1<<31 }
flags possible values enumeration.

11.74.1 Detailed Description

This is the FLTK text input widget.

It displays a single line of text and lets the user edit it. Normally it is drawn with an inset box and a white background. The text may contain any characters, and will correctly display any UTF text, using ^X notation for unprintable control characters. It assumes the font can draw any characters of the used scripts, which is true for standard fonts under Windows and Mac OS X. Characters can be input using the keyboard or the character palette/map. Character composition is done using dead keys and/or a compose key as defined by the operating system.

Table 11.308 Keyboard and mouse bindings.

Mouse button 1	Moves the cursor to this point. Drag selects characters. Double click selects words. Triple click selects all line. Shift+click extends the selection. When you select text it is automatically copied to the selection buffer.
Mouse button 2	Insert the selection buffer at the point clicked. You can also select a region and replace it with the selection buffer by selecting the region with mouse button 2.
Mouse button 3	Currently acts like button 1.
Backspace	Deletes one character to the left, or deletes the selected region.
Delete	Deletes one character to the right, or deletes the selected region. Combine with Shift for equivalent of ^X (copy+cut).
Enter	May cause the callback, see when() .

Table 11.309 Platform specific keyboard bindings.

Windows/Linux	Mac	Function
^A	Command-A	Selects all text in the widget.
^C	Command-C	Copy the current selection to the clipboard.
^I	^I	Insert a tab.
^J	^J	Insert a Line Feed. (Similar to literal 'Enter' character)
^L	^L	Insert a Form Feed.
^M	^M	Insert a Carriage Return.
^V, Shift-Insert	Command-V	Paste the clipboard. (Macs keyboards don't have "Insert" keys, but if they did, Shift-Insert would work)
^X, Shift-Delete	Command-X, Shift-Delete	Cut. Copy the selection to the clipboard and delete it. (If there's no selection, Shift-Delete acts like Delete)
^Z	Command-Z	Undo. This is a single-level undo mechanism, but all adjacent deletions and insertions are concatenated into a single "undo". Often this will undo a lot more than you expected.
Shift-^Z	Shift-Command-Z	Redo. Currently same behavior as ^Z. Reserved for future multilevel undo/redo.
Arrow Keys	Arrow Keys	Standard cursor movement. Can be combined with Shift to extend selection.
Home	Command-Up, Command-Left	Move to start of line. Can be combined with Shift to extend selection.
End	Command-Down, Command-Right	Move to end of line. Can be combined with Shift to extend selection.
Ctrl-Home	Command-Up, Command-PgUp, Ctrl-Left	Move to top of document/field. In single line input, moves to start of line. In multiline input, moves to start of top line. Can be combined with Shift to extend selection.

Ctrl-End	Command-End, Command-PgDn, Ctrl-Right	Move to bottom of document/field. In single line input, moves to end of line. In multiline input, moves to end of last line. Can be combined with Shift to extend selection.
Ctrl-Left	Alt-Left	Word left. Can be combined with Shift to extend selection.
Ctrl-Right	Alt-Right	Word right. Can be combined with Shift to extend selection.
Ctrl-Backspace	Alt-Backspace	Delete word left.
Ctrl-Delete	Alt-Delete	Delete word right.

11.74.2 Constructor & Destructor Documentation

11.74.2.1 Fl_Input()

```
Fl_Input::Fl_Input (
    int X,
    int Y,
    int W,
    int H,
    const char * l = 0)
```

Creates a new [Fl_Input](#) widget using the given position, size, and label string. The default boxtype is FL_DOWN_BOX.

11.74.3 Member Function Documentation

11.74.3.1 draw()

```
void Fl_Input::draw () [protected], [virtual]
```

Draws the widget.

Never call this function directly. FLTK will schedule redrawing whenever needed. If your widget must be redrawn as soon as possible, call [redraw\(\)](#) instead.

Override this function to draw your own widgets.

If you ever need to call another widget's draw method *from within your own [draw\(\)](#) method*, e.g. for an embedded scrollbar, you can do it (because [draw\(\)](#) is virtual) like this:

```
Fl_Widget *s = &scrollbar; // scrollbar is an embedded Fl_Scrollbar
s->draw();                 // calls Fl_Scrollbar::draw()
```

Implements [Fl_Widget](#).

11.74.3.2 handle()

```
int Fl_Input::handle (
    int event) [virtual]
```

Handles the specified event.

You normally don't call this method directly, but instead let FLTK do it when the user interacts with the widget.

When implemented in a widget, this function must return 0 if the widget does not use the event or 1 otherwise.

Most of the time, you want to call the inherited [handle\(\)](#) method in your overridden method so that you don't short-circuit events that you don't handle. In this last case you should return the callee retval.

One exception to the rule in the previous paragraph is if you really want to *override* the behavior of the base class. This requires knowledge of the details of the inherited class.

In rare cases you may want to return 1 from your [handle\(\)](#) method although you don't really handle the event. The effect would be to *filter* event processing, for instance if you want to dismiss non-numeric characters (keypresses) in a numeric input widget. You may "ring the bell" or show another visual indication or drop the event silently. In such a case you must not call the [handle\(\)](#) method of the base class and tell FLTK that you *consumed* the event by returning 1 even if you didn't *do* anything with it.

Parameters

<code>in</code>	<code>event</code>	the kind of event received
-----------------	--------------------	----------------------------

Return values

<code>0</code>	if the event was not used or understood
<code>1</code>	if the event was used and can be deleted

See also

[Fl_Event](#)

Reimplemented from [Fl_Widget](#).

Reimplemented in [Fl_Secret_Input](#), and [Fl_Spinner::Fl_Spinner_Input](#).

11.74.3.3 handle_key()

```
int Fl_Input::handle_key () [protected]
```

Handles a keystroke.

This `protected` method handles a keystroke in an [Fl_Input](#) or derived class. It handles compose key sequences and can also be used e.g. in [Fl_Multiline_Input](#), [Fl_Float_Input](#) and several more derived classes.

The method first checks in [Fl::compose](#) if the keystroke is a text entry or a control key. If it is text, the method inserts the composed characters into the input field, taking into account the input type (e.g., numeric fields).

If the keystroke is a control key as determined by [Fl::compose](#), the method handles key combinations for Insert, Enter, and Tab depending on the widget's [input_type\(\)](#).

The method then checks for Ctrl key combinations, such as Ctrl-A, Ctrl-C, Ctrl-V, Ctrl-X, and Ctrl-Z, which are commonly used for select all, copy, paste, cut, and undo operations.

Finally, the method checks for ASCII control characters, such as Ctrl-H, Ctrl-I, Ctrl-J, Ctrl-L, and Ctrl-M, which can be used to insert literal control characters into the input field.

If none of the above cases match, the method returns 0, indicating that the keystroke was not handled.

Returns

1 if the keystroke is handled by us, 0 if not.

11.74.3.4 handle_rmb()

```
int Fl_Input::handle_rmb () [protected]
```

Handle right mouse button down events.

Returns

1

The documentation for this class was generated from the following files:

- [Fl_Input.H](#)
- [Fl_Input.cxx](#)

11.75 Fl_Input_ Class Reference

This class provides a low-overhead text input field.

```
#include <Fl_Input_.H>
```

Inheritance diagram for `Fl_Input_`:

Public Member Functions

- int [append](#) (const char *t, int l=0, char keep_selection=0)
Append text at the end.
- bool [can_redo](#) () const
Check if there is a redo action available.
- bool [can_undo](#) () const
Check if the last operation can be undone.
- int [copy](#) (int clipboard)
Put the current selection into the clipboard.
- int [copy_cuts](#) ()
Copies the yank buffer to the clipboard.
- [Fl_Color](#) [cursor_color](#) () const
Gets the color of the cursor.
- void [cursor_color](#) ([Fl_Color](#) n)
Sets the color of the cursor.
- int [cut](#) ()
Deletes the current selection.
- int [cut](#) (int a, int b)
Deletes all characters between index a and b.
- int [cut](#) (int n)
Deletes the next n bytes rounded to characters before or after the cursor.
- double [dvalue](#) () const
Returns the widget text interpreted as a floating point number.
- [Fl_Input_](#) (int, int, int, int, const char *m=0)
Creates a new [Fl_Input_](#) widget.
- unsigned int [index](#) (int i) const
Returns the character at index i.
- int [input_type](#) () const
Gets the input field type.
- void [input_type](#) (int t)
Sets the input field type.
- int [insert](#) (const char *t, int l=0)
Inserts text at the cursor position.
- int [insert_position](#) () const
Gets the position of the text cursor.
- int [insert_position](#) (int p)
Sets the cursor position and mark.
- int [insert_position](#) (int p, int m)
Sets the index for the cursor and mark.
- int [ivalue](#) () const
Returns the widget text interpreted as a signed integer.
- int [mark](#) () const
Gets the current selection mark.
- int [mark](#) (int m)
Sets the current selection mark.
- int [maximum_size](#) () const
Gets the maximum length of the input field in characters.
- void [maximum_size](#) (int m)
Sets the maximum length of the input field in characters.
- int [position](#) () const

- int [position](#) (int p)
- int [position](#) (int p, int m)
- int [readonly](#) () const
Gets the read-only state of the input field.
- void [readonly](#) (int b)
Sets the read-only state of the input field.
- int [redo](#) ()
Redo previous undo operation.
- int [replace](#) (int b, int e, const char *text, int ilen=0)
Deletes text from b to e and inserts the new string text.
- void [resize](#) (int, int, int, int) [FL_OVERRIDE](#)
Changes the size of the widget.
- int [shortcut](#) () const
Return the shortcut key associated with this widget.
- void [shortcut](#) (int s)
Sets the shortcut key associated with this widget.
- int [size](#) () const
Returns the number of bytes in value().
- void [size](#) (int W, int H)
Sets the width and height of this widget.
- int [static_value](#) (const char *)
Changes the widget text.
- int [static_value](#) (const char *, int)
Changes the widget text.
- int [tab_nav](#) () const
Gets whether the Tab key causes focus navigation in multiline input fields or not.
- void [tab_nav](#) (int val)
Sets whether the Tab key does focus navigation, or inserts tab characters into [FL_Multiline_Input](#).
- [FL_Color](#) [textcolor](#) () const
Gets the color of the text in the input field.
- void [textcolor](#) ([FL_Color](#) n)
Sets the color of the text in the input field.
- [FL_Font](#) [textfont](#) () const
Gets the font of the text in the input field.
- void [textfont](#) ([FL_Font](#) s)
Sets the font of the text in the input field.
- [FL_Fontsize](#) [textsize](#) () const
Gets the size of the text in the input field.
- void [textsize](#) ([FL_Fontsize](#) s)
Sets the size of the text in the input field.
- int [undo](#) ()
Undoes previous changes to the text buffer.
- const char * [value](#) () const
Returns the text displayed in the widget.
- int [value](#) (const char *)
Changes the widget text.
- int [value](#) (const char *, int)
Changes the widget text.
- int [value](#) (double value)
Changes the widget text to a floating point number ("%g").
- int [value](#) (int value)

- Changes the widget text to a signed integer number.*

 - int `wrap` () const

Gets the word wrapping state of the input field.
- void `wrap` (int b)

Sets the word wrapping state of the input field.
- `~FI_Input` ()

Destroys the widget.

Public Member Functions inherited from `FI_Widget`

- void `_clear_fullscreen` ()
- void `_set_fullscreen` ()
- void `activate` ()

Activates the widget.
- unsigned int `active` () const

Returns whether the widget is active.
- int `active_r` () const

Returns whether the widget and all of its parents are active.
- `FI_Align` `align` () const

Gets the label alignment.
- void `align` (`FI_Align` alignment)

Sets the label alignment.
- long `argument` () const

Gets the current user data (long) argument that is passed to the callback function.
- void `argument` (long v)

Sets the current user data (long) argument that is passed to the callback function.
- virtual class `FI_GI_Window` * `as_gi_window` ()

Returns an `FI_GI_Window` pointer if this widget is an `FI_GI_Window`.
- virtual class `FI_GI_Window` const * `as_gi_window` () const
- virtual `FI_Group` * `as_group` ()

Returns an `FI_Group` pointer if this widget is an `FI_Group`.
- virtual `FI_Group` const * `as_group` () const
- virtual `FI_Window` * `as_window` ()

Returns an `FI_Window` pointer if this widget is an `FI_Window`.
- virtual `FI_Window` const * `as_window` () const
- void `bind_deimage` (`FI_Image` *img)

Sets the image to use as part of the widget label when in the inactive state.
- void `bind_deimage` (int f)

Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.
- void `bind_image` (`FI_Image` *img)

Sets the image to use as part of the widget label when in the active state.
- void `bind_image` (int f)

Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- `FI_Boxtype` `box` () const

Gets the box type of the widget.
- void `box` (`FI_Boxtype` new_box)

Sets the box type for the widget.
- `FI_Callback_p` `callback` () const

Gets the current callback function for the widget.
- void `callback` (`FI_Callback` *cb)

Sets the current callback function for the widget.

- void [callback](#) ([FI_Callback](#) *cb, [FI_Callback_User_Data](#) *p, bool auto_free)
Sets the current callback function and managed user data for the widget.
- void [callback](#) ([FI_Callback](#) *cb, void *p)
Sets the current callback function and data for the widget.
- void [callback](#) ([FI_Callback0](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback1](#) *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int [changed](#) () const
Checks if the widget value changed since the last callback.
- void [clear_active](#) ()
Marks the widget as inactive without sending events or changing focus.
- void [clear_changed](#) ()
Marks the value of the widget as unchanged.
- void [clear_damage](#) ([uchar](#) c=0)
Clears or sets the damage flags.
- void [clear_output](#) ()
Sets a widget to accept input.
- void [clear_visible](#) ()
Hides the widget.
- void [clear_visible_focus](#) ()
Disables keyboard focus navigation with this widget.
- [FI_Color](#) [color](#) () const
Gets the background color of the widget.
- void [color](#) ([FI_Color](#) bg)
Sets the background color of the widget.
- void [color](#) ([FI_Color](#) bg, [FI_Color](#) sel)
Sets the background and selection color of the widget.
- [FI_Color](#) [color2](#) () const
For back compatibility only.
- void [color2](#) (unsigned a)
For back compatibility only.
- int [contains](#) (const [FI_Widget](#) *w) const
Checks if w is a child of this widget.
- void [copy_label](#) (const char *new_label)
Sets the current label.
- void [copy_tooltip](#) (const char *text)
Sets the current tooltip text.
- [uchar](#) [damage](#) () const
Returns non-zero if [draw\(\)](#) needs to be called.
- void [damage](#) ([uchar](#) c)
Sets the damage bits for the widget.
- void [damage](#) ([uchar](#) c, int x, int y, int w, int h)
Sets the damage bits for an area inside the widget.
- int [damage_resize](#) (int, int, int, int)
Internal use only.
- void [deactivate](#) ()
Deactivates the widget.
- [FI_Image](#) * [deimage](#) ()
Gets the image that is used as part of the widget label when in the inactive state.
- const [FI_Image](#) * [deimage](#) () const

- Gets the image that is used as part of the widget label when in the inactive state.*

 - void [deimage](#) ([FL_Image](#) &img)

Sets the image to use as part of the widget label when in the inactive state.

 - void [deimage](#) ([FL_Image](#) *img)

Sets the image to use as part of the widget label when in the inactive state.

 - int [deimage_bound](#) () const

Returns whether the inactive image is managed by the widget.

 - void [do_callback](#) ([FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))

Calls the widget callback function with default arguments.

 - void [do_callback](#) ([FL_Widget](#) *widget, long arg, [FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))

Calls the widget callback function with arbitrary arguments.

 - void [do_callback](#) ([FL_Widget](#) *widget, void *arg=0, [FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))

Calls the widget callback function with arbitrary arguments.

 - virtual void [draw](#) ()=0

Draws the widget.

 - void [draw_label](#) (int, int, int, int, [FL_Align](#)) const

Draws the label in an arbitrary bounding box with an arbitrary alignment.

 - int [h](#) () const

Gets the widget height.

 - virtual int [handle](#) (int event)

Handles the specified event.

 - virtual void [hide](#) ()

Makes a widget invisible.

 - int [horizontal_label_margin](#) ()

Get the spacing between the label and the horizontal edge of the widget.

 - void [horizontal_label_margin](#) (int px)

Set the spacing between the label and the horizontal edge of the widget.

 - [FL_Image](#) * [image](#) ()

Gets the image that is used as part of the widget label when in the active state.

 - const [FL_Image](#) * [image](#) () const

Gets the image that is used as part of the widget label when in the active state.

 - void [image](#) ([FL_Image](#) &img)

Sets the image to use as part of the widget label when in the active state.

 - void [image](#) ([FL_Image](#) *img)

Sets the image to use as part of the widget label when in the active state.

 - int [image_bound](#) () const

Returns whether the image is managed by the widget.

 - int [inside](#) (const [FL_Widget](#) *wgt) const

Checks if this widget is a child of wgt.

 - int [is_label_copied](#) () const

Returns whether the current label was assigned with [copy_label\(\)](#).

 - const char * [label](#) () const

Gets the current label text.

 - void [label](#) (const char *text)

Sets the current label pointer.

 - void [label](#) ([FL_Labeltype](#) a, const char *b)

Shortcut to set the label text and type in one call.

 - int [label_image_spacing](#) ()

Return the gap size between the label and the image.

 - void [label_image_spacing](#) (int gap)

Set the gap between the label and the image in pixels.

- [FL_Color labelcolor](#) () const
Gets the label color.
- void [labelcolor](#) ([FL_Color](#) c)
Sets the label color.
- [FL_Font labelfont](#) () const
Gets the font to use.
- void [labelfont](#) ([FL_Font](#) f)
Sets the font to use.
- [FL_Fonsize labelsize](#) () const
Gets the font size in pixels.
- void [labelsize](#) ([FL_Fonsize](#) pix)
Sets the font size in pixels.
- [FL_Labeltype labeltype](#) () const
Gets the label type.
- void [labeltype](#) ([FL_Labeltype](#) a)
Sets the label type.
- void [measure_label](#) (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- bool [needs_keyboard](#) () const
Returns whether this widget needs a keyboard.
- void [needs_keyboard](#) (bool needs)
Sets whether this widget needs a keyboard.
- unsigned int [output](#) () const
Returns if a widget is used for output only.
- [FL_Group * parent](#) () const
Returns a pointer to the parent widget.
- void [parent](#) ([FL_Group](#) *p)
Internal use only - "for hacks only".
- void [position](#) (int X, int Y)
Repositions the window or widget.
- void [redraw](#) ()
Schedules the drawing of the widget.
- void [redraw_label](#) ()
Schedules the drawing of the label.
- [FL_Color selection_color](#) () const
Gets the selection color.
- void [selection_color](#) ([FL_Color](#) a)
Sets the selection color.
- void [set_active](#) ()
Marks the widget as active without sending events or changing focus.
- void [set_changed](#) ()
Marks the value of the widget as changed.
- void [set_output](#) ()
Sets a widget to output only.
- void [set_visible](#) ()
Makes the widget visible.
- void [set_visible_focus](#) ()
Enables keyboard focus navigation with this widget.
- int [shortcut_label](#) () const
Returns whether the widget's label uses '&' to indicate shortcuts.
- void [shortcut_label](#) (int value)

- Sets whether the widget's label uses '&' to indicate shortcuts.*

 - virtual void **show** ()
- Makes a widget visible.*

 - void **size** (int W, int H)
- Changes the size of the widget.*

 - int **take_focus** ()
- Gives the widget the keyboard focus.*

 - unsigned int **takeevents** () const
- Returns if the widget is able to take events.*

 - int **test_shortcut** ()
- Returns true if the widget's label contains the entered '&x' shortcut.*

 - const char * **tooltip** () const
- Gets the current tooltip text.*

 - void **tooltip** (const char *text)
- Sets the current tooltip text.*

 - **Fl_Window** * **top_window** () const
- Returns a pointer to the top-level window for the widget.*

 - **Fl_Window** * **top_window_offset** (int &xoff, int &yoff) const
- Finds the x/y offset of the current widget relative to the top-level window.*

 - **uchar** **type** () const
- Gets the widget type.*

 - void **type** (**uchar** t)
- Sets the widget type.*

 - int **use_accents_menu** ()
- Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.*

 - void * **user_data** () const
- Gets the user data for this widget.*

 - void **user_data** (**Fl_Callback_User_Data** *v, bool auto_free)
- Sets the user data for this widget.*

 - void **user_data** (void *v)
- Sets the user data for this widget.*

 - int **vertical_label_margin** ()
- Get the spacing between the label and the vertical edge of the widget.*

 - void **vertical_label_margin** (int px)
- Set the spacing between the label and the vertical edge of the widget.*

 - unsigned int **visible** () const
- Returns whether a widget is visible.*

 - unsigned int **visible_focus** () const
- Checks whether this widget has a visible focus.*

 - void **visible_focus** (int v)
- Modifies keyboard focus navigation.*

 - int **visible_r** () const
- Returns whether a widget and all its parents are visible.*

 - int **w** () const
- Gets the widget width.*

 - **Fl_When** **when** () const
- Returns the conditions under which the callback is called.*

 - void **when** (**uchar** i)
- Sets the flags used to decide when a callback is called.*

 - **Fl_Window** * **window** () const
- Returns a pointer to the nearest parent window up the widget hierarchy.*

- int **x** () const
Gets the widget position in its window.
- int **y** () const
Gets the widget position in its window.
- virtual **~FL_Widget** ()
Destroys the widget.

Protected Member Functions

- int **apply_undo** ()
Apply the current undo/redo operation.
- void **drawtext** (int, int, int, int)
Draws the text in the passed bounding box.
- void **drawtext** (int, int, int, int, bool draw_active)
Draws the text in the passed bounding box.
- void **handle_mouse** (int, int, int, int, int keepmark=0)
Handles mouse clicks and mouse moves.
- int **handletext** (int e, int, int, int, int)
Handles all kinds of text field related events.
- int **line_end** (int i) const
Finds the end of a line.
- int **line_start** (int i) const
Finds the start of a line.
- int **linesPerPage** ()
- void **maybe_do_callback** (FL_Callback_Reason reason=FL_REASON_UNKNOWN)
- int **up_down_position** (int, int keepmark=0)
Moves the cursor to the column given by up_down_pos.
- int **word_end** (int i) const
Finds the end of a word.
- int **word_start** (int i) const
Finds the start of a word.
- int **xscroll** () const
- int **yscroll** () const
- void **yscroll** (int yOffset)

Protected Member Functions inherited from FL_Widget

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** (FL_Boxtype t, FL_Color c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** (FL_Boxtype t, int x, int y, int w, int h, FL_Color c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const
Draws a focus rectangle around the widget.
- void **draw_focus** (FL_Boxtype t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void **draw_focus** (FL_Boxtype t, int x, int y, int w, int h, FL_Color bg) const

- Draws a focus box for the widget at the given position and size.*
- void `draw_label` () const
Draws the widget's label at the defined label position.
- void `draw_label` (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- `FI_Widget` (int `x`, int `y`, int `w`, int `h`, const char *`label`=0L)
Creates a widget at the given position and size.
- unsigned int `flags` () const
Gets the widget flags mask.
- void `h` (int `v`)
Internal use only.
- void `set_flag` (unsigned int `c`)
Sets a flag in the flags mask.
- void `w` (int `v`)
Internal use only.
- void `x` (int `v`)
Internal use only.
- void `y` (int `v`)
Internal use only.

Additional Inherited Members

Static Public Member Functions inherited from `FI_Widget`

- static void `default_callback` (`FI_Widget` *`widget`, void *`data`)
The default callback for all widgets that don't set a callback.
- static unsigned int `label_shortcut` (const char *`t`)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int `test_shortcut` (const char *, const bool `require_alt`=false)
Returns true if the given text `t` contains the entered '&x' shortcut.

Protected Types inherited from `FI_Widget`

- enum {
`INACTIVE` = 1<<0 , `INVISIBLE` = 1<<1 , `OUTPUT` = 1<<2 , `NOBORDER` = 1<<3 ,
`FORCE_POSITION` = 1<<4 , `NON_MODAL` = 1<<5 , `SHORTCUT_LABEL` = 1<<6 , `CHANGED` = 1<<7
, `OVERRIDE` = 1<<8 , `VISIBLE_FOCUS` = 1<<9 , `COPIED_LABEL` = 1<<10 , `CLIP_CHILDREN` = 1<<11
, `MENU_WINDOW` = 1<<12 , `TOOLTIP_WINDOW` = 1<<13 , `MODAL` = 1<<14 , `NO_OVERLAY` = 1<<15
, `GROUP_RELATIVE` = 1<<16 , `COPIED_TOOLTIP` = 1<<17 , `FULLSCREEN` = 1<<18 , `MAC_USE_ACCENTS_MENU`
= 1<<19 ,
`NEEDS_KEYBOARD` = 1<<20 , `IMAGE_BOUND` = 1<<21 , `DEIMAGE_BOUND` = 1<<22 ,
`AUTO_DELETE_USER_DATA` = 1<<23 ,
`MAXIMIZED` = 1<<24 , `POPUP` = 1<<25 , `USERFLAG3` = 1<<29 , `USERFLAG2` = 1<<30 ,
`USERFLAG1` = 1<<31 }
flags possible values enumeration.

11.75.1 Detailed Description

This class provides a low-overhead text input field.

This is a virtual base class below [Fl_Input](#). It has all the same interfaces, but lacks the [handle\(\)](#) and [draw\(\)](#) method. You may want to subclass it if you are one of those people who likes to change how the editing keys work. It may also be useful for adding scrollbars to the input field.

This can act like any of the subclasses of [Fl_Input](#), by setting [type\(\)](#) to one of the following values:

```
#define FL_NORMAL_INPUT      0
#define FL_FLOAT_INPUT      1
#define FL_INT_INPUT        2
#define FL_MULTILINE_INPUT   4
#define FL_SECRET_INPUT     5
#define FL_INPUT_TYPE       7
#define FL_INPUT_READONLY   8
#define FL_NORMAL_OUTPUT     (FL_NORMAL_INPUT | FL_INPUT_READONLY)
#define FL_MULTILINE_OUTPUT  (FL_MULTILINE_INPUT | FL_INPUT_READONLY)
#define FL_INPUT_WRAP       16
#define FL_MULTILINE_INPUT_WRAP (FL_MULTILINE_INPUT | FL_INPUT_WRAP)
#define FL_MULTILINE_OUTPUT_WRAP (FL_MULTILINE_INPUT | FL_INPUT_READONLY | FL_INPUT_WRAP)
```

All variables that represent an index into a text buffer are byte-oriented, not character oriented, counting from 0 (at or before the first character) to [size\(\)](#) (at the end of the buffer, after the last byte). Since UTF-8 characters can be up to six bytes long, simply incrementing such an index will not reliably advance to the next character in the text buffer. Indices and pointers into the text buffer should always point at a 7 bit ASCII character or the beginning of a UTF-8 character sequence. Behavior for false UTF-8 sequences and pointers into the middle of a sequence are undefined.

[Fl_Text_Display](#), [Fl_Text_Editor](#) for more powerful text handling widgets

[Fl_Widget::shortcut_label\(int\)](#)

11.75.2 Constructor & Destructor Documentation

11.75.2.1 Fl_Input_()

```
Fl_Input_::Fl_Input_ (
    int X,
    int Y,
    int W,
    int H,
    const char * l = 0)
```

Creates a new [Fl_Input_](#) widget.

This function creates a new [Fl_Input_](#) widget and adds it to the current [Fl_Group](#). The [value\(\)](#) is set to NULL. The default boxtype is [FL_DOWN_BOX](#).

Parameters

<i>X,Y,W,H</i>	the dimensions of the new widget
<i>l</i>	an optional label text

11.75.2.2 ~Fl_Input_()

```
Fl_Input_::~~Fl_Input_ ()
```

Destroys the widget.

The destructor clears all allocated buffers and removes the widget from the parent [Fl_Group](#).

11.75.3 Member Function Documentation

11.75.3.1 append()

```
int Fl_Input_::append (
    const char * t,
    int l = 0,
    char keep_selection = 0)
```

Append text at the end.

This function appends the string in `t` to the end of the text. It does not moves the new position or mark.

Parameters

in	<i>t</i>	text that will be appended
in	<i>l</i>	length of text, or 0 if the string is terminated by <code>nul</code> .
in	<i>keep_selection</i>	if this is 1, the current text selection will remain, if 0, the cursor will move to the end of the inserted text.

Returns

0 if no text was appended

11.75.3.2 `apply_undo()`

```
int Fl_Input_::apply_undo () [protected]
```

Apply the current undo/redo operation.

It's up to `undo()` and `redo()` to push and pop actions to and from the lists.

Returns

1 if the current action changed any text.

See also

`undo()`, `redo()`

11.75.3.3 `can_redo()`

```
bool Fl_Input_::can_redo () const
```

Check if there is a redo action available.

Returns

true if the widget can redo the last undo action

11.75.3.4 `can_undo()`

```
bool Fl_Input_::can_undo () const
```

Check if the last operation can be undone.

Returns

true if the widget can undo the last change

11.75.3.5 `copy()`

```
int Fl_Input_::copy (
    int clipboard)
```

Put the current selection into the clipboard.

This function copies the current selection between `mark()` and `position()` into the specified `clipboard`. This does not replace the old clipboard contents if `position()` and `mark()` are equal. Clipboard 0 maps to the current text selection and clipboard 1 maps to the cut/paste clipboard.

Parameters

<i>clipboard</i>	the clipboard destination 0 or 1
------------------	----------------------------------

Returns

0 if no text is selected, 1 if the selection was copied

See also

Fl::copy(const char *, int, int)

11.75.3.6 copy_cuts()

```
int Fl_Input_::copy_cuts ()
```

Copies the *yank* buffer to the clipboard.

This method copies all the previous contiguous cuts from the undo information to the clipboard. This function implements the [^]K shortcut key.

Returns

0 if the operation did not change the clipboard

See also

[copy\(int\), cut\(\)](#)

11.75.3.7 cursor_color() [1/2]

```
Fl_Color Fl_Input_::cursor_color () const [inline]
```

Gets the color of the cursor.

Returns

the current cursor color

11.75.3.8 cursor_color() [2/2]

```
void Fl_Input_::cursor_color (
    Fl_Color n) [inline]
```

Sets the color of the cursor.

The default color for the cursor is FL_BLACK.

Parameters

in	<i>n</i>	the new cursor color
----	----------	----------------------

11.75.3.9 cut() [1/3]

```
int Fl_Input_::cut () [inline]
```

Deletes the current selection.

This function deletes the currently selected text *without* storing it in the clipboard. To use the clipboard, you may call [copy\(\)](#) first or [copy_cuts\(\)](#) after this call.

Returns

0 if no data was copied

11.75.3.10 cut() [2/3]

```
int Fl_Input_::cut (
    int a,
    int b) [inline]
```

Deletes all characters between index *a* and *b*.

This function deletes the currently selected text *without* storing it in the clipboard. To use the clipboard, you may call [copy\(\)](#) first or [copy_cuts\(\)](#) after this call.

Parameters

<i>a,b</i>	range of bytes rounded to full characters and clamped to the buffer
------------	---

Returns

0 if no data was copied

11.75.3.11 cut() [3/3]

```
int Fl_Input_::cut (
    int n) [inline]
```

Deletes the next *n* bytes rounded to characters before or after the cursor.

This function deletes the currently selected text *without* storing it in the clipboard. To use the clipboard, you may call [copy\(\)](#) first or [copy_cuts\(\)](#) after this call.

Parameters

<i>n</i>	number of bytes rounded to full characters and clamped to the buffer. A negative number will cut characters to the left of the cursor.
----------	--

Returns

0 if no data was copied

11.75.3.12 drawtext() [1/2]

```
void Fl_Input_::drawtext (
    int X,
    int Y,
    int W,
    int H) [protected]
```

Draws the text in the passed bounding box.

If [damage\(\)](#) & FL_DAMAGE_ALL is true, this assumes the area has already been erased to [color\(\)](#). Otherwise it does minimal update and erases the area itself.

Parameters

<i>X,Y,W,H</i>	area that must be redrawn
----------------	---------------------------

11.75.3.13 drawtext() [2/2]

```
void Fl_Input_::drawtext (
    int X,
    int Y,
    int W,
    int H,
    bool draw_active) [protected]
```

Draws the text in the passed bounding box.

This version of `drawtext` allows the user to control whether the widget is drawn as active, i.e. with the text cursor, or inactive. This is useful for compound widgets where the input should be shown as active when actually the container widget is the active one.

A caller should not draw the widget with `active` set if another text widget may indeed be the active widget.

Parameters

<i>X,Y,W,H</i>	area that must be redrawn
<i>draw_active</i>	if set, the cursor will be drawn, even if the widget is not active

See also

[Fl_Input_::drawtext\(int X, int Y, int W, int H\)](#)

11.75.3.14 dvalue()

```
double Fl_Input_::dvalue () const
```

Returns the widget text interpreted as a floating point number.

Returns

double precision floating point value

See also

[Fl_Input_::ivalue\(\)](#)

[Fl_Input_::value\(double\)](#)

11.75.3.15 handle_mouse()

```
void Fl_Input_::handle_mouse (
    int X,
    int Y,
    int ,
    int ,
    int drag = 0) [protected]
```

Handles mouse clicks and mouse moves.

Todo Add comment and parameters

11.75.3.16 handletext()

```
int Fl_Input_::handletext (
    int event,
    int X,
    int Y,
    int W,
    int H) [protected]
```

Handles all kinds of text field related events.

This is called by derived classes.

Todo Add comment and parameters

11.75.3.17 index()

```
unsigned int Fl_Input_::index (
    int i) const
```

Returns the character at index *i*.

This function returns the UTF-8 character at *i* as a ucs4 character code.

Parameters

<code>in</code>	<code>i</code>	index into the value field
-----------------	----------------	----------------------------

Returns

the character at index `i`

11.75.3.18 input_type() [1/2]

```
int Fl_Input_::input_type () const [inline]
```

Gets the input field type.

Returns

the current input type

11.75.3.19 input_type() [2/2]

```
void Fl_Input_::input_type (
    int t) [inline]
```

Sets the input field type.

A [redraw\(\)](#) is required to reformat the input field.

Parameters

<code>in</code>	<code>t</code>	new input type
-----------------	----------------	----------------

11.75.3.20 insert()

```
int Fl_Input_::insert (
    const char * t,
    int l = 0) [inline]
```

Inserts text at the cursor position.

This function inserts the string in `t` at the cursor [position\(\)](#) and moves the new position and mark to the end of the inserted text.

Parameters

<code>in</code>	<code>t</code>	text that will be inserted
<code>in</code>	<code>l</code>	length of text, or 0 if the string is terminated by <code>nul</code> .

Returns

0 if no text was inserted

11.75.3.21 insert_position() [1/3]

```
int Fl_Input_::insert_position () const [inline]
```

Gets the position of the text cursor.

Returns

the cursor position as an index in the range 0..[size\(\)](#)

See also

[insert_position\(int, int\)](#)

11.75.3.22 insert_position() [2/3]

```
int Fl_Input_::insert_position (
    int p) [inline]
```

Sets the cursor position and mark.

`position(n)` is the same as `position(n, n)`.

Parameters

<i>p</i>	new index for cursor and mark
----------	-------------------------------

Returns

0 if no positions changed

See also

[insert_position\(int, int\)](#), [insert_position\(\)](#), [mark\(int\)](#)

11.75.3.23 insert_position() [3/3]

```
int Fl_Input_::insert_position (
    int p,
    int m)
```

Sets the index for the cursor and mark.

The input widget maintains two pointers into the string. The *position* (*p*) is where the cursor is. The *mark* (*m*) is the other end of the selected text. If they are equal then there is no selection. Changing this does not affect the clipboard (use [copy\(\)](#) to do that).

Changing these values causes a [redraw\(\)](#). The new values are bounds checked.

Parameters

<i>p</i>	index for the cursor position
<i>m</i>	index for the mark

Returns

0 if no positions changed

See also

[position\(int\)](#), [position\(\)](#), [mark\(int\)](#)

11.75.3.24 ivalue()

```
int Fl_Input_::ivalue () const
```

Returns the widget text interpreted as a signed integer.

Returns

signed integer value

See also

[Fl_Input_::dvalue\(\)](#)

[Fl_Input_::value\(int\)](#)

11.75.3.25 line_end()

```
int Fl_Input_::line_end (  
    int i) const    [protected]
```

Finds the end of a line.

This call calculates the end of a line based on the given index *i*.

Parameters

<code>in</code>	<code>i</code>	starting index for the search
-----------------	----------------	-------------------------------

Returns

end of the line

11.75.3.26 line_start()

```
int Fl_Input_::line_start (
    int i) const [protected]
```

Finds the start of a line.

This call calculates the start of a line based on the given index `i`.

Parameters

<code>in</code>	<code>i</code>	starting index for the search
-----------------	----------------	-------------------------------

Returns

start of the line

11.75.3.27 mark() [1/2]

```
int Fl_Input_::mark () const [inline]
```

Gets the current selection mark.

Returns

index into the text

11.75.3.28 mark() [2/2]

```
int Fl_Input_::mark (
    int m) [inline]
```

Sets the current selection mark.

`mark(n)` is the same as `insert_position(insert_position(),n)`.

Parameters

<code>m</code>	new index of the mark
----------------	-----------------------

Returns

0 if the mark did not change

See also

[insert_position\(\)](#), [insert_position\(int, int\)](#)

11.75.3.29 maximum_size() [1/2]

```
int Fl_Input_::maximum_size () const [inline]
```

Gets the maximum length of the input field in characters.

See also

[maximum_size\(int\)](#).

11.75.3.30 maximum_size() [2/2]

```
void Fl_Input_::maximum_size (
    int m) [inline]
```

Sets the maximum length of the input field in characters.

This limits the number of **characters** that can be inserted in the widget.

Since FLTK 1.3 this is different than the buffer size, since one character can be more than one byte in UTF-8 encoding. In FLTK 1.1 this was the same (one byte = one character).

11.75.3.31 position() [1/3]

```
int Fl_Input_::position () const [inline]
```

Deprecated "since 1.4.0 - use insert_position() instead"

11.75.3.32 position() [2/3]

```
int Fl_Input_::position (
    int p) [inline]
```

Deprecated "since 1.4.0 - use insert_position(p) instead"

11.75.3.33 position() [3/3]

```
int Fl_Input_::position (
    int p,
    int m) [inline]
```

Deprecated "since 1.4.0 - use insert_position(p, m) or Fl_Widget::position(x, y) instead"

11.75.3.34 readonly() [1/2]

```
int Fl_Input_::readonly () const [inline]
```

Gets the read-only state of the input field.

Returns

non-zero if this widget is read-only

11.75.3.35 readonly() [2/2]

```
void Fl_Input_::readonly (
    int b) [inline]
```

Sets the read-only state of the input field.

Parameters

in	<i>b</i>	if <i>b</i> is 0, the text in this widget can be edited by the user
----	----------	---

11.75.3.36 redo()

```
int Fl_Input_::redo ()
```

Redo previous undo operation.

This call reapplies previously executed undo operations.

Returns

non-zero if any change was made.

11.75.3.37 replace()

```
int Fl_Input_::replace (
    int b,
    int e,
    const char * text,
    int ilen = 0)
```

Deletes text from `b` to `e` and inserts the new string `text`.

All changes to the text buffer go through this function. It deletes the region between `b` and `e` (either one may be less or equal to the other), and then inserts the string `text` at that point and moves the [mark\(\)](#) and [position\(\)](#) to the end of the insertion. Does the callback if [when\(\)](#) & `FL_WHEN_CHANGED` and there is a change.

Set `b` and `e` equal to not delete anything. Set `text` to `NULL` to not insert anything.

`ilen` can be zero or `strlen(text)`, which saves a tiny bit of time if you happen to already know the length of the insertion, or can be used to insert a portion of a string. If `ilen` is zero, `strlen(text)` is used instead.

`b` and `e` are clamped to the `0..size()` range, so it is safe to pass any values. `b`, `e`, and `ilen` are used as numbers of bytes (not characters), where `b` and `e` count from 0 to [size\(\)](#) (end of buffer).

If `b` and/or `e` don't point to a valid UTF-8 character boundary, they are adjusted to the previous (`b`) or the next (`e`) valid UTF-8 character boundary, resp..

If the current number of characters in the buffer minus deleted characters plus inserted characters in `text` would overflow the number of allowed characters ([maximum_size\(\)](#)), then only the first characters of the string are inserted, so that [maximum_size\(\)](#) is not exceeded.

[cut\(\)](#) and [insert\(\)](#) are just inline functions that call [replace\(\)](#).

Parameters

in	<i>b</i>	beginning index of text to be deleted
in	<i>e</i>	ending index of text to be deleted and insertion position
in	<i>text</i>	string that will be inserted
in	<i>ilen</i>	length of <code>text</code> or 0 for nul terminated strings

Returns

0 if nothing changed

Note

If `text` does not point to a valid UTF-8 character or includes invalid UTF-8 sequences, the text is inserted nevertheless (counting invalid UTF-8 bytes as one character each).

11.75.3.38 resize()

```
void Fl_Input_::resize (
    int X,
    int Y,
    int W,
    int H) [virtual]
```

Changes the size of the widget.

This call updates the text layout so that the cursor is visible.

Parameters

in	<i>X,Y,W,H</i>	new size of the widget
----	----------------	------------------------

See also

[Fl_Widget::resize\(int, int, int, int\)](#)

Reimplemented from [Fl_Widget](#).

11.75.3.39 shortcut() [1/2]

```
int Fl_Input_::shortcut () const [inline]
```

Return the shortcut key associated with this widget.

Returns

shortcut keystroke

See also

[Fl_Button::shortcut\(\)](#)

11.75.3.40 shortcut() [2/2]

```
void Fl_Input_::shortcut (
    int s) [inline]
```

Sets the shortcut key associated with this widget.

Pressing the shortcut key gives text editing focus to this widget.

Parameters

in	s	new shortcut keystroke
----	---	------------------------

See also

[Fl_Button::shortcut\(\)](#)

11.75.3.41 size() [1/2]

```
int Fl_Input_::size () const [inline]
```

Returns the number of bytes in [value\(\)](#).

This may be greater than `strlen(value())` if there are `nul` characters in the text.

Returns

number of bytes in the text

11.75.3.42 size() [2/2]

```
void Fl_Input_::size (
    int W,
    int H) [inline]
```

Sets the width and height of this widget.

Parameters

in	W,H	new width and height
----	-----	----------------------

See also

[Fl_Widget::size\(int, int\)](#)

11.75.3.43 static_value() [1/2]

```
int Fl_Input_::static_value (
    const char * str)
```

Changes the widget text.

This function changes the text and sets the mark and the point to the end of it. The string is *not* copied. If the user edits the string it is copied to the internal buffer then. This can save a great deal of time and memory if your program is rapidly changing the values of text fields, but this will only work if the passed string remains unchanged until either the [Fl_Input](#) is destroyed or [value\(\)](#) is called again.

Parameters

in	str	the new text
----	-----	--------------

Returns

non-zero if the new value is different than the current one

11.75.3.44 static_value() [2/2]

```
int Fl_Input_::static_value (
    const char * str,
    int len)
```

Changes the widget text.

This function changes the text and sets the mark and the point to the end of it. The string is *not* copied. If the user edits the string it is copied to the internal buffer then. This can save a great deal of time and memory if your program is rapidly changing the values of text fields, but this will only work if the passed string remains unchanged until either the [Fl_Input](#) is destroyed or [value\(\)](#) is called again.

You can use the `len` parameter to directly set the length if you know it already or want to put `nul` characters in the text.

Parameters

in	str	the new text
in	len	the length of the new text

Returns

non-zero if the new value is different than the current one

11.75.3.45 tab_nav() [1/2]

```
int Fl_Input_::tab_nav () const [inline]
```

Gets whether the Tab key causes focus navigation in multiline input fields or not.

If enabled (default), hitting Tab causes focus navigation to the next widget.

If disabled, hitting Tab inserts a tab character into the text field.

Returns

1 if Tab advances focus (default), 0 if Tab inserts tab characters.

See also

[tab_nav\(int\)](#), [Fl::OPTION_ARROW_FOCUS](#).

11.75.3.46 tab_nav() [2/2]

```
void Fl_Input_::tab_nav (
    int val) [inline]
```

Sets whether the Tab key does focus navigation, or inserts tab characters into [Fl_Multiline_Input](#).

By default this flag is enabled to provide the 'normal' behavior most users expect; Tab navigates focus to the next widget. To inserting an actual Tab character, users can use Ctrl-I or copy/paste.

Disabling this flag gives the old FLTK behavior where Tab inserts a tab character into the text field, in which case only the mouse can be used to navigate to the next field.

History: This flag was provided for backwards support of FLTK's old 1.1.x behavior where Tab inserts a tab character instead of navigating focus to the next widget. This behavior was unique to [Fl_Multiline_Input](#). With the advent of [Fl_Text_Editor](#), this old behavior has been deprecated.

Parameters

<code>in</code>	<code>val</code>	If <code>val</code> is 1, Tab advances focus (default). If <code>val</code> is 0, Tab inserts a tab character (old FLTK behavior).
-----------------	------------------	---

See also

[tab_nav\(\)](#), [Fl::OPTION_ARROW_FOCUS](#).

11.75.3.47 textcolor() [1/2]

```
Fl_Color Fl_Input_::textcolor () const [inline]
```

Gets the color of the text in the input field.

Returns

the text color

See also

[textcolor\(Fl_Color\)](#)

11.75.3.48 textcolor() [2/2]

```
void Fl_Input_::textcolor (
    Fl_Color n) [inline]
```

Sets the color of the text in the input field.

The text color defaults to `FL_FOREGROUND_COLOR`.

Parameters

<code>in</code>	<code>n</code>	new text color
-----------------	----------------	----------------

See also

[textcolor\(\)](#)

11.75.3.49 textfont() [1/2]

```
Fl_Font Fl_Input_::textfont () const [inline]
```

Gets the font of the text in the input field.

Returns

the current [Fl_Font](#) index

11.75.3.50 textfont() [2/2]

```
void Fl_Input_::textfont (
    Fl_Font s) [inline]
```

Sets the font of the text in the input field.

The text font defaults to `FL_HELVETICA`.

Parameters

<code>in</code>	<code>s</code>	the new text font
-----------------	----------------	-------------------

11.75.3.51 `textsize()` [1/2]

```
Fl_Fontsize Fl_Input_::textsize () const [inline]
```

Gets the size of the text in the input field.

Returns

the text height in pixels

11.75.3.52 `textsize()` [2/2]

```
void Fl_Input_::textsize (
    Fl_Fontsize s) [inline]
```

Sets the size of the text in the input field.

The text height defaults to `FL_NORMAL_SIZE`.

Parameters

in	s	the new font height in pixel units
----	---	------------------------------------

11.75.3.53 `undo()`

```
int Fl_Input_::undo ()
```

Undoes previous changes to the text buffer.

This call undoes a number of previous calls to [replace\(\)](#).

Returns

non-zero if any change was made.

11.75.3.54 `up_down_position()`

```
int Fl_Input_::up_down_position (
    int i,
    int keepmark = 0) [protected]
```

Moves the cursor to the column given by `up_down_pos`.

This function is helpful when implementing up and down cursor movement. It moves the cursor from the beginning of a line to the column indicated by the global variable `up_down_pos` in pixel units.

Parameters

in	<i>i</i>	index into the beginning of a line of text
in	<i>keepmark</i>	if set, move only the cursor, but not the mark

Returns

index to new cursor position

11.75.3.55 `value()` [1/5]

```
const char * Fl_Input_::value () const [inline]
```

Returns the text displayed in the widget.

This function returns the current value, which is a pointer to the internal buffer and is valid only until the next event is handled.

Returns

pointer to an internal buffer - do not free() this

See also

[Fl_Input_::value\(const char*\)](#)

11.75.3.56 value() [2/5]

```
int Fl_Input_::value (
    const char * str)
```

Changes the widget text.

This function changes the text and sets the mark and the point to the end of it. The string is copied to the internal buffer. Passing NULL is the same as "".

Parameters

in	<i>str</i>	the new text
----	------------	--------------

Returns

non-zero if the new value is different than the current one

See also

[Fl_Input_::value\(const char* str, int len\)](#), [Fl_Input_::value\(\)](#)

11.75.3.57 value() [3/5]

```
int Fl_Input_::value (
    const char * str,
    int len)
```

Changes the widget text.

This function changes the text and sets the mark and the point to the end of it. The string is copied to the internal buffer. Passing NULL is the same as "".

You can use the `length` parameter to directly set the length if you know it already or want to put `nul` characters in the text.

Parameters

in	<i>str</i>	the new text
in	<i>len</i>	the length of the new text

Returns

non-zero if the new value is different than the current one

See also

[Fl_Input_::value\(const char* str\)](#), [Fl_Input_::value\(\)](#)

11.75.3.58 value() [4/5]

```
int Fl_Input_::value (
    double v)
```

Changes the widget text to a floating point number ("%g").

Parameters

in	<i>v</i>	the new value
----	----------	---------------

Returns

non-zero if the new value is different than the current one

See also

[Fl_Input_::value\(const char* str\)](#), [Fl_Input_::ivalue\(\)](#)

11.75.3.59 value() [5/5]

```
int Fl_Input_::value (  
    int v)
```

Changes the widget text to a signed integer number.

Parameters

in	v	the new value
----	---	---------------

Returns

non-zero if the new value is different than the current one

See also

[Fl_Input_::value\(const char* str\)](#), [Fl_Input_::ivalue\(\)](#)

11.75.3.60 word_end()

```
int Fl_Input_::word_end (  
    int i) const [protected]
```

Finds the end of a word.

Returns the index after the last byte of a word. If the index is already at the end of a word, it will find the end of the following word, so if you call it repeatedly you will move forwards to the end of the text.

Note that this is inconsistent with [line_end\(\)](#).

Parameters

in	i	starting index for the search
----	---	-------------------------------

Returns

end of the word

11.75.3.61 word_start()

```
int Fl_Input_::word_start (  
    int i) const [protected]
```

Finds the start of a word.

Returns the index of the first byte of a word. If the index is already at the beginning of a word, it will find the beginning of the previous word, so if you call it repeatedly you will move backwards to the beginning of the text.

Note that this is inconsistent with [line_start\(\)](#).

Parameters

in	i	starting index for the search
----	---	-------------------------------

Returns

start of the word, or previous word

11.75.3.62 wrap() [1/2]

```
int Fl_Input_::wrap () const [inline]
```

Gets the word wrapping state of the input field.

Word wrap is only functional with multi-line input fields.

11.75.3.63 wrap() [2/2]

```
void Fl_Input_::wrap (
    int b) [inline]
```

Sets the word wrapping state of the input field.

Word wrap is only functional with multi-line input fields.

The documentation for this class was generated from the following files:

- `Fl_Input_.H`
- `Fl_Input_.cxx`

11.76 Fl_Input_Choice Class Reference

A combination of the input widget and a menu button.

Inheritance diagram for `Fl_Input_Choice`:

Public Member Functions

- void **add** (const char *s)
Adds an item to the menu.
- int **changed** () const
Returns the combined [changed\(\)](#) state of the input and menu button widget.
- void **clear** ()
Removes all items from the menu.
- void **clear_changed** ()
Clears the [changed\(\)](#) state of both input and menu button widgets.
- [Fl_Boxtype](#) **down_box** () const
Gets the box type of the menu button.
- void **down_box** ([Fl_Boxtype](#) b)
Sets the box type of the menu button.
- [Fl_Input_Choice](#) (int X, int Y, int W, int H, const char *L=0)
Creates a new [Fl_Input_Choice](#) widget using the given position, size, and label string.
- [Fl_Input](#) * **input** ()
Returns a pointer to the internal [Fl_Input](#) widget.
- const [Fl_Menu_Item](#) * **menu** ()
Gets the [Fl_Menu_Item](#) array used for the menu.
- void **menu** (const [Fl_Menu_Item](#) *m)
Sets the [Fl_Menu_Item](#) array used for the menu.
- [Fl_Menu_Button](#) * **menubutton** ()
Returns a pointer to the internal [Fl_Menu_Button](#) widget.
- void **resize** (int X, int Y, int W, int H) [FL_OVERRIDE](#)
Resizes the [Fl_Input_Choice](#) widget.
- void **set_changed** ()
Sets the [changed\(\)](#) state of both input and menu button widgets to the specified value.
- [Fl_Color](#) **textcolor** () const

- Gets the [FL_Input](#) text field's text color.*
- void **textcolor** ([FL_Color](#) c)
Sets the [FL_Input](#) text field's text color to c.
- [FL_Font](#) **textfont** () const
Gets the [FL_Input](#) text field's font style.
- void **textfont** ([FL_Font](#) f)
Sets the [FL_Input](#) text field's font style to f.
- [FL_Fontsize](#) **textsize** () const
Gets the [FL_Input](#) text field's font size.
- void **textsize** ([FL_Fontsize](#) s)
Sets the [FL_Input](#) text field's font size to s.
- int **update_menubutton** ()
Updates the menubutton with the string value in [FL_Input](#).
- const char * **value** () const
Returns the [FL_Input](#) text field's current contents.
- void **value** (const char *val)
Sets the [FL_Input](#) text field's contents to val.
- void **value** (int val)
Chooses item# val in the menu, and sets the [FL_Input](#) text field to that value.

Public Member Functions inherited from [FL_Group](#)

- [FL_Widget](#) *& **_ddfdesign_kludge** ()
This is for forms compatibility only.
- void **add** ([FL_Widget](#) &)
The widget is removed from its current group (if any) and then added to the end of this group.
- void **add** ([FL_Widget](#) *o)
See void [FL_Group::add\(FL_Widget &w\)](#)
- void **add_resizable** ([FL_Widget](#) &o)
Adds a widget to the group and makes it the resizable widget.
- [FL_Widget](#) *const * **array** () const
Returns a pointer to the array of children.
- [FL_Group](#) const * **as_group** () const [FL_OVERRIDE](#)
- [FL_Group](#) * **as_group** () [FL_OVERRIDE](#)
Returns an [FL_Group](#) pointer if this widget is an [FL_Group](#).
- void **begin** ()
Sets the current group so you can build the widget tree by just constructing the widgets.
- [FL_Widget](#) * **child** (int n) const
Returns the n'th child.
- int **children** () const
Returns how many child widgets the group has.
- void **clear** ()
Deletes all child widgets from memory recursively.
- unsigned int **clip_children** ()
Returns the current clipping mode.
- void **clip_children** (int c)
Controls whether the group widget clips the drawing of child widgets to its bounding box.
- virtual int **delete_child** (int n)
Removes the widget at index from the group and deletes it.
- void **end** ()
Exactly the same as current(this->[parent\(\)](#)).

- int **find** (const [FL_Widget](#) &o) const
*See int [FL_Group::find\(const FL_Widget *w\)](#) const.*
- int **find** (const [FL_Widget](#) *) const
Searches the child array for the widget and returns the index.
- [FL_Group](#) (int, int, int, int, const char *s=0)
Creates a new [FL_Group](#) widget using the given position, size, and label string.
- void **focus** ([FL_Widget](#) *W)
- void **forms_end** ()
This is for forms compatibility only.
- int **handle** (int) [FL_OVERRIDE](#)
Handles the specified event.
- void **init_sizes** ()
Resets the internal array of widget sizes and positions.
- void **insert** ([FL_Widget](#) &, int i)
The widget is removed from its current group (if any) and then inserted into this group.
- void **insert** ([FL_Widget](#) &o, [FL_Widget](#) *before)
This does insert(w, find(before)).
- void **remove** ([FL_Widget](#) &)
Removes a widget from the group but does not delete it.
- void **remove** ([FL_Widget](#) *o)
Removes the widget o from the group.
- void **remove** (int index)
Removes the widget at index from the group but does not delete it.
- [FL_Widget](#) * **resizable** () const
Returns the group's resizable widget.
- void **resizable** ([FL_Widget](#) &o)
Sets the group's resizable widget.
- void **resizable** ([FL_Widget](#) *o)
The resizable widget defines both the resizing box and the resizing behavior of the group and its children.
- virtual [~FL_Group](#) ()
The destructor also deletes all the children.

Public Member Functions inherited from [FL_Widget](#)

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
Activates the widget.
- unsigned int **active** () const
Returns whether the widget is active.
- int **active_r** () const
Returns whether the widget and all of its parents are active.
- [FL_Align](#) **align** () const
Gets the label alignment.
- void **align** ([FL_Align](#) alignment)
Sets the label alignment.
- long **argument** () const
Gets the current user data (long) argument that is passed to the callback function.
- void **argument** (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class [FL_Gl_Window](#) * **as_gl_window** ()

- Returns an [FI_GI_Window](#) pointer if this widget is an [FI_GI_Window](#).*
- virtual class [FI_GI_Window](#) const * **as_gi_window** () const
- virtual [FI_Window](#) * **as_window** ()
- Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).*
- virtual [FI_Window](#) const * **as_window** () const
- void **bind_deimage** ([FI_Image](#) *img)
- Sets the image to use as part of the widget label when in the inactive state.*
- void **bind_deimage** (int f)
- Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.*
- void **bind_image** ([FI_Image](#) *img)
- Sets the image to use as part of the widget label when in the active state.*
- void **bind_image** (int f)
- Bind the image to the widget, so the widget will delete the image when it is no longer needed.*
- [FI_Boxtype](#) **box** () const
- Gets the box type of the widget.*
- void **box** ([FI_Boxtype](#) new_box)
- Sets the box type for the widget.*
- [FI_Callback_p](#) **callback** () const
- Gets the current callback function for the widget.*
- void **callback** ([FI_Callback](#) *cb)
- Sets the current callback function for the widget.*
- void **callback** ([FI_Callback](#) *cb, [FI_Callback_User_Data](#) *p, bool auto_free)
- Sets the current callback function and managed user data for the widget.*
- void **callback** ([FI_Callback](#) *cb, void *p)
- Sets the current callback function and data for the widget.*
- void **callback** ([FI_Callback0](#) *cb)
- Sets the current callback function for the widget.*
- void **callback** ([FI_Callback1](#) *cb, long p=0)
- Sets the current callback function for the widget.*
- unsigned int **changed** () const
- Checks if the widget value changed since the last callback.*
- void **clear_active** ()
- Marks the widget as inactive without sending events or changing focus.*
- void **clear_changed** ()
- Marks the value of the widget as unchanged.*
- void **clear_damage** (uchar c=0)
- Clears or sets the damage flags.*
- void **clear_output** ()
- Sets a widget to accept input.*
- void **clear_visible** ()
- Hides the widget.*
- void **clear_visible_focus** ()
- Disables keyboard focus navigation with this widget.*
- [FI_Color](#) **color** () const
- Gets the background color of the widget.*
- void **color** ([FI_Color](#) bg)
- Sets the background color of the widget.*
- void **color** ([FI_Color](#) bg, [FI_Color](#) sel)
- Sets the background and selection color of the widget.*
- [FI_Color](#) **color2** () const
- For back compatibility only.*

- void `color2` (unsigned a)
For back compatibility only.
- int `contains` (const `Fl_Widget` *w) const
Checks if w is a child of this widget.
- void `copy_label` (const char *new_label)
Sets the current label.
- void `copy_tooltip` (const char *text)
Sets the current tooltip text.
- `uchar` `damage` () const
Returns non-zero if `draw()` needs to be called.
- void `damage` (`uchar` c)
Sets the damage bits for the widget.
- void `damage` (`uchar` c, int x, int y, int w, int h)
Sets the damage bits for an area inside the widget.
- int `damage_resize` (int, int, int, int)
Internal use only.
- void `deactivate` ()
Deactivates the widget.
- `Fl_Image` * `deimage` ()
Gets the image that is used as part of the widget label when in the inactive state.
- const `Fl_Image` * `deimage` () const
Gets the image that is used as part of the widget label when in the inactive state.
- void `deimage` (`Fl_Image` &img)
Sets the image to use as part of the widget label when in the inactive state.
- void `deimage` (`Fl_Image` *img)
Sets the image to use as part of the widget label when in the inactive state.
- int `deimage_bound` () const
Returns whether the inactive image is managed by the widget.
- void `do_callback` (`Fl_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with default arguments.
- void `do_callback` (`Fl_Widget` *widget, long arg, `Fl_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with arbitrary arguments.
- void `do_callback` (`Fl_Widget` *widget, void *arg=0, `Fl_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with arbitrary arguments.
- void `draw_label` (int, int, int, int, `Fl_Align`) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const
Gets the widget height.
- virtual void `hide` ()
Makes a widget invisible.
- int `horizontal_label_margin` ()
Get the spacing between the label and the horizontal edge of the widget.
- void `horizontal_label_margin` (int px)
Set the spacing between the label and the horizontal edge of the widget.
- `Fl_Image` * `image` ()
Gets the image that is used as part of the widget label when in the active state.
- const `Fl_Image` * `image` () const
Gets the image that is used as part of the widget label when in the active state.
- void `image` (`Fl_Image` &img)
Sets the image to use as part of the widget label when in the active state.
- void `image` (`Fl_Image` *img)

- Sets the image to use as part of the widget label when in the active state.*

 - int `image_bound` () const

Returns whether the image is managed by the widget.
- int `inside` (const `FL_Widget` *wgt) const

Checks if this widget is a child of wgt.
- int `is_label_copied` () const

Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const

Gets the current label text.
- void `label` (const char *text)

Sets the current label pointer.
- void `label` (`FL_Labeltype` a, const char *b)

Shortcut to set the label text and type in one call.
- int `label_image_spacing` ()

Return the gap size between the label and the image.
- void `label_image_spacing` (int gap)

Set the gap between the label and the image in pixels.
- `FL_Color` `labelcolor` () const

Gets the label color.
- void `labelcolor` (`FL_Color` c)

Sets the label color.
- `FL_Font` `labelfont` () const

Gets the font to use.
- void `labelfont` (`FL_Font` f)

Sets the font to use.
- `FL_Fonsize` `labelsize` () const

Gets the font size in pixels.
- void `labelsize` (`FL_Fonsize` pix)

Sets the font size in pixels.
- `FL_Labeltype` `labeltype` () const

Gets the label type.
- void `labeltype` (`FL_Labeltype` a)

Sets the label type.
- void `measure_label` (int &ww, int &hh) const

Sets width ww and height hh accordingly with the label size.
- bool `needs_keyboard` () const

Returns whether this widget needs a keyboard.
- void `needs_keyboard` (bool needs)

Sets whether this widget needs a keyboard.
- unsigned int `output` () const

Returns if a widget is used for output only.
- `FL_Group` * `parent` () const

Returns a pointer to the parent widget.
- void `parent` (`FL_Group` *p)

Internal use only - "for hacks only".
- void `position` (int X, int Y)

Repositions the window or widget.
- void `redraw` ()

Schedules the drawing of the widget.
- void `redraw_label` ()

Schedules the drawing of the label.

- [FI_Color selection_color](#) () const
Gets the selection color.
- void [selection_color](#) ([FI_Color](#) a)
Sets the selection color.
- void [set_active](#) ()
Marks the widget as active without sending events or changing focus.
- void [set_changed](#) ()
Marks the value of the widget as changed.
- void [set_output](#) ()
Sets a widget to output only.
- void [set_visible](#) ()
Makes the widget visible.
- void [set_visible_focus](#) ()
Enables keyboard focus navigation with this widget.
- int [shortcut_label](#) () const
Returns whether the widget's label uses '&' to indicate shortcuts.
- void [shortcut_label](#) (int value)
Sets whether the widget's label uses '&' to indicate shortcuts.
- virtual void [show](#) ()
Makes a widget visible.
- void [size](#) (int W, int H)
Changes the size of the widget.
- int [take_focus](#) ()
Gives the widget the keyboard focus.
- unsigned int [takeevents](#) () const
Returns if the widget is able to take events.
- int [test_shortcut](#) ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * [tooltip](#) () const
Gets the current tooltip text.
- void [tooltip](#) (const char *text)
Sets the current tooltip text.
- [FI_Window](#) * [top_window](#) () const
Returns a pointer to the top-level window for the widget.
- [FI_Window](#) * [top_window_offset](#) (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- [uchar](#) [type](#) () const
Gets the widget type.
- void [type](#) ([uchar](#) t)
Sets the widget type.
- int [use_accents_menu](#) ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * [user_data](#) () const
Gets the user data for this widget.
- void [user_data](#) ([FI_Callback_User_Data](#) *v, bool auto_free)
Sets the user data for this widget.
- void [user_data](#) (void *v)
Sets the user data for this widget.
- int [vertical_label_margin](#) ()
Get the spacing between the label and the vertical edge of the widget.
- void [vertical_label_margin](#) (int px)

- Set the spacing between the label and the vertical edge of the widget.*

 - unsigned int **visible** () const
Returns whether a widget is visible.
 - unsigned int **visible_focus** () const
Checks whether this widget has a visible focus.
 - void **visible_focus** (int v)
Modifies keyboard focus navigation.
 - int **visible_r** () const
Returns whether a widget and all its parents are visible.
 - int **w** () const
Gets the widget width.
 - **Fl_When** **when** () const
Returns the conditions under which the callback is called.
 - void **when** (uchar i)
Sets the flags used to decide when a callback is called.
 - **Fl_Window** * **window** () const
Returns a pointer to the nearest parent window up the widget hierarchy.
 - int **x** () const
Gets the widget position in its window.
 - int **y** () const
Gets the widget position in its window.
 - virtual ~**Fl_Widget** ()
Destroys the widget.

Protected Member Functions

- void **draw** () **FL_OVERRIDE**
Draws the widget.
- virtual int **inp_h** () const
See [inp_x\(\)](#) for info.
- virtual int **inp_w** () const
See [inp_x\(\)](#) for info.
- virtual int **inp_x** () const
The methods [inp_x\(\)](#), [inp_y\(\)](#), [inp_w\(\)](#) and [inp_h\(\)](#) return the desired position and size of the internal [Fl_Input](#) widget.
- virtual int **inp_y** () const
See [inp_x\(\)](#) for info.
- virtual int **menu_h** () const
See [menu_x\(\)](#) for info.
- virtual int **menu_w** () const
See [menu_x\(\)](#) for info.
- virtual int **menu_x** () const
The methods [menu_x\(\)](#), [menu_y\(\)](#), [menu_w\(\)](#) and [menu_h\(\)](#) return the desired position and size of the internal [Fl_Menu_Button](#) widget.
- virtual int **menu_y** () const
See [menu_x\(\)](#) for info.

Protected Member Functions inherited from [FI_Group](#)

- [FI_Rect](#) * [bounds](#) ()
Returns the internal array of widget sizes and positions.
- void [draw_child](#) ([FI_Widget](#) &widget) const
Forces a child to redraw.
- void [draw_children](#) ()
Draws all children of the group.
- void [draw_outside_label](#) (const [FI_Widget](#) &widget) const
Parents normally call this to draw outside labels of child widgets.
- virtual int [on_insert](#) ([FI_Widget](#) *, int)
Allow derived groups to act when a widget is added as a child.
- virtual int [on_move](#) (int, int)
Allow derived groups to act when a widget is moved within the group.
- virtual void [on_remove](#) (int)
Allow derived groups to act when a child widget is removed from the group.
- int * [sizes](#) ()
Returns the internal array of widget sizes and positions.
- void [update_child](#) ([FI_Widget](#) &widget) const
Draws a child only if it needs it.

Protected Member Functions inherited from [FI_Widget](#)

- void [clear_flag](#) (unsigned int c)
Clears a flag in the flags mask.
- void [draw_backdrop](#) () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void [draw_box](#) () const
Draws the widget box according its box style.
- void [draw_box](#) ([FI_Boxtype](#) t, [FI_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void [draw_box](#) ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void [draw_focus](#) () const
Draws a focus rectangle around the widget.
- void [draw_focus](#) ([FI_Boxtype](#) t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void [draw_focus](#) ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) bg) const
Draws a focus box for the widget at the given position and size.
- void [draw_label](#) () const
Draws the widget's label at the defined label position.
- void [draw_label](#) (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [FI_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int [flags](#) () const
Gets the widget flags mask.
- void [h](#) (int v)
Internal use only.
- void [set_flag](#) (unsigned int c)
Sets a flag in the flags mask.
- void [w](#) (int v)

Internal use only.

- void `x` (int v)

Internal use only.

- void `y` (int v)

Internal use only.

Additional Inherited Members

Static Public Member Functions inherited from `FI_Group`

- static `FI_Group * current` ()
Returns the currently active group.
- static void `current` (`FI_Group *g`)
Sets the current group.

Static Public Member Functions inherited from `FI_Widget`

- static void `default_callback` (`FI_Widget *widget`, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int `label_shortcut` (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int `test_shortcut` (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from `FI_Widget`

- enum {
`INACTIVE` = 1<<0 , `INVISIBLE` = 1<<1 , `OUTPUT` = 1<<2 , `NOBORDER` = 1<<3 ,
`FORCE_POSITION` = 1<<4 , `NON_MODAL` = 1<<5 , `SHORTCUT_LABEL` = 1<<6 , `CHANGED` = 1<<7
, `OVERRIDE` = 1<<8 , `VISIBLE_FOCUS` = 1<<9 , `COPIED_LABEL` = 1<<10 , `CLIP_CHILDREN` = 1<<11
, `MENU_WINDOW` = 1<<12 , `TOOLTIP_WINDOW` = 1<<13 , `MODAL` = 1<<14 , `NO_OVERLAY` = 1<<15
, `GROUP_RELATIVE` = 1<<16 , `COPIED_TOOLTIP` = 1<<17 , `FULLSCREEN` = 1<<18 , `MAC_USE_ACCENTS_MENU`
= 1<<19 ,
`NEEDS_KEYBOARD` = 1<<20 , `IMAGE_BOUND` = 1<<21 , `DEIMAGE_BOUND` = 1<<22 ,
`AUTO_DELETE_USER_DATA` = 1<<23 ,
`MAXIMIZED` = 1<<24 , `POPUP` = 1<<25 , `USERFLAG3` = 1<<29 , `USERFLAG2` = 1<<30 ,
`USERFLAG1` = 1<<31 }
flags possible values enumeration.

11.76.1 Detailed Description

A combination of the input widget and a menu button.

Figure 11.26 `FI_Input_Choice` widget

The user can either type into the input area, or use the menu button chooser on the right to choose an item which loads the input area with the selected text.

The application can directly access both the internal `Fl_Input` and `Fl_Menu_Button` widgets respectively using the `input()` and `menubutton()` accessor methods.

The default behavior is to invoke the `Fl_Input_Choice::callback()` if the user changes the input field's contents, either by typing, pasting, or clicking a different item in the choice menu.

The callback can determine if an item was picked vs. typing into the input field by checking the value of `menubutton()->changed()`, which will be:

- 1: the user picked a different item in the choice menu
- 0: the user typed or pasted directly into the input field

Example Use of Fl_Input_Choice

```
#include <stdio.h>
#include <FL/Fl.H>
#include <FL/Fl_Double_Window.H>
#include <FL/Fl_Input_Choice.H>
// Fl_Input_Choice callback()
void choice_cb(Fl_Widget *w, void *userdata) {
    // Show info about the picked item
    Fl_Input_Choice *choice = (Fl_Input_Choice*)w;
    printf("*** Choice Callback:\n");
    printf("    widget's text value='%s'\n", choice->value()); // normally all you need
    // Access the menu via menubutton()..
    const Fl_Menu_Item *item = choice->menubutton()->mvalue();
    printf("    item label()='%s'\n", item ? item->label() : "(No item)");
    printf("    item value()=%d\n", choice->menubutton()->value());
    printf("    input value()='%s'\n", choice->input()->value());
    printf("    The user %s\n", choice->menubutton()->changed()
        ? "picked a menu item"
        : "typed text");
}

int main() {
    Fl_Double_Window win(200,100,"Input Choice");
    win.begin();
    Fl_Input_Choice choice(10,10,100,30);
    choice.callback(choice_cb, 0);
    choice.add("Red");
    choice.add("Orange");
    choice.add("Yellow");
    //choice.value("Red"); // uncomment to make "Red" default
    win.end();
    win.show();
    return Fl::run();
}
```

Subclassing Example

One can subclass `Fl_Input_Choice` to override the virtual methods `inp_x/y/w/h()` and `menu_x/y/w/h()` to take control of the internal `Fl_Input` and `Fl_Menu_Button` widget positioning. In this example, input and menubutton's positions are swapped:

```
#include <FL/Fl.H>
#include <FL/Fl_Window.H>
#include <FL/Fl_Input_Choice.H>

class MyInputChoice : public Fl_Input_Choice {
protected:
    virtual int inp_x() const { return x() + Fl::box_dx(box()) + menu_w(); } // override to reposition
    virtual int menu_x() const { return x() + Fl::box_dx(box()); } // override to reposition
public:
    MyInputChoice(int X,int Y,int W,int H,const char*L=0) : Fl_Input_Choice(X,Y,W,H,L) {
        resize(X,Y,W,H); // necessary for ctor to trigger our overrides
    }
};

int main(int argc, char **argv) {
    Fl_Window *win = new Fl_Window(400,300);
    MyInputChoice *mychoice = new MyInputChoice(150,40,150,25,"Right Align Input");
    mychoice->add("Aaa");
    mychoice->add("Bbb");
    mychoice->add("Ccc");
    win->end();
    win->resizable(win);
    win->show();
    return Fl::run();
}
```

11.76.2 Constructor & Destructor Documentation

11.76.2.1 Fl_Input_Choice()

```
Fl_Input_Choice::Fl_Input_Choice (
    int X,
    int Y,
    int W,
    int H,
    const char * L = 0)
```

Creates a new [Fl_Input_Choice](#) widget using the given position, size, and label string.
Inherited destructor destroys the widget and any values associated with it.

11.76.3 Member Function Documentation

11.76.3.1 add()

```
void Fl_Input_Choice::add (
    const char * s) [inline]
```

Adds an item to the menu.

When any item is selected, the [Fl_Input_Choice callback\(\)](#) is invoked, which can do something with the selected item.

You can access the more complex [Fl_Menu_Button::add\(\)](#) methods (setting item-specific callbacks, userdata, etc), via [menubutton\(\)](#). Example:

```
Fl_Input_Choice *choice = new Fl_Input_Choice(100,10,120,25,"Fonts");
Fl_Menu_Button *mb = choice->menubutton(); // use Fl_Input_Choice's Fl_Menu_Button
mb->add("Helvetica", 0, MyFont_CB, (void*)mydata); // use Fl_Menu_Button's add() methods
mb->add("Courier", 0, MyFont_CB, (void*)mydata);
mb->add("More..", 0, FontDialog_CB, (void*)mydata);
```

11.76.3.2 draw()

```
void Fl_Input_Choice::draw () [protected], [virtual]
```

Draws the widget.

Never call this function directly. FLTK will schedule redrawing whenever needed. If your widget must be redrawn as soon as possible, call [redraw\(\)](#) instead.

Override this function to draw your own widgets.

If you ever need to call another widget's draw method *from within your own draw() method*, e.g. for an embedded scrollbar, you can do it (because [draw\(\)](#) is virtual) like this:

```
Fl_Widget *s = &scrollbar; // scrollbar is an embedded Fl_Scrollbar
s->draw(); // calls Fl_Scrollbar::draw()
```

Reimplemented from [Fl_Group](#).

11.76.3.3 inp_x()

```
virtual int Fl_Input_Choice::inp_x () const [inline], [protected], [virtual]
```

The methods [inp_x\(\)](#), [inp_y\(\)](#), [inp_w\(\)](#) and [inp_h\(\)](#) return the desired position and size of the internal [Fl_Input](#) widget. These can be overridden by a subclass to redefine positioning. See code example in the Description for subclassing details.

11.76.3.4 input()

```
Fl_Input * Fl_Input_Choice::input () [inline]
```

Returns a pointer to the internal [Fl_Input](#) widget.

This can be used to directly access all of the [Fl_Input](#) widget's methods.

11.76.3.5 menu_x()

```
virtual int Fl_Input_Choice::menu_x () const [inline], [protected], [virtual]
```

The methods [menu_x\(\)](#), [menu_y\(\)](#), [menu_w\(\)](#) and [menu_h\(\)](#) return the desired position and size of the internal [Fl_Menu_Button](#) widget.

These can be overridden by a subclass to redefine positioning. See code example in the Description for subclassing details.

11.76.3.6 menubutton()

`Fl_Menu_Button * Fl_Input_Choice::menubutton () [inline]`

Returns a pointer to the internal `Fl_Menu_Button` widget.

This can be used to access any of the methods of the menu button, e.g.

```
Fl_Input_Choice *choice = new Fl_Input_Choice(100,10,120,25,"Choice:");
[...]
```

```
// Print all the items in the choice menu
for ( int t=0; t<choice->menubutton()->size(); t++ ) {
    const Fl_Menu_Item &item = choice->menubutton()->menu()[t];
    printf("item %d -- label=%s\n", t, item.label() ? item.label() : "(Null)");
}
```

11.76.3.7 resize()

```
void Fl_Input_Choice::resize (
    int X,
    int Y,
    int W,
    int H) [virtual]
```

Resizes the `Fl_Input_Choice` widget.

Reimplemented from `Fl_Group`.

11.76.3.8 update_menubutton()

`int Fl_Input_Choice::update_menubutton ()`

Updates the menubutton with the string value in `Fl_Input`.

If the string value currently in `Fl_Input` matches one of the menu items in `menubutton()`, that menu item will become the current item selected.

Call this method after setting `value(const char*)` if you need the `menubutton()` to be synchronized with the `Fl_Input` field.

```
// Add items
choice->add(".25");
choice->add(".50");
choice->add("1.0");
choice->add("2.0");
choice->add("4.0");

choice->value("1.0");           // sets Fl_Input to "1.0"
choice->update_menubutton();    // cause menubutton to reflect this value too
                                // (returns 1 if match was found, 0 if not)

// Verify menubutton()'s value.
printf("menu button choice index=%d, value=%s\n",
        choice->menubutton()->value(),           // would be -1 if update not done
        choice->menubutton()->text());           // would be NULL if update not done
```

Returns

1 if a matching menuitem was found and value set, 0 if not.

Version

1.4.0

11.76.3.9 value() [1/2]

```
void Fl_Input_Choice::value (
    const char * val) [inline]
```

Sets the `Fl_Input` text field's contents to `val`.

Note it is possible to set the `value()` to one that is not in the `menubutton`'s list of choices.

Setting the `value()` does NOT affect the `menubutton`'s selection. If that's needed, call `update_menubutton()` after setting `value()`.

See also

void [value\(int val\)](#), [update_menubutton\(\)](#)

11.76.3.10 value() [2/2]

```
void Fl_Input_Choice::value (
    int val)
```

Chooses item# `val` in the menu, and sets the [Fl_Input](#) text field to that value. Any previous text is cleared.

See also

void [value\(const char *val\)](#)

The documentation for this class was generated from the following files:

- [Fl_Input_Choice.H](#)
- [Fl_Input_Choice.cxx](#)

11.77 Fl_Int_Input Class Reference

The [Fl_Int_Input](#) class is a subclass of [Fl_Input](#) that only allows the user to type decimal digits (or hex numbers of the form 0xae).

```
#include <Fl_Int_Input.H>
```

Inheritance diagram for [Fl_Int_Input](#):

Public Member Functions

- [Fl_Int_Input](#) (int X, int Y, int W, int H, const char *l=0)
Creates a new [Fl_Int_Input](#) widget using the given position, size, and label string.

Public Member Functions inherited from [Fl_Input](#)

- [Fl_Input](#) (int, int, int, int, const char *l=0)
Creates a new [Fl_Input](#) widget using the given position, size, and label string.
- int [handle](#) (int) [FL_OVERRIDE](#)
Handles the specified event.

Public Member Functions inherited from [Fl_Input_](#)

- int [append](#) (const char *t, int l=0, char keep_selection=0)
Append text at the end.
- bool [can_redo](#) () const
Check if there is a redo action available.
- bool [can_undo](#) () const

- Check if the last operation can be undone.*

 - int `copy` (int clipboard)

Put the current selection into the clipboard.
- int `copy_cuts` ()

Copies the yank buffer to the clipboard.
- `Fl_Color` `cursor_color` () const

Gets the color of the cursor.
- void `cursor_color` (`Fl_Color` n)

Sets the color of the cursor.
- int `cut` ()

Deletes the current selection.
- int `cut` (int a, int b)

Deletes all characters between index a and b.
- int `cut` (int n)

Deletes the next n bytes rounded to characters before or after the cursor.
- double `dvalue` () const

Returns the widget text interpreted as a floating point number.
- `Fl_Input_` (int, int, int, int, const char *=0)

Creates a new `Fl_Input_` widget.
- unsigned int `index` (int i) const

Returns the character at index i.
- int `input_type` () const

Gets the input field type.
- void `input_type` (int t)

Sets the input field type.
- int `insert` (const char *t, int l=0)

Inserts text at the cursor position.
- int `insert_position` () const

Gets the position of the text cursor.
- int `insert_position` (int p)

Sets the cursor position and mark.
- int `insert_position` (int p, int m)

Sets the index for the cursor and mark.
- int `ivalue` () const

Returns the widget text interpreted as a signed integer.
- int `mark` () const

Gets the current selection mark.
- int `mark` (int m)

Sets the current selection mark.
- int `maximum_size` () const

Gets the maximum length of the input field in characters.
- void `maximum_size` (int m)

Sets the maximum length of the input field in characters.
- int `position` () const
- int `position` (int p)
- int `position` (int p, int m)
- int `readonly` () const

Gets the read-only state of the input field.
- void `readonly` (int b)

Sets the read-only state of the input field.
- int `redo` ()

- Redo previous undo operation.*
- `int replace (int b, int e, const char *text, int ilen=0)`
Deletes text from `b` to `e` and inserts the new string `text`.
- `void resize (int, int, int, int) FL_OVERRIDE`
Changes the size of the widget.
- `int shortcut () const`
Return the shortcut key associated with this widget.
- `void shortcut (int s)`
Sets the shortcut key associated with this widget.
- `int size () const`
Returns the number of bytes in `value()`.
- `void size (int W, int H)`
Sets the width and height of this widget.
- `int static_value (const char *)`
Changes the widget text.
- `int static_value (const char *, int)`
Changes the widget text.
- `int tab_nav () const`
Gets whether the Tab key causes focus navigation in multiline input fields or not.
- `void tab_nav (int val)`
Sets whether the Tab key does focus navigation, or inserts tab characters into `Fl_Multiline_Input`.
- `Fl_Color textcolor () const`
Gets the color of the text in the input field.
- `void textcolor (Fl_Color n)`
Sets the color of the text in the input field.
- `Fl_Font textfont () const`
Gets the font of the text in the input field.
- `void textfont (Fl_Font s)`
Sets the font of the text in the input field.
- `Fl_Fonsize textsize () const`
Gets the size of the text in the input field.
- `void textsize (Fl_Fonsize s)`
Sets the size of the text in the input field.
- `int undo ()`
Undoes previous changes to the text buffer.
- `const char * value () const`
Returns the text displayed in the widget.
- `int value (const char *)`
Changes the widget text.
- `int value (const char *, int)`
Changes the widget text.
- `int value (double value)`
Changes the widget text to a floating point number ("%g").
- `int value (int value)`
Changes the widget text to a signed integer number.
- `int wrap () const`
Gets the word wrapping state of the input field.
- `void wrap (int b)`
Sets the word wrapping state of the input field.
- `~Fl_Int_Input ()`
Destroys the widget.

Public Member Functions inherited from [FI_Widget](#)

- void [_clear_fullscreen](#) ()
- void [_set_fullscreen](#) ()
- void [activate](#) ()
Activates the widget.
- unsigned int [active](#) () const
Returns whether the widget is active.
- int [active_r](#) () const
Returns whether the widget and all of its parents are active.
- [FI_Align](#) [align](#) () const
Gets the label alignment.
- void [align](#) ([FI_Align](#) alignment)
Sets the label alignment.
- long [argument](#) () const
Gets the current user data (long) argument that is passed to the callback function.
- void [argument](#) (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class [FI_Gl_Window](#) * [as_gl_window](#) ()
Returns an [FI_Gl_Window](#) pointer if this widget is an [FI_Gl_Window](#).
- virtual class [FI_Gl_Window](#) const * [as_gl_window](#) () const
- virtual [FI_Group](#) * [as_group](#) ()
Returns an [FI_Group](#) pointer if this widget is an [FI_Group](#).
- virtual [FI_Group](#) const * [as_group](#) () const
- virtual [FI_Window](#) * [as_window](#) ()
Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).
- virtual [FI_Window](#) const * [as_window](#) () const
- void [bind_deimage](#) ([FI_Image](#) *img)
Sets the image to use as part of the widget label when in the inactive state.
- void [bind_deimage](#) (int f)
Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.
- void [bind_image](#) ([FI_Image](#) *img)
Sets the image to use as part of the widget label when in the active state.
- void [bind_image](#) (int f)
Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- [FI_Boxtype](#) [box](#) () const
Gets the box type of the widget.
- void [box](#) ([FI_Boxtype](#) new_box)
Sets the box type for the widget.
- [FI_Callback_p](#) [callback](#) () const
Gets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb, [FI_Callback_User_Data](#) *p, bool auto_free)
Sets the current callback function and managed user data for the widget.
- void [callback](#) ([FI_Callback](#) *cb, void *p)
Sets the current callback function and data for the widget.
- void [callback](#) ([FI_Callback0](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback1](#) *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int [changed](#) () const

- Checks if the widget value changed since the last callback.*

 - void [clear_active](#) ()

Marks the widget as inactive without sending events or changing focus.

 - void [clear_changed](#) ()

Marks the value of the widget as unchanged.

 - void [clear_damage](#) (uchar c=0)

Clears or sets the damage flags.

 - void [clear_output](#) ()

Sets a widget to accept input.

 - void [clear_visible](#) ()

Hides the widget.

 - void [clear_visible_focus](#) ()

Disables keyboard focus navigation with this widget.

 - [Fl_Color](#) [color](#) () const

Gets the background color of the widget.

 - void [color](#) ([Fl_Color](#) bg)

Sets the background color of the widget.

 - void [color](#) ([Fl_Color](#) bg, [Fl_Color](#) sel)

Sets the background and selection color of the widget.

 - [Fl_Color](#) [color2](#) () const

For back compatibility only.

 - void [color2](#) (unsigned a)

For back compatibility only.

 - int [contains](#) (const [Fl_Widget](#) *w) const

Checks if w is a child of this widget.

 - void [copy_label](#) (const char *new_label)

Sets the current label.

 - void [copy_tooltip](#) (const char *text)

Sets the current tooltip text.

 - [uchar](#) [damage](#) () const

Returns non-zero if [draw\(\)](#) needs to be called.

 - void [damage](#) (uchar c)

Sets the damage bits for the widget.

 - void [damage](#) (uchar c, int x, int y, int w, int h)

Sets the damage bits for an area inside the widget.

 - int [damage_resize](#) (int, int, int, int)

Internal use only.

 - void [deactivate](#) ()

Deactivates the widget.

 - [Fl_Image](#) * [deimage](#) ()

Gets the image that is used as part of the widget label when in the inactive state.

 - const [Fl_Image](#) * [deimage](#) () const

Gets the image that is used as part of the widget label when in the inactive state.

 - void [deimage](#) ([Fl_Image](#) &img)

Sets the image to use as part of the widget label when in the inactive state.

 - void [deimage](#) ([Fl_Image](#) *img)

Sets the image to use as part of the widget label when in the inactive state.

 - int [deimage_bound](#) () const

Returns whether the inactive image is managed by the widget.

 - void [do_callback](#) ([Fl_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))

Calls the widget callback function with default arguments.

- void `do_callback` (`FI_Widget` *widget, long arg, `FI_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with arbitrary arguments.
- void `do_callback` (`FI_Widget` *widget, void *arg=0, `FI_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with arbitrary arguments.
- void `draw_label` (int, int, int, int, `FI_Align`) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const
Gets the widget height.
- virtual void `hide` ()
Makes a widget invisible.
- int `horizontal_label_margin` ()
Get the spacing between the label and the horizontal edge of the widget.
- void `horizontal_label_margin` (int px)
Set the spacing between the label and the horizontal edge of the widget.
- `FI_Image` * `image` ()
Gets the image that is used as part of the widget label when in the active state.
- const `FI_Image` * `image` () const
Gets the image that is used as part of the widget label when in the active state.
- void `image` (`FI_Image` &img)
Sets the image to use as part of the widget label when in the active state.
- void `image` (`FI_Image` *img)
Sets the image to use as part of the widget label when in the active state.
- int `image_bound` () const
Returns whether the image is managed by the widget.
- int `inside` (const `FI_Widget` *wgt) const
Checks if this widget is a child of wgt.
- int `is_label_copied` () const
Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const
Gets the current label text.
- void `label` (const char *text)
Sets the current label pointer.
- void `label` (`FI_Labeltype` a, const char *b)
Shortcut to set the label text and type in one call.
- int `label_image_spacing` ()
Return the gap size between the label and the image.
- void `label_image_spacing` (int gap)
Set the gap between the label and the image in pixels.
- `FI_Color` `labelcolor` () const
Gets the label color.
- void `labelcolor` (`FI_Color` c)
Sets the label color.
- `FI_Font` `labelfont` () const
Gets the font to use.
- void `labelfont` (`FI_Font` f)
Sets the font to use.
- `FI_Fonsize` `labelsize` () const
Gets the font size in pixels.
- void `labelsize` (`FI_Fonsize` pix)
Sets the font size in pixels.
- `FI_Labeltype` `labeltype` () const

- Gets the label type.*

 - void [labeltype](#) ([Fl_Labeltype](#) a)
- Sets the label type.*

 - void [measure_label](#) (int &ww, int &hh) const

Sets width ww and height hh accordingly with the label size.
- bool [needs_keyboard](#) () const

Returns whether this widget needs a keyboard.
- void [needs_keyboard](#) (bool needs)

Sets whether this widget needs a keyboard.
- unsigned int [output](#) () const

Returns if a widget is used for output only.
- [Fl_Group](#) * [parent](#) () const

Returns a pointer to the parent widget.
- void [parent](#) ([Fl_Group](#) *p)

Internal use only - "for hacks only".
- void [position](#) (int X, int Y)

Repositions the window or widget.
- void [redraw](#) ()

Schedules the drawing of the widget.
- void [redraw_label](#) ()

Schedules the drawing of the label.
- [Fl_Color](#) [selection_color](#) () const

Gets the selection color.
- void [selection_color](#) ([Fl_Color](#) a)

Sets the selection color.
- void [set_active](#) ()

Marks the widget as active without sending events or changing focus.
- void [set_changed](#) ()

Marks the value of the widget as changed.
- void [set_output](#) ()

Sets a widget to output only.
- void [set_visible](#) ()

Makes the widget visible.
- void [set_visible_focus](#) ()

Enables keyboard focus navigation with this widget.
- int [shortcut_label](#) () const

Returns whether the widget's label uses '&' to indicate shortcuts.
- void [shortcut_label](#) (int value)

Sets whether the widget's label uses '&' to indicate shortcuts.
- virtual void [show](#) ()

Makes a widget visible.
- void [size](#) (int W, int H)

Changes the size of the widget.
- int [take_focus](#) ()

Gives the widget the keyboard focus.
- unsigned int [takeevents](#) () const

Returns if the widget is able to take events.
- int [test_shortcut](#) ()

Returns true if the widget's label contains the entered '&x' shortcut.
- const char * [tooltip](#) () const

Gets the current tooltip text.

- void **tooltip** (const char *text)
Sets the current tooltip text.
- **Fl_Window** * **top_window** () const
Returns a pointer to the top-level window for the widget.
- **Fl_Window** * **top_window_offset** (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- **uchar** **type** () const
Gets the widget type.
- void **type** (**uchar** t)
Sets the widget type.
- int **use_accents_menu** ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * **user_data** () const
Gets the user data for this widget.
- void **user_data** (**Fl_Callback_User_Data** *v, bool auto_free)
Sets the user data for this widget.
- void **user_data** (void *v)
Sets the user data for this widget.
- int **vertical_label_margin** ()
Get the spacing between the label and the vertical edge of the widget.
- void **vertical_label_margin** (int px)
Set the spacing between the label and the vertical edge of the widget.
- unsigned int **visible** () const
Returns whether a widget is visible.
- unsigned int **visible_focus** () const
Checks whether this widget has a visible focus.
- void **visible_focus** (int v)
Modifies keyboard focus navigation.
- int **visible_r** () const
Returns whether a widget and all its parents are visible.
- int **w** () const
Gets the widget width.
- **Fl_When** **when** () const
Returns the conditions under which the callback is called.
- void **when** (**uchar** i)
Sets the flags used to decide when a callback is called.
- **Fl_Window** * **window** () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int **x** () const
Gets the widget position in its window.
- int **y** () const
Gets the widget position in its window.
- virtual ~**Fl_Widget** ()
Destroys the widget.

Additional Inherited Members

Static Public Member Functions inherited from FI_Widget

- static void [default_callback](#) (FI_Widget *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int [label_shortcut](#) (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int [test_shortcut](#) (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Static Public Attributes inherited from FI_Input

- static const char * [copy_menu_text](#) = "Copy"
[this text may be customized at run-time]
- static const char * [cut_menu_text](#) = "Cut"
[this text may be customized at run-time]
- static const char * [paste_menu_text](#) = "Paste"
[this text may be customized at run-time]

Protected Types inherited from FI_Widget

- enum {
[INACTIVE](#) = 1<<0 , [INVISIBLE](#) = 1<<1 , [OUTPUT](#) = 1<<2 , [NOBORDER](#) = 1<<3 ,
[FORCE_POSITION](#) = 1<<4 , [NON_MODAL](#) = 1<<5 , [SHORTCUT_LABEL](#) = 1<<6 , [CHANGED](#) = 1<<7
, [OVERRIDE](#) = 1<<8 , [VISIBLE_FOCUS](#) = 1<<9 , [COPIED_LABEL](#) = 1<<10 , [CLIP_CHILDREN](#) = 1<<11
, [MENU_WINDOW](#) = 1<<12 , [TOOLTIP_WINDOW](#) = 1<<13 , [MODAL](#) = 1<<14 , [NO_OVERLAY](#) = 1<<15
, [GROUP_RELATIVE](#) = 1<<16 , [COPIED_TOOLTIP](#) = 1<<17 , [FULLSCREEN](#) = 1<<18 , [MAC_USE_ACCENTS_MENU](#)

[USERFLAG1](#) = 1<<31 }
flags possible values enumeration.

Protected Member Functions inherited from FI_Input

- void [draw](#) () [FL_OVERRIDE](#)
Draws the widget.
- int [handle_key](#) ()
Handles a keystroke.
- int [handle_rmb](#) ()
Handle right mouse button down events.

Protected Member Functions inherited from FI_Input_

- int [apply_undo](#) ()
Apply the current undo/redo operation.
- void [drawtext](#) (int, int, int, int)
Draws the text in the passed bounding box.
- void [drawtext](#) (int, int, int, int, bool draw_active)
Draws the text in the passed bounding box.

- void **handle_mouse** (int, int, int, int, int keepmark=0)
Handles mouse clicks and mouse moves.
- int **handletext** (int e, int, int, int, int)
Handles all kinds of text field related events.
- int **line_end** (int i) const
Finds the end of a line.
- int **line_start** (int i) const
Finds the start of a line.
- int **linesPerPage** ()
- void **maybe_do_callback** (FL_Callback_Reason reason=FL_REASON_UNKNOWN)
- int **up_down_position** (int, int keepmark=0)
Moves the cursor to the column given by up_down_pos.
- int **word_end** (int i) const
Finds the end of a word.
- int **word_start** (int i) const
Finds the start of a word.
- int **xscroll** () const
- int **yscroll** () const
- void **yscroll** (int yOffset)

Protected Member Functions inherited from FL_Widget

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** (FL_Boxtype t, FL_Color c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** (FL_Boxtype t, int x, int y, int w, int h, FL_Color c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const
Draws a focus rectangle around the widget.
- void **draw_focus** (FL_Boxtype t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void **draw_focus** (FL_Boxtype t, int x, int y, int w, int h, FL_Color bg) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- FL_Widget (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)

Internal use only.

- void `x` (int v)

Internal use only.

- void `y` (int v)

Internal use only.

11.77.1 Detailed Description

The `FI_Int_Input` class is a subclass of `FI_Input` that only allows the user to type decimal digits (or hex numbers of the form 0xae).f).

11.77.2 Constructor & Destructor Documentation

11.77.2.1 FI_Int_Input()

```
FI_Int_Input::FI_Int_Input (
    int X,
    int Y,
    int W,
    int H,
    const char * l = 0)
```

Creates a new `FI_Int_Input` widget using the given position, size, and label string.

The default boxtype is `FL_DOWN_BOX`.

Inherited destructor destroys the widget and any value associated with it.

The documentation for this class was generated from the following files:

- `FI_Int_Input.H`
- `FI_Input.cxx`

11.78 FI_JPEG_Image Class Reference

The `FI_JPEG_Image` class supports loading, caching, and drawing of Joint Photographic Experts Group (JPEG) File Interchange Format (JFIF) images.

```
#include <FI_JPEG_Image.H>
```

Inheritance diagram for `FI_JPEG_Image`:

Public Member Functions

- `FI_JPEG_Image` (const char *filename)
The constructor loads the JPEG image from the given jpeg filename.
- `FI_JPEG_Image` (const char *name, const unsigned char *data, int data_length=-1)
The constructor loads the JPEG image from memory.

Public Member Functions inherited from FI_RGB_Image

- virtual `FI_SVG_Image * as_svg_image` ()
Returns whether an image is an FI_SVG_Image or not.
- int `cache_h` ()

- int **cache_w** ()
- void **color_average** (FI_Color c, float i) **FL_OVERRIDE**
*The **color_average()** method averages the colors in the image with the provided FLTK color value.*
- FI_Image * **copy** () const
- FI_Image * **copy** (int W, int H) const **FL_OVERRIDE**
Creates a resized copy of the image.
- void **desaturate** () **FL_OVERRIDE**
*The **desaturate()** method converts an image to grayscale.*
- void **draw** (int X, int Y)
- void **draw** (int X, int Y, int W, int H, int cx=0, int cy=0) **FL_OVERRIDE**
Draws the image to the current drawing surface with a bounding box.
- FI_RGB_Image (const FI_Pixmap *pxm, FI_Color bg=FL_GRAY)
The constructor creates a new RGBA image from the specified FI_Pixmap.
- FI_RGB_Image (const uchar *bits, int bits_length, int W, int H, int D, int LD)
The constructor creates a new image from the specified data.
- FI_RGB_Image (const uchar *bits, int W, int H, int D=3, int LD=0)
The constructor creates a new image from the specified data.
- void **label** (FI_Menu_Item *m) **FL_OVERRIDE**
This method is an obsolete way to set the image attribute of a menu item.
- void **label** (FI_Widget *w) **FL_OVERRIDE**
This method is an obsolete way to set the image attribute of a widget or menu item.
- virtual void **normalize** ()
Makes sure the object is fully initialized.
- void **uncache** () **FL_OVERRIDE**
If the image has been cached for display, delete the cache data.
- ~FI_RGB_Image () **FL_OVERRIDE**
The destructor frees all memory and server resources that are used by the image.

Public Member Functions inherited from FI_Image

- virtual class FI_Shared_Image * **as_shared_image** ()
Returns whether an image is an FI_Shared_Image or not.
- FI_Image * **copy** () const
Creates a copy of the image in the same size.
- int **count** () const
Returns the number of data values associated with the image.
- int **d** () const
Returns the image depth.
- const char *const * **data** () const
Returns a pointer to the current image data array.
- int **data_h** () const
Returns the height of the image data.
- int **data_w** () const
Returns the width of the image data.
- void **draw** (int X, int Y)
Draws the image to the current drawing surface.
- int **fail** () const
Returns a value that is not 0 if there is currently no image available.
- FI_Image (int W, int H, int D)
The constructor creates an empty image with the specified width, height, and depth.
- int **h** () const

- Returns the current image drawing height in FLTK units.*

 - void **inactive** ()

*The **inactive()** method calls **color_average(FL_BACKGROUND_COLOR, 0.33f)** to produce an image that appears grayed out.*
- int **ld** () const

Returns the current line data size in bytes.
- virtual void **release** ()

*Releases an **FI_Image** - the same as 'delete this'.*
- virtual void **scale** (int width, int height, int proportional=1, int can_expand=0)

Sets the drawing size of the image.
- int **w** () const

Returns the current image drawing width in FLTK units.
- virtual ~**FI_Image** ()

The destructor is a virtual method that frees all memory used by the image.

Protected Member Functions

- void **load_jpg_** (const char *filename, const char *sharename, const unsigned char *data, int data_length=-1)

Protected Member Functions inherited from FI_Image

- void **d** (int D)
- Sets the current image depth.*
- void **data** (const char *const *p, int c)
- Sets the current data pointer and count of pointers in the array.*
- void **draw_empty** (int X, int Y)
- The protected method **draw_empty()** draws a box with an X in it.*
- int **draw_scaled** (int X, int Y, int W, int H)
- Draw the image to the current drawing surface rescaled to a given width and height.*
- void **h** (int H)
- Sets the height of the image data.*
- void **ld** (int LD)
- Sets the current line data size in bytes.*
- void **w** (int W)
- Sets the width of the image data.*

Additional Inherited Members

Static Public Member Functions inherited from FI_RGB_Image

- static size_t **max_size** ()
- Returns the maximum allowed image size in bytes when creating an **FI_RGB_Image** object.*
- static void **max_size** (size_t size)
- Sets the maximum allowed image size in bytes when creating an **FI_RGB_Image** object.*

Static Public Member Functions inherited from FI_Image

- static **FI_Labeltype** **define_FL_IMAGE_LABEL** ()
 - static **FI_RGB_Scaling** **RGB_scaling** ()
- Returns the currently used RGB image scaling method.*
- static void **RGB_scaling** (**FI_RGB_Scaling**)
- Sets the RGB image scaling method used for copy(int, int).*
- static **FI_RGB_Scaling** **scaling_algorithm** ()

Gets what algorithm is used when resizing a source image to draw it.

- static void [scaling_algorithm](#) ([FI_RGB_Scaling](#) algorithm)

Sets what algorithm is used when resizing a source image to draw it.

Public Attributes inherited from [FI_RGB_Image](#)

- int **alloc_array**

If non-zero, the object's data array is delete[]'d when deleting the object.

- const [uchar](#) * **array**

Points to the start of the object's data array.

Static Public Attributes inherited from [FI_Image](#)

- static const int **ERR_FILE_ACCESS** = -2
- static const int **ERR_FORMAT** = -3
- static const int **ERR_MEMORY_ACCESS** = -4
- static const int **ERR_NO_IMAGE** = -1
- static bool **register_images_done** = false

True after [fl_register_images\(\)](#) was called, false before.

Static Protected Member Functions inherited from [FI_Image](#)

- static void **labeltype** (const [FI_Label](#) *lo, int lx, int ly, int lw, int lh, [FI_Align](#) la)
- static void **measure** (const [FI_Label](#) *lo, int &lw, int &lh)

11.78.1 Detailed Description

The [FI_JPEG_Image](#) class supports loading, caching, and drawing of Joint Photographic Experts Group (JPEG) File Interchange Format (JFIF) images.

The class supports grayscale and color (RGB) JPEG image files.

11.78.2 Constructor & Destructor Documentation

11.78.2.1 [FI_JPEG_Image\(\)](#) [1/2]

```
FI_JPEG_Image::FI_JPEG_Image (
    const char * filename)
```

The constructor loads the JPEG image from the given jpeg filename.

The inherited destructor frees all memory and server resources that are used by the image.

Use [FI_Image::fail\(\)](#) to check if [FI_JPEG_Image](#) failed to load. [fail\(\)](#) returns `ERR_FILE_ACCESS` if the file could not be opened or read, `ERR_FORMAT` if the JPEG format could not be decoded, and `ERR_NO_IMAGE` if the image could not be loaded for another reason. If the image has loaded correctly, [w\(\)](#), [h\(\)](#), and [d\(\)](#) should return values greater than zero.

Parameters

in	<i>filename</i>	a full path and name pointing to a valid jpeg file.
----	-----------------	---

See also

[FI_JPEG_Image::FI_JPEG_Image\(const char *imagename, const unsigned char *data\)](#)

11.78.2.2 FI_JPEG_Image() [2/2]

```
FI_JPEG_Image::FI_JPEG_Image (
    const char * name,
    const unsigned char * data,
    int data_length = -1)
```

The constructor loads the JPEG image from memory.

Construct an image from a block of memory inside the application. Fluid offers "binary Data" chunks as a great way to add image data into the C++ source code. `name_png` can be NULL. If a name is given, the image is added to the list of shared images (see: [FI_Shared_Image](#)) and will be available by that name.

The inherited destructor frees all memory and server resources that are used by the image.

Use [FI_Image::fail\(\)](#) to check if [FI_JPEG_Image](#) failed to load. [fail\(\)](#) returns `ERR_FILE_ACCESS` if the file could not be opened or read, `ERR_FORMAT` if the JPEG format could not be decoded, and `ERR_NO_IMAGE` if the image could not be loaded for another reason. If the image has loaded correctly, `w()`, `h()`, and `d()` should return values greater than zero.

Parameters

<i>name</i>	A unique name or NULL
<i>data</i>	A pointer to the memory location of the JPEG image
<i>data_length</i>	optional length of <code>data</code> . This will protect memory outside of the <code>data</code> array from illegal read operations

[FI_JPEG_Image::FI_JPEG_Image\(const char *filename\)](#)
[FI_Shared_Image](#)

The documentation for this class was generated from the following files:

- [FI_JPEG_Image.H](#)
- [FI_JPEG_Image.cxx](#)

11.79 FI_Label Struct Reference

This struct stores all information for a text or mixed graphics label.

```
#include <FI_Widget.H>
```

Public Member Functions

- void [draw](#) (int, int, int, int, [FI_Align](#)) const
Draws the label aligned to the given box.
- void [measure](#) (int &w, int &h) const
Measures the size of the label.

Public Attributes

- [FI_Align](#) **align_**
alignment of label
- [FI_Color](#) **color**
text color
- [FI_Image](#) * **deimage**
optional image for a deactivated label
- [FI_Font](#) **font**
label font used in text
- signed char **h_margin_**

- Spacing between label and the horizontally aligned side of the widget.*
 - `Fl_Image * image`
optional image for an active label
 - `Fl_Fontsize size`
size of label font
 - `uchar spacing`
Spacing between an image and the label text.
 - `uchar type`
type of label.
 - signed char `v_margin_`
Spacing between label and the vertically aligned side of the widget.
 - const char * `value`
label text

11.79.1 Detailed Description

This struct stores all information for a text or mixed graphics label.

Todo There is an aspiration that the `Fl_Label` type will become a widget by itself. That way we will be avoiding a lot of code duplication by handling labels in a similar fashion to widgets containing text. We also provide an easy interface for very complex labels, containing html or vector graphics. However, this re-factoring is not in place in this release.

11.79.2 Member Function Documentation

11.79.2.1 draw()

```
void Fl_Label::draw (
    int X,
    int Y,
    int W,
    int H,
    Fl_Align align) const
```

Draws the label aligned to the given box.

Draws a label with arbitrary alignment in an arbitrary box.

11.79.2.2 measure()

```
void Fl_Label::measure (
    int & W,
    int & H) const
```

Measures the size of the label.

Parameters

<code>in, out</code>	<code>W,H</code>	: this is the requested size for the label text plus image; on return, this will contain the size needed to fit the label
----------------------	------------------	---

11.79.3 Member Data Documentation

11.79.3.1 type

`uchar Fl_Label::type`
type of label.

[Fl_Labeltype](#)

The documentation for this struct was generated from the following files:

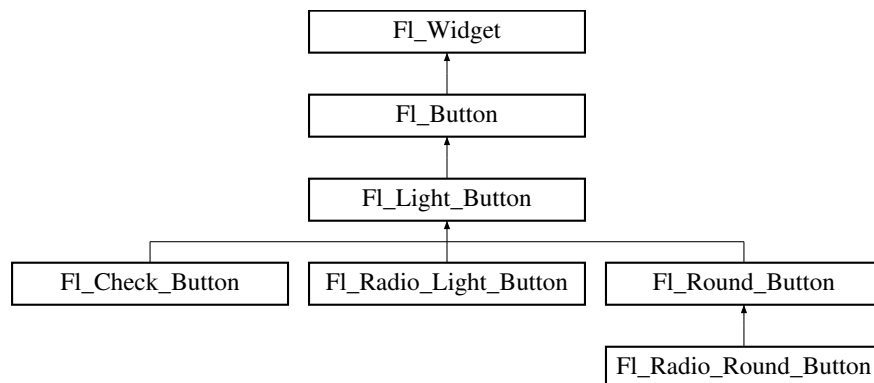

- [Fl_Widget.H](#)
- [fl_labeltype.cxx](#)

11.80 Fl_Light_Button Class Reference

This subclass displays the "on" state by turning on a light, rather than drawing pushed in.

```
#include <Fl_Light_Button.H>
```

Inheritance diagram for Fl_Light_Button:

Public Member Functions

- [Fl_Light_Button](#) (int *x*, int *y*, int *w*, int *h*, const char **l*=0)
Creates a new Fl_Light_Button widget using the given position, size, and label string.
- int [handle](#) (int) [FL_OVERRIDE](#)
Handles the specified event.

Public Member Functions inherited from [Fl_Button](#)

- int [clear](#) ()
Same as `value(0)`.
- [uchar compact](#) ()
Return true if buttons are rendered as compact buttons.
- void [compact](#) ([uchar](#) *v*)
Decide if buttons should be rendered in compact mode.
- [Fl_Boxtype down_box](#) () const
Returns the current down box type, which is drawn when `value()` is non-zero.
- void [down_box](#) ([Fl_Boxtype](#) *b*)
Sets the down box type.
- [Fl_Color down_color](#) () const
(for backwards compatibility)
- void [down_color](#) (unsigned *c*)
(for backwards compatibility)
- [Fl_Button](#) (int *X*, int *Y*, int *W*, int *H*, const char **L*=0)
The constructor creates the button using the given position, size, and label.
- int [set](#) ()
Same as `value(1)`.

- void **setonly** ()
Turns on this button and turns off all other radio buttons in the group (calling `value (1)` or `set ()` does not do this).
- int **shortcut** () const
Returns the current shortcut key for the button.
- void **shortcut** (const char *s)
(for backwards compatibility)
- void **shortcut** (int s)
Sets the shortcut key to `s`.
- char **value** () const
Returns the current value of the button (0 or 1).
- int **value** (int v)
Sets the current value of the button.

Public Member Functions inherited from **Fl_Widget**

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
Activates the widget.
- unsigned int **active** () const
Returns whether the widget is active.
- int **active_r** () const
Returns whether the widget and all of its parents are active.
- **Fl_Align** **align** () const
Gets the label alignment.
- void **align** (**Fl_Align** alignment)
Sets the label alignment.
- long **argument** () const
Gets the current user data (long) argument that is passed to the callback function.
- void **argument** (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class **Fl_Gl_Window** * **as_gl_window** ()
*Returns an **Fl_Gl_Window** pointer if this widget is an **Fl_Gl_Window**.*
- virtual class **Fl_Gl_Window** const * **as_gl_window** () const
- virtual **Fl_Group** * **as_group** ()
*Returns an **Fl_Group** pointer if this widget is an **Fl_Group**.*
- virtual **Fl_Group** const * **as_group** () const
- virtual **Fl_Window** * **as_window** ()
*Returns an **Fl_Window** pointer if this widget is an **Fl_Window**.*
- virtual **Fl_Window** const * **as_window** () const
- void **bind_deimage** (**Fl_Image** *img)
Sets the image to use as part of the widget label when in the inactive state.
- void **bind_deimage** (int f)
Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.
- void **bind_image** (**Fl_Image** *img)
Sets the image to use as part of the widget label when in the active state.
- void **bind_image** (int f)
Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- **Fl_Boxtype** **box** () const
Gets the box type of the widget.
- void **box** (**Fl_Boxtype** new_box)

- Sets the box type for the widget.*

 - [FI_Callback_p](#) [callback](#) () const
- Gets the current callback function for the widget.*

 - void [callback](#) ([FI_Callback](#) *cb)
- Sets the current callback function for the widget.*

 - void [callback](#) ([FI_Callback](#) *cb, [FI_Callback_User_Data](#) *p, bool auto_free)
- Sets the current callback function and managed user data for the widget.*

- Sets the damage bits for an area inside the widget.*

 - int [damage_resize](#) (int, int, int, int)
- Internal use only.*

- void `deactivate` ()
Deactivates the widget.
- `FL_Image * deimage` ()
Gets the image that is used as part of the widget label when in the inactive state.
- const `FL_Image * deimage` () const
Gets the image that is used as part of the widget label when in the inactive state.
- void `deimage` (`FL_Image &img`)
Sets the image to use as part of the widget label when in the inactive state.
- void `deimage` (`FL_Image *img`)
Sets the image to use as part of the widget label when in the inactive state.
- int `deimage_bound` () const
Returns whether the inactive image is managed by the widget.
- void `do_callback` (`FL_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with default arguments.
- void `do_callback` (`FL_Widget *widget`, long arg, `FL_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with arbitrary arguments.
- void `do_callback` (`FL_Widget *widget`, void *arg=0, `FL_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with arbitrary arguments.
- void `draw_label` (int, int, int, int, `FL_Align`) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const
Gets the widget height.
- virtual void `hide` ()
Makes a widget invisible.
- int `horizontal_label_margin` ()
Get the spacing between the label and the horizontal edge of the widget.
- void `horizontal_label_margin` (int px)
Set the spacing between the label and the horizontal edge of the widget.
- `FL_Image * image` ()
Gets the image that is used as part of the widget label when in the active state.
- const `FL_Image * image` () const
Gets the image that is used as part of the widget label when in the active state.
- void `image` (`FL_Image &img`)
Sets the image to use as part of the widget label when in the active state.
- void `image` (`FL_Image *img`)
Sets the image to use as part of the widget label when in the active state.
- int `image_bound` () const
Returns whether the image is managed by the widget.
- int `inside` (const `FL_Widget *wgt`) const
Checks if this widget is a child of wgt.
- int `is_label_copied` () const
Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const
Gets the current label text.
- void `label` (const char *text)
Sets the current label pointer.
- void `label` (`FL_Labeltype` a, const char *b)
Shortcut to set the label text and type in one call.
- int `label_image_spacing` ()
Return the gap size between the label and the image.
- void `label_image_spacing` (int gap)

- Set the gap between the label and the image in pixels.*

 - [FI_Color labelcolor](#) () const

Gets the label color.
- void [labelcolor](#) ([FI_Color](#) c)

Sets the label color.
- [FI_Font labelfont](#) () const

Gets the font to use.
- void [labelfont](#) ([FI_Font](#) f)

Sets the font to use.
- [FI_Fonsize labelsize](#) () const

Gets the font size in pixels.
- void [labelsiz](#) ([FI_Fonsize](#) pix)

Sets the font size in pixels.
- [FI_Labeltype labeltype](#) () const

Gets the label type.
- void [labeltype](#) ([FI_Labeltype](#) a)

Sets the label type.
- void [measure_label](#) (int &ww, int &hh) const

Sets width ww and height hh accordingly with the label size.
- bool [needs_keyboard](#) () const

Returns whether this widget needs a keyboard.
- void [needs_keyboard](#) (bool needs)

Sets whether this widget needs a keyboard.
- unsigned int [output](#) () const

Returns if a widget is used for output only.
- [FI_Group * parent](#) () const

Returns a pointer to the parent widget.
- void [parent](#) ([FI_Group](#) *p)

Internal use only - "for hacks only".
- void [position](#) (int X, int Y)

Repositions the window or widget.
- void [redraw](#) ()

Schedules the drawing of the widget.
- void [redraw_label](#) ()

Schedules the drawing of the label.
- virtual void [resize](#) (int x, int y, int w, int h)

Changes the size or position of the widget.
- [FI_Color selection_color](#) () const

Gets the selection color.
- void [selection_color](#) ([FI_Color](#) a)

Sets the selection color.
- void [set_active](#) ()

Marks the widget as active without sending events or changing focus.
- void [set_changed](#) ()

Marks the value of the widget as changed.
- void [set_output](#) ()

Sets a widget to output only.
- void [set_visible](#) ()

Makes the widget visible.
- void [set_visible_focus](#) ()

Enables keyboard focus navigation with this widget.

- int [shortcut_label](#) () const
Returns whether the widget's label uses '&' to indicate shortcuts.
- void [shortcut_label](#) (int value)
Sets whether the widget's label uses '&' to indicate shortcuts.
- virtual void [show](#) ()
Makes a widget visible.
- void [size](#) (int W, int H)
Changes the size of the widget.
- int [take_focus](#) ()
Gives the widget the keyboard focus.
- unsigned int [takeevents](#) () const
Returns if the widget is able to take events.
- int [test_shortcut](#) ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * [tooltip](#) () const
Gets the current tooltip text.
- void [tooltip](#) (const char *text)
Sets the current tooltip text.
- [Fl_Window](#) * [top_window](#) () const
Returns a pointer to the top-level window for the widget.
- [Fl_Window](#) * [top_window_offset](#) (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- [uchar](#) [type](#) () const
Gets the widget type.
- void [type](#) ([uchar](#) t)
Sets the widget type.
- int [use_accents_menu](#) ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * [user_data](#) () const
Gets the user data for this widget.
- void [user_data](#) ([Fl_Callback_User_Data](#) *v, bool auto_free)
Sets the user data for this widget.
- void [user_data](#) (void *v)
Sets the user data for this widget.
- int [vertical_label_margin](#) ()
Get the spacing between the label and the vertical edge of the widget.
- void [vertical_label_margin](#) (int px)
Set the spacing between the label and the vertical edge of the widget.
- unsigned int [visible](#) () const
Returns whether a widget is visible.
- unsigned int [visible_focus](#) () const
Checks whether this widget has a visible focus.
- void [visible_focus](#) (int v)
Modifies keyboard focus navigation.
- int [visible_r](#) () const
Returns whether a widget and all its parents are visible.
- int [w](#) () const
Gets the widget width.
- [Fl_When](#) [when](#) () const
Returns the conditions under which the callback is called.
- void [when](#) ([uchar](#) i)

- Sets the flags used to decide when a callback is called.*
- `FL_Window * window () const`
Returns a pointer to the nearest parent window up the widget hierarchy.
- `int x () const`
Gets the widget position in its window.
- `int y () const`
Gets the widget position in its window.
- `virtual ~FL_Widget ()`
Destroys the widget.

Protected Member Functions

- `void draw () FL_OVERRIDE`
Draws the widget.

Protected Member Functions inherited from FL_Button

- `void simulate_key_action ()`

Protected Member Functions inherited from FL_Widget

- `void clear_flag (unsigned int c)`
Clears a flag in the flags mask.
- `void draw_backdrop () const`
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- `void draw_box () const`
Draws the widget box according its box style.
- `void draw_box (FL_Boxtype t, FL_Color c) const`
Draws a box of type t, of color c at the widget's position and size.
- `void draw_box (FL_Boxtype t, int x, int y, int w, int h, FL_Color c) const`
Draws a box of type t, of color c at the position X,Y and size W,H.
- `void draw_focus () const`
Draws a focus rectangle around the widget.
- `void draw_focus (FL_Boxtype t, int X, int Y, int W, int H) const`
Draws a focus rectangle around the widget.
- `void draw_focus (FL_Boxtype t, int x, int y, int w, int h, FL_Color bg) const`
Draws a focus box for the widget at the given position and size.
- `void draw_label () const`
Draws the widget's label at the defined label position.
- `void draw_label (int, int, int, int) const`
Draws the label in an arbitrary bounding box.
- `FL_Widget (int x, int y, int w, int h, const char *label=0L)`
Creates a widget at the given position and size.
- `unsigned int flags () const`
Gets the widget flags mask.
- `void h (int v)`
Internal use only.
- `void set_flag (unsigned int c)`
Sets a flag in the flags mask.
- `void w (int v)`
Internal use only.
- `void x (int v)`
Internal use only.
- `void y (int v)`
Internal use only.

Additional Inherited Members

Static Public Member Functions inherited from [Fl_Widget](#)

- static void [default_callback](#) ([Fl_Widget](#) *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int [label_shortcut](#) (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int [test_shortcut](#) (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from [Fl_Widget](#)

- enum {
[INACTIVE](#) = 1<<0 , [INVISIBLE](#) = 1<<1 , [OUTPUT](#) = 1<<2 , [NOBORDER](#) = 1<<3 ,

11.80.1 Detailed Description

This subclass displays the "on" state by turning on a light, rather than drawing pushed in.

The shape of the "light" is initially set to [FL_DOWN_BOX](#). The color of the light when on is controlled with [selection_color\(\)](#), which defaults to [FL_YELLOW](#).

Buttons generate callbacks when they are clicked by the user. You control exactly when and how by changing the values for [type\(\)](#) and [when\(\)](#).

Figure 11.27 [Fl_Light_Button](#)

11.80.2 Constructor & Destructor Documentation

11.80.2.1 [Fl_Light_Button\(\)](#)

```
Fl_Light_Button::Fl_Light_Button (
    int X,
    int Y,
    int W,
```

```
int H,
const char * l = 0)
```

Creates a new [Fl_Light_Button](#) widget using the given position, size, and label string.

The default box type is `FL_UP_BOX` and the default down box type [down_box\(\)](#) is `FL_NO_BOX` (0).

The [selection_color\(\)](#) sets the color of the "light". Default is `FL_YELLOW`.

The default label alignment is `'FL_ALIGN_LEFT|FL_ALIGN_INSIDE'` so the label is drawn inside the button area right of the "light".

Note

Do not change the default box types of [Fl_Light_Button](#). The box types determine how the button is drawn. If you change the [down_box\(\)](#) type the drawing behavior is undefined.

11.80.3 Member Function Documentation

11.80.3.1 draw()

```
void Fl_Light_Button::draw () [protected], [virtual]
```

Draws the widget.

Never call this function directly. FLTK will schedule redrawing whenever needed. If your widget must be redrawn as soon as possible, call [redraw\(\)](#) instead.

Override this function to draw your own widgets.

If you ever need to call another widget's draw method *from within your own [draw\(\)](#) method*, e.g. for an embedded scrollbar, you can do it (because [draw\(\)](#) is virtual) like this:

```
Fl_Widget *s = &scrollbar; // scrollbar is an embedded Fl_Scrollbar
s->draw();                 // calls Fl_Scrollbar::draw()
```

Reimplemented from [Fl_Button](#).

11.80.3.2 handle()

```
int Fl_Light_Button::handle (
    int event) [virtual]
```

Handles the specified event.

You normally don't call this method directly, but instead let FLTK do it when the user interacts with the widget.

When implemented in a widget, this function must return 0 if the widget does not use the event or 1 otherwise.

Most of the time, you want to call the inherited [handle\(\)](#) method in your overridden method so that you don't short-circuit events that you don't handle. In this last case you should return the callee retval.

One exception to the rule in the previous paragraph is if you really want to *override* the behavior of the base class. This requires knowledge of the details of the inherited class.

In rare cases you may want to return 1 from your [handle\(\)](#) method although you don't really handle the event. The effect would be to *filter* event processing, for instance if you want to dismiss non-numeric characters (keypresses) in a numeric input widget. You may "ring the bell" or show another visual indication or drop the event silently. In such a case you must not call the [handle\(\)](#) method of the base class and tell FLTK that you *consumed* the event by returning 1 even if you didn't *do* anything with it.

Parameters

in	<i>event</i>	the kind of event received
----	--------------	----------------------------

Return values

0	if the event was not used or understood
1	if the event was used and can be deleted

- FI_Light_Button.cxx

11.81 FI_Line_Dial Class Reference

Inheritance diagram for FI_Line_Dial:

Public Member Functions

- **FI_Line_Dial** (int X, int Y, int W, int H, const char *L=0)

Public Member Functions inherited from [FI_Dial](#)

- short [angle1](#) () const
Sets Or gets the angles used for the minimum and maximum values.
- void **angle1** (short a)
See short [angle1\(\)](#) const.
- short **angle2** () const
See short [angle1\(\)](#) const.
- void **angle2** (short a)
See short [angle1\(\)](#) const.
- void **angles** (short a, short b)
See short [angle1\(\)](#) const.
- [FI_Dial](#) (int x, int y, int w, int h, const char *l=0)
Creates a new [FI_Dial](#) widget using the given position, size, and label string.
- int [handle](#) (int) [FL_OVERRIDE](#)
Allow subclasses to handle event based on current position and size.

Public Member Functions inherited from [FI_Valuator](#)

- void **bounds** (double a, double b)
Sets the minimum (a) and maximum (b) values for the valuator widget.
- double **clamp** (double)
Clamps the passed value to the valuator range.
- virtual int [format](#) (char *)
Uses internal rules to format the fields numerical value into the character array pointed to by the passed parameter.
- double [increment](#) (double, int)

- Adds n times the step value to the passed value.*
- double **maximum** () const
 - Gets the maximum value for the valuator.*
- void **maximum** (double a)
 - Sets the maximum value for the valuator.*
- double **minimum** () const
 - Gets the minimum value for the valuator.*
- void **minimum** (double a)
 - Sets the minimum value for the valuator.*
- void **precision** (int digits)
 - Sets the step value to $1.0 / 10^{\text{digits}}$.*
- void **range** (double a, double b)
 - Sets the minimum and maximum values for the valuator.*
- double **round** (double)
 - Round the passed value to the nearest step increment.*
- double **step** () const
 - Gets or sets the step value.*
- void **step** (double a, int b)
 - See double [FI_Valuator::step\(\)](#) const.*
- void **step** (double s)
 - See double [FI_Valuator::step\(\)](#) const.*
- void **step** (int a)
 - See double [FI_Valuator::step\(\)](#) const.*
- double **value** () const
 - Gets the floating point(double) value.*
- int **value** (double)
 - Sets the current value.*
- **~FI_Valuator** () **FL_OVERRIDE**
 - Destructor is accessible despite protected constructor.*

Public Member Functions inherited from [FI_Widget](#)

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
 - Activates the widget.*
- unsigned int **active** () const
 - Returns whether the widget is active.*
- int **active_r** () const
 - Returns whether the widget and all of its parents are active.*
- [FI_Align](#) **align** () const
 - Gets the label alignment.*
- void **align** ([FI_Align](#) alignment)
 - Sets the label alignment.*
- long **argument** () const
 - Gets the current user data (long) argument that is passed to the callback function.*
- void **argument** (long v)
 - Sets the current user data (long) argument that is passed to the callback function.*
- virtual class [FI_Gl_Window](#) * **as_gl_window** ()
 - Returns an [FI_Gl_Window](#) pointer if this widget is an [FI_Gl_Window](#).*
- virtual class [FI_Gl_Window](#) const * **as_gl_window** () const

- virtual [FI_Group](#) * [as_group](#) ()
Returns an [FI_Group](#) pointer if this widget is an [FI_Group](#).
- virtual [FI_Group](#) const * [as_group](#) () const
- virtual [FI_Window](#) * [as_window](#) ()
Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).
- virtual [FI_Window](#) const * [as_window](#) () const
- void [bind_deimage](#) ([FI_Image](#) *img)
Sets the image to use as part of the widget label when in the inactive state.
- void [bind_deimage](#) (int f)
Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.
- void [bind_image](#) ([FI_Image](#) *img)
Sets the image to use as part of the widget label when in the active state.
- void [bind_image](#) (int f)
Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- [FI_Boxtype](#) [box](#) () const
Gets the box type of the widget.
- void [box](#) ([FI_Boxtype](#) new_box)
Sets the box type for the widget.
- [FI_Callback_p](#) [callback](#) () const
Gets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb, [FI_Callback_User_Data](#) *p, bool auto_free)
Sets the current callback function and managed user data for the widget.
- void [callback](#) ([FI_Callback](#) *cb, void *p)
Sets the current callback function and data for the widget.
- void [callback](#) ([FI_Callback0](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback1](#) *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int [changed](#) () const
Checks if the widget value changed since the last callback.
- void [clear_active](#) ()
Marks the widget as inactive without sending events or changing focus.
- void [clear_changed](#) ()
Marks the value of the widget as unchanged.
- void [clear_damage](#) (uchar c=0)
Clears or sets the damage flags.
- void [clear_output](#) ()
Sets a widget to accept input.
- void [clear_visible](#) ()
Hides the widget.
- void [clear_visible_focus](#) ()
Disables keyboard focus navigation with this widget.
- [FI_Color](#) [color](#) () const
Gets the background color of the widget.
- void [color](#) ([FI_Color](#) bg)
Sets the background color of the widget.
- void [color](#) ([FI_Color](#) bg, [FI_Color](#) sel)
Sets the background and selection color of the widget.
- [FI_Color](#) [color2](#) () const

- For back compatibility only.*
- void [color2](#) (unsigned a)
- For back compatibility only.*
- int [contains](#) (const [FL_Widget](#) *w) const
- Checks if w is a child of this widget.*
- void [copy_label](#) (const char *new_label)
- Sets the current label.*
- void [copy_tooltip](#) (const char *text)
- Sets the current tooltip text.*
- [uchar](#) [damage](#) () const
- Returns non-zero if [draw\(\)](#) needs to be called.*
- void [damage](#) ([uchar](#) c)
- Sets the damage bits for the widget.*
- void [damage](#) ([uchar](#) c, int x, int y, int w, int h)
- Sets the damage bits for an area inside the widget.*
- int [damage_resize](#) (int, int, int, int)
- Internal use only.*
- void [deactivate](#) ()
- Deactivates the widget.*
- [FL_Image](#) * [deimage](#) ()
- Gets the image that is used as part of the widget label when in the inactive state.*
- const [FL_Image](#) * [deimage](#) () const
- Gets the image that is used as part of the widget label when in the inactive state.*
- void [deimage](#) ([FL_Image](#) &img)
- Sets the image to use as part of the widget label when in the inactive state.*
- void [deimage](#) ([FL_Image](#) *img)
- Sets the image to use as part of the widget label when in the inactive state.*
- int [deimage_bound](#) () const
- Returns whether the inactive image is managed by the widget.*
- void [do_callback](#) ([FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
- Calls the widget callback function with default arguments.*
- void [do_callback](#) ([FL_Widget](#) *widget, long arg, [FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
- Calls the widget callback function with arbitrary arguments.*
- void [do_callback](#) ([FL_Widget](#) *widget, void *arg=0, [FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
- Calls the widget callback function with arbitrary arguments.*
- void [draw_label](#) (int, int, int, int, [FL_Align](#)) const
- Draws the label in an arbitrary bounding box with an arbitrary alignment.*
- int [h](#) () const
- Gets the widget height.*
- virtual void [hide](#) ()
- Makes a widget invisible.*
- int [horizontal_label_margin](#) ()
- Get the spacing between the label and the horizontal edge of the widget.*
- void [horizontal_label_margin](#) (int px)
- Set the spacing between the label and the horizontal edge of the widget.*
- [FL_Image](#) * [image](#) ()
- Gets the image that is used as part of the widget label when in the active state.*
- const [FL_Image](#) * [image](#) () const
- Gets the image that is used as part of the widget label when in the active state.*
- void [image](#) ([FL_Image](#) &img)
- Sets the image to use as part of the widget label when in the active state.*

- void `image` (`FI_Image` *img)
Sets the image to use as part of the widget label when in the active state.
- int `image_bound` () const
Returns whether the image is managed by the widget.
- int `inside` (const `FI_Widget` *wgt) const
Checks if this widget is a child of wgt.
- int `is_label_copied` () const
Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const
Gets the current label text.
- void `label` (const char *text)
Sets the current label pointer.
- void `label` (`FI_Labeltype` a, const char *b)
Shortcut to set the label text and type in one call.
- int `label_image_spacing` ()
Return the gap size between the label and the image.
- void `label_image_spacing` (int gap)
Set the gap between the label and the image in pixels.
- `FI_Color` `labelcolor` () const
Gets the label color.
- void `labelcolor` (`FI_Color` c)
Sets the label color.
- `FI_Font` `labelfont` () const
Gets the font to use.
- void `labelfont` (`FI_Font` f)
Sets the font to use.
- `FI_Fonsize` `labelsize` () const
Gets the font size in pixels.
- void `labelsize` (`FI_Fonsize` pix)
Sets the font size in pixels.
- `FI_Labeltype` `labeltype` () const
Gets the label type.
- void `labeltype` (`FI_Labeltype` a)
Sets the label type.
- void `measure_label` (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- bool `needs_keyboard` () const
Returns whether this widget needs a keyboard.
- void `needs_keyboard` (bool needs)
Sets whether this widget needs a keyboard.
- unsigned int `output` () const
Returns if a widget is used for output only.
- `FI_Group` * `parent` () const
Returns a pointer to the parent widget.
- void `parent` (`FI_Group` *p)
Internal use only - "for hacks only".
- void `position` (int X, int Y)
Repositions the window or widget.
- void `redraw` ()
Schedules the drawing of the widget.
- void `redraw_label` ()

- Schedules the drawing of the label.*

 - virtual void **resize** (int **x**, int **y**, int **w**, int **h**)

Changes the size or position of the widget.
- **FI_Color selection_color** () const

Gets the selection color.
- void **selection_color** (**FI_Color** a)

Sets the selection color.
- void **set_active** ()

Marks the widget as active without sending events or changing focus.
- void **set_changed** ()

Marks the value of the widget as changed.
- void **set_output** ()

Sets a widget to output only.
- void **set_visible** ()

Makes the widget visible.
- void **set_visible_focus** ()

Enables keyboard focus navigation with this widget.
- int **shortcut_label** () const

Returns whether the widget's label uses '&' to indicate shortcuts.
- void **shortcut_label** (int value)

Sets whether the widget's label uses '&' to indicate shortcuts.
- virtual void **show** ()

Makes a widget visible.
- void **size** (int W, int H)

Changes the size of the widget.
- int **take_focus** ()

Gives the widget the keyboard focus.
- unsigned int **takeevents** () const

Returns if the widget is able to take events.
- int **test_shortcut** ()

Returns true if the widget's label contains the entered '&x' shortcut.
- const char * **tooltip** () const

Gets the current tooltip text.
- void **tooltip** (const char *text)

Sets the current tooltip text.
- **FI_Window * top_window** () const

Returns a pointer to the top-level window for the widget.
- **FI_Window * top_window_offset** (int &xoff, int &yoff) const

Finds the x/y offset of the current widget relative to the top-level window.
- **uchar type** () const

Gets the widget type.
- void **type** (**uchar** t)

Sets the widget type.
- int **use_accents_menu** ()

Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * **user_data** () const

Gets the user data for this widget.
- void **user_data** (**FI_Callback_User_Data** *v, bool auto_free)

Sets the user data for this widget.
- void **user_data** (void *v)

Sets the user data for this widget.

- int [vertical_label_margin](#) ()
Get the spacing between the label and the vertical edge of the widget.
- void [vertical_label_margin](#) (int px)
Set the spacing between the label and the vertical edge of the widget.
- unsigned int [visible](#) () const
Returns whether a widget is visible.
- unsigned int [visible_focus](#) () const
Checks whether this widget has a visible focus.
- void [visible_focus](#) (int v)
Modifies keyboard focus navigation.
- int [visible_r](#) () const
Returns whether a widget and all its parents are visible.
- int [w](#) () const
Gets the widget width.
- [Fl_When](#) [when](#) () const
Returns the conditions under which the callback is called.
- void [when](#) (uchar i)
Sets the flags used to decide when a callback is called.
- [Fl_Window](#) * [window](#) () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int [x](#) () const
Gets the widget position in its window.
- int [y](#) () const
Gets the widget position in its window.
- virtual [~Fl_Widget](#) ()
Destroys the widget.

Additional Inherited Members

Static Public Member Functions inherited from [Fl_Widget](#)

- static void [default_callback](#) ([Fl_Widget](#) *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int [label_shortcut](#) (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int [test_shortcut](#) (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from [Fl_Widget](#)

- enum {
[INACTIVE](#) = 1<<0 , [INVISIBLE](#) = 1<<1 , [OUTPUT](#) = 1<<2 , [NOBORDER](#) = 1<<3 ,
[FORCE_POSITION](#) = 1<<4 , [NON_MODAL](#) = 1<<5 , [SHORTCUT_LABEL](#) = 1<<6 , [CHANGED](#) = 1<<7
, [OVERRIDE](#) = 1<<8 , [VISIBLE_FOCUS](#) = 1<<9 , [COPIED_LABEL](#) = 1<<10 , [CLIP_CHILDREN](#) = 1<<11
, [MENU_WINDOW](#) = 1<<12 , [TOOLTIP_WINDOW](#) = 1<<13 , [MODAL](#) = 1<<14 , [NO_OVERLAY](#) = 1<<15
, [GROUP_RELATIVE](#) = 1<<16 , [COPIED_TOOLTIP](#) = 1<<17 , [FULLSCREEN](#) = 1<<18 , [MAC_USE_ACCENTS_MENU](#)
= 1<<19 ,
[NEEDS_KEYBOARD](#) = 1<<20 , [IMAGE_BOUND](#) = 1<<21 , [DEIMAGE_BOUND](#) = 1<<22 ,
[AUTO_DELETE_USER_DATA](#) = 1<<23 ,

[USERFLAG1](#) = 1<<31 }
flags possible values enumeration.

Protected Member Functions inherited from FI_Dial

- void **draw** () **FL_OVERRIDE**
Draws dial at current position and size.
- void **draw** (int X, int Y, int W, int H)
Draws dial at given position and size.
- int **handle** (int event, int X, int Y, int W, int H)
Allows subclasses to handle event based on given position and size.

Protected Member Functions inherited from FI_Valuator

- **FI_Valuator** (int X, int Y, int W, int H, const char *L)
Creates a new FI_Valuator widget using the given position, size, and label string.
- void **handle_drag** (double newvalue)
Called during a drag operation, after an FL_WHEN_CHANGED event is received and before the callback.
- void **handle_push** ()
Stores the current value in the previous value.
- void **handle_release** ()
Called after an FL_WHEN_RELEASE event is received and before the callback.
- int **horizontal** () const
Tells if the valuator is an FL_HORIZONTAL one.
- double **previous_value** () const
Gets the previous floating point value before an event changed it.
- void **set_value** (double v)
Sets the current floating point value.
- double **softclamp** (double)
Clamps the value, but accepts v if the previous value is not already out of range.
- virtual void **value_damage** ()
Asks for partial redraw.

Protected Member Functions inherited from FI_Widget

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** (FI_Boxtype t, FI_Color c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** (FI_Boxtype t, int x, int y, int w, int h, FI_Color c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const
Draws a focus rectangle around the widget.
- void **draw_focus** (FI_Boxtype t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void **draw_focus** (FI_Boxtype t, int x, int y, int w, int h, FI_Color bg) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.

- `FI_Widget` (int `x`, int `y`, int `w`, int `h`, const char *`label`=0L)
Creates a widget at the given position and size.
- unsigned int `flags` () const
Gets the widget flags mask.
- void `h` (int `v`)
Internal use only.
- void `set_flag` (unsigned int `c`)
Sets a flag in the flags mask.
- void `w` (int `v`)
Internal use only.
- void `x` (int `v`)
Internal use only.
- void `y` (int `v`)
Internal use only.

The documentation for this class was generated from the following files:

- `FI_Line_Dial.H`
- `FI_Dial.cxx`

11.82 FI_Mac_App_Menu Class Reference

Static Public Member Functions

- static void `custom_application_menu_items` (const `FI_Menu_Item` *`m`)
Adds custom menu item(s) to the application menu of the system menu bar.

Static Public Attributes

- static const char * `about`
Localizable text for the "About xxx" application menu item.
- static const char * `hide`
Localizable text for the "Hide xxx" application menu item.
- static const char * `hide_others`
Localizable text for the "Hide Others" application menu item.
- static const char * `print`
Localizable text for the "Print Front Window" application menu item.
- static const char * `print_no_titlebar`
Localizable text for the "Print Front Window" application menu item.
- static const char * `quit`
Localizable text for the "Quit xxx" application menu item.
- static const char * `services`
Localizable text for the "Services" application menu item.
- static const char * `show`
Localizable text for the "Show All" application menu item.
- static const char * `toggle_print_titlebar`
Localizable text for the "Toggle print titlebar" application menu item.

11.82.1 Member Function Documentation

11.82.1.1 custom_application_menu_items()

```
static void Fl_Mac_App_Menu::custom_application_menu_items (  
    const Fl_Menu_Item * m) [static]
```

Adds custom menu item(s) to the application menu of the system menu bar.

They are positioned after the "Print Front Window / Toggle printing of titlebar" items, or at their place if they were removed with `Fl_Mac_App_Menu::print = ""`.

Parameters

<i>m</i>	zero-ending array of Fl_Menu_Item 's.
----------	---

11.82.2 Member Data Documentation

11.82.2.1 print

```
const char* Fl_Mac_App_Menu::print [static]
```

Localizable text for the "Print Front Window" application menu item.

This menu item and next one won't be displayed if [Fl_Mac_App_Menu::print](#) is set to an empty string.

The documentation for this class was generated from the following file:

- [mac.H](#)

11.83 Fl_Menu_ Class Reference

Base class of all widgets that have a menu in FLTK.

```
#include <Fl_Menu_.H>
```

Inheritance diagram for `Fl_Menu_`:

Public Member Functions

- int [add](#) (const char *)
This is a Forms (and SGI GL library) compatible add function, it adds many menu items, with '|' separating the menu items, and tab separating the menu item names from an optional shortcut string.
- int [add](#) (const char *, int [shortcut](#), [Fl_Callback](#) *, void *=0, int=0)
Adds a new menu item.
- int [add](#) (const char *a, const char *b, [Fl_Callback](#) *c, void *d=0, int e=0)
See int [Fl_Menu_::add](#)(const char label, int shortcut, Fl_Callback*, void *user_data=0, int flags=0)*
- void [clear](#) ()
Same as menu(NULL), set the array pointer to null, indicating a zero-length menu.
- int [clear_submenu](#) (int index)
Clears the specified submenu pointed to by index of all menu items.
- void [copy](#) (const [Fl_Menu_Item](#) *m, void *user_data=0)
Sets the menu array pointer with a copy of m that will be automatically deleted.
- [Fl_Boxtype](#) [down_box](#) () const
This box type is used to surround the currently-selected items in the menus.
- void [down_box](#) ([Fl_Boxtype](#) b)
Sets the box type used to surround the currently-selected items in the menus.
- [Fl_Color](#) [down_color](#) () const
For back compatibility, same as [selection_color](#)()
- void [down_color](#) (unsigned c)

- For back compatibility, same as [selection_color\(\)](#)*

 - int [find_index](#) (const char *name) const

Find the menu item index for a given menu `pathname`, such as "Edit/Copy".
- int [find_index](#) (const [FI_Menu_Item](#) *item) const

Find the index into the menu array for a given `item`.
- int [find_index](#) ([FI_Callback](#) *cb) const

Find the index into the menu array for a given callback `cb`.
- const [FI_Menu_Item](#) * [find_item](#) (const char *name)

Find the menu item for a given menu `pathname`, such as "Edit/Copy".
- const [FI_Menu_Item](#) * [find_item](#) ([FI_Callback](#) *)

Find the menu item for the given callback `cb`.
- const [FI_Menu_Item](#) * [find_item_with_argument](#) (long)

Find the menu item for the given user argument `v`.
- const [FI_Menu_Item](#) * [find_item_with_user_data](#) (void *)

Find the menu item for the given user data `v`.
- [FI_Menu_](#) (int, int, int, int, const char *s=0)

Creates a new [FI_Menu_](#) widget using the given position, size, and label string.
- void [global](#) ()

Make the shortcuts for this menu work no matter what window has the focus when you type it.
- int [insert](#) (int index, const char *, int [shortcut](#), [FI_Callback](#) *, void *d=0, int e=0)

Inserts a new menu item at the specified `index` position.
- int [insert](#) (int index, const char *a, const char *b, [FI_Callback](#) *c, void *d=0, int e=0)

See int [FI_Menu_::insert](#)(const char label, int shortcut, [FI_Callback](#)*, void *user_data=0, int flags=0)*
- int [item_pathname](#) (char *name, int namelen, const [FI_Menu_Item](#) *finditem=0) const

Get the menu 'pathname' for the specified menuitem.
- const [FI_Menu_Item](#) * [menu](#) () const

Returns a pointer to the array of [FI_Menu_Items](#).
- void [menu](#) (const [FI_Menu_Item](#) *m)

Sets the menu array pointer directly.
- [FI_Boxtype](#) [menu_box](#) () const

Get the box type for the menu popup windows.
- void [menu_box](#) ([FI_Boxtype](#) b)

Set the box type for the menu popup windows.
- const [FI_Menu_Item](#) * [menu_end](#) ()

Finishes menu modifications and returns [menu\(\)](#).
- int [mode](#) (int i) const

Get the flags of item `i`.
- void [mode](#) (int i, int fl)

Set the flags of item `i`.
- const [FI_Menu_Item](#) * [mvalue](#) () const

Return a pointer to the last menu item that was picked.
- const [FI_Menu_Item](#) * [picked](#) (const [FI_Menu_Item](#) *)

When user picks a menu item, call this.
- const [FI_Menu_Item](#) * [prev_mvalue](#) () const

Return a pointer to the menu item that was picked before the current one was picked.
- void [remove](#) (int)

Deletes item `i` from the menu.
- void [replace](#) (int, const char *)

Changes the text of item `i`.
- void [setonly](#) ([FI_Menu_Item](#) *item)

Turns the radio item "on" for the menu item and turns "off" adjacent radio items of the same group.

- void **shortcut** (int i, int s)
Change the shortcut of item i to s.
- int **size** () const
This returns the number of [FI_Menu_Item](#) structures that make up the menu, correctly counting submenus.
- void **size** (int W, int H)
- const [FI_Menu_Item](#) * **test_shortcut** ()
Returns the menu item with the entered shortcut (key value).
- const char * **text** () const
Returns the title of the last item chosen.
- const char * **text** (int i) const
Returns the title of item i.
- [FI_Color](#) **textcolor** () const
Get the current color of menu item labels.
- void **textcolor** ([FI_Color](#) c)
Sets the current color of menu item labels.
- [FI_Font](#) **textfont** () const
Gets the current font of menu item labels.
- void **textfont** ([FI_Font](#) c)
Sets the current font of menu item labels.
- [FI_Fonsize](#) **textsize** () const
Gets the font size of menu item labels.
- void **textsize** ([FI_Fonsize](#) c)
Sets the font size of menu item labels.
- int **value** () const
Return the index into the [menu\(\)](#) of the last item chosen by the user.
- int **value** (const [FI_Menu_Item](#) *)
Set the value of a menu to the menu item m.
- int **value** (int i)
Set the value of the menu to index i.

Public Member Functions inherited from [FI_Widget](#)

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
Activates the widget.
- unsigned int **active** () const
Returns whether the widget is active.
- int **active_r** () const
Returns whether the widget and all of its parents are active.
- [FI_Align](#) **align** () const
Gets the label alignment.
- void **align** ([FI_Align](#) alignment)
Sets the label alignment.
- long **argument** () const
Gets the current user data (long) argument that is passed to the callback function.
- void **argument** (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class [FI_Gl_Window](#) * **as_gl_window** ()
Returns an [FI_Gl_Window](#) pointer if this widget is an [FI_Gl_Window](#).
- virtual class [FI_Gl_Window](#) const * **as_gl_window** () const

- virtual [FI_Group](#) * [as_group](#) ()
Returns an [FI_Group](#) pointer if this widget is an [FI_Group](#).
- virtual [FI_Group](#) const * [as_group](#) () const
- virtual [FI_Window](#) * [as_window](#) ()
Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).
- virtual [FI_Window](#) const * [as_window](#) () const
- void [bind_deimage](#) ([FI_Image](#) *img)
Sets the image to use as part of the widget label when in the inactive state.
- void [bind_deimage](#) (int f)
Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.
- void [bind_image](#) ([FI_Image](#) *img)
Sets the image to use as part of the widget label when in the active state.
- void [bind_image](#) (int f)
Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- [FI_Boxtype](#) [box](#) () const
Gets the box type of the widget.
- void [box](#) ([FI_Boxtype](#) new_box)
Sets the box type for the widget.
- [FI_Callback_p](#) [callback](#) () const
Gets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb, [FI_Callback_User_Data](#) *p, bool auto_free)
Sets the current callback function and managed user data for the widget.
- void [callback](#) ([FI_Callback](#) *cb, void *p)
Sets the current callback function and data for the widget.
- void [callback](#) ([FI_Callback0](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback1](#) *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int [changed](#) () const
Checks if the widget value changed since the last callback.
- void [clear_active](#) ()
Marks the widget as inactive without sending events or changing focus.
- void [clear_changed](#) ()
Marks the value of the widget as unchanged.
- void [clear_damage](#) (uchar c=0)
Clears or sets the damage flags.
- void [clear_output](#) ()
Sets a widget to accept input.
- void [clear_visible](#) ()
Hides the widget.
- void [clear_visible_focus](#) ()
Disables keyboard focus navigation with this widget.
- [FI_Color](#) [color](#) () const
Gets the background color of the widget.
- void [color](#) ([FI_Color](#) bg)
Sets the background color of the widget.
- void [color](#) ([FI_Color](#) bg, [FI_Color](#) sel)
Sets the background and selection color of the widget.
- [FI_Color](#) [color2](#) () const

- For back compatibility only.*

 - void [color2](#) (unsigned a)
- For back compatibility only.*

 - int [contains](#) (const [Fl_Widget](#) *w) const

Checks if w is a child of this widget.
- void [copy_label](#) (const char *new_label)

Sets the current label.
- void [copy_tooltip](#) (const char *text)

Sets the current tooltip text.
- [uchar](#) [damage](#) () const

Returns non-zero if [draw\(\)](#) needs to be called.
- void [damage](#) ([uchar](#) c)

Sets the damage bits for the widget.
- void [damage](#) ([uchar](#) c, int x, int y, int w, int h)

Sets the damage bits for an area inside the widget.
- int [damage_resize](#) (int, int, int, int)

Internal use only.
- void [deactivate](#) ()

Deactivates the widget.
- [Fl_Image](#) * [deimage](#) ()

Gets the image that is used as part of the widget label when in the inactive state.
- const [Fl_Image](#) * [deimage](#) () const

Gets the image that is used as part of the widget label when in the inactive state.
- void [deimage](#) ([Fl_Image](#) &img)

Sets the image to use as part of the widget label when in the inactive state.
- void [deimage](#) ([Fl_Image](#) *img)

Sets the image to use as part of the widget label when in the inactive state.
- int [deimage_bound](#) () const

Returns whether the inactive image is managed by the widget.
- void [do_callback](#) ([Fl_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))

Calls the widget callback function with default arguments.
- void [do_callback](#) ([Fl_Widget](#) *widget, long arg, [Fl_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))

Calls the widget callback function with arbitrary arguments.
- void [do_callback](#) ([Fl_Widget](#) *widget, void *arg=0, [Fl_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))

Calls the widget callback function with arbitrary arguments.
- virtual void [draw](#) ()=0

Draws the widget.
- void [draw_label](#) (int, int, int, int, [Fl_Align](#)) const

Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int [h](#) () const

Gets the widget height.
- virtual int [handle](#) (int event)

Handles the specified event.
- virtual void [hide](#) ()

Makes a widget invisible.
- int [horizontal_label_margin](#) ()

Get the spacing between the label and the horizontal edge of the widget.
- void [horizontal_label_margin](#) (int px)

Set the spacing between the label and the horizontal edge of the widget.
- [Fl_Image](#) * [image](#) ()

Gets the image that is used as part of the widget label when in the active state.

- const [FI_Image](#) * [image](#) () const
Gets the image that is used as part of the widget label when in the active state.
- void [image](#) ([FI_Image](#) &img)
Sets the image to use as part of the widget label when in the active state.
- void [image](#) ([FI_Image](#) *img)
Sets the image to use as part of the widget label when in the active state.
- int [image_bound](#) () const
Returns whether the image is managed by the widget.
- int [inside](#) (const [FI_Widget](#) *wgt) const
Checks if this widget is a child of wgt.
- int [is_label_copied](#) () const
Returns whether the current label was assigned with [copy_label\(\)](#).
- const char * [label](#) () const
Gets the current label text.
- void [label](#) (const char *text)
Sets the current label pointer.
- void [label](#) ([FI_Labeltype](#) a, const char *b)
Shortcut to set the label text and type in one call.
- int [label_image_spacing](#) ()
Return the gap size between the label and the image.
- void [label_image_spacing](#) (int gap)
Set the gap between the label and the image in pixels.
- [FI_Color](#) [labelcolor](#) () const
Gets the label color.
- void [labelcolor](#) ([FI_Color](#) c)
Sets the label color.
- [FI_Font](#) [labelfont](#) () const
Gets the font to use.
- void [labelfont](#) ([FI_Font](#) f)
Sets the font to use.
- [FI_Fonsize](#) [labelsize](#) () const
Gets the font size in pixels.
- void [labelsize](#) ([FI_Fonsize](#) pix)
Sets the font size in pixels.
- [FI_Labeltype](#) [labeltype](#) () const
Gets the label type.
- void [labeltype](#) ([FI_Labeltype](#) a)
Sets the label type.
- void [measure_label](#) (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- bool [needs_keyboard](#) () const
Returns whether this widget needs a keyboard.
- void [needs_keyboard](#) (bool needs)
Sets whether this widget needs a keyboard.
- unsigned int [output](#) () const
Returns if a widget is used for output only.
- [FI_Group](#) * [parent](#) () const
Returns a pointer to the parent widget.
- void [parent](#) ([FI_Group](#) *p)
Internal use only - "for hacks only".
- void [position](#) (int X, int Y)

- *Repositions the window or widget.*
- void `redraw` ()
- *Schedules the drawing of the widget.*
- void `redraw_label` ()
- *Schedules the drawing of the label.*
- virtual void `resize` (int `x`, int `y`, int `w`, int `h`)
- *Changes the size or position of the widget.*
- `FI_Color` `selection_color` () const
- *Gets the selection color.*
- void `selection_color` (`FI_Color` `a`)
- *Sets the selection color.*
- void `set_active` ()
- *Marks the widget as active without sending events or changing focus.*
- void `set_changed` ()
- *Marks the value of the widget as changed.*
- void `set_output` ()
- *Sets a widget to output only.*
- void `set_visible` ()
- *Makes the widget visible.*
- void `set_visible_focus` ()
- *Enables keyboard focus navigation with this widget.*
- int `shortcut_label` () const
- *Returns whether the widget's label uses '&' to indicate shortcuts.*
- void `shortcut_label` (int `value`)
- *Sets whether the widget's label uses '&' to indicate shortcuts.*
- virtual void `show` ()
- *Makes a widget visible.*
- void `size` (int `W`, int `H`)
- *Changes the size of the widget.*
- int `take_focus` ()
- *Gives the widget the keyboard focus.*
- unsigned int `takeevents` () const
- *Returns if the widget is able to take events.*
- int `test_shortcut` ()
- *Returns true if the widget's label contains the entered '&x' shortcut.*
- const char * `tooltip` () const
- *Gets the current tooltip text.*
- void `tooltip` (const char *`text`)
- *Sets the current tooltip text.*
- `FI_Window` * `top_window` () const
- *Returns a pointer to the top-level window for the widget.*
- `FI_Window` * `top_window_offset` (int &`xoff`, int &`yoff`) const
- *Finds the x/y offset of the current widget relative to the top-level window.*
- `uchar` `type` () const
- *Gets the widget type.*
- void `type` (`uchar` `t`)
- *Sets the widget type.*
- int `use_accents_menu` ()
- *Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.*
- void * `user_data` () const
- *Gets the user data for this widget.*

- void **user_data** ([FI_Callback_User_Data](#) *v, bool auto_free)
Sets the user data for this widget.
- void **user_data** (void *v)
Sets the user data for this widget.
- int [vertical_label_margin](#) ()
Get the spacing between the label and the vertical edge of the widget.
- void [vertical_label_margin](#) (int px)
Set the spacing between the label and the vertical edge of the widget.
- unsigned int [visible](#) () const
Returns whether a widget is visible.
- unsigned int [visible_focus](#) () const
Checks whether this widget has a visible focus.
- void [visible_focus](#) (int v)
Modifies keyboard focus navigation.
- int [visible_r](#) () const
Returns whether a widget and all its parents are visible.
- int [w](#) () const
Gets the widget width.
- [FI_When](#) [when](#) () const
Returns the conditions under which the callback is called.
- void [when](#) (uchar i)
Sets the flags used to decide when a callback is called.
- [FI_Window](#) * [window](#) () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int [x](#) () const
Gets the widget position in its window.
- int [y](#) () const
Gets the widget position in its window.
- virtual [~FI_Widget](#) ()
Destroys the widget.

Protected Member Functions

- int **item_pathname_** (char *name, int namelen, const [FI_Menu_Item](#) *finditem, const [FI_Menu_Item](#) *menu=0) const

Protected Member Functions inherited from [FI_Widget](#)

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** ([FI_Boxtype](#) t, [FI_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const
Draws a focus rectangle around the widget.
- void **draw_focus** ([FI_Boxtype](#) t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.

- void `draw_focus` (`Fl_Boxtype` t, int x, int y, int w, int h, `Fl_Color` bg) const
Draws a focus box for the widget at the given position and size.
- void `draw_label` () const
Draws the widget's label at the defined label position.
- void `draw_label` (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- `Fl_Widget` (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int `flags` () const
Gets the widget flags mask.
- void `h` (int v)
Internal use only.
- void `set_flag` (unsigned int c)
Sets a flag in the flags mask.
- void `w` (int v)
Internal use only.
- void `x` (int v)
Internal use only.
- void `y` (int v)
Internal use only.

Protected Attributes

- `uchar` `alloc`
- `uchar` `down_box_`
- `Fl_Boxtype` `menu_box_`
- `Fl_Color` `textcolor_`
- `Fl_Font` `textfont_`
- `Fl_Fontsize` `textsize_`

Additional Inherited Members

Static Public Member Functions inherited from `Fl_Widget`

- static void `default_callback` (`Fl_Widget` *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int `label_shortcut` (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int `test_shortcut` (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from `Fl_Widget`

- enum {
`INACTIVE` = 1<<0 , `INVISIBLE` = 1<<1 , `OUTPUT` = 1<<2 , `NOBORDER` = 1<<3 ,
`FORCE_POSITION` = 1<<4 , `NON_MODAL` = 1<<5 , `SHORTCUT_LABEL` = 1<<6 , `CHANGED` = 1<<7
, `OVERRIDE` = 1<<8 , `VISIBLE_FOCUS` = 1<<9 , `COPIED_LABEL` = 1<<10 , `CLIP_CHILDREN` = 1<<11
, `MENU_WINDOW` = 1<<12 , `TOOLTIP_WINDOW` = 1<<13 , `MODAL` = 1<<14 , `NO_OVERLAY` = 1<<15
, `GROUP_RELATIVE` = 1<<16 , `COPIED_TOOLTIP` = 1<<17 , `FULLSCREEN` = 1<<18 , `MAC_USE_ACCENTS_MENU`
= 1<<19 ,
`NEEDS_KEYBOARD` = 1<<20 , `IMAGE_BOUND` = 1<<21 , `DEIMAGE_BOUND` = 1<<22 ,
`AUTO_DELETE_USER_DATA` = 1<<23 ,

`MAXIMIZED = 1<<24 , POPUP = 1<<25 , USERFLAG3 = 1<<29 , USERFLAG2 = 1<<30 , USERFLAG1 = 1<<31 }`

flags possible values enumeration.

11.83.1 Detailed Description

Base class of all widgets that have a menu in FLTK.

Currently FLTK provides you with [Fl_Menu_Button](#), [Fl_Menu_Bar](#), and [Fl_Choice](#).

The class contains a pointer to an array of structures of type [Fl_Menu_Item](#). The array may either be supplied directly by the user program, or it may be "private": a dynamically allocated array managed by the [Fl_Menu_](#).

When the user clicks a menu item, [value\(\)](#) is set to that item and then:

- If the [Fl_Menu_Item](#) has a callback set, that callback is invoked with any userdata configured for it. (The [Fl_Menu_](#) widget's callback is NOT invoked.)
- For any [Fl_Menu_Items](#) that **don't** have a callback set, the [Fl_Menu_](#) widget's callback is invoked with any userdata configured for it. The callback can determine which item was picked using [value\(\)](#), [mvalue\(\)](#), [item_pathname\(\)](#), etc.

The line spacing between menu items can be controlled with the global setting [Fl::menu_linespacing\(\)](#).

See also

[Fl_Widget::shortcut_label\(int\)](#)

11.83.2 Constructor & Destructor Documentation

11.83.2.1 Fl_Menu_()

```
Fl_Menu_::Fl_Menu_ (
    int X,
    int Y,
    int W,
    int H,
    const char * l = 0)
```

Creates a new [Fl_Menu_](#) widget using the given position, size, and label string.

[menu\(\)](#) is initialized to null.

11.83.3 Member Function Documentation

11.83.3.1 add() [1/2]

```
int Fl_Menu_::add (
    const char * str)
```

This is a Forms (and SGI GL library) compatible add function, it adds many menu items, with '|' separating the menu items, and tab separating the menu item names from an optional shortcut string.

The passed string is split at any '|' characters and then `add(s,0,0,0,0)` is done with each section. This is often useful if you are just using the value, and is compatible with Forms and other GL programs. The section strings use the same special characters as described for the long version of [add\(\)](#).

No items must be added to a menu during a callback to the same menu.

Parameters

<i>str</i>	string containing multiple menu labels as described above
------------	---

Returns

the index into the [menu\(\)](#) array, where the entry was added

11.83.3.2 `add()` [2/2]

```
int Fl_Menu_::add (  
    const char * label,  
    int shortcut,  
    Fl_Callback * callback,  
    void * userdata = 0,  
    int flags = 0)
```

Adds a new menu item.

Parameters

in	<i>label</i>	The text label for the menu item.
in	<i>shortcut</i>	Optional keyboard shortcut that can be an int or string: (FL_CTRL+'a') or "^a". Default 0 if none.
in	<i>callback</i>	Optional callback invoked when user clicks the item. Default 0 if none.
in	<i>userdata</i>	Optional user data passed as an argument to the callback. Default 0 if none.
in	<i>flags</i>	Optional flags that control the type of menu item; see below. Default is 0 for none.

Returns

The index into the `menu()` array, where the entry was added.

Description

If the menu array was directly set with `menu(x)`, then `copy()` is done to make a private array.

Since this method can change the internal menu array, any menu item pointers or indices the application may have cached can become stale, and should be recalculated/refreshed.

A menu item's callback must not `add()` items to its parent menu during the callback.

Due to backwards compatibility and historical restrictions we recommend to use either

- static menu arrays that are not extended during runtime or
- dynamic, extendable menu item arrays that are entirely created by using `add()` or `insert()`.

This ensures that all menu arrays and strings are copied to internal storage and released when required.

Note

If you create menus from static `Fl_Menu_Item` arrays and `add()` or `insert()` more menu items later, then the menu array is copied to local storage but some local (static) strings may appear to "leak memory". This is a known issue and discouraged usage (see description above) but the impact on memory usage should typically be small.

Detailed Description of Parameters

label

The menu item's label. This argument is required and must not be NULL.

The characters "&", "/", "\", and "_" are treated as special characters in the label string. The "&" character specifies that the following character is an accelerator and will be underlined. The "/" character is used to escape the next character in the string. Labels starting with the "_" character cause a divider to be placed after that menu item.

A label of the form "File/Quit" will create the submenu "File" with a menu item called "Quit".

The label string is copied to new memory and can be freed. The other arguments (including the shortcut) are copied into the menu item unchanged.

If an item exists already with that name then it is replaced with this new one. Otherwise this new one is added to the end of the correct menu or submenu. The return value is the offset into the array that the new entry was placed at.

shortcut

The keyboard shortcut for this menu item.

This parameter is optional, and defaults to 0 to indicate no shortcut.

The shortcut can either be a raw integer value (eg. FL_CTRL+'A') or a string (eg. "^c" or "^97").

Raw integer shortcuts can be a combination of keyboard chars (eg. 'A') and optional keyboard modifiers (see [FL::event_state\(\)](#), e.g. FL_SHIFT, etc). In addition, FL_COMMAND can be used to denote FL_META under Mac OS X and FL_CTRL under other platforms.

String shortcuts can be specified in one of two ways:

```
[#+^]<ascii_value>    e.g. "97", "^97", "+97", "#97"
[#+^]<ascii_char>     e.g. "a", "^a", "+a", "#a"
```

..where <ascii_value> is a decimal value representing an ASCII character (eg. 97 is the ascii code for 'a'), and the optional prefixes enhance the value that follows. Multiple prefixes must appear in the order below.

```
# - Alt
+ - Shift
^ - Control
```

Internally, the text shortcuts are converted to integer values using `fl_old_shortcut(const char*)`.

callback

The callback to invoke when this menu item is selected.

This parameter is optional, and defaults to 0 for no callback.

userdata

The callback's 'user data' that is passed to the callback.

This parameter is optional, and defaults to 0.

flags

These are bit flags to define what kind of menu item this is.

This parameter is optional, and defaults to 0 to define a 'regular' menu item.

These flags can be 'OR'ed together:

```
FL_MENU_INACTIVE    // Deactivate menu item (gray out)
FL_MENU_TOGGLE      // Item is a checkbox toggle (shows checkbox for on/off state)
FL_MENU_VALUE       // The on/off state for checkbox/radio buttons (if set, state is 'on')
FL_MENU_RADIO       // Item is a radio button (one checkbox of many can be on)
FL_MENU_INVISIBLE   // Item will not show up (shortcut will work)
FL_SUBMENU_POINTER  // Indicates user_data() is a pointer to another menu array
FL_SUBMENU          // This item is a submenu to other items
FL_MENU_DIVIDER     // Creates divider line below this item. Also ends a group of radio buttons.
```

All other bits in 'flags' are reserved and must not be used.

If FL_SUBMENU is set in an item's flags, then actually two items are added:

- the first item is the menu item (submenu title), as expected, and
- the second item is the submenu terminating item with the label and all other members set to 0.

If you add submenus with the 'path' technique, then the corresponding submenu terminators (maybe more than one) are added as well.

Todo Raw integer shortcut needs examples. Dependent on responses to <https://www.fltk.↵org/newsgroups.php?gfltk.coredev+v:10086> and results of STR#2344

11.83.3.3 clear()

```
void Fl_Menu_::clear ()
```

Same as menu(NULL), set the array pointer to null, indicating a zero-length menu.

Menus must not be cleared during a callback to the same menu.

11.83.3.4 clear_submenu()

```
int Fl_Menu_::clear_submenu (
    int index)
```

Clears the specified submenu pointed to by `index` of all menu items.

This method is useful for clearing a submenu so that it can be re-populated with new items. Example: a "File/Recent Files/..." submenu that shows the last few files that have been opened.

The specified `index` must point to a submenu.

The submenu is cleared with `remove()`. If the menu array was directly set with `menu(x)`, then `copy()` is done to make a private array.

Warning

Since this method can change the internal menu array, any menu item pointers or indices the application may have cached can become stale, and should be recalculated/refreshed.

Example:

```
int index = menubar->find_index("File/Recent"); // get index of "File/Recent" submenu
if ( index != -1 ) menubar->clear_submenu(index); // clear the submenu
menubar->add("File/Recent/Aaa");
menubar->add("File/Recent/Bbb");
[...]
```

Parameters

<i>index</i>	The index of the submenu to be cleared
--------------	--

Returns

0 on success, -1 if the index is out of range or not a submenu

See also

[remove\(int\)](#)

11.83.3.5 copy()

```
void Fl_Menu_::copy (
    const Fl_Menu_Item * m,
    void * ud = 0)
```

Sets the menu array pointer with a copy of m that will be automatically deleted.

If userdata ud is not NULL, then all user data pointers are changed in the menus as well. See void [Fl_Menu_::menu\(const Fl_Menu_Item* m\)](#).

11.83.3.6 find_index() [1/3]

```
int Fl_Menu_::find_index (
    const char * pathname) const
```

Find the menu item index for a given menu pathname, such as "Edit/Copy".

This method finds a menu item's index position for the given menu pathname, also traversing submenus, but **not** submenu pointers (FL_SUBMENU_POINTER).

To get the menu item pointer for a pathname, use [find_item\(\)](#)

Parameters

<i>in</i>	<i>pathname</i>	The path and name of the menu item to find
-----------	-----------------	--

Returns

The index of the matching item, or -1 if not found.

See also

[item_pathname\(\)](#)

11.83.3.7 find_index() [2/3]

```
int Fl_Menu_::find_index (
    const Fl_Menu_Item * item) const
```

Find the index into the menu array for a given item.

A way to convert a menu item pointer into an index.

Does **not** handle items that are in submenu pointers (FL_SUBMENU_POINTER).

-1 is returned if the item is not in this menu or is part of an FL_SUBMENU_POINTER submenu.

Current implementation is fast and not expensive.

```
// Convert an index-to-item
int index = 12;
const Fl_Menu_Item *item = mymenu->menu() + index;
```

```
// Convert an item-to-index
int index = mymenu->find_index(item);
if ( index == -1 ) { ..error.. }
```

Parameters

<code>in</code>	<i>item</i>	The item to be found
-----------------	-------------	----------------------

Returns

The index of the item, or -1 if not found.

See also

[menu\(\)](#)

11.83.3.8 `find_index()` [3/3]

```
int Fl_Menu_::find_index (
    Fl_Callback * cb) const
```

Find the index into the menu array for a given callback `cb`.

This method finds a menu item's index position, also traversing submenus, but **not** submenu pointers (FL_↔SUBMENU_POINTER). This is useful if an application uses internationalisation and a menu item can not be found using its label. This search is also much faster.

Parameters

<code>cb</code>	Find the first item with this callback
-----------------	--

Returns

The index of the item with the specific callback, or -1 if not found

See also

`find_index(const char*)`

11.83.3.9 `find_item()` [1/2]

```
const Fl_Menu_Item * Fl_Menu_::find_item (
    const char * pathname)
```

Find the menu item for a given menu pathname, such as "Edit/Copy".

This method finds a menu item in the menu array, also traversing submenus, but not submenu pointers (FL_↔SUBMENU_POINTER).

To get the menu item's index, use `find_index(const char*)`

Example:

```
Fl_Menu_Bar *menubar = new Fl_Menu_Bar(..);
menubar->add("File/&Open");
menubar->add("File/&Save");
menubar->add("Edit/&Copy");
// [...]
Fl_Menu_Item *item;
if ( ( item = (Fl_Menu_Item*)menubar->find_item("File/&Open") ) != NULL ) {
    item->labelcolor(FL_RED);
}
if ( ( item = (Fl_Menu_Item*)menubar->find_item("Edit/&Copy") ) != NULL ) {
    item->labelcolor(FL_GREEN);
}
```

Parameters

<i>pathname</i>	The path and name of the menu item
-----------------	------------------------------------

Returns

The item found, or NULL if not found

See also

[find_index\(const char*\)](#), [find_item\(Fl_Callback*\)](#), [item_pathname\(\)](#)

11.83.3.10 find_item() [2/2]

```
const Fl_Menu_Item * Fl_Menu_::find_item (
    Fl_Callback * cb)
```

Find the menu item for the given callback *cb*.

This method finds a menu item in a menu array, also traversing submenus, but not submenu pointers. This is useful if an application uses internationalisation and a menu item can not be found using its label. This search is also much faster.

Parameters

<i>in</i>	<i>cb</i>	find the first item with this callback
-----------	-----------	--

Returns

The item found, or NULL if not found

See also

[find_item\(const char*\)](#)

11.83.3.11 find_item_with_argument()

```
const Fl_Menu_Item * Fl_Menu_::find_item_with_argument (
    long v)
```

Find the menu item for the given user argument *v*.

Parameters

<i>in</i>	<i>v</i>	find the first item with this user argument
-----------	----------	---

Returns

The item found, or NULL if not found

See also

[find_item\(const char*\)](#)

11.83.3.12 find_item_with_user_data()

```
const Fl_Menu_Item * Fl_Menu_::find_item_with_user_data (
    void * v)
```

Find the menu item for the given user data *v*.

Parameters

<i>in</i>	<i>v</i>	find the first item with this user data
-----------	----------	---

Returns

The item found, or NULL if not found

See also

[find_item\(const char*\)](#)

11.83.3.13 global()

```
void Fl_Menu_::global ()
```

Make the shortcuts for this menu work no matter what window has the focus when you type it.

This is done by using [Fl::add_handler\(\)](#). This `Fl_Menu_` widget does not have to be visible (ie the window it is in can be hidden, or it does not have to be put in a window at all).

Currently there can be only one `global()` menu. Setting a new one will replace the old one. There is no way to remove the `global()` setting (so don't destroy the widget!)

11.83.3.14 insert()

```
int Fl_Menu_::insert (
    int index,
    const char * label,
    int shortcut,
    Fl_Callback * callback,
    void * userdata = 0,
    int flags = 0)
```

Inserts a new menu item at the specified `index` position.

If `index` is -1, the menu item is appended; same behavior as [add\(\)](#).

To properly insert a menu item, `label` must be the name of the item (eg. "Quit"), and not a 'menu pathname' (eg. "File/Quit"). If a menu pathname is specified, the value of `index` is *ignored*, the new item's position defined by the pathname.

For more details, see [add\(\)](#). Except for the `index` parameter, [add\(\)](#) has more detailed information on parameters and behavior, and is functionally equivalent.

Parameters

in	<i>index</i>	The menu array's index position where the new item is inserted. If -1, behavior is the same as add() .
in	<i>label</i>	The text label for the menu item. If the label is a menu pathname, <code>index</code> is ignored, and the pathname indicates the position of the new item.
in	<i>shortcut</i>	Optional keyboard shortcut. Can be an int (FL_CTRL+'a') or a string ("^a"). Default is 0.
in	<i>callback</i>	Optional callback invoked when user clicks the item. Default 0 if none.
in	<i>userdata</i>	Optional user data passed as an argument to the callback. Default 0 if none.
in	<i>flags</i>	Optional flags that control the type of menu item; see add() for more info. Default is 0 for none.

Returns

The index into the [menu\(\)](#) array, where the entry was added.

See also

[add\(\)](#)

11.83.3.15 item_pathname()

```
int Fl_Menu_::item_pathname (
    char * name,
    int namelen,
    const Fl_Menu_Item * finditem = 0) const
```

Get the menu 'pathname' for the specified menuitem.

If finditem==NULL, [mvalue\(\)](#) is used (the most recently picked menuitem).

Example:

```
Fl_Menu_Bar *menubar = 0;
void my_menu_callback(Fl_Widget*,void*) {
    char name[80];
    if ( menubar->item_pathname(name, sizeof(name)-1) == 0 ) { // recently picked item
        if ( strcmp(name, "File/&Open") == 0 ) { .. } // open invoked
        if ( strcmp(name, "File/&Save") == 0 ) { .. } // save invoked
        if ( strcmp(name, "Edit/&Copy") == 0 ) { .. } // copy invoked
    }
}
int main() {
    [...]
    menubar = new Fl_Menu_Bar(..);
    menubar->add("File/&Open", 0, my_menu_callback);
    menubar->add("File/&Save", 0, my_menu_callback);
    menubar->add("Edit/&Copy", 0, my_menu_callback);
    [...]
}
```

Returns

- 0 : OK (name has menuitem's pathname)
- -1 : item not found (name=="")
- -2 : 'name' not large enough (name=="")

See also

[find_item\(\)](#)

11.83.3.16 menu() [1/2]

```
const Fl_Menu_Item * Fl_Menu_::menu () const [inline]
```

Returns a pointer to the array of `Fl_Menu_Items`.

This will either be the value passed to `menu(value)` or the private copy or an internal (temporary) location (see note below).

Note

Implementation details - may be changed in the future. All modifications of the menu array are done by copying the entire menu array to an internal storage for optimization of memory allocations, for instance when using [add\(\)](#) or [insert\(\)](#). While this is done, [menu\(\)](#) returns the pointer to this internal location. The entire menu will be copied back to private storage when needed, i.e. when **another** `Fl_Menu_` is modified. You can force this reallocation after you're done with all menu modifications by calling [Fl_Menu_::menu_end\(\)](#) to make sure [menu\(\)](#) returns a permanent pointer to private storage (until the menu is modified again). Note also that some menu methods (e.g. [Fl_Menu_Button::popup\(\)](#)) call [menu_end\(\)](#) internally to ensure a consistent menu array while the menu is open.

See also

[size\(\)](#) – returns the [size](#) of the `Fl_Menu_Item` array.

[menu_end\(\)](#) – finish menu modifications (optional)

Example: How to walk the array:

```
for ( int t=0; t<menubar->size(); t++ ) { // walk array of items
    const Fl_Menu_Item &item = menubar->menu()[t]; // get each item
    fprintf(stderr, "item #%d -- label=%s, value=%s type=%s\n",
        t,
        item.label() ? item.label() : "(Null)", // menu terminators have NULL labels
        (item.flags & FL_MENU_VALUE) ? "set" : "clear", // value of toggle or radio items
        (item.flags & FL_SUBMENU) ? "Submenu" : "Item"); // see if item is a submenu or actual item
}
```

11.83.3.17 menu() [2/2]

```
void Fl_Menu_::menu (
    const Fl_Menu_Item * m)
```

Sets the menu array pointer directly.

If the old menu is private it is deleted. NULL is allowed and acts the same as a zero-length menu. If you try to modify the array (with [add\(\)](#), [replace\(\)](#), or [remove\(\)](#)) a private copy is automatically done.

11.83.3.18 menu_box() [1/2]

```
Fl_Boxtype Fl_Menu_::menu_box () const [inline]
```

Get the box type for the menu popup windows.

Returns

the box type, or FL_NO_BOX if [Fl_Menu_::box\(\)](#) is to be used instead

11.83.3.19 menu_box() [2/2]

```
void Fl_Menu_::menu_box (
    Fl_Boxtype b) [inline]
```

Set the box type for the menu popup windows.

If menu_box set to FL_NO_BOX, the menu window will use [Fl_Menu_::box\(\)](#) instead.

Parameters

in	<i>b</i>	new box type or FL_NO_BOX
----	----------	---------------------------

11.83.3.20 menu_end()

```
const Fl_Menu_Item * Fl_Menu_::menu_end ()
```

Finishes menu modifications and returns [menu\(\)](#).

Call [menu_end\(\)](#) after using [add\(\)](#), [insert\(\)](#), [remove\(\)](#), or any other methods that may change the menu array if you want to access the menu array anytime later with [menu\(\)](#). This should be called only once after the **last** menu modification for performance reasons.

Does nothing if the menu array is already in a private location.

Some methods like [Fl_Menu_Button::popup\(\)](#) call this method before their menu is opened.

Note

After menu changes like [add\(\)](#), [insert\(\)](#), etc. [menu\(\)](#) would return a pointer to a temporary internal menu array that may be relocated at unexpected times. This is due to performance considerations and may be changed w/o further notice.

Since

1.4.0

Returns

New [Fl_Menu_Item](#) array pointer.

See also

[Fl_Menu_::menu\(\)](#)

11.83.3.21 mode() [1/2]

```
int Fl_Menu_::mode (
    int i) const [inline]
```

Get the flags of item i.

For a list of the flags, see [Fl_Menu_Item](#).

11.83.3.22 mode() [2/2]

```
void Fl_Menu_::mode (
    int i,
    int fl) [inline]
```

Set the flags of item *i*.

For a list of the flags, see [Fl_Menu_Item](#).

11.83.3.23 picked()

```
const Fl_Menu_Item * Fl_Menu_::picked (
    const Fl_Menu_Item * v)
```

When user picks a menu item, call this.

It will do the callback.

Unfortunately this also casts away `const` for the checkboxes, but this was necessary so non-checkbox menus can really be declared 'const'.

Parameters

<i>in</i>	<i>v</i>	The menu item that was picked by the user.
-----------	----------	--

Returns

The same `Fl_Menu_Item*` that was set (*v*).

11.83.3.24 prev_mvalue()

```
const Fl_Menu_Item * Fl_Menu_::prev_mvalue () const [inline]
```

Return a pointer to the menu item that was picked before the current one was picked.

This call gives developers additional details how a user changed a choice in the [Fl_Choice](#) widget.

11.83.3.25 remove()

```
void Fl_Menu_::remove (
    int i)
```

Deletes item *i* from the menu.

If the menu array was directly set with `menu(x)` then [copy\(\)](#) is done to make a private array.

No items must be removed from a menu during a callback to the same menu.

Parameters

<i>i</i>	index into menu array
----------	-----------------------

11.83.3.26 replace()

```
void Fl_Menu_::replace (
    int i,
    const char * str)
```

Changes the text of item *i*.

This is the only way to get slash into an [add\(\)](#)'ed menu item. If the menu array was directly set with `menu(x)` then [copy\(\)](#) is done to make a private array.

Parameters

<i>i</i>	index into menu array
<i>str</i>	new label for menu item at index <i>i</i>

11.83.3.27 size()

```
int Fl_Menu_::size () const
```

This returns the number of [Fl_Menu_Item](#) structures that make up the menu, correctly counting submenus.

This includes the "terminator" item at the end. To copy a menu array you need to copy [size\(\)*sizeof\(Fl_Menu_Item\)](#) bytes. If the menu is NULL this returns zero (an empty menu will return 1).

11.83.3.28 test_shortcut()

```
const Fl_Menu_Item * Fl_Menu_::test_shortcut () [inline]
```

Returns the menu item with the entered shortcut (key value).

This searches the complete [menu\(\)](#) for a shortcut that matches the entered key value. It must be called for a FL_KEYBOARD or FL_SHORTCUT event.

If a match is found, the menu's callback will be called.

Returns

matched [Fl_Menu_Item](#) or NULL.

11.83.3.29 value() [1/3]

```
int Fl_Menu_::value () const
```

Return the index into the [menu\(\)](#) of the last item chosen by the user.

The *value* of the menu is the index into the [menu\(\)](#) of the last item chosen by the user or -1.

It is -1 initially (if no item has been chosen) or if the chosen menu item is part of a submenu addressed by an FL_SUBMENU_POINTER.

Note

All menu items are located in a contiguous array of [Fl_Menu_Item](#)'s unless an item has the FL_SUBMENU_POINTER flag which redirects the submenu to an independent submenu array. This submenu array is not counted in the [size\(\)](#) of the menu, and menu items in this submenu can't return a valid index into the **main** menu. Therefore menu items that are located in such a submenu return -1 when [value\(\)](#) is called. This may be changed in a future version.

You can use [mvalue\(\)](#) instead to retrieve the last picked menu item directly.

Returns

Index of the last chosen menu item or -1 (see description).

See also

[const Fl_Menu_Item *mvalue\(\)](#)

11.83.3.30 value() [2/3]

```
int Fl_Menu_::value (
    const Fl_Menu_Item * m)
```

Set the value of a menu to the menu item *m*.

The *value* of the menu is the index into the [menu\(\)](#) of the last item chosen by the user or -1.

It is -1 initially (if no item has been chosen) or if the chosen menu item is part of a submenu addressed by an FL_SUBMENU_POINTER.

Note

All menu items are located in a contiguous array of [Fl_Menu_Item](#)'s unless an item has the FL_SUBMENU_POINTER flag which redirects the submenu to an independent submenu array. This submenu array is not counted in the [size\(\)](#) of the menu, and menu items in this submenu can't return a valid index into the **main** menu. Therefore menu items that are located in such a submenu return -1 when [value\(\)](#) is called. This may be changed in a future version.

The menu item can be any menu item, even one in a detached submenu (see note about FL_SUBMENU_POINTER above).

Parameters

<i>in</i>	<i>m</i>	Pointer to any menu item.
-----------	----------	---------------------------

Returns

Whether the new value is different than the old one.

Return values

0	The value didn't change.
1	The value was changed.

See also

int [value\(int\)](#)

int [value\(\)](#)

const [Fl_Menu_Item](#) *mvalue()

11.83.3.31 value() [3/3]

```
int Fl_Menu_::value (
    int i) [inline]
```

Set the value of the menu to index *i*.

The *value* of the menu is the index into the [menu\(\)](#) of the last item chosen by the user or -1.

It is -1 initially (if no item has been chosen) or if the chosen menu item is part of a submenu addressed by an FL_SUBMENU_POINTER.

Note

All menu items are located in a contiguous array of [Fl_Menu_Item](#)'s unless an item has the FL_SUBMENU_POINTER flag which redirects the submenu to an independent submenu array. This submenu array is not counted in the [size\(\)](#) of the menu, and menu items in this submenu can't return a valid index into the **main** menu. Therefore menu items that are located in such a submenu return -1 when [value\(\)](#) is called. This may be changed in a future version.

You can set the value as an integer or with a pointer to a menu item. The integer value is restricted to the main menu array (0..[size\(\)](#)-1) whereas the menu item can be any menu item, even one in a detached submenu (see note about FL_SUBMENU_POINTER above).

Parameters

<i>in</i>	<i>i</i>	Index of the menu item in the main menu array. Values outside 0.. size() -1 are ignored (return 0).
-----------	----------	---

Returns

Whether the new value is different than the old one.

Return values

0	The value didn't change.
1	The value was changed.

11.84 FI_Menu_Bar Class Reference

This widget provides a standard menubar interface.

```
#include <FI_Menu_Bar.H>
```

Inheritance diagram for FI_Menu_Bar:

Public Member Functions

- [FI_Menu_Bar](#) (int X, int Y, int W, int H, const char *|=0)
Creates a new [FI_Menu_Bar](#) widget using the given position, size, and label string.
- int [handle](#) (int) [FL_OVERRIDE](#)
Handles the specified event.
- virtual void [play_menu](#) (const [FI_Menu_Item](#) *item)
*Opens the 1st level submenu of the menubar corresponding to *item*.*
- virtual void [update](#) ()
Updates the menu bar after any change to its items.

Public Member Functions inherited from [FI_Menu_](#)

- int [add](#) (const char *)
This is a Forms (and SGI GL library) compatible add function, it adds many menu items, with '|' separating the menu items, and tab separating the menu item names from an optional shortcut string.
- int [add](#) (const char *, int [shortcut](#), [FI_Callback](#) *, void *=0, int=0)
Adds a new menu item.
- int [add](#) (const char *a, const char *b, [FI_Callback](#) *c, void *d=0, int e=0)
See int [FI_Menu_::add](#)(const char label, int shortcut, [FI_Callback](#)*, void *user_data=0, int flags=0)*
- void [clear](#) ()
Same as menu(NULL), set the array pointer to null, indicating a zero-length menu.
- int [clear_submenu](#) (int index)
*Clears the specified submenu pointed to by *index* of all menu items.*
- void [copy](#) (const [FI_Menu_Item](#) *m, void *[user_data](#)=0)

- Sets the menu array pointer with a copy of m that will be automatically deleted.*

 - **FL_Boxtype down_box** () const

This box type is used to surround the currently-selected items in the menus.
- void **down_box** (FL_Boxtype b)

Sets the box type used to surround the currently-selected items in the menus.
- **FL_Color down_color** () const

For back compatibility, same as [selection_color\(\)](#)
- void **down_color** (unsigned c)

For back compatibility, same as [selection_color\(\)](#)
- int **find_index** (const char *name) const

Find the menu item index for a given menu pathname, such as "Edit/Copy".
- int **find_index** (const FL_Menu_Item *item) const

Find the index into the menu array for a given item.
- int **find_index** (FL_Callback *cb) const

Find the index into the menu array for a given callback cb.
- const FL_Menu_Item * **find_item** (const char *name)

Find the menu item for a given menu pathname, such as "Edit/Copy".
- const FL_Menu_Item * **find_item** (FL_Callback *)

Find the menu item for the given callback cb.
- const FL_Menu_Item * **find_item_with_argument** (long)

Find the menu item for the given user argument v.
- const FL_Menu_Item * **find_item_with_user_data** (void *)

Find the menu item for the given user data v.
- **FL_Menu_** (int, int, int, int, const char *s=0)

Creates a new FL_Menu_ widget using the given position, size, and label string.
- void **global** ()

Make the shortcuts for this menu work no matter what window has the focus when you type it.
- int **insert** (int index, const char *, int shortcut, FL_Callback *, void *s=0, int e=0)

Inserts a new menu item at the specified index position.
- int **insert** (int index, const char *a, const char *b, FL_Callback *c, void *d=0, int e=0)

See `int FL_Menu_::insert(const char label, int shortcut, FL_Callback*, void *user_data=0, int flags=0)`*
- int **item_pathname** (char *name, int namelen, const FL_Menu_Item *finditem=0) const

Get the menu 'pathname' for the specified menuitem.
- const FL_Menu_Item * **menu** () const

Returns a pointer to the array of FL_Menu_Items.
- void **menu** (const FL_Menu_Item *m)

Sets the menu array pointer directly.
- **FL_Boxtype menu_box** () const

Get the box type for the menu popup windows.
- void **menu_box** (FL_Boxtype b)

Set the box type for the menu popup windows.
- const FL_Menu_Item * **menu_end** ()

Finishes menu modifications and returns [menu\(\)](#).
- int **mode** (int i) const

Get the flags of item i.
- void **mode** (int i, int fl)

Set the flags of item i.
- const FL_Menu_Item * **mvalue** () const

Return a pointer to the last menu item that was picked.
- const FL_Menu_Item * **picked** (const FL_Menu_Item *)

When user picks a menu item, call this.

- const [Fl_Menu_Item](#) * [prev_mvalue](#) () const
Return a pointer to the menu item that was picked before the current one was picked.
- void [remove](#) (int)
*Deletes item *i* from the menu.*
- void [replace](#) (int, const char *)
*Changes the text of item *i*.*
- void **setonly** ([Fl_Menu_Item](#) *item)
Turns the radio item "on" for the menu item and turns "off" adjacent radio items of the same group.
- void **shortcut** (int i, int s)
*Change the shortcut of item *i* to *s*.*
- int [size](#) () const
This returns the number of [Fl_Menu_Item](#) structures that make up the menu, correctly counting submenus.
- void **size** (int W, int H)
- const [Fl_Menu_Item](#) * [test_shortcut](#) ()
Returns the menu item with the entered shortcut (key value).
- const char * **text** () const
Returns the title of the last item chosen.
- const char * **text** (int i) const
*Returns the title of item *i*.*
- [Fl_Color](#) **textcolor** () const
Get the current color of menu item labels.
- void **textcolor** ([Fl_Color](#) c)
Sets the current color of menu item labels.
- [Fl_Font](#) **textfont** () const
Gets the current font of menu item labels.
- void **textfont** ([Fl_Font](#) c)
Sets the current font of menu item labels.
- [Fl_Fontsize](#) **textsize** () const
Gets the font size of menu item labels.
- void **textsize** ([Fl_Fontsize](#) c)
Sets the font size of menu item labels.
- int [value](#) () const
Return the index into the [menu\(\)](#) of the last item chosen by the user.
- int [value](#) (const [Fl_Menu_Item](#) *)
*Set the value of a menu to the menu item *m*.*
- int [value](#) (int i)
*Set the value of the menu to index *i*.*

Public Member Functions inherited from [Fl_Widget](#)

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void [activate](#) ()
Activates the widget.
- unsigned int [active](#) () const
Returns whether the widget is active.
- int [active_r](#) () const
Returns whether the widget and all of its parents are active.
- [Fl_Align](#) [align](#) () const
Gets the label alignment.
- void [align](#) ([Fl_Align](#) alignment)

- Sets the label alignment.*
- long [argument](#) () const
 - Gets the current user data (long) argument that is passed to the callback function.*
- void [argument](#) (long v)
 - Sets the current user data (long) argument that is passed to the callback function.*
- virtual class [FI_Gl_Window](#) * [as_gl_window](#) ()
 - Returns an [FI_Gl_Window](#) pointer if this widget is an [FI_Gl_Window](#).*
- virtual class [FI_Gl_Window](#) const * [as_gl_window](#) () const
- virtual [FI_Group](#) * [as_group](#) ()
 - Returns an [FI_Group](#) pointer if this widget is an [FI_Group](#).*
- virtual [FI_Group](#) const * [as_group](#) () const
- virtual [FI_Window](#) * [as_window](#) ()
 - Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).*
- virtual [FI_Window](#) const * [as_window](#) () const
- void [bind_deimage](#) ([FI_Image](#) *img)
 - Sets the image to use as part of the widget label when in the inactive state.*
- void [bind_deimage](#) (int f)
 - Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.*
- void [bind_image](#) ([FI_Image](#) *img)
 - Sets the image to use as part of the widget label when in the active state.*
- void [bind_image](#) (int f)
 - Bind the image to the widget, so the widget will delete the image when it is no longer needed.*
- [FI_Boxtype](#) box () const
 - Gets the box type of the widget.*
- void [box](#) ([FI_Boxtype](#) new_box)
 - Sets the box type for the widget.*
- [FI_Callback_p](#) callback () const
 - Gets the current callback function for the widget.*
- void [callback](#) ([FI_Callback](#) *cb)
 - Sets the current callback function for the widget.*
- void [callback](#) ([FI_Callback](#) *cb, [FI_Callback_User_Data](#) *p, bool auto_free)
 - Sets the current callback function and managed user data for the widget.*
- void [callback](#) ([FI_Callback](#) *cb, void *p)
 - Sets the current callback function and data for the widget.*
- void [callback](#) ([FI_Callback0](#) *cb)
 - Sets the current callback function for the widget.*
- void [callback](#) ([FI_Callback1](#) *cb, long p=0)
 - Sets the current callback function for the widget.*
- unsigned int [changed](#) () const
 - Checks if the widget value changed since the last callback.*
- void [clear_active](#) ()
 - Marks the widget as inactive without sending events or changing focus.*
- void [clear_changed](#) ()
 - Marks the value of the widget as unchanged.*
- void [clear_damage](#) (uchar c=0)
 - Clears or sets the damage flags.*
- void [clear_output](#) ()
 - Sets a widget to accept input.*
- void [clear_visible](#) ()
 - Hides the widget.*
- void [clear_visible_focus](#) ()

- Disables keyboard focus navigation with this widget.*

 - [FL_Color](#) [color](#) () const

Gets the background color of the widget.

 - void [color](#) ([FL_Color](#) bg)

Sets the background color of the widget.

 - void [color](#) ([FL_Color](#) bg, [FL_Color](#) sel)

Sets the background and selection color of the widget.

 - [FL_Color](#) [color2](#) () const

For back compatibility only.

 - void [color2](#) (unsigned a)

For back compatibility only.

 - int [contains](#) (const [FL_Widget](#) *w) const

Checks if w is a child of this widget.

 - void [copy_label](#) (const char *new_label)

Sets the current label.

 - void [copy_tooltip](#) (const char *text)

Sets the current tooltip text.

 - [uchar](#) [damage](#) () const

Returns non-zero if [draw\(\)](#) needs to be called.

 - void [damage](#) ([uchar](#) c)

Sets the damage bits for the widget.

 - void [damage](#) ([uchar](#) c, int x, int y, int w, int h)

Sets the damage bits for an area inside the widget.

 - int [damage_resize](#) (int, int, int, int)

Internal use only.

 - void [deactivate](#) ()

Deactivates the widget.

 - [FL_Image](#) * [deimage](#) ()

Gets the image that is used as part of the widget label when in the inactive state.

 - const [FL_Image](#) * [deimage](#) () const

Gets the image that is used as part of the widget label when in the inactive state.

 - void [deimage](#) ([FL_Image](#) &img)

Sets the image to use as part of the widget label when in the inactive state.

 - void [deimage](#) ([FL_Image](#) *img)

Sets the image to use as part of the widget label when in the inactive state.

 - int [deimage_bound](#) () const

Returns whether the inactive image is managed by the widget.

 - void [do_callback](#) ([FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))

Calls the widget callback function with default arguments.

 - void [do_callback](#) ([FL_Widget](#) *widget, long arg, [FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))

Calls the widget callback function with arbitrary arguments.

 - void [do_callback](#) ([FL_Widget](#) *widget, void *arg=0, [FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))

Calls the widget callback function with arbitrary arguments.

 - void [draw_label](#) (int, int, int, int, [FL_Align](#)) const

Draws the label in an arbitrary bounding box with an arbitrary alignment.

 - int [h](#) () const

Gets the widget height.

 - virtual void [hide](#) ()

Makes a widget invisible.

 - int [horizontal_label_margin](#) ()

Get the spacing between the label and the horizontal edge of the widget.

- void [horizontal_label_margin](#) (int px)
Set the spacing between the label and the horizontal edge of the widget.
- [FL_Image](#) * [image](#) ()
Gets the image that is used as part of the widget label when in the active state.
- const [FL_Image](#) * [image](#) () const
Gets the image that is used as part of the widget label when in the active state.
- void [image](#) ([FL_Image](#) &img)
Sets the image to use as part of the widget label when in the active state.
- void [image](#) ([FL_Image](#) *img)
Sets the image to use as part of the widget label when in the active state.
- int [image_bound](#) () const
Returns whether the image is managed by the widget.
- int [inside](#) (const [FL_Widget](#) *wgt) const
Checks if this widget is a child of wgt.
- int [is_label_copied](#) () const
Returns whether the current label was assigned with [copy_label\(\)](#).
- const char * [label](#) () const
Gets the current label text.
- void [label](#) (const char *text)
Sets the current label pointer.
- void [label](#) ([FL_Labeltype](#) a, const char *b)
Shortcut to set the label text and type in one call.
- int [label_image_spacing](#) ()
Return the gap size between the label and the image.
- void [label_image_spacing](#) (int gap)
Set the gap between the label and the image in pixels.
- [FL_Color](#) [labelcolor](#) () const
Gets the label color.
- void [labelcolor](#) ([FL_Color](#) c)
Sets the label color.
- [FL_Font](#) [labelfont](#) () const
Gets the font to use.
- void [labelfont](#) ([FL_Font](#) f)
Sets the font to use.
- [FL_Fonsize](#) [labelsize](#) () const
Gets the font size in pixels.
- void [labelsize](#) ([FL_Fonsize](#) pix)
Sets the font size in pixels.
- [FL_Labeltype](#) [labeltype](#) () const
Gets the label type.
- void [labeltype](#) ([FL_Labeltype](#) a)
Sets the label type.
- void [measure_label](#) (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- bool [needs_keyboard](#) () const
Returns whether this widget needs a keyboard.
- void [needs_keyboard](#) (bool needs)
Sets whether this widget needs a keyboard.
- unsigned int [output](#) () const
Returns if a widget is used for output only.
- [FL_Group](#) * [parent](#) () const

- Returns a pointer to the parent widget.*

 - void [parent](#) ([Fl_Group](#) *p)

Internal use only - "for hacks only".
- void [position](#) (int X, int Y)

Repositions the window or widget.
- void [redraw](#) ()

Schedules the drawing of the widget.
- void [redraw_label](#) ()

Schedules the drawing of the label.
- virtual void [resize](#) (int x, int y, int w, int h)

Changes the size or position of the widget.
- [Fl_Color](#) [selection_color](#) () const

Gets the selection color.
- void [selection_color](#) ([Fl_Color](#) a)

Sets the selection color.
- void [set_active](#) ()

Marks the widget as active without sending events or changing focus.
- void [set_changed](#) ()

Marks the value of the widget as changed.
- void [set_output](#) ()

Sets a widget to output only.
- void [set_visible](#) ()

Makes the widget visible.
- void [set_visible_focus](#) ()

Enables keyboard focus navigation with this widget.
- int [shortcut_label](#) () const

Returns whether the widget's label uses '&' to indicate shortcuts.
- void [shortcut_label](#) (int value)

Sets whether the widget's label uses '&' to indicate shortcuts.
- virtual void [show](#) ()

Makes a widget visible.
- void [size](#) (int W, int H)

Changes the size of the widget.
- int [take_focus](#) ()

Gives the widget the keyboard focus.
- unsigned int [takeevents](#) () const

Returns if the widget is able to take events.
- int [test_shortcut](#) ()

Returns true if the widget's label contains the entered '&x' shortcut.
- const char * [tooltip](#) () const

Gets the current tooltip text.
- void [tooltip](#) (const char *text)

Sets the current tooltip text.
- [Fl_Window](#) * [top_window](#) () const

Returns a pointer to the top-level window for the widget.
- [Fl_Window](#) * [top_window_offset](#) (int &xoff, int &yoff) const

Finds the x/y offset of the current widget relative to the top-level window.
- [uchar](#) [type](#) () const

Gets the widget type.
- void [type](#) ([uchar](#) t)

Sets the widget type.

- int **use_accents_menu** ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * **user_data** () const
Gets the user data for this widget.
- void **user_data** (FI_Callback_User_Data *v, bool auto_free)
Sets the user data for this widget.
- void **user_data** (void *v)
Sets the user data for this widget.
- int **vertical_label_margin** ()
Get the spacing between the label and the vertical edge of the widget.
- void **vertical_label_margin** (int px)
Set the spacing between the label and the vertical edge of the widget.
- unsigned int **visible** () const
Returns whether a widget is visible.
- unsigned int **visible_focus** () const
Checks whether this widget has a visible focus.
- void **visible_focus** (int v)
Modifies keyboard focus navigation.
- int **visible_r** () const
Returns whether a widget and all its parents are visible.
- int **w** () const
Gets the widget width.
- FI_When **when** () const
Returns the conditions under which the callback is called.
- void **when** (uchar i)
Sets the flags used to decide when a callback is called.
- FI_Window * **window** () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int **x** () const
Gets the widget position in its window.
- int **y** () const
Gets the widget position in its window.
- virtual ~FI_Widget ()
Destroys the widget.

Protected Member Functions

- void **draw** () **FL_OVERRIDE**
Draws the widget.

Protected Member Functions inherited from FI_Menu_

- int **item_pathname_** (char *name, int namelen, const FI_Menu_Item *finditem, const FI_Menu_Item *menu=0) const

Protected Member Functions inherited from FI_Widget

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const

- Draws the widget box according its box style.*
- void **draw_box** ([FI_Boxtype](#) t, [FI_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const
Draws a focus rectangle around the widget.
- void **draw_focus** ([FI_Boxtype](#) t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void **draw_focus** ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) bg) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [FI_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

Additional Inherited Members

Static Public Member Functions inherited from [FI_Widget](#)

- static void **default_callback** ([FI_Widget](#) *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int **label_shortcut** (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int **test_shortcut** (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

11.84.1 Detailed Description

This widget provides a standard menubar interface.

Usually you will put this widget along the top edge of your window. The height of the widget should be 30 for the menu titles to draw correctly with the default font.

The items on the bar and the menus they bring up are defined by a single `FI_Menu_Item` array. Because a `FI_Menu_Item` array defines a hierarchy, the top level menu defines the items in the menubar, while the submenus define the pull-down menus. Sub-sub menus and lower pop up to the right of the submenus.

Figure 11.28 menubar

If there is an item in the top menu that is not a title of a submenu, then it acts like a "button" in the menubar. Clicking on it will pick it.

When the user clicks a menu item, `value()` is set to that item and then:

- The item's callback is done if one has been set; the `FI_Menu_Bar` is passed as the `FI_Widget*` argument, along with any userdata configured for the callback.
- If the item does not have a callback, the `FI_Menu_Bar`'s callback is done instead, along with any userdata configured for the callback. The callback can determine which item was picked using `value()`, `mvalue()`, `item_pathname()`, etc.

Submenus will also pop up in response to shortcuts indicated by putting a '&' character in the name field of the menu item. If you put a '&' character in a top-level "button" then the shortcut picks it. The '&' character in submenus is ignored until the menu is popped up.

Typing the `shortcut()` of any of the menu items will cause callbacks exactly the same as when you pick the item with the mouse.

11.84.2 Constructor & Destructor Documentation

11.84.2.1 FI_Menu_Bar()

```
FI_Menu_Bar::FI_Menu_Bar (
    int X,
    int Y,
    int W,
    int H,
    const char * l = 0)
```

Creates a new `Fl_Menu_Bar` widget using the given position, size, and label string.

The default boxtype is `FL_UP_BOX`.

The constructor sets `menu()` to `NULL`. See `Fl_Menu_` for the methods to set or change the menu.

`labelsize()`, `labelfont()`, and `labelcolor()` are used to control how the menubar items are drawn. They are initialized from the `Fl_Menu` static variables, but you can change them if desired.

`label()` is ignored unless you change `align()` to put it outside the menubar.

The destructor removes the `Fl_Menu_Bar` widget and all of its menu items.

11.84.3 Member Function Documentation

11.84.3.1 `draw()`

```
void Fl_Menu_Bar::draw () [protected], [virtual]
```

Draws the widget.

Never call this function directly. FLTK will schedule redrawing whenever needed. If your widget must be redrawn as soon as possible, call `redraw()` instead.

Override this function to draw your own widgets.

If you ever need to call another widget's draw method *from within your own `draw()` method*, e.g. for an embedded scrollbar, you can do it (because `draw()` is virtual) like this:

```
Fl_Widget *s = &scrollbar; // scrollbar is an embedded Fl_Scrollbar
s->draw();                 // calls Fl_Scrollbar::draw()
```

Implements `Fl_Widget`.

Reimplemented in `Fl_Sys_Menu_Bar`.

11.84.3.2 `handle()`

```
int Fl_Menu_Bar::handle (
    int event) [virtual]
```

Handles the specified event.

You normally don't call this method directly, but instead let FLTK do it when the user interacts with the widget.

When implemented in a widget, this function must return 0 if the widget does not use the event or 1 otherwise.

Most of the time, you want to call the inherited `handle()` method in your overridden method so that you don't short-circuit events that you don't handle. In this last case you should return the callee retval.

One exception to the rule in the previous paragraph is if you really want to *override* the behavior of the base class. This requires knowledge of the details of the inherited class.

In rare cases you may want to return 1 from your `handle()` method although you don't really handle the event. The effect would be to *filter* event processing, for instance if you want to dismiss non-numeric characters (keypresses) in a numeric input widget. You may "ring the bell" or show another visual indication or drop the event silently. In such a case you must not call the `handle()` method of the base class and tell FLTK that you *consumed* the event by returning 1 even if you didn't *do* anything with it.

Parameters

in	<i>event</i>	the kind of event received
----	--------------	----------------------------

Return values

0	if the event was not used or understood
1	if the event was used and can be deleted

See also

[Fl_Event](#)

Reimplemented from `Fl_Widget`.

11.84.3.3 play_menu()

```
void Fl_Menu_Bar::play_menu (
    const Fl_Menu_Item * item) [virtual]
```

Opens the 1st level submenu of the menubar corresponding to `item`.

Since

1.4.0

Reimplemented in [Fl_Sys_Menu_Bar](#).

11.84.3.4 update()

```
virtual void Fl_Menu_Bar::update () [inline], [virtual]
```

Updates the menu bar after any change to its items.

This is useful when the menu bar can be an [Fl_Sys_Menu_Bar](#) object.

Reimplemented in [Fl_Sys_Menu_Bar](#).

The documentation for this class was generated from the following files:

- [Fl_Menu_Bar.H](#)
- [Fl_Menu_Bar.cxx](#)

11.85 Fl_Menu_Button Class Reference

This is a button that when pushed pops up a menu (or hierarchy of menus) defined by an array of [Fl_Menu_Item](#) objects.

```
#include <Fl_Menu_Button.H>
```

Inheritance diagram for [Fl_Menu_Button](#):

**Public Types**

- enum [popup_buttons](#) {
[POPUP1](#) = 1 , [POPUP2](#) , [POPUP12](#) , [POPUP3](#) ,
[POPUP13](#) , [POPUP23](#) , [POPUP123](#) }

indicate what mouse buttons pop up the menu.

Public Member Functions

- [Fl_Menu_Button](#) (int, int, int, int, const char * = 0)
Creates a new [Fl_Menu_Button](#) widget using the given position, size, and label string.
- int [handle](#) (int) [FL_OVERRIDE](#)
Handles the specified event.
- const [Fl_Menu_Item](#) * [popup](#) ()
Act exactly as though the user clicked the button or typed the shortcut key.

Public Member Functions inherited from [Fl_Menu_](#)

- int [add](#) (const char *)
This is a Forms (and SGI GL library) compatible add function, it adds many menu items, with '|' separating the menu items, and tab separating the menu item names from an optional shortcut string.
- int [add](#) (const char *, int [shortcut](#), [Fl_Callback](#) *, void *=0, int=0)
Adds a new menu item.
- int [add](#) (const char *a, const char *b, [Fl_Callback](#) *c, void *d=0, int e=0)
See int [Fl_Menu_::add](#)(const char label, int shortcut, [Fl_Callback](#)*, void *user_data=0, int flags=0)*
- void [clear](#) ()
Same as menu(NULL), set the array pointer to null, indicating a zero-length menu.
- int [clear_submenu](#) (int index)
Clears the specified submenu pointed to by index of all menu items.
- void [copy](#) (const [Fl_Menu_Item](#) *m, void *user_data=0)
Sets the menu array pointer with a copy of m that will be automatically deleted.
- [Fl_Boxtype](#) [down_box](#) () const
This box type is used to surround the currently-selected items in the menus.
- void [down_box](#) ([Fl_Boxtype](#) b)
Sets the box type used to surround the currently-selected items in the menus.
- [Fl_Color](#) [down_color](#) () const
For back compatibility, same as [selection_color](#)()
- void [down_color](#) (unsigned c)
For back compatibility, same as [selection_color](#)()
- int [find_index](#) (const char *name) const
Find the menu item index for a given menu pathname, such as "Edit/Copy".
- int [find_index](#) (const [Fl_Menu_Item](#) *item) const
Find the index into the menu array for a given item.
- int [find_index](#) ([Fl_Callback](#) *cb) const
Find the index into the menu array for a given callback cb.
- const [Fl_Menu_Item](#) * [find_item](#) (const char *name)
Find the menu item for a given menu pathname, such as "Edit/Copy".
- const [Fl_Menu_Item](#) * [find_item](#) ([Fl_Callback](#) *)
Find the menu item for the given callback cb.
- const [Fl_Menu_Item](#) * [find_item_with_argument](#) (long)
Find the menu item for the given user argument v.
- const [Fl_Menu_Item](#) * [find_item_with_user_data](#) (void *)
Find the menu item for the given user data v.
- [Fl_Menu_](#) (int, int, int, int, const char *=0)
Creates a new [Fl_Menu_](#) widget using the given position, size, and label string.
- void [global](#) ()
Make the shortcuts for this menu work no matter what window has the focus when you type it.
- int [insert](#) (int index, const char *, int [shortcut](#), [Fl_Callback](#) *, void *=0, int=0)
Inserts a new menu item at the specified index position.
- int [insert](#) (int index, const char *a, const char *b, [Fl_Callback](#) *c, void *d=0, int e=0)
See int [Fl_Menu_::insert](#)(const char label, int shortcut, [Fl_Callback](#)*, void *user_data=0, int flags=0)*
- int [item_pathname](#) (char *name, int namelen, const [Fl_Menu_Item](#) *finditem=0) const
Get the menu 'pathname' for the specified menuitem.
- const [Fl_Menu_Item](#) * [menu](#) () const
Returns a pointer to the array of [Fl_Menu_Items](#).
- void [menu](#) (const [Fl_Menu_Item](#) *m)
Sets the menu array pointer directly.

- [FI_Boxtype menu_box](#) () const
Get the box type for the menu popup windows.
- void [menu_box](#) ([FI_Boxtype](#) b)
Set the box type for the menu popup windows.
- const [FI_Menu_Item](#) * [menu_end](#) ()
Finishes menu modifications and returns [menu\(\)](#).
- int [mode](#) (int i) const
Get the flags of item i.
- void [mode](#) (int i, int fl)
Set the flags of item i.
- const [FI_Menu_Item](#) * [mvalue](#) () const
Return a pointer to the last menu item that was picked.
- const [FI_Menu_Item](#) * [picked](#) (const [FI_Menu_Item](#) *)
When user picks a menu item, call this.
- const [FI_Menu_Item](#) * [prev_mvalue](#) () const
Return a pointer to the menu item that was picked before the current one was picked.
- void [remove](#) (int)
Deletes item i from the menu.
- void [replace](#) (int, const char *)
Changes the text of item i.
- void [setonly](#) ([FI_Menu_Item](#) *item)
Turns the radio item "on" for the menu item and turns "off" adjacent radio items of the same group.
- void [shortcut](#) (int i, int s)
Change the shortcut of item i to s.
- int [size](#) () const
This returns the number of [FI_Menu_Item](#) structures that make up the menu, correctly counting submenus.
- void [size](#) (int W, int H)
- const [FI_Menu_Item](#) * [test_shortcut](#) ()
Returns the menu item with the entered shortcut (key value).
- const char * [text](#) () const
Returns the title of the last item chosen.
- const char * [text](#) (int i) const
Returns the title of item i.
- [FI_Color](#) [textcolor](#) () const
Get the current color of menu item labels.
- void [textcolor](#) ([FI_Color](#) c)
Sets the current color of menu item labels.
- [FI_Font](#) [textfont](#) () const
Gets the current font of menu item labels.
- void [textfont](#) ([FI_Font](#) c)
Sets the current font of menu item labels.
- [FI_Fonsize](#) [textsize](#) () const
Gets the font size of menu item labels.
- void [textsize](#) ([FI_Fonsize](#) c)
Sets the font size of menu item labels.
- int [value](#) () const
Return the index into the [menu\(\)](#) of the last item chosen by the user.
- int [value](#) (const [FI_Menu_Item](#) *)
Set the value of a menu to the menu item m.
- int [value](#) (int i)
Set the value of the menu to index i.

Public Member Functions inherited from [FI_Widget](#)

- void [_clear_fullscreen](#) ()
- void [_set_fullscreen](#) ()
- void [activate](#) ()
Activates the widget.
- unsigned int [active](#) () const
Returns whether the widget is active.
- int [active_r](#) () const
Returns whether the widget and all of its parents are active.
- [FI_Align](#) [align](#) () const
Gets the label alignment.
- void [align](#) ([FI_Align](#) alignment)
Sets the label alignment.
- long [argument](#) () const
Gets the current user data (long) argument that is passed to the callback function.
- void [argument](#) (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class [FI_Gl_Window](#) * [as_gl_window](#) ()
Returns an [FI_Gl_Window](#) pointer if this widget is an [FI_Gl_Window](#).
- virtual class [FI_Gl_Window](#) const * [as_gl_window](#) () const
- virtual [FI_Group](#) * [as_group](#) ()
Returns an [FI_Group](#) pointer if this widget is an [FI_Group](#).
- virtual [FI_Group](#) const * [as_group](#) () const
- virtual [FI_Window](#) * [as_window](#) ()
Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).
- virtual [FI_Window](#) const * [as_window](#) () const
- void [bind_deimage](#) ([FI_Image](#) *img)
Sets the image to use as part of the widget label when in the inactive state.
- void [bind_deimage](#) (int f)
Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.
- void [bind_image](#) ([FI_Image](#) *img)
Sets the image to use as part of the widget label when in the active state.
- void [bind_image](#) (int f)
Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- [FI_Boxtype](#) [box](#) () const
Gets the box type of the widget.
- void [box](#) ([FI_Boxtype](#) new_box)
Sets the box type for the widget.
- [FI_Callback_p](#) [callback](#) () const
Gets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb, [FI_Callback_User_Data](#) *p, bool auto_free)
Sets the current callback function and managed user data for the widget.
- void [callback](#) ([FI_Callback](#) *cb, void *p)
Sets the current callback function and data for the widget.
- void [callback](#) ([FI_Callback0](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback1](#) *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int [changed](#) () const

- Checks if the widget value changed since the last callback.*

 - void `clear_active` ()

Marks the widget as inactive without sending events or changing focus.

- void `clear_changed` ()

Marks the value of the widget as unchanged.

- void `clear_damage` (uchar c=0)

Clears or sets the damage flags.

- void `clear_output` ()

Sets a widget to accept input.

- void `clear_visible` ()

Hides the widget.

- void `clear_visible_focus` ()

Disables keyboard focus navigation with this widget.

- `FL_Color color` () const

Gets the background color of the widget.

- void `color` (FL_Color bg)

Sets the background color of the widget.

- void `color` (FL_Color bg, FL_Color sel)

Sets the background and selection color of the widget.

- `FL_Color color2` () const

For back compatibility only.

- void `color2` (unsigned a)

For back compatibility only.

- int `contains` (const FL_Widget *w) const

Checks if w is a child of this widget.

- void `copy_label` (const char *new_label)

Sets the current label.

- void `copy_tooltip` (const char *text)

Sets the current tooltip text.

- `uchar damage` () const

Returns non-zero if `draw()` needs to be called.

- void `damage` (uchar c)

Sets the damage bits for the widget.

- void `damage` (uchar c, int x, int y, int w, int h)

Sets the damage bits for an area inside the widget.

- int `damage_resize` (int, int, int, int)

Internal use only.

- void `deactivate` ()

Deactivates the widget.

- `FL_Image * deimage` ()

Gets the image that is used as part of the widget label when in the inactive state.

- const `FL_Image * deimage` () const

Gets the image that is used as part of the widget label when in the inactive state.

- void `deimage` (FL_Image &img)

Sets the image to use as part of the widget label when in the inactive state.

- void `deimage` (FL_Image *img)

Sets the image to use as part of the widget label when in the inactive state.

- int `deimage_bound` () const

Returns whether the inactive image is managed by the widget.

- void `do_callback` (FL_Callback_Reason reason=FL_REASON_UNKNOWN)

Calls the widget callback function with default arguments.

- void `do_callback` (`FI_Widget` *widget, long arg, `FI_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with arbitrary arguments.
- void `do_callback` (`FI_Widget` *widget, void *arg=0, `FI_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with arbitrary arguments.
- void `draw_label` (int, int, int, int, `FI_Align`) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const
Gets the widget height.
- virtual void `hide` ()
Makes a widget invisible.
- int `horizontal_label_margin` ()
Get the spacing between the label and the horizontal edge of the widget.
- void `horizontal_label_margin` (int px)
Set the spacing between the label and the horizontal edge of the widget.
- `FI_Image` * `image` ()
Gets the image that is used as part of the widget label when in the active state.
- const `FI_Image` * `image` () const
Gets the image that is used as part of the widget label when in the active state.
- void `image` (`FI_Image` &img)
Sets the image to use as part of the widget label when in the active state.
- void `image` (`FI_Image` *img)
Sets the image to use as part of the widget label when in the active state.
- int `image_bound` () const
Returns whether the image is managed by the widget.
- int `inside` (const `FI_Widget` *wgt) const
Checks if this widget is a child of wgt.
- int `is_label_copied` () const
Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const
Gets the current label text.
- void `label` (const char *text)
Sets the current label pointer.
- void `label` (`FI_Labeltype` a, const char *b)
Shortcut to set the label text and type in one call.
- int `label_image_spacing` ()
Return the gap size between the label and the image.
- void `label_image_spacing` (int gap)
Set the gap between the label and the image in pixels.
- `FI_Color` `labelcolor` () const
Gets the label color.
- void `labelcolor` (`FI_Color` c)
Sets the label color.
- `FI_Font` `labelfont` () const
Gets the font to use.
- void `labelfont` (`FI_Font` f)
Sets the font to use.
- `FI_Fonsize` `labelsize` () const
Gets the font size in pixels.
- void `labelsize` (`FI_Fonsize` pix)
Sets the font size in pixels.
- `FI_Labeltype` `labeltype` () const

- Gets the label type.*

 - void [labeltype](#) ([FL_Labeltype](#) a)
- Sets the label type.*

 - void [measure_label](#) (int &ww, int &hh) const

Sets width ww and height hh accordingly with the label size.
- bool [needs_keyboard](#) () const

Returns whether this widget needs a keyboard.
- void [needs_keyboard](#) (bool needs)

Sets whether this widget needs a keyboard.
- unsigned int [output](#) () const

Returns if a widget is used for output only.
- [FL_Group](#) * [parent](#) () const

Returns a pointer to the parent widget.
- void [parent](#) ([FL_Group](#) *p)

Internal use only - "for hacks only".
- void [position](#) (int X, int Y)

Repositions the window or widget.
- void [redraw](#) ()

Schedules the drawing of the widget.
- void [redraw_label](#) ()

Schedules the drawing of the label.
- virtual void [resize](#) (int x, int y, int w, int h)

Changes the size or position of the widget.
- [FL_Color](#) [selection_color](#) () const

Gets the selection color.
- void [selection_color](#) ([FL_Color](#) a)

Sets the selection color.
- void [set_active](#) ()

Marks the widget as active without sending events or changing focus.
- void [set_changed](#) ()

Marks the value of the widget as changed.
- void [set_output](#) ()

Sets a widget to output only.
- void [set_visible](#) ()

Makes the widget visible.
- void [set_visible_focus](#) ()

Enables keyboard focus navigation with this widget.
- int [shortcut_label](#) () const

Returns whether the widget's label uses '&' to indicate shortcuts.
- void [shortcut_label](#) (int value)

Sets whether the widget's label uses '&' to indicate shortcuts.
- virtual void [show](#) ()

Makes a widget visible.
- void [size](#) (int W, int H)

Changes the size of the widget.
- int [take_focus](#) ()

Gives the widget the keyboard focus.
- unsigned int [takeevents](#) () const

Returns if the widget is able to take events.
- int [test_shortcut](#) ()

Returns true if the widget's label contains the entered '&x' shortcut.

- `const char * tooltip () const`
Gets the current tooltip text.
- `void tooltip (const char *text)`
Sets the current tooltip text.
- `Fl_Window * top_window () const`
Returns a pointer to the top-level window for the widget.
- `Fl_Window * top_window_offset (int &xoff, int &yoff) const`
Finds the x/y offset of the current widget relative to the top-level window.
- `uchar type () const`
Gets the widget type.
- `void type (uchar t)`
Sets the widget type.
- `int use_accents_menu ()`
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- `void * user_data () const`
Gets the user data for this widget.
- `void user_data (Fl_Callback_User_Data *v, bool auto_free)`
Sets the user data for this widget.
- `void user_data (void *v)`
Sets the user data for this widget.
- `int vertical_label_margin ()`
Get the spacing between the label and the vertical edge of the widget.
- `void vertical_label_margin (int px)`
Set the spacing between the label and the vertical edge of the widget.
- `unsigned int visible () const`
Returns whether a widget is visible.
- `unsigned int visible_focus () const`
Checks whether this widget has a visible focus.
- `void visible_focus (int v)`
Modifies keyboard focus navigation.
- `int visible_r () const`
Returns whether a widget and all its parents are visible.
- `int w () const`
Gets the widget width.
- `Fl_When when () const`
Returns the conditions under which the callback is called.
- `void when (uchar i)`
Sets the flags used to decide when a callback is called.
- `Fl_Window * window () const`
Returns a pointer to the nearest parent window up the widget hierarchy.
- `int x () const`
Gets the widget position in its window.
- `int y () const`
Gets the widget position in its window.
- `virtual ~Fl_Widget ()`
Destroys the widget.

Protected Member Functions

- `void draw () FL_OVERRIDE`
Draws the widget.

Protected Member Functions inherited from FI_Menu_

- int **item_pathname_** (char *name, int namelen, const FI_Menu_Item *finditem, const FI_Menu_Item *menu=0) const

Protected Member Functions inherited from FI_Widget

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** (FI_Boxtype t, FI_Color c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** (FI_Boxtype t, int x, int y, int w, int h, FI_Color c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const
Draws a focus rectangle around the widget.
- void **draw_focus** (FI_Boxtype t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void **draw_focus** (FI_Boxtype t, int x, int y, int w, int h, FI_Color bg) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- FI_Widget (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

Static Protected Attributes

- static FI_Menu_Button * **pressed_menu_button_** = NULL

Additional Inherited Members

Static Public Member Functions inherited from FI_Widget

- static void **default_callback** (FI_Widget *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int **label_shortcut** (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int **test_shortcut** (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from [Fl_Widget](#)

11.85.1 Detailed Description

This is a button that when pushed pops up a menu (or hierarchy of menus) defined by an array of [Fl_Menu_Item](#) objects.

Figure 11.29 `menu_button`

Normally any mouse button will pop up a menu and it is lined up below the button as shown in the picture. However an [Fl_Menu_Button](#) may also control a pop-up menu. This is done by setting the `type()`. If `type()` is zero a normal menu button is produced. If it is nonzero then this is a pop-up menu. The bits in `type()` indicate what mouse buttons pop up the menu (see [Fl_Menu_Button::popup_buttons](#)).

The menu will also pop up in response to shortcuts indicated by putting a '&' character in the `label()`.

Typing the `shortcut()` of any of the menu items will cause callbacks exactly the same as when you pick the item with the mouse. The '&' character in menu item names are only looked at when the menu is popped up, however.

When the user clicks a menu item, [value\(\)](#) is set to that item and then:

- The item's callback is done if one has been set; the [Fl_Menu_Button](#) is passed as the `Fl_Widget*` argument, along with any userdata configured for the callback.
- If the item does not have a callback, the [Fl_Menu_Button](#)'s callback is done instead, along with any userdata configured for it. The callback can determine which item was picked using [value\(\)](#), [mvalue\(\)](#), [item_pathname\(\)](#), etc.

11.85.2 Member Enumeration Documentation

11.85.2.1 popup_buttons

enum [Fl_Menu_Button::popup_buttons](#)

indicate what mouse buttons pop up the menu.

Values for [type\(\)](#) used to indicate what mouse buttons pop up the menu. [Fl_Menu_Button::POPUP3](#) is usually what you want.

Enumerator

POPUP1	pops up with the mouse 1st button.
POPUP2	pops up with the mouse 2nd button.
POPUP12	pops up with the mouse 1st or 2nd buttons.
POPUP3	pops up with the mouse 3rd button.
POPUP13	pops up with the mouse 1st or 3rd buttons.
POPUP23	pops up with the mouse 2nd or 3rd buttons.
POPUP123	pops up with any mouse button.

11.85.3 Constructor & Destructor Documentation

11.85.3.1 Fl_Menu_Button()

```
Fl_Menu_Button::Fl_Menu_Button (
    int X,
    int Y,
    int W,
    int H,
    const char * l = 0)
```

Creates a new [Fl_Menu_Button](#) widget using the given position, size, and label string.

The default boxtype is `FL_UP_BOX`.

The constructor sets [menu\(\)](#) to `NULL`. See [Fl_Menu_](#) for the methods to set or change the menu.

11.85.4 Member Function Documentation

11.85.4.1 draw()

```
void Fl_Menu_Button::draw () [protected], [virtual]
```

Draws the widget.

Never call this function directly. FLTK will schedule redrawing whenever needed. If your widget must be redrawn as soon as possible, call [redraw\(\)](#) instead.

Override this function to draw your own widgets.

If you ever need to call another widget's draw method *from within your own [draw\(\)](#) method*, e.g. for an embedded scrollbar, you can do it (because [draw\(\)](#) is virtual) like this:

```
Fl_Widget *s = &scrollbar; // scrollbar is an embedded Fl_Scrollbar
s->draw();                 // calls Fl_Scrollbar::draw()
```

Implements [Fl_Widget](#).

11.85.4.2 `handle()`

```
int Fl_Menu_Button::handle (
    int event) [virtual]
```

Handles the specified event.

You normally don't call this method directly, but instead let FLTK do it when the user interacts with the widget.

When implemented in a widget, this function must return 0 if the widget does not use the event or 1 otherwise.

Most of the time, you want to call the inherited [handle\(\)](#) method in your overridden method so that you don't short-circuit events that you don't handle. In this last case you should return the callee retval.

One exception to the rule in the previous paragraph is if you really want to *override* the behavior of the base class. This requires knowledge of the details of the inherited class.

In rare cases you may want to return 1 from your [handle\(\)](#) method although you don't really handle the event. The effect would be to *filter* event processing, for instance if you want to dismiss non-numeric characters (keypresses) in a numeric input widget. You may "ring the bell" or show another visual indication or drop the event silently. In such a case you must not call the [handle\(\)](#) method of the base class and tell FLTK that you *consumed* the event by returning 1 even if you didn't *do* anything with it.

Parameters

in	<i>event</i>	the kind of event received
----	--------------	----------------------------

Return values

0	if the event was not used or understood
1	if the event was used and can be deleted

See also

[Fl_Event](#)

Reimplemented from [Fl_Widget](#).

11.85.4.3 `popup()`

```
const Fl_Menu_Item * Fl_Menu_Button::popup ()
```

Act exactly as though the user clicked the button or typed the shortcut key.

The menu appears, it waits for the user to pick an item, and if they pick one it sets [value\(\)](#) and does the callback or sets [changed\(\)](#) as described above. The menu item is returned or NULL if the user dismisses the menu.

Note

Since FLTK 1.4.0 [Fl_Menu_::menu_end\(\)](#) is called before the menu pops up to make sure the menu array is located in private storage.

11.86 `Fl_Menu_Item` Struct Reference

The [Fl_Menu_Item](#) structure defines a single menu item that is used by the [Fl_Menu_](#) class.

```
#include <Fl_Menu_Item.H>
```

Public Member Functions

- void **activate** ()
Allows a menu item to be picked.
- int **active** () const
Gets whether or not the item can be picked.
- int **activevisible** () const
Returns non 0 if FL_INACTIVE and FL_INVISIBLE are cleared, 0 otherwise.
- int **add** (const char *, int shortcut, FL_Callback *, void *=0, int=0)
Adds a menu item.
- int **add** (const char *a, const char *b, FL_Callback *c, void *d=0, int e=0)
See int add(const char, int shortcut, FL_Callback*, void*, int)*
- long **argument** () const
Gets the user_data() argument that is sent to the callback function.
- void **argument** (long v)
Sets the user_data() argument that is sent to the callback function.
- FL_Callback_p **callback** () const
Returns the callback function that is set for the menu item.
- void **callback** (FL_Callback *c)
Sets the menu item's callback function.
- void **callback** (FL_Callback *c, void *p)
Sets the menu item's callback function and userdata() argument.
- void **callback** (FL_Callback0 *c)
Sets the menu item's callback function.
- void **callback** (FL_Callback1 *c, long p=0)
Sets the menu item's callback function and userdata() argument.
- void **check** ()
Back compatibility only.
- int **checkbox** () const
Returns true if a checkbox will be drawn next to this item.
- int **checked** () const
Back compatibility only.
- void **clear** ()
Turns the check or radio item "off" for the menu item.
- void **deactivate** ()
Prevents a menu item from being picked.
- void **do_callback** (FL_Widget *o) const
Calls the FL_Menu_Item item's callback, and provides the FL_Widget argument.
- void **do_callback** (FL_Widget *o, long arg) const
Calls the FL_Menu_Item item's callback, and provides the FL_Widget argument.
- void **do_callback** (FL_Widget *o, void *arg) const
Calls the FL_Menu_Item item's callback, and provides the FL_Widget argument.
- void **draw** (int x, int y, int w, int h, const FL_Menu_ *, int t=0) const
Draws the menu item in bounding box x,y,w,h, optionally selects the item.
- const FL_Menu_Item * **find_shortcut** (int *ip=0, const bool require_alt=false) const
Search only the top level menu for a shortcut.
- FL_Menu_Item * **first** ()
Returns the first menu item, same as next(0).
- const FL_Menu_Item * **first** () const
Returns the first menu item, same as next(0).
- void **hide** ()

- Hides an item in the menu.*

 - void [image](#) ([FI_Image](#) &image)

Compatibility API for FLUID, same as `image.label(this)`.
- void [image](#) ([FI_Image](#) *image)

Compatibility API for FLUID, same as `image->label(this)`.
- void [image_label](#) (const [FI_Image](#) *image)

Sets the title (`label()`) to an icon or image.
- int [insert](#) (int, const char *, int, [FI_Callback](#) *, void *=0, int=0)

Inserts an item at position `index`.
- const char * [label](#) () const

Returns the title (`label`) of the menu item.
- void [label](#) (const char *a)

Sets the title (`label`) of the menu item.
- void [label](#) ([FI_Labeltype](#) a, const char *b)

Sets the title (`label`) and the label type of the menu item.
- [FI_Color](#) [labelcolor](#) () const

Gets the menu item's label color.
- void [labelcolor](#) ([FI_Color](#) a)

Sets the menu item's label color.
- [FI_Font](#) [labelfont](#) () const

Gets the menu item's label font.
- void [labelfont](#) ([FI_Font](#) a)

Sets the menu item's label font.
- [FI_Fonsize](#) [labelsize](#) () const

Gets the label font pixel size/height.
- void [labelsize](#) ([FI_Fonsize](#) a)

Sets the label font pixel size/height.
- [FI_Labeltype](#) [labeltype](#) () const

Returns the menu item's labeltype.
- void [labeltype](#) ([FI_Labeltype](#) a)

Sets the menu item's labeltype.
- int [measure](#) (int *h, const [FI_Menu_](#) *) const

Measures width of label, including effect of & characters.
- void [multi_label](#) (const [FI_Multi_Label](#) *ml)

Sets the title (`label()`) and `labeltype()` to an [FI_Multi_Label](#).
- [FI_Menu_Item](#) * [next](#) (int i=1)

Advances a pointer by `n` items through a menu array, skipping the contents of submenus and invisible items.
- const [FI_Menu_Item](#) * [next](#) (int=1) const

Advance a pointer by `n` items through a menu array, skipping the contents of submenus and invisible items.
- const [FI_Menu_Item](#) * [popup](#) (int X, int Y, const char *title=0, const [FI_Menu_Item](#) *picked=0, const [FI_Menu_](#) *=0) const

This method is called by widgets that want to display menus.
- const [FI_Menu_Item](#) * [pulldown](#) (int X, int Y, int W, int H, const [FI_Menu_Item](#) *picked=0, const [FI_Menu_](#) *=0, const [FI_Menu_Item](#) *title=0, int menubar=0) const

Pulldown() is similar to [popup\(\)](#), but a rectangle is provided to position the menu.
- int [radio](#) () const

Returns true if this item is a radio item.
- void [set](#) ()

Turns the check or radio item "on" for the menu item.
- void [setonly](#) ([FI_Menu_Item](#) const *first=NULL)

Turns the radio item "on" for the menu item and turns "off" adjacent radio items set.

- int **shortcut** () const
Gets what key combination shortcut will trigger the menu item.
- void **shortcut** (int s)
Sets exactly what key combination will trigger the menu item.
- void **show** ()
Makes an item visible in the menu.
- int **size** () const
Size of the menu starting from this menu item.
- int **submenu** () const
Returns true if either FL_SUBMENU or FL_SUBMENU_POINTER is on in the flags.
- const FL_Menu_Item * **test_shortcut** () const
This is designed to be called by a widgets handle() method in response to a FL_SHORTCUT event.
- void **uncheck** ()
Back compatibility only.
- void * **user_data** () const
Gets the [user_data\(\)](#) argument that is sent to the callback function.
- void **user_data** (void *v)
Sets the [user_data\(\)](#) argument that is sent to the callback function.
- int **value** () const
Returns the current value of the check or radio item.
- void **value** (int v)
Sets the current value of the check or radio item.
- int **visible** () const
Gets the visibility of an item.

Public Attributes

- [FL_Callback](#) * **callback_**
menu item callback
- int **flags**
menu item flags like FL_MENU_TOGGLE, FL_MENU_RADIO
- [FL_Color](#) **labelcolor_**
menu item text color
- [FL_Font](#) **labelfont_**
which font for this menu item text
- [FL_Fonsize](#) **labelsize_**
size of menu item text
- [uchar](#) **labeltype_**
how the menu item text looks like
- int **shortcut_**
menu item shortcut
- const char * **text**
menu item text, returned by [label\(\)](#)
- void * **user_data_**
menu item user_data for the menu's callback

11.86.1 Detailed Description

The `Fl_Menu_Item` structure defines a single menu item that is used by the `Fl_Menu_` class.

```
struct Fl_Menu_Item {
    const char*  text;          // label()
    int          shortcut_;
    Fl_Callback* callback_;
    void*        user_data_;
    int          flags;
    uchar        labeltype_;
    uchar        labelfont_;
    uchar        labelsize_;
    uchar        labelcolor_;
};

enum { // values for flags:
    FL_MENU_INACTIVE   = 1,          // Deactivate menu item (gray out)
    FL_MENU_TOGGLE     = 2,          // Item is a checkbox toggle (shows checkbox for on/off state)
    FL_MENU_VALUE      = 4,          // The on/off state for checkbox/radio buttons (if set, state is 'on')
    FL_MENU_RADIO      = 8,          // Item is a radio button (one checkbox of many can be on)
    FL_MENU_INVISIBLE  = 0x10,       // Item will not show up (shortcut will work)
    FL_SUBMENU_POINTER = 0x20,       // Indicates user_data() is a pointer to another menu array
    FL_SUBMENU         = 0x40,       // This item is a submenu to other items
    FL_MENU_DIVIDER    = 0x80,       // Creates divider line below this item. Also ends a group of radio
                                   buttons.
    FL_MENU_HORIZONTAL = 0x100      // ??? -- reserved, internal (do not use)
};
```

Note

All other bits in `flags` are reserved for FLTK usage, do not use any bits of the `flags` variable for your own purposes. Even **undocumented** bits can be used for internal purposes in this or any future FLTK version.

Some `flags` bits may be changed during runtime by user code, particularly if you need to change the value of a menu item (ON/OFF) or make it active or inactive. Such changes must be done with caution so they don't affect other (maybe undocumented) bits, i.e. you need to make proper bit operations to set or clear only these particular bits.

Typically menu items are statically defined; for example:

```
Fl_Menu_Item popup[] = {
    {"&alpha",      FL_ALT+'a', the_cb, (void*)1},
    {"&beta",       FL_ALT+'b', the_cb, (void*)2},
    {"&gamma",      FL_ALT+'c', the_cb, (void*)3, FL_MENU_DIVIDER},
    {"&strange",    0,          strange_cb},
    {"&charm",      0,          charm_cb},
    {"&truth",      0,          truth_cb},
    {"&beauty",     0,          beauty_cb},
    {"sub&menu",    0,          0, 0, FL_SUBMENU},
    {"one"},
    {"two"},
    {"three"},
    {0},
    {"inactive",    FL_ALT+'i', 0, 0, FL_MENU_INACTIVE|FL_MENU_DIVIDER},
    {"invisible",   FL_ALT+'i', 0, 0, FL_MENU_INVISIBLE},
    {"check",       FL_ALT+'i', 0, 0, FL_MENU_TOGGLE|FL_MENU_VALUE},
    {"box",         FL_ALT+'i', 0, 0, FL_MENU_TOGGLE},
    {0}};
```

produces:

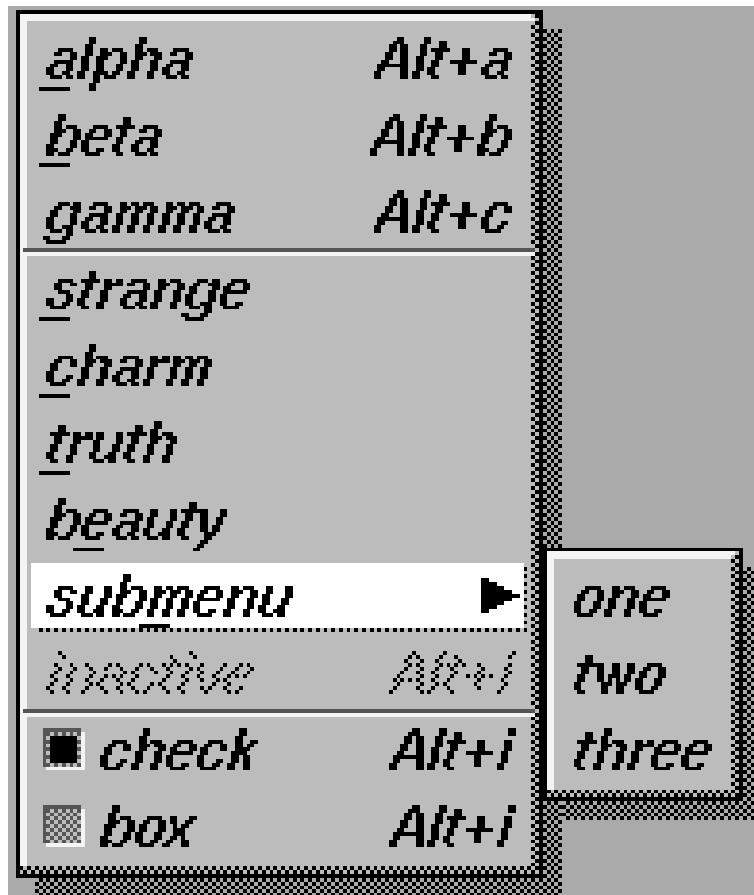

Figure 11.30 menu

A submenu title is identified by the bit `FL_SUBMENU` in the flags field, and ends with a `label()` that is `NULL`. You can nest menus to any depth. A pointer to the first item in the submenu can be treated as an `Fl_Menu` array itself. It is also possible to make separate submenu arrays with `FL_SUBMENU_POINTER` flags. You should use the method functions to access structure members and not access them directly to avoid compatibility problems with future releases of FLTK.

Note

Adding menu items with `insert()`, `add()`, or any of its overloaded variants copies the entire menu to internal storage. Using the memory of a static menu array after that would access unused (but not released) memory and thus have no effect.

11.86.2 Member Function Documentation

11.86.2.1 `add()`

```
int Fl_Menu_Item::add (
    const char * mytext,
    int sc,
    Fl_Callback * cb,
    void * data = 0,
    int myflags = 0)
```

Adds a menu item.

The text is split at `'` characters to automatically produce submenus (actually a totally unnecessary feature as you can now add submenu titles directly by setting `FL_SUBMENU` in the flags).

Returns

the index into the `menu()` array, where the entry was added

See also

[Fl_Menu_Item::insert\(int, const char*, int, Fl_Callback*, void*, int\)](#)

11.86.2.2 argument() [1/2]

```
long Fl_Menu_Item::argument () const [inline]
```

Gets the [user_data\(\)](#) argument that is sent to the callback function.

For convenience you can also define the callback as taking a long argument. This method casts the stored [user_data\(\)](#) argument to long and returns it as a *long* value.

11.86.2.3 argument() [2/2]

```
void Fl_Menu_Item::argument (
    long v) [inline]
```

Sets the [user_data\(\)](#) argument that is sent to the callback function.

For convenience you can also define the callback as taking a long argument. This method casts the given argument *v* to *void** and stores it in the menu item's [userdata\(\)](#) member. This may not be portable to some machines.

11.86.2.4 callback() [1/5]

```
Fl_Callback_p Fl_Menu_Item::callback () const [inline]
```

Returns the callback function that is set for the menu item.

Each item has space for a callback function and an argument for that function. Due to back compatibility, the [Fl_Menu_Item](#) itself is not passed to the callback, instead you have to get it by calling `((Fl_Menu_*)w)->mvalue()` where *w* is the widget argument.

11.86.2.5 callback() [2/5]

```
void Fl_Menu_Item::callback (
    Fl_Callback * c) [inline]
```

Sets the menu item's callback function.

This method does not set the [userdata\(\)](#) argument.

See also

[Fl_Callback_p Fl_Menuitem::callback\(\) const](#)

11.86.2.6 callback() [3/5]

```
void Fl_Menu_Item::callback (
    Fl_Callback * c,
    void * p) [inline]
```

Sets the menu item's callback function and [userdata\(\)](#) argument.

See also

[Fl_Callback_p Fl_Menuitem::callback\(\) const](#)

11.86.2.7 callback() [4/5]

```
void Fl_Menu_Item::callback (
    Fl_Callback0 * c) [inline]
```

Sets the menu item's callback function.

This method does not set the [userdata\(\)](#) argument.

See also

[Fl_Callback_p Fl_Menuitem::callback\(\) const](#)

11.86.2.8 callback() [5/5]

```
void Fl_Menu_Item::callback (
    Fl_Callback1 * c,
    long p = 0) [inline]
```

Sets the menu item's callback function and userdata() argument.

The argument `is` is cast to `void*` and stored as the `userdata()` for the menu item's callback function.

See also

[Fl_Callback_p](#) `Fl_MenuItem::callback()` `const`

11.86.2.9 check()

```
void Fl_Menu_Item::check () [inline]
```

Back compatibility only.

Deprecated Please use [Fl_Menu_Item::set\(\)](#) instead. This method will be removed in FLTK 1.5.0 or later.

See also

[set\(\)](#)

11.86.2.10 checkbox()

```
int Fl_Menu_Item::checkbox () const [inline]
```

Returns true if a checkbox will be drawn next to this item.

This is true if `FL_MENU_TOGGLE` or `FL_MENU_RADIO` is set in the flags.

11.86.2.11 checked()

```
int Fl_Menu_Item::checked () const [inline]
```

Back compatibility only.

Deprecated Please use [Fl_Menu_Item::value\(\)](#) instead. This method will be removed in FLTK 1.5.0 or later.

See also

[value\(\)](#)

11.86.2.12 deactivate()

```
void Fl_Menu_Item::deactivate () [inline]
```

Prevents a menu item from being picked.

Note that this will also cause the menu item to appear grayed-out.

11.86.2.13 do_callback() [1/3]

```
void Fl_Menu_Item::do_callback (
    Fl_Widget * o) const [inline]
```

Calls the [Fl_Menu_Item](#) item's callback, and provides the [Fl_Widget](#) argument.

The callback is called with the stored [user_data\(\)](#) as its second argument. You must first check that [callback\(\)](#) is non-zero before calling this.

11.86.2.14 do_callback() [2/3]

```
void Fl_Menu_Item::do_callback (
    Fl_Widget * o,
    long arg) const [inline]
```

Calls the [Fl_Menu_Item](#) item's callback, and provides the [Fl_Widget](#) argument.

This call overrides the callback's second argument with the given value `arg`. `long arg` is cast to `void*` when calling the callback. You must first check that [callback\(\)](#) is non-zero before calling this.

11.86.2.15 do_callback() [3/3]

```
void Fl_Menu_Item::do_callback (
    Fl_Widget * o,
    void * arg) const [inline]
```

Calls the [Fl_Menu_Item](#) item's callback, and provides the [Fl_Widget](#) argument.

This call overrides the callback's second argument with the given value `arg`. You must first check that [callback\(\)](#) is non-zero before calling this.

11.86.2.16 find_shortcut()

```
const Fl_Menu_Item * Fl_Menu_Item::find_shortcut (
    int * ip = 0,
    const bool require_alt = false) const
```

Search only the top level menu for a shortcut.

Either &x in the label or the shortcut fields are used.

This tests the current event, which must be an `FL_KEYBOARD` or `FL_SHORTCUT`, against a shortcut value.

Parameters

<i>ip</i>	returns the index of the item, if <i>ip</i> is not NULL.
<i>require_alt</i>	if true: match only if Alt key is pressed.

Returns

found [Fl_Menu_Item](#) or NULL

11.86.2.17 image() [1/2]

```
void Fl_Menu_Item::image (
    Fl_Image & image) [inline]
```

Compatibility API for FLUID, same as `image.label(this)`.

Note

This method is intended for internal use by fluid and may not do what you expect.

11.86.2.18 image() [2/2]

```
void Fl_Menu_Item::image (
    Fl_Image * image) [inline]
```

Compatibility API for FLUID, same as `image->label(this)`.

Note

This method is intended for internal use by fluid and may not do what you expect.

11.86.2.19 image_label()

```
void Fl_Menu_Item::image_label (
    const Fl_Image * image) [inline]
```

Sets the title ([label\(\)](#)) to an icon or image.

This sets the [labeltype\(\)](#) to `_FL_IMAGE_LABEL` (note the leading underscore).

See also

`const char* Fl_Menu_Item::label\(\) const`

Since

1.4.0

11.86.2.20 insert()

```
int Fl_Menu_Item::insert (
    int index,
    const char * mytext,
    int sc,
    Fl_Callback * cb,
    void * data = 0,
    int myflags = 0)
```

Inserts an item at position `index`.

If `index` is -1, the item is added the same way as [Fl_Menu_Item::add\(\)](#).

If 'mytext' contains any un-escaped front slashes (/), it's assumed a menu pathname is being specified, and the value of `index` will be ignored.

In all other aspects, the behavior of [insert\(\)](#) is the same as [add\(\)](#).

Parameters

in	<i>index</i>	insert new items here
in	<i>mytext</i>	new label string, details see above
in	<i>sc</i>	keyboard shortcut for new item
in	<i>cb</i>	callback function for new item
in	<i>data</i>	user data for new item
in	<i>myflags</i>	menu flags as described in Fl_Menu_Item

Returns

the index into the `menu()` array, where the entry was added

11.86.2.21 label() [1/3]

```
const char * Fl_Menu_Item::label () const [inline]
```

Returns the title (label) of the menu item.

A NULL here indicates the end of the menu (or of a submenu). A '&' in the item will print an underscore under the next letter, and if the menu is popped up that letter will be a "shortcut" to pick that item. To get a real '&' put two in a row.

The returned value depends on the [labeltype\(\)](#) that has been used to store the label.

Returns

A pointer to the label cast to (const char *)

Return values

(a)	A pointer to text (const char *)
(b)	A pointer to an image (Fl_Image *)
(c)	A pointer to a "multi label" (Fl_Multi_Label *)
NULL	End of menu or submenu

[Fl_Menu_Item::label\(const char *\)](#)

[Fl_Menu_Item::label\(Fl_Labeltype, const char *\)](#)

[Fl_Menu_Item::image_label\(const Fl_Image *\)](#)

[Fl_Menu_Item::multi_label\(const Fl_Multi_Label *\)](#)

[Fl_Multi_Label::label\(Fl_Menu_Item *\)](#)

11.86.2.22 label() [2/3]

```
void Fl_Menu_Item::label (
    const char * a) [inline]
```

Sets the title (label) of the menu item.

Note

This does **not** change the [labeltype\(\)](#) for backwards compatibility. Take care to assign the correct [labeltype\(\)](#) if you assign different label types to the same menu item sequentially.

The default [labeltype\(\)](#) is FL_NORMAL_LABEL.

See also

[label\(Fl_Labeltype, const char*\)](#)

const char* [Fl_Menu_Item::label\(\)](#) const

11.86.2.23 label() [3/3]

```
void Fl_Menu_Item::label (
    Fl_Labeltype a,
    const char * b) [inline]
```

Sets the title (label) and the label type of the menu item.

The default [Fl_Labeltype](#) when using [Fl_Menu_Item::label\(const char* a\)](#) is FL_NORMAL_LABEL but you can set any other label type, for instance FL_EMBOSSSED_LABEL.

Special labeltypes are:

- FL_ICON_LABEL: draws the icon ([Fl_Image](#)) associated with the text
- FL_IMAGE_LABEL: draws the image ([Fl_Image](#)) associated with the text
- FL_MULTI_LABEL: draws multiple parts side by side, see [Fl_Multi_Label](#)

See also

const char* [Fl_Menu_Item::label\(\)](#) const

11.86.2.24 labelcolor() [1/2]

```
Fl_Color Fl_Menu_Item::labelcolor () const [inline]
```

Gets the menu item's label color.

This color is passed to the labeltype routine, and is typically the color of the label text. This defaults to FL_BLACK. If this color is not black fltk will **not** use overlay bitplanes to draw the menu - this is so that images put in the menu draw correctly.

11.86.2.25 labelcolor() [2/2]

```
void Fl_Menu_Item::labelcolor (
    Fl_Color a) [inline]
```

Sets the menu item's label color.

See also

[Fl_Color Fl_Menu_Item::labelcolor\(\)](#) const

11.86.2.26 labelfont() [1/2]

```
Fl_Font Fl_Menu_Item::labelfont () const [inline]
```

Gets the menu item's label font.

Fonts are identified by small 8-bit indexes into a table. See the enumeration list for predefined fonts. The default value is a Helvetica font. The function [Fl::set_font\(\)](#) can define new fonts.

11.86.2.27 labelfont() [2/2]

```
void Fl_Menu_Item::labelfont (
    Fl_Font a) [inline]
```

Sets the menu item's label font.

Fonts are identified by small 8-bit indexes into a table. See the enumeration list for predefined fonts. The default value is a Helvetica font. The function [Fl::set_font\(\)](#) can define new fonts.

11.86.2.28 labeltype() [1/2]

```
Fl_Labeltype Fl_Menu_Item::labeltype () const [inline]
```

Returns the menu item's labeltype.

A labeltype identifies a routine that draws the label of the widget. This can be used for special effects such as emboss, or to use the [label\(\)](#) pointer as another form of data such as a bitmap. The value FL_NORMAL_LABEL prints the label as text.

11.86.2.29 labeltype() [2/2]

```
void Fl_Menu_Item::labeltype (
    Fl_Labeltype a) [inline]
```

Sets the menu item's labeltype.

A labeltype identifies a routine that draws the label of the widget. This can be used for special effects such as emboss, or to use the [label\(\)](#) pointer as another form of data such as a bitmap. The value FL_NORMAL_LABEL prints the label as text.

11.86.2.30 measure()

```
int Fl_Menu_Item::measure (
    int * hp,
    const Fl_Menu_ * m) const
```

Measures width of label, including effect of & characters.

Optionally, can get height if hp is not NULL.

11.86.2.31 multi_label()

```
void Fl_Menu_Item::multi_label (
    const Fl_Multi_Label * ml) [inline]
```

Sets the title ([label\(\)](#)) and [labeltype\(\)](#) to an [Fl_Multi_Label](#).

This sets the [labeltype\(\)](#) to _FL_MULTI_LABEL (note the leading underscore).

See also

```
const char* Fl_Menu_Item::label() const
```

Since

1.4.0

11.86.2.32 next() [1/2]

```
Fl_Menu_Item * Fl_Menu_Item::next (
    int i = 1) [inline]
```

Advances a pointer by n items through a menu array, skipping the contents of submenus and invisible items.

There are two calls so that you can advance through const and non-const data.

11.86.2.33 next() [2/2]

```
const Fl_Menu_Item * Fl_Menu_Item::next (
    int n = 1) const
```

Advance a pointer by n items through a menu array, skipping the contents of submenus and invisible items.

There are two calls so that you can advance through const and non-const data.

11.86.2.34 popup()

```
const Fl_Menu_Item * Fl_Menu_Item::popup (
    int X,
    int Y,
    const char * title = 0,
    const Fl_Menu_Item * picked = 0,
    const Fl_Menu_ * menu_button = 0) const
```

This method is called by widgets that want to display menus.

The menu stays up until the user picks an item or dismisses it. The selected item (or NULL if none) is returned. *This does not do the callbacks or change the state of check or radio items.*

The menu is positioned so the cursor is centered over the item picked. This will work even if `picked` is in a submenu. If `picked` is zero or not in the menu item table the menu is positioned with the cursor in the top-left corner.

Parameters

in	<i>X,Y</i>	the position of the mouse cursor, relative to the window that got the most recent event (usually you can pass <code>Fl::event_x()</code> and <code>Fl::event_y()</code> unchanged here).
in	<i>title</i>	a character string title for the menu. If non-zero a small box appears above the menu with the title in it.
in	<i>picked</i>	if this pointer is not NULL, the popup menu will appear so that the picked menu is under the mouse pointer.
in	<i>menu_button</i>	is a pointer to an <code>Fl_Menu_</code> from which the color and boxtypes for the menu are pulled. If NULL then defaults are used.

Returns

a pointer to the menu item selected by the user, or NULL

11.86.2.35 pulldown()

```
const Fl_Menu_Item * Fl_Menu_Item::pulldown (
    int X,
    int Y,
    int W,
    int H,
    const Fl_Menu_Item * initial_item = 0,
    const Fl_Menu_ * pbutton = 0,
    const Fl_Menu_Item * title = 0,
    int menubar = 0) const
```

Pulldown() is similar to `popup()`, but a rectangle is provided to position the menu.

The menu is made at least `W` wide, and the picked item `initial_item` is centered over the rectangle (like `Fl_Choice` uses).

If `initial_item` is NULL or not found, the menu is aligned just below the rectangle (like a pulldown menu).

The `title` and `menubar` arguments are used internally by the `Fl_Menu_Bar` widget.

11.86.2.36 radio()

```
int Fl_Menu_Item::radio () const [inline]
```

Returns true if this item is a radio item.

When a radio button is selected all "adjacent" radio buttons are turned off. A set of radio items is delimited by an item that has `radio()` false, or by an item with `FL_MENU_DIVIDER` turned on.

11.86.2.37 set()

```
void Fl_Menu_Item::set () [inline]
```

Turns the check or radio item "on" for the menu item.

Note that this does not turn off any adjacent radio items like `setonly()` does.

11.86.2.38 setonly()

```
void Fl_Menu_Item::setonly (
    Fl_Menu_Item const * first = NULL)
```

Turns the radio item "on" for the menu item and turns "off" adjacent radio items set.

Note

This method is dangerous if radio items are first in the menu. Make sure that `first` is set correctly or use `Fl_Menu_::setonly(Fl_Menu_Item*)` instead.

Parameters

<code>in</code>	<code>first</code>	start of menu array or NULL (default) if the radio group is not the first item
-----------------	--------------------	--

11.86.2.39 shortcut()

```
void Fl_Menu_Item::shortcut (
    int s) [inline]
```

Sets exactly what key combination will trigger the menu item.

The value is a logical 'or' of a key and a set of shift flags, for instance `FL_ALT+'a'` or `FL_ALT+FL_F+10` or just `'a'`. A value of zero disables the shortcut.

The key can be any value returned by `Fl::event_key()`, but will usually be an ASCII letter. Use a lower-case letter unless you require the shift key to be held down.

The shift flags can be any set of values accepted by `Fl::event_state()`. If the bit is on that shift key must be pushed. Meta, Alt, Ctrl, and Shift must be off if they are not in the shift flags (zero for the other bits indicates a "don't care" setting).

11.86.2.40 size()

```
int Fl_Menu_Item::size () const
```

Size of the menu starting from this menu item.

This method counts all menu items starting with `this` menu item, including all menu items in the same (sub)menu level, all nested submenus, **and** the terminating empty (0) menu item.

It does **not** count menu items referred to by `FL_SUBMENU_POINTER` menu items (except the single menu item with `FL_SUBMENU_POINTER`).

All menu items counted are consecutive in memory (one array).

Example:

```
schemechoice = new Fl_Choice(X+125,Y,140,25,"FLTK Scheme");
schemechoice->add("none");
schemechoice->add("plastic");
schemechoice->add("gtk+");
schemechoice->add("gleam");
printf("schemechoice->menu()->size() = %d\n", schemechoice->menu()->size());
```

Output:

```
schemechoice->menu()->size() = 5
```

11.86.2.41 submenu()

```
int Fl_Menu_Item::submenu () const [inline]
```

Returns true if either `FL_SUBMENU` or `FL_SUBMENU_POINTER` is on in the flags.

`FL_SUBMENU` indicates an embedded submenu that goes from the next item through the next one with a NULL `label()`. `FL_SUBMENU_POINTER` indicates that `user_data()` is a pointer to another menu array.

11.86.2.42 test_shortcut()

```
const Fl_Menu_Item * Fl_Menu_Item::test_shortcut () const
```

This is designed to be called by a widget's `handle()` method in response to a `FL_SHORTCUT` event.

If the current event matches one of the items shortcut, that item is returned. If the keystroke does not match any shortcuts then NULL is returned. This only matches the `shortcut()` fields, not the letters in the title preceded by ' '

11.86.2.43 `unchecked()`

```
void Fl_Menu_Item::unchecked () [inline]
```

Back compatibility only.

Deprecated Please use `Fl_Menu_Item::clear()` instead. This method will be removed in FLTK 1.5.0 or later.

See also

[clear\(\)](#)

11.86.2.44 `value()`

```
int Fl_Menu_Item::value () const [inline]
```

Returns the current value of the check or radio item.

This is zero (0) if the menu item is not checked and non-zero otherwise.

Since

1.4.0 this method returns 1 if the item is checked but you should not rely on a particular value, only zero or non-zero.

Note

The returned value for a checked menu item was `FL_MENU_VALUE` (4) before FLTK 1.4.0.

The documentation for this struct was generated from the following files:

- [Fl_Menu_Item.H](#)
- `Fl_Menu.cxx`
- `Fl_Menu_.cxx`
- `Fl_Menu_add.cxx`

11.87 `Fl_Menu_Window` Class Reference

The `Fl_Menu_Window` widget is a window type used for menus.

```
#include <Fl_Menu_Window.H>
```

Inheritance diagram for `Fl_Menu_Window`:

Public Member Functions

- **`Fl_Menu_Window`** (int W, int H, const char *l=0)
Creates a new `Fl_Menu_Window` widget using the given size, and label string.
- **`Fl_Menu_Window`** (int X, int Y, int W, int H, const char *l=0)
Creates a new `Fl_Menu_Window` widget using the given position, size, and label string.
- **`~Fl_Menu_Window`** ()
Destroys the window and all of its children.

Public Member Functions inherited from [FL_Single_Window](#)

- **FL_Single_Window** (int W, int H, const char *l=0)
Creates a new [FL_Single_Window](#) widget using the given size, and label (title) string.
- **FL_Single_Window** (int X, int Y, int W, int H, const char *l=0)
Creates a new [FL_Single_Window](#) widget using the given position, size, and label (title) string.
- void **flush** () [FL_OVERRIDE](#)
Same as [FL_Window::flush\(\)](#)
- void **make_current** ()
Same as [FL_Window::make_current\(\)](#)
- void **show** () [FL_OVERRIDE](#)
Makes a widget visible.
- void **show** (int argc, char **argv)
*Same as [FL_Window::show\(int argc, char **argv\)](#)*

Public Member Functions inherited from [FL_Window](#)

- void **allow_expand_outside_parent** ()
Allow this subwindow to expand outside the area of its parent window.
- virtual class [FL_Double_Window](#) * **as_double_window** ()
Return non-null if this is an [FL_Double_Window](#) object.
- virtual class [FL_Overlay_Window](#) * **as_overlay_window** ()
Return non-null if this is an [FL_Overlay_Window](#) object.
- [FL_Window](#) const * **as_window** () const [FL_OVERRIDE](#)
- [FL_Window](#) * **as_window** () [FL_OVERRIDE](#)
Returns an [FL_Window](#) pointer if this widget is an [FL_Window](#).
- unsigned int **border** () const
Returns whether the window possesses a border.
- void **border** (int b)
Sets whether or not the window manager border is around the window.
- void **clear_border** ()
Fast inline function to turn the window manager border off.
- void **clear_modal_states** ()
Clears the "modal" flags and converts a "modal" or "non-modal" window back into a "normal" window.
- void **copy_label** (const char *a)
Sets the window titlebar label to a copy of a character string.
- void **cursor** (const [FL_RGB_Image](#) *, int, int)
Changes the cursor for this window using the provided image as cursor's shape.
- void **cursor** ([FL_Cursor](#) c, [FL_Color](#), [FL_Color](#)=FL_WHITE)
For back compatibility only.
- void **cursor** ([FL_Cursor](#))
Changes the cursor for this window.
- int **decorated_h** () const
Returns the window height including any window title bar and any frame added by the window manager.
- int **decorated_w** () const
Returns the window width including any frame added by the window manager.
- void **default_cursor** ([FL_Cursor](#) c, [FL_Color](#), [FL_Color](#)=FL_WHITE)
For back compatibility only.
- void **default_cursor** ([FL_Cursor](#))
Sets the default window cursor.
- void **draw_backdrop** ()
Draw the background image if one is set and is aligned inside.

- [FL_Window](#) (int *w*, int *h*, const char **title*=0)
*Creates a window from the given width *w*, height *h*, and *title*.*
- [FL_Window](#) (int *x*, int *y*, int *w*, int *h*, const char **title*=0)
*Creates a window from the given position (*x*, *y*), size (*w*, *h*) and *title*.*
- void [free_position](#) ()
Undoes the effect of a previous [resize\(\)](#) or [show\(\)](#) so that the next time [show\(\)](#) is called the window manager is free to position the window.
- void [fullscreen](#) ()
Makes the window completely fill one or more screens, without any window manager border visible.
- unsigned int [fullscreen_active](#) () const
Returns non zero if FULLSCREEN flag is set, 0 otherwise.
- void [fullscreen_off](#) ()
Turns off any side effects of [fullscreen\(\)](#)
- void [fullscreen_off](#) (int *X*, int *Y*, int *W*, int *H*)
Turns off any side effects of [fullscreen\(\)](#) and does [resize\(x,y,w,h\)](#).
- void [fullscreen_screens](#) (int *top*, int *bottom*, int *left*, int *right*)
Sets which screens should be used when this window is in fullscreen mode.
- [uchar get_size_range](#) (int **minw*, int **minh*, int **maxw*=NULL, int **maxh*=NULL, int **dw*=NULL, int **dh*=NULL, int **aspect*=NULL)
Gets the allowable range to which the user can resize this window.
- int [handle](#) (int) [FL_OVERRIDE](#)
Handles the specified event.
- void [hide](#) () [FL_OVERRIDE](#)
Removes the window from the screen.
- void [hotspot](#) (const [FL_Widget](#) &*p*, int *offscreen*=0)
*See void [FL_Window::hotspot](#)(int *x*, int *y*, int *offscreen* = 0)*
- void [hotspot](#) (const [FL_Widget](#) *, int *offscreen*=0)
*See void [FL_Window::hotspot](#)(int *x*, int *y*, int *offscreen* = 0)*
- void [hotspot](#) (int *x*, int *y*, int *offscreen*=0)
Positions the window so that the mouse is pointing at the given position, or at the center of the given widget, which may be the window itself.
- const void * [icon](#) () const
Gets the current icon window target dependent data.
- void [icon](#) (const [FL_RGB_Image](#) *)
Sets or resets a single window icon.
- void [icon](#) (const void **ic*)
Platform-specific method to set the window icon usable on Windows and X11 only.
- void [iconize](#) ()
Iconifies the window.
- const char * [iconlabel](#) () const
See void [FL_Window::iconlabel\(const char\)](#)*
- void [iconlabel](#) (const char *)
Sets the icon label.
- void [icons](#) (const [FL_RGB_Image](#) *[], int)
Sets the window icons.
- void [icons](#) (HICON *big_icon*, HICON *small_icon*)
Sets the window icons using HICON handles (Windows platform only).
- const char * [label](#) () const
See void [FL_Window::label\(const char\)](#)*
- void [label](#) (const char *)
Sets the window title bar label.

- void **label** (const char *label, const char *iconlabel)
Sets the icon label.
- void **make_current** ()
Sets things up so that the drawing functions in <FL/fl_draw.H> will go into this window.
- void **maximize** ()
Maximizes a top-level window to its current screen.
- unsigned int **maximize_active** () const
Returns whether the window is currently maximized.
- unsigned int **menu_window** () const
Returns true if this window is a menu window.
- unsigned int **modal** () const
Returns true if this window is modal.
- unsigned int **non_modal** () const
Returns true if this window is modal or non-modal.
- **fl_uintptr_t** **os_id** ()
Returns a platform-specific identification of a shown window, or 0 if not shown.
- unsigned int **override** () const
Returns non zero if OVERRIDE flag is set, 0 otherwise.
- void **resize** (int X, int Y, int W, int H) **FL_OVERRIDE**
Changes the size and position of the window.
- int **screen_num** ()
The number of the screen containing the mapped window.
- void **screen_num** (int screen_num)
Set the number of the screen where to map the window.
- void **set_menu_window** ()
Marks the window as a menu window.
- void **set_modal** ()
*A "modal" window, when **shown()**, will prevent any events from being delivered to other windows in the same program, and will also remain on top of the other windows (if the X window manager supports the "transient for" property).*
- void **set_non_modal** ()
*A "non-modal" window (terminology borrowed from Microsoft Windows) acts like a **modal()** one in that it remains on top, but it has no effect on event delivery.*
- void **set_override** ()
Activates the flags NOBORDER|OVERRIDE.
- void **set_tooltip_window** ()
Marks the window as a tooltip window.
- const **Fl_Image** * **shape** ()
Returns the image controlling the window shape or NULL.
- void **shape** (const **Fl_Image** &b)
*Set the window's shape with an **Fl_Image**.*
- void **shape** (const **Fl_Image** *img)
Assigns a non-rectangular shape to the window.
- void **show** () **FL_OVERRIDE**
Puts the window on the screen.
- void **show** (int argc, char **argv)
*Puts the window on the screen with **show()** and parses command-line arguments.*
- int **shown** ()
*Returns non-zero if **show()** has been called (but not **hide()**).*
- void **size_range** (int minw, int minh, int maxw=0, int maxh=0, int dw=0, int dh=0, int aspect=0)
Sets the allowable range to which the user can resize this window.
- unsigned int **tooltip_window** () const

- *Returns true if this window is a tooltip window.*
- void `un_maximize ()`
Returns a previously maximized top-level window to its previous size.
- void `wait_for_expose ()`
Waits for the window to be displayed after calling `show()`.
- int `x_root ()` const
Gets the x position of the window on the screen.
- const char * `xclass ()` const
Returns the xclass for this window, or a default.
- void `xclass (const char *c)`
Sets the xclass for this window.
- int `y_root ()` const
Gets the y position of the window on the screen.
- virtual `~FL_Window ()`
The destructor also deletes all the children.

Public Member Functions inherited from `FL_Group`

- `FL_Widget *& _ddfdesign_kludge ()`
This is for forms compatibility only.
- void `add (FL_Widget &)`
The widget is removed from its current group (if any) and then added to the end of this group.
- void `add (FL_Widget *o)`
See void `FL_Group::add(FL_Widget &w)`
- void `add_resizable (FL_Widget &o)`
Adds a widget to the group and makes it the resizable widget.
- `FL_Widget *const * array ()` const
Returns a pointer to the array of children.
- `FL_Group const * as_group ()` const `FL_OVERRIDE`
- `FL_Group * as_group ()` `FL_OVERRIDE`
Returns an `FL_Group` pointer if this widget is an `FL_Group`.
- void `begin ()`
Sets the current group so you can build the widget tree by just constructing the widgets.
- `FL_Widget * child (int n)` const
Returns the n'th child.
- int `children ()` const
Returns how many child widgets the group has.
- void `clear ()`
Deletes all child widgets from memory recursively.
- unsigned int `clip_children ()`
Returns the current clipping mode.
- void `clip_children (int c)`
Controls whether the group widget clips the drawing of child widgets to its bounding box.
- virtual int `delete_child (int n)`
Removes the widget at `index` from the group and deletes it.
- void `end ()`
Exactly the same as `current(this->parent())`.
- int `find (const FL_Widget &o)` const
*See int `FL_Group::find(const FL_Widget *w)` const.*
- int `find (const FL_Widget *)` const
Searches the child array for the widget and returns the index.

- **FL_Group** (int, int, int, int, const char * = 0)

*Creates a new **FL_Group** widget using the given position, size, and label string.*
- void **focus** (**FL_Widget** *W)
- void **forms_end** ()

This is for forms compatibility only.
- void **init_sizes** ()

Resets the internal array of widget sizes and positions.
- void **insert** (**FL_Widget** &, int i)

The widget is removed from its current group (if any) and then inserted into this group.
- void **insert** (**FL_Widget** &o, **FL_Widget** *before)

This does insert(w, find(before)).
- void **remove** (**FL_Widget** &)

Removes a widget from the group but does not delete it.
- void **remove** (**FL_Widget** *o)

Removes the widget o from the group.
- void **remove** (int index)

Removes the widget at index from the group but does not delete it.
- **FL_Widget** * **resizable** () const

Returns the group's resizable widget.
- void **resizable** (**FL_Widget** &o)

Sets the group's resizable widget.
- void **resizable** (**FL_Widget** *o)

The resizable widget defines both the resizing box and the resizing behavior of the group and its children.
- virtual ~**FL_Group** ()

The destructor also deletes all the children.

Public Member Functions inherited from **FL_Widget**

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()

Activates the widget.
- unsigned int **active** () const

Returns whether the widget is active.
- int **active_r** () const

Returns whether the widget and all of its parents are active.
- **FL_Align** **align** () const

Gets the label alignment.
- void **align** (**FL_Align** alignment)

Sets the label alignment.
- long **argument** () const

Gets the current user data (long) argument that is passed to the callback function.
- void **argument** (long v)

Sets the current user data (long) argument that is passed to the callback function.
- virtual class **FL_Gl_Window** * **as_gl_window** ()

*Returns an **FL_Gl_Window** pointer if this widget is an **FL_Gl_Window**.*
- virtual class **FL_Gl_Window** const * **as_gl_window** () const
- void **bind_deimage** (**FL_Image** *img)

Sets the image to use as part of the widget label when in the inactive state.
- void **bind_deimage** (int f)

Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.

- void [bind_image](#) ([FL_Image](#) *img)
Sets the image to use as part of the widget label when in the active state.
- void [bind_image](#) (int f)
Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- [FL_Boxtype](#) [box](#) () const
Gets the box type of the widget.
- void [box](#) ([FL_Boxtype](#) new_box)
Sets the box type for the widget.
- [FL_Callback_p](#) [callback](#) () const
Gets the current callback function for the widget.
- void [callback](#) ([FL_Callback](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FL_Callback](#) *cb, [FL_Callback_User_Data](#) *p, bool auto_free)
Sets the current callback function and managed user data for the widget.
- void [callback](#) ([FL_Callback](#) *cb, void *p)
Sets the current callback function and data for the widget.
- void [callback](#) ([FL_Callback0](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FL_Callback1](#) *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int [changed](#) () const
Checks if the widget value changed since the last callback.
- void [clear_active](#) ()
Marks the widget as inactive without sending events or changing focus.
- void [clear_changed](#) ()
Marks the value of the widget as unchanged.
- void [clear_damage](#) ([uchar](#) c=0)
Clears or sets the damage flags.
- void [clear_output](#) ()
Sets a widget to accept input.
- void [clear_visible](#) ()
Hides the widget.
- void [clear_visible_focus](#) ()
Disables keyboard focus navigation with this widget.
- [FL_Color](#) [color](#) () const
Gets the background color of the widget.
- void [color](#) ([FL_Color](#) bg)
Sets the background color of the widget.
- void [color](#) ([FL_Color](#) bg, [FL_Color](#) sel)
Sets the background and selection color of the widget.
- [FL_Color](#) [color2](#) () const
For back compatibility only.
- void [color2](#) (unsigned a)
For back compatibility only.
- int [contains](#) (const [FL_Widget](#) *w) const
Checks if w is a child of this widget.
- void [copy_label](#) (const char *new_label)
Sets the current label.
- void [copy_tooltip](#) (const char *text)
Sets the current tooltip text.
- [uchar](#) [damage](#) () const

- Returns non-zero if [draw\(\)](#) needs to be called.*

 - void [damage](#) ([uchar](#) c)
 - Sets the damage bits for the widget.*
 - void [damage](#) ([uchar](#) c, int x, int y, int w, int h)
 - Sets the damage bits for an area inside the widget.*
 - int [damage_resize](#) (int, int, int, int)
 - Internal use only.*
 - void [deactivate](#) ()
 - Deactivates the widget.*
 - [FL_Image](#) * [deimage](#) ()
 - Gets the image that is used as part of the widget label when in the inactive state.*
 - const [FL_Image](#) * [deimage](#) () const
 - Gets the image that is used as part of the widget label when in the inactive state.*
 - void [deimage](#) ([FL_Image](#) &img)
 - Sets the image to use as part of the widget label when in the inactive state.*
 - void [deimage](#) ([FL_Image](#) *img)
 - Sets the image to use as part of the widget label when in the inactive state.*
 - int [deimage_bound](#) () const
 - Returns whether the inactive image is managed by the widget.*
 - void [do_callback](#) ([FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
 - Calls the widget callback function with default arguments.*
 - void [do_callback](#) ([FL_Widget](#) *widget, long arg, [FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
 - Calls the widget callback function with arbitrary arguments.*
 - void [do_callback](#) ([FL_Widget](#) *widget, void *arg=0, [FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
 - Calls the widget callback function with arbitrary arguments.*
 - void [draw_label](#) (int, int, int, int, [FL_Align](#)) const
 - Draws the label in an arbitrary bounding box with an arbitrary alignment.*
 - int [h](#) () const
 - Gets the widget height.*
 - int [horizontal_label_margin](#) ()
 - Get the spacing between the label and the horizontal edge of the widget.*
 - void [horizontal_label_margin](#) (int px)
 - Set the spacing between the label and the horizontal edge of the widget.*
 - [FL_Image](#) * [image](#) ()
 - Gets the image that is used as part of the widget label when in the active state.*
 - const [FL_Image](#) * [image](#) () const
 - Gets the image that is used as part of the widget label when in the active state.*
 - void [image](#) ([FL_Image](#) &img)
 - Sets the image to use as part of the widget label when in the active state.*
 - void [image](#) ([FL_Image](#) *img)
 - Sets the image to use as part of the widget label when in the active state.*
 - int [image_bound](#) () const
 - Returns whether the image is managed by the widget.*
 - int [inside](#) (const [FL_Widget](#) *wgt) const
 - Checks if this widget is a child of wgt.*
 - int [is_label_copied](#) () const
 - Returns whether the current label was assigned with [copy_label\(\)](#).*
 - const char * [label](#) () const
 - Gets the current label text.*
 - void [label](#) (const char *text)
 - Sets the current label pointer.*

- void [label](#) ([FL_Labeltype](#) a, const char *b)
Shortcut to set the label text and type in one call.
- int [label_image_spacing](#) ()
Return the gap size between the label and the image.
- void [label_image_spacing](#) (int gap)
Set the gap between the label and the image in pixels.
- [FL_Color](#) [labelcolor](#) () const
Gets the label color.
- void [labelcolor](#) ([FL_Color](#) c)
Sets the label color.
- [FL_Font](#) [labelfont](#) () const
Gets the font to use.
- void [labelfont](#) ([FL_Font](#) f)
Sets the font to use.
- [FL_Fonsize](#) [labelsize](#) () const
Gets the font size in pixels.
- void [labelsize](#) ([FL_Fonsize](#) pix)
Sets the font size in pixels.
- [FL_Labeltype](#) [labeltype](#) () const
Gets the label type.
- void [labeltype](#) ([FL_Labeltype](#) a)
Sets the label type.
- void [measure_label](#) (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- bool [needs_keyboard](#) () const
Returns whether this widget needs a keyboard.
- void [needs_keyboard](#) (bool needs)
Sets whether this widget needs a keyboard.
- unsigned int [output](#) () const
Returns if a widget is used for output only.
- [FL_Group](#) * [parent](#) () const
Returns a pointer to the parent widget.
- void [parent](#) ([FL_Group](#) *p)
Internal use only - "for hacks only".
- void [position](#) (int X, int Y)
Repositions the window or widget.
- void [redraw](#) ()
Schedules the drawing of the widget.
- void [redraw_label](#) ()
Schedules the drawing of the label.
- [FL_Color](#) [selection_color](#) () const
Gets the selection color.
- void [selection_color](#) ([FL_Color](#) a)
Sets the selection color.
- void [set_active](#) ()
Marks the widget as active without sending events or changing focus.
- void [set_changed](#) ()
Marks the value of the widget as changed.
- void [set_output](#) ()
Sets a widget to output only.
- void [set_visible](#) ()

- Makes the widget visible.*

 - void [set_visible_focus](#) ()

Enables keyboard focus navigation with this widget.
- int [shortcut_label](#) () const

Returns whether the widget's label uses '&' to indicate shortcuts.
- void [shortcut_label](#) (int value)

Sets whether the widget's label uses '&' to indicate shortcuts.
- void [size](#) (int W, int H)

Changes the size of the widget.
- int [take_focus](#) ()

Gives the widget the keyboard focus.
- unsigned int [takeevents](#) () const

Returns if the widget is able to take events.
- int [test_shortcut](#) ()

Returns true if the widget's label contains the entered '&x' shortcut.
- const char * [tooltip](#) () const

Gets the current tooltip text.
- void [tooltip](#) (const char *text)

Sets the current tooltip text.
- [FI_Window](#) * [top_window](#) () const

Returns a pointer to the top-level window for the widget.
- [FI_Window](#) * [top_window_offset](#) (int &xoff, int &yoff) const

Finds the x/y offset of the current widget relative to the top-level window.
- [uchar](#) [type](#) () const

Gets the widget type.
- void [type](#) ([uchar](#) t)

Sets the widget type.
- int [use_accents_menu](#) ()

Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * [user_data](#) () const

Gets the user data for this widget.
- void [user_data](#) ([FI_Callback_User_Data](#) *v, bool auto_free)

Sets the user data for this widget.
- void [user_data](#) (void *v)

Sets the user data for this widget.
- int [vertical_label_margin](#) ()

Get the spacing between the label and the vertical edge of the widget.
- void [vertical_label_margin](#) (int px)

Set the spacing between the label and the vertical edge of the widget.
- unsigned int [visible](#) () const

Returns whether a widget is visible.
- unsigned int [visible_focus](#) () const

Checks whether this widget has a visible focus.
- void [visible_focus](#) (int v)

Modifies keyboard focus navigation.
- int [visible_r](#) () const

Returns whether a widget and all its parents are visible.
- int [w](#) () const

Gets the widget width.
- [FI_When](#) [when](#) () const

Returns the conditions under which the callback is called.

- void `when` (`uchar` i)
Sets the flags used to decide when a callback is called.
- `FI_Window * window` () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int `x` () const
Gets the widget position in its window.
- int `y` () const
Gets the widget position in its window.
- virtual `~FI_Widget` ()
Destroys the widget.

Additional Inherited Members

Public Types inherited from `FI_Window`

- typedef struct HICON__ * `HICON`

Static Public Member Functions inherited from `FI_Window`

- static `FI_Window * current` ()
Returns the last window that was made current.
- static void `default_callback` (`FI_Window *`, void *v)
Back compatibility: Sets the default callback v for win to call on close event.
- static void `default_icon` (const `FI_RGB_Image *`)
Sets a single default window icon.
- static void `default_icons` (const `FI_RGB_Image *[]`, int)
Sets the default window icons.
- static void `default_icons` (HICON big_icon, HICON small_icon)
Sets the default window icons (Windows platform only).
- static const char * `default_xclass` ()
Returns the default xclass.
- static void `default_xclass` (const char *)
Sets the default window xclass.
- static bool `is_a_rescale` ()
Returns true when a window is being rescaled.
- static char `show_next_window_iconic` ()
Returns the static flag whether the next window should be opened iconified.
- static void `show_next_window_iconic` (char stat)
Sets a static flag whether the next window should be opened iconified.

Static Public Member Functions inherited from `FI_Group`

- static `FI_Group * current` ()
Returns the currently active group.
- static void `current` (`FI_Group *g`)
Sets the current group.

Static Public Member Functions inherited from `FI_Widget`

- static void `default_callback` (`FI_Widget *widget`, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int `label_shortcut` (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int `test_shortcut` (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from FI_Widget

- enum {
`INACTIVE` = 1<<0 , `INVISIBLE` = 1<<1 , `OUTPUT` = 1<<2 , `NOBORDER` = 1<<3 ,
`FORCE_POSITION` = 1<<4 , `NON_MODAL` = 1<<5 , `SHORTCUT_LABEL` = 1<<6 , `CHANGED` = 1<<7
, `OVERRIDE` = 1<<8 , `VISIBLE_FOCUS` = 1<<9 , `COPIED_LABEL` = 1<<10 , `CLIP_CHILDREN` = 1<<11
, `MENU_WINDOW` = 1<<12 , `TOOLTIP_WINDOW` = 1<<13 , `MODAL` = 1<<14 , `NO_OVERLAY` = 1<<15
, `GROUP_RELATIVE` = 1<<16 , `COPIED_TOOLTIP` = 1<<17 , `FULLSCREEN` = 1<<18 , `MAC_USE_ACCENTS_MENU`
= 1<<19 ,

`MAXIMIZED` = 1<<24 , `POPUP` = 1<<25 , `USERFLAG3` = 1<<29 , `USERFLAG2` = 1<<30 ,
`USERFLAG1` = 1<<31 }

flags possible values enumeration.

Protected Member Functions inherited from FI_Window

- void `default_size_range` ()
Protected method to calculate the default size range of a window.
- void `draw` () `FL_OVERRIDE`
Draws the widget.
- int `force_position` () const
Returns the internal state of the window's `FORCE_POSITION` flag.
- void `force_position` (int force)
Sets an internal flag that tells FLTK and the window manager to honor position requests.
- void `free_icons` ()
Deletes all icons previously attached to the window.
- int `is_resizable` ()
Protected method to determine whether a window is resizable.

Protected Member Functions inherited from FI_Group

- `FI_Rect *` `bounds` ()
Returns the internal array of widget sizes and positions.
- void `draw_child` (`FI_Widget` &widget) const
Forces a child to redraw.
- void `draw_children` ()
Draws all children of the group.
- void `draw_outside_label` (const `FI_Widget` &widget) const
Parents normally call this to draw outside labels of child widgets.
- virtual int `on_insert` (`FI_Widget` *, int)
Allow derived groups to act when a widget is added as a child.
- virtual int `on_move` (int, int)
Allow derived groups to act when a widget is moved within the group.
- virtual void `on_remove` (int)
Allow derived groups to act when a child widget is removed from the group.
- int * `sizes` ()
Returns the internal array of widget sizes and positions.
- void `update_child` (`FI_Widget` &widget) const
Draws a child only if it needs it.

Protected Member Functions inherited from [FI_Widget](#)

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** ([FI_Boxtype](#) t, [FI_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const
Draws a focus rectangle around the widget.
- void **draw_focus** ([FI_Boxtype](#) t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void **draw_focus** ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) bg) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [FI_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

Static Protected Attributes inherited from [FI_Window](#)

- static [FI_Window](#) * **current_**
Stores the last window that was made current.

11.87.1 Detailed Description

The [FI_Menu_Window](#) widget is a window type used for menus.

By default the window is drawn in the hardware overlay planes if they are available so that the menu don't force the rest of the window to redraw.

The documentation for this class was generated from the following files:

- [FI_Menu_Window.H](#)
- [FI_Menu_Window.cxx](#)

11.88 Fl_Multi_Browser Class Reference

The [Fl_Multi_Browser](#) class is a subclass of [Fl_Browser](#) which lets the user select any set of the lines.

```
#include <Fl_Multi_Browser.H>
```

Inheritance diagram for [Fl_Multi_Browser](#):

Public Member Functions

- [Fl_Multi_Browser](#) (int X, int Y, int W, int H, const char *L=0)
Creates a new [Fl_Multi_Browser](#) widget using the given position, size, and label string.

Public Member Functions inherited from [Fl_Browser](#)

- void [add](#) (const char *newtext, void *d=0)
Adds a new line to the end of the browser.
- void [bottomline](#) (int line)
*Scrolls the browser so the bottom item in the browser is showing the specified *line*.*
- void [clear](#) ()
Removes all the lines in the browser.
- char [column_char](#) () const
Gets the current column separator character.
- void [column_char](#) (char c)
*Sets the column separator to *c*.*
- const int * [column_widths](#) () const
Gets the current column width array.
- void [column_widths](#) (const int *arr)
*Sets the current array to *arr*.*
- void * [data](#) (int line) const
*Returns the user *data()* for specified *line*.*
- void [data](#) (int line, void *d)
*Sets the user data for specified *line* to *d*.*
- void [display](#) (int line, int val=1)
For back compatibility.
- int [displayed](#) (int line) const
*Returns non-zero if *line* has been scrolled to a position where it is being displayed.*
- [Fl_Browser](#) (int X, int Y, int W, int H, const char *L=0)
The constructor makes an empty browser.
- char [format_char](#) () const
Gets the current format code prefix character, which by default is '@'.
- void [format_char](#) (char c)

- Sets the current format code prefix character to `c`.*

 - void `hide` () `FL_OVERRIDE`

Hides the entire `FL_Browser` widget – opposite of `show()`.
- void `hide` (int line)

Makes `line` invisible, preventing selection by the user.
- `FL_Image` * `icon` (int line) const

Returns the icon currently defined for `line`.
- void `icon` (int line, `FL_Image` *icon)

Set the image icon for `line` to the value `icon`.
- void `insert` (int line, const char *newtext, void *d=0)

Insert a new entry whose label is `newtext` above given `line`, optional data `d`.
- void `lineposition` (int line, `FL_Line_Position` pos)

Updates the browser so that `line` is shown at position `pos`.
- int `load` (const char *filename)

Clears the browser and reads the file, adding each line from the file to the browser.
- void `make_visible` (int line)

Make the item at the specified `line` `visible()`.
- void `middleline` (int line)

Scrolls the browser so the middle item in the browser is showing the specified `line`.
- void `move` (int to, int from)

Line `from` is removed and reinserted at `to`.
- void `remove` (int line)

Remove entry for given `line` number, making the browser one line shorter.
- void `remove_icon` (int line)

Removes the icon for `line`.
- void `replace` (int a, const char *b)

For back compatibility only.
- int `select` (int line, int val=1)

Sets the selection state of the item at `line` to the value `val`.
- int `selected` (int line) const

Returns 1 if specified `line` is selected, 0 if not.
- void `show` () `FL_OVERRIDE`

Shows the entire `FL_Browser` widget – opposite of `hide()`.
- void `show` (int line)

Makes `line` visible, and available for selection by user.
- int `size` () const

Returns how many lines are in the browser.
- void `size` (int W, int H)
- void `swap` (int a, int b)

Swaps two browser lines `a` and `b`.
- const char * `text` (int line) const

Returns the label text for the specified `line`.
- void `text` (int line, const char *newtext)

Sets the text for the specified `line` to `newtext`.
- `FL_Fontsize` `textsize` () const

Gets the default text size (in pixels) for the lines in the browser.
- void `textsize` (`FL_Fontsize` newSize)

Sets the default text size (in pixels) for the lines in the browser to `newSize`.
- int `topline` () const

Returns the line that is currently visible at the top of the browser.
- void `topline` (int line)

- *Scrolls the browser so the top item in the browser is showing the specified `line`.*
- `int value () const`
Returns the line number of the currently selected line, or 0 if none selected.
- `void value (int line)`
Sets the browser's `value()`, which selects the specified `line`.
- `int visible (int line) const`
Returns non-zero if the specified `line` is visible, 0 if hidden.
- `~FI_Browser ()`
The destructor deletes all list items and destroys the browser.

Public Member Functions inherited from FI_Browser_

- `int deselect (int docallbacks=0)`
Deselects all items in the list and returns 1 if the state changed or 0 if it did not.
- `void display (void *item)`
Displays the `item`, scrolling the list as necessary.
- `int handle (int event) FL_OVERRIDE`
Handles the `event` within the normal widget bounding box.
- `uchar has_scrollbar () const`
Returns the current scrollbar mode, see `FI_Browser_::has_scrollbar(uchar)`
- `void has_scrollbar (uchar mode)`
Sets whether the widget should have scrollbars or not (default `FI_Browser_::BOTH`).
- `int hposition () const`
Gets the horizontal scroll position of the list as a pixel position `pos`.
- `void hposition (int)`
Sets the horizontal scroll position of the list to pixel position `pos`.
- `int linespacing () const`
Return the height of additional spacing between browser lines.
- `void linespacing (int pixels)`
Add some space between browser lines.
- `int position () const`
- `void position (int pos)`
- `void position (int x, int y)`
- `void resize (int X, int Y, int W, int H) FL_OVERRIDE`
Repositions and/or resizes the browser.
- `void scrollbar_left ()`
Moves the vertical scrollbar to the lefthand side of the list.
- `void scrollbar_right ()`
Moves the vertical scrollbar to the righthand side of the list.
- `int scrollbar_size () const`
Gets the current size of the scrollbars' troughs, in pixels.
- `void scrollbar_size (int newSize)`
Sets the pixel size of the scrollbars' troughs to `newSize`, in pixels.
- `int scrollbar_width () const`
Returns the global value `FI::scrollbar_size()`.
- `void scrollbar_width (int width)`
Sets the global `FI::scrollbar_size()`, and forces this instance of the widget to use it.
- `int select (void *item, int val=1, int docallbacks=0)`
Sets the selection state of `item` to `val`, and returns 1 if the state changed or 0 if it did not.
- `int select_only (void *item, int docallbacks=0)`
Selects `item` and returns 1 if the state changed or 0 if it did not.

- void **sort** (int **flags**=0)
*Sort the items in the browser based on **flags**.*
- **FL_Color** **textcolor** () const
Gets the default text color for the lines in the browser.
- void **textcolor** (**FL_Color** col)
*Sets the default text color for the lines in the browser to color **col**.*
- **FL_Font** **textfont** () const
Gets the default text font for the lines in the browser.
- void **textfont** (**FL_Font** font)
*Sets the default text font for the lines in the browser to **font**.*
- **FL_Fontsize** **textsize** () const
Gets the default text size (in pixels) for the lines in the browser.
- void **textsize** (**FL_Fontsize** newSize)
*Sets the default text size (in pixels) for the lines in the browser to **size**.*
- int **vposition** () const
*Gets the vertical scroll position of the list as a pixel position **pos**.*
- void **vposition** (int pos)
*Sets the vertical scroll position of the list to pixel position **pos**.*

Public Member Functions inherited from **FL_Group**

- **FL_Widget** *& **_ddfdesign_kludge** ()
This is for forms compatibility only.
- void **add** (**FL_Widget** &)
The widget is removed from its current group (if any) and then added to the end of this group.
- void **add** (**FL_Widget** *o)
*See void **FL_Group::add(FL_Widget &w)***
- void **add_resizable** (**FL_Widget** &o)
Adds a widget to the group and makes it the resizable widget.
- **FL_Widget** *const * **array** () const
Returns a pointer to the array of children.
- **FL_Group** const * **as_group** () const **FL_OVERRIDE**
- **FL_Group** * **as_group** () **FL_OVERRIDE**
*Returns an **FL_Group** pointer if this widget is an **FL_Group**.*
- void **begin** ()
Sets the current group so you can build the widget tree by just constructing the widgets.
- **FL_Widget** * **child** (int n) const
Returns the n'th child.
- int **children** () const
Returns how many child widgets the group has.
- void **clear** ()
Deletes all child widgets from memory recursively.
- unsigned int **clip_children** ()
Returns the current clipping mode.
- void **clip_children** (int c)
Controls whether the group widget clips the drawing of child widgets to its bounding box.
- virtual int **delete_child** (int n)
*Removes the widget at **index** from the group and deletes it.*
- void **end** ()
*Exactly the same as **current(this->parent())**.*
- int **find** (const **FL_Widget** &o) const

- See `int FL_Group::find(const FL_Widget *w) const`.
- `int find (const FL_Widget *) const`
Searches the child array for the widget and returns the index.
- `FL_Group (int, int, int, int, const char * = 0)`
Creates a new FL_Group widget using the given position, size, and label string.
- `void focus (FL_Widget *W)`
- `void forms_end ()`
This is for forms compatibility only.
- `int handle (int) FL_OVERRIDE`
Handles the specified event.
- `void init_sizes ()`
Resets the internal array of widget sizes and positions.
- `void insert (FL_Widget &, int i)`
The widget is removed from its current group (if any) and then inserted into this group.
- `void insert (FL_Widget &o, FL_Widget *before)`
This does insert(w, find(before)).
- `void remove (FL_Widget &)`
Removes a widget from the group but does not delete it.
- `void remove (FL_Widget *o)`
Removes the widget o from the group.
- `void remove (int index)`
Removes the widget at index from the group but does not delete it.
- `FL_Widget * resizable () const`
Returns the group's resizable widget.
- `void resizable (FL_Widget &o)`
Sets the group's resizable widget.
- `void resizable (FL_Widget *o)`
The resizable widget defines both the resizing box and the resizing behavior of the group and its children.
- `void resize (int, int, int, int) FL_OVERRIDE`
Resizes the FL_Group widget and all of its children.
- `virtual ~FL_Group ()`
The destructor also deletes all the children.

Public Member Functions inherited from FL_Widget

- `void _clear_fullscreen ()`
- `void _set_fullscreen ()`
- `void activate ()`
Activates the widget.
- `unsigned int active () const`
Returns whether the widget is active.
- `int active_r () const`
Returns whether the widget and all of its parents are active.
- `FL_Align align () const`
Gets the label alignment.
- `void align (FL_Align alignment)`
Sets the label alignment.
- `long argument () const`
Gets the current user data (long) argument that is passed to the callback function.
- `void argument (long v)`
Sets the current user data (long) argument that is passed to the callback function.

- virtual class [FL_Gl_Window](#) * [as_gl_window](#) ()
Returns an [FL_Gl_Window](#) pointer if this widget is an [FL_Gl_Window](#).
- virtual class [FL_Gl_Window](#) const * [as_gl_window](#) () const
- virtual [FL_Window](#) * [as_window](#) ()
Returns an [FL_Window](#) pointer if this widget is an [FL_Window](#).
- virtual [FL_Window](#) const * [as_window](#) () const
- void [bind_deimage](#) ([FL_Image](#) *img)
Sets the image to use as part of the widget label when in the inactive state.
- void [bind_deimage](#) (int f)
Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.
- void [bind_image](#) ([FL_Image](#) *img)
Sets the image to use as part of the widget label when in the active state.
- void [bind_image](#) (int f)
Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- [FL_Boxtype](#) [box](#) () const
Gets the box type of the widget.
- void [box](#) ([FL_Boxtype](#) new_box)
Sets the box type for the widget.
- [FL_Callback_p](#) [callback](#) () const
Gets the current callback function for the widget.
- void [callback](#) ([FL_Callback](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FL_Callback](#) *cb, [FL_Callback_User_Data](#) *p, bool auto_free)
Sets the current callback function and managed user data for the widget.
- void [callback](#) ([FL_Callback](#) *cb, void *p)
Sets the current callback function and data for the widget.
- void [callback](#) ([FL_Callback0](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FL_Callback1](#) *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int [changed](#) () const
Checks if the widget value changed since the last callback.
- void [clear_active](#) ()
Marks the widget as inactive without sending events or changing focus.
- void [clear_changed](#) ()
Marks the value of the widget as unchanged.
- void [clear_damage](#) (uchar c=0)
Clears or sets the damage flags.
- void [clear_output](#) ()
Sets a widget to accept input.
- void [clear_visible](#) ()
Hides the widget.
- void [clear_visible_focus](#) ()
Disables keyboard focus navigation with this widget.
- [FL_Color](#) [color](#) () const
Gets the background color of the widget.
- void [color](#) ([FL_Color](#) bg)
Sets the background color of the widget.
- void [color](#) ([FL_Color](#) bg, [FL_Color](#) sel)
Sets the background and selection color of the widget.
- [FL_Color](#) [color2](#) () const

- For back compatibility only.*
- void [color2](#) (unsigned a)
- For back compatibility only.*
- int [contains](#) (const [FI_Widget](#) *w) const
- Checks if w is a child of this widget.*
- void [copy_label](#) (const char *new_label)
- Sets the current label.*
- void [copy_tooltip](#) (const char *text)
- Sets the current tooltip text.*
- [uchar](#) [damage](#) () const
- Returns non-zero if [draw\(\)](#) needs to be called.*
- void [damage](#) ([uchar](#) c)
- Sets the damage bits for the widget.*
- void [damage](#) ([uchar](#) c, int x, int y, int w, int h)
- Sets the damage bits for an area inside the widget.*
- int [damage_resize](#) (int, int, int, int)
- Internal use only.*
- void [deactivate](#) ()
- Deactivates the widget.*
- [FI_Image](#) * [deimage](#) ()
- Gets the image that is used as part of the widget label when in the inactive state.*
- const [FI_Image](#) * [deimage](#) () const
- Gets the image that is used as part of the widget label when in the inactive state.*
- void [deimage](#) ([FI_Image](#) &img)
- Sets the image to use as part of the widget label when in the inactive state.*
- void [deimage](#) ([FI_Image](#) *img)
- Sets the image to use as part of the widget label when in the inactive state.*
- int [deimage_bound](#) () const
- Returns whether the inactive image is managed by the widget.*
- void [do_callback](#) ([FI_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
- Calls the widget callback function with default arguments.*
- void [do_callback](#) ([FI_Widget](#) *widget, long arg, [FI_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
- Calls the widget callback function with arbitrary arguments.*
- void [do_callback](#) ([FI_Widget](#) *widget, void *arg=0, [FI_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
- Calls the widget callback function with arbitrary arguments.*
- void [draw_label](#) (int, int, int, int, [FI_Align](#)) const
- Draws the label in an arbitrary bounding box with an arbitrary alignment.*
- int [h](#) () const
- Gets the widget height.*
- int [horizontal_label_margin](#) ()
- Get the spacing between the label and the horizontal edge of the widget.*
- void [horizontal_label_margin](#) (int px)
- Set the spacing between the label and the horizontal edge of the widget.*
- [FI_Image](#) * [image](#) ()
- Gets the image that is used as part of the widget label when in the active state.*
- const [FI_Image](#) * [image](#) () const
- Gets the image that is used as part of the widget label when in the active state.*
- void [image](#) ([FI_Image](#) &img)
- Sets the image to use as part of the widget label when in the active state.*
- void [image](#) ([FI_Image](#) *img)
- Sets the image to use as part of the widget label when in the active state.*

- `int image_bound () const`
Returns whether the image is managed by the widget.
- `int inside (const FL_Widget *wgt) const`
Checks if this widget is a child of wgt.
- `int is_label_copied () const`
Returns whether the current label was assigned with `copy_label()`.
- `const char * label () const`
Gets the current label text.
- `void label (const char *text)`
Sets the current label pointer.
- `void label (FL_Labeltype a, const char *b)`
Shortcut to set the label text and type in one call.
- `int label_image_spacing ()`
Return the gap size between the label and the image.
- `void label_image_spacing (int gap)`
Set the gap between the label and the image in pixels.
- `FL_Color labelcolor () const`
Gets the label color.
- `void labelcolor (FL_Color c)`
Sets the label color.
- `FL_Font labelfont () const`
Gets the font to use.
- `void labelfont (FL_Font f)`
Sets the font to use.
- `FL_Fonsize labelsz () const`
Gets the font size in pixels.
- `void labelsz (FL_Fonsize pix)`
Sets the font size in pixels.
- `FL_Labeltype labeltype () const`
Gets the label type.
- `void labeltype (FL_Labeltype a)`
Sets the label type.
- `void measure_label (int &ww, int &hh) const`
Sets width ww and height hh accordingly with the label size.
- `bool needs_keyboard () const`
Returns whether this widget needs a keyboard.
- `void needs_keyboard (bool needs)`
Sets whether this widget needs a keyboard.
- `unsigned int output () const`
Returns if a widget is used for output only.
- `FL_Group * parent () const`
Returns a pointer to the parent widget.
- `void parent (FL_Group *p)`
Internal use only - "for hacks only".
- `void position (int X, int Y)`
Repositions the window or widget.
- `void redraw ()`
Schedules the drawing of the widget.
- `void redraw_label ()`
Schedules the drawing of the label.
- `FL_Color selection_color () const`

- Gets the selection color.*

 - void [selection_color](#) ([Fl_Color](#) a)

Sets the selection color.
- void [set_active](#) ()

Marks the widget as active without sending events or changing focus.
- void [set_changed](#) ()

Marks the value of the widget as changed.
- void [set_output](#) ()

Sets a widget to output only.
- void [set_visible](#) ()

Makes the widget visible.
- void [set_visible_focus](#) ()

Enables keyboard focus navigation with this widget.
- int [shortcut_label](#) () const

Returns whether the widget's label uses '&' to indicate shortcuts.
- void [shortcut_label](#) (int value)

Sets whether the widget's label uses '&' to indicate shortcuts.
- void [size](#) (int W, int H)

Changes the size of the widget.
- int [take_focus](#) ()

Gives the widget the keyboard focus.
- unsigned int [takeevents](#) () const

Returns if the widget is able to take events.
- int [test_shortcut](#) ()

Returns true if the widget's label contains the entered '&x' shortcut.
- const char * [tooltip](#) () const

Gets the current tooltip text.
- void [tooltip](#) (const char *text)

Sets the current tooltip text.
- [Fl_Window](#) * [top_window](#) () const

Returns a pointer to the top-level window for the widget.
- [Fl_Window](#) * [top_window_offset](#) (int &xoff, int &yoff) const

Finds the x/y offset of the current widget relative to the top-level window.
- [uchar](#) type () const

Gets the widget type.
- void [type](#) ([uchar](#) t)

Sets the widget type.
- int [use_accents_menu](#) ()

Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * [user_data](#) () const

Gets the user data for this widget.
- void [user_data](#) ([Fl_Callback_User_Data](#) *v, bool auto_free)

Sets the user data for this widget.
- void [user_data](#) (void *v)

Sets the user data for this widget.
- int [vertical_label_margin](#) ()

Get the spacing between the label and the vertical edge of the widget.
- void [vertical_label_margin](#) (int px)

Set the spacing between the label and the vertical edge of the widget.
- unsigned int [visible](#) () const

Returns whether a widget is visible.

- unsigned int `visible_focus` () const
Checks whether this widget has a visible focus.
- void `visible_focus` (int v)
Modifies keyboard focus navigation.
- int `visible_r` () const
Returns whether a widget and all its parents are visible.
- int `w` () const
Gets the widget width.
- `FI_When` when () const
Returns the conditions under which the callback is called.
- void `when` (uchar i)
Sets the flags used to decide when a callback is called.
- `FI_Window` * `window` () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int `x` () const
Gets the widget position in its window.
- int `y` () const
Gets the widget position in its window.
- virtual `~FI_Widget` ()
Destroys the widget.

Additional Inherited Members

Public Types inherited from `FI_Browser`

- enum `FI_Line_Position` { `TOP` , `BOTTOM` , `MIDDLE` }
For internal use only?

Public Types inherited from `FI_Browser_`

- enum {
 `HORIZONTAL` = 1 , `VERTICAL` = 2 , `BOTH` = 3 , `ALWAYS_ON` = 4 ,
 `HORIZONTAL_ALWAYS` = 5 , `VERTICAL_ALWAYS` = 6 , `BOTH_ALWAYS` = 7 }
Values for `has_scrollbar()`.

Static Public Member Functions inherited from `FI_Group`

- static `FI_Group` * `current` ()
Returns the currently active group.
- static void `current` (`FI_Group` *g)
Sets the current group.

Static Public Member Functions inherited from `FI_Widget`

- static void `default_callback` (`FI_Widget` *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int `label_shortcut` (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int `test_shortcut` (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Public Attributes inherited from FI_Browser_

- [FI_Scrollbar hscrollbar](#)
Horizontal scrollbar.
- [FI_Scrollbar scrollbar](#)
Vertical scrollbar.

Protected Types inherited from FI_Widget

- enum {
[INACTIVE](#) = 1<<0 , [INVISIBLE](#) = 1<<1 , [OUTPUT](#) = 1<<2 , [NOBORDER](#) = 1<<3 ,
[FORCE_POSITION](#) = 1<<4 , [NON_MODAL](#) = 1<<5 , [SHORTCUT_LABEL](#) = 1<<6 , [CHANGED](#) = 1<<7
, [OVERRIDE](#) = 1<<8 , [VISIBLE_FOCUS](#) = 1<<9 , [COPIED_LABEL](#) = 1<<10 , [CLIP_CHILDREN](#) = 1<<11
, [MENU_WINDOW](#) = 1<<12 , [TOOLTIP_WINDOW](#) = 1<<13 , [MODAL](#) = 1<<14 , [NO_OVERLAY](#) = 1<<15
, [GROUP_RELATIVE](#) = 1<<16 , [COPIED_TOOLTIP](#) = 1<<17 , [FULLSCREEN](#) = 1<<18 , [MAC_USE_ACCENTS_MENU](#)
= 1<<19 ,
[NEEDS_KEYBOARD](#) = 1<<20 , [IMAGE_BOUND](#) = 1<<21 , [DEIMAGE_BOUND](#) = 1<<22 ,
[AUTO_DELETE_USER_DATA](#) = 1<<23 ,
[MAXIMIZED](#) = 1<<24 , [POPUP](#) = 1<<25 , [USERFLAG3](#) = 1<<29 , [USERFLAG2](#) = 1<<30 ,
[USERFLAG1](#) = 1<<31 }
flags possible values enumeration.

Protected Member Functions inherited from FI_Browser

- [FL_BLINE * _remove](#) (int line)
Removes the item at the specified line.
- [FL_BLINE * find_line](#) (int line) const
Returns the item for specified line.
- int [full_height](#) () const [FL_OVERRIDE](#)
The height of the entire list of all [visible\(\)](#) items in pixels.
- int [incr_height](#) () const [FL_OVERRIDE](#)
The default 'average' item height (including inter-item spacing) in pixels.
- void [insert](#) (int line, [FL_BLINE *item](#))
Insert specified item above line.
- void * [item_at](#) (int line) const [FL_OVERRIDE](#)
Return the item at specified line.
- void [item_draw](#) (void *item, int X, int Y, int W, int H) const [FL_OVERRIDE](#)
Draws item at the position specified by X Y W H.
- void * [item_first](#) () const [FL_OVERRIDE](#)
Returns the very first item in the list.
- int [item_height](#) (void *item) const [FL_OVERRIDE](#)
Returns height of item in pixels.
- void * [item_last](#) () const [FL_OVERRIDE](#)
Returns the very last item in the list.
- void * [item_next](#) (void *item) const [FL_OVERRIDE](#)
Returns the next item after item.
- void * [item_prev](#) (void *item) const [FL_OVERRIDE](#)
Returns the previous item before item.
- void [item_select](#) (void *item, int val) [FL_OVERRIDE](#)
Change the selection state of item to the value val.
- int [item_selected](#) (void *item) const [FL_OVERRIDE](#)

- *See if `item` is selected.*
- void `item_swap` (void *a, void *b) `FL_OVERRIDE`
Swap the items `a` and `b`.
- const char * `item_text` (void *item) const `FL_OVERRIDE`
Returns the label text for `item`.
- int `item_width` (void *item) const `FL_OVERRIDE`
Returns width of `item` in pixels.
- int `lineno` (void *item) const
Returns line number corresponding to `item`, or zero if not found.
- void `swap` (FL_BLINE *a, FL_BLINE *b)
Swap the two items `a` and `b`.

Protected Member Functions inherited from `FI_Browser_`

- void `bbox` (int &X, int &Y, int &W, int &H) const
Returns the bounding box for the interior of the list's display window, inside the scrollbars.
- void `deleting` (void *item)
This method should be used when `item` is being deleted from the list.
- int `displayed` (void *item) const
Returns non-zero if `item` has been scrolled to a position where it is being displayed.
- void `draw` () `FL_OVERRIDE`
Draws the list within the normal widget bounding box.
- void * `find_item` (int ypos)
This method returns the item under mouse `y` position `ypos`.
- `FI_Browser_` (int X, int Y, int W, int H, const char *L=0)
The constructor makes an empty browser.
- virtual int `full_width` () const
This method may be provided by the subclass to indicate the full width of the item list, in pixels.
- void `inserting` (void *a, void *b)
This method should be used when an item is in the process of being inserted into the list.
- virtual int `item_quick_height` (void *item) const
This method may be provided by the subclass to return the height of the `item`, in pixels.
- int `leftedge` () const
This method returns the `X` position of the left edge of the list area after adjusting for the scrollbar and border, if any.
- void `new_list` ()
This method should be called when the list data is completely replaced or cleared.
- void `redraw_line` (void *item)
This method should be called when the contents of `item` has changed, but not its height.
- void `redraw_lines` ()
This method will cause the entire list to be redrawn.
- void `replacing` (void *a, void *b)
This method should be used when item `a` is being replaced by item `b`.
- void * `selection` () const
Returns the item currently selected, or NULL if there is no selection.
- void `swapping` (void *a, void *b)
This method should be used when two items `a` and `b` are being swapped.
- void * `top` () const
Returns the item that appears at the top of the list.

Protected Member Functions inherited from FI_Group

- [FI_Rect](#) * [bounds](#) ()
Returns the internal array of widget sizes and positions.
- void [draw](#) () [FL_OVERRIDE](#)
Draws the widget.
- void [draw_child](#) ([FI_Widget](#) &widget) const
Forces a child to redraw.
- void [draw_children](#) ()
Draws all children of the group.
- void [draw_outside_label](#) (const [FI_Widget](#) &widget) const
Parents normally call this to draw outside labels of child widgets.
- virtual int [on_insert](#) ([FI_Widget](#) *, int)
Allow derived groups to act when a widget is added as a child.
- virtual int [on_move](#) (int, int)
Allow derived groups to act when a widget is moved within the group.
- virtual void [on_remove](#) (int)
Allow derived groups to act when a child widget is removed from the group.
- int * [sizes](#) ()
Returns the internal array of widget sizes and positions.
- void [update_child](#) ([FI_Widget](#) &widget) const
Draws a child only if it needs it.

Protected Member Functions inherited from FI_Widget

- void [clear_flag](#) (unsigned int c)
Clears a flag in the flags mask.
- void [draw_backdrop](#) () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void [draw_box](#) () const
Draws the widget box according its box style.
- void [draw_box](#) ([FI_Boxtype](#) t, [FI_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void [draw_box](#) ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void [draw_focus](#) () const
Draws a focus rectangle around the widget.
- void [draw_focus](#) ([FI_Boxtype](#) t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void [draw_focus](#) ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) bg) const
Draws a focus box for the widget at the given position and size.
- void [draw_label](#) () const
Draws the widget's label at the defined label position.
- void [draw_label](#) (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [FI_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int [flags](#) () const
Gets the widget flags mask.
- void [h](#) (int v)
Internal use only.
- void [set_flag](#) (unsigned int c)

Sets a flag in the flags mask.

- void [w](#) (int v)

Internal use only.

- void [x](#) (int v)

Internal use only.

- void [y](#) (int v)

Internal use only.

11.88.1 Detailed Description

The [Fl_Multi_Browser](#) class is a subclass of [Fl_Browser](#) which lets the user select any set of the lines.

Figure 11.31 [Fl_Multi_Browser](#)

The user interface is Macintosh style: clicking an item turns off all the others and selects that one, dragging selects all the items the mouse moves over, and ctrl + click (Cmd+click on the Mac OS platform) toggles the items. Shift + click extends the selection until the clicked item. This is different from how forms did it. Normally the callback is done when the user releases the mouse, but you can change this with [when\(\)](#).

See [Fl_Browser](#) for methods to add and remove lines from the browser.

11.88.2 Constructor & Destructor Documentation

11.88.2.1 [Fl_Multi_Browser\(\)](#)

```
Fl_Multi_Browser::Fl_Multi_Browser (
    int X,
    int Y,
    int W,
    int H,
    const char * L = 0)
```

Creates a new [Fl_Multi_Browser](#) widget using the given position, size, and label string.

The default boxtype is `FL_DOWN_BOX`. The constructor specializes [Fl_Browser\(\)](#) by setting the type to `FL_↔MULTI_BROWSER`. The destructor destroys the widget and frees all memory that has been allocated.

The documentation for this class was generated from the following files:

- [Fl_Multi_Browser.H](#)
- [Fl_Browser.cxx](#)

11.89 [Fl_Multi_Label](#) Struct Reference

Allows a mixed text and/or graphics label to be applied to an [Fl_Menu_Item](#) or [Fl_Widget](#).

```
#include <Fl_Multi_Label.H>
```

Public Member Functions

- void [label](#) ([Fl_Menu_Item](#) *)

Associate an [Fl_Multi_Label](#) with an [Fl_Menu_Item](#).

- void [label](#) ([Fl_Widget](#) *)

Associate an [Fl_Multi_Label](#) with an [Fl_Widget](#).

Public Attributes

- `const char * labela`
Holds the "leftmost" of the two elements in the composite label.
- `const char * labelb`
Holds the "rightmost" of the two elements in the composite label.
- `uchar typea`
Holds the "type" of labela.
- `uchar typeb`
Holds the "type" of labelb.

11.89.1 Detailed Description

Allows a mixed text and/or graphics label to be applied to an [Fl_Menu_Item](#) or [Fl_Widget](#).

Most regular FLTK widgets now support the ability to associate both images and text with a label but some special cases, notably the non-widget [Fl_Menu_Item](#) objects, do not. [Fl_Multi_Label](#) may be used to create menu items that have an icon and text, which would not normally be possible for an [Fl_Menu_Item](#). For example, [Fl_Multi_Label](#) is used in the New->Code submenu in fluid, and others.

Figure 11.32 Menu items with icons using [Fl_Multi_Label](#)

Each [Fl_Multi_Label](#) holds two elements, `labela` and `labelb`; each may hold either a text label (`const char*`) or an image (`Fl_Image*`). When displayed, `labela` is drawn first and `labelb` is drawn immediately to its right. More complex labels can be constructed by setting `labelb` as another [Fl_Multi_Label](#) and thus chaining up a series of label elements.

When assigning a label element to one of `labela` or `labelb`, they should be explicitly cast to (`const char*`) if they are not of that type already.

Note

An [Fl_Multi_Label](#) object and all its components (label text, images, chained [Fl_Multi_Label](#)'s and their linked objects) must exist during the lifetime of the widget or menu item they are assigned to. It is the responsibility of the user's code to release these linked objects if necessary after the widget or menu is deleted.

Example Use: [Fl_Menu_Bar](#)

```
Fl_Pixmap *image = new Fl_Pixmap(..); // image for menu item; any Fl_Image based widget
Fl_Menu_Bar *menu = new Fl_Menu_Bar(..); // can be any Fl_Menu_ oriented widget (Fl_Choice,
    Fl_Menu_Button..)

// Create a menu item
int i = menu->add("File/New", ..);
Fl_Menu_Item *item = (Fl_Menu_Item*)&(menu->menu()[i]);

// Create a multi label, assign it an image + text
Fl_Multi_Label *ml = new Fl_Multi_Label;

// Left side of label is an image
ml->typea = FL_IMAGE_LABEL;
ml->labela = (const char*)image; // any Fl_Image widget: Fl_Pixmap, Fl_PNG_Image, etc..

// Right side of label is label text
ml->typeb = FL_NORMAL_LABEL;
ml->labelb = item->label();

// Assign the multilabel to the menu item
// ml->label(item); // deprecated since 1.4.0; backwards compatible with 1.3.x
item->label(ml); // new method since 1.4.0
```

See also

[Fl_Label](#) and [Fl_Labeltype](#) and [examples/howto-menu-with-images.cxx](#)

11.89.2 Member Function Documentation

11.89.2.1 `label()` [1/2]

```
void Fl_Multi_Label::label (
    Fl_Menu_Item * o)
```

Associate an [Fl_Multi_Label](#) with an [Fl_Menu_Item](#).

This uses [Fl_Menu_Item::label\(Fl_Labeltype a, const char *b\)](#) internally to set the *label* and the label type of the menu item, i.e. it stores a *pointer* to the [Fl_Multi_Label](#) object (*this*). An existing label (pointer) will be overwritten.

This sets the type of the menu item's label to `_FL_MULTI_LABEL` - note the leading underscore ('_').

There is no way to use a method like [Fl_Widget::copy_label\(\)](#) that transfers ownership of the [Fl_Multi_Label](#) and its linked objects (images, text, and chained [Fl_Multi_Label](#)'s) to the menu item.

The [Fl_Multi_Label](#) and all linked images, text labels, or chained [Fl_Multi_Label](#) objects must exist during the lifetime of the menu and will not be released when the menu item is destroyed.

Note

The user's code is responsible for releasing the [Fl_Multi_Label](#) and all linked objects (images, text, chained [Fl_Multi_Label](#)'s) after the menu has been deleted. This may cause memory leaks if [Fl_Multi_Label](#) is used and reassigned w/o releasing the objects assigned to it.

Deprecated since 1.4.0: please use [Fl_Menu_Item::label\(Fl_Multi_Label *\)](#)

See also

[Fl_Menu_Item::label\(Fl_Multi_Label *\)](#)

11.89.2.2 `label()` [2/2]

```
void Fl_Multi_Label::label (
    Fl_Widget * o)
```

Associate an [Fl_Multi_Label](#) with an [Fl_Widget](#).

This method uses [Fl_Widget::label\(Fl_Labeltype, const char *\)](#) internally to set the *label* of the widget, i.e. it stores a *pointer* to the [Fl_Multi_Label](#) object (*this*). An existing label that has been set using [Fl_Widget::copy_label\(\)](#) will be released prior to the assignment of the new label.

This sets the type of the widget's label to `_FL_MULTI_LABEL` - note the leading underscore ('_').

There is no way to use a method like [Fl_Widget::copy_label\(\)](#) that transfers ownership of the [Fl_Multi_Label](#) and its linked objects (images, text, and chained [Fl_Multi_Label](#)'s) to the widget.

The [Fl_Multi_Label](#) and all linked images, text labels, or chained [Fl_Multi_Label](#) objects must exist during the lifetime of the widget and will not be released when the widget is destroyed.

Note

The user's code is responsible for releasing the [Fl_Multi_Label](#) and all linked objects (images, text, chained [Fl_Multi_Label](#)'s) after the widget has been deleted. This may cause memory leaks if [Fl_Multi_Label](#) is used and reassigned w/o releasing the objects assigned to it.

11.89.3 Member Data Documentation

11.89.3.1 `labela`

```
const char* Fl_Multi_Label::labela
```

Holds the "leftmost" of the two elements in the composite label.

Typically this would be assigned either a text string (const char*), a ([Fl_Image*](#)) or a ([Fl_Multi_Label*](#)).

11.89.3.2 `labelb`

```
const char* Fl_Multi_Label::labelb
```

Holds the "rightmost" of the two elements in the composite label.

Typically this would be assigned either a text string (const char*), a ([Fl_Image*](#)) or a ([Fl_Multi_Label*](#)).

11.89.3.3 typea

`uchar Fl_Multi_Label::typea`

Holds the "type" of labela.

Typically this is set to FL_NORMAL_LABEL for a text label, FL_IMAGE_LABEL for an image (based on `Fl_image`) or FL_MULTI_LABEL if "chaining" multiple [Fl_Multi_Label](#) elements together.

11.89.3.4 typeb

`uchar Fl_Multi_Label::typeb`

Holds the "type" of labelb.

Typically this is set to FL_NORMAL_LABEL for a text label, FL_IMAGE_LABEL for an image (based on `Fl_image`) or FL_MULTI_LABEL if "chaining" multiple [Fl_Multi_Label](#) elements together.

The documentation for this struct was generated from the following files:

- `Fl_Multi_Label.H`
- `Fl_Multi_Label.cxx`

11.90 Fl_Multiline_Input Class Reference

This input field displays '\n' characters as new lines rather than ^J, and accepts the Return, Tab, and up and down arrow keys.

```
#include <Fl_Multiline_Input.H>
```

Inheritance diagram for `Fl_Multiline_Input`:

Public Member Functions

- [Fl_Multiline_Input](#) (int X, int Y, int W, int H, const char *l=0)
Creates a new [Fl_Multiline_Input](#) widget using the given position, size, and label string.

Public Member Functions inherited from [Fl_Input](#)

- [Fl_Input](#) (int, int, int, int, const char *l=0)
Creates a new [Fl_Input](#) widget using the given position, size, and label string.
- int [handle](#) (int) [FL_OVERRIDE](#)
Handles the specified event.

Public Member Functions inherited from [Fl_Input_](#)

- int [append](#) (const char *t, int l=0, char keep_selection=0)
Append text at the end.
- bool [can_redo](#) () const
Check if there is a redo action available.
- bool [can_undo](#) () const
Check if the last operation can be undone.

- int `copy` (int clipboard)
Put the current selection into the clipboard.
- int `copy_cuts` ()
Copies the yank buffer to the clipboard.
- `Fl_Color cursor_color` () const
Gets the color of the cursor.
- void `cursor_color` (Fl_Color n)
Sets the color of the cursor.
- int `cut` ()
Deletes the current selection.
- int `cut` (int a, int b)
Deletes all characters between index a and b.
- int `cut` (int n)
Deletes the next n bytes rounded to characters before or after the cursor.
- double `dvalue` () const
Returns the widget text interpreted as a floating point number.
- `Fl_Input_` (int, int, int, const char *=0)
Creates a new Fl_Input_ widget.
- unsigned int `index` (int i) const
Returns the character at index i.
- int `input_type` () const
Gets the input field type.
- void `input_type` (int t)
Sets the input field type.
- int `insert` (const char *t, int l=0)
Inserts text at the cursor position.
- int `insert_position` () const
Gets the position of the text cursor.
- int `insert_position` (int p)
Sets the cursor position and mark.
- int `insert_position` (int p, int m)
Sets the index for the cursor and mark.
- int `ivalue` () const
Returns the widget text interpreted as a signed integer.
- int `mark` () const
Gets the current selection mark.
- int `mark` (int m)
Sets the current selection mark.
- int `maximum_size` () const
Gets the maximum length of the input field in characters.
- void `maximum_size` (int m)
Sets the maximum length of the input field in characters.
- int `position` () const
- int `position` (int p)
- int `position` (int p, int m)
- int `readonly` () const
Gets the read-only state of the input field.
- void `readonly` (int b)
Sets the read-only state of the input field.
- int `redo` ()
Redo previous undo operation.

- `int replace (int b, int e, const char *text, int len=0)`
Deletes text from `b` to `e` and inserts the new string `text`.
- `void resize (int, int, int, int) FL_OVERRIDE`
Changes the size of the widget.
- `int shortcut () const`
Return the shortcut key associated with this widget.
- `void shortcut (int s)`
Sets the shortcut key associated with this widget.
- `int size () const`
Returns the number of bytes in `value()`.
- `void size (int W, int H)`
Sets the width and height of this widget.
- `int static_value (const char *)`
Changes the widget text.
- `int static_value (const char *, int)`
Changes the widget text.
- `int tab_nav () const`
Gets whether the Tab key causes focus navigation in multiline input fields or not.
- `void tab_nav (int val)`
Sets whether the Tab key does focus navigation, or inserts tab characters into `FL_Multiline_Input`.
- `FL_Color textcolor () const`
Gets the color of the text in the input field.
- `void textcolor (FL_Color n)`
Sets the color of the text in the input field.
- `FL_Font textfont () const`
Gets the font of the text in the input field.
- `void textfont (FL_Font s)`
Sets the font of the text in the input field.
- `FL_Fonsize textsize () const`
Gets the size of the text in the input field.
- `void textsize (FL_Fonsize s)`
Sets the size of the text in the input field.
- `int undo ()`
Undoes previous changes to the text buffer.
- `const char * value () const`
Returns the text displayed in the widget.
- `int value (const char *)`
Changes the widget text.
- `int value (const char *, int)`
Changes the widget text.
- `int value (double value)`
Changes the widget text to a floating point number ("%g").
- `int value (int value)`
Changes the widget text to a signed integer number.
- `int wrap () const`
Gets the word wrapping state of the input field.
- `void wrap (int b)`
Sets the word wrapping state of the input field.
- `~FL_Input_ ()`
Destroys the widget.

Public Member Functions inherited from [FI_Widget](#)

- void [_clear_fullscreen](#) ()
- void [_set_fullscreen](#) ()
- void [activate](#) ()
Activates the widget.
- unsigned int [active](#) () const
Returns whether the widget is active.
- int [active_r](#) () const
Returns whether the widget and all of its parents are active.
- [FI_Align](#) [align](#) () const
Gets the label alignment.
- void [align](#) ([FI_Align](#) alignment)
Sets the label alignment.
- long [argument](#) () const
Gets the current user data (long) argument that is passed to the callback function.
- void [argument](#) (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class [FI_Gl_Window](#) * [as_gl_window](#) ()
Returns an [FI_Gl_Window](#) pointer if this widget is an [FI_Gl_Window](#).
- virtual class [FI_Gl_Window](#) const * [as_gl_window](#) () const
- virtual [FI_Group](#) * [as_group](#) ()
Returns an [FI_Group](#) pointer if this widget is an [FI_Group](#).
- virtual [FI_Group](#) const * [as_group](#) () const
- virtual [FI_Window](#) * [as_window](#) ()
Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).
- virtual [FI_Window](#) const * [as_window](#) () const
- void [bind_deimage](#) ([FI_Image](#) *img)
Sets the image to use as part of the widget label when in the inactive state.
- void [bind_deimage](#) (int f)
Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.
- void [bind_image](#) ([FI_Image](#) *img)
Sets the image to use as part of the widget label when in the active state.
- void [bind_image](#) (int f)
Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- [FI_Boxtype](#) [box](#) () const
Gets the box type of the widget.
- void [box](#) ([FI_Boxtype](#) new_box)
Sets the box type for the widget.
- [FI_Callback_p](#) [callback](#) () const
Gets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb, [FI_Callback_User_Data](#) *p, bool auto_free)
Sets the current callback function and managed user data for the widget.
- void [callback](#) ([FI_Callback](#) *cb, void *p)
Sets the current callback function and data for the widget.
- void [callback](#) ([FI_Callback0](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback1](#) *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int [changed](#) () const

- Checks if the widget value changed since the last callback.*

 - void `clear_active` ()

Marks the widget as inactive without sending events or changing focus.

 - void `clear_changed` ()
- Marks the value of the widget as unchanged.*
- void `clear_damage` (uchar c=0)
- Clears or sets the damage flags.*
- void `clear_output` ()
- Sets a widget to accept input.*
- void `clear_visible` ()
- Hides the widget.*
- void `clear_visible_focus` ()
- Disables keyboard focus navigation with this widget.*
- `FL_Color` `color` () const
- Gets the background color of the widget.*
- void `color` (`FL_Color` bg)
- Sets the background color of the widget.*
- void `color` (`FL_Color` bg, `FL_Color` sel)
- Sets the background and selection color of the widget.*
- `FL_Color` `color2` () const
- For back compatibility only.*
- void `color2` (unsigned a)
- For back compatibility only.*
- int `contains` (const `FL_Widget` *w) const
- Checks if w is a child of this widget.*
- void `copy_label` (const char *new_label)
- Sets the current label.*
- void `copy_tooltip` (const char *text)
- Sets the current tooltip text.*
- `uchar` `damage` () const
- Returns non-zero if `draw()` needs to be called.*
- void `damage` (uchar c)
- Sets the damage bits for the widget.*
- void `damage` (uchar c, int x, int y, int w, int h)
- Sets the damage bits for an area inside the widget.*
- int `damage_resize` (int, int, int, int)
- Internal use only.*
- void `deactivate` ()
- Deactivates the widget.*
- `FL_Image` * `deimage` ()
- Gets the image that is used as part of the widget label when in the inactive state.*
- const `FL_Image` * `deimage` () const
- Gets the image that is used as part of the widget label when in the inactive state.*
- void `deimage` (`FL_Image` &img)
- Sets the image to use as part of the widget label when in the inactive state.*
- void `deimage` (`FL_Image` *img)
- Sets the image to use as part of the widget label when in the inactive state.*
- int `deimage_bound` () const
- Returns whether the inactive image is managed by the widget.*
- void `do_callback` (`FL_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
- Calls the widget callback function with default arguments.*

- void `do_callback` (`FI_Widget` *widget, long arg, `FI_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with arbitrary arguments.
- void `do_callback` (`FI_Widget` *widget, void *arg=0, `FI_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with arbitrary arguments.
- void `draw_label` (int, int, int, int, `FI_Align`) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const
Gets the widget height.
- virtual void `hide` ()
Makes a widget invisible.
- int `horizontal_label_margin` ()
Get the spacing between the label and the horizontal edge of the widget.
- void `horizontal_label_margin` (int px)
Set the spacing between the label and the horizontal edge of the widget.
- `FI_Image` * `image` ()
Gets the image that is used as part of the widget label when in the active state.
- const `FI_Image` * `image` () const
Gets the image that is used as part of the widget label when in the active state.
- void `image` (`FI_Image` &img)
Sets the image to use as part of the widget label when in the active state.
- void `image` (`FI_Image` *img)
Sets the image to use as part of the widget label when in the active state.
- int `image_bound` () const
Returns whether the image is managed by the widget.
- int `inside` (const `FI_Widget` *wgt) const
Checks if this widget is a child of wgt.
- int `is_label_copied` () const
Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const
Gets the current label text.
- void `label` (const char *text)
Sets the current label pointer.
- void `label` (`FI_Labeltype` a, const char *b)
Shortcut to set the label text and type in one call.
- int `label_image_spacing` ()
Return the gap size between the label and the image.
- void `label_image_spacing` (int gap)
Set the gap between the label and the image in pixels.
- `FI_Color` `labelcolor` () const
Gets the label color.
- void `labelcolor` (`FI_Color` c)
Sets the label color.
- `FI_Font` `labelfont` () const
Gets the font to use.
- void `labelfont` (`FI_Font` f)
Sets the font to use.
- `FI_Fonsize` `labelsize` () const
Gets the font size in pixels.
- void `labelsize` (`FI_Fonsize` pix)
Sets the font size in pixels.
- `FI_Labeltype` `labeltype` () const

- Gets the label type.*

 - void `labeltype` (`FI_Labeltype` a)
- Sets the label type.*

 - void `measure_label` (int &ww, int &hh) const

Sets width ww and height hh accordingly with the label size.
- bool `needs_keyboard` () const

Returns whether this widget needs a keyboard.
- void `needs_keyboard` (bool needs)

Sets whether this widget needs a keyboard.
- unsigned int `output` () const

Returns if a widget is used for output only.
- `FI_Group` * `parent` () const

Returns a pointer to the parent widget.
- void `parent` (`FI_Group` *p)

Internal use only - "for hacks only".
- void `position` (int X, int Y)

Repositions the window or widget.
- void `redraw` ()

Schedules the drawing of the widget.
- void `redraw_label` ()

Schedules the drawing of the label.
- `FI_Color` `selection_color` () const

Gets the selection color.
- void `selection_color` (`FI_Color` a)

Sets the selection color.
- void `set_active` ()

Marks the widget as active without sending events or changing focus.
- void `set_changed` ()

Marks the value of the widget as changed.
- void `set_output` ()

Sets a widget to output only.
- void `set_visible` ()

Makes the widget visible.
- void `set_visible_focus` ()

Enables keyboard focus navigation with this widget.
- int `shortcut_label` () const

Returns whether the widget's label uses '&' to indicate shortcuts.
- void `shortcut_label` (int value)

Sets whether the widget's label uses '&' to indicate shortcuts.
- virtual void `show` ()

Makes a widget visible.
- void `size` (int W, int H)

Changes the size of the widget.
- int `take_focus` ()

Gives the widget the keyboard focus.
- unsigned int `takeevents` () const

Returns if the widget is able to take events.
- int `test_shortcut` ()

Returns true if the widget's label contains the entered '&x' shortcut.
- const char * `tooltip` () const

Gets the current tooltip text.

- void **tooltip** (const char *text)
Sets the current tooltip text.
- **Fl_Window** * **top_window** () const
Returns a pointer to the top-level window for the widget.
- **Fl_Window** * **top_window_offset** (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- **uchar** **type** () const
Gets the widget type.
- void **type** (uchar t)
Sets the widget type.
- int **use_accents_menu** ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * **user_data** () const
Gets the user data for this widget.
- void **user_data** (**Fl_Callback_User_Data** *v, bool auto_free)
Sets the user data for this widget.
- void **user_data** (void *v)
Sets the user data for this widget.
- int **vertical_label_margin** ()
Get the spacing between the label and the vertical edge of the widget.
- void **vertical_label_margin** (int px)
Set the spacing between the label and the vertical edge of the widget.
- unsigned int **visible** () const
Returns whether a widget is visible.
- unsigned int **visible_focus** () const
Checks whether this widget has a visible focus.
- void **visible_focus** (int v)
Modifies keyboard focus navigation.
- int **visible_r** () const
Returns whether a widget and all its parents are visible.
- int **w** () const
Gets the widget width.
- **Fl_When** **when** () const
Returns the conditions under which the callback is called.
- void **when** (uchar i)
Sets the flags used to decide when a callback is called.
- **Fl_Window** * **window** () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int **x** () const
Gets the widget position in its window.
- int **y** () const
Gets the widget position in its window.
- virtual ~**Fl_Widget** ()
Destroys the widget.

Additional Inherited Members

Static Public Member Functions inherited from FI_Widget

- static void [default_callback](#) (FI_Widget *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int [label_shortcut](#) (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int [test_shortcut](#) (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Static Public Attributes inherited from FI_Input

- static const char * [copy_menu_text](#) = "Copy"
[this text may be customized at run-time]
- static const char * [cut_menu_text](#) = "Cut"
[this text may be customized at run-time]
- static const char * [paste_menu_text](#) = "Paste"
[this text may be customized at run-time]

Protected Types inherited from FI_Widget

- enum {
[INACTIVE](#) = 1<<0 , [INVISIBLE](#) = 1<<1 , [OUTPUT](#) = 1<<2 , [NOBORDER](#) = 1<<3 ,
[FORCE_POSITION](#) = 1<<4 , [NON_MODAL](#) = 1<<5 , [SHORTCUT_LABEL](#) = 1<<6 , [CHANGED](#) = 1<<7
, [OVERRIDE](#) = 1<<8 , [VISIBLE_FOCUS](#) = 1<<9 , [COPIED_LABEL](#) = 1<<10 , [CLIP_CHILDREN](#) = 1<<11
, [MENU_WINDOW](#) = 1<<12 , [TOOLTIP_WINDOW](#) = 1<<13 , [MODAL](#) = 1<<14 , [NO_OVERLAY](#) = 1<<15
, [GROUP_RELATIVE](#) = 1<<16 , [COPIED_TOOLTIP](#) = 1<<17 , [FULLSCREEN](#) = 1<<18 , [MAC_USE_ACCENTS_MENU](#)
= 1<<19 ,

[USERFLAG1](#) = 1<<31 }
flags possible values enumeration.

Protected Member Functions inherited from FI_Input

- void [draw](#) () [FL_OVERRIDE](#)
Draws the widget.
- int [handle_key](#) ()
Handles a keystroke.
- int [handle_rmb](#) ()
Handle right mouse button down events.

Protected Member Functions inherited from FI_Input_

- int [apply_undo](#) ()
Apply the current undo/redo operation.
- void [drawtext](#) (int, int, int, int)
Draws the text in the passed bounding box.
- void [drawtext](#) (int, int, int, int, bool draw_active)
Draws the text in the passed bounding box.

- void **handle_mouse** (int, int, int, int, int keepmark=0)
Handles mouse clicks and mouse moves.
- int **handletext** (int e, int, int, int, int)
Handles all kinds of text field related events.
- int **line_end** (int i) const
Finds the end of a line.
- int **line_start** (int i) const
Finds the start of a line.
- int **linesPerPage** ()
- void **maybe_do_callback** (FL_Callback_Reason reason=FL_REASON_UNKNOWN)
- int **up_down_position** (int, int keepmark=0)
Moves the cursor to the column given by up_down_pos.
- int **word_end** (int i) const
Finds the end of a word.
- int **word_start** (int i) const
Finds the start of a word.
- int **xscroll** () const
- int **yscroll** () const
- void **yscroll** (int yOffset)

Protected Member Functions inherited from FL_Widget

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** (FL_Boxtype t, FL_Color c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** (FL_Boxtype t, int x, int y, int w, int h, FL_Color c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const
Draws a focus rectangle around the widget.
- void **draw_focus** (FL_Boxtype t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void **draw_focus** (FL_Boxtype t, int x, int y, int w, int h, FL_Color bg) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- FL_Widget (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)

Internal use only.

- void [x](#) (int v)

Internal use only.

- void [y](#) (int v)

Internal use only.

11.90.1 Detailed Description

This input field displays '\n' characters as new lines rather than ^J, and accepts the Return, Tab, and up and down arrow keys.

This is for editing multiline text.

This is far from the nirvana of text editors, and is probably only good for small bits of text, 10 lines at most. Note that this widget does not support scrollbars or per-character color control.

If you are presenting large amounts of text and need scrollbars or full color control of characters, you probably want [Fl_Text_Editor](#) instead.

In FLTK 1.3.x, the default behavior of the 'Tab' key was changed to support consistent focus navigation. To get the older FLTK 1.1.x behavior, set [Fl_Input_::tab_nav\(\)](#) to 0. Newer programs should consider using [Fl_Text_Editor](#).

11.90.2 Constructor & Destructor Documentation

11.90.2.1 Fl_Multiline_Input()

```
Fl_Multiline_Input::Fl_Multiline_Input (
    int X,
    int Y,
    int W,
    int H,
    const char * l = 0)
```

Creates a new [Fl_Multiline_Input](#) widget using the given position, size, and label string.

The default boxtype is FL_DOWN_BOX.

Inherited destructor destroys the widget and any value associated with it.

The documentation for this class was generated from the following files:

- [Fl_Multiline_Input.H](#)
- [Fl_Input.cxx](#)

11.91 Fl_Multiline_Output Class Reference

This widget is a subclass of [Fl_Output](#) that displays multiple lines of text.

```
#include <Fl_Multiline_Output.H>
```

Inheritance diagram for Fl_Multiline_Output:

Public Member Functions

- [FL_Multiline_Output](#) (int X, int Y, int W, int H, const char *l=0)
Creates a new [FL_Multiline_Output](#) widget using the given position, size, and label string.

Public Member Functions inherited from [FL_Output](#)

- [FL_Output](#) (int X, int Y, int W, int H, const char *l=0)
Creates a new [FL_Output](#) widget using the given position, size, and label string.

Public Member Functions inherited from [FL_Input](#)

- [FL_Input](#) (int, int, int, int, const char *l=0)
Creates a new [FL_Input](#) widget using the given position, size, and label string.
- int [handle](#) (int) [FL_OVERRIDE](#)
Handles the specified event.

Public Member Functions inherited from [FL_Input_](#)

- int [append](#) (const char *t, int l=0, char keep_selection=0)
Append text at the end.
- bool [can_redo](#) () const
Check if there is a redo action available.
- bool [can_undo](#) () const
Check if the last operation can be undone.
- int [copy](#) (int clipboard)
Put the current selection into the clipboard.
- int [copy_cuts](#) ()
Copies the yank buffer to the clipboard.
- [FL_Color](#) [cursor_color](#) () const
Gets the color of the cursor.
- void [cursor_color](#) ([FL_Color](#) n)
Sets the color of the cursor.
- int [cut](#) ()
Deletes the current selection.
- int [cut](#) (int a, int b)
*Deletes all characters between index *a* and *b*.*
- int [cut](#) (int n)
*Deletes the next *n* bytes rounded to characters before or after the cursor.*
- double [dvalue](#) () const
Returns the widget text interpreted as a floating point number.
- [FL_Input_](#) (int, int, int, int, const char *l=0)
Creates a new [FL_Input_](#) widget.
- unsigned int [index](#) (int i) const
*Returns the character at index *i*.*
- int [input_type](#) () const
Gets the input field type.
- void [input_type](#) (int t)
Sets the input field type.
- int [insert](#) (const char *t, int l=0)
Inserts text at the cursor position.
- int [insert_position](#) () const

- Gets the position of the text cursor.*

 - int [insert_position](#) (int p)

Sets the cursor position and mark.

 - int [insert_position](#) (int p, int m)

Sets the index for the cursor and mark.

 - int [ivalue](#) () const

Returns the widget text interpreted as a signed integer.

 - int [mark](#) () const

Gets the current selection mark.

 - int [mark](#) (int m)

Sets the current selection mark.

 - int [maximum_size](#) () const

Gets the maximum length of the input field in characters.

 - void [maximum_size](#) (int m)

Sets the maximum length of the input field in characters.

 - int [position](#) () const
 - int [position](#) (int p)
 - int [position](#) (int p, int m)
 - int [readonly](#) () const

Gets the read-only state of the input field.

 - void [readonly](#) (int b)

Sets the read-only state of the input field.

 - int [redo](#) ()

Redo previous undo operation.

 - int [replace](#) (int b, int e, const char *text, int ilen=0)

Deletes text from b to e and inserts the new string text.

 - void [resize](#) (int, int, int, int) [FL_OVERRIDE](#)

Changes the size of the widget.

 - int [shortcut](#) () const

Return the shortcut key associated with this widget.

 - void [shortcut](#) (int s)

Sets the shortcut key associated with this widget.

 - int [size](#) () const

Returns the number of bytes in value().

 - void [size](#) (int W, int H)

Sets the width and height of this widget.

 - int [static_value](#) (const char *)

Changes the widget text.

 - int [static_value](#) (const char *, int)

Changes the widget text.

 - int [tab_nav](#) () const

Gets whether the Tab key causes focus navigation in multiline input fields or not.

 - void [tab_nav](#) (int val)

Sets whether the Tab key does focus navigation, or inserts tab characters into [FL_Multiline_Input](#).

 - [FL_Color](#) [textcolor](#) () const

Gets the color of the text in the input field.

 - void [textcolor](#) ([FL_Color](#) n)

Sets the color of the text in the input field.

 - [FL_Font](#) [textfont](#) () const

Gets the font of the text in the input field.

 - void [textfont](#) ([FL_Font](#) s)

- Sets the font of the text in the input field.*
 - `FI_Fontsize` `textsize` () const
- Gets the size of the text in the input field.*
 - void `textsize` (`FI_Fontsize` s)
- Sets the size of the text in the input field.*
 - int `undo` ()
- Undoes previous changes to the text buffer.*
 - const char * `value` () const
- Returns the text displayed in the widget.*
 - int `value` (const char *)
- Changes the widget text.*
 - int `value` (const char *, int)
- Changes the widget text.*
 - int `value` (double value)
- Changes the widget text to a floating point number ("%g").*
 - int `value` (int value)
- Changes the widget text to a signed integer number.*
 - int `wrap` () const
- Gets the word wrapping state of the input field.*
 - void `wrap` (int b)
- Sets the word wrapping state of the input field.*
 - `~FI_Input` ()
- Destroys the widget.*

Public Member Functions inherited from `FI_Widget`

- void `_clear_fullscreen` ()
- void `_set_fullscreen` ()
- void `activate` ()
- Activates the widget.*
- unsigned int `active` () const
- Returns whether the widget is active.*
- int `active_r` () const
- Returns whether the widget and all of its parents are active.*
- `FI_Align` `align` () const
- Gets the label alignment.*
- void `align` (`FI_Align` alignment)
- Sets the label alignment.*
- long `argument` () const
- Gets the current user data (long) argument that is passed to the callback function.*
- void `argument` (long v)
- Sets the current user data (long) argument that is passed to the callback function.*
- virtual class `FI_Gl_Window` * `as_gl_window` ()
- Returns an `FI_Gl_Window` pointer if this widget is an `FI_Gl_Window`.*
- virtual class `FI_Gl_Window` const * `as_gl_window` () const
- virtual `FI_Group` * `as_group` ()
- Returns an `FI_Group` pointer if this widget is an `FI_Group`.*
- virtual `FI_Group` const * `as_group` () const
- virtual `FI_Window` * `as_window` ()
- Returns an `FI_Window` pointer if this widget is an `FI_Window`.*
- virtual `FI_Window` const * `as_window` () const

- void [bind_deimage](#) ([FI_Image](#) *img)
Sets the image to use as part of the widget label when in the inactive state.
- void [bind_deimage](#) (int f)
Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.
- void [bind_image](#) ([FI_Image](#) *img)
Sets the image to use as part of the widget label when in the active state.
- void [bind_image](#) (int f)
Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- [FI_Boxtype](#) [box](#) () const
Gets the box type of the widget.
- void [box](#) ([FI_Boxtype](#) new_box)
Sets the box type for the widget.
- [FI_Callback_p](#) [callback](#) () const
Gets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb, [FI_Callback_User_Data](#) *p, bool auto_free)
Sets the current callback function and managed user data for the widget.
- void [callback](#) ([FI_Callback](#) *cb, void *p)
Sets the current callback function and data for the widget.
- void [callback](#) ([FI_Callback0](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback1](#) *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int [changed](#) () const
Checks if the widget value changed since the last callback.
- void [clear_active](#) ()
Marks the widget as inactive without sending events or changing focus.
- void [clear_changed](#) ()
Marks the value of the widget as unchanged.
- void [clear_damage](#) (uchar c=0)
Clears or sets the damage flags.
- void [clear_output](#) ()
Sets a widget to accept input.
- void [clear_visible](#) ()
Hides the widget.
- void [clear_visible_focus](#) ()
Disables keyboard focus navigation with this widget.
- [FI_Color](#) [color](#) () const
Gets the background color of the widget.
- void [color](#) ([FI_Color](#) bg)
Sets the background color of the widget.
- void [color](#) ([FI_Color](#) bg, [FI_Color](#) sel)
Sets the background and selection color of the widget.
- [FI_Color](#) [color2](#) () const
For back compatibility only.
- void [color2](#) (unsigned a)
For back compatibility only.
- int [contains](#) (const [FI_Widget](#) *w) const
Checks if w is a child of this widget.
- void [copy_label](#) (const char *new_label)

- Sets the current label.*

 - void `copy_tooltip` (const char *text)

Sets the current tooltip text.
- `uchar damage` () const

Returns non-zero if `draw()` needs to be called.
- void `damage` (uchar c)

Sets the damage bits for the widget.
- void `damage` (uchar c, int x, int y, int w, int h)

Sets the damage bits for an area inside the widget.
- int `damage_resize` (int, int, int, int)

Internal use only.
- void `deactivate` ()

Deactivates the widget.
- `FL_Image * deimage` ()

Gets the image that is used as part of the widget label when in the inactive state.
- const `FL_Image * deimage` () const

Gets the image that is used as part of the widget label when in the inactive state.
- void `deimage` (FL_Image &img)

Sets the image to use as part of the widget label when in the inactive state.
- void `deimage` (FL_Image *img)

Sets the image to use as part of the widget label when in the inactive state.
- int `deimage_bound` () const

Returns whether the inactive image is managed by the widget.
- void `do_callback` (FL_Callback_Reason reason=FL_REASON_UNKNOWN)

Calls the widget callback function with default arguments.
- void `do_callback` (FL_Widget *widget, long arg, FL_Callback_Reason reason=FL_REASON_UNKNOWN)

Calls the widget callback function with arbitrary arguments.
- void `do_callback` (FL_Widget *widget, void *arg=0, FL_Callback_Reason reason=FL_REASON_UNKNOWN)

Calls the widget callback function with arbitrary arguments.
- void `draw_label` (int, int, int, int, FL_Align) const

Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const

Gets the widget height.
- virtual void `hide` ()

Makes a widget invisible.
- int `horizontal_label_margin` ()

Get the spacing between the label and the horizontal edge of the widget.
- void `horizontal_label_margin` (int px)

Set the spacing between the label and the horizontal edge of the widget.
- `FL_Image * image` ()

Gets the image that is used as part of the widget label when in the active state.
- const `FL_Image * image` () const

Gets the image that is used as part of the widget label when in the active state.
- void `image` (FL_Image &img)

Sets the image to use as part of the widget label when in the active state.
- void `image` (FL_Image *img)

Sets the image to use as part of the widget label when in the active state.
- int `image_bound` () const

Returns whether the image is managed by the widget.
- int `inside` (const FL_Widget *wgt) const

Checks if this widget is a child of wgt.

- int [is_label_copied](#) () const
Returns whether the current label was assigned with [copy_label\(\)](#).
- const char * [label](#) () const
Gets the current label text.
- void [label](#) (const char *text)
Sets the current label pointer.
- void [label](#) (FI_Labeltype a, const char *b)
Shortcut to set the label text and type in one call.
- int [label_image_spacing](#) ()
Return the gap size between the label and the image.
- void [label_image_spacing](#) (int gap)
Set the gap between the label and the image in pixels.
- FI_Color [labelcolor](#) () const
Gets the label color.
- void [labelcolor](#) (FI_Color c)
Sets the label color.
- FI_Font [labelfont](#) () const
Gets the font to use.
- void [labelfont](#) (FI_Font f)
Sets the font to use.
- FI_Fonsize [labelsiz](#)e () const
Gets the font size in pixels.
- void [labelsiz](#)e (FI_Fonsize pix)
Sets the font size in pixels.
- FI_Labeltype [labeltype](#) () const
Gets the label type.
- void [labeltype](#) (FI_Labeltype a)
Sets the label type.
- void [measure_label](#) (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- bool [needs_keyboard](#) () const
Returns whether this widget needs a keyboard.
- void [needs_keyboard](#) (bool needs)
Sets whether this widget needs a keyboard.
- unsigned int [output](#) () const
Returns if a widget is used for output only.
- FI_Group * [parent](#) () const
Returns a pointer to the parent widget.
- void [parent](#) (FI_Group *p)
Internal use only - "for hacks only".
- void [position](#) (int X, int Y)
Repositions the window or widget.
- void [redraw](#) ()
Schedules the drawing of the widget.
- void [redraw_label](#) ()
Schedules the drawing of the label.
- FI_Color [selection_color](#) () const
Gets the selection color.
- void [selection_color](#) (FI_Color a)
Sets the selection color.
- void [set_active](#) ()

- Marks the widget as active without sending events or changing focus.*

 - void [set_changed](#) ()
- Marks the value of the widget as changed.*

 - void [set_output](#) ()
- Sets a widget to output only.*

 - void [set_visible](#) ()
- Makes the widget visible.*

 - void [set_visible_focus](#) ()
- Enables keyboard focus navigation with this widget.*

 - int [shortcut_label](#) () const
- Returns whether the widget's label uses '&' to indicate shortcuts.*

 - void [shortcut_label](#) (int value)
- Sets whether the widget's label uses '&' to indicate shortcuts.*

 - virtual void [show](#) ()
- Makes a widget visible.*

 - void [size](#) (int W, int H)
- Changes the size of the widget.*

 - int [take_focus](#) ()
- Gives the widget the keyboard focus.*

 - unsigned int [takeevents](#) () const
- Returns if the widget is able to take events.*

 - int [test_shortcut](#) ()
- Returns true if the widget's label contains the entered '&x' shortcut.*

 - const char * [tooltip](#) () const
- Gets the current tooltip text.*

 - void [tooltip](#) (const char *text)
- Sets the current tooltip text.*

 - [Fl_Window](#) * [top_window](#) () const
- Returns a pointer to the top-level window for the widget.*

 - [Fl_Window](#) * [top_window_offset](#) (int &xoff, int &yoff) const
- Finds the x/y offset of the current widget relative to the top-level window.*

 - [uchar](#) [type](#) () const
- Gets the widget type.*

 - void [type](#) ([uchar](#) t)
- Sets the widget type.*

 - int [use_accents_menu](#) ()
- Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.*

 - void * [user_data](#) () const
- Gets the user data for this widget.*

 - void [user_data](#) ([Fl_Callback_User_Data](#) *v, bool auto_free)
- Sets the user data for this widget.*

 - void [user_data](#) (void *v)
- Sets the user data for this widget.*

 - int [vertical_label_margin](#) ()
- Get the spacing between the label and the vertical edge of the widget.*

 - void [vertical_label_margin](#) (int px)
- Set the spacing between the label and the vertical edge of the widget.*

 - unsigned int [visible](#) () const
- Returns whether a widget is visible.*

 - unsigned int [visible_focus](#) () const
- Checks whether this widget has a visible focus.*

- void [visible_focus](#) (int v)
Modifies keyboard focus navigation.
- int [visible_r](#) () const
Returns whether a widget and all its parents are visible.
- int [w](#) () const
Gets the widget width.
- [FL_When](#) [when](#) () const
Returns the conditions under which the callback is called.
- void [when](#) (uchar i)
Sets the flags used to decide when a callback is called.
- [FL_Window](#) * [window](#) () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int [x](#) () const
Gets the widget position in its window.
- int [y](#) () const
Gets the widget position in its window.
- virtual [~FL_Widget](#) ()
Destroys the widget.

Additional Inherited Members

Static Public Member Functions inherited from [FL_Widget](#)

- static void [default_callback](#) ([FL_Widget](#) *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int [label_shortcut](#) (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int [test_shortcut](#) (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Static Public Attributes inherited from [FL_Input](#)

- static const char * [copy_menu_text](#) = "Copy"
[this text may be customized at run-time]
- static const char * [cut_menu_text](#) = "Cut"
[this text may be customized at run-time]
- static const char * [paste_menu_text](#) = "Paste"
[this text may be customized at run-time]

Protected Types inherited from [FL_Widget](#)

- enum {
[INACTIVE](#) = 1<<0 , [INVISIBLE](#) = 1<<1 , [OUTPUT](#) = 1<<2 , [NOBORDER](#) = 1<<3 ,
[FORCE_POSITION](#) = 1<<4 , [NON_MODAL](#) = 1<<5 , [SHORTCUT_LABEL](#) = 1<<6 , [CHANGED](#) = 1<<7

[USERFLAG1](#) = 1<<31 }
flags possible values enumeration.

Protected Member Functions inherited from [FI_Input](#)

- void [draw](#) () [FL_OVERRIDE](#)
Draws the widget.
- int [handle_key](#) ()
Handles a keystroke.
- int [handle_rmb](#) ()
Handle right mouse button down events.

Protected Member Functions inherited from [FI_Input_](#)

- int [apply_undo](#) ()
Apply the current undo/redo operation.
- void [drawtext](#) (int, int, int, int)
Draws the text in the passed bounding box.
- void [drawtext](#) (int, int, int, int, bool draw_active)
Draws the text in the passed bounding box.
- void [handle_mouse](#) (int, int, int, int, int keepmark=0)
Handles mouse clicks and mouse moves.
- int [handletext](#) (int e, int, int, int, int)
Handles all kinds of text field related events.
- int [line_end](#) (int i) const
Finds the end of a line.
- int [line_start](#) (int i) const
Finds the start of a line.
- int [linesPerPage](#) ()
- void [maybe_do_callback](#) ([FI_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
- int [up_down_position](#) (int, int keepmark=0)
Moves the cursor to the column given by `up_down_pos`.
- int [word_end](#) (int i) const
Finds the end of a word.
- int [word_start](#) (int i) const
Finds the start of a word.
- int [xscroll](#) () const
- int [yscroll](#) () const
- void [yscroll](#) (int yOffset)

Protected Member Functions inherited from [FI_Widget](#)

- void [clear_flag](#) (unsigned int c)
Clears a flag in the flags mask.
- void [draw_backdrop](#) () const
If `FL_ALIGN_IMAGE_BACKDROP` is set, the image or deimage will be drawn.
- void [draw_box](#) () const
Draws the widget box according its box style.
- void [draw_box](#) ([FI_Boxtype](#) t, [FI_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void [draw_box](#) ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void [draw_focus](#) () const
Draws a focus rectangle around the widget.
- void [draw_focus](#) ([FI_Boxtype](#) t, int X, int Y, int W, int H) const

- Draws a focus rectangle around the widget.*
- void [draw_focus](#) ([Fl_Boxtype](#) t, int x, int y, int w, int h, [Fl_Color](#) bg) const
- Draws a focus box for the widget at the given position and size.*
- void [draw_label](#) () const
- Draws the widget's label at the defined label position.*
- void [draw_label](#) (int, int, int, int) const
- Draws the label in an arbitrary bounding box.*
- [Fl_Widget](#) (int x, int y, int w, int h, const char *label=0L)
- Creates a widget at the given position and size.*
- unsigned int **flags** () const
- Gets the widget flags mask.*
- void [h](#) (int v)
- Internal use only.*
- void **set_flag** (unsigned int c)
- Sets a flag in the flags mask.*
- void [w](#) (int v)
- Internal use only.*
- void [x](#) (int v)
- Internal use only.*
- void [y](#) (int v)
- Internal use only.*

11.91.1 Detailed Description

This widget is a subclass of [Fl_Output](#) that displays multiple lines of text.

It also displays tab characters as whitespace to the next column.

Note that this widget does not support scrollbars, or per-character color control.

If you are presenting large amounts of read-only text and need scrollbars, or full color control of characters, then use [Fl_Text_Display](#). If you want to display HTML text, use [Fl_Help_View](#).

A caret cursor (^) shows the keyboard navigation mark for keyboard selection of the output text, e.g. Arrow Keys to move the cursor, Shift + Arrow Keys to create a text selection, and '^C' to copy the selected text to the paste buffer. The caret cursor can be disabled by disabling the widget's "visible focus" using [clear_visible_focus\(\)](#), inherited from the [Fl_Widget](#) base class. Doing this also disables the widget's keyboard navigation.

11.91.2 Constructor & Destructor Documentation

11.91.2.1 Fl_Multiline_Output()

```
Fl_Multiline_Output::Fl_Multiline_Output (
    int X,
    int Y,
    int W,
    int H,
    const char * l = 0)
```

Creates a new [Fl_Multiline_Output](#) widget using the given position, size, and label string.

The default boxtype is [FL_DOWN_BOX](#).

Inherited destructor destroys the widget and any value associated with it.

The documentation for this class was generated from the following files:

- [Fl_Multiline_Output.H](#)
- [Fl_Input.cxx](#)

11.92 Fl_Native_File_Chooser Class Reference

This class lets an FLTK application easily and consistently access the operating system's native file chooser.

```
#include <Fl_Native_File_Chooser.H>
```

Public Types

- enum `Option` {
`NO_OPTIONS` = 0x0000 , `SAVEAS_CONFIRM` = 0x0001 , `NEW_FOLDER` = 0x0002 , `PREVIEW` = 0x0004 ,
`USE_FILTER_EXT` = 0x0008 }
- enum `Type` {
`BROWSE_FILE` = 0 , `BROWSE_DIRECTORY` , `BROWSE_MULTI_FILE` , `BROWSE_MULTI_DIRECTORY` ,
`BROWSE_SAVE_FILE` , `BROWSE_SAVE_DIRECTORY` }

Public Member Functions

- int `count` () const
Returns the number of filenames (or directory names) the user selected.
- const char * `directory` () const
Returns the current preset `directory()` value.
- void `directory` (const char *val)
Preset the directory the browser will show when opened.
- const char * `errmsg` () const
Returns a system dependent error message for the last method that failed.
- const char * `filename` () const
Return the filename the user chose.
- const char * `filename` (int i) const
Return one of the filenames the user selected.
- const char * `filter` () const
Returns the filter string last set.
- void `filter` (const char *f)
Sets the filename filters used for browsing.
- int `filter_value` () const
Returns which filter value was last selected by the user.
- void `filter_value` (int i)
Sets which filter will be initially selected.
- int `filters` () const
Gets how many filters were available, not including "All Files".
- `FI_Native_File_Chooser` (int val=`BROWSE_FILE`)
The constructor.
- int `options` () const
Gets the platform specific `FI_Native_File_Chooser::Option` flags.
- void `options` (int o)
Sets the platform specific chooser options to `val`.
- const char * `preset_file` () const
Get the preset filename.
- void `preset_file` (const char *f)
Sets the default filename for the chooser.
- int `show` ()
Post the chooser's dialog.
- const char * `title` () const
Get the title of the file chooser's dialog window.
- void `title` (const char *t)
Set the title of the file chooser's dialog window.
- int `type` () const
Gets the current `FI_Native_File_Chooser::Type` of browser.
- void `type` (int t)
Sets the current `FI_Native_File_Chooser::Type` of browser.
- `~FI_Native_File_Chooser` ()
Destructor.

Static Public Attributes

- static const char * **file_exists_message** = "File exists. Are you sure you want to overwrite?"

Localizable message.

11.92.1 Detailed Description

This class lets an FLTK application easily and consistently access the operating system's native file chooser.

Some operating systems have very complex and specific file choosers that many users want access to specifically, instead of FLTK's default file chooser(s).

In cases where there is no native file browser, FLTK's own file browser is used instead.

To use this widget, use the following include in your code:

```
#include <FL/Fl_Native_File_Chooser.H>
```

The following example shows how to pick a single file:

```
// Create and post the local native file chooser
#include <FL/Fl_Native_File_Chooser.H>
[...]
```

```
Fl_Native_File_Chooser fnfc;
fnfc.title("Pick a file");
fnfc.type(Fl_Native_File_Chooser::BROWSE_FILE);
fnfc.filter("Text\*.txt\n"
           "C Files\*.{cxx,h,c}");
fnfc.directory("/var/tmp"); // default directory to use
// Show native chooser
switch ( fnfc.show() ) {
case -1: printf("ERROR: %s\n", fnfc.errmsg()); break; // ERROR
case 1: printf("CANCEL\n"); break; // CANCEL
default: printf("PICKED: %s\n", fnfc.filename()); break; // FILE CHOSEN
}
```

The `Fl_Native_File_Chooser` widget transmits UTF-8 encoded filenames to its user. It is recommended to open files that may have non-ASCII names with the `fl_fopen()` or `fl_open()` utility functions that handle these names in a cross-platform way (whereas the standard `fopen()/open()` functions fail on the Windows platform to open files with a non-ASCII name).

Platform Specific Caveats

- Under X11/Wayland the dialog is chosen as follows:

1. If command `zenity` is available at run-time and if `Fl::option(OPTION_FNFC_USES_ZENITY)` is turned on, the `zenity`-based dialog opens. This is expected to be more appropriate than other dialog forms for sandboxed apps, but member function `filter_value()` is not effective.
2. Else if the app runs under the KDE desktop and if `Fl::option(OPTION_FNFC_USES_KDIALOG)` is turned on, and if command `kdiallog` is available at run-time, the `kdiallog`-based dialog opens. Member function `filter_value()` is not effective with this dialog.
3. Else if the GTK library is available at run-time on the computer and if `Fl::option(OPTION_FNFC_USES_GTK)` is not turned off, the GTK-styled dialog opens. Call `fl_register_images()` to add a "Preview" button to this dialog. Use the static public attributes of class `Fl_File_Chooser` to localize the browser.
4. Otherwise, FLTK's own dialog produced by the `Fl_File_Chooser` class opens. Call `fl_register_images()` to add a "Preview" button to it. It's best if you also call `Fl_File_Icon::load_system_icons()` at the start of `main()`, to enable the nicer looking file browser widgets. Use the static public attributes of class `Fl_File_Chooser` to localize the browser.

- Some operating systems support certain OS specific options; see `Fl_Native_File_Chooser::options()` for a list.

Figure 11.33 The Fl_Native_File_Chooser on different platforms

11.92.2 Member Enumeration Documentation

11.92.2.1 Option

```
enum Fl_Native_File_Chooser::Option
```

Enumerator

NO_OPTIONS	no options enabled
SAVEAS_CONFIRM	Show native 'Save As' overwrite confirm dialog.
NEW_FOLDER	Show 'New Folder' icon (if supported)
PREVIEW	enable preview mode (if supported)
USE_FILTER_EXT	Chooser filter presets the output file extension (if supported)

11.92.2.2 Type

```
enum Fl_Native_File_Chooser::Type
```

Enumerator

BROWSE_FILE	browse files (lets user choose one file)
BROWSE_DIRECTORY	browse directories (lets user choose one directory)
BROWSE_MULTI_FILE	browse files (lets user choose multiple files)
BROWSE_MULTI_DIRECTORY	browse directories (lets user choose multiple directories)
BROWSE_SAVE_FILE	browse to save a file
BROWSE_SAVE_DIRECTORY	browse to save a directory

11.92.3 Constructor & Destructor Documentation

11.92.3.1 Fl_Native_File_Chooser()

```
Fl_Native_File_Chooser::Fl_Native_File_Chooser (
    int val = BROWSE_FILE)
```

The constructor.

Internally allocates the native widgets. Optional `val` presets the type of browser this will be, which can also be changed with [type\(\)](#).

11.92.3.2 ~Fl_Native_File_Chooser()

```
Fl_Native_File_Chooser::~~Fl_Native_File_Chooser ()
```

Destructor.

Deallocates any resources allocated to this widget.

11.92.4 Member Function Documentation

11.92.4.1 count()

```
int Fl_Native_File_Chooser::count () const
```

Returns the number of filenames (or directory names) the user selected.

Example:

```
if ( fnfc->show() == 0 ) {
    // Print all filenames user selected
    for (int n=0; n<fnfc->count(); n++ ) {
        printf("%d) '%s'\n", n, fnfc->filename(n));
    }
}
```

11.92.4.2 directory()

```
void Fl_Native_File_Chooser::directory (
    const char * val)
```

Preset the directory the browser will show when opened.

If `val` is NULL, or no directory is specified, the chooser will attempt to use the last non-cancelled folder.

11.92.4.3 errmsg()

```
const char * Fl_Native_File_Chooser::errmsg () const
```

Returns a system dependent error message for the last method that failed.

This message should at least be flagged to the user in a dialog box, or to some kind of error log. Contents will be valid only for methods that document [errmsg\(\)](#) will have info on failures.

11.92.4.4 filename() [1/2]

```
const char * Fl_Native_File_Chooser::filename () const
```

Return the filename the user chose.

Use this if only expecting a single filename. If more than one filename is expected, use [filename\(int\)](#) instead. Return value may be "" if no filename was chosen (eg. user cancelled).

11.92.4.5 filename() [2/2]

```
const char * Fl_Native_File_Chooser::filename (
    int i) const
```

Return one of the filenames the user selected.

Use [count\(\)](#) to determine how many filenames the user selected.

Example:

```
if ( fnfc->show() == 0 ) {
    // Print all filenames user selected
    for (int n=0; n<fnfc->count(); n++ ) {
        printf("%d) '%s'\n", n, fnfc->filename(n));
    }
}
```

11.92.4.6 filter() [1/2]

```
const char * Fl_Native_File_Chooser::filter () const
```

Returns the filter string last set.

Can be NULL if no filter was set.

11.92.4.7 filter() [2/2]

```
void Fl_Native_File_Chooser::filter (
    const char * f)
```

Sets the filename filters used for browsing.

The default is NULL, which browses all files.

The filter string can be any of:

- A single wildcard (eg. "*.txt")
- Multiple wildcards (eg. ".*{cxx,h,H}")
- A descriptive name followed by a "\t" and a wildcard (eg. "Text Files\t*.txt")
- A list of separate wildcards with a "\n" between each (eg. ".*{cxx,H}\n*.txt")
- A list of descriptive names and wildcards (eg. "C++ Files\t*.{cxx,H}\nTxt Files\t*.txt")

The format of each filter is a wildcard, or an optional user description followed by '\t' and the wildcard.

On most platforms, each filter is available to the user via a pulldown menu in the file chooser. The 'All Files' option is always available to the user.

11.92.4.8 filter_value() [1/2]

```
int Fl_Native_File_Chooser::filter_value () const
```

Returns which filter value was last selected by the user.

This is only valid if the chooser returns success and if the particular file chooser supports it. Otherwise the value is not changed.

Some "native" file choosers don't support returning the filter selection by the user, particularly the system dialog based browsers:

- kdialog (KDE system dialog)
- zenity (another system dialog based chooser).

Note: this list may not be complete.

These system file chooser dialogs don't return the filter value chosen by the user.

See also

[filter\(const char *f\)](#)

11.92.4.9 filter_value() [2/2]

```
void Fl_Native_File_Chooser::filter_value (
    int i)
```

Sets which filter will be initially selected.

The first filter is indexed as 0. If [filter_value\(\)](#) == [filters\(\)](#), then "All Files" was chosen. If [filter_value\(\)](#) > [filters\(\)](#), then a custom filter was set.

Some "native" file choosers don't support this way to set the initial filter type, particularly the system dialog based browsers:

- kdialog (KDE system dialog)
- zenity (another system dialog based chooser).

Note: this list may not be complete.

As far as we know these dialogs use the **first** item in the list of filter values as the initial filter presented to the user.

See also

[filter\(const char *f\)](#)

11.92.4.10 options()

```
void Fl_Native_File_Chooser::options (
    int o)
```

Sets the platform specific chooser options to `val`.

`val` is expected to be one or more [Fl_Native_File_Chooser::Option](#) flags ORed together. Some platforms have OS-specific functions that can be enabled/disabled via this method.

Flag	Description	Win	Mac	Other
NEW_FOLDER	Shows the 'New Folder' button.	Ignored	Used	Used
PREVIEW	Enables the 'Preview' mode by default.	Ignored	Ignored	Used
SAVEAS_CONFIRM	Confirm dialog if BROWSE_SAVE_FILE file exists.	Used	Used	Used
USE_FILTER_EXT	Chooser filter presets the output file extension.	Ignored	Used	Used (GTK)

11.92.4.11 preset_file()

```
void Fl_Native_File_Chooser::preset_file (
    const char * f)
```

Sets the default filename for the chooser.

Use [directory\(\)](#) to set the default directory. Mainly used to preset the filename for save dialogs, and on most platforms can be used for opening files as well.

11.92.4.12 show()

```
int Fl_Native_File_Chooser::show ()
```

Post the chooser's dialog.

Blocks until dialog has been completed or cancelled.

Returns

- 0 – user picked a file
- 1 – user cancelled
- -1 – failed; [errmsg\(\)](#) has reason

11.92.4.13 title() [1/2]

```
const char * Fl_Native_File_Chooser::title () const
```

Get the title of the file chooser's dialog window.

Return value may be NULL if no title was set.

11.92.4.14 title() [2/2]

```
void Fl_Native_File_Chooser::title (
    const char * t)
```

Set the title of the file chooser's dialog window.

Can be NULL if no title desired. The default title varies according to the platform, so you are advised to set the title explicitly.

The documentation for this class was generated from the following files:

- [Fl_Native_File_Chooser.cxx](#)
- [Fl_Native_File_Chooser_GTK.cxx](#)

11.93 FI_Nice_Slider Class Reference

Inheritance diagram for FI_Nice_Slider:

Public Member Functions

- **FI_Nice_Slider** (int X, int Y, int W, int H, const char *L=0)

Public Member Functions inherited from FI_Slider

- void **bounds** (double a, double b)
Sets the minimum (a) and maximum (b) values for the valuator widget.
- **FI_Slider** (int X, int Y, int W, int H, const char *L=0)
Creates a new FI_Slider widget using the given position, size, and label string.
- **FI_Slider** (uchar t, int X, int Y, int W, int H, const char *L)
Creates a new FI_Slider widget using the given type, position, size, and label string.
- int **handle** (int) **FL_OVERRIDE**
Handles the specified event.
- int **scrollvalue** (int pos, int size, int first, int total)
Sets the size and position of the sliding knob in the box.
- **FI_Boxtype slider** () const
Gets the slider box type.
- void **slider** (FI_Boxtype c)
Sets the slider box type.
- float **slider_size** () const
Get the dimensions of the moving piece of slider.
- void **slider_size** (double v)
Set the dimensions of the moving piece of slider.

Public Member Functions inherited from FI_Valuator

- void **bounds** (double a, double b)
Sets the minimum (a) and maximum (b) values for the valuator widget.
- double **clamp** (double)
Clamps the passed value to the valuator range.
- virtual int **format** (char *)
Uses internal rules to format the fields numerical value into the character array pointed to by the passed parameter.
- double **increment** (double, int)
Adds n times the step value to the passed value.
- double **maximum** () const
Gets the maximum value for the valuator.
- void **maximum** (double a)

- Sets the maximum value for the valuator.*

 - double **minimum** () const

Gets the minimum value for the valuator.

 - void **minimum** (double a)

Sets the minimum value for the valuator.

 - void **precision** (int digits)

Sets the step value to $1.0 / 10^{\text{digits}}$.

 - void **range** (double a, double b)

Sets the minimum and maximum values for the valuator.

 - double **round** (double)

Round the passed value to the nearest step increment.

 - double **step** () const

Gets or sets the step value.

 - void **step** (double a, int b)

See double FI_Valuator::step() const.

 - void **step** (double s)

See double FI_Valuator::step() const.

 - void **step** (int a)

See double FI_Valuator::step() const.

 - double **value** () const

Gets the floating point(double) value.

 - int **value** (double)

Sets the current value.

 - **~FI_Valuator** () **FL_OVERRIDE**

Destructor is accessible despite protected constructor.

Public Member Functions inherited from FI_Widget

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
- Activates the widget.*

 - unsigned int **active** () const

Returns whether the widget is active.

 - int **active_r** () const

Returns whether the widget and all of its parents are active.
- **FI_Align align** () const
- Gets the label alignment.*

 - void **align** (FI_Align alignment)

Sets the label alignment.
- long **argument** () const
- Gets the current user data (long) argument that is passed to the callback function.*

 - void **argument** (long v)

Sets the current user data (long) argument that is passed to the callback function.
- virtual class **FI_Gl_Window** * **as_gl_window** ()
- Returns an FI_Gl_Window pointer if this widget is an FI_Gl_Window.*

 - virtual class **FI_Gl_Window** const * **as_gl_window** () const
- virtual **FI_Group** * **as_group** ()
- Returns an FI_Group pointer if this widget is an FI_Group.*

 - virtual **FI_Group** const * **as_group** () const
- virtual **FI_Window** * **as_window** ()

- Returns an [FL_Window](#) pointer if this widget is an [FL_Window](#).*

 - virtual [FL_Window](#) const * **as_window** () const
- void [bind_deimage](#) ([FL_Image](#) *img)

Sets the image to use as part of the widget label when in the inactive state.
- void [bind_deimage](#) (int f)

Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.
- void [bind_image](#) ([FL_Image](#) *img)

Sets the image to use as part of the widget label when in the active state.
- void [bind_image](#) (int f)

Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- [FL_Boxtype](#) **box** () const

Gets the box type of the widget.
- void [box](#) ([FL_Boxtype](#) new_box)

Sets the box type for the widget.
- [FL_Callback_p](#) **callback** () const

Gets the current callback function for the widget.
- void [callback](#) ([FL_Callback](#) *cb)

Sets the current callback function for the widget.
- void [callback](#) ([FL_Callback](#) *cb, [FL_Callback_User_Data](#) *p, bool auto_free)

Sets the current callback function and managed user data for the widget.
- void [callback](#) ([FL_Callback](#) *cb, void *p)

Sets the current callback function and data for the widget.
- void [callback](#) ([FL_Callback0](#) *cb)

Sets the current callback function for the widget.
- void [callback](#) ([FL_Callback1](#) *cb, long p=0)

Sets the current callback function for the widget.
- unsigned int [changed](#) () const

Checks if the widget value changed since the last callback.
- void [clear_active](#) ()

Marks the widget as inactive without sending events or changing focus.
- void [clear_changed](#) ()

Marks the value of the widget as unchanged.
- void [clear_damage](#) (uchar c=0)

Clears or sets the damage flags.
- void [clear_output](#) ()

Sets a widget to accept input.
- void [clear_visible](#) ()

Hides the widget.
- void [clear_visible_focus](#) ()

Disables keyboard focus navigation with this widget.
- [FL_Color](#) **color** () const

Gets the background color of the widget.
- void [color](#) ([FL_Color](#) bg)

Sets the background color of the widget.
- void [color](#) ([FL_Color](#) bg, [FL_Color](#) sel)

Sets the background and selection color of the widget.
- [FL_Color](#) **color2** () const

For back compatibility only.
- void [color2](#) (unsigned a)

For back compatibility only.
- int [contains](#) (const [FL_Widget](#) *w) const

- Checks if w is a child of this widget.*
- void [copy_label](#) (const char *new_label)
Sets the current label.
- void [copy_tooltip](#) (const char *text)
Sets the current tooltip text.
- [uchar](#) [damage](#) () const
Returns non-zero if [draw\(\)](#) needs to be called.
- void [damage](#) ([uchar](#) c)
Sets the damage bits for the widget.
- void [damage](#) ([uchar](#) c, int x, int y, int w, int h)
Sets the damage bits for an area inside the widget.
- int [damage_resize](#) (int, int, int, int)
Internal use only.
- void [deactivate](#) ()
Deactivates the widget.
- [FL_Image](#) * [deimage](#) ()
Gets the image that is used as part of the widget label when in the inactive state.
- const [FL_Image](#) * [deimage](#) () const
Gets the image that is used as part of the widget label when in the inactive state.
- void [deimage](#) ([FL_Image](#) &img)
Sets the image to use as part of the widget label when in the inactive state.
- void [deimage](#) ([FL_Image](#) *img)
Sets the image to use as part of the widget label when in the inactive state.
- int [deimage_bound](#) () const
Returns whether the inactive image is managed by the widget.
- void [do_callback](#) ([FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
Calls the widget callback function with default arguments.
- void [do_callback](#) ([FL_Widget](#) *widget, long arg, [FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
Calls the widget callback function with arbitrary arguments.
- void [do_callback](#) ([FL_Widget](#) *widget, void *arg=0, [FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
Calls the widget callback function with arbitrary arguments.
- void [draw_label](#) (int, int, int, int, [FL_Align](#)) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int [h](#) () const
Gets the widget height.
- virtual void [hide](#) ()
Makes a widget invisible.
- int [horizontal_label_margin](#) ()
Get the spacing between the label and the horizontal edge of the widget.
- void [horizontal_label_margin](#) (int px)
Set the spacing between the label and the horizontal edge of the widget.
- [FL_Image](#) * [image](#) ()
Gets the image that is used as part of the widget label when in the active state.
- const [FL_Image](#) * [image](#) () const
Gets the image that is used as part of the widget label when in the active state.
- void [image](#) ([FL_Image](#) &img)
Sets the image to use as part of the widget label when in the active state.
- void [image](#) ([FL_Image](#) *img)
Sets the image to use as part of the widget label when in the active state.
- int [image_bound](#) () const
Returns whether the image is managed by the widget.

- int `inside` (const `FL_Widget` *wgt) const
Checks if this widget is a child of wgt.
- int `is_label_copied` () const
Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const
Gets the current label text.
- void `label` (const char *text)
Sets the current label pointer.
- void `label` (`FL_Labeltype` a, const char *b)
Shortcut to set the label text and type in one call.
- int `label_image_spacing` ()
Return the gap size between the label and the image.
- void `label_image_spacing` (int gap)
Set the gap between the label and the image in pixels.
- `FL_Color` `labelcolor` () const
Gets the label color.
- void `labelcolor` (`FL_Color` c)
Sets the label color.
- `FL_Font` `labelfont` () const
Gets the font to use.
- void `labelfont` (`FL_Font` f)
Sets the font to use.
- `FL_Fonsize` `labelsize` () const
Gets the font size in pixels.
- void `labelsize` (`FL_Fonsize` pix)
Sets the font size in pixels.
- `FL_Labeltype` `labeltype` () const
Gets the label type.
- void `labeltype` (`FL_Labeltype` a)
Sets the label type.
- void `measure_label` (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- bool `needs_keyboard` () const
Returns whether this widget needs a keyboard.
- void `needs_keyboard` (bool needs)
Sets whether this widget needs a keyboard.
- unsigned int `output` () const
Returns if a widget is used for output only.
- `FL_Group` * `parent` () const
Returns a pointer to the parent widget.
- void `parent` (`FL_Group` *p)
Internal use only - "for hacks only".
- void `position` (int X, int Y)
Repositions the window or widget.
- void `redraw` ()
Schedules the drawing of the widget.
- void `redraw_label` ()
Schedules the drawing of the label.
- virtual void `resize` (int x, int y, int w, int h)
Changes the size or position of the widget.
- `FL_Color` `selection_color` () const

- Gets the selection color.*
- void **selection_color** (**FI_Color** a)
- Sets the selection color.*
- void **set_active** ()
- Marks the widget as active without sending events or changing focus.*
- void **set_changed** ()
- Marks the value of the widget as changed.*
- void **set_output** ()
- Sets a widget to output only.*
- void **set_visible** ()
- Makes the widget visible.*
- void **set_visible_focus** ()
- Enables keyboard focus navigation with this widget.*
- int **shortcut_label** () const
- Returns whether the widget's label uses '&' to indicate shortcuts.*
- void **shortcut_label** (int value)
- Sets whether the widget's label uses '&' to indicate shortcuts.*
- virtual void **show** ()
- Makes a widget visible.*
- void **size** (int W, int H)
- Changes the size of the widget.*
- int **take_focus** ()
- Gives the widget the keyboard focus.*
- unsigned int **takeevents** () const
- Returns if the widget is able to take events.*
- int **test_shortcut** ()
- Returns true if the widget's label contains the entered '&x' shortcut.*
- const char * **tooltip** () const
- Gets the current tooltip text.*
- void **tooltip** (const char *text)
- Sets the current tooltip text.*
- **FI_Window** * **top_window** () const
- Returns a pointer to the top-level window for the widget.*
- **FI_Window** * **top_window_offset** (int &xoff, int &yoff) const
- Finds the x/y offset of the current widget relative to the top-level window.*
- **uchar** **type** () const
- Gets the widget type.*
- void **type** (**uchar** t)
- Sets the widget type.*
- int **use_accents_menu** ()
- Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.*
- void * **user_data** () const
- Gets the user data for this widget.*
- void **user_data** (**FI_Callback_User_Data** *v, bool auto_free)
- Sets the user data for this widget.*
- void **user_data** (void *v)
- Sets the user data for this widget.*
- int **vertical_label_margin** ()
- Get the spacing between the label and the vertical edge of the widget.*
- void **vertical_label_margin** (int px)
- Set the spacing between the label and the vertical edge of the widget.*

- unsigned int `visible` () const
Returns whether a widget is visible.
- unsigned int `visible_focus` () const
Checks whether this widget has a visible focus.
- void `visible_focus` (int v)
Modifies keyboard focus navigation.
- int `visible_r` () const
Returns whether a widget and all its parents are visible.
- int `w` () const
Gets the widget width.
- `FL_When` `when` () const
Returns the conditions under which the callback is called.
- void `when` (uchar i)
Sets the flags used to decide when a callback is called.
- `FL_Window` * `window` () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int `x` () const
Gets the widget position in its window.
- int `y` () const
Gets the widget position in its window.
- virtual `~FL_Widget` ()
Destroys the widget.

Additional Inherited Members

Static Public Member Functions inherited from `FL_Widget`

- static void `default_callback` (`FL_Widget` *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int `label_shortcut` (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int `test_shortcut` (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from `FL_Widget`

- enum {
`INACTIVE` = 1<<0 , `INVISIBLE` = 1<<1 , `OUTPUT` = 1<<2 , `NOBORDER` = 1<<3 ,
`FORCE_POSITION` = 1<<4 , `NON_MODAL` = 1<<5 , `SHORTCUT_LABEL` = 1<<6 , `CHANGED` = 1<<7
, `OVERRIDE` = 1<<8 , `VISIBLE_FOCUS` = 1<<9 , `COPIED_LABEL` = 1<<10 , `CLIP_CHILDREN` = 1<<11
, `MENU_WINDOW` = 1<<12 , `TOOLTIP_WINDOW` = 1<<13 , `MODAL` = 1<<14 , `NO_OVERLAY` = 1<<15
, `GROUP_RELATIVE` = 1<<16 , `COPIED_TOOLTIP` = 1<<17 , `FULLSCREEN` = 1<<18 , `MAC_USE_ACCENTS_MENU`
= 1<<19 ,
`NEEDS_KEYBOARD` = 1<<20 , `IMAGE_BOUND` = 1<<21 , `DEIMAGE_BOUND` = 1<<22 ,
`AUTO_DELETE_USER_DATA` = 1<<23 ,
`MAXIMIZED` = 1<<24 , `POPUP` = 1<<25 , `USERFLAG3` = 1<<29 , `USERFLAG2` = 1<<30 ,
`USERFLAG1` = 1<<31 }
flags possible values enumeration.

Protected Member Functions inherited from FI_Slider

- void **draw** () [FL_OVERRIDE](#)
Draws the widget.
- void **draw** (int, int, int, int)
- int **handle** (int, int, int, int, int)

Protected Member Functions inherited from FI_Valuator

- [FI_Valuator](#) (int X, int Y, int W, int H, const char *L)
Creates a new [FI_Valuator](#) widget using the given position, size, and label string.
- void **handle_drag** (double newvalue)
Called during a drag operation, after an FL_WHEN_CHANGED event is received and before the callback.
- void **handle_push** ()
Stores the current value in the previous value.
- void **handle_release** ()
Called after an FL_WHEN_RELEASE event is received and before the callback.
- int **horizontal** () const
Tells if the valuator is an FL_HORIZONTAL one.
- double **previous_value** () const
Gets the previous floating point value before an event changed it.
- void **set_value** (double v)
Sets the current floating point value.
- double **softclamp** (double)
Clamps the value, but accepts v if the previous value is not already out of range.
- virtual void [value_damage](#) ()
Asks for partial redraw.

Protected Member Functions inherited from FI_Widget

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** ([FI_Boxtype](#) t, [FI_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const
Draws a focus rectangle around the widget.
- void **draw_focus** ([FI_Boxtype](#) t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void **draw_focus** ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) bg) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [FI_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.

- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

The documentation for this class was generated from the following files:

- FL_Nice_Slider.H
- FL_Slider.cxx

11.94 FL_Output Class Reference

This widget displays a piece of text.

```
#include <FL_Output.H>
```

Inheritance diagram for FL_Output:

Public Member Functions

- **FL_Output** (int X, int Y, int W, int H, const char *l=0)
*Creates a new **FL_Output** widget using the given position, size, and label string.*

Public Member Functions inherited from FL_Input

- **FL_Input** (int, int, int, int, const char *s=0)
*Creates a new **FL_Input** widget using the given position, size, and label string.*
- int **handle** (int) **FL_OVERRIDE**
Handles the specified event.

Public Member Functions inherited from FL_Input_

- int **append** (const char *t, int l=0, char keep_selection=0)
Append text at the end.
- bool **can_redo** () const

- Check if there is a redo action available.*

 - bool `can_undo` () const
- Check if the last operation can be undone.*

 - int `copy` (int clipboard)
- Put the current selection into the clipboard.*

 - int `copy_cuts` ()
- Copies the yank buffer to the clipboard.*

 - `FI_Color` `cursor_color` () const
- Gets the color of the cursor.*

 - void `cursor_color` (`FI_Color` n)
- Sets the color of the cursor.*

 - int `cut` ()
- Deletes the current selection.*

 - int `cut` (int a, int b)
- Deletes all characters between index a and b.*

 - int `cut` (int n)
- Deletes the next n bytes rounded to characters before or after the cursor.*

 - double `dvalue` () const
- Returns the widget text interpreted as a floating point number.*

 - `FI_Input_` (int, int, int, int, const char *=0)
- Creates a new FI_Input_ widget.*

 - unsigned int `index` (int i) const
- Returns the character at index i.*

 - int `input_type` () const
- Gets the input field type.*

 - void `input_type` (int t)
- Sets the input field type.*

 - int `insert` (const char *t, int l=0)
- Inserts text at the cursor position.*

 - int `insert_position` () const
- Gets the position of the text cursor.*

 - int `insert_position` (int p)
- Sets the cursor position and mark.*

 - int `insert_position` (int p, int m)
- Sets the index for the cursor and mark.*

 - int `ivalue` () const
- Returns the widget text interpreted as a signed integer.*

 - int `mark` () const
- Gets the current selection mark.*

 - int `mark` (int m)
- Sets the current selection mark.*

 - int `maximum_size` () const
- Gets the maximum length of the input field in characters.*

 - void `maximum_size` (int m)
- Sets the maximum length of the input field in characters.*

 - int `position` () const
- Gets the position of the text cursor.*

 - int `position` (int p)
- Sets the cursor position and mark.*

 - int `position` (int p, int m)
- Gets the read-only state of the input field.*

 - int `readonly` () const
- Sets the read-only state of the input field.*

 - void `readonly` (int b)

- Sets the read-only state of the input field.*
- int `redo` ()
 - Redo previous undo operation.*
- int `replace` (int b, int e, const char *text, int ilen=0)
 - Deletes text from b to e and inserts the new string text.*
- void `resize` (int, int, int, int) `FL_OVERRIDE`
 - Changes the size of the widget.*
- int `shortcut` () const
 - Return the shortcut key associated with this widget.*
- void `shortcut` (int s)
 - Sets the shortcut key associated with this widget.*
- int `size` () const
 - Returns the number of bytes in `value()`.*
- void `size` (int W, int H)
 - Sets the width and height of this widget.*
- int `static_value` (const char *)
 - Changes the widget text.*
- int `static_value` (const char *, int)
 - Changes the widget text.*
- int `tab_nav` () const
 - Gets whether the Tab key causes focus navigation in multiline input fields or not.*
- void `tab_nav` (int val)
 - Sets whether the Tab key does focus navigation, or inserts tab characters into `FL_Multiline_Input`.*
- `FL_Color` `textcolor` () const
 - Gets the color of the text in the input field.*
- void `textcolor` (`FL_Color` n)
 - Sets the color of the text in the input field.*
- `FL_Font` `textfont` () const
 - Gets the font of the text in the input field.*
- void `textfont` (`FL_Font` s)
 - Sets the font of the text in the input field.*
- `FL_Fontsize` `textsize` () const
 - Gets the size of the text in the input field.*
- void `textsize` (`FL_Fontsize` s)
 - Sets the size of the text in the input field.*
- int `undo` ()
 - Undoes previous changes to the text buffer.*
- const char * `value` () const
 - Returns the text displayed in the widget.*
- int `value` (const char *)
 - Changes the widget text.*
- int `value` (const char *, int)
 - Changes the widget text.*
- int `value` (double value)
 - Changes the widget text to a floating point number ("%g").*
- int `value` (int value)
 - Changes the widget text to a signed integer number.*
- int `wrap` () const
 - Gets the word wrapping state of the input field.*
- void `wrap` (int b)
 - Sets the word wrapping state of the input field.*
- `~FL_Input` ()
 - Destroys the widget.*

Public Member Functions inherited from [FI_Widget](#)

- void [_clear_fullscreen](#) ()
- void [_set_fullscreen](#) ()
- void [activate](#) ()
Activates the widget.
- unsigned int [active](#) () const
Returns whether the widget is active.
- int [active_r](#) () const
Returns whether the widget and all of its parents are active.
- [FI_Align align](#) () const
Gets the label alignment.
- void [align](#) ([FI_Align alignment](#))
Sets the label alignment.
- long [argument](#) () const
Gets the current user data (long) argument that is passed to the callback function.
- void [argument](#) (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class [FI_Gl_Window](#) * [as_gl_window](#) ()
Returns an [FI_Gl_Window](#) pointer if this widget is an [FI_Gl_Window](#).
- virtual class [FI_Gl_Window](#) const * [as_gl_window](#) () const
- virtual [FI_Group](#) * [as_group](#) ()
Returns an [FI_Group](#) pointer if this widget is an [FI_Group](#).
- virtual [FI_Group](#) const * [as_group](#) () const
- virtual [FI_Window](#) * [as_window](#) ()
Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).
- virtual [FI_Window](#) const * [as_window](#) () const
- void [bind_deimage](#) ([FI_Image](#) *img)
Sets the image to use as part of the widget label when in the inactive state.
- void [bind_deimage](#) (int f)
Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.
- void [bind_image](#) ([FI_Image](#) *img)
Sets the image to use as part of the widget label when in the active state.
- void [bind_image](#) (int f)
Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- [FI_Boxtype box](#) () const
Gets the box type of the widget.
- void [box](#) ([FI_Boxtype new_box](#))
Sets the box type for the widget.
- [FI_Callback_p callback](#) () const
Gets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb, [FI_Callback_User_Data](#) *p, bool auto_free)
Sets the current callback function and managed user data for the widget.
- void [callback](#) ([FI_Callback](#) *cb, void *p)
Sets the current callback function and data for the widget.
- void [callback](#) ([FI_Callback0](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback1](#) *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int [changed](#) () const

- Checks if the widget value changed since the last callback.*

 - void `clear_active` ()

Marks the widget as inactive without sending events or changing focus.
- void `clear_changed` ()

Marks the value of the widget as unchanged.
- void `clear_damage` (uchar c=0)

Clears or sets the damage flags.
- void `clear_output` ()

Sets a widget to accept input.
- void `clear_visible` ()

Hides the widget.
- void `clear_visible_focus` ()

Disables keyboard focus navigation with this widget.
- `FL_Color` `color` () const

Gets the background color of the widget.
- void `color` (`FL_Color` bg)

Sets the background color of the widget.
- void `color` (`FL_Color` bg, `FL_Color` sel)

Sets the background and selection color of the widget.
- `FL_Color` `color2` () const

For back compatibility only.
- void `color2` (unsigned a)

For back compatibility only.
- int `contains` (const `FL_Widget` *w) const

Checks if w is a child of this widget.
- void `copy_label` (const char *new_label)

Sets the current label.
- void `copy_tooltip` (const char *text)

Sets the current tooltip text.
- `uchar` `damage` () const

Returns non-zero if `draw()` needs to be called.
- void `damage` (uchar c)

Sets the damage bits for the widget.
- void `damage` (uchar c, int x, int y, int w, int h)

Sets the damage bits for an area inside the widget.
- int `damage_resize` (int, int, int, int)

Internal use only.
- void `deactivate` ()

Deactivates the widget.
- `FL_Image` * `deimage` ()

Gets the image that is used as part of the widget label when in the inactive state.
- const `FL_Image` * `deimage` () const

Gets the image that is used as part of the widget label when in the inactive state.
- void `deimage` (`FL_Image` &img)

Sets the image to use as part of the widget label when in the inactive state.
- void `deimage` (`FL_Image` *img)

Sets the image to use as part of the widget label when in the inactive state.
- int `deimage_bound` () const

Returns whether the inactive image is managed by the widget.
- void `do_callback` (`FL_Callback_Reason` reason=`FL_REASON_UNKNOWN`)

Calls the widget callback function with default arguments.

- void `do_callback` (`FL_Widget` *widget, long arg, `FL_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with arbitrary arguments.
- void `do_callback` (`FL_Widget` *widget, void *arg=0, `FL_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with arbitrary arguments.
- void `draw_label` (int, int, int, int, `FL_Align`) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const
Gets the widget height.
- virtual void `hide` ()
Makes a widget invisible.
- int `horizontal_label_margin` ()
Get the spacing between the label and the horizontal edge of the widget.
- void `horizontal_label_margin` (int px)
Set the spacing between the label and the horizontal edge of the widget.
- `FL_Image` * `image` ()
Gets the image that is used as part of the widget label when in the active state.
- const `FL_Image` * `image` () const
Gets the image that is used as part of the widget label when in the active state.
- void `image` (`FL_Image` &img)
Sets the image to use as part of the widget label when in the active state.
- void `image` (`FL_Image` *img)
Sets the image to use as part of the widget label when in the active state.
- int `image_bound` () const
Returns whether the image is managed by the widget.
- int `inside` (const `FL_Widget` *wgt) const
Checks if this widget is a child of wgt.
- int `is_label_copied` () const
Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const
Gets the current label text.
- void `label` (const char *text)
Sets the current label pointer.
- void `label` (`FL_Labeltype` a, const char *b)
Shortcut to set the label text and type in one call.
- int `label_image_spacing` ()
Return the gap size between the label and the image.
- void `label_image_spacing` (int gap)
Set the gap between the label and the image in pixels.
- `FL_Color` `labelcolor` () const
Gets the label color.
- void `labelcolor` (`FL_Color` c)
Sets the label color.
- `FL_Font` `labelfont` () const
Gets the font to use.
- void `labelfont` (`FL_Font` f)
Sets the font to use.
- `FL_Fonsize` `labelsize` () const
Gets the font size in pixels.
- void `labelsize` (`FL_Fonsize` pix)
Sets the font size in pixels.
- `FL_Labeltype` `labeltype` () const

- Gets the label type.*

 - void `labeltype` (`Fl_Labeltype` a)
- Sets the label type.*

 - void `measure_label` (int &ww, int &hh) const

Sets width ww and height hh accordingly with the label size.
- bool `needs_keyboard` () const

Returns whether this widget needs a keyboard.
- void `needs_keyboard` (bool needs)

Sets whether this widget needs a keyboard.
- unsigned int `output` () const

Returns if a widget is used for output only.
- `Fl_Group` * `parent` () const

Returns a pointer to the parent widget.
- void `parent` (`Fl_Group` *p)

Internal use only - "for hacks only".
- void `position` (int X, int Y)

Repositions the window or widget.
- void `redraw` ()

Schedules the drawing of the widget.
- void `redraw_label` ()

Schedules the drawing of the label.
- `Fl_Color` `selection_color` () const

Gets the selection color.
- void `selection_color` (`Fl_Color` a)

Sets the selection color.
- void `set_active` ()

Marks the widget as active without sending events or changing focus.
- void `set_changed` ()

Marks the value of the widget as changed.
- void `set_output` ()

Sets a widget to output only.
- void `set_visible` ()

Makes the widget visible.
- void `set_visible_focus` ()

Enables keyboard focus navigation with this widget.
- int `shortcut_label` () const

Returns whether the widget's label uses '&' to indicate shortcuts.
- void `shortcut_label` (int value)

Sets whether the widget's label uses '&' to indicate shortcuts.
- virtual void `show` ()

Makes a widget visible.
- void `size` (int W, int H)

Changes the size of the widget.
- int `take_focus` ()

Gives the widget the keyboard focus.
- unsigned int `takeevents` () const

Returns if the widget is able to take events.
- int `test_shortcut` ()

Returns true if the widget's label contains the entered '&x' shortcut.
- const char * `tooltip` () const

Gets the current tooltip text.

- void **tooltip** (const char *text)
Sets the current tooltip text.
- **FL_Window** * **top_window** () const
Returns a pointer to the top-level window for the widget.
- **FL_Window** * **top_window_offset** (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- **uchar** **type** () const
Gets the widget type.
- void **type** (**uchar** t)
Sets the widget type.
- int **use_accents_menu** ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * **user_data** () const
Gets the user data for this widget.
- void **user_data** (**FL_Callback_User_Data** *v, bool auto_free)
Sets the user data for this widget.
- void **user_data** (void *v)
Sets the user data for this widget.
- int **vertical_label_margin** ()
Get the spacing between the label and the vertical edge of the widget.
- void **vertical_label_margin** (int px)
Set the spacing between the label and the vertical edge of the widget.
- unsigned int **visible** () const
Returns whether a widget is visible.
- unsigned int **visible_focus** () const
Checks whether this widget has a visible focus.
- void **visible_focus** (int v)
Modifies keyboard focus navigation.
- int **visible_r** () const
Returns whether a widget and all its parents are visible.
- int **w** () const
Gets the widget width.
- **FL_When** **when** () const
Returns the conditions under which the callback is called.
- void **when** (**uchar** i)
Sets the flags used to decide when a callback is called.
- **FL_Window** * **window** () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int **x** () const
Gets the widget position in its window.
- int **y** () const
Gets the widget position in its window.
- virtual **~FL_Widget** ()
Destroys the widget.

Additional Inherited Members

Static Public Member Functions inherited from [Fl_Widget](#)

- static void [default_callback](#) ([Fl_Widget](#) *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int [label_shortcut](#) (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int [test_shortcut](#) (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Static Public Attributes inherited from [Fl_Input](#)

- static const char * [copy_menu_text](#) = "Copy"
[this text may be customized at run-time]
- static const char * [cut_menu_text](#) = "Cut"
[this text may be customized at run-time]
- static const char * [paste_menu_text](#) = "Paste"
[this text may be customized at run-time]

Protected Types inherited from [Fl_Widget](#)

- enum {
[INACTIVE](#) = 1<<0 , [INVISIBLE](#) = 1<<1 , [OUTPUT](#) = 1<<2 , [NOBORDER](#) = 1<<3 ,
[FORCE_POSITION](#) = 1<<4 , [NON_MODAL](#) = 1<<5 , [SHORTCUT_LABEL](#) = 1<<6 , [CHANGED](#) = 1<<7
, [OVERRIDE](#) = 1<<8 , [VISIBLE_FOCUS](#) = 1<<9 , [COPIED_LABEL](#) = 1<<10 , [CLIP_CHILDREN](#) = 1<<11
, [MENU_WINDOW](#) = 1<<12 , [TOOLTIP_WINDOW](#) = 1<<13 , [MODAL](#) = 1<<14 , [NO_OVERLAY](#) = 1<<15
, [GROUP_RELATIVE](#) = 1<<16 , [COPIED_TOOLTIP](#) = 1<<17 , [FULLSCREEN](#) = 1<<18 , [MAC_USE_ACCENTS_MENU](#)
= 1<<19 ,
[NEEDS_KEYBOARD](#) = 1<<20 , [IMAGE_BOUND](#) = 1<<21 , [DEIMAGE_BOUND](#) = 1<<22 ,

[USERFLAG1](#) = 1<<31 }
flags possible values enumeration.

Protected Member Functions inherited from [Fl_Input](#)

- void [draw](#) () [FL_OVERRIDE](#)
Draws the widget.
- int [handle_key](#) ()
Handles a keystroke.
- int [handle_rmb](#) ()
Handle right mouse button down events.

Protected Member Functions inherited from [Fl_Input_](#)

- int [apply_undo](#) ()
Apply the current undo/redo operation.
- void [drawtext](#) (int, int, int, int)
Draws the text in the passed bounding box.
- void [drawtext](#) (int, int, int, int, bool draw_active)
Draws the text in the passed bounding box.

- void **handle_mouse** (int, int, int, int, int keepmark=0)
Handles mouse clicks and mouse moves.
- int **handletext** (int e, int, int, int, int)
Handles all kinds of text field related events.
- int **line_end** (int i) const
Finds the end of a line.
- int **line_start** (int i) const
Finds the start of a line.
- int **linesPerPage** ()
- void **maybe_do_callback** (FI_Callback_Reason reason=FL_REASON_UNKNOWN)
- int **up_down_position** (int, int keepmark=0)
Moves the cursor to the column given by up_down_pos.
- int **word_end** (int i) const
Finds the end of a word.
- int **word_start** (int i) const
Finds the start of a word.
- int **xscroll** () const
- int **yscroll** () const
- void **yscroll** (int yOffset)

Protected Member Functions inherited from FI_Widget

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** (FI_Boxtype t, FI_Color c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** (FI_Boxtype t, int x, int y, int w, int h, FI_Color c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const
Draws a focus rectangle around the widget.
- void **draw_focus** (FI_Boxtype t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void **draw_focus** (FI_Boxtype t, int x, int y, int w, int h, FI_Color bg) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- FI_Widget (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)

Internal use only.

- void [x](#) (int v)

Internal use only.

- void [y](#) (int v)

Internal use only.

11.94.1 Detailed Description

This widget displays a piece of text.

When you set the [value\(\)](#) , [Fl_Output](#) does a strcpy() to its own storage, which is useful for program-generated values. The user may select portions of the text using the mouse and paste the contents into other fields or programs.

Figure 11.34 [Fl_Output](#)

There is a single subclass, [Fl_Multiline_Output](#), which allows you to display multiple lines of text. [Fl_Multiline_Output](#) does not provide scroll bars. If a more complete text editing widget is needed, use [Fl_Text_Display](#) instead.

The text may contain any characters except \0, and will correctly display anything, using ^X notation for unprintable control characters and \nnn notation for unprintable characters with the high bit set. It assumes the font can draw any characters in the ISO-Latin1 character set.

11.94.2 Constructor & Destructor Documentation

11.94.2.1 [Fl_Output\(\)](#)

```
Fl_Output::Fl_Output (
    int X,
    int Y,
    int W,
    int H,
    const char * l = 0)
```

Creates a new [Fl_Output](#) widget using the given position, size, and label string.

The default boxtype is [FL_DOWN_BOX](#).

Inherited destructor destroys the widget and any value associated with it.

The documentation for this class was generated from the following files:

- [Fl_Output.H](#)
- [Fl_Input.cxx](#)

11.95 FL_Overlay_Window Class Reference

This window provides double buffering and also the ability to draw the "overlay" which is another picture placed on top of the main image.

```
#include <FL_Overlay_Window.H>
```

Inheritance diagram for FL_Overlay_Window:

Public Member Functions

- `FL_Overlay_Window * as_overlay_window ()` **FL_OVERRIDE**
Return non-null if this is an *FL_Overlay_Window* object.
- `int can_do_overlay ()`
Returns non-zero if there's hardware overlay support.
- `virtual void draw_overlay ()=0`
You must subclass *FL_Overlay_Window* and provide this method.
- `void flush ()` **FL_OVERRIDE**
Forces the window to be drawn, this window is also made current and calls *draw()*.
- `void hide ()` **FL_OVERRIDE**
Makes a widget invisible.
- `void redraw_overlay ()`
Call this to indicate that the overlay data has changed and needs to be redrawn.
- `void resize (int, int, int, int)` **FL_OVERRIDE**
Changes the size or position of the widget.
- `void show ()` **FL_OVERRIDE**
Makes a widget visible.
- `void show (int a, char **b)`
Same as *FL_Window::show(int a, char **b)*
- `~FL_Overlay_Window ()`
Destroys the window and all child widgets.

Public Member Functions inherited from FL_Double_Window

- `FL_Double_Window * as_double_window ()` **FL_OVERRIDE**
Return non-null if this is an *FL_Double_Window* object.
- `FL_Double_Window (int W, int H, const char *l=0)`
Creates a new *FL_Double_Window* widget using the given position, size, and label (title) string.
- `FL_Double_Window (int X, int Y, int W, int H, const char *l=0)`
See *FL_Double_Window::FL_Double_Window(int w, int h, const char *label = 0)*
- `void show (int a, char **b)`
Same as *FL_Window::show(int a, char **b)*
- `~FL_Double_Window ()`
The destructor also deletes all the children.

Public Member Functions inherited from [FI_Window](#)

- void [allow_expand_outside_parent](#) ()
Allow this subwindow to expand outside the area of its parent window.
- [FI_Window](#) const * [as_window](#) () const [FL_OVERRIDE](#)
- [FI_Window](#) * [as_window](#) () [FL_OVERRIDE](#)
Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).
- unsigned int **border** () const
Returns whether the window possesses a border.
- void [border](#) (int b)
Sets whether or not the window manager border is around the window.
- void [clear_border](#) ()
Fast inline function to turn the window manager border off.
- void [clear_modal_states](#) ()
Clears the "modal" flags and converts a "modal" or "non-modal" window back into a "normal" window.
- void **copy_label** (const char *a)
Sets the window titlebar label to a copy of a character string.
- void [cursor](#) (const [FI_RGB_Image](#) *, int, int)
Changes the cursor for this window using the provided image as cursor's shape.
- void [cursor](#) ([FI_Cursor](#) c, [FI_Color](#), [FI_Color](#)=[FL_WHITE](#))
For back compatibility only.
- void [cursor](#) ([FI_Cursor](#))
Changes the cursor for this window.
- int [decorated_h](#) () const
Returns the window height including any window title bar and any frame added by the window manager.
- int [decorated_w](#) () const
Returns the window width including any frame added by the window manager.
- void [default_cursor](#) ([FI_Cursor](#) c, [FI_Color](#), [FI_Color](#)=[FL_WHITE](#))
For back compatibility only.
- void [default_cursor](#) ([FI_Cursor](#))
Sets the default window cursor.
- void **draw_backdrop** ()
Draw the background image if one is set and is aligned inside.
- [FI_Window](#) (int w, int h, const char *title=0)
Creates a window from the given width w, height h, and title.
- [FI_Window](#) (int x, int y, int w, int h, const char *title=0)
Creates a window from the given position (x, y), size (w, h) and title.
- void [free_position](#) ()
Undoes the effect of a previous [resize\(\)](#) or [show\(\)](#) so that the next time [show\(\)](#) is called the window manager is free to position the window.
- void [fullscreen](#) ()
Makes the window completely fill one or more screens, without any window manager border visible.
- unsigned int **fullscreen_active** () const
Returns non zero if [FULLSCREEN](#) flag is set, 0 otherwise.
- void **fullscreen_off** ()
Turns off any side effects of [fullscreen\(\)](#)
- void **fullscreen_off** (int X, int Y, int W, int H)
Turns off any side effects of [fullscreen\(\)](#) and does [resize\(x,y,w,h\)](#).
- void [fullscreen_screens](#) (int top, int bottom, int left, int right)
Sets which screens should be used when this window is in fullscreen mode.
- [uchar](#) [get_size_range](#) (int *minw, int *minh, int *maxw=NULL, int *maxh=NULL, int *dw=NULL, int *dh=NULL, int *aspect=NULL)

- Gets the allowable range to which the user can resize this window.*

 - int **handle** (int) **FL_OVERRIDE**
- Handles the specified event.*

 - void **hide** () **FL_OVERRIDE**
- Removes the window from the screen.*

 - void **hotspot** (const **FL_Widget** &p, int offscreen=0)

*See void **FL_Window::hotspot**(int x, int y, int offscreen = 0)*
- void **hotspot** (const **FL_Widget** *, int offscreen=0)

*See void **FL_Window::hotspot**(int x, int y, int offscreen = 0)*
- void **hotspot** (int x, int y, int offscreen=0)

Positions the window so that the mouse is pointing at the given position, or at the center of the given widget, which may be the window itself.
- const void * **icon** () const

Gets the current icon window target dependent data.
- void **icon** (const **FL_RGB_Image** *)

Sets or resets a single window icon.
- void **icon** (const void *ic)

Platform-specific method to set the window icon usable on Windows and X11 only.
- void **iconize** ()

Iconifies the window.
- const char * **iconlabel** () const

*See void **FL_Window::iconlabel**(const char*)*
- void **iconlabel** (const char *)

Sets the icon label.
- void **icons** (const **FL_RGB_Image** *[, int])

Sets the window icons.
- void **icons** (HICON big_icon, HICON small_icon)

Sets the window icons using HICON handles (Windows platform only).
- const char * **label** () const

*See void **FL_Window::label**(const char*)*
- void **label** (const char *)

Sets the window title bar label.
- void **label** (const char *label, const char *iconlabel)

Sets the icon label.
- void **make_current** ()

Sets things up so that the drawing functions in <FL/fl_draw.H> will go into this window.
- void **maximize** ()

Maximizes a top-level window to its current screen.
- unsigned int **maximize_active** () const

Returns whether the window is currently maximized.
- unsigned int **menu_window** () const

Returns true if this window is a menu window.
- unsigned int **modal** () const

Returns true if this window is modal.
- unsigned int **non_modal** () const

Returns true if this window is modal or non-modal.
- **fl_uintptr_t** **os_id** ()

Returns a platform-specific identification of a shown window, or 0 if not shown.
- unsigned int **override** () const

Returns non zero if OVERRIDE flag is set, 0 otherwise.
- void **resize** (int X, int Y, int W, int H) **FL_OVERRIDE**

- Changes the size and position of the window.*

 - int `screen_num` ()

The number of the screen containing the mapped window.
 - void `screen_num` (int `screen_num`)

Set the number of the screen where to map the window.
 - void `set_menu_window` ()

Marks the window as a menu window.
 - void `set_modal` ()

A "modal" window, when `shown()`, will prevent any events from being delivered to other windows in the same program, and will also remain on top of the other windows (if the X window manager supports the "transient for" property).
 - void `set_non_modal` ()

A "non-modal" window (terminology borrowed from Microsoft Windows) acts like a `modal()` one in that it remains on top, but it has no effect on event delivery.
 - void `set_override` ()

Activates the flags `NOBORDER|OVERRIDE`.
 - void `set_tooltip_window` ()

Marks the window as a tooltip window.
 - const `FI_Image` * `shape` ()

Returns the image controlling the window shape or NULL.
 - void `shape` (const `FI_Image` &b)

Set the window's shape with an `FI_Image`.
 - void `shape` (const `FI_Image` *img)

Assigns a non-rectangular shape to the window.
 - void `show` () `FL_OVERRIDE`

Puts the window on the screen.
 - void `show` (int argc, char **argv)

Puts the window on the screen with `show()` and parses command-line arguments.
 - int `shown` ()

Returns non-zero if `show()` has been called (but not `hide()`).
 - void `size_range` (int minw, int minh, int maxw=0, int maxh=0, int dw=0, int dh=0, int aspect=0)

Sets the allowable range to which the user can resize this window.
 - unsigned int `tooltip_window` () const

Returns true if this window is a tooltip window.
 - void `un_maximize` ()

Returns a previously maximized top-level window to its previous size.
 - void `wait_for_expose` ()

Waits for the window to be displayed after calling `show()`.
 - int `x_root` () const

Gets the x position of the window on the screen.
 - const char * `xclass` () const

Returns the xclass for this window, or a default.
 - void `xclass` (const char *c)

Sets the xclass for this window.
 - int `y_root` () const

Gets the y position of the window on the screen.
 - virtual `~FI_Window` ()

The destructor also deletes all the children.

Public Member Functions inherited from FL_Group

- [FL_Widget](#) *[_ddfdesign_kludge](#) ()
This is for forms compatibility only.
- void **add** ([FL_Widget](#) &)
The widget is removed from its current group (if any) and then added to the end of this group.
- void **add** ([FL_Widget](#) *o)
See void [FL_Group::add\(FL_Widget &w\)](#)
- void **add_resizable** ([FL_Widget](#) &o)
Adds a widget to the group and makes it the resizable widget.
- [FL_Widget](#) *const * **array** () const
Returns a pointer to the array of children.
- [FL_Group](#) const * **as_group** () const [FL_OVERRIDE](#)
- [FL_Group](#) * **as_group** () [FL_OVERRIDE](#)
Returns an [FL_Group](#) pointer if this widget is an [FL_Group](#).
- void **begin** ()
Sets the current group so you can build the widget tree by just constructing the widgets.
- [FL_Widget](#) * **child** (int n) const
Returns the n'th child.
- int **children** () const
Returns how many child widgets the group has.
- void **clear** ()
Deletes all child widgets from memory recursively.
- unsigned int **clip_children** ()
Returns the current clipping mode.
- void **clip_children** (int c)
Controls whether the group widget clips the drawing of child widgets to its bounding box.
- virtual int **delete_child** (int n)
*Removes the widget at *index* from the group and deletes it.*
- void **end** ()
*Exactly the same as *current(this->parent())*.*
- int **find** (const [FL_Widget](#) &o) const
*See int [FL_Group::find\(const FL_Widget *w\)](#) const.*
- int **find** (const [FL_Widget](#) *) const
Searches the child array for the widget and returns the index.
- [FL_Group](#) (int, int, int, int, const char * = 0)
Creates a new [FL_Group](#) widget using the given position, size, and label string.
- void **focus** ([FL_Widget](#) *W)
- void **forms_end** ()
This is for forms compatibility only.
- void **init_sizes** ()
Resets the internal array of widget sizes and positions.
- void **insert** ([FL_Widget](#) &, int i)
The widget is removed from its current group (if any) and then inserted into this group.
- void **insert** ([FL_Widget](#) &o, [FL_Widget](#) *before)
*This does *insert(w, find(before))*.*
- void **remove** ([FL_Widget](#) &)
Removes a widget from the group but does not delete it.
- void **remove** ([FL_Widget](#) *o)
Removes the widget o from the group.
- void **remove** (int index)

- Removes the widget at `index` from the group but does not delete it.*

 - `FI_Widget * resizable () const`

Returns the group's resizable widget.

 - `void resizable (FI_Widget &o)`
- Sets the group's resizable widget.*
- `void resizable (FI_Widget *o)`
- The resizable widget defines both the resizing box and the resizing behavior of the group and its children.*
- `virtual ~FI_Group ()`
- The destructor also deletes all the children.*

Public Member Functions inherited from `FI_Widget`

- `void _clear_fullscreen ()`
 - `void _set_fullscreen ()`
 - `void activate ()`
- Activates the widget.*
- `unsigned int active () const`
- Returns whether the widget is active.*
- `int active_r () const`
- Returns whether the widget and all of its parents are active.*
- `FI_Align align () const`
- Gets the label alignment.*
- `void align (FI_Align alignment)`
- Sets the label alignment.*
- `long argument () const`
- Gets the current user data (long) argument that is passed to the callback function.*
- `void argument (long v)`
- Sets the current user data (long) argument that is passed to the callback function.*
- `virtual class FI_GL_Window * as_gl_window ()`
- Returns an `FI_GL_Window` pointer if this widget is an `FI_GL_Window`.*
- `virtual class FI_GL_Window const * as_gl_window () const`
- `void bind_deimage (FI_Image *img)`
- Sets the image to use as part of the widget label when in the inactive state.*
- `void bind_deimage (int f)`
- Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.*
- `void bind_image (FI_Image *img)`
- Sets the image to use as part of the widget label when in the active state.*
- `void bind_image (int f)`
- Bind the image to the widget, so the widget will delete the image when it is no longer needed.*
- `FI_Boxtype box () const`
- Gets the box type of the widget.*
- `void box (FI_Boxtype new_box)`
- Sets the box type for the widget.*
- `FI_Callback_p callback () const`
- Gets the current callback function for the widget.*
- `void callback (FI_Callback *cb)`
- Sets the current callback function for the widget.*
- `void callback (FI_Callback *cb, FI_Callback_User_Data *p, bool auto_free)`
- Sets the current callback function and managed user data for the widget.*
- `void callback (FI_Callback *cb, void *p)`
- Sets the current callback function and data for the widget.*

- void `callback` (`FL_Callback0` *cb)
Sets the current callback function for the widget.
- void `callback` (`FL_Callback1` *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int `changed` () const
Checks if the widget value changed since the last callback.
- void `clear_active` ()
Marks the widget as inactive without sending events or changing focus.
- void `clear_changed` ()
Marks the value of the widget as unchanged.
- void `clear_damage` (`uchar` c=0)
Clears or sets the damage flags.
- void `clear_output` ()
Sets a widget to accept input.
- void `clear_visible` ()
Hides the widget.
- void `clear_visible_focus` ()
Disables keyboard focus navigation with this widget.
- `FL_Color` `color` () const
Gets the background color of the widget.
- void `color` (`FL_Color` bg)
Sets the background color of the widget.
- void `color` (`FL_Color` bg, `FL_Color` sel)
Sets the background and selection color of the widget.
- `FL_Color` `color2` () const
For back compatibility only.
- void `color2` (unsigned a)
For back compatibility only.
- int `contains` (const `FL_Widget` *w) const
Checks if w is a child of this widget.
- void `copy_label` (const char *new_label)
Sets the current label.
- void `copy_tooltip` (const char *text)
Sets the current tooltip text.
- `uchar` `damage` () const
Returns non-zero if `draw()` needs to be called.
- void `damage` (`uchar` c)
Sets the damage bits for the widget.
- void `damage` (`uchar` c, int x, int y, int w, int h)
Sets the damage bits for an area inside the widget.
- int `damage_resize` (int, int, int, int)
Internal use only.
- void `deactivate` ()
Deactivates the widget.
- `FL_Image` * `deimage` ()
Gets the image that is used as part of the widget label when in the inactive state.
- const `FL_Image` * `deimage` () const
Gets the image that is used as part of the widget label when in the inactive state.
- void `deimage` (`FL_Image` &img)
Sets the image to use as part of the widget label when in the inactive state.
- void `deimage` (`FL_Image` *img)

- Sets the image to use as part of the widget label when in the inactive state.*

 - `int deimage_bound () const`

Returns whether the inactive image is managed by the widget.
- `void do_callback (FL_Callback_Reason reason=FL_REASON_UNKNOWN)`

Calls the widget callback function with default arguments.
- `void do_callback (FL_Widget *widget, long arg, FL_Callback_Reason reason=FL_REASON_UNKNOWN)`

Calls the widget callback function with arbitrary arguments.
- `void do_callback (FL_Widget *widget, void *arg=0, FL_Callback_Reason reason=FL_REASON_UNKNOWN)`

Calls the widget callback function with arbitrary arguments.
- `void draw_label (int, int, int, int, FL_Align) const`

Draws the label in an arbitrary bounding box with an arbitrary alignment.
- `int h () const`

Gets the widget height.
- `int horizontal_label_margin ()`

Get the spacing between the label and the horizontal edge of the widget.
- `void horizontal_label_margin (int px)`

Set the spacing between the label and the horizontal edge of the widget.
- `FL_Image * image ()`

Gets the image that is used as part of the widget label when in the active state.
- `const FL_Image * image () const`

Gets the image that is used as part of the widget label when in the active state.
- `void image (FL_Image &img)`

Sets the image to use as part of the widget label when in the active state.
- `void image (FL_Image *img)`

Sets the image to use as part of the widget label when in the active state.
- `int image_bound () const`

Returns whether the image is managed by the widget.
- `int inside (const FL_Widget *wgt) const`

Checks if this widget is a child of wgt.
- `int is_label_copied () const`

Returns whether the current label was assigned with `copy_label()`.
- `const char * label () const`

Gets the current label text.
- `void label (const char *text)`

Sets the current label pointer.
- `void label (FL_Labeltype a, const char *b)`

Shortcut to set the label text and type in one call.
- `int label_image_spacing ()`

Return the gap size between the label and the image.
- `void label_image_spacing (int gap)`

Set the gap between the label and the image in pixels.
- `FL_Color labelcolor () const`

Gets the label color.
- `void labelcolor (FL_Color c)`

Sets the label color.
- `FL_Font labelfont () const`

Gets the font to use.
- `void labelfont (FL_Font f)`

Sets the font to use.
- `FL_Fonsize labelsiz () const`

Gets the font size in pixels.

- void [labelsize](#) ([Fl_Fontsize](#) pix)
Sets the font size in pixels.
- [Fl_Labeltype](#) [labeltype](#) () const
Gets the label type.
- void [labeltype](#) ([Fl_Labeltype](#) a)
Sets the label type.
- void [measure_label](#) (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- bool [needs_keyboard](#) () const
Returns whether this widget needs a keyboard.
- void [needs_keyboard](#) (bool needs)
Sets whether this widget needs a keyboard.
- unsigned int [output](#) () const
Returns if a widget is used for output only.
- [Fl_Group](#) * [parent](#) () const
Returns a pointer to the parent widget.
- void [parent](#) ([Fl_Group](#) *p)
Internal use only - "for hacks only".
- void [position](#) (int X, int Y)
Repositions the window or widget.
- void [redraw](#) ()
Schedules the drawing of the widget.
- void [redraw_label](#) ()
Schedules the drawing of the label.
- [Fl_Color](#) [selection_color](#) () const
Gets the selection color.
- void [selection_color](#) ([Fl_Color](#) a)
Sets the selection color.
- void [set_active](#) ()
Marks the widget as active without sending events or changing focus.
- void [set_changed](#) ()
Marks the value of the widget as changed.
- void [set_output](#) ()
Sets a widget to output only.
- void [set_visible](#) ()
Makes the widget visible.
- void [set_visible_focus](#) ()
Enables keyboard focus navigation with this widget.
- int [shortcut_label](#) () const
Returns whether the widget's label uses '&' to indicate shortcuts.
- void [shortcut_label](#) (int value)
Sets whether the widget's label uses '&' to indicate shortcuts.
- void [size](#) (int W, int H)
Changes the size of the widget.
- int [take_focus](#) ()
Gives the widget the keyboard focus.
- unsigned int [takeevents](#) () const
Returns if the widget is able to take events.
- int [test_shortcut](#) ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * [tooltip](#) () const

- Gets the current tooltip text.*
- void **tooltip** (const char *text)
 - Sets the current tooltip text.*
- **Fl_Window** * **top_window** () const
 - Returns a pointer to the top-level window for the widget.*
- **Fl_Window** * **top_window_offset** (int &xoff, int &yoff) const
 - Finds the x/y offset of the current widget relative to the top-level window.*
- **uchar** **type** () const
 - Gets the widget type.*
- void **type** (**uchar** t)
 - Sets the widget type.*
- int **use_accents_menu** ()
 - Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.*
- void * **user_data** () const
 - Gets the user data for this widget.*
- void **user_data** (**Fl_Callback_User_Data** *v, bool auto_free)
 - Sets the user data for this widget.*
- void **user_data** (void *v)
 - Sets the user data for this widget.*
- int **vertical_label_margin** ()
 - Get the spacing between the label and the vertical edge of the widget.*
- void **vertical_label_margin** (int px)
 - Set the spacing between the label and the vertical edge of the widget.*
- unsigned int **visible** () const
 - Returns whether a widget is visible.*
- unsigned int **visible_focus** () const
 - Checks whether this widget has a visible focus.*
- void **visible_focus** (int v)
 - Modifies keyboard focus navigation.*
- int **visible_r** () const
 - Returns whether a widget and all its parents are visible.*
- int **w** () const
 - Gets the widget width.*
- **Fl_When** **when** () const
 - Returns the conditions under which the callback is called.*
- void **when** (**uchar** i)
 - Sets the flags used to decide when a callback is called.*
- **Fl_Window** * **window** () const
 - Returns a pointer to the nearest parent window up the widget hierarchy.*
- int **x** () const
 - Gets the widget position in its window.*
- int **y** () const
 - Gets the widget position in its window.*
- virtual **~Fl_Widget** ()
 - Destroys the widget.*

Protected Member Functions

- **Fl_Overlay_Window** (int W, int H, const char *l=0)
 - See **Fl_Overlay_Window::Fl_Overlay_Window**(int X, int Y, int W, int H, const char *l=0)*
- **Fl_Overlay_Window** (int X, int Y, int W, int H, const char *l=0)
 - Creates a new **Fl_Overlay_Window** widget using the given position, size, and label (title) string.*

Protected Member Functions inherited from FI_Window

- void [default_size_range](#) ()
Protected method to calculate the default size range of a window.
- void [draw](#) () [FL_OVERRIDE](#)
Draws the widget.
- int [force_position](#) () const
Returns the internal state of the window's `FORCE_POSITION` flag.
- void [force_position](#) (int force)
Sets an internal flag that tells FLTK and the window manager to honor position requests.
- void [free_icons](#) ()
Deletes all icons previously attached to the window.
- int [is_resizable](#) ()
Protected method to determine whether a window is resizable.

Protected Member Functions inherited from FI_Group

- [FI_Rect](#) * [bounds](#) ()
Returns the internal array of widget sizes and positions.
- void [draw_child](#) ([FI_Widget](#) &widget) const
Forces a child to redraw.
- void [draw_children](#) ()
Draws all children of the group.
- void [draw_outside_label](#) (const [FI_Widget](#) &widget) const
Parents normally call this to draw outside labels of child widgets.
- virtual int [on_insert](#) ([FI_Widget](#) *, int)
Allow derived groups to act when a widget is added as a child.
- virtual int [on_move](#) (int, int)
Allow derived groups to act when a widget is moved within the group.
- virtual void [on_remove](#) (int)
Allow derived groups to act when a child widget is removed from the group.
- int * [sizes](#) ()
Returns the internal array of widget sizes and positions.
- void [update_child](#) ([FI_Widget](#) &widget) const
Draws a child only if it needs it.

Protected Member Functions inherited from FI_Widget

- void [clear_flag](#) (unsigned int c)
Clears a flag in the flags mask.
- void [draw_backdrop](#) () const
If `FL_ALIGN_IMAGE_BACKDROP` is set, the image or deimage will be drawn.
- void [draw_box](#) () const
Draws the widget box according its box style.
- void [draw_box](#) ([FI_Boxtype](#) t, [FI_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void [draw_box](#) ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void [draw_focus](#) () const
Draws a focus rectangle around the widget.
- void [draw_focus](#) ([FI_Boxtype](#) t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.

- void `draw_focus` (`FI_Boxtype` t, int x, int y, int w, int h, `FI_Color` bg) const
Draws a focus box for the widget at the given position and size.
- void `draw_label` () const
Draws the widget's label at the defined label position.
- void `draw_label` (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- `FI_Widget` (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int `flags` () const
Gets the widget flags mask.
- void `h` (int v)
Internal use only.
- void `set_flag` (unsigned int c)
Sets a flag in the flags mask.
- void `w` (int v)
Internal use only.
- void `x` (int v)
Internal use only.
- void `y` (int v)
Internal use only.

Additional Inherited Members

Public Types inherited from `FI_Window`

- typedef struct HICON__ * `HICON`

Static Public Member Functions inherited from `FI_Window`

- static `FI_Window` * `current` ()
Returns the last window that was made current.
- static void `default_callback` (`FI_Window` *, void *v)
Back compatibility: Sets the default callback v for win to call on close event.
- static void `default_icon` (const `FI_RGB_Image` *)
Sets a single default window icon.
- static void `default_icons` (const `FI_RGB_Image` *[], int)
Sets the default window icons.
- static void `default_icons` (HICON big_icon, HICON small_icon)
Sets the default window icons (Windows platform only).
- static const char * `default_xclass` ()
Returns the default xclass.
- static void `default_xclass` (const char *)
Sets the default window xclass.
- static bool `is_a_rescale` ()
Returns true when a window is being rescaled.
- static char `show_next_window_iconic` ()
Returns the static flag whether the next window should be opened iconified.
- static void `show_next_window_iconic` (char stat)
Sets a static flag whether the next window should be opened iconified.

Static Public Member Functions inherited from Fl_Group

- static [Fl_Group](#) * [current](#) ()
Returns the currently active group.
- static void [current](#) ([Fl_Group](#) *g)
Sets the current group.

Static Public Member Functions inherited from Fl_Widget

- static void [default_callback](#) ([Fl_Widget](#) *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int [label_shortcut](#) (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int [test_shortcut](#) (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from Fl_Widget

- enum {
[INACTIVE](#) = 1<<0 , [INVISIBLE](#) = 1<<1 , [OUTPUT](#) = 1<<2 , [NOBORDER](#) = 1<<3 ,

[USERFLAG1](#) = 1<<31 }
flags possible values enumeration.

Static Protected Attributes inherited from Fl_Window

- static [Fl_Window](#) * [current_](#)
Stores the last window that was made current.

11.95.1 Detailed Description

This window provides double buffering and also the ability to draw the "overlay" which is another picture placed on top of the main image.

The overlay is designed to be a rapidly-changing but simple graphic such as a mouse selection box. [Fl_Overlay_Window](#) uses the overlay planes provided by your graphics hardware if they are available.

If no hardware support is found the overlay is simulated by drawing directly into the on-screen copy of the double-buffered window, and "erased" by copying the backbuffer over it again. This means the overlay will blink if you change the image in the window.

11.95.2 Constructor & Destructor Documentation

11.95.2.1 Fl_Overlay_Window()

```
Fl_Overlay_Window::Fl_Overlay_Window (
    int X,
    int Y,
    int W,
```

```
int H,
const char * l = 0) [protected]
```

Creates a new [Fl_Overlay_Window](#) widget using the given position, size, and label (title) string. If the positions (x,y) are not given, then the window manager will choose them.

11.95.3 Member Function Documentation

11.95.3.1 [as_overlay_window\(\)](#)

```
Fl\_Overlay\_Window * Fl\_Overlay\_Window::as\_overlay\_window () [inline], [virtual]
```

Return non-null if this is an [Fl_Overlay_Window](#) object.

Reimplemented from [Fl_Window](#).

11.95.3.2 [draw_overlay\(\)](#)

```
virtual void Fl\_Overlay\_Window::draw\_overlay () [pure virtual]
```

You must subclass [Fl_Overlay_Window](#) and provide this method.

It is just like a [draw\(\)](#) method, except it draws the overlay. The overlay will have already been "cleared" when this is called. You can use any of the routines described in [<FL/fl_draw.H>](#).

11.95.3.3 [flush\(\)](#)

```
void Fl\_Overlay\_Window::flush () [virtual]
```

Forces the window to be drawn, this window is also made current and calls [draw\(\)](#).

Reimplemented from [Fl_Double_Window](#).

11.95.3.4 [hide\(\)](#)

```
void Fl\_Overlay\_Window::hide () [virtual]
```

Makes a widget invisible.

See also

[show\(\)](#), [visible\(\)](#), [visible_r\(\)](#)

Reimplemented from [Fl_Double_Window](#).

11.95.3.5 [redraw_overlay\(\)](#)

```
void Fl\_Overlay\_Window::redraw\_overlay ()
```

Call this to indicate that the overlay data has changed and needs to be redrawn.

The overlay will be clear until the first time this is called, so if you want an initial display you must call this after calling [show\(\)](#).

11.95.3.6 [resize\(\)](#)

```
void Fl\_Overlay\_Window::resize (
    int x,
    int y,
    int w,
    int h) [virtual]
```

Changes the size or position of the widget.

This is a virtual function so that the widget may implement its own handling of resizing. The default version does *not* call the [redraw\(\)](#) method, but instead relies on the parent widget to do so because the parent may know a faster way to update the display, such as scrolling from the old position.

Some window managers under X11 call [resize\(\)](#) a lot more often than needed. Please verify that the position or size of a widget did actually change before doing any extensive calculations.

position(X, Y) is a shortcut for [resize\(X, Y, w\(\), h\(\)\)](#), and size(W, H) is a shortcut for [resize\(x\(\), y\(\), W, H\)](#).

Parameters

in	<i>x,y</i>	new position relative to the parent window
in	<i>w,h</i>	new size

See also

[position\(int,int\)](#), [size\(int,int\)](#)

Reimplemented from [Fl_Double_Window](#).

11.95.3.7 show()

```
void Fl_Overlay_Window::show () [virtual]
```

Makes a widget visible.

An invisible widget never gets redrawn and does not get keyboard or mouse events, but can receive a few other events like FL_SHOW.

The [visible\(\)](#) method returns true if the widget is set to be visible. The [visible_r\(\)](#) method returns true if the widget and all of its parents are visible. A widget is only visible if [visible\(\)](#) is true on it *and all of its parents*.

Changing it will send FL_SHOW or FL_HIDE events to the widget. *Do not change it if the parent is not visible, as this will send false FL_SHOW or FL_HIDE events to the widget.* [redraw\(\)](#) is called if necessary on this or the parent.

[hide\(\)](#), [visible\(\)](#), [visible_r\(\)](#)

Reimplemented from [Fl_Double_Window](#).

The documentation for this class was generated from the following files:

- Fl_Overlay_Window.H
- Fl_Overlay_Window.cxx

11.96 Fl_Pack Class Reference

This widget was designed to add the functionality of compressing and aligning widgets.

```
#include <Fl_Pack.H>
```

Inheritance diagram for Fl_Pack:

**Public Types**

- enum { **VERTICAL** = 0 , **HORIZONTAL** = 1 }

Public Member Functions

- void [clear](#) ()
Deletes all child widgets with [Fl_Group::clear\(\)](#).
- [Fl_Pack](#) (int X, int Y, int W, int H, const char *L=0)
Creates a new [Fl_Pack](#) widget using the given position, size, and label string.
- [uchar horizontal](#) () const

- *Returns non-zero if [FL_Pack](#) alignment is horizontal.*
- void [resize](#) (int X, int Y, int W, int H) [FL_OVERRIDE](#)
Override [FL_Group](#) resize behavior.
- int **spacing** () const
Gets the number of extra pixels of blank space that are added between the children.
- void **spacing** (int i)
Sets the number of extra pixels of blank space that are added between the children.

Public Member Functions inherited from [FL_Group](#)

- [FL_Widget](#) *& **_ddfdesign_kludge** ()
This is for forms compatibility only.
- void **add** ([FL_Widget](#) &)
The widget is removed from its current group (if any) and then added to the end of this group.
- void **add** ([FL_Widget](#) *o)
See void [FL_Group::add\(FL_Widget &w\)](#)
- void **add_resizable** ([FL_Widget](#) &o)
Adds a widget to the group and makes it the resizable widget.
- [FL_Widget](#) *const * **array** () const
Returns a pointer to the array of children.
- [FL_Group](#) const * **as_group** () const [FL_OVERRIDE](#)
- [FL_Group](#) * **as_group** () [FL_OVERRIDE](#)
Returns an [FL_Group](#) pointer if this widget is an [FL_Group](#).
- void **begin** ()
Sets the current group so you can build the widget tree by just constructing the widgets.
- [FL_Widget](#) * **child** (int n) const
Returns the n'th child.
- int **children** () const
Returns how many child widgets the group has.
- void **clear** ()
Deletes all child widgets from memory recursively.
- unsigned int **clip_children** ()
Returns the current clipping mode.
- void **clip_children** (int c)
Controls whether the group widget clips the drawing of child widgets to its bounding box.
- virtual int **delete_child** (int n)
*Removes the widget at *index* from the group and deletes it.*
- void **end** ()
*Exactly the same as *current(this->parent())*.*
- int **find** (const [FL_Widget](#) &o) const
*See int [FL_Group::find\(const FL_Widget *w\)](#) const.*
- int **find** (const [FL_Widget](#) *) const
Searches the child array for the widget and returns the index.
- [FL_Group](#) (int, int, int, int, const char * = 0)
Creates a new [FL_Group](#) widget using the given position, size, and label string.
- void **focus** ([FL_Widget](#) *W)
- void **forms_end** ()
This is for forms compatibility only.
- int **handle** (int) [FL_OVERRIDE](#)
Handles the specified event.
- void **init_sizes** ()

- Resets the internal array of widget sizes and positions.*

 - void **insert** (**FL_Widget** &, int i)

The widget is removed from its current group (if any) and then inserted into this group.

 - void **insert** (**FL_Widget** &o, **FL_Widget** *before)
- This does insert(w, find(before)).*
- void **remove** (**FL_Widget** &)
- Removes a widget from the group but does not delete it.*
- void **remove** (**FL_Widget** *o)
- Removes the widget o from the group.*
- void **remove** (int index)
- Removes the widget at index from the group but does not delete it.*
- **FL_Widget** * **resizable** () const
- Returns the group's resizable widget.*
- void **resizable** (**FL_Widget** &o)
- Sets the group's resizable widget.*
- void **resizable** (**FL_Widget** *o)
- The resizable widget defines both the resizing box and the resizing behavior of the group and its children.*
- virtual ~**FL_Group** ()
- The destructor also deletes all the children.*

Public Member Functions inherited from **FL_Widget**

- void **_clear_fullscreen** ()
 - void **_set_fullscreen** ()
 - void **activate** ()
- Activates the widget.*
- unsigned int **active** () const
- Returns whether the widget is active.*
- int **active_r** () const
- Returns whether the widget and all of its parents are active.*
- **FL_Align** **align** () const
- Gets the label alignment.*
- void **align** (**FL_Align** alignment)
- Sets the label alignment.*
- long **argument** () const
- Gets the current user data (long) argument that is passed to the callback function.*
- void **argument** (long v)
- Sets the current user data (long) argument that is passed to the callback function.*
- virtual class **FL_Gl_Window** * **as_gl_window** ()
- Returns an **FL_Gl_Window** pointer if this widget is an **FL_Gl_Window**.*
- virtual class **FL_Gl_Window** const * **as_gl_window** () const
- virtual **FL_Window** * **as_window** ()
- Returns an **FL_Window** pointer if this widget is an **FL_Window**.*
- virtual **FL_Window** const * **as_window** () const
- void **bind_deimage** (**FL_Image** *img)
- Sets the image to use as part of the widget label when in the inactive state.*
- void **bind_deimage** (int f)
- Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.*
- void **bind_image** (**FL_Image** *img)
- Sets the image to use as part of the widget label when in the active state.*
- void **bind_image** (int f)

- Bind the image to the widget, so the widget will delete the image when it is no longer needed.*
- [FI_Boxtype](#) [box](#) () const
Gets the box type of the widget.
- void [box](#) ([FI_Boxtype](#) new_box)
Sets the box type for the widget.
- [FI_Callback_p](#) [callback](#) () const
Gets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb, [FI_Callback_User_Data](#) *p, bool auto_free)
Sets the current callback function and managed user data for the widget.
- void [callback](#) ([FI_Callback](#) *cb, void *p)
Sets the current callback function and data for the widget.
- void [callback](#) ([FI_Callback0](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback1](#) *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int [changed](#) () const
Checks if the widget value changed since the last callback.
- void [clear_active](#) ()
Marks the widget as inactive without sending events or changing focus.
- void [clear_changed](#) ()
Marks the value of the widget as unchanged.
- void [clear_damage](#) ([uchar](#) c=0)
Clears or sets the damage flags.
- void [clear_output](#) ()
Sets a widget to accept input.
- void [clear_visible](#) ()
Hides the widget.
- void [clear_visible_focus](#) ()
Disables keyboard focus navigation with this widget.
- [FI_Color](#) [color](#) () const
Gets the background color of the widget.
- void [color](#) ([FI_Color](#) bg)
Sets the background color of the widget.
- void [color](#) ([FI_Color](#) bg, [FI_Color](#) sel)
Sets the background and selection color of the widget.
- [FI_Color](#) [color2](#) () const
For back compatibility only.
- void [color2](#) (unsigned a)
For back compatibility only.
- int [contains](#) (const [FI_Widget](#) *w) const
Checks if w is a child of this widget.
- void [copy_label](#) (const char *new_label)
Sets the current label.
- void [copy_tooltip](#) (const char *text)
Sets the current tooltip text.
- [uchar](#) [damage](#) () const
Returns non-zero if [draw\(\)](#) needs to be called.
- void [damage](#) ([uchar](#) c)
Sets the damage bits for the widget.

- void **damage** (uchar c, int x, int y, int w, int h)
Sets the damage bits for an area inside the widget.
- int **damage_resize** (int, int, int, int)
Internal use only.
- void **deactivate** ()
Deactivates the widget.
- **FL_Image** * **deimage** ()
Gets the image that is used as part of the widget label when in the inactive state.
- const **FL_Image** * **deimage** () const
Gets the image that is used as part of the widget label when in the inactive state.
- void **deimage** (**FL_Image** &img)
Sets the image to use as part of the widget label when in the inactive state.
- void **deimage** (**FL_Image** *img)
Sets the image to use as part of the widget label when in the inactive state.
- int **deimage_bound** () const
Returns whether the inactive image is managed by the widget.
- void **do_callback** (**FL_Callback_Reason** reason=**FL_REASON_UNKNOWN**)
Calls the widget callback function with default arguments.
- void **do_callback** (**FL_Widget** *widget, long arg, **FL_Callback_Reason** reason=**FL_REASON_UNKNOWN**)
Calls the widget callback function with arbitrary arguments.
- void **do_callback** (**FL_Widget** *widget, void *arg=0, **FL_Callback_Reason** reason=**FL_REASON_UNKNOWN**)
Calls the widget callback function with arbitrary arguments.
- void **draw_label** (int, int, int, int, **FL_Align**) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int **h** () const
Gets the widget height.
- virtual void **hide** ()
Makes a widget invisible.
- int **horizontal_label_margin** ()
Get the spacing between the label and the horizontal edge of the widget.
- void **horizontal_label_margin** (int px)
Set the spacing between the label and the horizontal edge of the widget.
- **FL_Image** * **image** ()
Gets the image that is used as part of the widget label when in the active state.
- const **FL_Image** * **image** () const
Gets the image that is used as part of the widget label when in the active state.
- void **image** (**FL_Image** &img)
Sets the image to use as part of the widget label when in the active state.
- void **image** (**FL_Image** *img)
Sets the image to use as part of the widget label when in the active state.
- int **image_bound** () const
Returns whether the image is managed by the widget.
- int **inside** (const **FL_Widget** *wgt) const
Checks if this widget is a child of wgt.
- int **is_label_copied** () const
Returns whether the current label was assigned with [copy_label\(\)](#).
- const char * **label** () const
Gets the current label text.
- void **label** (const char *text)
Sets the current label pointer.
- void **label** (**FL_Labeltype** a, const char *b)

- Shortcut to set the label text and type in one call.*

 - `int label_image_spacing ()`
Return the gap size between the label and the image.
 - `void label_image_spacing (int gap)`
Set the gap between the label and the image in pixels.
 - `FI_Color labelcolor () const`
Gets the label color.
 - `void labelcolor (FI_Color c)`
Sets the label color.
 - `FI_Font labelfont () const`
Gets the font to use.
 - `void labelfont (FI_Font f)`
Sets the font to use.
 - `FI_Fonsize labelsz () const`
Gets the font size in pixels.
 - `void labelsz (FI_Fonsize pix)`
Sets the font size in pixels.
 - `FI_Labeltype labeltype () const`
Gets the label type.
 - `void labeltype (FI_Labeltype a)`
Sets the label type.
 - `void measure_label (int &ww, int &hh) const`
Sets width ww and height hh accordingly with the label size.
 - `bool needs_keyboard () const`
Returns whether this widget needs a keyboard.
 - `void needs_keyboard (bool needs)`
Sets whether this widget needs a keyboard.
 - `unsigned int output () const`
Returns if a widget is used for output only.
 - `FI_Group * parent () const`
Returns a pointer to the parent widget.
 - `void parent (FI_Group *p)`
Internal use only - "for hacks only".
 - `void position (int X, int Y)`
Repositions the window or widget.
 - `void redraw ()`
Schedules the drawing of the widget.
 - `void redraw_label ()`
Schedules the drawing of the label.
 - `FI_Color selection_color () const`
Gets the selection color.
 - `void selection_color (FI_Color a)`
Sets the selection color.
 - `void set_active ()`
Marks the widget as active without sending events or changing focus.
 - `void set_changed ()`
Marks the value of the widget as changed.
 - `void set_output ()`
Sets a widget to output only.
 - `void set_visible ()`
Makes the widget visible.

- void [set_visible_focus](#) ()
Enables keyboard focus navigation with this widget.
- int [shortcut_label](#) () const
Returns whether the widget's label uses '&' to indicate shortcuts.
- void [shortcut_label](#) (int value)
Sets whether the widget's label uses '&' to indicate shortcuts.
- virtual void [show](#) ()
Makes a widget visible.
- void [size](#) (int W, int H)
Changes the size of the widget.
- int [take_focus](#) ()
Gives the widget the keyboard focus.
- unsigned int [takeevents](#) () const
Returns if the widget is able to take events.
- int [test_shortcut](#) ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * [tooltip](#) () const
Gets the current tooltip text.
- void [tooltip](#) (const char *text)
Sets the current tooltip text.
- [FI_Window](#) * [top_window](#) () const
Returns a pointer to the top-level window for the widget.
- [FI_Window](#) * [top_window_offset](#) (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- [uchar](#) [type](#) () const
Gets the widget type.
- void [type](#) ([uchar](#) t)
Sets the widget type.
- int [use_accents_menu](#) ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * [user_data](#) () const
Gets the user data for this widget.
- void [user_data](#) ([FI_Callback_User_Data](#) *v, bool auto_free)
Sets the user data for this widget.
- void [user_data](#) (void *v)
Sets the user data for this widget.
- int [vertical_label_margin](#) ()
Get the spacing between the label and the vertical edge of the widget.
- void [vertical_label_margin](#) (int px)
Set the spacing between the label and the vertical edge of the widget.
- unsigned int [visible](#) () const
Returns whether a widget is visible.
- unsigned int [visible_focus](#) () const
Checks whether this widget has a visible focus.
- void [visible_focus](#) (int v)
Modifies keyboard focus navigation.
- int [visible_r](#) () const
Returns whether a widget and all its parents are visible.
- int [w](#) () const
Gets the widget width.
- [FI_When](#) [when](#) () const

- Returns the conditions under which the callback is called.*
- void **when** (uchar i)
Sets the flags used to decide when a callback is called.
- **FL_Window** * **window** () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int **x** () const
Gets the widget position in its window.
- int **y** () const
Gets the widget position in its window.
- virtual ~**FL_Widget** ()
Destroys the widget.

Protected Member Functions

- void **draw** () **FL_OVERRIDE**
Draws the widget.

Protected Member Functions inherited from **FL_Group**

- **FL_Rect** * **bounds** ()
Returns the internal array of widget sizes and positions.
- void **draw_child** (**FL_Widget** &widget) const
Forces a child to redraw.
- void **draw_children** ()
Draws all children of the group.
- void **draw_outside_label** (const **FL_Widget** &widget) const
Parents normally call this to draw outside labels of child widgets.
- virtual int **on_insert** (**FL_Widget** *, int)
Allow derived groups to act when a widget is added as a child.
- virtual int **on_move** (int, int)
Allow derived groups to act when a widget is moved within the group.
- virtual void **on_remove** (int)
Allow derived groups to act when a child widget is removed from the group.
- int * **sizes** ()
Returns the internal array of widget sizes and positions.
- void **update_child** (**FL_Widget** &widget) const
Draws a child only if it needs it.

Protected Member Functions inherited from **FL_Widget**

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** (**FL_Boxtype** t, **FL_Color** c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** (**FL_Boxtype** t, int x, int y, int w, int h, **FL_Color** c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const
Draws a focus rectangle around the widget.

- void `draw_focus` (`FI_Boxtype` t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void `draw_focus` (`FI_Boxtype` t, int x, int y, int w, int h, `FI_Color` bg) const
Draws a focus box for the widget at the given position and size.
- void `draw_label` () const
Draws the widget's label at the defined label position.
- void `draw_label` (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- `FI_Widget` (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int `flags` () const
Gets the widget flags mask.
- void `h` (int v)
Internal use only.
- void `set_flag` (unsigned int c)
Sets a flag in the flags mask.
- void `w` (int v)
Internal use only.
- void `x` (int v)
Internal use only.
- void `y` (int v)
Internal use only.

Additional Inherited Members

Static Public Member Functions inherited from `FI_Group`

- static `FI_Group` * `current` ()
Returns the currently active group.
- static void `current` (`FI_Group` *g)
Sets the current group.

Static Public Member Functions inherited from `FI_Widget`

- static void `default_callback` (`FI_Widget` *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int `label_shortcut` (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int `test_shortcut` (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from `FI_Widget`

- enum {
`INACTIVE` = 1<<0 , `INVISIBLE` = 1<<1 , `OUTPUT` = 1<<2 , `NOBORDER` = 1<<3 ,
`FORCE_POSITION` = 1<<4 , `NON_MODAL` = 1<<5 , `SHORTCUT_LABEL` = 1<<6 , `CHANGED` = 1<<7
, `OVERRIDE` = 1<<8 , `VISIBLE_FOCUS` = 1<<9 , `COPIED_LABEL` = 1<<10 , `CLIP_CHILDREN` = 1<<11
, `MENU_WINDOW` = 1<<12 , `TOOLTIP_WINDOW` = 1<<13 , `MODAL` = 1<<14 , `NO_OVERLAY` = 1<<15

USERFLAG1 = 1<<31 }
```

flags possible values enumeration.

11.96.1 Detailed Description

This widget was designed to add the functionality of compressing and aligning widgets.

If `type()` is `Fl_Pack::HORIZONTAL` all the children are resized to the height of the `Fl_Pack`, and are moved next to each other horizontally. If `type()` is not `Fl_Pack::HORIZONTAL` then the children are resized to the width and are stacked below each other. Then the `Fl_Pack` resizes itself to surround the child widgets.

You may want to put the `Fl_Pack` inside an `Fl_Scroll`.

The '`resizable()`' for `Fl_Pack` is set to `NULL` by default. Its behavior is slightly different than in a normal `Fl_Group` widget: only if the `resizable()` widget is the last widget in the group it is extended to take the full available width or height, respectively, of the `Fl_Pack` group.

Note

You can nest `Fl_Pack` widgets or put them inside `Fl_Scroll` widgets or inside other group widgets but their behavior can sometimes be *"surprising"*. This is partly due to the fact that `Fl_Pack` widgets resize themselves during their `draw()` operation, trying to react on their child widgets resizing themselves during **their** `draw()` operations which can be confusing. If you want to achieve special resize behavior of nested group widgets it can sometimes be easier to derive your own specialized group widget than to try to make nested `Fl_Pack` widgets behave as expected.

See also

[Fl_Group::resizable\(\)](#)

11.96.2 Constructor & Destructor Documentation

11.96.2.1 Fl_Pack()

```
Fl_Pack::Fl_Pack (
    int X,
    int Y,
    int W,
    int H,
    const char * L = 0)
```

Creates a new `Fl_Pack` widget using the given position, size, and label string.

The default boxtype is `FL_NO_BOX`.

The default `type()` is `Fl_Pack::VERTICAL`.

The destructor *also deletes all the children*. This allows a whole tree to be deleted at once, without having to keep a pointer to all the children in the user code. A kludge has been done so the `Fl_Pack` and all of its children can be automatic (local) variables, but you must declare the `Fl_Pack` *first*, so that it is destroyed last.

Parameters

in	<i>X,Y</i>	X and Y coordinates (position)
in	<i>W,H</i>	width and height, respectively
in	<i>L</i>	label (optional)

11.96.3 Member Function Documentation

11.96.3.1 clear()

```
void Fl_Pack::clear () [inline]
```

Deletes all child widgets with `Fl_Group::clear()`.

And sets to `NULL` the `resizable()` widget.

11.96.3.2 draw()

```
void Fl_Pack::draw () [protected], [virtual]
```

Draws the widget.

Never call this function directly. FLTK will schedule redrawing whenever needed. If your widget must be redrawn as soon as possible, call [redraw\(\)](#) instead.

Override this function to draw your own widgets.

If you ever need to call another widget's draw method *from within your own [draw\(\)](#) method*, e.g. for an embedded scrollbar, you can do it (because [draw\(\)](#) is virtual) like this:

```
Fl_Widget *s = &scrollbar; // scrollbar is an embedded Fl_Scrollbar
s->draw();                 // calls Fl_Scrollbar::draw()
```

Reimplemented from [Fl_Group](#).

11.96.3.3 horizontal()

```
uchar Fl_Pack::horizontal () const [inline]
```

Returns non-zero if [Fl_Pack](#) alignment is horizontal.

Returns

non-zero if [Fl_Pack](#) alignment is horizontal ([Fl_Pack::HORIZONTAL](#))

Note

Currently the return value is the same as [Fl_Group::type\(\)](#), but this may change in the future. Do not set any other values than the following with [Fl_Pack::type\(\)](#):

- [Fl_Pack::VERTICAL](#) (Default)
- [Fl_Pack::HORIZONTAL](#)

See class [Fl_Pack](#) documentation for details.

11.96.3.4 resize()

```
void Fl_Pack::resize (
    int X,
    int Y,
    int W,
    int H) [virtual]
```

Override [Fl_Group](#) resize behavior.

Resizing an [Fl_Pack](#) will not resize any of its children, but trigger a redraw, which in turn recalculates the dimensions of all children.

Parameters

in	X,Y,W,H	new position and size of the Fl_Pack widget
----	---------	---

Reimplemented from [Fl_Group](#).

The documentation for this class was generated from the following files:

- [Fl_Pack.H](#)
- [Fl_Pack.cxx](#)

11.97 Fl_Paged_Device Class Reference

Represents page-structured drawing surfaces.

```
#include <Fl_Paged_Device.H>
```

Inheritance diagram for [Fl_Paged_Device](#):

Classes

- struct [page_format](#)
width, height and name of a page format

Public Types

- enum [Page_Format](#) {
A0 = 0 , A1 , A2 , A3 ,
A4 , A5 , A6 , A7 ,
A8 , A9 , B0 , B1 ,
B2 , B3 , B4 , B5 ,
B6 , B7 , B8 , B9 ,
B10 , C5E , DLE , EXECUTIVE ,
FOLIO , LEDGER , LEGAL , LETTER ,
TABLOID , ENVELOPE , MEDIA = 0x1000 }
Possible page formats.
- enum [Page_Layout](#) { PORTRAIT = 0 , LANDSCAPE = 0x100 , REVERSED = 0x200 , ORIENTATION = 0x300 }
Possible page layouts.

Public Member Functions

- virtual int [begin_job](#) (int pagecount=0, int *frompage=NULL, int *topage=NULL, char **perr_↵ message=NULL)
Begins a print job.
- virtual int [begin_page](#) (void)
Begins a new printed page.
- virtual void [end_job](#) (void)
To be called at the end of a print job.
- virtual int [end_page](#) (void)
To be called at the end of each page.
- virtual void [margins](#) (int *left, int *top, int *right, int *bottom)
Computes the dimensions of margins that lie between the printable page area and the full page.
- void [print_widget](#) ([FL_Widget](#) *widget, int delta_x=0, int delta_y=0)
Synonym of [draw\(FL_Widget, int, int\)](#)*
- void [print_window](#) ([FL_Window](#) *win, int x_off=0, int y_off=0)
Synonym of [draw_decorated_window\(FL_Window, int, int\)](#)*
- virtual void [rotate](#) (float angle)
Rotates the graphics operations relatively to paper.
- virtual void [scale](#) (float scale_x, float scale_y=0.)
Changes the scaling of page coordinates.
- int [start_job](#) (int pagecount=0, int *frompage=NULL, int *topage=NULL, char **perr_message=NULL)

Synonym of [begin_job\(int pagecount, int *frompage, int *topage, char **perr_message\)](#).

- int [start_page](#) ()

Synonym of [begin_page\(\)](#).

- virtual [~FI_Paged_Device](#) ()

The destructor.

Public Member Functions inherited from [FI_Widget_Surface](#)

- void [draw](#) ([FI_Widget](#) *widget, int delta_x=0, int delta_y=0)

Draws the widget on the drawing surface.

- void [draw_decorated_window](#) ([FI_Window](#) *win, int x_offset=0, int y_offset=0)

Draws a window with its title bar and frame if any.

- virtual void [origin](#) (int *x, int *y)

Computes the coordinates of the current origin of graphics functions.

- virtual void [origin](#) (int x, int y)

Sets the position of the origin of graphics in the drawable part of the drawing surface.

- void [print_window_part](#) ([FI_Window](#) *win, int x, int y, int w, int h, int delta_x=0, int delta_y=0)

Draws a rectangular part of an on-screen window.

- virtual int [printable_rect](#) (int *w, int *h)

Computes the width and height of the drawable area of the drawing surface.

- virtual void [translate](#) (int x, int y)

Translates the current graphics origin accounting for the current rotation.

- virtual void [untranslate](#) ()

Undoes the effect of a previous [translate\(\)](#) call.

Public Member Functions inherited from [FI_Surface_Device](#)

- [FI_Graphics_Driver](#) * [driver](#) ()

Returns the graphics driver of this drawing surface.

- virtual bool [is_current](#) ()

Is this surface the current drawing surface?

- virtual void [set_current](#) (void)

Make this surface the current drawing surface.

- virtual [~FI_Surface_Device](#) ()

The destructor.

Static Public Attributes

- static const [page_format](#) [page_formats](#) [[NO_PAGE_FORMATS](#)]

width, height and name of all elements of the enum [Page_Format](#).

Protected Member Functions

- [FI_Paged_Device](#) ()

The constructor.

Protected Member Functions inherited from [FI_Widget_Surface](#)

- [FI_Widget_Surface](#) ([FI_Graphics_Driver](#) *d)

The constructor.

Protected Member Functions inherited from [Fl_Surface_Device](#)

- void **driver** ([Fl_Graphics_Driver](#) *graphics_driver)
Sets the graphics driver of this drawing surface.
- virtual void **end_current** ()
FLTK calls this each time a surface ceases to be the current drawing surface.
- **Fl_Surface_Device** ([Fl_Graphics_Driver](#) *graphics_driver)
Constructor that sets the graphics driver to use for the created surface.

Additional Inherited Members

Static Public Member Functions inherited from [Fl_Surface_Device](#)

- static [Fl_Surface_Device](#) * **pop_current** ()
Removes the top element from the current drawing surface stack, and makes the new top element current.
- static void **push_current** ([Fl_Surface_Device](#) *new_current)
Pushes new_current on top of the stack of current drawing surfaces, and makes it current.
- static [Fl_Surface_Device](#) * **surface** ()
The current drawing surface.

Protected Attributes inherited from [Fl_Widget_Surface](#)

- int **x_offset**
horizontal offset to the origin of graphics coordinates
- int **y_offset**
vertical offset to the origin of graphics coordinates

11.97.1 Detailed Description

Represents page-structured drawing surfaces.

This class has no public constructor: don't instantiate it; use [Fl_Printer](#) or [Fl_PostScript_File_Device](#) instead.

11.97.2 Member Enumeration Documentation

11.97.2.1 Page_Format

```
enum Fl\_Paged\_Device::Page\_Format
```

Possible page formats.

All paper formats with pre-defined width and height. The [Fl_Paged_Device::page_formats](#) array gives these widths and heights.

Enumerator

A0	A0 format.
A1	A1 format.
A2	A2 format.
A3	A3 format.
A4	A4 format.
A5	A5 format.
A6	A6 format.
A7	A7 format.
A8	A8 format.
A9	A9 format.
B0	B0 format.
B1	B1 format.
B2	B2 format.

Enumerator

B3	B3 format.
B4	B4 format.
B5	B5 format.
B6	B6 format.
B7	B7 format.
B8	B8 format.
B9	B9 format.
B10	B10 format.
EXECUTIVE	Executive format.
FOLIO	Folio format.
LEDGER	Ledger format.
LEGAL	Legal format.
LETTER	Letter format.
TABLOID	Tabloid format.

11.97.2.2 Page_Layout

enum [Fl_Paged_Device::Page_Layout](#)

Possible page layouts.

Enumerator

PORTRAIT	Portrait orientation.
LANDSCAPE	Landscape orientation.
REVERSED	Reversed orientation.
ORIENTATION	orientation

11.97.3 Member Function Documentation

11.97.3.1 begin_job()

```
int Fl_Paged_Device::begin_job (
    int pagecount = 0,
    int * frompage = NULL,
    int * topage = NULL,
    char ** perr_message = NULL) [virtual]
```

Begins a print job.

Parameters

in	<i>pagecount</i>	the total number of pages of the job (or 0 if you don't know the number of pages)
out	<i>frompage</i>	if non-null, *frompage is set to the first page the user wants printed
out	<i>topage</i>	if non-null, *topage is set to the last page the user wants printed
out	<i>perr_message</i>	if non-null and if the returned value is 2, *perr_message is set to a string describing the error. That string can be deleted after use.

Returns

0 if OK, 1 if user cancelled the job, 2 if any error.

Reimplemented in [Fl_PDF_File_Surface](#), [Fl_PostScript_File_Device](#), and [Fl_Printer](#).

11.97.3.2 `begin_page()`

```
int Fl_Paged_Device::begin_page (
    void ) [virtual]
```

Begins a new printed page.

The page coordinates are initially in points, i.e., 1/72 inch, and with origin at the top left of the printable page area. This function also makes this surface the current drawing surface with [Fl_Surface_Device::push_current\(\)](#).

Note

[begin_page\(\)](#) calls [Fl_Surface_Device::push_current\(\)](#) and leaves this device as the active surface. If any calls between [begin_page\(\)](#) and [end_page\(\)](#) open dialog boxes or will otherwise draw into FLTK windows, those calls must be put between a call to [Fl_Surface_Device::pop_current\(\)](#) and a call to [Fl_Surface_Device::push_current\(\)](#), or the content of the dialog box will be rendered to the printer instead of the screen.

Returns

0 if OK, non-zero if any error

Reimplemented in [Fl_PDF_File_Surface](#), [Fl_PostScript_File_Device](#), and [Fl_Printer](#).

11.97.3.3 `end_job()`

```
void Fl_Paged_Device::end_job (
    void ) [virtual]
```

To be called at the end of a print job.

Reimplemented in [Fl_PDF_File_Surface](#), [Fl_PostScript_File_Device](#), and [Fl_Printer](#).

11.97.3.4 `end_page()`

```
int Fl_Paged_Device::end_page (
    void ) [virtual]
```

To be called at the end of each page.

This function also stops this surface from being the current drawing surface with [Fl_Surface_Device::pop_current\(\)](#).

Note

[end_page\(\)](#) calls [Fl_Surface_Device::pop_current\(\)](#). If any calls between [begin_page\(\)](#) and [end_page\(\)](#) open dialog boxes or will otherwise draw into FLTK windows, those calls must be put between a call to [Fl_Surface_Device::pop_current\(\)](#) and a call to [Fl_Surface_Device::push_current\(\)](#).

Returns

0 if OK, non-zero if any error.

Reimplemented in [Fl_PDF_File_Surface](#), [Fl_PostScript_File_Device](#), and [Fl_Printer](#).

11.97.3.5 `margins()`

```
void Fl_Paged_Device::margins (
    int * left,
    int * top,
    int * right,
    int * bottom) [virtual]
```

Computes the dimensions of margins that lie between the printable page area and the full page.

Values are in the same unit as that used by FLTK drawing functions. They are changed by [scale\(\)](#) calls.

Parameters

out	<i>left</i>	If non-null, *left is set to the left margin size.
out	<i>top</i>	If non-null, *top is set to the top margin size.

out	<i>right</i>	If non-null, *right is set to the right margin size.
out	<i>bottom</i>	If non-null, *bottom is set to the bottom margin size.

Reimplemented in [Fl_PDF_File_Surface](#), [Fl_PostScript_File_Device](#), and [Fl_Printer](#).

11.97.3.6 rotate()

```
void Fl_Paged_Device::rotate (
    float angle) [virtual]
```

Rotates the graphics operations relatively to paper.

The rotation is centered on the current graphics origin. Successive [rotate\(\)](#) calls don't combine their effects.

Parameters

<i>angle</i>	Rotation angle in counter-clockwise degrees.
--------------	--

Reimplemented in [Fl_PDF_File_Surface](#), [Fl_PostScript_File_Device](#), and [Fl_Printer](#).

11.97.3.7 scale()

```
void Fl_Paged_Device::scale (
    float scale_x,
    float scale_y = 0.) [virtual]
```

Changes the scaling of page coordinates.

This function also resets the origin of graphics functions at top left of printable page area. After a [scale\(\)](#) call, do a [printable_rect\(\)](#) call to get the new dimensions of the printable page area. Successive [scale\(\)](#) calls don't combine their effects.

Parameters

<i>scale_x</i>	Horizontal dimensions of plot are multiplied by this quantity.
<i>scale_y</i>	Same as above, vertically. The value 0. is equivalent to setting <code>scale_y = scale_x</code> . Thus, <code>scale(factor);</code> is equivalent to <code>scale(factor, factor);</code>

Reimplemented in [Fl_PDF_File_Surface](#), [Fl_PostScript_File_Device](#), and [Fl_Printer](#).

11.97.3.8 start_job()

```
int Fl_Paged_Device::start_job (
    int pagecount = 0,
    int * frompage = NULL,
    int * topage = NULL,
    char ** perr_message = NULL) [inline]
```

Synonym of [begin_job\(int pagecount, int *frompage, int *topage, char **perr_message\)](#).

For API compatibility with FLTK 1.3.x

11.97.3.9 start_page()

```
int Fl_Paged_Device::start_page () [inline]
```

Synonym of [begin_page\(\)](#).

For API compatibility with FLTK 1.3.x

The documentation for this class was generated from the following files:

- [Fl_Paged_Device.H](#)
- [Fl_Paged_Device.cxx](#)

11.98 Fl_PDF_File_Surface Class Reference

To send graphical output to a PDF file.

```
#include <Fl_PDF_File_Surface.H>
```

Inheritance diagram for Fl_PDF_File_Surface:

Public Member Functions

- `int begin_document (const char *pathname, enum Fl_Paged_Device::Page_Format format=Fl_Paged_Device::A4, enum Fl_Paged_Device::Page_Layout layout=Fl_Paged_Device::PORTRAIT, char **perr=NULL)`
Prepare to draw to a PDF document identified by its pathname.
- `int begin_job (const char *defaultfilename, char **perr=NULL)`
Prepare to draw to a PDF document identified with a file chooser.
- `int begin_job (int, int *, int *, char **) FL_OVERRIDE`
Don't use for this class.
- `int begin_page (void) FL_OVERRIDE`
Begins a new printed page.
- `void end_job (void) FL_OVERRIDE`
To be called at the end of a print job.
- `int end_page (void) FL_OVERRIDE`
To be called at the end of each page.
- `bool is_current () FL_OVERRIDE`
Is this surface the current drawing surface?
- `void margins (int *left, int *top, int *right, int *bottom) FL_OVERRIDE`
Computes the dimensions of margins that lie between the printable page area and the full page.
- `void origin (int *x, int *y) FL_OVERRIDE`
Computes the coordinates of the current origin of graphics functions.
- `void origin (int x, int y) FL_OVERRIDE`
Sets the position of the origin of graphics in the drawable part of the drawing surface.
- `const char * pdf_filename ()`
Returns the name of the PDF document.
- `int printable_rect (int *w, int *h) FL_OVERRIDE`
Computes the width and height of the drawable area of the drawing surface.
- `void rotate (float angle) FL_OVERRIDE`
Rotates the graphics operations relatively to paper.
- `void scale (float s_x, float s_y=0) FL_OVERRIDE`
Changes the scaling of page coordinates.
- `void set_current () FL_OVERRIDE`
Make this surface the current drawing surface.
- `void translate (int x, int y) FL_OVERRIDE`
Translates the current graphics origin accounting for the current rotation.
- `void untranslate () FL_OVERRIDE`
Undoes the effect of a previous `translate()` call.

Public Member Functions inherited from FI_Paged_Device

- void **print_widget** ([FI_Widget](#) *widget, int delta_x=0, int delta_y=0)
Synonym of [draw\(FI_Widget, int, int\)](#)*
- void **print_window** ([FI_Window](#) *win, int x_off=0, int y_off=0)
Synonym of [draw_decorated_window\(FI_Window, int, int\)](#)*
- int **start_job** (int pagecount=0, int *frompage=NULL, int *topage=NULL, char **perr_message=NULL)
*Synonym of [begin_job\(int pagecount, int *frompage, int *topage, char **perr_message\)](#).*
- int **start_page** ()
Synonym of [begin_page\(\)](#).
- virtual ~**FI_Paged_Device** ()
The destructor.

Public Member Functions inherited from FI_Widget_Surface

- void **draw** ([FI_Widget](#) *widget, int delta_x=0, int delta_y=0)
Draws the widget on the drawing surface.
- void **draw_decorated_window** ([FI_Window](#) *win, int x_offset=0, int y_offset=0)
Draws a window with its title bar and frame if any.
- void **print_window_part** ([FI_Window](#) *win, int x, int y, int w, int h, int delta_x=0, int delta_y=0)
Draws a rectangular part of an on-screen window.

Public Member Functions inherited from FI_Surface_Device

- [FI_Graphics_Driver](#) * **driver** ()
Returns the graphics driver of this drawing surface.
- virtual ~**FI_Surface_Device** ()
The destructor.

Static Public Attributes

These attributes are useful for the Wayland/X11 platform only.

- static const char * **format_dialog_title** = "PDF document settings"
Localizable text of the "PDF document settings" dialog.
- static const char * **format_dialog_page_size** = "Page Size:"
Localizable text of the "PDF document settings" dialog.
- static const char * **format_dialog_orientation** = "Orientation:"
Localizable text of the "PDF document settings" dialog.
- static const char * **format_dialog_default** = "Set as default"
Localizable text of the "PDF document settings" dialog.

Static Public Attributes inherited from FI_Paged_Device

- static const [page_format](#) **page_formats** [[NO_PAGE_FORMATS](#)]
width, height and name of all elements of the enum [Page_Format](#).

Additional Inherited Members

Public Types inherited from FI_Paged_Device

- enum [Page_Format](#) {
 A0 = 0, A1, A2, A3,
 A4, A5, A6, A7,
 A8, A9, B0, B1,
 B2, B3, B4, B5,

```
B6 , B7 , B8 , B9 ,
B10 , C5E , DLE , EXECUTIVE ,
FOLIO , LEDGER , LEGAL , LETTER ,
TABLOID , ENVELOPE , MEDIA = 0x1000 }
```

Possible page formats.

- enum `Page_Layout` { `PORTRAIT` = 0 , `LANDSCAPE` = 0x100 , `REVERSED` = 0x200 , `ORIENTATION` = 0x300 }

Possible page layouts.

Static Public Member Functions inherited from `FI_Surface_Device`

- static `FI_Surface_Device * pop_current ()`
Removes the top element from the current drawing surface stack, and makes the new top element current.
- static void `push_current (FI_Surface_Device *new_current)`
Pushes new_current on top of the stack of current drawing surfaces, and makes it current.
- static `FI_Surface_Device * surface ()`
The current drawing surface.

Protected Member Functions inherited from `FI_Paged_Device`

- `FI_Paged_Device ()`
The constructor.

Protected Member Functions inherited from `FI_Widget_Surface`

- `FI_Widget_Surface (FI_Graphics_Driver *d)`
The constructor.

Protected Member Functions inherited from `FI_Surface_Device`

- void `driver (FI_Graphics_Driver *graphics_driver)`
Sets the graphics driver of this drawing surface.
- virtual void `end_current ()`
FLTK calls this each time a surface ceases to be the current drawing surface.
- `FI_Surface_Device (FI_Graphics_Driver *graphics_driver)`
Constructor that sets the graphics driver to use for the created surface.

Protected Attributes inherited from `FI_Widget_Surface`

- int `x_offset`
horizontal offset to the origin of graphics coordinates
- int `y_offset`
vertical offset to the origin of graphics coordinates

11.98.1 Detailed Description

To send graphical output to a PDF file.

Class `FI_PDF_File_Surface` is used exactly as the `FI_Printer` class except for its 2 member functions `begin_job()` and `begin_document()`.

Platform notes:

- Windows: requires "Microsoft Print to PDF" available in Windows 10 and later.
- Wayland/X11: requires the FLTK library was built with `FLTK_USE_PANGO=1`.
- macOS: requires macOS 10.9 or later.

If the running platform doesn't fulfill the requirement above, the program runs but doesn't output any PDF.

11.98.2 Member Function Documentation

11.98.2.1 begin_document()

```
int Fl_PDF_File_Surface::begin_document (
    const char * pathname,
    enum Fl_Paged_Device::Page_Format format = Fl_Paged_Device::A4,
    enum Fl_Paged_Device::Page_Layout layout = Fl_Paged_Device::PORTRAIT,
    char ** perr = NULL)
```

Prepare to draw to a PDF document identified by its pathname.

Parameters

<i>pathname</i>	Path name for the PDF document
<i>format</i>	The paper format for the PDF document
<i>layout</i>	The orientation for the PDF document
<i>perr</i>	NULL or address of a string that receives a message in case of error. To be deleted[] after use.

Returns

0 for success, 2 when an error occurred.

11.98.2.2 begin_job() [1/2]

```
int Fl_PDF_File_Surface::begin_job (
    const char * defaultfilename,
    char ** perr = NULL)
```

Prepare to draw to a PDF document identified with a file chooser.

A dialog opens to select the location and name of the output PDF document as well as its page format and orientation.

Parameters

<i>defaultfilename</i>	Default name for the PDF document
<i>perr</i>	NULL or address of a string that receives a message in case of error. To be deleted[] after use.

Returns

0 for success, 1 when the user cancelled the operation, 2 when an error occurred.

11.98.2.3 begin_job() [2/2]

```
int Fl_PDF_File_Surface::begin_job (
    int ,
    int * ,
    int * ,
    char ** ) [inline], [virtual]
```

Don't use for this class.

Reimplemented from [Fl_Paged_Device](#).

11.98.2.4 begin_page()

```
int Fl_PDF_File_Surface::begin_page (
    void ) [inline], [virtual]
```

Begins a new printed page.

The page coordinates are initially in points, i.e., 1/72 inch, and with origin at the top left of the printable page area. This function also makes this surface the current drawing surface with [Fl_Surface_Device::push_current\(\)](#).

Note

[begin_page\(\)](#) calls [Fl_Surface_Device::push_current\(\)](#) and leaves this device as the active surface. If any calls between [begin_page\(\)](#) and [end_page\(\)](#) open dialog boxes or will otherwise draw into FLTK windows, those calls must be put between a call to [Fl_Surface_Device::pop_current\(\)](#) and a call to [Fl_Surface_Device::push_current\(\)](#), or the content of the dialog box will be rendered to the printer instead of the screen.

Returns

0 if OK, non-zero if any error

Reimplemented from [Fl_Paged_Device](#).

11.98.2.5 end_job()

```
void Fl_PDF_File_Surface::end_job (
    void ) [inline], [virtual]
```

To be called at the end of a print job.

Reimplemented from [Fl_Paged_Device](#).

11.98.2.6 end_page()

```
int Fl_PDF_File_Surface::end_page (
    void ) [inline], [virtual]
```

To be called at the end of each page.

This function also stops this surface from being the current drawing surface with [Fl_Surface_Device::pop_current\(\)](#).

Note

[end_page\(\)](#) calls [Fl_Surface_Device::pop_current\(\)](#). If any calls between [begin_page\(\)](#) and [end_page\(\)](#) open dialog boxes or will otherwise draw into FLTK windows, those calls must be put between a call to [Fl_Surface_Device::pop_current\(\)](#) and a call to [Fl_Surface_Device::push_current\(\)](#).

Returns

0 if OK, non-zero if any error.

Reimplemented from [Fl_Paged_Device](#).

11.98.2.7 is_current()

```
bool Fl_PDF_File_Surface::is_current () [inline], [virtual]
```

Is this surface the current drawing surface?

Reimplemented from [Fl_Surface_Device](#).

11.98.2.8 margins()

```
void Fl_PDF_File_Surface::margins (
    int * left,
    int * top,
    int * right,
    int * bottom) [inline], [virtual]
```

Computes the dimensions of margins that lie between the printable page area and the full page.

Values are in the same unit as that used by FLTK drawing functions. They are changed by [scale\(\)](#) calls.

Parameters

out	<i>left</i>	If non-null, *left is set to the left margin size.
out	<i>top</i>	If non-null, *top is set to the top margin size.
out	<i>right</i>	If non-null, *right is set to the right margin size.
out	<i>bottom</i>	If non-null, *bottom is set to the bottom margin size.

Reimplemented from [Fl_Paged_Device](#).

11.98.2.9 origin() [1/2]

```
void Fl_PDF_File_Surface::origin (
    int * x,
    int * y) [inline], [virtual]
```

Computes the coordinates of the current origin of graphics functions.

Parameters

out	x,y	If non-null, *x and *y are set to the horizontal and vertical coordinates of the graphics origin.
-----	-----	---

Reimplemented from [Fl_Widget_Surface](#).

11.98.2.10 origin() [2/2]

```
void Fl_PDF_File_Surface::origin (
    int x,
    int y) [inline], [virtual]
```

Sets the position of the origin of graphics in the drawable part of the drawing surface.

Arguments should be expressed relatively to the result of a previous [printable_rect\(\)](#) call. That is, `printable_rect(&w, &h); origin(w/2, 0);` sets the graphics origin at the top center of the drawable area. Successive [origin\(\)](#) calls don't combine their effects. [Origin\(\)](#) calls are not affected by [rotate\(\)](#) calls (for classes derived from [Fl_Paged_Device](#)).

Parameters

in	x,y	Horizontal and vertical positions in the drawing surface of the desired origin of graphics.
----	-----	---

Reimplemented from [Fl_Widget_Surface](#).

11.98.2.11 printable_rect()

```
int Fl_PDF_File_Surface::printable_rect (
    int * w,
    int * h) [inline], [virtual]
```

Computes the width and height of the drawable area of the drawing surface.

Values are in the same unit as that used by FLTK drawing functions and are unchanged by calls to [origin\(\)](#). If the object is derived from class [Fl_Paged_Device](#), values account for the user-selected paper type and print orientation and are changed by [scale\(\)](#) calls.

Returns

0 if OK, non-zero if any error

Reimplemented from [Fl_Widget_Surface](#).

11.98.2.12 rotate()

```
void Fl_PDF_File_Surface::rotate (
    float angle) [inline], [virtual]
```

Rotates the graphics operations relatively to paper.

The rotation is centered on the current graphics origin. Successive [rotate\(\)](#) calls don't combine their effects.

Parameters

angle	Rotation angle in counter-clockwise degrees.
-------	--

Reimplemented from [Fl_Paged_Device](#).

11.98.2.13 scale()

```
void Fl_PDF_File_Surface::scale (
    float scale_x,
    float scale_y = 0) [inline], [virtual]
```

Changes the scaling of page coordinates.

This function also resets the origin of graphics functions at top left of printable page area. After a [scale\(\)](#) call, do a [printable_rect\(\)](#) call to get the new dimensions of the printable page area. Successive [scale\(\)](#) calls don't combine their effects.

Parameters

scale_x	Horizontal dimensions of plot are multiplied by this quantity.
scale_y	Same as above, vertically. The value 0. is equivalent to setting <code>scale_y = scale_x</code> . Thus, <code>scale(factor);</code> is equivalent to <code>scale(factor, factor);</code>

Reimplemented from [Fl_Paged_Device](#).

11.98.2.14 set_current()

```
void Fl_PDF_File_Surface::set_current (
    void ) [inline], [virtual]
```

Make this surface the current drawing surface.

This surface will receive all future graphics requests.

Since FLTK 1.4.0 the preferred API to change the current drawing surface is [Fl_Surface_Device::push_current\(\)](#) / [Fl_Surface_Device::pop_current\(\)](#).

Note

It is recommended to use this function only as follows :

- The current drawing surface is the display;
- make current another surface, e.g., an [Fl_Printer](#) or an [Fl_Image_Surface](#) object, calling [set_current\(\)](#) on this object;
- draw to that surface;
- make the display current again with [Fl_Display_Device::display_device\(\)->set_current\(\)](#);
don't do any other call to [set_current\(\)](#) before this one.

Other scenarios of drawing surface changes should be performed via [Fl_Surface_Device::push_current\(\)](#) and [Fl_Surface_Device::pop_current\(\)](#).

Reimplemented from [Fl_Surface_Device](#).

11.98.2.15 translate()

```
void Fl_PDF_File_Surface::translate (
    int x,
    int y) [inline], [virtual]
```

Translates the current graphics origin accounting for the current rotation.

Each [translate\(\)](#) call must be matched by an [untranslate\(\)](#) call. Successive [translate\(\)](#) calls add up their effects.

Reimplemented from [Fl_Widget_Surface](#).

11.98.2.16 untranslate()

```
void Fl_PDF_File_Surface::untranslate (
    void ) [inline], [virtual]
```

Undoes the effect of a previous [translate\(\)](#) call.

Reimplemented from [Fl_Widget_Surface](#).

The documentation for this class was generated from the following files:

- [Fl_PDF_File_Surface.H](#)
- [Fl_Device.cxx](#)

11.99 Fl_Pixmap Class Reference

The [Fl_Pixmap](#) class supports caching and drawing of colormap (pixmap) images, including transparency.

```
#include <Fl_Pixmap.H>
```

Inheritance diagram for [Fl_Pixmap](#):

Public Member Functions

- int **cache_h** ()
- int **cache_w** ()

The [color_average\(\)](#) method averages the colors in the image with the provided FLTK color value.
- [Fl_Image](#) * **copy** () const
- [Fl_Image](#) * **copy** (int W, int H) const [FL_OVERRIDE](#)
Creates a resized copy of the image.
- void **desaturate** () [FL_OVERRIDE](#)
The [desaturate\(\)](#) method converts an image to grayscale.
- void **draw** (int X, int Y)
- void **draw** (int X, int Y, int W, int H, int cx=0, int cy=0) [FL_OVERRIDE](#)
Draws the image to the current drawing surface with a bounding box.
- [Fl_Pixmap](#) (char *const *D)
The constructors create a new pixmap from the specified XPM data.
- [Fl_Pixmap](#) (const char *const *D)
The constructors create a new pixmap from the specified XPM data.
- [Fl_Pixmap](#) (const [uchar](#) *const *D)
The constructors create a new pixmap from the specified XPM data.
- [Fl_Pixmap](#) ([uchar](#) *const *D)
The constructors create a new pixmap from the specified XPM data.
- void **label** ([Fl_Menu_Item](#) *m) [FL_OVERRIDE](#)
This method is an obsolete way to set the image attribute of a menu item.
- void **label** ([Fl_Widget](#) *w) [FL_OVERRIDE](#)
This method is an obsolete way to set the image attribute of a widget or menu item.
- void **uncache** () [FL_OVERRIDE](#)
If the image has been cached for display, delete the cache data.
- virtual ~[Fl_Pixmap](#) ()
The destructor frees all memory and server resources that are used by the pixmap.

Public Member Functions inherited from [Fl_Image](#)

- virtual class [Fl_Shared_Image](#) * **as_shared_image** ()
Returns whether an image is an [Fl_Shared_Image](#) or not.
- [Fl_Image](#) * **copy** () const
Creates a copy of the image in the same size.

- int **count** () const
Returns the number of data values associated with the image.
- int **d** () const
Returns the image depth.
- const char *const * **data** () const
Returns a pointer to the current image data array.
- int **data_h** () const
Returns the height of the image data.
- int **data_w** () const
Returns the width of the image data.
- void **draw** (int X, int Y)
Draws the image to the current drawing surface.
- int **fail** () const
Returns a value that is not 0 if there is currently no image available.
- **FL_Image** (int W, int H, int D)
The constructor creates an empty image with the specified width, height, and depth.
- int **h** () const
Returns the current image drawing height in FLTK units.
- void **inactive** ()
*The **inactive()** method calls **color_average(FL_BACKGROUND_COLOR, 0.33f)** to produce an image that appears grayed out.*
- int **ld** () const
Returns the current line data size in bytes.
- virtual void **release** ()
*Releases an **FL_Image** - the same as 'delete this'.*
- virtual void **scale** (int width, int height, int proportional=1, int can_expand=0)
Sets the drawing size of the image.
- int **w** () const
Returns the current image drawing width in FLTK units.
- virtual ~**FL_Image** ()
The destructor is a virtual method that frees all memory used by the image.

Public Attributes

- int **alloc_data**

Protected Member Functions

- void **measure** ()

Protected Member Functions inherited from **FL_Image**

- void **d** (int D)
Sets the current image depth.
- void **data** (const char *const *p, int c)
Sets the current data pointer and count of pointers in the array.
- void **draw_empty** (int X, int Y)
*The protected method **draw_empty()** draws a box with an X in it.*
- int **draw_scaled** (int X, int Y, int W, int H)
Draw the image to the current drawing surface rescaled to a given width and height.
- void **h** (int H)
Sets the height of the image data.
- void **ld** (int LD)

Sets the current line data size in bytes.

- void [w](#) (int W)

Sets the width of the image data.

11.99.1 Detailed Description

The [Fl_Pixmap](#) class supports caching and drawing of colormap (pixmap) images, including transparency.

11.99.2 Member Function Documentation

11.99.2.1 [color_average\(\)](#)

```
void Fl_Pixmap::color_average (
    Fl\_Color c,
    float i) [virtual]
```

The [color_average\(\)](#) method averages the colors in the image with the provided FLTK color value.

The first argument specifies the FLTK color to be used.

The second argument specifies the amount of the original image to combine with the color, so a value of 1.0 results in no color blend, and a value of 0.0 results in a constant image of the specified color.

An internal copy is made of the original image data before changes are applied, to avoid modifying the original image data in memory.

Reimplemented from [Fl_Image](#).

11.99.2.2 copy()

```
Fl_Image * Fl_Pixmap::copy (
    int W,
    int H) const [virtual]
```

Creates a resized copy of the image.

It is recommended not to call this member function to reduce the size of an image to the size of the area where this image will be drawn, and to use [Fl_Image::scale\(\)](#) instead.

The new image should be released when you are done with it.

Note: since FLTK 1.4.0 you can use [Fl_Image::release\(\)](#) for all types of images (i.e. all subclasses of [Fl_Image](#)) instead of operator *delete* for [Fl_Image](#)'s and [Fl_Image::release\(\)](#) for [Fl_Shared_Image](#)'s.

The new image data will be converted to the requested size. RGB images are resized using the algorithm set by [Fl_Image::RGB_scaling\(\)](#).

For the new image the following equations are true:

- `w() == data_w() == W`
- `h() == data_h() == H`

Parameters

in	<i>W,H</i>	Requested width and height of the new image
----	------------	---

Note

The returned image can be safely cast to the same image type as that of the source image provided this type is one of [Fl_RGB_Image](#), [Fl_SVG_Image](#), [Fl_Pixmap](#), [Fl_Bitmap](#), [Fl_Tiled_Image](#), [Fl_Anim_GIF_Image](#) and [Fl_Shared_Image](#). Returned objects copied from images of other, derived, image classes belong to the parent class appearing in this list. For example, the copy of an [Fl_GIF_Image](#) is an object of class [Fl_Pixmap](#).

Since FLTK 1.4.0 this method is 'const'. If you derive your own class from [Fl_Image](#) or any subclass your overridden methods of '[Fl_Image::copy\(\) const](#)' and '[Fl_Image::copy\(int, int\) const](#)' **must** also be 'const' for inheritance to work properly. This is different than in FLTK 1.3.x and earlier where these methods have not been 'const'.

Reimplemented from [Fl_Image](#).

11.99.2.3 desaturate()

```
void Fl_Pixmap::desaturate () [virtual]
```

The [desaturate\(\)](#) method converts an image to grayscale.

If the image contains an alpha channel (depth = 4), the alpha channel is preserved.

An internal copy is made of the original image data before changes are applied, to avoid modifying the original image data in memory.

Reimplemented from [Fl_Image](#).

11.99.2.4 draw()

```
void Fl_Pixmap::draw (
    int X,
    int Y,
    int W,
    int H,
    int cx = 0,
    int cy = 0) [virtual]
```

Draws the image to the current drawing surface with a bounding box.

Arguments *X*, *Y*, *W*, *H* specify a bounding box for the image, with the origin (upper-left corner) of the image offset by the *cx* and *cy* arguments.

Another way to see what part of the image gets drawn and where, is to consider this alternative writing producing the same output:

```
fl_push_clip(X,Y,W,H);
this->draw(X - cx, Y - cy);
fl_pop_clip();
```

Repeated calls to this member function with the same image but varying `W`, `H`, `cx`, or `cy` arguments may be more efficiently processed using the above alternative writing.

Reimplemented from [FI_Image](#).

11.99.2.5 label() [1/2]

```
void Fl_Pixmap::label (
    Fl_Menu_Item * m) [virtual]
```

This method is an obsolete way to set the image attribute of a menu item.

Deprecated Please use [Fl_Menu_Item::image\(\)](#) instead.

Reimplemented from [FI_Image](#).

11.99.2.6 label() [2/2]

```
void Fl_Pixmap::label (
    Fl_Widget * widget) [virtual]
```

This method is an obsolete way to set the image attribute of a widget or menu item.

Deprecated Please use [Fl_Widget::image\(\)](#) or [Fl_Widget::deimage\(\)](#) instead.

Reimplemented from [FI_Image](#).

11.99.2.7 uncache()

```
void Fl_Pixmap::uncache () [virtual]
```

If the image has been cached for display, delete the cache data.

This allows you to change the data used for the image and then redraw it without recreating an image object.

Reimplemented from [FI_Image](#).

The documentation for this class was generated from the following files:

- [FI_Pixmap.H](#)
- [FI_Pixmap.cxx](#)

11.100 FI_Plugin Class Reference

[FI_Plugin](#) allows link-time and run-time integration of binary modules.

```
#include <FI_Plugin.H>
```

Inheritance diagram for [FI_Plugin](#):

Public Member Functions

- [FI_Plugin](#) (const char *klass, const char *name)
Create a plugin.
- virtual [~FI_Plugin](#) ()
Clear the plugin and remove it from the database.

11.100.1 Detailed Description

[FI_Plugin](#) allows link-time and run-time integration of binary modules.

[FI_Plugin](#) and [FI_Plugin_Manager](#) provide a small and simple solution for linking C++ classes at run-time, or optionally linking modules at compile time without the need to change the main application.

[FI_Plugin_Manager](#) uses static initialization to create the plugin interface early during startup. Plugins are stored in a temporary database, organized in classes.

Plugins should derive a new class from [FI_Plugin](#) as a base:

```
class My_Plugin : public FI_Plugin {
public:
    My_Plugin() : FI_Plugin("effects", "blur") { }
    void do_something(...);
};
My_Plugin blur_plugin();
```

Plugins can be put into modules and either linked before distribution, or loaded from dynamically linkable files. An [FI_Plugin_Manager](#) is used to list and access all currently loaded plugins.

```
FI_Plugin_Manager mgr("effects");
int i, n = mgr.plugins();
for (i=0; i<n; i++) {
    My_Plugin *pin = (My_Plugin*)mgr.plugin(i);
    pin->do_something();
}
```

11.100.2 Constructor & Destructor Documentation

11.100.2.1 FI_Plugin()

```
FI_Plugin::FI_Plugin (
    const char * klass,
    const char * name)
```

Create a plugin.

Parameters

in	<i>klass</i>	plugins are grouped in classes
in	<i>name</i>	every plugin should have a unique name

The documentation for this class was generated from the following files:

- [FI_Plugin.H](#)
- [FI_Preferences.cxx](#)

11.101 FI_Plugin_Manager Class Reference

[FI_Plugin_Manager](#) manages link-time and run-time plugin binaries.

```
#include <FI_Plugin.H>
```

Inheritance diagram for [FI_Plugin_Manager](#):

Public Member Functions

- [FI_Preferences::ID addPlugin](#) (const char **name*, [FI_Plugin](#) **plugin*)
This function adds a new plugin to the database.
- [FI_Plugin_Manager](#) (const char **klass*)
Manage all plugins belonging to one class.

- [FI_Plugin](#) * **plugin** (const char *[name](#))
Return the address of a plugin by name.
- [FI_Plugin](#) * **plugin** (int index)
Return the address of a plugin by index.
- int **plugins** ()
Return the number of plugins in the klass.
- ~[FI_Plugin_Manager](#) ()
Remove the plugin manager.

Public Member Functions inherited from [FI_Preferences](#)

- char **clear** ()
Delete all groups and all entries.
- char **delete_all_entries** ()
Delete all entries.
- char **delete_all_groups** ()
Delete all groups.
- char **delete_entry** (const char *[entry](#))
Deletes a single name/value pair.
- char **delete_group** (const char *[group](#))
Deletes a group.
- int **dirty** ()
Check if there were changes to the database that need to be written to disk.
- int **entries** ()
Returns the number of entries (name/value pairs) in a group.
- const char * **entry** (int index)
Returns the name of an entry.
- char **entry_exists** (const char *[key](#))
Returns non-zero if an entry with this name exists.
- [Root](#) filename (char *buffer, size_t buffer_size)
Return the file name and path to the preference file.
- [FI_Preferences](#) (const char *[path](#), const char *[vendor](#), const char *[application](#))
Deprecated: Use this constructor to create or read a preference file at an arbitrary position in the file system.
- [FI_Preferences](#) (const char *[path](#), const char *[vendor](#), const char *[application](#), [Root](#) flags)
Use this constructor to create or read a preference file at an arbitrary position in the file system.
- **FI_Preferences** (const [FI_Preferences](#) &)
Create another reference to a Preferences group.
- [FI_Preferences](#) ([FI_Preferences](#) &parent, const char *[group](#))
Generate or read a new group of entries within another group.
- [FI_Preferences](#) ([FI_Preferences](#) &parent, int groupIndex)
Open a child group using a given index.
- [FI_Preferences](#) ([FI_Preferences](#) *parent, const char *[group](#))
Create or access a group of preferences using a name.
- [FI_Preferences](#) ([FI_Preferences](#) *parent, int groupIndex)
- [FI_Preferences](#) (ID id)
Create a new dataset access point using a dataset ID.
- [FI_Preferences](#) ([Root](#) root, const char *[vendor](#), const char *[application](#))
The constructor creates a group that manages key/value pairs and child groups.
- int **flush** ()
Writes preferences to disk if they were modified.
- char **get** (const char *[entry](#), char *&value, const char *defaultValue)

- Reads an entry from the group.*

 - char [get](#) (const char *[entry](#), char *value, const char *defaultValue, int maxSize)
- Reads an entry from the group.*

 - char [get](#) (const char *[entry](#), double &value, double defaultValue)
- Reads an entry from the group.*

 - char [get](#) (const char *[entry](#), float &value, float defaultValue)
- Reads an entry from the group.*

 - char [get](#) (const char *[entry](#), int &value, int defaultValue)
- Reads an entry from the group.*

 - char [get](#) (const char *[entry](#), void *&value, const void *defaultValue, int defaultSize)
- Reads an entry from the group.*

 - char [get](#) (const char *[entry](#), void *value, const void *defaultValue, int defaultSize, int *size)
- Reads a binary entry from the group, encoded in hexadecimal blocks.*

 - char [get](#) (const char *[entry](#), void *value, const void *defaultValue, int defaultSize, int maxSize)
- Reads a binary entry from the group, encoded in hexadecimal blocks.*

 - char [get_userdata_path](#) (char *[path](#), int pathlen)
- Creates a path that is related to the preference file and that is usable for additional application data.*

 - const char * [group](#) (int num_group)
- Returns the name of the Nth (*num_group*) group.*

 - char [group_exists](#) (const char *key)
- Returns non-zero if a group with this name exists.*

 - int [groups](#) ()
- Returns the number of groups that are contained within a group.*

 - [ID](#) [id](#) ()
- Return an [ID](#) that can later be reused to open more references to this dataset.*

 - const char * [name](#) ()
- Return the name of this entry.*

 - const char * [path](#) ()
- Return the full path to this entry.*

 - char [set](#) (const char *[entry](#), const char *value)
- Sets an entry (name/value pair).*

 - char [set](#) (const char *[entry](#), const void *value, int size)
- Sets an entry (name/value pair).*

 - char [set](#) (const char *[entry](#), double value)
- Sets an entry (name/value pair).*

 - char [set](#) (const char *[entry](#), double value, int precision)
- Sets an entry (name/value pair).*

 - char [set](#) (const char *[entry](#), float value)
- Sets an entry (name/value pair).*

 - char [set](#) (const char *[entry](#), float value, int precision)
- Sets an entry (name/value pair).*

 - char [set](#) (const char *[entry](#), int value)
- Sets an entry (name/value pair).*

 - int [size](#) (const char *[entry](#))
- Returns the size of the value part of an entry.*

 - virtual [~FI_Preferences](#) ()
- The destructor removes allocated resources.*

Static Public Member Functions

- static int [load](#) (const char *filename)
Load a module from disk.
- static int [loadAll](#) (const char *dirpath, const char *pattern=0)
Use this function to load a whole directory full of modules.
- static void [removePlugin](#) ([FI_Preferences::ID](#) id)
Remove any plugin.

Static Public Member Functions inherited from [FI_Preferences](#)

- static unsigned int [file_access](#) ()
Return the current file access permissions for the FLTK preferences system.
- static void [file_access](#) (unsigned int flags)
Tell the FLTK preferences system which files in the file system it may read, create, or write.
- static [Root](#) filename (char *buffer, size_t buffer_size, [Root](#) root, const char *vendor, const char *application)
Determine the file name and path to preferences that would be opened with these parameters.
- static const char * [new_UUID](#) ()
Returns a UUID as generated by the system.
- static char [remove](#) ([ID](#) id_)
Remove the group with this ID from a database.

Additional Inherited Members

Public Types inherited from [FI_Preferences](#)

- typedef void * [ID](#)
Every FI_Preferences-Group has a unique ID.
- enum [Root](#) {
[UNKNOWN_ROOT_TYPE](#) = -1 , [SYSTEM](#) = 0 , [USER](#) , [MEMORY](#) ,
[ROOT_MASK](#) = 0x00FF , [CORE](#) = 0x0100 , [C_LOCALE](#) = 0x1000 , [CLEAR](#) = 0x2000 ,
[SYSTEM_L](#) = [SYSTEM](#) | [C_LOCALE](#) , [USER_L](#) = [USER](#) | [C_LOCALE](#) , [CORE_SYSTEM_L](#) = [CORE](#) |
[SYSTEM_L](#) , [CORE_USER_L](#) = [CORE](#) | [USER_L](#) ,
[CORE_SYSTEM](#) = [CORE](#) | [SYSTEM](#) , [CORE_USER](#) = [CORE](#) | [USER](#) }
Define the scope of the preferences.

Static Public Attributes inherited from [FI_Preferences](#)

- static const unsigned int [ALL](#) = [ALL_READ_OK](#) | [ALL_WRITE_OK](#)
Set this to give FLTK and applications permission to read, write, and create preference files.
- static const unsigned int [ALL_READ_OK](#) = [USER_READ_OK](#) | [SYSTEM_READ_OK](#) | [CORE_READ_OK](#)
Set this to allow FLTK and applications to read preference files.
- static const unsigned int [ALL_WRITE_OK](#) = [USER_WRITE_OK](#) | [SYSTEM_WRITE_OK](#) | [CORE_WRITE_OK](#)
Set this to allow FLTK and applications to create and write preference files.
- static const unsigned int [APP_OK](#) = [SYSTEM_OK](#) | [USER_OK](#)
Set this if it is OK for applications to read, create, and write any kind of preference files.
- static const unsigned int [CORE_OK](#) = [CORE_READ_OK](#) | [CORE_WRITE_OK](#)
Set this if it is OK for FLTK to read, create, or write preference files.
- static const unsigned int [CORE_READ_OK](#) = 0x0010
Set this if it is OK for FLTK to read preference files.
- static const unsigned int [CORE_WRITE_OK](#) = 0x0020
Set this if it is OK for FLTK to create or write preference files.
- static const unsigned int [NONE](#) = 0x0000
Set this if no call to [FI_Preferences](#) shall access the file system.

- static const unsigned int **SYSTEM_OK** = [SYSTEM_READ_OK](#) | [SYSTEM_WRITE_OK](#)
Set this if it is OK for applications to read, create, and write system wide preference files.
- static const unsigned int **SYSTEM_READ_OK** = 0x0004
Set this if it is OK for applications to read system wide preference files.
- static const unsigned int **SYSTEM_WRITE_OK** = 0x0008
Set this if it is OK for applications to create and write system wide preference files.
- static const unsigned int **USER_OK** = [USER_READ_OK](#) | [USER_WRITE_OK](#)
Set this if it is OK for applications to read, create, and write user preference files.
- static const unsigned int **USER_READ_OK** = 0x0001
Set this if it is OK for applications to read user preference files.
- static const unsigned int **USER_WRITE_OK** = 0x0002
Set this if it is OK for applications to create and write user preference files.

Protected Attributes inherited from [Fl_Preferences](#)

- [Node](#) * node
- [RootNode](#) * rootNode

11.101.1 Detailed Description

[Fl_Plugin_Manager](#) manages link-time and run-time plugin binaries.

See also

[Fl_Plugin](#)

11.101.2 Constructor & Destructor Documentation

11.101.2.1 ~Fl_Plugin_Manager()

```
Fl_Plugin_Manager::~Fl_Plugin_Manager ()
```

Remove the plugin manager.

Calling this does not remove the database itself or any plugins. It just removes the reference to the database.

11.101.3 Member Function Documentation

11.101.3.1 addPlugin()

```
Fl_Preferences::ID Fl_Plugin_Manager::addPlugin (
    const char * name,
    Fl_Plugin * plugin)
```

This function adds a new plugin to the database.

There is no need to call this function explicitly. Every [Fl_Plugin](#) constructor will call this function at initialization time.

11.101.3.2 load()

```
int Fl_Plugin_Manager::load (
    const char * filename) [static]
```

Load a module from disk.

A module must be a dynamically linkable file for the given operating system. When loading a module, its +init function will be called which in turn calls the constructor of all statically initialized [Fl_Plugin](#) classes and adds them to the database.

11.101.3.3 loadAll()

```
int Fl_Plugin_Manager::loadAll (  
    const char * dirpath,  
    const char * pattern = 0) [static]
```

Use this function to load a whole directory full of modules.

Parameters

<i>dirpath</i>	Pathname of a directory. It must end with the platform's directory separator character (i.e., '\' under Windows, '/' otherwise).
<i>pattern</i>	A filename pattern to catch all modules of interest in the targeted directory (e.g., "{*.so,*.dll,*.dylib}"), or NULL to catch all files in the directory.

11.101.3.4 removePlugin()

```
void Fl_Plugin_Manager::removePlugin (
    Fl_Preferences::ID id) [static]
```

Remove any plugin.

There is no need to call this function explicitly. Every [Fl_Plugin](#) destructor will call this function at destruction time. The documentation for this class was generated from the following files:

- [Fl_Plugin.H](#)
- [Fl_Preferences.cxx](#)

11.102 FI_PNG_Image Class Reference

The [FI_PNG_Image](#) class supports loading, caching, and drawing of Portable Network Graphics (PNG) image files.

```
#include <FI_PNG_Image.H>
```

Inheritance diagram for [FI_PNG_Image](#):

**Public Member Functions**

- [FI_PNG_Image](#) (const char *filename)
The constructor loads the named PNG image from the given png filename.
- [FI_PNG_Image](#) (const char *name_png, const unsigned char *buffer, int datasize)
Constructor that reads a PNG image from memory.

Public Member Functions inherited from [FI_RGB_Image](#)

- virtual [FI_SVG_Image](#) * [as_svg_image](#) ()
Returns whether an image is an [FI_SVG_Image](#) or not.
- int **cache_h** ()
- int **cache_w** ()
- void [color_average](#) ([FI_Color](#) c, float i) [FL_OVERRIDE](#)
The [color_average\(\)](#) method averages the colors in the image with the provided FLTK color value.
- [FI_Image](#) * **copy** () const
- [FI_Image](#) * **copy** (int W, int H) const [FL_OVERRIDE](#)
Creates a resized copy of the image.
- void [desaturate](#) () [FL_OVERRIDE](#)
The [desaturate\(\)](#) method converts an image to grayscale.
- void **draw** (int X, int Y)

- void **draw** (int X, int Y, int W, int H, int cx=0, int cy=0) **FL_OVERRIDE**
Draws the image to the current drawing surface with a bounding box.
- **FI_RGB_Image** (const **FI_Pixmap** *pxm, **FI_Color** bg=FL_GRAY)
*The constructor creates a new RGBA image from the specified **FI_Pixmap**.*
- **FI_RGB_Image** (const **uchar** *bits, int bits_length, int W, int H, int D, int LD)
The constructor creates a new image from the specified data.
- **FI_RGB_Image** (const **uchar** *bits, int W, int H, int D=3, int LD=0)
The constructor creates a new image from the specified data.
- void **label** (**FI_Menu_Item** *m) **FL_OVERRIDE**
This method is an obsolete way to set the image attribute of a menu item.
- void **label** (**FI_Widget** *w) **FL_OVERRIDE**
This method is an obsolete way to set the image attribute of a widget or menu item.
- virtual void **normalize** ()
Makes sure the object is fully initialized.
- void **uncache** () **FL_OVERRIDE**
If the image has been cached for display, delete the cache data.
- ~**FI_RGB_Image** () **FL_OVERRIDE**
The destructor frees all memory and server resources that are used by the image.

Public Member Functions inherited from **FI_Image**

- virtual class **FI_Shared_Image** * **as_shared_image** ()
*Returns whether an image is an **FI_Shared_Image** or not.*
- **FI_Image** * **copy** () const
Creates a copy of the image in the same size.
- int **count** () const
Returns the number of data values associated with the image.
- int **d** () const
Returns the image depth.
- const char *const * **data** () const
Returns a pointer to the current image data array.
- int **data_h** () const
Returns the height of the image data.
- int **data_w** () const
Returns the width of the image data.
- void **draw** (int X, int Y)
Draws the image to the current drawing surface.
- int **fail** () const
Returns a value that is not 0 if there is currently no image available.
- **FI_Image** (int W, int H, int D)
The constructor creates an empty image with the specified width, height, and depth.
- int **h** () const
Returns the current image drawing height in FLTK units.
- void **inactive** ()
*The **inactive()** method calls **color_average(FL_BACKGROUND_COLOR, 0.33f)** to produce an image that appears grayed out.*
- int **ld** () const
Returns the current line data size in bytes.
- virtual void **release** ()
*Releases an **FI_Image** - the same as 'delete this'.*
- virtual void **scale** (int width, int height, int proportional=1, int can_expand=0)

Sets the drawing size of the image.

- int [w](#) () const

Returns the current image drawing width in FLTK units.

- virtual [~FI_Image](#) ()

The destructor is a virtual method that frees all memory used by the image.

Additional Inherited Members

Static Public Member Functions inherited from [FI_RGB_Image](#)

- static [size_t](#) [max_size](#) ()

Returns the maximum allowed image size in bytes when creating an [FI_RGB_Image](#) object.

- static void [max_size](#) ([size_t](#) size)

Sets the maximum allowed image size in bytes when creating an [FI_RGB_Image](#) object.

Static Public Member Functions inherited from [FI_Image](#)

- static [FI_Labeltype](#) [define_FL_IMAGE_LABEL](#) ()

- static [FI_RGB_Scaling](#) [RGB_scaling](#) ()

Returns the currently used RGB image scaling method.

- static void [RGB_scaling](#) ([FI_RGB_Scaling](#))

Sets the RGB image scaling method used for copy(int, int).

- static [FI_RGB_Scaling](#) [scaling_algorithm](#) ()

Gets what algorithm is used when resizing a source image to draw it.

- static void [scaling_algorithm](#) ([FI_RGB_Scaling](#) algorithm)

Sets what algorithm is used when resizing a source image to draw it.

Public Attributes inherited from [FI_RGB_Image](#)

- int [alloc_array](#)

If non-zero, the object's data array is delete[]'d when deleting the object.

- const [uchar](#) * [array](#)

Points to the start of the object's data array.

Static Public Attributes inherited from [FI_Image](#)

- static const int [ERR_FILE_ACCESS](#) = -2

- static const int [ERR_FORMAT](#) = -3

- static const int [ERR_MEMORY_ACCESS](#) = -4

- static const int [ERR_NO_IMAGE](#) = -1

- static bool [register_images_done](#) = false

True after [fl_register_images\(\)](#) was called, false before.

Protected Member Functions inherited from [FI_Image](#)

- void [d](#) (int D)

Sets the current image depth.

- void [data](#) (const char *const *p, int c)

Sets the current data pointer and count of pointers in the array.

- void [draw_empty](#) (int X, int Y)

The protected method [draw_empty\(\)](#) draws a box with an X in it.

- int [draw_scaled](#) (int X, int Y, int W, int H)

Draw the image to the current drawing surface rescaled to a given width and height.

- void [h](#) (int H)

Sets the height of the image data.

- void [ld](#) (int LD)

Sets the current line data size in bytes.

- void [w](#) (int W)

Sets the width of the image data.

Static Protected Member Functions inherited from [FI_Image](#)

- static void **labeltype** (const [FI_Label](#) *lo, int lx, int ly, int lw, int lh, [FI_Align](#) la)
- static void **measure** (const [FI_Label](#) *lo, int &lw, int &lh)

11.102.1 Detailed Description

The [FI_PNG_Image](#) class supports loading, caching, and drawing of Portable Network Graphics (PNG) image files. The class loads color-mapped and full-color images and handles color- and alpha-based transparency.

11.102.2 Constructor & Destructor Documentation

11.102.2.1 [FI_PNG_Image\(\)](#) [1/2]

```
FI_PNG_Image::FI_PNG_Image (
    const char * filename)
```

The constructor loads the named PNG image from the given png filename.

The destructor frees all memory and server resources that are used by the image.

Use [FI_Image::fail\(\)](#) to check if [FI_PNG_Image](#) failed to load. [fail\(\)](#) returns `ERR_FILE_ACCESS` if the file could not be opened or read, `ERR_FORMAT` if the PNG format could not be decoded, and `ERR_NO_IMAGE` if the image could not be loaded for another reason.

Parameters

<code>in</code>	<code>filename</code>	Name of PNG file to read
-----------------	-----------------------	--------------------------

11.102.2.2 [FI_PNG_Image\(\)](#) [2/2]

```
FI_PNG_Image::FI_PNG_Image (
    const char * name_png,
    const unsigned char * buffer,
    int maxsize)
```

Constructor that reads a PNG image from memory.

Construct an image from a block of memory inside the application. Fluid offers "binary Data" chunks as a great way to add image data into the C++ source code. `name_png` can be NULL. If a name is given, the image is added to the list of shared images (see: [FI_Shared_Image](#)) and will be available by that name.

Parameters

<code>name_png</code>	A name given to this image or NULL
<code>buffer</code>	Pointer to the start of the PNG image in memory
<code>maxsize</code>	Size in bytes of the memory buffer containing the PNG image

The documentation for this class was generated from the following files:

- [FI_PNG_Image.H](#)
- [FI_PNG_Image.cxx](#)

11.103 FI_PNM_Image Class Reference

The [FI_PNM_Image](#) class supports loading, caching, and drawing of Portable Anymap (PNM, PBM, PGM, PPM) image files.

```
#include <Fl_PNM_Image.H>
```

Inheritance diagram for [FI_PNM_Image](#):

Public Member Functions

- [FI_PNM_Image](#) (const char *filename)
The constructor loads the named PNM image.

Public Member Functions inherited from [FI_RGB_Image](#)

- virtual [FI_SVG_Image](#) * [as_svg_image](#) ()
Returns whether an image is an [FI_SVG_Image](#) or not.
- int [cache_h](#) ()
- int [cache_w](#) ()
- void [color_average](#) ([FI_Color](#) c, float i) [FL_OVERRIDE](#)
The [color_average\(\)](#) method averages the colors in the image with the provided FLTK color value.
- [FI_Image](#) * [copy](#) () const
- [FI_Image](#) * [copy](#) (int W, int H) const [FL_OVERRIDE](#)
Creates a resized copy of the image.
- void [desaturate](#) () [FL_OVERRIDE](#)
The [desaturate\(\)](#) method converts an image to grayscale.
- void [draw](#) (int X, int Y)
- void [draw](#) (int X, int Y, int W, int H, int cx=0, int cy=0) [FL_OVERRIDE](#)
Draws the image to the current drawing surface with a bounding box.
- [FI_RGB_Image](#) (const [FI_Pixmap](#) *pxm, [FI_Color](#) bg=[FL_GRAY](#))
The constructor creates a new RGBA image from the specified [FI_Pixmap](#).
- [FI_RGB_Image](#) (const [uchar](#) *bits, int bits_length, int W, int H, int D, int LD)
The constructor creates a new image from the specified data.
- [FI_RGB_Image](#) (const [uchar](#) *bits, int W, int H, int D=3, int LD=0)
The constructor creates a new image from the specified data.
- void [label](#) ([FI_Menu_Item](#) *m) [FL_OVERRIDE](#)
This method is an obsolete way to set the image attribute of a menu item.
- void [label](#) ([FI_Widget](#) *w) [FL_OVERRIDE](#)
This method is an obsolete way to set the image attribute of a widget or menu item.
- virtual void [normalize](#) ()
Makes sure the object is fully initialized.
- void [uncache](#) () [FL_OVERRIDE](#)
If the image has been cached for display, delete the cache data.
- ~[FI_RGB_Image](#) () [FL_OVERRIDE](#)
The destructor frees all memory and server resources that are used by the image.

Public Member Functions inherited from FI_Image

- virtual class FI_Shared_Image * **as_shared_image** ()
Returns whether an image is an FI_Shared_Image or not.
- FI_Image * **copy** () const
Creates a copy of the image in the same size.
- int **count** () const
Returns the number of data values associated with the image.
- int **d** () const
Returns the image depth.
- const char *const * **data** () const
Returns a pointer to the current image data array.
- int **data_h** () const
Returns the height of the image data.
- int **data_w** () const
Returns the width of the image data.
- void **draw** (int X, int Y)
Draws the image to the current drawing surface.
- int **fail** () const
Returns a value that is not 0 if there is currently no image available.
- FI_Image (int W, int H, int D)
The constructor creates an empty image with the specified width, height, and depth.
- int **h** () const
Returns the current image drawing height in FLTK units.
- void **inactive** ()
*The **inactive()** method calls **color_average(FL_BACKGROUND_COLOR, 0.33f)** to produce an image that appears grayed out.*
- int **ld** () const
Returns the current line data size in bytes.
- virtual void **release** ()
Releases an FI_Image - the same as 'delete this'.
- virtual void **scale** (int width, int height, int proportional=1, int can_expand=0)
Sets the drawing size of the image.
- int **w** () const
Returns the current image drawing width in FLTK units.
- virtual ~FI_Image ()
The destructor is a virtual method that frees all memory used by the image.

Additional Inherited Members

Static Public Member Functions inherited from FI_RGB_Image

- static size_t **max_size** ()
Returns the maximum allowed image size in bytes when creating an FI_RGB_Image object.
- static void **max_size** (size_t size)
Sets the maximum allowed image size in bytes when creating an FI_RGB_Image object.

Static Public Member Functions inherited from [FI_Image](#)

- static [FI_Labeltype](#) [define_FL_IMAGE_LABEL](#) ()
- static [FI_RGB_Scaling](#) [RGB_scaling](#) ()
Returns the currently used RGB image scaling method.
- static void [RGB_scaling](#) ([FI_RGB_Scaling](#))
Sets the RGB image scaling method used for copy(int, int).
- static [FI_RGB_Scaling](#) [scaling_algorithm](#) ()
Gets what algorithm is used when resizing a source image to draw it.
- static void [scaling_algorithm](#) ([FI_RGB_Scaling](#) algorithm)
Sets what algorithm is used when resizing a source image to draw it.

Public Attributes inherited from [FI_RGB_Image](#)

- int [alloc_array](#)
If non-zero, the object's data array is delete[]'d when deleting the object.
- const [uchar](#) * [array](#)
Points to the start of the object's data array.

Static Public Attributes inherited from [FI_Image](#)

- static const int [ERR_FILE_ACCESS](#) = -2
- static const int [ERR_FORMAT](#) = -3
- static const int [ERR_MEMORY_ACCESS](#) = -4
- static const int [ERR_NO_IMAGE](#) = -1
- static bool [register_images_done](#) = false
True after [fl_register_images\(\)](#) was called, false before.

Protected Member Functions inherited from [FI_Image](#)

- void [d](#) (int D)
Sets the current image depth.
- void [data](#) (const char *const *p, int c)
Sets the current data pointer and count of pointers in the array.
- void [draw_empty](#) (int X, int Y)
The protected method [draw_empty\(\)](#) draws a box with an X in it.
- int [draw_scaled](#) (int X, int Y, int W, int H)
Draw the image to the current drawing surface rescaled to a given width and height.
- void [h](#) (int H)
Sets the height of the image data.
- void [ld](#) (int LD)
Sets the current line data size in bytes.
- void [w](#) (int W)
Sets the width of the image data.

Static Protected Member Functions inherited from [FI_Image](#)

- static void [labeltype](#) (const [FI_Label](#) *lo, int lx, int ly, int lw, int lh, [FI_Align](#) la)
- static void [measure](#) (const [FI_Label](#) *lo, int &lw, int &lh)

11.103.1 Detailed Description

The [FI_PNM_Image](#) class supports loading, caching, and drawing of Portable Anymap (PNM, PBM, PGM, PPM) image files.

The class loads bitmap, grayscale, and full-color images in both ASCII and binary formats.

11.103.2 Constructor & Destructor Documentation

11.103.2.1 Fl_PNM_Image()

```
Fl_PNM_Image::Fl_PNM_Image (
    const char * filename)
```

The constructor loads the named PNM image.

The destructor frees all memory and server resources that are used by the image.

Use [Fl_Image::fail\(\)](#) to check if [Fl_PNM_Image](#) failed to load. [fail\(\)](#) returns `ERR_FILE_ACCESS` if the file could not be opened or read, `ERR_FORMAT` if the PNM format could not be decoded, and `ERR_NO_IMAGE` if the image could not be loaded for another reason.

Parameters

in	<i>filename</i>	a full path and name pointing to a valid jpeg file.
----	-----------------	---

The documentation for this class was generated from the following files:

- [Fl_PNM_Image.H](#)
- [Fl_PNM_Image.cxx](#)

11.104 Fl_Positioner Class Reference

This class is provided for Forms compatibility.

```
#include <Fl_Positioner.H>
```

Inheritance diagram for [Fl_Positioner](#):

Public Member Functions

- [Fl_Positioner](#) (int *x*, int *y*, int *w*, int *h*, const char **l*=0)

Creates a new [Fl_Positioner](#) widget using the given position, size, and label string.
- int [handle](#) (int) [FL_OVERRIDE](#)

Handles the specified event.
- int **value** (double, double)

*Returns the current position in *x* and *y*.*
- void **xbounds** (double, double)

*Sets the *X* axis bounds.*
- double **xmaximum** () const

*Gets the *X* axis maximum.*
- void **xmaximum** (double *a*)

Same as `xbounds(xminimum(), a)`
- double **xminimum** () const

*Gets the *X* axis minimum.*
- void **xminimum** (double *a*)

Same as `xbounds(a, xmaximum())`
- void **xstep** (double *a*)

*Sets the stepping value for the *X* axis.*
- double **xvalue** () const

*Gets the *X* axis coordinate.*

- int **xvalue** (double)
Sets the X axis coordinate.
- void **ybounds** (double, double)
Sets the Y axis bounds.
- double **ymaximum** () const
Gets the Y axis maximum.
- void **ymaximum** (double a)
Same as ybounds(yminimum(), a)
- double **yminimum** () const
Gets the Y axis minimum.
- void **yminimum** (double a)
Same as ybounds(a, ymaximum())
- void **ystep** (double a)
Sets the stepping value for the Y axis.
- double **yvalue** () const
Gets the Y axis coordinate.
- int **yvalue** (double)
Sets the Y axis coordinate.

Public Member Functions inherited from [Fl_Widget](#)

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void [activate](#) ()
Activates the widget.
- unsigned int [active](#) () const
Returns whether the widget is active.
- int [active_r](#) () const
Returns whether the widget and all of its parents are active.
- [Fl_Align](#) [align](#) () const
Gets the label alignment.
- void [align](#) ([Fl_Align](#) alignment)
Sets the label alignment.
- long [argument](#) () const
Gets the current user data (long) argument that is passed to the callback function.
- void [argument](#) (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class [Fl_Gl_Window](#) * [as_gl_window](#) ()
Returns an [Fl_Gl_Window](#) pointer if this widget is an [Fl_Gl_Window](#).
- virtual class [Fl_Gl_Window](#) const * **as_gl_window** () const
- virtual [Fl_Group](#) * [as_group](#) ()
Returns an [Fl_Group](#) pointer if this widget is an [Fl_Group](#).
- virtual [Fl_Group](#) const * **as_group** () const
- virtual [Fl_Window](#) * [as_window](#) ()
Returns an [Fl_Window](#) pointer if this widget is an [Fl_Window](#).
- virtual [Fl_Window](#) const * **as_window** () const
- void [bind_deimage](#) ([Fl_Image](#) *img)
Sets the image to use as part of the widget label when in the inactive state.
- void [bind_deimage](#) (int f)
Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.
- void [bind_image](#) ([Fl_Image](#) *img)

- Sets the image to use as part of the widget label when in the active state.*

 - void [bind_image](#) (int f)

Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- [FL_Boxtype](#) [box](#) () const

Gets the box type of the widget.
- void [box](#) ([FL_Boxtype](#) new_box)

Sets the box type for the widget.
- [FL_Callback_p](#) [callback](#) () const

Gets the current callback function for the widget.
- void [callback](#) ([FL_Callback](#) *cb)

Sets the current callback function for the widget.
- void [callback](#) ([FL_Callback](#) *cb, [FL_Callback_User_Data](#) *p, bool auto_free)

Sets the current callback function and managed user data for the widget.
- void [callback](#) ([FL_Callback](#) *cb, void *p)

Sets the current callback function and data for the widget.
- void [callback](#) ([FL_Callback0](#) *cb)

Sets the current callback function for the widget.
- void [callback](#) ([FL_Callback1](#) *cb, long p=0)

Sets the current callback function for the widget.
- unsigned int [changed](#) () const

Checks if the widget value changed since the last callback.
- void [clear_active](#) ()

Marks the widget as inactive without sending events or changing focus.
- void [clear_changed](#) ()

Marks the value of the widget as unchanged.
- void [clear_damage](#) (uchar c=0)

Clears or sets the damage flags.
- void [clear_output](#) ()

Sets a widget to accept input.
- void [clear_visible](#) ()

Hides the widget.
- void [clear_visible_focus](#) ()

Disables keyboard focus navigation with this widget.
- [FL_Color](#) [color](#) () const

Gets the background color of the widget.
- void [color](#) ([FL_Color](#) bg)

Sets the background color of the widget.
- void [color](#) ([FL_Color](#) bg, [FL_Color](#) sel)

Sets the background and selection color of the widget.
- [FL_Color](#) [color2](#) () const

For back compatibility only.
- void [color2](#) (unsigned a)

For back compatibility only.
- int [contains](#) (const [FL_Widget](#) *w) const

Checks if w is a child of this widget.
- void [copy_label](#) (const char *new_label)

Sets the current label.
- void [copy_tooltip](#) (const char *text)

Sets the current tooltip text.
- uchar [damage](#) () const

Returns non-zero if [draw\(\)](#) needs to be called.

- void [damage](#) ([uchar](#) c)
Sets the damage bits for the widget.
- void [damage](#) ([uchar](#) c, int x, int y, int w, int h)
Sets the damage bits for an area inside the widget.
- int [damage_resize](#) (int, int, int, int)
Internal use only.
- void [deactivate](#) ()
Deactivates the widget.
- [FL_Image](#) * [deimage](#) ()
Gets the image that is used as part of the widget label when in the inactive state.
- const [FL_Image](#) * [deimage](#) () const
Gets the image that is used as part of the widget label when in the inactive state.
- void [deimage](#) ([FL_Image](#) &img)
Sets the image to use as part of the widget label when in the inactive state.
- void [deimage](#) ([FL_Image](#) *img)
Sets the image to use as part of the widget label when in the inactive state.
- int [deimage_bound](#) () const
Returns whether the inactive image is managed by the widget.
- void [do_callback](#) ([FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
Calls the widget callback function with default arguments.
- void [do_callback](#) ([FL_Widget](#) *widget, long arg, [FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
Calls the widget callback function with arbitrary arguments.
- void [do_callback](#) ([FL_Widget](#) *widget, void *arg=0, [FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
Calls the widget callback function with arbitrary arguments.
- void [draw_label](#) (int, int, int, int, [FL_Align](#)) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int [h](#) () const
Gets the widget height.
- virtual void [hide](#) ()
Makes a widget invisible.
- int [horizontal_label_margin](#) ()
Get the spacing between the label and the horizontal edge of the widget.
- void [horizontal_label_margin](#) (int px)
Set the spacing between the label and the horizontal edge of the widget.
- [FL_Image](#) * [image](#) ()
Gets the image that is used as part of the widget label when in the active state.
- const [FL_Image](#) * [image](#) () const
Gets the image that is used as part of the widget label when in the active state.
- void [image](#) ([FL_Image](#) &img)
Sets the image to use as part of the widget label when in the active state.
- void [image](#) ([FL_Image](#) *img)
Sets the image to use as part of the widget label when in the active state.
- int [image_bound](#) () const
Returns whether the image is managed by the widget.
- int [inside](#) (const [FL_Widget](#) *wgt) const
Checks if this widget is a child of wgt.
- int [is_label_copied](#) () const
Returns whether the current label was assigned with [copy_label\(\)](#).
- const char * [label](#) () const
Gets the current label text.
- void [label](#) (const char *text)

- Sets the current label pointer.*

 - void [label](#) ([FL_Labeltype](#) a, const char *b)

Shortcut to set the label text and type in one call.
- int [label_image_spacing](#) ()

Return the gap size between the label and the image.
- void [label_image_spacing](#) (int gap)

Set the gap between the label and the image in pixels.
- [FL_Color](#) [labelcolor](#) () const

Gets the label color.
- void [labelcolor](#) ([FL_Color](#) c)

Sets the label color.
- [FL_Font](#) [labelfont](#) () const

Gets the font to use.
- void [labelfont](#) ([FL_Font](#) f)

Sets the font to use.
- [FL_Fonsize](#) [labelsize](#) () const

Gets the font size in pixels.
- void [labelsize](#) ([FL_Fonsize](#) pix)

Sets the font size in pixels.
- [FL_Labeltype](#) [labeltype](#) () const

Gets the label type.
- void [labeltype](#) ([FL_Labeltype](#) a)

Sets the label type.
- void [measure_label](#) (int &ww, int &hh) const

Sets width ww and height hh accordingly with the label size.
- bool [needs_keyboard](#) () const

Returns whether this widget needs a keyboard.
- void [needs_keyboard](#) (bool needs)

Sets whether this widget needs a keyboard.
- unsigned int [output](#) () const

Returns if a widget is used for output only.
- [FL_Group](#) * [parent](#) () const

Returns a pointer to the parent widget.
- void [parent](#) ([FL_Group](#) *p)

Internal use only - "for hacks only".
- void [position](#) (int X, int Y)

Repositions the window or widget.
- void [redraw](#) ()

Schedules the drawing of the widget.
- void [redraw_label](#) ()

Schedules the drawing of the label.
- virtual void [resize](#) (int x, int y, int w, int h)

Changes the size or position of the widget.
- [FL_Color](#) [selection_color](#) () const

Gets the selection color.
- void [selection_color](#) ([FL_Color](#) a)

Sets the selection color.
- void [set_active](#) ()

Marks the widget as active without sending events or changing focus.
- void [set_changed](#) ()

Marks the value of the widget as changed.

- void [set_output](#) ()
Sets a widget to output only.
- void [set_visible](#) ()
Makes the widget visible.
- void [set_visible_focus](#) ()
Enables keyboard focus navigation with this widget.
- int [shortcut_label](#) () const
Returns whether the widget's label uses '&' to indicate shortcuts.
- void [shortcut_label](#) (int value)
Sets whether the widget's label uses '&' to indicate shortcuts.
- virtual void [show](#) ()
Makes a widget visible.
- void [size](#) (int W, int H)
Changes the size of the widget.
- int [take_focus](#) ()
Gives the widget the keyboard focus.
- unsigned int [takeevents](#) () const
Returns if the widget is able to take events.
- int [test_shortcut](#) ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * [tooltip](#) () const
Gets the current tooltip text.
- void [tooltip](#) (const char *text)
Sets the current tooltip text.
- [Fl_Window](#) * [top_window](#) () const
Returns a pointer to the top-level window for the widget.
- [Fl_Window](#) * [top_window_offset](#) (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- [uchar](#) [type](#) () const
Gets the widget type.
- void [type](#) ([uchar](#) t)
Sets the widget type.
- int [use_accents_menu](#) ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * [user_data](#) () const
Gets the user data for this widget.
- void [user_data](#) ([Fl_Callback_User_Data](#) *v, bool auto_free)
Sets the user data for this widget.
- void [user_data](#) (void *v)
Sets the user data for this widget.
- int [vertical_label_margin](#) ()
Get the spacing between the label and the vertical edge of the widget.
- void [vertical_label_margin](#) (int px)
Set the spacing between the label and the vertical edge of the widget.
- unsigned int [visible](#) () const
Returns whether a widget is visible.
- unsigned int [visible_focus](#) () const
Checks whether this widget has a visible focus.
- void [visible_focus](#) (int v)
Modifies keyboard focus navigation.
- int [visible_r](#) () const

- Returns whether a widget and all its parents are visible.*
- int **w** () const
Gets the widget width.
- **FL_When** when () const
Returns the conditions under which the callback is called.
- void **when** (uchar i)
Sets the flags used to decide when a callback is called.
- **FL_Window** * **window** () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int **x** () const
Gets the widget position in its window.
- int **y** () const
Gets the widget position in its window.
- virtual ~**FL_Widget** ()
Destroys the widget.

Protected Member Functions

- void **draw** () **FL_OVERRIDE**
Draws the widget.
- void **draw** (int, int, int, int)
- int **handle** (int, int, int, int, int)

Protected Member Functions inherited from **FL_Widget**

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** (FL_Boxtype t, FL_Color c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** (FL_Boxtype t, int x, int y, int w, int h, FL_Color c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const
Draws a focus rectangle around the widget.
- void **draw_focus** (FL_Boxtype t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void **draw_focus** (FL_Boxtype t, int x, int y, int w, int h, FL_Color bg) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- **FL_Widget** (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)

- *Sets a flag in the flags mask.*
- void `w` (int v)
Internal use only.
- void `x` (int v)
Internal use only.
- void `y` (int v)
Internal use only.

Additional Inherited Members

Static Public Member Functions inherited from `Fl_Widget`

- static void `default_callback` (`Fl_Widget` *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int `label_shortcut` (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int `test_shortcut` (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from `Fl_Widget`

- enum {
`INACTIVE` = 1<<0 , `INVISIBLE` = 1<<1 , `OUTPUT` = 1<<2 , `NOBORDER` = 1<<3 ,
`FORCE_POSITION` = 1<<4 , `NON_MODAL` = 1<<5 , `SHORTCUT_LABEL` = 1<<6 , `CHANGED` = 1<<7
, `OVERRIDE` = 1<<8 , `VISIBLE_FOCUS` = 1<<9 , `COPIED_LABEL` = 1<<10 , `CLIP_CHILDREN` = 1<<11
, `MENU_WINDOW` = 1<<12 , `TOOLTIP_WINDOW` = 1<<13 , `MODAL` = 1<<14 , `NO_OVERLAY` = 1<<15
, `GROUP_RELATIVE` = 1<<16 , `COPIED_TOOLTIP` = 1<<17 , `FULLSCREEN` = 1<<18 , `MAC_USE_ACCENTS_MENU`
= 1<<19 ,
`NEEDS_KEYBOARD` = 1<<20 , `IMAGE_BOUND` = 1<<21 , `DEIMAGE_BOUND` = 1<<22 ,
`AUTO_DELETE_USER_DATA` = 1<<23 ,
`MAXIMIZED` = 1<<24 , `POPOP` = 1<<25 , `USERFLAG3` = 1<<29 , `USERFLAG2` = 1<<30 ,
`USERFLAG1` = 1<<31 }
flags possible values enumeration.

11.104.1 Detailed Description

This class is provided for Forms compatibility.

It provides 2D input. It would be useful if this could be put atop another widget so that the crosshairs are on top, but this is not implemented. The color of the crosshairs is `selection_color()`.

Figure 11.35 `Fl_Positioner`

11.104.2 Constructor & Destructor Documentation

11.104.2.1 `Fl_Positioner()`

```
Fl_Positioner::Fl_Positioner (
    int X,
```

```

    int Y,
    int W,
    int H,
    const char * l = 0)

```

Creates a new [Fl_Positioner](#) widget using the given position, size, and label string. The default boxtype is `FL_NO_BOX`.

11.104.3 Member Function Documentation

11.104.3.1 draw()

```
void Fl_Positioner::draw () [protected], [virtual]
```

Draws the widget.

Never call this function directly. FLTK will schedule redrawing whenever needed. If your widget must be redrawn as soon as possible, call [redraw\(\)](#) instead.

Override this function to draw your own widgets.

If you ever need to call another widget's draw method *from within your own [draw\(\)](#) method*, e.g. for an embedded scrollbar, you can do it (because [draw\(\)](#) is virtual) like this:

```

Fl_Widget *s = &scrollbar; // scrollbar is an embedded Fl_Scrollbar
s->draw();                 // calls Fl_Scrollbar::draw()

```

Implements [Fl_Widget](#).

11.104.3.2 handle()

```

int Fl_Positioner::handle (
    int event) [virtual]

```

Handles the specified event.

You normally don't call this method directly, but instead let FLTK do it when the user interacts with the widget.

When implemented in a widget, this function must return 0 if the widget does not use the event or 1 otherwise.

Most of the time, you want to call the inherited `handle()` method in your overridden method so that you don't short-circuit events that you don't handle. In this last case you should return the callee retval.

One exception to the rule in the previous paragraph is if you really want to *override* the behavior of the base class.

This requires knowledge of the details of the inherited class.

In rare cases you may want to return 1 from your `handle()` method although you don't really handle the event. The effect would be to *filter* event processing, for instance if you want to dismiss non-numeric characters (keypresses) in a numeric input widget. You may "ring the bell" or show another visual indication or drop the event silently. In such a case you must not call the `handle()` method of the base class and tell FLTK that you *consumed* the event by returning 1 even if you didn't *do* anything with it.

Parameters

in	<i>event</i>	the kind of event received
----	--------------	----------------------------

Return values

0	if the event was not used or understood
1	if the event was used and can be deleted

- `Fl_Positioner.cxx`

11.105 FL_PostScript_File_Device Class Reference

To send graphical output to a PostScript file.

```
#include <FL_PostScript.H>
```

Inheritance diagram for FL_PostScript_File_Device:

Public Member Functions

- int **begin_job** (FILE *ps_output, int pagecount=0, enum [FL_Paged_Device::Page_Format](#) format=[FL_Paged_Device::A4](#), enum [FL_Paged_Device::Page_Layout](#) layout=[FL_Paged_Device::PORTRAIT](#))
Begins the session where all graphics requests will go to FILE pointer.
- int **begin_job** (int pagecount, int *from, int *to, char **perr_message) [FL_OVERRIDE](#)
Don't use with this class.
- int **begin_job** (int pagecount=0, enum [FL_Paged_Device::Page_Format](#) format=[FL_Paged_Device::A4](#), enum [FL_Paged_Device::Page_Layout](#) layout=[FL_Paged_Device::PORTRAIT](#))
Begins the session where all graphics requests will go to a local PostScript file.
- int **begin_page** (void) [FL_OVERRIDE](#)
Begins a new printed page.
- void **close_command** ([FL_PostScript_Close_Command](#) cmd)
Sets the function `end_job()` calls to close the file()
- void **end_current** () [FL_OVERRIDE](#)
FLTK calls this each time a surface ceases to be the current drawing surface.
- void **end_job** (void) [FL_OVERRIDE](#)
Completes all PostScript output.
- int **end_page** (void) [FL_OVERRIDE](#)
To be called at the end of each page.
- FILE * **file** ()
Returns the underlying FILE receiving all PostScript data.*
- **FL_PostScript_File_Device** ()
The constructor.
- void **margins** (int *left, int *top, int *right, int *bottom) [FL_OVERRIDE](#)
Computes the dimensions of margins that lie between the printable page area and the full page.
- void **origin** (int *x, int *y) [FL_OVERRIDE](#)
Computes the coordinates of the current origin of graphics functions.
- void **origin** (int x, int y) [FL_OVERRIDE](#)
Sets the position of the origin of graphics in the drawable part of the drawing surface.
- int **printable_rect** (int *w, int *h) [FL_OVERRIDE](#)
Computes the width and height of the drawable area of the drawing surface.
- void **rotate** (float angle) [FL_OVERRIDE](#)
Rotates the graphics operations relatively to paper.
- void **scale** (float scale_x, float scale_y=0.) [FL_OVERRIDE](#)
Changes the scaling of page coordinates.

- void `set_current` () **FL_OVERRIDE**
Make this surface the current drawing surface.
- int `start_job` (FILE *ps_output, int pagecount=0, enum `FI_Paged_Device::Page_Format` format=`FI_Paged_Device::A4`, enum `FI_Paged_Device::Page_Layout` layout=`FI_Paged_Device::PORTRAIT`)
Synonym of `begin_job()`.
- int `start_job` (int pagecount=0, enum `FI_Paged_Device::Page_Format` format=`FI_Paged_Device::A4`, enum `FI_Paged_Device::Page_Layout` layout=`FI_Paged_Device::PORTRAIT`)
Synonym of `begin_job()`.
- void `translate` (int x, int y) **FL_OVERRIDE**
Translates the current graphics origin accounting for the current rotation.
- void `untranslate` (void) **FL_OVERRIDE**
Undoes the effect of a previous `translate()` call.
- `~FI_PostScript_File_Device` ()
The destructor.

Public Member Functions inherited from `FI_Paged_Device`

- void `print_widget` (`FI_Widget` *widget, int delta_x=0, int delta_y=0)
Synonym of `draw(FI_Widget, int, int)`*
- void `print_window` (`FI_Window` *win, int x_off=0, int y_off=0)
Synonym of `draw_decorated_window(FI_Window, int, int)`*
- int `start_job` (int pagecount=0, int *frompage=NULL, int *topage=NULL, char **perr_message=NULL)
*Synonym of `begin_job(int pagecount, int *frompage, int *topage, char **perr_message)`.*
- int `start_page` ()
Synonym of `begin_page()`.
- virtual `~FI_Paged_Device` ()
The destructor.

Public Member Functions inherited from `FI_Widget_Surface`

- void `draw` (`FI_Widget` *widget, int delta_x=0, int delta_y=0)
Draws the widget on the drawing surface.
- void `draw_decorated_window` (`FI_Window` *win, int x_offset=0, int y_offset=0)
Draws a window with its title bar and frame if any.
- void `print_window_part` (`FI_Window` *win, int x, int y, int w, int h, int delta_x=0, int delta_y=0)
Draws a rectangular part of an on-screen window.

Public Member Functions inherited from `FI_Surface_Device`

- `FI_Graphics_Driver` * `driver` ()
Returns the graphics driver of this drawing surface.
- virtual bool `is_current` ()
Is this surface the current drawing surface?
- virtual `~FI_Surface_Device` ()
The destructor.

Static Public Attributes

- static const char * `file_chooser_title`
Label of the PostScript file chooser window.

Static Public Attributes inherited from [FI_Paged_Device](#)

- static const [page_format](#) **page_formats** [[NO_PAGE_FORMATS](#)]
width, height and name of all elements of the enum [Page_Format](#).

Protected Member Functions

- [FI_PostScript_Graphics_Driver](#) * **driver** ()
Returns the PostScript driver of this drawing surface.

Protected Member Functions inherited from [FI_Paged_Device](#)

- [FI_Paged_Device](#) ()
The constructor.

Protected Member Functions inherited from [FI_Widget_Surface](#)

- [FI_Widget_Surface](#) ([FI_Graphics_Driver](#) *d)
The constructor.

Protected Member Functions inherited from [FI_Surface_Device](#)

- void **driver** ([FI_Graphics_Driver](#) *graphics_driver)
Sets the graphics driver of this drawing surface.
- [FI_Surface_Device](#) ([FI_Graphics_Driver](#) *graphics_driver)
Constructor that sets the graphics driver to use for the created surface.

Additional Inherited Members

Public Types inherited from [FI_Paged_Device](#)

- enum [Page_Format](#) {
 [A0](#) = 0 , [A1](#) , [A2](#) , [A3](#) ,
 [A4](#) , [A5](#) , [A6](#) , [A7](#) ,
 [A8](#) , [A9](#) , [B0](#) , [B1](#) ,
 [B2](#) , [B3](#) , [B4](#) , [B5](#) ,
 [B6](#) , [B7](#) , [B8](#) , [B9](#) ,
 [B10](#) , [C5E](#) , [DLE](#) , [EXECUTIVE](#) ,
 [FOLIO](#) , [LEDGER](#) , [LEGAL](#) , [LETTER](#) ,
 [TABLOID](#) , [ENVELOPE](#) , [MEDIA](#) = 0x1000 }
Possible page formats.
- enum [Page_Layout](#) { [PORTRAIT](#) = 0 , [LANDSCAPE](#) = 0x100 , [REVERSED](#) = 0x200 , [ORIENTATION](#) = 0x300 }
Possible page layouts.

Static Public Member Functions inherited from [FI_Surface_Device](#)

- static [FI_Surface_Device](#) * **pop_current** ()
Removes the top element from the current drawing surface stack, and makes the new top element current.
- static void **push_current** ([FI_Surface_Device](#) *new_current)
*Pushes *new_current* on top of the stack of current drawing surfaces, and makes it current.*
- static [FI_Surface_Device](#) * **surface** ()
The current drawing surface.

Protected Attributes inherited from [Fl_Widget_Surface](#)

- `int x_offset`
horizontal offset to the origin of graphics coordinates
- `int y_offset`
vertical offset to the origin of graphics coordinates

11.105.1 Detailed Description

To send graphical output to a PostScript file.

This class is used exactly as the [Fl_Printer](#) class except for the [begin_job\(\)](#) call, two variants of which are usable and allow to specify what page format and layout are desired.

Processing of text: Text uses vectorial fonts under the X11 + Pango and the Wayland platforms. With other platforms, only text restricted to the Latin alphabet (and a few other characters listed in the table below) and to FLTK standard fonts is vectorized. All other unicode characters or all other fonts (FL_FREE_FONT and above) are output as a bitmap. FLTK standard fonts are output using the corresponding PostScript standard fonts. The latin alphabet means all unicode characters between U+0020 and U+017F, or, in other words, the ASCII, Latin-1 Supplement and Latin Extended-A charts.

Char	Codepoint	Name	Char	Codepoint	Name	Char	Codepoint	Name

’	U+2019	quoteright	€	U+20AC	Euro	🍏	U+F8FF	apple (macOS only)

Figure 11.36 Extra characters supported by standard PostScript fonts

Processing of transparent [Fl_RGB_Image](#) objects: Under the X11 + Pango and the Wayland platforms, these objects are output with their exact transparency. With other platforms, these objects are drawn blended to white color. Class [Fl_EPS_File_Surface](#) 's constructor allows to set another background color for blending.

11.105.2 Member Function Documentation

11.105.2.1 [begin_job\(\)](#) [1/3]

```
int Fl_PostScript_File_Device::begin_job (
    FILE * ps_output,
    int pagecount = 0,
    enum Fl_Paged_Device::Page_Format format = Fl_Paged_Device::A4,
    enum Fl_Paged_Device::Page_Layout layout = Fl_Paged_Device::PORTRAIT)
```

Begins the session where all graphics requests will go to FILE pointer.

This member function prevents [end_job\(\)](#) from closing `ps_output`, so the user can check with `ferror(ps_output)` for output errors.

Parameters

<i>ps_output</i>	A writable FILE pointer that will receive PostScript output and that should not be closed until after end_job() has been called.
<i>pagecount</i>	The total number of pages to be created. Use 0 if this number is unknown when this function is called.
<i>format</i>	Desired page format.
<i>layout</i>	Desired page layout.

Returns

always 0.

11.105.2.2 begin_job() [2/3]

```
int Fl_PostScript_File_Device::begin_job (
    int pagecount,
    int * from,
    int * to,
    char ** perr_message) [virtual]
```

Don't use with this class.

Reimplemented from [Fl_Paged_Device](#).

11.105.2.3 begin_job() [3/3]

```
int Fl_PostScript_File_Device::begin_job (
    int pagecount = 0,
    enum Fl_Paged_Device::Page_Format format = Fl_Paged_Device::A4,
    enum Fl_Paged_Device::Page_Layout layout = Fl_Paged_Device::PORTRAIT)
```

Begins the session where all graphics requests will go to a local PostScript file.

Opens a file dialog to select an output PostScript file. This member function makes [end_job\(\)](#) close the resulting PostScript file and display an alert message with [fl_alert\(\)](#) in case of any output error.

Parameters

<i>pagecount</i>	The total number of pages to be created. Use 0 if this number is unknown when this function is called.
<i>format</i>	Desired page format.
<i>layout</i>	Desired page layout.

Returns

0 if OK, 1 if user cancelled the file dialog, 2 if fopen failed on user-selected output file.

11.105.2.4 begin_page()

```
int Fl_PostScript_File_Device::begin_page (
    void ) [virtual]
```

Begins a new printed page.

The page coordinates are initially in points, i.e., 1/72 inch, and with origin at the top left of the printable page area. This function also makes this surface the current drawing surface with [Fl_Surface_Device::push_current\(\)](#).

Note

`begin_page()` calls `Fl_Surface_Device::push_current()` and leaves this device as the active surface. If any calls between `begin_page()` and `end_page()` open dialog boxes or will otherwise draw into FLTK windows, those calls must be put between a call to `Fl_Surface_Device::pop_current()` and a call to `Fl_Surface_Device::push_current()`, or the content of the dialog box will be rendered to the printer instead of the screen.

Returns

0 if OK, non-zero if any error

Reimplemented from `Fl_Paged_Device`.

11.105.2.5 end_current()

```
void Fl_PostScript_File_Device::end_current () [virtual]
```

FLTK calls this each time a surface ceases to be the current drawing surface.

This member function is mostly of interest to developers of new `Fl_Surface_Device` derived classes. It allows to perform surface-specific operations necessary when this surface ceases to be current. Each implementation should end with a call to `Fl_Surface_Device::end_current()`.

Reimplemented from `Fl_Surface_Device`.

11.105.2.6 end_job()

```
void Fl_PostScript_File_Device::end_job (
    void ) [virtual]
```

Completes all PostScript output.

This also closes with `fclose()` the underlying `file()` unless `close_command()` was used to set another function.

Reimplemented from `Fl_Paged_Device`.

11.105.2.7 end_page()

```
int Fl_PostScript_File_Device::end_page (
    void ) [virtual]
```

To be called at the end of each page.

This function also stops this surface from being the current drawing surface with `Fl_Surface_Device::pop_current()`.

Note

`end_page()` calls `Fl_Surface_Device::pop_current()`. If any calls between `begin_page()` and `end_page()` open dialog boxes or will otherwise draw into FLTK windows, those calls must be put between a call to `Fl_Surface_Device::pop_current()` and a call to `Fl_Surface_Device::push_current()`.

Returns

0 if OK, non-zero if any error.

Reimplemented from `Fl_Paged_Device`.

11.105.2.8 margins()

```
void Fl_PostScript_File_Device::margins (
    int * left,
    int * top,
    int * right,
    int * bottom) [virtual]
```

Computes the dimensions of margins that lie between the printable page area and the full page.

Values are in the same unit as that used by FLTK drawing functions. They are changed by `scale()` calls.

Parameters

out	<i>left</i>	If non-null, *left is set to the left margin size.
out	<i>top</i>	If non-null, *top is set to the top margin size.
out	<i>right</i>	If non-null, *right is set to the right margin size.
out	<i>bottom</i>	If non-null, *bottom is set to the bottom margin size.

Reimplemented from [Fl_Paged_Device](#).

11.105.2.9 origin() [1/2]

```
void Fl_PostScript_File_Device::origin (
    int * x,
    int * y) [virtual]
```

Computes the coordinates of the current origin of graphics functions.

Parameters

out	<i>x,y</i>	If non-null, *x and *y are set to the horizontal and vertical coordinates of the graphics origin.
-----	------------	---

Reimplemented from [Fl_Widget_Surface](#).

11.105.2.10 origin() [2/2]

```
void Fl_PostScript_File_Device::origin (
    int x,
    int y) [virtual]
```

Sets the position of the origin of graphics in the drawable part of the drawing surface.

Arguments should be expressed relatively to the result of a previous [printable_rect\(\)](#) call. That is, `printable_rect(&w, &h); origin(w/2, 0);` sets the graphics origin at the top center of the drawable area. Successive [origin\(\)](#) calls don't combine their effects. [Origin\(\)](#) calls are not affected by [rotate\(\)](#) calls (for classes derived from [Fl_Paged_Device](#)).

Parameters

in	<i>x,y</i>	Horizontal and vertical positions in the drawing surface of the desired origin of graphics.
----	------------	---

Reimplemented from [Fl_Widget_Surface](#).

11.105.2.11 printable_rect()

```
int Fl_PostScript_File_Device::printable_rect (
    int * w,
    int * h) [virtual]
```

Computes the width and height of the drawable area of the drawing surface.

Values are in the same unit as that used by FLTK drawing functions and are unchanged by calls to [origin\(\)](#). If the object is derived from class [Fl_Paged_Device](#), values account for the user-selected paper type and print orientation and are changed by [scale\(\)](#) calls.

Returns

0 if OK, non-zero if any error

Reimplemented from [Fl_Widget_Surface](#).

11.105.2.12 rotate()

```
void Fl_PostScript_File_Device::rotate (  
    float angle) [virtual]
```

Rotates the graphics operations relatively to paper.

The rotation is centered on the current graphics origin. Successive [rotate\(\)](#) calls don't combine their effects.

Parameters

<i>angle</i>	Rotation angle in counter-clockwise degrees.
--------------	--

Reimplemented from [Fl_Paged_Device](#).

11.105.2.13 scale()

```
void Fl_PostScript_File_Device::scale (
    float scale_x,
    float scale_y = 0.) [virtual]
```

Changes the scaling of page coordinates.

This function also resets the origin of graphics functions at top left of printable page area. After a [scale\(\)](#) call, do a [printable_rect\(\)](#) call to get the new dimensions of the printable page area. Successive [scale\(\)](#) calls don't combine their effects.

Parameters

<i>scale_x</i>	Horizontal dimensions of plot are multiplied by this quantity.
<i>scale_y</i>	Same as above, vertically. The value 0. is equivalent to setting <code>scale_y = scale_x</code> . Thus, <code>scale(factor)</code> ; is equivalent to <code>scale(factor, factor)</code> ;

Reimplemented from [Fl_Paged_Device](#).

11.105.2.14 set_current()

```
void Fl_PostScript_File_Device::set_current (
    void ) [virtual]
```

Make this surface the current drawing surface.

This surface will receive all future graphics requests.

Since FLTK 1.4.0 the preferred API to change the current drawing surface is [Fl_Surface_Device::push_current\(\)](#) / [Fl_Surface_Device::pop_current\(\)](#).

Note

It is recommended to use this function only as follows :

- The current drawing surface is the display;
- make current another surface, e.g., an [Fl_Printer](#) or an [Fl_Image_Surface](#) object, calling [set_current\(\)](#) on this object;
- draw to that surface;
- make the display current again with [Fl_Display_Device::display_device\(\)->set_current\(\)](#);
don't do any other call to [set_current\(\)](#) before this one.

Other scenarios of drawing surface changes should be performed via [Fl_Surface_Device::push_current\(\)](#) and [Fl_Surface_Device::pop_current\(\)](#).

Reimplemented from [Fl_Surface_Device](#).

11.105.2.15 start_job() [1/2]

```
int Fl_PostScript_File_Device::start_job (
    FILE * ps_output,
    int pagecount = 0,
    enum Fl_Paged_Device::Page_Format format = Fl_Paged_Device::A4,
    enum Fl_Paged_Device::Page_Layout layout = Fl_Paged_Device::PORTRAIT) [inline]
```

Synonym of [begin_job\(\)](#).

For API compatibility with FLTK 1.3.x

11.105.2.16 start_job() [2/2]

```
int Fl_PostScript_File_Device::start_job (
    int pagecount = 0,
    enum Fl_Paged_Device::Page_Format format = Fl_Paged_Device::A4,
    enum Fl_Paged_Device::Page_Layout layout = Fl_Paged_Device::PORTRAIT) [inline]
```

Synonym of [begin_job\(\)](#).

For API compatibility with FLTK 1.3.x

11.105.2.17 translate()

```
void Fl_PostScript_File_Device::translate (
    int x,
    int y) [virtual]
```

Translates the current graphics origin accounting for the current rotation.

Each [translate\(\)](#) call must be matched by an [untranslate\(\)](#) call. Successive [translate\(\)](#) calls add up their effects.

Reimplemented from [Fl_Widget_Surface](#).

11.105.2.18 untranslate()

```
void Fl_PostScript_File_Device::untranslate (
    void ) [virtual]
```

Undoes the effect of a previous [translate\(\)](#) call.

Reimplemented from [Fl_Widget_Surface](#).

The documentation for this class was generated from the following file:

- [Fl_PostScript.H](#)

11.106 Fl_Preferences Class Reference

[Fl_Preferences](#) store user settings between application starts.

```

Public Member Functions

- char **clear** ()
Delete all groups and all entries.
- char **delete_all_entries** ()
Delete all entries.
- char **delete_all_groups** ()
Delete all groups.
- char **delete_entry** (const char *entry)
Deletes a single name/value pair.
- char **delete_group** (const char *group)
Deletes a group.
- int **dirty** ()
Check if there were changes to the database that need to be written to disk.
- int **entries** ()
Returns the number of entries (name/value pairs) in a group.
- const char * **entry** (int index)
Returns the name of an entry.
- char **entry_exists** (const char *key)
Returns non-zero if an entry with this name exists.
- **Root filename** (char *buffer, size_t buffer_size)
Return the file name and path to the preference file.
- **FI_Preferences** (const char *path, const char *vendor, const char *application)
Deprecated: Use this constructor to create or read a preference file at an arbitrary position in the file system.
- **FI_Preferences** (const char *path, const char *vendor, const char *application, **Root** flags)
Use this constructor to create or read a preference file at an arbitrary position in the file system.
- **FI_Preferences** (const **FI_Preferences** &)
Create another reference to a Preferences group.
- **FI_Preferences** (**FI_Preferences** &parent, const char *group)
Generate or read a new group of entries within another group.
- **FI_Preferences** (**FI_Preferences** &parent, int groupIndex)
Open a child group using a given index.
- **FI_Preferences** (**FI_Preferences** *parent, const char *group)
Create or access a group of preferences using a name.
- **FI_Preferences** (**FI_Preferences** *parent, int groupIndex)
- **FI_Preferences** (ID id)
Create a new dataset access point using a dataset ID.
- **FI_Preferences** (**Root** root, const char *vendor, const char *application)
The constructor creates a group that manages key/value pairs and child groups.
- int **flush** ()
Writes preferences to disk if they were modified.
- char **get** (const char *entry, char *&value, const char *defaultValue)
Reads an entry from the group.
- char **get** (const char *entry, char *value, const char *defaultValue, int maxSize)
Reads an entry from the group.
- char **get** (const char *entry, double &value, double defaultValue)
Reads an entry from the group.

- char [get](#) (const char *[entry](#), float &value, float defaultValue)
Reads an entry from the group.
- char [get](#) (const char *[entry](#), int &value, int defaultValue)
Reads an entry from the group.
- char [get](#) (const char *[entry](#), void *&value, const void *defaultValue, int defaultSize)
Reads an entry from the group.
- char [get](#) (const char *[entry](#), void *value, const void *defaultValue, int defaultSize, int *size)
Reads a binary entry from the group, encoded in hexadecimal blocks.
- char [get](#) (const char *[entry](#), void *value, const void *defaultValue, int defaultSize, int maxSize)
Reads a binary entry from the group, encoded in hexadecimal blocks.
- char [get_userdata_path](#) (char *[path](#), int pathlen)
Creates a path that is related to the preference file and that is usable for additional application data.
- const char * [group](#) (int num_group)
Returns the name of the Nth (num_group) group.
- char [group_exists](#) (const char *key)
Returns non-zero if a group with this name exists.
- int [groups](#) ()
Returns the number of groups that are contained within a group.
- ID [id](#) ()
Return an ID that can later be reused to open more references to this dataset.
- const char * [name](#) ()
Return the name of this entry.
- const char * [path](#) ()
Return the full path to this entry.
- char [set](#) (const char *[entry](#), const char *value)
Sets an entry (name/value pair).
- char [set](#) (const char *[entry](#), const void *value, int size)
Sets an entry (name/value pair).
- char [set](#) (const char *[entry](#), double value)
Sets an entry (name/value pair).
- char [set](#) (const char *[entry](#), double value, int precision)
Sets an entry (name/value pair).
- char [set](#) (const char *[entry](#), float value)
Sets an entry (name/value pair).
- char [set](#) (const char *[entry](#), float value, int precision)
Sets an entry (name/value pair).
- char [set](#) (const char *[entry](#), int value)
Sets an entry (name/value pair).
- int [size](#) (const char *[entry](#))
Returns the size of the value part of an entry.
- virtual [~FI_Preferences](#) ()
The destructor removes allocated resources.

Static Public Member Functions

- static unsigned int [file_access](#) ()
Return the current file access permissions for the FLTK preferences system.
- static void [file_access](#) (unsigned int flags)
Tell the FLTK preferences system which files in the file system it may read, create, or write.
- static [Root filename](#) (char *buffer, size_t buffer_size, [Root](#) root, const char *vendor, const char *application)
Determine the file name and path to preferences that would be opened with these parameters.

- static const char * [new_UUID](#) ()
Returns a UUID as generated by the system.
- static char **remove** ([ID](#) id_)
Remove the group with this [ID](#) from a database.

Static Public Attributes

- static const unsigned int **ALL** = [ALL_READ_OK](#) | [ALL_WRITE_OK](#)
Set this to give FLTK and applications permission to read, write, and create preference files.
- static const unsigned int **ALL_READ_OK** = [USER_READ_OK](#) | [SYSTEM_READ_OK](#) | [CORE_READ_OK](#)
Set this to allow FLTK and applications to read preference files.
- static const unsigned int **ALL_WRITE_OK** = [USER_WRITE_OK](#) | [SYSTEM_WRITE_OK](#) | [CORE_WRITE_OK](#)
Set this to allow FLTK and applications to create and write preference files.
- static const unsigned int **APP_OK** = [SYSTEM_OK](#) | [USER_OK](#)
Set this if it is OK for applications to read, create, and write any kind of preference files.
- static const unsigned int **CORE_OK** = [CORE_READ_OK](#) | [CORE_WRITE_OK](#)
Set this if it is OK for FLTK to read, create, or write preference files.
- static const unsigned int [CORE_READ_OK](#) = 0x0010
Set this if it is OK for FLTK to read preference files.
- static const unsigned int [CORE_WRITE_OK](#) = 0x0020
Set this if it is OK for FLTK to create or write preference files.
- static const unsigned int [NONE](#) = 0x0000
Set this if no call to [FL_Preferences](#) shall access the file system.
- static const unsigned int **SYSTEM_OK** = [SYSTEM_READ_OK](#) | [SYSTEM_WRITE_OK](#)
Set this if it is OK for applications to read, create, and write system wide preference files.
- static const unsigned int **SYSTEM_READ_OK** = 0x0004
Set this if it is OK for applications to read system wide preference files.
- static const unsigned int **SYSTEM_WRITE_OK** = 0x0008
Set this if it is OK for applications to create and write system wide preference files.
- static const unsigned int **USER_OK** = [USER_READ_OK](#) | [USER_WRITE_OK](#)
Set this if it is OK for applications to read, create, and write user preference files.
- static const unsigned int **USER_READ_OK** = 0x0001
Set this if it is OK for applications to read user preference files.
- static const unsigned int **USER_WRITE_OK** = 0x0002
Set this if it is OK for applications to create and write user preference files.

Protected Attributes

11.106.1 Detailed Description

[Fl_Preferences](#) store user settings between application starts.

FLTK Preferences are similar to the Registry on Windows and Preferences on MacOS, providing a simple method to store customizable user settings between application launches. A typical use is storing the last window position or a history of previously used documents.

Preferences are organized in a hierarchy of groups. Every group can contain more groups and any number of key/value pairs. Keys can be text strings containing ASCII letters, digits, periods, and underscores. Forward slashes in a key name are treated as subgroups, i.e. the key 'window/width' would actually refer to the key 'width' inside the group 'window'.

Keys have a unique name within their group. A value can be any string including control characters 0x00 to 0x1f, 0x7f, and UTF-8 octets.

Several methods allow setting and getting numerical values and binary data.

Preferences files are the same across platforms. User comments in preference files are preserved. Filenames are unique for each application by using a vendor/application naming scheme. The developer app must provide default values for all entries to ensure proper operation should preferences be corrupted or not yet exist.

Note

The format of preferences files is not part of the FLTK specification and intentionally undocumented. The only valid way to read or write prefs files is via the API from your app. The fact that the current implementation looks like human-readable text is purely coincidental and may change at any time. Preferences files are not meant to be created or edited "by hand."

FLTK preferences are not meant to replace a fully featured database. No merging of data takes place. If several instances of an app access the same database at the same time, only the most recent changes will persist.

Preferences should not be used to store document data. The .prefs file should be kept small for performance reasons. One application can have multiple preferences files. Extensive binary data however should be stored in separate files: see [Fl_Preferences::get_userdata_path\(\)](#).

[Fl_Preferences](#) are not thread-safe. They can temporarily change the locale on some platforms during read and write access, which also changes it temporarily in other threads of the same app.

Typically a preferences database is read at startup, and then reopened and written at app shutdown:

```
int appWindowWidth, appWindowHeight;

void launch() {
    Fl_Preferences app(Fl_Preferences::USER_L, "matthiasm.com", "hello");
    // 'app' constructor will be called, reading data from .prefs file
    Fl_Preferences window(app, "window");
    window.get("width", appWindowWidth, 800);
    window.get("height", appWindowHeight, 600);
    // 'app' destructor will be called. This will write data to the
    // .prefs file if any preferences were changed or added
}

void quit() {
    Fl_Preferences app(Fl_Preferences::USER_L, "matthiasm.com", "hello");
    Fl_Preferences window(app, "window");
    window.set("width", appWindowWidth);
    window.set("height", appWindowHeight);
}
```

See also

[Fl_Preferences::Fl_Preferences\(Root root, const char *vendor, const char *application\)](#)

As a special case, [Fl_Preferences](#) can be memory mapped and not be associated with a file on disk. See [Fl_Preferences::Fl_Preferences\(Fl_Preferences *parent, const char *group\)](#) and [Fl_Preferences::MEMORY](#) for more details on memory mapped preferences.

Note

Starting with FLTK 1.3, preferences databases are expected to be in UTF-8 encoding. Previous databases were stored in the current character set or code page which renders them incompatible for text entries using international characters.

Starting with FLTK 1.4, searching a valid path to store the preference files has changed slightly. Please see [Fl_Preferences::Fl_Preferences\(Root, const char*, const char*\)](#) for details.

Starting with FLTK 1.4, preference files should be created with `SYSTEM_L` or `USER_L` to be interchangeable between computers with differing locale settings. The legacy modes, `LOCAL` and `SYSTEM`, will read and

write floating point values using the decimal point of the current locale. As a result, a fp-value would be written '3,1415' on a German machine, and would be read back as '3.0' on a US machine because the comma would not be recognized as an alternative decimal point.

11.106.2 Member Typedef Documentation

11.106.2.1 ID

```
typedef void* Fl_Preferences::ID
```

Every Fl_Preferences-Group has a unique ID.

ID's can be retrieved from an Fl_Preferences-Group and can then be used to create more Fl_Preference references to the same data set, as long as the database remains open.

11.106.3 Member Enumeration Documentation

11.106.3.1 Root

```
enum Fl_Preferences::Root
```

Define the scope of the preferences.

Enumerator

UNKNOWN_ROOT_TYPE	Returned if storage could not be determined.
SYSTEM	Preferences are used system-wide. Deprecated, see SYSTEM_L.
USER	Preferences apply only to the current user. Deprecated, see USER_L.
MEMORY	Returned if querying memory mapped preferences.
ROOT_MASK	Mask for the values above.
CORE	OR'd by FLTK to read and write core library preferences and options.
C_LOCALE	This flag should always be set to ensure that floating point values are written and read correctly independently of the current locale.
CLEAR	Don't read a possibly existing database. Instead, start with an empty set of preferences.
SYSTEM_L	Preferences are used system-wide, locale independent.
USER_L	Preferences apply only to the current user, locale independent.
CORE_SYSTEM_L	Same as CORE SYSTEM C_LOCALE.
CORE_USER_L	Same as CORE USER C_LOCALE.
CORE_SYSTEM	Deprecated, same as CORE SYSTEM. Use CORE_SYSTEM_L instead.
CORE_USER	Deprecated, same as CORE USER. Use CORE_USER_L instead.

11.106.4 Constructor & Destructor Documentation

11.106.4.1 Fl_Preferences() [1/8]

```
Fl_Preferences::Fl_Preferences (
    Root root,
    const char * vendor,
    const char * application)
```

The constructor creates a group that manages key/value pairs and child groups.

Preferences can be stored per user using the root type `Fl_Preferences::USER_L`, or stored system-wide using `Fl_Preferences::SYSTEM_L`.

Groups and key/value pairs can be read and written randomly. Reading undefined values will return the default value. Writing undefined values will create all required groups and key/value pairs.

This constructor creates the *base* instance for all following entries and reads the database from disk into memory if it exists. The vendor argument is a unique text string identifying the development team or vendor of an application. A

domain name or an EMail address (replacing the '@' with a '.') are great unique names, e.g. "research.matthiasm.com" or "fluid.fltk.org". The application argument can be the working title or final name of your application. Both vendor and application must be valid UNIX path segments as they become parts of the preference file path and may contain forward slashes to create deeper file structures.

Note

On **Windows**, the directory is constructed by querying the *Common AppData* or *AppData* key of the Software\Microsoft\Windows\CurrentVersion\Explorer\Shell Folders registry entry. The filename and path is then constructed as \$(query)/\$(vendor)/\$(application).prefs. If the query call fails, data will be stored in RAM only. It will be lost when the app exits.

In FLTK versions before 1.4.0, if querying the registry failed,

preferences would be written to C:\FLTK\\$(vendor)\\$(application).prefs.

Note

On **Linux**, the USER directory is constructed by reading \$HOME. If \$HOME is not set or not pointing to an existing directory, FLTK will check the path member of the passwd struct returned by getpwuid(getuid()). If all attempts fail, data will be stored in RAM only and be lost when the app exits.

The SYSTEM preference filename is hardcoded as /etc/fltk/\$(vendor)/\$(application).prefs.

For backward compatibility, the old USER .prefs file naming scheme \$(directory)/.fltk/\$(vendor)/\$(application) is checked first. If that file does not exist, the environment variable \$XDG_CONFIG_HOME is read as a base directory. If \$XDG_CONFIG_HOME is not set, the base directory defaults to \$HOME/.config/.

The user preferences will be stored in \$(directory)/\$(vendor)/\$(application).prefs. The user data path will be \$(directory)/\$(vendor)/\$(application)/.

In FLTK versions before 1.4.0, if \$HOME was not set, the USER path would be empty, generating \$(vendor)/\$(application).prefs, which was used relative to the current working directory.

Note

On **macOS**, the USER directory is constructed by reading \$HOME. If \$HOME is not set or not pointing to an existing directory, we check the path returned by NSHomeDirectory(), and finally checking the path member of the passwd struct returned by getpwuid(getuid()). If all attempts fail, data will be stored in RAM only and be lost when the app exits. The filename and path is then constructed as \$(directory)/Library/Preferences/\$(vendor)/\$(application).prefs. The SYSTEM directory is hardcoded as /Library/Preferences/\$(vendor)/\$(application).prefs.

In FLTK versions before 1.4.0, if \$HOME was not set, the USER path

would be NULL, generating <null>/Library/Preferences/\$(vendor)/\$(application).prefs, which would silently fail to create a preference file.

Parameters

in	<i>root</i>	can be USER_L or SYSTEM_L for user specific or system wide preferences, add the CLEAR flag to start with a clean set of preferences instead of reading them from a preexisting database
in	<i>vendor</i>	unique text describing the company or author of this file, must be a valid filepath segment
in	<i>application</i>	unique text describing the application, must be a valid filepath segment

See also

[FI_Preferences\(FI_Preferences *parent, const char *group\)](#) with parent set to NULL

11.106.4.2 Fl_Preferences() [2/8]

```
Fl_Preferences::Fl_Preferences (
    const char * path,
    const char * vendor,
    const char * application,
    Root flags)
```

Use this constructor to create or read a preference file at an arbitrary position in the file system.

The file name is generated in the form \$(path)/\$(application).prefs. If application is NULL, path is taken literally as the file path and name.

```
// Example: read from an existing database and write modifications when flushed
// or destructor is called
Fl_Preferences database("/user/matt/test.prefs", "org.fltk.test", NULL,
    Fl_Preferences::C_LOCALE);

// Example: create a new preferences file with an empty data set
Fl_Preferences database("/user/matt/test.prefs", "org.fltk.test", NULL,
    (Fl_Preferences::Root) (Fl_Preferences::C_LOCALE|Fl_Preferences::CLEAR));
```

Note

the C_LOCALE flag is not set by default for backward compatibility, but it is highly recommended to set it when opening a database.

Parameters

in	<i>path</i>	path to the directory that contains the preference file
in	<i>vendor</i>	unique text describing the company or author of this file, must be a valid file path segment
in	<i>application</i>	unique text describing the application, must be a valid filename or NULL
in	<i>flags</i>	C_LOCALE to make the preferences file independent of the current locale, add the CLEAR flag to start with a clean set of preferences instead of reading from the database

11.106.4.3 Fl_Preferences() [3/8]

```
Fl_Preferences::Fl_Preferences (
    Fl_Preferences & parent,
    const char * group)
```

Generate or read a new group of entries within another group.

Use the group argument to name the group that you would like to access. Group can also contain a path to a group further down the hierarchy by separating group names with a forward slash '/'.

Parameters

in	<i>parent</i>	reference object for the new group
in	<i>group</i>	name of the group to access (may contain '/'s)

11.106.4.4 Fl_Preferences() [4/8]

```
Fl_Preferences::Fl_Preferences (
    Fl_Preferences * parent,
    const char * group)
```

Create or access a group of preferences using a name.

Parent should point to a previously created parent preferences group to create a preferences hierarchy.

If parent is set to NULL, an unnamed database will be accessed that exists only in local memory and is not associated with a file on disk. The root type of this database is set to `Fl_Preferences::MEMORY`.

- the memory database is *not* shared among multiple instances of the same app
- memory databases are *not* thread safe

- all data will be lost when the app quits

```
void some_function() {
    Fl_Preferences guide( NULL, "Guide" );
    guide.set("answer", 42);
}
void other_function() {
    int x;
    Fl_Preferences guide( NULL, "Guide" );
    guide.get("answer", x, -1);
}
```

FLTK uses the memory database to manage plugins. See [Fl_Plugin](#).

Parameters

in	<i>parent</i>	the parameter <i>parent</i> is a pointer to the parent group. If <i>parent</i> is NULL, the new preferences item refers to an application internal database ("runtime prefs") which exists only once, and remains in RAM only until the application quits. This database is used to manage plugins and other data indexes by strings. Runtime prefs are <i>not</i> thread-safe.
in	<i>group</i>	a group name that is used as a key into the database

See also

[Fl_Preferences\(Fl_Preferences&, const char *group \)](#)

11.106.4.5 Fl_Preferences() [5/8]

```
Fl_Preferences::Fl_Preferences (
    Fl_Preferences & parent,
    int groupIndex)
```

Open a child group using a given index.

Use the *groupIndex* argument to find the group that you would like to access. If the given index is invalid (negative or too high), a new group is created with a UUID as a name.

The index needs to be fixed. It is currently backward. Index 0 points to the last member in the 'list' of preferences.

Parameters

in	<i>parent</i>	reference object for the new group
in	<i>groupIndex</i>	zero based index into child groups

11.106.4.6 Fl_Preferences() [6/8]

```
Fl_Preferences::Fl_Preferences (
    Fl_Preferences * parent,
    int groupIndex)
```

See also

[Fl_Preferences\(Fl_Preferences&, int groupIndex \)](#)

11.106.4.7 Fl_Preferences() [7/8]

```
Fl_Preferences::Fl_Preferences (
    Fl_Preferences::ID id)
```

Create a new dataset access point using a dataset **ID**.

ID's are a great way to remember shortcuts to database entries that are deeply nested in a preferences database, as long as the database root is not deleted. An **ID** can be retrieved from any [Fl_Preferences](#) dataset, and can then be used to create multiple new references to the same dataset.

ID's can be very helpful when put into the `user_data()` field of widget callbacks.

11.106.4.8 ~Fl_Preferences()

```
Fl_Preferences::~~Fl_Preferences () [virtual]
```

The destructor removes allocated resources.

When used on the *base* preferences group, the destructor flushes all changes to the preference file and deletes all internal databases.

The destructor does not remove any data from the database. It merely deletes your reference to the database.

11.106.4.9 Fl_Preferences() [8/8]

```
Fl_Preferences::Fl_Preferences (
    const char * path,
    const char * vendor,
    const char * application)
```

Deprecated: Use this constructor to create or read a preference file at an arbitrary position in the file system.

Deprecated "since 1.4.0 - use Fl_Preferences(path, vendor, application, flags) instead"

This constructor should no longer be used because the generated database uses the current locale, making it impossible to exchange floating point settings between machines with different language settings.

Use `Fl_Preferences(path, vendor, application, Fl_Preferences::C_LOCALE)` in new projects and `Fl_Preferences(path, vendor, application, 0)` if you must keep backward compatibility.

[Fl_Preferences\(const char *path, const char *vendor, const char *application, Root flags \)](#)

11.106.5 Member Function Documentation

11.106.5.1 delete_entry()

```
char Fl_Preferences::delete_entry (
    const char * key)
```

Deletes a single name/value pair.

This function removes the entry *key* from the database.

Parameters

in	<i>key</i>	name of entry to delete
----	------------	-------------------------

Returns

0 if deleting the entry failed

11.106.5.2 delete_group()

```
char Fl_Preferences::delete_group (
    const char * group)
```

Deletes a group.

Removes a group and all keys and groups within that group from the database.

Parameters

in	<i>group</i>	name of the group to delete
----	--------------	-----------------------------

Returns

0 if call failed

11.106.5.3 dirty()

```
int Fl_Preferences::dirty ()
```

Check if there were changes to the database that need to be written to disk.

Returns

- 1 if the database will be written to disk by `flush` or destructor.
- 0 if the database is unchanged since the last write operation.
- 1 if there is an internal database error.

11.106.5.4 entries()

```
int Fl_Preferences::entries ()
```

Returns the number of entries (name/value pairs) in a group.

Returns

number of entries

11.106.5.5 entry()

```
const char * Fl_Preferences::entry (  
    int index)
```

Returns the name of an entry.

There is no guaranteed order of entry names. The index must be within the range given by [entries\(\)](#).

Parameters

in	<i>index</i>	number indexing the requested entry
----	--------------	-------------------------------------

Returns

pointer to value cstring

11.106.5.6 entry_exists()

```
char Fl_Preferences::entry_exists (  
    const char * key)
```

Returns non-zero if an entry with this name exists.

Parameters

in	<i>key</i>	name of entry that is searched for
----	------------	------------------------------------

Returns

0 if entry was not found

11.106.5.7 file_access() [1/2]

```
unsigned int Fl_Preferences::file_access () [static]
```

Return the current file access permissions for the FLTK preferences system.

See also

[Fl_Preferences::file_access\(unsigned int\)](#)

11.106.5.8 file_access() [2/2]

```
void Fl_Preferences::file_access (
    unsigned int flags) [static]
```

Tell the FLTK preferences system which files in the file system it may read, create, or write.

The FLTK core library will try to read or even create or write preference files when calling [Fl::option\(\)](#), [Fl_File_Chooser](#), the printing panel, and possibly some other internal functions. If your application wants to keep FLTK from touching the file system, call this function before making any other FLTK calls:

```
// neither FLTK nor the app may read, create, or write preference files
Fl_Preferences::file_access( Fl_Preferences::NONE );
```

or

```
// FLTK may not read, create, or write preference files, but the application may
Fl_Preferences::file_access( Fl_Preferences::APP_OK );
```

All flags can be combined using an OR operator. If flags are not set, that specific access to the file system will not be allowed. By default, all access is granted. To clear one or more flags from the default setting, use:

```
Fl_Preferences::file_access( Fl_Preferences::file_access()
    &~ Fl_Preferences::SYSTEM_WRITE );
```

If preferences are created using a filename (instead of [Fl_Preferences::USER](#) or [Fl_Preferences::SYSTEM](#)), file access is handled as if the [Fl_Preferences::USER](#) flag was set.

See also

[Fl_Preferences::NONE](#) and others for a list of flags.

[Fl_Preferences::file_access\(\)](#)

11.106.5.9 filename() [1/2]

```
Fl_Preferences::Root Fl_Preferences::filename (
    char * buffer,
    size_t buffer_size)
```

Return the file name and path to the preference file.

If the preferences have not changed or have not been flushed, the file or directory may not have been created yet.

Parameters

out	<i>buffer</i>	write the resulting path into this buffer
in	<i>buffer_size</i>	size of the buffer in bytes

Returns

the root type at creation type, or MEMORY for runtime prefs, it does not return CORE or LOCALE flags.

11.106.5.10 filename() [2/2]

```
Fl_Preferences::Root Fl_Preferences::filename (
    char * buffer,
    size_t buffer_size,
    Root root,
    const char * vendor,
    const char * application) [static]
```

Determine the file name and path to preferences that would be opened with these parameters.

Find the possible location of a preference file on disk without touching any of the pathname components. This can be used to check if a preference file already exists.

Parameters

out	<i>buffer</i>	write the resulting path into this buffer
in	<i>buffer_size</i>	size of the buffer in bytes
in	<i>root</i>	can be USER_L or SYSTEM_L for user specific or system wide preferences

Parameters

in	<i>vendor</i>	unique text describing the company or author of this file, must be a valid filepath segment
in	<i>application</i>	unique text describing the application, must be a valid filepath segment

Returns

the input root value, or [Fl_Preferences::UNKNOWN_ROOT_TYPE](#) if the path could not be determined.

See also

[Fl_Preferences\(Root root, const char *vendor, const char *application \)](#)

11.106.5.11 flush()

```
int Fl_Preferences::flush ()
```

Writes preferences to disk if they were modified.

This method can be used to verify that writing a preference file went well. Deleting the base preferences object will also write the contents of the database to disk.

Returns

-1 if anything went wrong, i.e. file could not be opened, permissions blocked writing, etc.

0 if the file was written to disk. This does not check if the disk ran out of space and the file is truncated.

1 if no data was written to the database and no write attempt to disk was made.

11.106.5.12 get() [1/8]

```
char Fl_Preferences::get (
    const char * key,
    char *& text,
    const char * defaultValue)
```

Reads an entry from the group.

A default value must be supplied. The return value indicates if the value was available (non-zero) or the default was used (0). [get\(\)](#) allocates memory of sufficient size to hold the value. The buffer must be free'd by the developer using 'free(value)'.

Parameters

in	<i>key</i>	name of entry
out	<i>text</i>	returned from preferences or default value if none was set
in	<i>defaultValue</i>	default value to be used if no preference was set

Returns

0 if the default value was used

11.106.5.13 get() [2/8]

```
char Fl_Preferences::get (
    const char * key,
    char * text,
    const char * defaultValue,
    int maxSize)
```

Reads an entry from the group.

A default value must be supplied. The return value indicates if the value was available (non-zero) or the default was used (0). 'maxSize' is the maximum length of text that will be read. The text buffer must allow for one additional byte for a trailing zero.

Parameters

in	<i>key</i>	name of entry
out	<i>text</i>	returned from preferences or default value if none was set
in	<i>defaultValue</i>	default value to be used if no preference was set
in	<i>maxSize</i>	maximum length of value plus one byte for a trailing zero

Returns

0 if the default value was used

11.106.5.14 get() [3/8]

```
char Fl_Preferences::get (  
    const char * key,  
    double & value,  
    double defaultValue)
```

Reads an entry from the group.

A default value must be supplied. The return value indicates if the value was available (non-zero) or the default was used (0).

Parameters

in	<i>key</i>	name of entry
out	<i>value</i>	returned from preferences or default value if none was set
in	<i>defaultValue</i>	default value to be used if no preference was set

Returns

0 if the default value was used

11.106.5.15 get() [4/8]

```
char Fl_Preferences::get (  
    const char * key,  
    float & value,  
    float defaultValue)
```

Reads an entry from the group.

A default value must be supplied. The return value indicates if the value was available (non-zero) or the default was used (0).

Parameters

in	<i>key</i>	name of entry
out	<i>value</i>	returned from preferences or default value if none was set
in	<i>defaultValue</i>	default value to be used if no preference was set

Returns

0 if the default value was used

11.106.5.16 get() [5/8]

```
char Fl_Preferences::get (
    const char * key,
    int & value,
    int defaultValue)
```

Reads an entry from the group.

A default value must be supplied. The return value indicates if the value was available (non-zero) or the default was used (0).

Parameters

in	<i>key</i>	name of entry
out	<i>value</i>	returned from preferences or default value if none was set
in	<i>defaultValue</i>	default value to be used if no preference was set

Returns

0 if the default value was used

11.106.5.17 get() [6/8]

```
char Fl_Preferences::get (
    const char * key,
    void *& data,
    const void * defaultValue,
    int defaultSize)
```

Reads an entry from the group.

A default value must be supplied. The return value indicates if the value was available (non-zero) or the default was used (0). [get\(\)](#) allocates memory of sufficient size to hold the value. The buffer must be free'd by the developer using 'free(value)'.

Parameters

in	<i>key</i>	name of entry
out	<i>data</i>	returned from preferences or default value if none was set
in	<i>defaultValue</i>	default value to be used if no preference was set
in	<i>defaultSize</i>	size of default value array

Returns

0 if the default value was used

11.106.5.18 get() [7/8]

```
char Fl_Preferences::get (
    const char * key,
    void * data,
    const void * defaultValue,
    int defaultSize,
    int * maxSize)
```

Reads a binary entry from the group, encoded in hexadecimal blocks.

A binary (not hex) default value can be supplied. The return value indicates if the value was available (non-zero) or the default was used (0). *maxSize* is the maximum length of text that will be read and returns the actual number of bytes read.

Parameters

in	<i>key</i>	name of entry
out	<i>data</i>	value returned from preferences or default value if none was set
in	<i>defaultValue</i>	default value to be used if no preference was set
in	<i>defaultSize</i>	size of default value array
in, out	<i>maxSize</i>	maximum length of value and actual number of bytes set

Returns

0 if the default value was used

11.106.5.19 get() [8/8]

```
char Fl_Preferences::get (
    const char * key,
    void * data,
    const void * defaultValue,
    int defaultSize,
    int maxSize)
```

Reads a binary entry from the group, encoded in hexadecimal blocks.

Parameters

in	<i>key</i>	name of entry
out	<i>data</i>	value returned from preferences or default value if none was set
in	<i>defaultValue</i>	default value
in	<i>defaultSize</i>	size of default value array
in	<i>maxSize</i>	maximum length of value, to receive the number of bytes read, use the function below instead.

Returns

0 if the default value was used

See also

[Fl_Preferences::get\(const char *key, void *data, const void *defaultValue, int defaultSize, int *maxSize \)](#)

11.106.5.20 get_userdata_path()

```
char Fl_Preferences::get_userdata_path (
    char * path,
    int pathlen)
```

Creates a path that is related to the preference file and that is usable for additional application data.

This function creates a directory that is named after the preferences database without the .prefs extension and located in the same directory. It then fills the given buffer with the complete path name.

There is no way to verify that the path name fit into the buffer. If the name is too long, it will be clipped.

This function can be used with direct paths that don't end in .prefs . *getUserDataPath()* will remove any extension and end the path with a / . If the file name has no extension, *getUserDataPath()* will append .data/ to the path name.

Example:

```
Fl_Preferences prefs( USER, "matthiasm.com", "test" );
char path[FL_PATH_MAX];
prefs.getUserDataPath( path, FL_PATH_MAX );
```

creates the preferences database in the directory (User 'matt' on Linux):

```
/Users/matt/.fltk/matthiasm.com/test.prefs  
..and returns the userdata path:  
/Users/matt/.fltk/matthiasm.com/test/
```

Parameters

out	<i>path</i>	buffer for user data path
in	<i>pathlen</i>	size of path buffer (should be at least <code>FL_PATH_MAX</code>)

Returns

- 1 if there is no filename (*path* will be unmodified)
- 1 if *pathlen* is 0 (*path* will be unmodified)
- 1 if a path was created successfully, *path* will contain the path name ending in a '/'
- 0 if path was not created for some reason; *path* will contain the pathname that could not be created

See also

[Fl_Preferences::Fl_Preferences\(Root, const char*, const char*\)](#)

11.106.5.21 group()

```
const char * Fl_Preferences::group (
    int num_group)
```

Returns the name of the Nth (*num_group*) group.

There is no guaranteed order of group names. The index must be within the range given by [groups\(\)](#).

Parameters

in	<i>num_group</i>	number indexing the requested group
----	------------------	-------------------------------------

Returns

'C' string pointer to the group name

11.106.5.22 group_exists()

```
char Fl_Preferences::group_exists (
    const char * key)
```

Returns non-zero if a group with this name exists.

Group names are relative to the [Fl_Preferences](#) node and can contain a path. "." describes the current node, "/" describes the topmost node. By preceding a groupname with a "/" its path becomes relative to the topmost node.

Parameters

in	<i>key</i>	name of group that is searched for
----	------------	------------------------------------

Returns

0 if no group by that name was found

11.106.5.23 groups()

```
int Fl_Preferences::groups ()
```

Returns the number of groups that are contained within a group.

Returns

0 for no groups at all

11.106.5.24 new_UUID()

```
const char * Fl_Preferences::new_UUID () [static]
```

Returns a UUID as generated by the system.

A UUID is a "universally unique identifier" which is commonly used in configuration files to create identities. A UUID in ASCII looks like this: 937C4900-51AA-4C11-8DD3-7AB59944F03E. It has always 36 bytes plus a trailing zero.

Returns

a pointer to a static buffer containing the new UUID in ASCII format. The buffer is overwritten during every call to this function!

11.106.5.25 set() [1/7]

```
char Fl_Preferences::set (
    const char * key,
    const char * text)
```

Sets an entry (name/value pair).

The return value indicates if there was a problem storing the data in memory. However it does not reflect if the value was actually stored in the preference file.

Parameters

in	<i>key</i>	name of entry
in	<i>text</i>	set this entry to value

Returns

0 if setting the value failed

11.106.5.26 set() [2/7]

```
char Fl_Preferences::set (
    const char * key,
    const void * data,
    int dsize)
```

Sets an entry (name/value pair).

The return value indicates if there was a problem storing the data in memory. However it does not reflect if the value was actually stored in the preference file.

Parameters

in	<i>key</i>	name of entry
in	<i>data</i>	set this entry to value
in	<i>dsize</i>	size of data array

Returns

0 if setting the value failed

11.106.5.27 set() [3/7]

```
char Fl_Preferences::set (
    const char * key,
    double value)
```

Sets an entry (name/value pair).

The return value indicates if there was a problem storing the data in memory. However it does not reflect if the value was actually stored in the preference file.

Parameters

in	<i>key</i>	name of entry
in	<i>value</i>	set this entry to <i>value</i>

Returns

0 if setting the value failed

11.106.5.28 set() [4/7]

```
char Fl_Preferences::set (  
    const char * key,  
    double value,  
    int precision)
```

Sets an entry (name/value pair).

The return value indicates if there was a problem storing the data in memory. However it does not reflect if the value was actually stored in the preference file.

Parameters

in	<i>key</i>	name of entry
in	<i>value</i>	set this entry to <i>value</i>
in	<i>precision</i>	number of decimal digits to represent value

Returns

0 if setting the value failed

11.106.5.29 set() [5/7]

```
char Fl_Preferences::set (  
    const char * key,  
    float value)
```

Sets an entry (name/value pair).

The return value indicates if there was a problem storing the data in memory. However it does not reflect if the value was actually stored in the preference file.

Parameters

in	<i>key</i>	name of entry
in	<i>value</i>	set this entry to <i>value</i>

Returns

0 if setting the value failed

11.106.5.30 set() [6/7]

```
char Fl_Preferences::set (  
    const char * key,  
    float value,  
    int precision)
```

Sets an entry (name/value pair).

The return value indicates if there was a problem storing the data in memory. However it does not reflect if the value was actually stored in the preference file.

Parameters

in	<i>key</i>	name of entry
in	<i>value</i>	set this entry to <i>value</i>
in	<i>precision</i>	number of decimal digits to represent value

Returns

0 if setting the value failed

11.106.5.31 set() [7/7]

```
char Fl_Preferences::set (
    const char * key,
    int value)
```

Sets an entry (name/value pair).

The return value indicates if there was a problem storing the data in memory. However it does not reflect if the value was actually stored in the preference file.

Parameters

in	<i>key</i>	name of entry
in	<i>value</i>	set this entry to <i>value</i>

Returns

0 if setting the value failed

11.106.5.32 size()

```
int Fl_Preferences::size (
    const char * key)
```

Returns the size of the value part of an entry.

Parameters

in	<i>key</i>	name of entry
----	------------	---------------

Returns

size of value

11.106.6 Member Data Documentation**11.106.6.1 CORE_READ_OK**

```
const unsigned int Fl_Preferences::CORE_READ_OK = 0x0010 [static]
```

Set this if it is OK for FLTK to read preference files.

USER_READ_OK and/or SYSTEM_READ_OK must also be set.

11.106.6.2 CORE_WRITE_OK

```
const unsigned int Fl_Preferences::CORE_WRITE_OK = 0x0020 [static]
```

Set this if it is OK for FLTK to create or write preference files.

USER_WRITE_OK and/or SYSTEM_WRITE_OK must also be set.

11.106.6.3 NONE

```
const unsigned int Fl_Preferences::NONE = 0x0000 [static]
```

Set this if no call to [Fl_Preferences](#) shall access the file system.

See also

[Fl_Preferences::file_access\(unsigned int\)](#)

11.107 Fl_Printer Class Reference

OS-independent print support.

```
#include <Fl_Printer.H>
```

Inheritance diagram for [Fl_Printer](#):

Public Member Functions

- [int begin_job](#) (int pagecount=0, int *frompage=NULL, int *topage=NULL, char **perr_message=NULL) [FL_OVERRIDE](#)
Begins a print job.
- [int begin_page](#) (void) [FL_OVERRIDE](#)
Begins a new printed page.
- [void end_job](#) (void) [FL_OVERRIDE](#)
To be called at the end of a print job.
- [int end_page](#) (void) [FL_OVERRIDE](#)
To be called at the end of each page.
- [Fl_Printer](#) (void)
The constructor.
- [bool is_current](#) () [FL_OVERRIDE](#)
Is this surface the current drawing surface?
- [void margins](#) (int *left, int *top, int *right, int *bottom) [FL_OVERRIDE](#)
Computes the dimensions of margins that lie between the printable page area and the full page.
- [void origin](#) (int *x, int *y) [FL_OVERRIDE](#)
Computes the coordinates of the current origin of graphics functions.
- [void origin](#) (int x, int y) [FL_OVERRIDE](#)
Sets the position of the origin of graphics in the drawable part of the drawing surface.
- [int printable_rect](#) (int *w, int *h) [FL_OVERRIDE](#)
Computes the width and height of the drawable area of the drawing surface.
- [void rotate](#) (float angle) [FL_OVERRIDE](#)

- Rotates the graphics operations relatively to paper.*

 - void [scale](#) (float scale_x, float scale_y=0.) [FL_OVERRIDE](#)

Changes the scaling of page coordinates.
- void [set_current](#) (void) [FL_OVERRIDE](#)

Make this surface the current drawing surface.
- void [translate](#) (int x, int y) [FL_OVERRIDE](#)

Translates the current graphics origin accounting for the current rotation.
- void [untranslate](#) (void) [FL_OVERRIDE](#)

Undoes the effect of a previous [translate\(\)](#) call.
- [~FI_Printer](#) (void)

The destructor.

Public Member Functions inherited from [FI_Paged_Device](#)

- void [print_widget](#) ([FI_Widget](#) *widget, int delta_x=0, int delta_y=0)

Synonym of [draw\(FI_Widget, int, int\)](#)*
- void [print_window](#) ([FI_Window](#) *win, int x_off=0, int y_off=0)

Synonym of [draw_decorated_window\(FI_Window, int, int\)](#)*
- int [start_job](#) (int pagecount=0, int *frompage=NULL, int *topage=NULL, char **perr_message=NULL)

*Synonym of [begin_job\(int pagecount, int *frompage, int *topage, char **perr_message\)](#).*
- int [start_page](#) ()

Synonym of [begin_page\(\)](#).
- virtual [~FI_Paged_Device](#) ()

The destructor.

Public Member Functions inherited from [FI_Widget_Surface](#)

- void [draw](#) ([FI_Widget](#) *widget, int delta_x=0, int delta_y=0)

Draws the widget on the drawing surface.
- void [draw_decorated_window](#) ([FI_Window](#) *win, int x_offset=0, int y_offset=0)

Draws a window with its title bar and frame if any.
- void [print_window_part](#) ([FI_Window](#) *win, int x, int y, int w, int h, int delta_x=0, int delta_y=0)

Draws a rectangular part of an on-screen window.

Public Member Functions inherited from [FI_Surface_Device](#)

- [FI_Graphics_Driver](#) * [driver](#) ()

Returns the graphics driver of this drawing surface.
- virtual [~FI_Surface_Device](#) ()

The destructor.

Possible page formats.
- enum [Page_Layout](#) { [PORTRAIT](#) = 0 , [LANDSCAPE](#) = 0x100 , [REVERSED](#) = 0x200 , [ORIENTATION](#) = 0x300 }
Possible page layouts.

Static Public Member Functions inherited from [FI_Surface_Device](#)

- static [FI_Surface_Device](#) * **pop_current** ()
Removes the top element from the current drawing surface stack, and makes the new top element current.
- static void **push_current** ([FI_Surface_Device](#) *new_current)

Pushes `new_current` on top of the stack of current drawing surfaces, and makes it current.

- static [Fl_Surface_Device * surface](#) ()

The current drawing surface.

Protected Member Functions inherited from [Fl_Paged_Device](#)

- [Fl_Paged_Device](#) ()

The constructor.

Protected Member Functions inherited from [Fl_Widget_Surface](#)

- [Fl_Widget_Surface](#) (Fl_Graphics_Driver *d)

The constructor.

Protected Member Functions inherited from [Fl_Surface_Device](#)

- void **driver** (Fl_Graphics_Driver *graphics_driver)
Sets the graphics driver of this drawing surface.
- virtual void [end_current](#) ()
FLTK calls this each time a surface ceases to be the current drawing surface.
- **Fl_Surface_Device** (Fl_Graphics_Driver *graphics_driver)
Constructor that sets the graphics driver to use for the created surface.

Protected Attributes inherited from [Fl_Widget_Surface](#)

- int **x_offset**
horizontal offset to the origin of graphics coordinates
- int **y_offset**
vertical offset to the origin of graphics coordinates

11.107.1 Detailed Description

OS-independent print support.

[Fl_Printer](#) allows to use all drawing, color, text, image, and clip FLTK functions, and to have them operate on printed page(s). There are two main, non exclusive, ways to use it.

- Print any widget (standard, custom, [Fl_Window](#), [Fl_Gl_Window](#)) as it appears on screen, with optional translation, scaling and rotation. This is done by calling [print_widget\(\)](#), [print_window\(\)](#) or [print_window_part\(\)](#).
- Use a series of FLTK graphics commands (e.g., font, text, lines, colors, clip, image) to compose a page appropriately shaped for printing.

In both cases, begin by [begin_job\(\)](#), [begin_page\(\)](#), [printable_rect\(\)](#) and [origin\(\)](#) calls and finish by [end_page\(\)](#) and [end_job\(\)](#) calls.

Example of use: print a widget centered in a page

```
#include <FL/Fl_Printer.H>
#include <FL/fl_draw.H>
int width, height;
Fl_Widget *widget = ... // a widget we want printed
Fl_Printer *printer = new Fl_Printer();
if (printer->begin_job(1) == 0) {
    printer->begin_page();
    printer->printable_rect(&width, &height);
    fl_color(FL_BLACK);
    fl_line_style(FL_SOLID, 2);
    fl_rect(0, 0, width, height);
    fl_font(FL_COURIER, 12);
    time_t now; time(&now); fl_draw(ctime(&now), 0, fl_height());
    printer->origin(width/2, height/2);
    printer->print_widget(widget, -widget->w()/2, -widget->h()/2);
    printer->end_page();
    printer->end_job();
}
```

```
delete printer;
```

Recommended method to refresh GUI while printing :

```
printer->begin_job(0);
.....
Fl_Surface_Device::push_current(Fl_Display_Device::display_device());
Fl::check(); // or any operation that draws to display
Fl_Surface_Device::pop_current();
.....
printer->end_job();
```

Platform specifics

- X11 and Wayland platforms:
 - FLTK expresses all graphics data using (Level 2) PostScript and sends that to the selected printer. See class [Fl_PostScript_File_Device](#) for a description of how text and transparent images appear in print.
 - If the GTK library is available at run-time, class [Fl_Printer](#) runs GTK's printer dialog which allows to set printer, paper size and orientation.
 - If the GTK library is not available, or if `Fl::option(Fl::OPTION_PRINTER_USES_GTK)` has been turned off, class [Fl_Printer](#) runs FLTK's print dialog.
 - * Unless it has been previously changed, the default paper size is A4. To change that, press the "Properties" button of the "Print" dialog window opened by an [Fl_Printer::begin_job\(\)](#) call. This opens a "Printer Properties" window where it's possible to select the adequate paper size. Finally press the "Save" button therein to assign the chosen paper size to the chosen printer for this and all further print operations.
 - * Use the static public attributes of this class to set the print dialog to other languages than English. For example, the "Printer:" dialog item [Fl_Printer::dialog_printer](#) can be set to French with:

```
Fl_Printer::dialog_printer = "Imprimante:";
```

 before creation of the [Fl_Printer](#) object.
 - * Use [Fl_PostScript_File_Device::file_chooser_title](#) to customize the title of the file chooser dialog that opens when using the "Print To File" option of the print dialog.
- Windows platform: Transparent [Fl_RGB_Image](#) 's don't print with exact transparency on most printers (a workaround is to use [print_window_part\(\)](#)). [Fl_RGB_Image](#) 's don't [rotate\(\)](#) well.
- Mac OS X platform: all graphics requests print as on display and accept rotation and scaling.

11.107.2 Member Function Documentation

11.107.2.1 begin_job()

```
int Fl_Printer::begin_job (
    int pagecount = 0,
    int * frompage = NULL,
    int * topage = NULL,
    char ** perr_message = NULL) [virtual]
```

Begins a print job.

Parameters

in	<i>pagecount</i>	the total number of pages of the job (or 0 if you don't know the number of pages)
out	<i>frompage</i>	if non-null, *frompage is set to the first page the user wants printed
out	<i>topage</i>	if non-null, *topage is set to the last page the user wants printed
out	<i>perr_message</i>	if non-null and if the returned value is 2, *perr_message is set to a string describing the error. That string can be delete[]'d after use.

Returns

0 if OK, 1 if user cancelled the job, 2 if any error.

Reimplemented from [Fl_Paged_Device](#).

11.107.2.2 begin_page()

```
int Fl_Printer::begin_page (
    void ) [virtual]
```

Begins a new printed page.

The page coordinates are initially in points, i.e., 1/72 inch, and with origin at the top left of the printable page area. This function also makes this surface the current drawing surface with [Fl_Surface_Device::push_current\(\)](#).

Note

[begin_page\(\)](#) calls [Fl_Surface_Device::push_current\(\)](#) and leaves this device as the active surface. If any calls between [begin_page\(\)](#) and [end_page\(\)](#) open dialog boxes or will otherwise draw into FLTK windows, those calls must be put between a call to [Fl_Surface_Device::pop_current\(\)](#) and a call to [Fl_Surface_Device::push_current\(\)](#), or the content of the dialog box will be rendered to the printer instead of the screen.

Returns

0 if OK, non-zero if any error

Reimplemented from [Fl_Paged_Device](#).

11.107.2.3 end_job()

```
void Fl_Printer::end_job (
    void ) [virtual]
```

To be called at the end of a print job.

Reimplemented from [Fl_Paged_Device](#).

11.107.2.4 end_page()

```
int Fl_Printer::end_page (
    void ) [virtual]
```

To be called at the end of each page.

This function also stops this surface from being the current drawing surface with [Fl_Surface_Device::pop_current\(\)](#).

Note

[end_page\(\)](#) calls [Fl_Surface_Device::pop_current\(\)](#). If any calls between [begin_page\(\)](#) and [end_page\(\)](#) open dialog boxes or will otherwise draw into FLTK windows, those calls must be put between a call to [Fl_Surface_Device::pop_current\(\)](#) and a call to [Fl_Surface_Device::push_current\(\)](#).

Returns

0 if OK, non-zero if any error.

Reimplemented from [Fl_Paged_Device](#).

11.107.2.5 is_current()

```
bool Fl_Printer::is_current () [virtual]
```

Is this surface the current drawing surface?

Reimplemented from [Fl_Surface_Device](#).

11.107.2.6 margins()

```
void Fl_Printer::margins (
    int * left,
    int * top,
    int * right,
    int * bottom) [virtual]
```

Computes the dimensions of margins that lie between the printable page area and the full page.

Values are in the same unit as that used by FLTK drawing functions. They are changed by [scale\(\)](#) calls.

Parameters

out	<i>left</i>	If non-null, *left is set to the left margin size.
out	<i>top</i>	If non-null, *top is set to the top margin size.
out	<i>right</i>	If non-null, *right is set to the right margin size.
out	<i>bottom</i>	If non-null, *bottom is set to the bottom margin size.

Reimplemented from [Fl_Paged_Device](#).

11.107.2.7 origin() [1/2]

```
void Fl_Printer::origin (
    int * x,
    int * y) [virtual]
```

Computes the coordinates of the current origin of graphics functions.

Parameters

out	<i>x,y</i>	If non-null, *x and *y are set to the horizontal and vertical coordinates of the graphics origin.
-----	------------	---

Reimplemented from [Fl_Widget_Surface](#).

11.107.2.8 origin() [2/2]

```
void Fl_Printer::origin (
    int x,
    int y) [virtual]
```

Sets the position of the origin of graphics in the drawable part of the drawing surface.

Arguments should be expressed relatively to the result of a previous [printable_rect\(\)](#) call. That is, `printable_rect(&w, &h); origin(w/2, 0);` sets the graphics origin at the top center of the drawable area. Successive [origin\(\)](#) calls don't combine their effects. [Origin\(\)](#) calls are not affected by [rotate\(\)](#) calls (for classes derived from [Fl_Paged_Device](#)).

Parameters

in	<i>x,y</i>	Horizontal and vertical positions in the drawing surface of the desired origin of graphics.
----	------------	---

Reimplemented from [Fl_Widget_Surface](#).

11.107.2.9 printable_rect()

```
int Fl_Printer::printable_rect (
    int * w,
    int * h) [virtual]
```

Computes the width and height of the drawable area of the drawing surface.

Values are in the same unit as that used by FLTK drawing functions and are unchanged by calls to [origin\(\)](#). If the object is derived from class [Fl_Paged_Device](#), values account for the user-selected paper type and print orientation and are changed by [scale\(\)](#) calls.

Returns

0 if OK, non-zero if any error

Reimplemented from [Fl_Widget_Surface](#).

11.107.2.10 rotate()

```
void Fl_Printer::rotate (  
    float angle) [virtual]
```

Rotates the graphics operations relatively to paper.

The rotation is centered on the current graphics origin. Successive [rotate\(\)](#) calls don't combine their effects.

Parameters

<i>angle</i>	Rotation angle in counter-clockwise degrees.
--------------	--

Reimplemented from [Fl_Paged_Device](#).

11.107.2.11 scale()

```
void Fl_Printer::scale (
    float scale_x,
    float scale_y = 0.) [virtual]
```

Changes the scaling of page coordinates.

This function also resets the origin of graphics functions at top left of printable page area. After a [scale\(\)](#) call, do a [printable_rect\(\)](#) call to get the new dimensions of the printable page area. Successive [scale\(\)](#) calls don't combine their effects.

Parameters

<i>scale_x</i>	Horizontal dimensions of plot are multiplied by this quantity.
<i>scale_y</i>	Same as above, vertically. The value 0. is equivalent to setting <code>scale_y = scale_x</code> . Thus, <code>scale(factor)</code> ; is equivalent to <code>scale(factor, factor)</code> ;

Reimplemented from [Fl_Paged_Device](#).

11.107.2.12 set_current()

```
void Fl_Printer::set_current (
    void ) [virtual]
```

Make this surface the current drawing surface.

This surface will receive all future graphics requests.

Since FLTK 1.4.0 the preferred API to change the current drawing surface is [Fl_Surface_Device::push_current\(\)](#) / [Fl_Surface_Device::pop_current\(\)](#).

Note

It is recommended to use this function only as follows :

- The current drawing surface is the display;
- make current another surface, e.g., an [Fl_Printer](#) or an [Fl_Image_Surface](#) object, calling [set_current\(\)](#) on this object;
- draw to that surface;
- make the display current again with [Fl_Display_Device::display_device\(\)->set_current\(\)](#);
don't do any other call to [set_current\(\)](#) before this one.

Other scenarios of drawing surface changes should be performed via [Fl_Surface_Device::push_current\(\)](#) and [Fl_Surface_Device::pop_current\(\)](#).

Reimplemented from [Fl_Surface_Device](#).

11.107.2.13 translate()

```
void Fl_Printer::translate (
    int x,
    int y) [virtual]
```

Translates the current graphics origin accounting for the current rotation.

Each [translate\(\)](#) call must be matched by an [untranslate\(\)](#) call. Successive [translate\(\)](#) calls add up their effects.

Reimplemented from [Fl_Widget_Surface](#).

11.107.2.14 untranslate()

```
void Fl_Printer::untranslate (
    void ) [virtual]
```

Undoes the effect of a previous [translate\(\)](#) call.

Reimplemented from [Fl_Widget_Surface](#).

The documentation for this class was generated from the following files:

- [Fl_Printer.H](#)
- [Fl_Printer.cxx](#)

11.108 Fl_Progress Class Reference

Displays a progress bar for the user.

```
#include <Fl_Progress.H>
```

Inheritance diagram for [Fl_Progress](#):

**Public Member Functions**

- [Fl_Progress](#) (int *x*, int *y*, int *w*, int *h*, const char **l*=0)
The constructor creates the progress bar using the position, size, and label.
- float **maximum** () const
Gets the maximum value in the progress widget.
- void **maximum** (float *v*)
Sets the maximum value in the progress widget.
- float **minimum** () const
Gets the minimum value in the progress widget.
- void **minimum** (float *v*)
Sets the minimum value in the progress widget.
- float **value** () const
Gets the current value in the progress widget.
- void **value** (float *v*)
Sets the current value in the progress widget.

Public Member Functions inherited from [Fl_Widget](#)

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void [activate](#) ()
Activates the widget.
- unsigned int [active](#) () const
Returns whether the widget is active.
- int [active_r](#) () const
Returns whether the widget and all of its parents are active.
- [Fl_Align align](#) () const
Gets the label alignment.
- void [align](#) ([Fl_Align alignment](#))
Sets the label alignment.

- long [argument](#) () const
Gets the current user data (long) argument that is passed to the callback function.
- void [argument](#) (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class [FI_Gl_Window](#) * [as_gl_window](#) ()
Returns an [FI_Gl_Window](#) pointer if this widget is an [FI_Gl_Window](#).
- virtual class [FI_Gl_Window](#) const * [as_gl_window](#) () const
- virtual [FI_Group](#) * [as_group](#) ()
Returns an [FI_Group](#) pointer if this widget is an [FI_Group](#).
- virtual [FI_Group](#) const * [as_group](#) () const
- virtual [FI_Window](#) * [as_window](#) ()
Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).
- virtual [FI_Window](#) const * [as_window](#) () const
- void [bind_deimage](#) ([FI_Image](#) *img)
Sets the image to use as part of the widget label when in the inactive state.
- void [bind_deimage](#) (int f)
Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.
- void [bind_image](#) ([FI_Image](#) *img)
Sets the image to use as part of the widget label when in the active state.
- void [bind_image](#) (int f)
Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- [FI_Boxtype](#) [box](#) () const
Gets the box type of the widget.
- void [box](#) ([FI_Boxtype](#) new_box)
Sets the box type for the widget.
- [FI_Callback_p](#) [callback](#) () const
Gets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb, [FI_Callback_User_Data](#) *p, bool auto_free)
Sets the current callback function and managed user data for the widget.
- void [callback](#) ([FI_Callback](#) *cb, void *p)
Sets the current callback function and data for the widget.
- void [callback](#) ([FI_Callback0](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback1](#) *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int [changed](#) () const
Checks if the widget value changed since the last callback.
- void [clear_active](#) ()
Marks the widget as inactive without sending events or changing focus.
- void [clear_changed](#) ()
Marks the value of the widget as unchanged.
- void [clear_damage](#) (uchar c=0)
Clears or sets the damage flags.
- void [clear_output](#) ()
Sets a widget to accept input.
- void [clear_visible](#) ()
Hides the widget.
- void [clear_visible_focus](#) ()
Disables keyboard focus navigation with this widget.

- `FL_Color color () const`
Gets the background color of the widget.
- `void color (FL_Color bg)`
Sets the background color of the widget.
- `void color (FL_Color bg, FL_Color sel)`
Sets the background and selection color of the widget.
- `FL_Color color2 () const`
For back compatibility only.
- `void color2 (unsigned a)`
For back compatibility only.
- `int contains (const FL_Widget *w) const`
Checks if w is a child of this widget.
- `void copy_label (const char *new_label)`
Sets the current label.
- `void copy_tooltip (const char *text)`
Sets the current tooltip text.
- `uchar damage () const`
Returns non-zero if `draw()` needs to be called.
- `void damage (uchar c)`
Sets the damage bits for the widget.
- `void damage (uchar c, int x, int y, int w, int h)`
Sets the damage bits for an area inside the widget.
- `int damage_resize (int, int, int, int)`
Internal use only.
- `void deactivate ()`
Deactivates the widget.
- `FL_Image * deimage ()`
Gets the image that is used as part of the widget label when in the inactive state.
- `const FL_Image * deimage () const`
Gets the image that is used as part of the widget label when in the inactive state.
- `void deimage (FL_Image &img)`
Sets the image to use as part of the widget label when in the inactive state.
- `void deimage (FL_Image *img)`
Sets the image to use as part of the widget label when in the inactive state.
- `int deimage_bound () const`
Returns whether the inactive image is managed by the widget.
- `void do_callback (FL_Callback_Reason reason=FL_REASON_UNKNOWN)`
Calls the widget callback function with default arguments.
- `void do_callback (FL_Widget *widget, long arg, FL_Callback_Reason reason=FL_REASON_UNKNOWN)`
Calls the widget callback function with arbitrary arguments.
- `void do_callback (FL_Widget *widget, void *arg=0, FL_Callback_Reason reason=FL_REASON_UNKNOWN)`
Calls the widget callback function with arbitrary arguments.
- `void draw_label (int, int, int, int, FL_Align) const`
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- `int h () const`
Gets the widget height.
- `virtual int handle (int event)`
Handles the specified event.
- `virtual void hide ()`
Makes a widget invisible.
- `int horizontal_label_margin ()`

- Get the spacing between the label and the horizontal edge of the widget.*

 - void [horizontal_label_margin](#) (int px)

Set the spacing between the label and the horizontal edge of the widget.
- [FL_Image](#) * [image](#) ()

Gets the image that is used as part of the widget label when in the active state.
- const [FL_Image](#) * [image](#) () const

Gets the image that is used as part of the widget label when in the active state.
- void [image](#) ([FL_Image](#) &img)

Sets the image to use as part of the widget label when in the active state.
- void [image](#) ([FL_Image](#) *img)

Sets the image to use as part of the widget label when in the active state.
- int [image_bound](#) () const

Returns whether the image is managed by the widget.
- int [inside](#) (const [FL_Widget](#) *wgt) const

Checks if this widget is a child of wgt.
- int [is_label_copied](#) () const

Returns whether the current label was assigned with [copy_label\(\)](#).
- const char * [label](#) () const

Gets the current label text.
- void [label](#) (const char *text)

Sets the current label pointer.
- void [label](#) ([FL_Labeltype](#) a, const char *b)

Shortcut to set the label text and type in one call.
- int [label_image_spacing](#) ()

Return the gap size between the label and the image.
- void [label_image_spacing](#) (int gap)

Set the gap between the label and the image in pixels.
- [FL_Color](#) [labelcolor](#) () const

Gets the label color.
- void [labelcolor](#) ([FL_Color](#) c)

Sets the label color.
- [FL_Font](#) [labelfont](#) () const

Gets the font to use.
- void [labelfont](#) ([FL_Font](#) f)

Sets the font to use.
- [FL_Fonsize](#) [labelsize](#) () const

Gets the font size in pixels.
- void [labelsize](#) ([FL_Fonsize](#) pix)

Sets the font size in pixels.
- [FL_Labeltype](#) [labeltype](#) () const

Gets the label type.
- void [labeltype](#) ([FL_Labeltype](#) a)

Sets the label type.
- void [measure_label](#) (int &ww, int &hh) const

Sets width ww and height hh accordingly with the label size.
- bool [needs_keyboard](#) () const

Returns whether this widget needs a keyboard.
- void [needs_keyboard](#) (bool needs)

Sets whether this widget needs a keyboard.
- unsigned int [output](#) () const

Returns if a widget is used for output only.

- `FL_Group * parent () const`
Returns a pointer to the parent widget.
- `void parent (FL_Group *p)`
Internal use only - "for hacks only".
- `void position (int X, int Y)`
Repositions the window or widget.
- `void redraw ()`
Schedules the drawing of the widget.
- `void redraw_label ()`
Schedules the drawing of the label.
- `virtual void resize (int x, int y, int w, int h)`
Changes the size or position of the widget.
- `FL_Color selection_color () const`
Gets the selection color.
- `void selection_color (FL_Color a)`
Sets the selection color.
- `void set_active ()`
Marks the widget as active without sending events or changing focus.
- `void set_changed ()`
Marks the value of the widget as changed.
- `void set_output ()`
Sets a widget to output only.
- `void set_visible ()`
Makes the widget visible.
- `void set_visible_focus ()`
Enables keyboard focus navigation with this widget.
- `int shortcut_label () const`
Returns whether the widget's label uses '&' to indicate shortcuts.
- `void shortcut_label (int value)`
Sets whether the widget's label uses '&' to indicate shortcuts.
- `virtual void show ()`
Makes a widget visible.
- `void size (int W, int H)`
Changes the size of the widget.
- `int take_focus ()`
Gives the widget the keyboard focus.
- `unsigned int takeevents () const`
Returns if the widget is able to take events.
- `int test_shortcut ()`
Returns true if the widget's label contains the entered '&x' shortcut.
- `const char * tooltip () const`
Gets the current tooltip text.
- `void tooltip (const char *text)`
Sets the current tooltip text.
- `FL_Window * top_window () const`
Returns a pointer to the top-level window for the widget.
- `FL_Window * top_window_offset (int &xoff, int &yoff) const`
Finds the x/y offset of the current widget relative to the top-level window.
- `uchar type () const`
Gets the widget type.
- `void type (uchar t)`

- Sets the widget type.*
- int **use_accents_menu** ()
 - Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.*
- void * **user_data** () const
 - Gets the user data for this widget.*
- void **user_data** (FI_Callback_User_Data *v, bool auto_free)
 - Sets the user data for this widget.*
- void **user_data** (void *v)
 - Sets the user data for this widget.*
- int **vertical_label_margin** ()
 - Get the spacing between the label and the vertical edge of the widget.*
- void **vertical_label_margin** (int px)
 - Set the spacing between the label and the vertical edge of the widget.*
- unsigned int **visible** () const
 - Returns whether a widget is visible.*
- unsigned int **visible_focus** () const
 - Checks whether this widget has a visible focus.*
- void **visible_focus** (int v)
 - Modifies keyboard focus navigation.*
- int **visible_r** () const
 - Returns whether a widget and all its parents are visible.*
- int **w** () const
 - Gets the widget width.*
- FI_When **when** () const
 - Returns the conditions under which the callback is called.*
- void **when** (uchar i)
 - Sets the flags used to decide when a callback is called.*
- FI_Window * **window** () const
 - Returns a pointer to the nearest parent window up the widget hierarchy.*
- int **x** () const
 - Gets the widget position in its window.*
- int **y** () const
 - Gets the widget position in its window.*
- virtual ~FI_Widget ()
 - Destroys the widget.*

Protected Member Functions

- void **draw** () **FL_OVERRIDE**
 - Draws the progress bar.*

Protected Member Functions inherited from FI_Widget

- void **clear_flag** (unsigned int c)
 - Clears a flag in the flags mask.*
- void **draw_backdrop** () const
 - If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.*
- void **draw_box** () const
 - Draws the widget box according its box style.*
- void **draw_box** (FI_Boxtype t, FI_Color c) const
 - Draws a box of type t, of color c at the widget's position and size.*
- void **draw_box** (FI_Boxtype t, int x, int y, int w, int h, FI_Color c) const

- Draws a box of type t, of color c at the position X,Y and size W,H.*
- void `draw_focus` () const
- Draws a focus rectangle around the widget.*
- void `draw_focus` (FI_Boxtype t, int X, int Y, int W, int H) const
- Draws a focus rectangle around the widget.*
- void `draw_focus` (FI_Boxtype t, int x, int y, int w, int h, FI_Color bg) const
- Draws a focus box for the widget at the given position and size.*
- void `draw_label` () const
- Draws the widget's label at the defined label position.*
- void `draw_label` (int, int, int, int) const
- Draws the label in an arbitrary bounding box.*
- `FI_Widget` (int x, int y, int w, int h, const char *label=0L)
- Creates a widget at the given position and size.*
- unsigned int `flags` () const
- Gets the widget flags mask.*
- void `h` (int v)
- Internal use only.*
- void `set_flag` (unsigned int c)
- Sets a flag in the flags mask.*
- void `w` (int v)
- Internal use only.*
- void `x` (int v)
- Internal use only.*
- void `y` (int v)
- Internal use only.*

Additional Inherited Members

Static Public Member Functions inherited from FI_Widget

- static void `default_callback` (FI_Widget *widget, void *data)
- The default callback for all widgets that don't set a callback.*
- static unsigned int `label_shortcut` (const char *t)
- Returns the Unicode value of the '&x' shortcut in a given text.*
- static int `test_shortcut` (const char *, const bool require_alt=false)
- Returns true if the given text t contains the entered '&x' shortcut.*

Protected Types inherited from FI_Widget

- enum {
`INACTIVE` = 1<<0 , `INVISIBLE` = 1<<1 , `OUTPUT` = 1<<2 , `NOBORDER` = 1<<3 ,
`FORCE_POSITION` = 1<<4 , `NON_MODAL` = 1<<5 , `SHORTCUT_LABEL` = 1<<6 , `CHANGED` = 1<<7
, `OVERRIDE` = 1<<8 , `VISIBLE_FOCUS` = 1<<9 , `COPIED_LABEL` = 1<<10 , `CLIP_CHILDREN` = 1<<11
, `MENU_WINDOW` = 1<<12 , `TOOLTIP_WINDOW` = 1<<13 , `MODAL` = 1<<14 , `NO_OVERLAY` = 1<<15

`MAXIMIZED` = 1<<24 , `POPUP` = 1<<25 , `USERFLAG3` = 1<<29 , `USERFLAG2` = 1<<30 ,
`USERFLAG1` = 1<<31 }
flags possible values enumeration.

11.108.1 Detailed Description

Displays a progress bar for the user.

11.108.2 Constructor & Destructor Documentation

11.108.2.1 Fl_Progress()

```
Fl_Progress::Fl_Progress (
    int X,
    int Y,
    int W,
    int H,
    const char * L = 0)
```

The constructor creates the progress bar using the position, size, and label.

You can set the background color with [color\(\)](#) and the progress bar color with [selection_color\(\)](#), or you can set both colors together with [color\(unsigned bg, unsigned sel\)](#).

The default colors are FL_BACKGROUND2_COLOR and FL_YELLOW, resp.

11.108.3 Member Function Documentation

11.108.3.1 draw()

```
void Fl_Progress::draw (
    void ) [protected], [virtual]
```

Draws the progress bar.

Implements [Fl_Widget](#).

The documentation for this class was generated from the following files:

- [Fl_Progress.H](#)
- [Fl_Progress.cxx](#)

11.109 Fl_Radio_Button Class Reference

Inheritance diagram for Fl_Radio_Button:

Public Member Functions

- [Fl_Radio_Button](#) (int X, int Y, int W, int H, const char *L=0)
The constructor creates the button using the given position, size, and label.

Public Member Functions inherited from [Fl_Button](#)

- int [clear](#) ()
Same as `value(0)`.
- [uchar compact](#) ()
Return true if buttons are rendered as compact buttons.
- void [compact](#) ([uchar v](#))
Decide if buttons should be rendered in compact mode.

- [FI_Boxtype](#) `down_box ()` const
Returns the current down box type, which is drawn when `value()` is non-zero.
- void `down_box (FI_Boxtype b)`
Sets the down box type.
- [FI_Color](#) `down_color ()` const
(for backwards compatibility)
- void `down_color (unsigned c)`
(for backwards compatibility)
- [FI_Button](#) (int X, int Y, int W, int H, const char *L=0)
The constructor creates the button using the given position, size, and label.
- int `handle (int) FL_OVERRIDE`
Handles the specified event.
- int `set ()`
Same as `value (1)`.
- void `setonly ()`
Turns on this button and turns off all other radio buttons in the group (calling `value (1)` or `set ()` does not do this).
- int `shortcut ()` const
Returns the current shortcut key for the button.
- void `shortcut (const char *s)`
(for backwards compatibility)
- void `shortcut (int s)`
Sets the shortcut key to `s`.
- char `value ()` const
Returns the current value of the button (0 or 1).
- int `value (int v)`
Sets the current value of the button.

Public Member Functions inherited from [FI_Widget](#)

- void `_clear_fullscreen ()`
- void `_set_fullscreen ()`
- void `activate ()`
Activates the widget.
- unsigned int `active ()` const
Returns whether the widget is active.
- int `active_r ()` const
Returns whether the widget and all of its parents are active.
- [FI_Align](#) `align ()` const
Gets the label alignment.
- void `align (FI_Align alignment)`
Sets the label alignment.
- long `argument ()` const
Gets the current user data (long) argument that is passed to the callback function.
- void `argument (long v)`
Sets the current user data (long) argument that is passed to the callback function.
- virtual class [FI_Gl_Window](#) * `as_gl_window ()`
Returns an [FI_Gl_Window](#) pointer if this widget is an [FI_Gl_Window](#).
- virtual class [FI_Gl_Window](#) const * `as_gl_window ()` const
- virtual [FI_Group](#) * `as_group ()`
Returns an [FI_Group](#) pointer if this widget is an [FI_Group](#).
- virtual [FI_Group](#) const * `as_group ()` const

- virtual [FI_Window](#) * [as_window](#) ()
Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).
- virtual [FI_Window](#) const * **[as_window](#)** () const
- void [bind_deimage](#) ([FI_Image](#) *img)
Sets the image to use as part of the widget label when in the inactive state.
- void [bind_deimage](#) (int f)
Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.
- void [bind_image](#) ([FI_Image](#) *img)
Sets the image to use as part of the widget label when in the active state.
- void [bind_image](#) (int f)
Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- [FI_Boxtype](#) [box](#) () const
Gets the box type of the widget.
- void [box](#) ([FI_Boxtype](#) new_box)
Sets the box type for the widget.
- [FI_Callback_p](#) [callback](#) () const
Gets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb, [FI_Callback_User_Data](#) *p, bool auto_free)
Sets the current callback function and managed user data for the widget.
- void [callback](#) ([FI_Callback](#) *cb, void *p)
Sets the current callback function and data for the widget.
- void [callback](#) ([FI_Callback0](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback1](#) *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int [changed](#) () const
Checks if the widget value changed since the last callback.
- void [clear_active](#) ()
Marks the widget as inactive without sending events or changing focus.
- void [clear_changed](#) ()
Marks the value of the widget as unchanged.
- void [clear_damage](#) (uchar c=0)
Clears or sets the damage flags.
- void [clear_output](#) ()
Sets a widget to accept input.
- void [clear_visible](#) ()
Hides the widget.
- void [clear_visible_focus](#) ()
Disables keyboard focus navigation with this widget.
- [FI_Color](#) [color](#) () const
Gets the background color of the widget.
- void [color](#) ([FI_Color](#) bg)
Sets the background color of the widget.
- void [color](#) ([FI_Color](#) bg, [FI_Color](#) sel)
Sets the background and selection color of the widget.
- [FI_Color](#) [color2](#) () const
For back compatibility only.
- void [color2](#) (unsigned a)
For back compatibility only.

- int [contains](#) (const [Fl_Widget](#) *w) const
Checks if w is a child of this widget.
- void [copy_label](#) (const char *new_label)
Sets the current label.
- void [copy_tooltip](#) (const char *text)
Sets the current tooltip text.
- [uchar](#) [damage](#) () const
Returns non-zero if [draw\(\)](#) needs to be called.
- void [damage](#) ([uchar](#) c)
Sets the damage bits for the widget.
- void [damage](#) ([uchar](#) c, int x, int y, int w, int h)
Sets the damage bits for an area inside the widget.
- int [damage_resize](#) (int, int, int, int)
Internal use only.
- void [deactivate](#) ()
Deactivates the widget.
- [Fl_Image](#) * [deimage](#) ()
Gets the image that is used as part of the widget label when in the inactive state.
- const [Fl_Image](#) * [deimage](#) () const
Gets the image that is used as part of the widget label when in the inactive state.
- void [deimage](#) ([Fl_Image](#) &img)
Sets the image to use as part of the widget label when in the inactive state.
- void [deimage](#) ([Fl_Image](#) *img)
Sets the image to use as part of the widget label when in the inactive state.
- int [deimage_bound](#) () const
Returns whether the inactive image is managed by the widget.
- void [do_callback](#) ([Fl_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
Calls the widget callback function with default arguments.
- void [do_callback](#) ([Fl_Widget](#) *widget, long arg, [Fl_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
Calls the widget callback function with arbitrary arguments.
- void [do_callback](#) ([Fl_Widget](#) *widget, void *arg=0, [Fl_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
Calls the widget callback function with arbitrary arguments.
- void [draw_label](#) (int, int, int, int, [Fl_Align](#)) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int [h](#) () const
Gets the widget height.
- virtual void [hide](#) ()
Makes a widget invisible.
- int [horizontal_label_margin](#) ()
Get the spacing between the label and the horizontal edge of the widget.
- void [horizontal_label_margin](#) (int px)
Set the spacing between the label and the horizontal edge of the widget.
- [Fl_Image](#) * [image](#) ()
Gets the image that is used as part of the widget label when in the active state.
- const [Fl_Image](#) * [image](#) () const
Gets the image that is used as part of the widget label when in the active state.
- void [image](#) ([Fl_Image](#) &img)
Sets the image to use as part of the widget label when in the active state.
- void [image](#) ([Fl_Image](#) *img)
Sets the image to use as part of the widget label when in the active state.
- int [image_bound](#) () const

- Returns whether the image is managed by the widget.*

 - int `inside` (const `FI_Widget` *wgt) const

Checks if this widget is a child of wgt.
- int `is_label_copied` () const

Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const

Gets the current label text.
- void `label` (const char *text)

Sets the current label pointer.
- void `label` (`FI_Labeltype` a, const char *b)

Shortcut to set the label text and type in one call.
- int `label_image_spacing` ()

Return the gap size between the label and the image.
- void `label_image_spacing` (int gap)

Set the gap between the label and the image in pixels.
- `FI_Color` `labelcolor` () const

Gets the label color.
- void `labelcolor` (`FI_Color` c)

Sets the label color.
- `FI_Font` `labelfont` () const

Gets the font to use.
- void `labelfont` (`FI_Font` f)

Sets the font to use.
- `FI_Fonsize` `labelsize` () const

Gets the font size in pixels.
- void `labelsize` (`FI_Fonsize` pix)

Sets the font size in pixels.
- `FI_Labeltype` `labeltype` () const

Gets the label type.
- void `labeltype` (`FI_Labeltype` a)

Sets the label type.
- void `measure_label` (int &ww, int &hh) const

Sets width ww and height hh accordingly with the label size.
- bool `needs_keyboard` () const

Returns whether this widget needs a keyboard.
- void `needs_keyboard` (bool needs)

Sets whether this widget needs a keyboard.
- unsigned int `output` () const

Returns if a widget is used for output only.
- `FI_Group` * `parent` () const

Returns a pointer to the parent widget.
- void `parent` (`FI_Group` *p)

Internal use only - "for hacks only".
- void `position` (int X, int Y)

Repositions the window or widget.
- void `redraw` ()

Schedules the drawing of the widget.
- void `redraw_label` ()

Schedules the drawing of the label.
- virtual void `resize` (int x, int y, int w, int h)

Changes the size or position of the widget.

- [FI_Color selection_color](#) () const
Gets the selection color.
- void [selection_color](#) ([FI_Color](#) a)
Sets the selection color.
- void [set_active](#) ()
Marks the widget as active without sending events or changing focus.
- void [set_changed](#) ()
Marks the value of the widget as changed.
- void [set_output](#) ()
Sets a widget to output only.
- void [set_visible](#) ()
Makes the widget visible.
- void [set_visible_focus](#) ()
Enables keyboard focus navigation with this widget.
- int [shortcut_label](#) () const
Returns whether the widget's label uses '&' to indicate shortcuts.
- void [shortcut_label](#) (int value)
Sets whether the widget's label uses '&' to indicate shortcuts.
- virtual void [show](#) ()
Makes a widget visible.
- void [size](#) (int W, int H)
Changes the size of the widget.
- int [take_focus](#) ()
Gives the widget the keyboard focus.
- unsigned int [takeevents](#) () const
Returns if the widget is able to take events.
- int [test_shortcut](#) ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * [tooltip](#) () const
Gets the current tooltip text.
- void [tooltip](#) (const char *text)
Sets the current tooltip text.
- [FI_Window](#) * [top_window](#) () const
Returns a pointer to the top-level window for the widget.
- [FI_Window](#) * [top_window_offset](#) (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- [uchar](#) type () const
Gets the widget type.
- void [type](#) ([uchar](#) t)
Sets the widget type.
- int [use_accents_menu](#) ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * [user_data](#) () const
Gets the user data for this widget.
- void [user_data](#) ([FI_Callback_User_Data](#) *v, bool auto_free)
Sets the user data for this widget.
- void [user_data](#) (void *v)
Sets the user data for this widget.
- int [vertical_label_margin](#) ()
Get the spacing between the label and the vertical edge of the widget.
- void [vertical_label_margin](#) (int px)

- Set the spacing between the label and the vertical edge of the widget.*

 - unsigned int `visible` () const
 - Returns whether a widget is visible.*
 - unsigned int `visible_focus` () const
 - Checks whether this widget has a visible focus.*
 - void `visible_focus` (int v)
 - Modifies keyboard focus navigation.*
 - int `visible_r` () const
 - Returns whether a widget and all its parents are visible.*
 - int `w` () const
 - Gets the widget width.*
 - `Fl_When` when () const
 - Returns the conditions under which the callback is called.*
 - void `when` (uchar i)
 - Sets the flags used to decide when a callback is called.*
 - `Fl_Window` * `window` () const
 - Returns a pointer to the nearest parent window up the widget hierarchy.*
 - int `x` () const
 - Gets the widget position in its window.*
 - int `y` () const
 - Gets the widget position in its window.*
 - virtual `~Fl_Widget` ()
 - Destroys the widget.*

Additional Inherited Members

Static Public Member Functions inherited from `Fl_Widget`

- static void `default_callback` (`Fl_Widget` *widget, void *data)
- The default callback for all widgets that don't set a callback.*
- static unsigned int `label_shortcut` (const char *t)
- Returns the Unicode value of the '&x' shortcut in a given text.*
- static int `test_shortcut` (const char *, const bool require_alt=false)
- Returns true if the given text t contains the entered '&x' shortcut.*

Protected Types inherited from `Fl_Widget`

- enum {
`INACTIVE` = 1<<0 , `INVISIBLE` = 1<<1 , `OUTPUT` = 1<<2 , `NOBORDER` = 1<<3 ,
`FORCE_POSITION` = 1<<4 , `NON_MODAL` = 1<<5 , `SHORTCUT_LABEL` = 1<<6 , `CHANGED` = 1<<7
, `OVERRIDE` = 1<<8 , `VISIBLE_FOCUS` = 1<<9 , `COPIED_LABEL` = 1<<10 , `CLIP_CHILDREN` = 1<<11
, `MENU_WINDOW` = 1<<12 , `TOOLTIP_WINDOW` = 1<<13 , `MODAL` = 1<<14 , `NO_OVERLAY` = 1<<15

`MAXIMIZED` = 1<<24 , `POPUP` = 1<<25 , `USERFLAG3` = 1<<29 , `USERFLAG2` = 1<<30 ,
`USERFLAG1` = 1<<31 }
flags possible values enumeration.

Protected Member Functions inherited from Fl_Button

- void **draw** () [FL_OVERRIDE](#)
Draws the widget.
- void **simulate_key_action** ()

Protected Member Functions inherited from Fl_Widget

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** (Fl_Boxtype t, Fl_Color c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** (Fl_Boxtype t, int x, int y, int w, int h, Fl_Color c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const
Draws a focus rectangle around the widget.
- void **draw_focus** (Fl_Boxtype t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void **draw_focus** (Fl_Boxtype t, int x, int y, int w, int h, Fl_Color bg) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [Fl_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

Static Protected Member Functions inherited from Fl_Button

- static void **key_release_timeout** (void *)

Static Protected Attributes inherited from Fl_Button

- static [Fl_Widget_Tracker](#) * **key_release_tracker** = 0

11.109.1 Constructor & Destructor Documentation

11.109.1.1 `Fl_Radio_Button()`

```
Fl_Radio_Button::Fl_Radio_Button (
    int X,
    int Y,
    int W,
    int H,
    const char * L = 0)
```

The constructor creates the button using the given position, size, and label. The Button [type\(\)](#) is set to `FL_RADIO_BUTTON`.

Parameters

in	<i>X,Y,W,H</i>	position and size of the widget
in	<i>L</i>	widget label, default is no label

The documentation for this class was generated from the following files:

- `Fl_Radio_Button.H`
- `Fl_Button.cxx`

11.110 `Fl_Radio_Light_Button` Class Reference

Inheritance diagram for `Fl_Radio_Light_Button`:

Public Member Functions

- **`Fl_Radio_Light_Button`** (int X, int Y, int W, int H, const char *l=0)

Public Member Functions inherited from [Fl_Light_Button](#)

- [Fl_Light_Button](#) (int x, int y, int w, int h, const char *l=0)
Creates a new [Fl_Light_Button](#) widget using the given position, size, and label string.
- int [handle](#) (int) [FL_OVERRIDE](#)
Handles the specified event.

Public Member Functions inherited from [Fl_Button](#)

- int [clear](#) ()
Same as `value(0)`.
- [uchar compact](#) ()
Return true if buttons are rendered as compact buttons.
- void [compact](#) (uchar v)

- Decide if buttons should be rendered in compact mode.*
- **FL_Boxtype** **down_box** () const
*Returns the current down box type, which is drawn when **value()** is non-zero.*
- void **down_box** (FL_Boxtype b)
Sets the down box type.
- **FL_Color** **down_color** () const
(for backwards compatibility)
- void **down_color** (unsigned c)
(for backwards compatibility)
- **FL_Button** (int X, int Y, int W, int H, const char *L=0)
The constructor creates the button using the given position, size, and label.
- int **set** ()
*Same as **value(1)**.*
- void **setonly** ()
*Turns on this button and turns off all other radio buttons in the group (calling **value(1)** or **set()** does not do this).*
- int **shortcut** () const
Returns the current shortcut key for the button.
- void **shortcut** (const char *s)
(for backwards compatibility)
- void **shortcut** (int s)
*Sets the shortcut key to *s*.*
- char **value** () const
Returns the current value of the button (0 or 1).
- int **value** (int v)
Sets the current value of the button.

Public Member Functions inherited from FL_Widget

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
Activates the widget.
- unsigned int **active** () const
Returns whether the widget is active.
- int **active_r** () const
Returns whether the widget and all of its parents are active.
- **FL_Align** **align** () const
Gets the label alignment.
- void **align** (FL_Align alignment)
Sets the label alignment.
- long **argument** () const
Gets the current user data (long) argument that is passed to the callback function.
- void **argument** (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class **FL_Gl_Window** * **as_gl_window** ()
*Returns an **FL_Gl_Window** pointer if this widget is an **FL_Gl_Window**.*
- virtual class **FL_Gl_Window** const * **as_gl_window** () const
- virtual **FL_Group** * **as_group** ()
*Returns an **FL_Group** pointer if this widget is an **FL_Group**.*
- virtual **FL_Group** const * **as_group** () const
- virtual **FL_Window** * **as_window** ()

- Returns an [FL_Window](#) pointer if this widget is an [FL_Window](#).*

 - virtual [FL_Window](#) const * **as_window** () const
- void [bind_deimage](#) ([FL_Image](#) *img)

Sets the image to use as part of the widget label when in the inactive state.
- void [bind_deimage](#) (int f)

Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.
- void [bind_image](#) ([FL_Image](#) *img)

Sets the image to use as part of the widget label when in the active state.
- void [bind_image](#) (int f)

Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- [FL_Boxtype](#) **box** () const

Gets the box type of the widget.
- void [box](#) ([FL_Boxtype](#) new_box)

Sets the box type for the widget.
- [FL_Callback_p](#) **callback** () const

Gets the current callback function for the widget.
- void [callback](#) ([FL_Callback](#) *cb)

Sets the current callback function for the widget.
- void [callback](#) ([FL_Callback](#) *cb, [FL_Callback_User_Data](#) *p, bool auto_free)

Sets the current callback function and managed user data for the widget.
- void [callback](#) ([FL_Callback](#) *cb, void *p)

Sets the current callback function and data for the widget.
- void [callback](#) ([FL_Callback0](#) *cb)

Sets the current callback function for the widget.
- void [callback](#) ([FL_Callback1](#) *cb, long p=0)

Sets the current callback function for the widget.
- unsigned int [changed](#) () const

Checks if the widget value changed since the last callback.
- void [clear_active](#) ()

Marks the widget as inactive without sending events or changing focus.
- void [clear_changed](#) ()

Marks the value of the widget as unchanged.
- void [clear_damage](#) (uchar c=0)

Clears or sets the damage flags.
- void [clear_output](#) ()

Sets a widget to accept input.
- void [clear_visible](#) ()

Hides the widget.
- void [clear_visible_focus](#) ()

Disables keyboard focus navigation with this widget.
- [FL_Color](#) **color** () const

Gets the background color of the widget.
- void [color](#) ([FL_Color](#) bg)

Sets the background color of the widget.
- void [color](#) ([FL_Color](#) bg, [FL_Color](#) sel)

Sets the background and selection color of the widget.
- [FL_Color](#) **color2** () const

For back compatibility only.
- void [color2](#) (unsigned a)

For back compatibility only.
- int [contains](#) (const [FL_Widget](#) *w) const

- Checks if w is a child of this widget.*
- void [copy_label](#) (const char *new_label)
- Sets the current label.*
- void [copy_tooltip](#) (const char *text)
- Sets the current tooltip text.*
- [uchar](#) [damage](#) () const
- Returns non-zero if [draw\(\)](#) needs to be called.*
- void [damage](#) ([uchar](#) c)
- Sets the damage bits for the widget.*
- void [damage](#) ([uchar](#) c, int x, int y, int w, int h)
- Sets the damage bits for an area inside the widget.*
- int [damage_resize](#) (int, int, int, int)
- Internal use only.*
- void [deactivate](#) ()
- Deactivates the widget.*
- [FL_Image](#) * [deimage](#) ()
- Gets the image that is used as part of the widget label when in the inactive state.*
- const [FL_Image](#) * [deimage](#) () const
- Gets the image that is used as part of the widget label when in the inactive state.*
- void [deimage](#) ([FL_Image](#) &img)
- Sets the image to use as part of the widget label when in the inactive state.*
- void [deimage](#) ([FL_Image](#) *img)
- Sets the image to use as part of the widget label when in the inactive state.*
- int [deimage_bound](#) () const
- Returns whether the inactive image is managed by the widget.*
- void [do_callback](#) ([FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
- Calls the widget callback function with default arguments.*
- void [do_callback](#) ([FL_Widget](#) *widget, long arg, [FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
- Calls the widget callback function with arbitrary arguments.*
- void [do_callback](#) ([FL_Widget](#) *widget, void *arg=0, [FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
- Calls the widget callback function with arbitrary arguments.*
- void [draw_label](#) (int, int, int, int, [FL_Align](#)) const
- Draws the label in an arbitrary bounding box with an arbitrary alignment.*
- int [h](#) () const
- Gets the widget height.*
- virtual void [hide](#) ()
- Makes a widget invisible.*
- int [horizontal_label_margin](#) ()
- Get the spacing between the label and the horizontal edge of the widget.*
- void [horizontal_label_margin](#) (int px)
- Set the spacing between the label and the horizontal edge of the widget.*
- [FL_Image](#) * [image](#) ()
- Gets the image that is used as part of the widget label when in the active state.*
- const [FL_Image](#) * [image](#) () const
- Gets the image that is used as part of the widget label when in the active state.*
- void [image](#) ([FL_Image](#) &img)
- Sets the image to use as part of the widget label when in the active state.*
- void [image](#) ([FL_Image](#) *img)
- Sets the image to use as part of the widget label when in the active state.*
- int [image_bound](#) () const
- Returns whether the image is managed by the widget.*

- int `inside` (const `FL_Widget` *wgt) const
Checks if this widget is a child of wgt.
- int `is_label_copied` () const
Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const
Gets the current label text.
- void `label` (const char *text)
Sets the current label pointer.
- void `label` (`FL_Labeltype` a, const char *b)
Shortcut to set the label text and type in one call.
- int `label_image_spacing` ()
Return the gap size between the label and the image.
- void `label_image_spacing` (int gap)
Set the gap between the label and the image in pixels.
- `FL_Color` `labelcolor` () const
Gets the label color.
- void `labelcolor` (`FL_Color` c)
Sets the label color.
- `FL_Font` `labelfont` () const
Gets the font to use.
- void `labelfont` (`FL_Font` f)
Sets the font to use.
- `FL_Fonsize` `labelsize` () const
Gets the font size in pixels.
- void `labelsize` (`FL_Fonsize` pix)
Sets the font size in pixels.
- `FL_Labeltype` `labeltype` () const
Gets the label type.
- void `labeltype` (`FL_Labeltype` a)
Sets the label type.
- void `measure_label` (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- bool `needs_keyboard` () const
Returns whether this widget needs a keyboard.
- void `needs_keyboard` (bool needs)
Sets whether this widget needs a keyboard.
- unsigned int `output` () const
Returns if a widget is used for output only.
- `FL_Group` * `parent` () const
Returns a pointer to the parent widget.
- void `parent` (`FL_Group` *p)
Internal use only - "for hacks only".
- void `position` (int X, int Y)
Repositions the window or widget.
- void `redraw` ()
Schedules the drawing of the widget.
- void `redraw_label` ()
Schedules the drawing of the label.
- virtual void `resize` (int x, int y, int w, int h)
Changes the size or position of the widget.
- `FL_Color` `selection_color` () const

- Gets the selection color.*

 - void **selection_color** (**FI_Color** a)

Sets the selection color.
- void **set_active** ()

Marks the widget as active without sending events or changing focus.
- void **set_changed** ()

Marks the value of the widget as changed.
- void **set_output** ()

Sets a widget to output only.
- void **set_visible** ()

Makes the widget visible.
- void **set_visible_focus** ()

Enables keyboard focus navigation with this widget.
- int **shortcut_label** () const

Returns whether the widget's label uses '&' to indicate shortcuts.
- void **shortcut_label** (int value)

Sets whether the widget's label uses '&' to indicate shortcuts.
- virtual void **show** ()

Makes a widget visible.
- void **size** (int W, int H)

Changes the size of the widget.
- int **take_focus** ()

Gives the widget the keyboard focus.
- unsigned int **takeevents** () const

Returns if the widget is able to take events.
- int **test_shortcut** ()

Returns true if the widget's label contains the entered '&x' shortcut.
- const char * **tooltip** () const

Gets the current tooltip text.
- void **tooltip** (const char *text)

Sets the current tooltip text.
- **FI_Window** * **top_window** () const

Returns a pointer to the top-level window for the widget.
- **FI_Window** * **top_window_offset** (int &xoff, int &yoff) const

Finds the x/y offset of the current widget relative to the top-level window.
- **uchar** **type** () const

Gets the widget type.
- void **type** (**uchar** t)

Sets the widget type.
- int **use_accents_menu** ()

Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * **user_data** () const

Gets the user data for this widget.
- void **user_data** (**FI_Callback_User_Data** *v, bool auto_free)

Sets the user data for this widget.
- void **user_data** (void *v)

Sets the user data for this widget.
- int **vertical_label_margin** ()

Get the spacing between the label and the vertical edge of the widget.
- void **vertical_label_margin** (int px)

Set the spacing between the label and the vertical edge of the widget.

- unsigned int [visible](#) () const
Returns whether a widget is visible.
- unsigned int [visible_focus](#) () const
Checks whether this widget has a visible focus.
- void [visible_focus](#) (int v)
Modifies keyboard focus navigation.
- int [visible_r](#) () const
Returns whether a widget and all its parents are visible.
- int [w](#) () const
Gets the widget width.
- [Fl_When](#) when () const
Returns the conditions under which the callback is called.
- void [when](#) (uchar i)
Sets the flags used to decide when a callback is called.
- [Fl_Window](#) * [window](#) () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int [x](#) () const
Gets the widget position in its window.
- int [y](#) () const
Gets the widget position in its window.
- virtual [~Fl_Widget](#) ()
Destroys the widget.

Additional Inherited Members

Static Public Member Functions inherited from [Fl_Widget](#)

- static void [default_callback](#) ([Fl_Widget](#) *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int [label_shortcut](#) (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int [test_shortcut](#) (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from [Fl_Widget](#)

- enum {
[INACTIVE](#) = 1<<0 , [INVISIBLE](#) = 1<<1 , [OUTPUT](#) = 1<<2 , [NOBORDER](#) = 1<<3 ,
[FORCE_POSITION](#) = 1<<4 , [NON_MODAL](#) = 1<<5 , [SHORTCUT_LABEL](#) = 1<<6 , [CHANGED](#) = 1<<7
, [OVERRIDE](#) = 1<<8 , [VISIBLE_FOCUS](#) = 1<<9 , [COPIED_LABEL](#) = 1<<10 , [CLIP_CHILDREN](#) = 1<<11
, [MENU_WINDOW](#) = 1<<12 , [TOOLTIP_WINDOW](#) = 1<<13 , [MODAL](#) = 1<<14 , [NO_OVERLAY](#) = 1<<15

[USERFLAG1](#) = 1<<31 }
flags possible values enumeration.

Protected Member Functions inherited from FI_Light_Button

- void **draw** () [FL_OVERRIDE](#)

Draws the widget.

Protected Member Functions inherited from FI_Button

- void **simulate_key_action** ()

Protected Member Functions inherited from FI_Widget

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** ([FI_Boxtype](#) t, [FI_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const
Draws a focus rectangle around the widget.
- void **draw_focus** ([FI_Boxtype](#) t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void **draw_focus** ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) bg) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [FI_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

Static Protected Member Functions inherited from FI_Button

- static void **key_release_timeout** (void *)

Static Protected Attributes inherited from [FI_Button](#)

- static [FI_Widget_Tracker](#) * `key_release_tracker` = 0

The documentation for this class was generated from the following files:

- [FI_Radio_Light_Button.H](#)
- [FI_Light_Button.cxx](#)

11.111 [FI_Radio_Round_Button](#) Class Reference

Inheritance diagram for [FI_Radio_Round_Button](#):

Public Member Functions

- [FI_Radio_Round_Button](#) (int X, int Y, int W, int H, const char *L=0)
Creates a new [FI_Radio_Button](#) widget using the given position, size, and label string.

Public Member Functions inherited from [FI_Round_Button](#)

- [FI_Round_Button](#) (int x, int y, int w, int h, const char *l=0)
Creates a new [FI_Round_Button](#) widget using the given position, size, and label string.

Public Member Functions inherited from [FI_Light_Button](#)

- [FI_Light_Button](#) (int x, int y, int w, int h, const char *l=0)
Creates a new [FI_Light_Button](#) widget using the given position, size, and label string.
- int [handle](#) (int) [FL_OVERRIDE](#)
Handles the specified event.

Public Member Functions inherited from [FI_Button](#)

- int [clear](#) ()
Same as `value(0)`.
- uchar [compact](#) ()
Return true if buttons are rendered as compact buttons.
- void [compact](#) (uchar v)
Decide if buttons should be rendered in compact mode.
- [FI_Boxtype](#) [down_box](#) () const
Returns the current down box type, which is drawn when `value()` is non-zero.
- void [down_box](#) ([FI_Boxtype](#) b)
Sets the down box type.

- [FI_Color](#) **down_color** () const
(for backwards compatibility)
- void **down_color** (unsigned c)
(for backwards compatibility)
- [FI_Button](#) (int X, int Y, int W, int H, const char *L=0)
The constructor creates the button using the given position, size, and label.
- int **set** ()
Same as `value(1)`.
- void **setonly** ()
Turns on this button and turns off all other radio buttons in the group (calling `value(1)` or `set()` does not do this).
- int **shortcut** () const
Returns the current shortcut key for the button.
- void **shortcut** (const char *s)
(for backwards compatibility)
- void **shortcut** (int s)
Sets the shortcut key to `s`.
- char **value** () const
Returns the current value of the button (0 or 1).
- int **value** (int v)
Sets the current value of the button.

Public Member Functions inherited from [FI_Widget](#)

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
Activates the widget.
- unsigned int **active** () const
Returns whether the widget is active.
- int **active_r** () const
Returns whether the widget and all of its parents are active.
- [FI_Align](#) **align** () const
Gets the label alignment.
- void **align** ([FI_Align](#) alignment)
Sets the label alignment.
- long **argument** () const
Gets the current user data (long) argument that is passed to the callback function.
- void **argument** (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class [FI_Gl_Window](#) * **as_gl_window** ()
Returns an [FI_Gl_Window](#) pointer if this widget is an [FI_Gl_Window](#).
- virtual class [FI_Gl_Window](#) const * **as_gl_window** () const
- virtual [FI_Group](#) * **as_group** ()
Returns an [FI_Group](#) pointer if this widget is an [FI_Group](#).
- virtual [FI_Group](#) const * **as_group** () const
- virtual [FI_Window](#) * **as_window** ()
Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).
- virtual [FI_Window](#) const * **as_window** () const
- void **bind_deimage** ([FI_Image](#) *img)
Sets the image to use as part of the widget label when in the inactive state.
- void **bind_deimage** (int f)

- Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.*

 - void `bind_image` (`FI_Image` *img)

Sets the image to use as part of the widget label when in the active state.
- void `bind_image` (int f)

Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- `FI_Boxtype` `box` () const

Gets the box type of the widget.
- void `box` (`FI_Boxtype` new_box)

Sets the box type for the widget.
- `FI_Callback_p` `callback` () const

Gets the current callback function for the widget.
- void `callback` (`FI_Callback` *cb)

Sets the current callback function for the widget.
- void `callback` (`FI_Callback` *cb, `FI_Callback_User_Data` *p, bool auto_free)

Sets the current callback function and managed user data for the widget.
- void `callback` (`FI_Callback` *cb, void *p)

Sets the current callback function and data for the widget.
- void `callback` (`FI_Callback0` *cb)

Sets the current callback function for the widget.
- void `callback` (`FI_Callback1` *cb, long p=0)

Sets the current callback function for the widget.
- unsigned int `changed` () const

Checks if the widget value changed since the last callback.
- void `clear_active` ()

Marks the widget as inactive without sending events or changing focus.
- void `clear_changed` ()

Marks the value of the widget as unchanged.
- void `clear_damage` (uchar c=0)

Clears or sets the damage flags.
- void `clear_output` ()

Sets a widget to accept input.
- void `clear_visible` ()

Hides the widget.
- void `clear_visible_focus` ()

Disables keyboard focus navigation with this widget.
- `FI_Color` `color` () const

Gets the background color of the widget.
- void `color` (`FI_Color` bg)

Sets the background color of the widget.
- void `color` (`FI_Color` bg, `FI_Color` sel)

Sets the background and selection color of the widget.
- `FI_Color` `color2` () const

For back compatibility only.
- void `color2` (unsigned a)

For back compatibility only.
- int `contains` (const `FI_Widget` *w) const

Checks if w is a child of this widget.
- void `copy_label` (const char *new_label)

Sets the current label.
- void `copy_tooltip` (const char *text)

Sets the current tooltip text.

- `uchar damage ()` const
Returns non-zero if `draw()` needs to be called.
- `void damage (uchar c)`
Sets the damage bits for the widget.
- `void damage (uchar c, int x, int y, int w, int h)`
Sets the damage bits for an area inside the widget.
- `int damage_resize (int, int, int, int)`
Internal use only.
- `void deactivate ()`
Deactivates the widget.
- `FL_Image * deimage ()`
Gets the image that is used as part of the widget label when in the inactive state.
- `const FL_Image * deimage ()` const
Gets the image that is used as part of the widget label when in the inactive state.
- `void deimage (FL_Image &img)`
Sets the image to use as part of the widget label when in the inactive state.
- `void deimage (FL_Image *img)`
Sets the image to use as part of the widget label when in the inactive state.
- `int deimage_bound ()` const
Returns whether the inactive image is managed by the widget.
- `void do_callback (FL_Callback_Reason reason=FL_REASON_UNKNOWN)`
Calls the widget callback function with default arguments.
- `void do_callback (FL_Widget *widget, long arg, FL_Callback_Reason reason=FL_REASON_UNKNOWN)`
Calls the widget callback function with arbitrary arguments.
- `void do_callback (FL_Widget *widget, void *arg=0, FL_Callback_Reason reason=FL_REASON_UNKNOWN)`
Calls the widget callback function with arbitrary arguments.
- `void draw_label (int, int, int, int, FL_Align) const`
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- `int h ()` const
Gets the widget height.
- `virtual void hide ()`
Makes a widget invisible.
- `int horizontal_label_margin ()`
Get the spacing between the label and the horizontal edge of the widget.
- `void horizontal_label_margin (int px)`
Set the spacing between the label and the horizontal edge of the widget.
- `FL_Image * image ()`
Gets the image that is used as part of the widget label when in the active state.
- `const FL_Image * image ()` const
Gets the image that is used as part of the widget label when in the active state.
- `void image (FL_Image &img)`
Sets the image to use as part of the widget label when in the active state.
- `void image (FL_Image *img)`
Sets the image to use as part of the widget label when in the active state.
- `int image_bound ()` const
Returns whether the image is managed by the widget.
- `int inside (const FL_Widget *wgt)` const
Checks if this widget is a child of `wgt`.
- `int is_label_copied ()` const
Returns whether the current label was assigned with `copy_label()`.
- `const char * label ()` const

- Gets the current label text.*

 - void [label](#) (const char *text)
- Sets the current label pointer.*

 - void [label](#) (FI_Labeltype a, const char *b)
- Shortcut to set the label text and type in one call.*

 - int [label_image_spacing](#) ()
- Return the gap size between the label and the image.*

 - void [label_image_spacing](#) (int gap)
- Set the gap between the label and the image in pixels.*

 - [FI_Color](#) [labelcolor](#) () const
- Gets the label color.*

 - void [labelcolor](#) ([FI_Color](#) c)
- Sets the label color.*

 - [FI_Font](#) [labelfont](#) () const
- Gets the font to use.*

 - void [labelfont](#) ([FI_Font](#) f)
- Sets the font to use.*

 - [FI_Fonsize](#) [labelsiz](#) () const
- Gets the font size in pixels.*

 - void [labelsiz](#) ([FI_Fonsize](#) pix)
- Sets the font size in pixels.*

 - [FI_Labeltype](#) [labeltype](#) () const
- Gets the label type.*

 - void [labeltype](#) ([FI_Labeltype](#) a)
- Sets the label type.*

 - void [measure_label](#) (int &ww, int &hh) const
- Sets width ww and height hh accordingly with the label size.*

 - bool [needs_keyboard](#) () const
- Returns whether this widget needs a keyboard.*

 - void [needs_keyboard](#) (bool needs)
- Sets whether this widget needs a keyboard.*

 - unsigned int [output](#) () const
- Returns if a widget is used for output only.*

 - [FI_Group](#) * [parent](#) () const
- Returns a pointer to the parent widget.*

 - void [parent](#) ([FI_Group](#) *p)
- Internal use only - "for hacks only".*

 - void [position](#) (int X, int Y)
- Repositions the window or widget.*

 - void [redraw](#) ()
- Schedules the drawing of the widget.*

 - void [redraw_label](#) ()
- Schedules the drawing of the label.*

 - virtual void [resize](#) (int x, int y, int w, int h)
- Changes the size or position of the widget.*

 - [FI_Color](#) [selection_color](#) () const
- Gets the selection color.*

 - void [selection_color](#) ([FI_Color](#) a)
- Sets the selection color.*

 - void [set_active](#) ()
- Marks the widget as active without sending events or changing focus.*

- void [set_changed](#) ()
Marks the value of the widget as changed.
- void [set_output](#) ()
Sets a widget to output only.
- void [set_visible](#) ()
Makes the widget visible.
- void [set_visible_focus](#) ()
Enables keyboard focus navigation with this widget.
- int [shortcut_label](#) () const
Returns whether the widget's label uses '&' to indicate shortcuts.
- void [shortcut_label](#) (int value)
Sets whether the widget's label uses '&' to indicate shortcuts.
- virtual void [show](#) ()
Makes a widget visible.
- void [size](#) (int W, int H)
Changes the size of the widget.
- int [take_focus](#) ()
Gives the widget the keyboard focus.
- unsigned int [takeevents](#) () const
Returns if the widget is able to take events.
- int [test_shortcut](#) ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * [tooltip](#) () const
Gets the current tooltip text.
- void [tooltip](#) (const char *text)
Sets the current tooltip text.
- [Fl_Window](#) * [top_window](#) () const
Returns a pointer to the top-level window for the widget.
- [Fl_Window](#) * [top_window_offset](#) (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- [uchar](#) [type](#) () const
Gets the widget type.
- void [type](#) ([uchar](#) t)
Sets the widget type.
- int [use_accents_menu](#) ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * [user_data](#) () const
Gets the user data for this widget.
- void [user_data](#) ([Fl_Callback_User_Data](#) *v, bool auto_free)
Sets the user data for this widget.
- void [user_data](#) (void *v)
Sets the user data for this widget.
- int [vertical_label_margin](#) ()
Get the spacing between the label and the vertical edge of the widget.
- void [vertical_label_margin](#) (int px)
Set the spacing between the label and the vertical edge of the widget.
- unsigned int [visible](#) () const
Returns whether a widget is visible.
- unsigned int [visible_focus](#) () const
Checks whether this widget has a visible focus.
- void [visible_focus](#) (int v)

- Modifies keyboard focus navigation.*

 - int `visible_r` () const
Returns whether a widget and all its parents are visible.
 - int `w` () const
Gets the widget width.
 - `Fl_When when` () const
Returns the conditions under which the callback is called.
 - void `when` (uchar i)
Sets the flags used to decide when a callback is called.
 - `Fl_Window * window` () const
Returns a pointer to the nearest parent window up the widget hierarchy.
 - int `x` () const
Gets the widget position in its window.
 - int `y` () const
Gets the widget position in its window.
 - virtual `~Fl_Widget` ()
Destroys the widget.

Additional Inherited Members

Static Public Member Functions inherited from `Fl_Widget`

- static void `default_callback` (`Fl_Widget *widget`, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int `label_shortcut` (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int `test_shortcut` (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from `Fl_Widget`

- enum {
`INACTIVE` = 1<<0 , `INVISIBLE` = 1<<1 , `OUTPUT` = 1<<2 , `NOBORDER` = 1<<3 ,
`FORCE_POSITION` = 1<<4 , `NON_MODAL` = 1<<5 , `SHORTCUT_LABEL` = 1<<6 , `CHANGED` = 1<<7

`MAXIMIZED` = 1<<24 , `POPUP` = 1<<25 , `USERFLAG3` = 1<<29 , `USERFLAG2` = 1<<30 ,
`USERFLAG1` = 1<<31 }
flags possible values enumeration.

Protected Member Functions inherited from `Fl_Light_Button`

- void `draw` () `FL_OVERRIDE`
Draws the widget.

Protected Member Functions inherited from `Fl_Button`

- void `simulate_key_action` ()

Protected Member Functions inherited from FI_Widget

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** (FI_Boxtype t, FI_Color c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** (FI_Boxtype t, int x, int y, int w, int h, FI_Color c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const
Draws a focus rectangle around the widget.
- void **draw_focus** (FI_Boxtype t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void **draw_focus** (FI_Boxtype t, int x, int y, int w, int h, FI_Color bg) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- FI_Widget (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

Static Protected Member Functions inherited from FI_Button

- static void **key_release_timeout** (void *)

Static Protected Attributes inherited from FI_Button

- static FI_Widget_Tracker * **key_release_tracker** = 0

11.111.1 Constructor & Destructor Documentation

11.111.1.1 FI_Radio_Round_Button()

```
FI_Radio_Round_Button::FI_Radio_Round_Button (
    int X,
    int Y,
    int W,
```

```
int H,
const char * L = 0)
```

Creates a new [Fl_Radio_Button](#) widget using the given position, size, and label string. The button [type\(\)](#) is set to FL_RADIO_BUTTON.

Parameters

in	<i>X,Y,W,H</i>	position and size of the widget
in	<i>L</i>	widget label, default is no label

The documentation for this class was generated from the following files:

- [Fl_Radio_Round_Button.H](#)
- [Fl_Round_Button.cxx](#)

11.112 Fl_Rect Class Reference

Rectangle with standard FLTK coordinates (X, Y, W, H).

```
#include <Fl_Rect.H>
```

Public Member Functions

- [int b \(\)](#) const
gets the bottom edge (y + h).
- [void b \(int B\)](#)
sets the height based on B and y
- [Fl_Rect \(\)](#)
The default constructor creates an empty rectangle (x = y = w = h = 0).
- [Fl_Rect \(const \[Fl_Widget\]\(#\) &widget\)](#)
This constructor creates a rectangle based on a widget's position and size.
- [Fl_Rect \(const \[Fl_Widget\]\(#\) *const widget\)](#)
This constructor creates a rectangle based on a widget's position and size.
- [Fl_Rect \(int W, int H\)](#)
This constructor creates a rectangle with x = y = 0 and the given width and height.
- [Fl_Rect \(int X, int Y, int W, int H\)](#)
This constructor creates a rectangle with the given x,y coordinates and the given width and height.
- [Fl_Rect \(int X, int Y, int W, int H, \[Fl_Boxtype\]\(#\) bt\)](#)
This constructor creates a rectangle with the given x,y coordinates and the given width and height reduced by the box frame size.
- [int h \(\)](#) const
gets the height
- [void h \(int H\)](#)
sets the height
- [void inset \(\[Fl_Boxtype\]\(#\) bt\)](#)
Move all edges in by the frame size of box type bt.
- [void inset \(int d\)](#)
Move all edges in by d.
- [void inset \(int left, int top, int right, int bottom\)](#)
Move all edges in by left, top, right, bottom.
- [int r \(\)](#) const
gets the right edge (x + w).
- [void r \(int R\)](#)
sets the width based on R and x

- `int w () const`
gets the width
- `void w (int W)`
sets the width
- `int x () const`
gets the x coordinate (left edge)
- `void x (int X)`
sets the x coordinate (left edge)
- `int y () const`
gets the y coordinate (top edge)
- `void y (int Y)`
sets the y coordinate (top edge)

Friends

- `bool operator!= (const Fl_Rect &lhs, const Fl_Rect &rhs)`
- `bool operator== (const Fl_Rect &lhs, const Fl_Rect &rhs)`

11.112.1 Detailed Description

Rectangle with standard FLTK coordinates (X, Y, W, H).

This may be used internally, for overloaded widget constructors and other overloaded methods like `fl_measure()`, `fl_text_extents()`, `fl_rect()`, `fl_rectf()`, and maybe more.

11.112.2 Constructor & Destructor Documentation

11.112.2.1 Fl_Rect()

```
Fl_Rect::Fl_Rect (
    int X,
    int Y,
    int W,
    int H,
    Fl_Boxtype bt) [inline]
```

This constructor creates a rectangle with the given x,y coordinates and the given width and height reduced by the box frame size.

This is the same as using the constructor w/o `bt` and subsequently calling `inset(bt)`.

11.112.3 Member Function Documentation

11.112.3.1 b()

```
int Fl_Rect::b () const [inline]
```

gets the bottom edge (`y + h`).

Note

`r()` and `b()` are coordinates **outside** the area of the rectangle.

11.112.3.2 inset() [1/3]

```
void Fl_Rect::inset (
    Fl_Boxtype bt) [inline]
```

Move all edges in by the frame size of box type `bt`.

Shrinks the rectangle at all sides by the frame width or height of the given box type `bt`.

This method uses the frame sizes given by the box type `bt` using

- `Fl::box_dx(bt)`

- `Fl::box_dy(bt)`
- `Fl::box_dw(bt)`
- `Fl::box_dh(bt)`

If the rectangle is smaller than the frame sizes the result is undefined, i.e. an invalid or empty rectangle.

11.112.3.3 `inset()` [2/3]

```
void Fl_Rect::inset (
    int d) [inline]
```

Move all edges in by `d`.

Shrinks the rectangle by `d` at all sides keeping the center of the rectangle at the same spot.

If `d` is negative, the rectangle is enlarged.

If `d >= w()` or `h()` the result is undefined, i.e. an invalid or empty rectangle.

11.112.3.4 `inset()` [3/3]

```
void Fl_Rect::inset (
    int left,
    int top,
    int right,
    int bottom) [inline]
```

Move all edges in by `left`, `top`, `right`, `bottom`.

Shrinks the rectangle on all sides keeping the center of the rectangle at the same spot.

If any value is negative, the rectangle is enlarged.

Values are not range checked; it is possible to create an invalid or empty rectangle.

11.112.3.5 `r()`

```
int Fl_Rect::r () const [inline]
```

gets the right edge (`x + w`).

Note

`r()` and `b()` are coordinates **outside** the area of the rectangle.

The documentation for this class was generated from the following file:

- `Fl_Rect.H`

11.113 `Fl_Scroll::Fl_Region_LRTB` Struct Reference

A local struct to manage a region defined by left/right/top/bottom.

```
#include <Fl_Scroll.H>
```

Public Attributes

- `int b`
(*b*)ottom "*y*" position, aka *y2*
- `int l`
(*l*)eft "*x*" position, aka *x1*
- `int r`
(*r*)ight "*x*" position, aka *x2*
- `int t`
(*t*)op "*y*" position, aka *y1*

11.113.1 Detailed Description

A local struct to manage a region defined by left/right/top/bottom.

The documentation for this struct was generated from the following file:

- Fl_Scroll.H

11.114 Fl_Scroll::Fl_Region_XYWH Struct Reference

A local struct to manage a region defined by xywh.

```
#include <Fl_Scroll.H>
```

Public Attributes

- int **h**
- int **w**
- int **x**
- int **y**

11.114.1 Detailed Description

A local struct to manage a region defined by xywh.

The documentation for this struct was generated from the following file:

- Fl_Scroll.H

11.115 Fl_Repeat_Button Class Reference

The [Fl_Repeat_Button](#) is a subclass of [Fl_Button](#) that generates a callback when it is pressed and then repeatedly generates callbacks as long as it is held down.

```
#include <Fl_Repeat_Button.H>
```

Inheritance diagram for Fl_Repeat_Button:

Public Member Functions

- void **deactivate** ()
- [Fl_Repeat_Button](#) (int X, int Y, int W, int H, const char *l=0)
Creates a new [Fl_Repeat_Button](#) widget using the given position, size, and label string.
- int **handle** (int) [FL_OVERRIDE](#)
Handles the specified event.

Public Member Functions inherited from [Fl_Button](#)

- int **clear** ()
Same as `value(0)`.
- [uchar compact](#) ()
Return true if buttons are rendered as compact buttons.
- void **compact** ([uchar](#) v)

- Decide if buttons should be rendered in compact mode.*
- [Fl_Boxtype](#) **down_box** () const
Returns the current down box type, which is drawn when [value\(\)](#) is non-zero.
- void **down_box** ([Fl_Boxtype](#) b)
Sets the down box type.
- [Fl_Color](#) **down_color** () const
(for backwards compatibility)
- void **down_color** (unsigned c)
(for backwards compatibility)
- [Fl_Button](#) (int X, int Y, int W, int H, const char *L=0)
The constructor creates the button using the given position, size, and label.
- int **set** ()
Same as [value\(1\)](#).
- void **setonly** ()
Turns on this button and turns off all other radio buttons in the group (calling [value\(1\)](#) or [set\(\)](#) does not do this).
- int **shortcut** () const
Returns the current shortcut key for the button.
- void **shortcut** (const char *s)
(for backwards compatibility)
- void **shortcut** (int s)
Sets the shortcut key to s.
- char **value** () const
Returns the current value of the button (0 or 1).
- int **value** (int v)
Sets the current value of the button.

Public Member Functions inherited from [Fl_Widget](#)

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
Activates the widget.
- unsigned int **active** () const
Returns whether the widget is active.
- int **active_r** () const
Returns whether the widget and all of its parents are active.
- [Fl_Align](#) **align** () const
Gets the label alignment.
- void **align** ([Fl_Align](#) alignment)
Sets the label alignment.
- long **argument** () const
Gets the current user data (long) argument that is passed to the callback function.
- void **argument** (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class [Fl_Gl_Window](#) * **as_gl_window** ()
Returns an [Fl_Gl_Window](#) pointer if this widget is an [Fl_Gl_Window](#).
- virtual class [Fl_Gl_Window](#) const * **as_gl_window** () const
- virtual [Fl_Group](#) * **as_group** ()
Returns an [Fl_Group](#) pointer if this widget is an [Fl_Group](#).
- virtual [Fl_Group](#) const * **as_group** () const
- virtual [Fl_Window](#) * **as_window** ()

- Returns an [FL_Window](#) pointer if this widget is an [FL_Window](#).*

 - virtual [FL_Window](#) const * **as_window** () const
- void [bind_deimage](#) ([FL_Image](#) *img)

Sets the image to use as part of the widget label when in the inactive state.
- void [bind_deimage](#) (int f)

Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.
- void [bind_image](#) ([FL_Image](#) *img)

Sets the image to use as part of the widget label when in the active state.
- void [bind_image](#) (int f)

Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- [FL_Boxtype](#) **box** () const

Gets the box type of the widget.
- void [box](#) ([FL_Boxtype](#) new_box)

Sets the box type for the widget.
- [FL_Callback_p](#) **callback** () const

Gets the current callback function for the widget.
- void [callback](#) ([FL_Callback](#) *cb)

Sets the current callback function for the widget.
- void [callback](#) ([FL_Callback](#) *cb, [FL_Callback_User_Data](#) *p, bool auto_free)

Sets the current callback function and managed user data for the widget.
- void [callback](#) ([FL_Callback](#) *cb, void *p)

Sets the current callback function and data for the widget.
- void [callback](#) ([FL_Callback0](#) *cb)

Sets the current callback function for the widget.
- void [callback](#) ([FL_Callback1](#) *cb, long p=0)

Sets the current callback function for the widget.
- unsigned int [changed](#) () const

Checks if the widget value changed since the last callback.
- void [clear_active](#) ()

Marks the widget as inactive without sending events or changing focus.
- void [clear_changed](#) ()

Marks the value of the widget as unchanged.
- void [clear_damage](#) (uchar c=0)

Clears or sets the damage flags.
- void [clear_output](#) ()

Sets a widget to accept input.
- void [clear_visible](#) ()

Hides the widget.
- void [clear_visible_focus](#) ()

Disables keyboard focus navigation with this widget.
- [FL_Color](#) **color** () const

Gets the background color of the widget.
- void [color](#) ([FL_Color](#) bg)

Sets the background color of the widget.
- void [color](#) ([FL_Color](#) bg, [FL_Color](#) sel)

Sets the background and selection color of the widget.
- [FL_Color](#) **color2** () const

For back compatibility only.
- void [color2](#) (unsigned a)

For back compatibility only.
- int [contains](#) (const [FL_Widget](#) *w) const

- Checks if w is a child of this widget.*

 - void `copy_label` (const char *new_label)

Sets the current label.
- void `copy_tooltip` (const char *text)

Sets the current tooltip text.
- `uchar damage` () const

Returns non-zero if `draw()` needs to be called.
- void `damage` (uchar c)

Sets the damage bits for the widget.
- void `damage` (uchar c, int x, int y, int w, int h)

Sets the damage bits for an area inside the widget.
- int `damage_resize` (int, int, int, int)

Internal use only.
- void `deactivate` ()

Deactivates the widget.
- `FL_Image * deimage` ()

Gets the image that is used as part of the widget label when in the inactive state.
- const `FL_Image * deimage` () const

Gets the image that is used as part of the widget label when in the inactive state.
- void `deimage` (`FL_Image` &img)

Sets the image to use as part of the widget label when in the inactive state.
- void `deimage` (`FL_Image` *img)

Sets the image to use as part of the widget label when in the inactive state.
- int `deimage_bound` () const

Returns whether the inactive image is managed by the widget.
- void `do_callback` (`FL_Callback_Reason` reason=`FL_REASON_UNKNOWN`)

Calls the widget callback function with default arguments.
- void `do_callback` (`FL_Widget` *widget, long arg, `FL_Callback_Reason` reason=`FL_REASON_UNKNOWN`)

Calls the widget callback function with arbitrary arguments.
- void `do_callback` (`FL_Widget` *widget, void *arg=0, `FL_Callback_Reason` reason=`FL_REASON_UNKNOWN`)

Calls the widget callback function with arbitrary arguments.
- void `draw_label` (int, int, int, int, `FL_Align`) const

Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const

Gets the widget height.
- virtual void `hide` ()

Makes a widget invisible.
- int `horizontal_label_margin` ()

Get the spacing between the label and the horizontal edge of the widget.
- void `horizontal_label_margin` (int px)

Set the spacing between the label and the horizontal edge of the widget.
- `FL_Image * image` ()

Gets the image that is used as part of the widget label when in the active state.
- const `FL_Image * image` () const

Gets the image that is used as part of the widget label when in the active state.
- void `image` (`FL_Image` &img)

Sets the image to use as part of the widget label when in the active state.
- void `image` (`FL_Image` *img)

Sets the image to use as part of the widget label when in the active state.
- int `image_bound` () const

Returns whether the image is managed by the widget.

- int [inside](#) (const [FL_Widget](#) *wgt) const
Checks if this widget is a child of wgt.
- int [is_label_copied](#) () const
Returns whether the current label was assigned with [copy_label\(\)](#).
- const char * [label](#) () const
Gets the current label text.
- void [label](#) (const char *text)
Sets the current label pointer.
- void [label](#) ([FL_Labeltype](#) a, const char *b)
Shortcut to set the label text and type in one call.
- int [label_image_spacing](#) ()
Return the gap size between the label and the image.
- void [label_image_spacing](#) (int gap)
Set the gap between the label and the image in pixels.
- [FL_Color](#) [labelcolor](#) () const
Gets the label color.
- void [labelcolor](#) ([FL_Color](#) c)
Sets the label color.
- [FL_Font](#) [labelfont](#) () const
Gets the font to use.
- void [labelfont](#) ([FL_Font](#) f)
Sets the font to use.
- [FL_Fonsize](#) [labelsize](#) () const
Gets the font size in pixels.
- void [labelsize](#) ([FL_Fonsize](#) pix)
Sets the font size in pixels.
- [FL_Labeltype](#) [labeltype](#) () const
Gets the label type.
- void [labeltype](#) ([FL_Labeltype](#) a)
Sets the label type.
- void [measure_label](#) (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- bool [needs_keyboard](#) () const
Returns whether this widget needs a keyboard.
- void [needs_keyboard](#) (bool needs)
Sets whether this widget needs a keyboard.
- unsigned int [output](#) () const
Returns if a widget is used for output only.
- [FL_Group](#) * [parent](#) () const
Returns a pointer to the parent widget.
- void [parent](#) ([FL_Group](#) *p)
Internal use only - "for hacks only".
- void [position](#) (int X, int Y)
Repositions the window or widget.
- void [redraw](#) ()
Schedules the drawing of the widget.
- void [redraw_label](#) ()
Schedules the drawing of the label.
- virtual void [resize](#) (int x, int y, int w, int h)
Changes the size or position of the widget.
- [FL_Color](#) [selection_color](#) () const

- Gets the selection color.*

 - void **selection_color** (**Fl_Color** a)

Sets the selection color.
- void **set_active** ()

Marks the widget as active without sending events or changing focus.
- void **set_changed** ()

Marks the value of the widget as changed.
- void **set_output** ()

Sets a widget to output only.
- void **set_visible** ()

Makes the widget visible.
- void **set_visible_focus** ()

Enables keyboard focus navigation with this widget.
- int **shortcut_label** () const

Returns whether the widget's label uses '&' to indicate shortcuts.
- void **shortcut_label** (int value)

Sets whether the widget's label uses '&' to indicate shortcuts.
- virtual void **show** ()

Makes a widget visible.
- void **size** (int W, int H)

Changes the size of the widget.
- int **take_focus** ()

Gives the widget the keyboard focus.
- unsigned int **takeevents** () const

Returns if the widget is able to take events.
- int **test_shortcut** ()

Returns true if the widget's label contains the entered '&x' shortcut.
- const char * **tooltip** () const

Gets the current tooltip text.
- void **tooltip** (const char *text)

Sets the current tooltip text.
- **Fl_Window** * **top_window** () const

Returns a pointer to the top-level window for the widget.
- **Fl_Window** * **top_window_offset** (int &xoff, int &yoff) const

Finds the x/y offset of the current widget relative to the top-level window.
- **uchar** **type** () const

Gets the widget type.
- void **type** (**uchar** t)

Sets the widget type.
- int **use_accents_menu** ()

Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * **user_data** () const

Gets the user data for this widget.
- void **user_data** (**Fl_Callback_User_Data** *v, bool auto_free)

Sets the user data for this widget.
- void **user_data** (void *v)

Sets the user data for this widget.
- int **vertical_label_margin** ()

Get the spacing between the label and the vertical edge of the widget.
- void **vertical_label_margin** (int px)

Set the spacing between the label and the vertical edge of the widget.

- unsigned int `visible` () const
Returns whether a widget is visible.
- unsigned int `visible_focus` () const
Checks whether this widget has a visible focus.
- void `visible_focus` (int v)
Modifies keyboard focus navigation.
- int `visible_r` () const
Returns whether a widget and all its parents are visible.
- int `w` () const
Gets the widget width.
- `Fl_When` `when` () const
Returns the conditions under which the callback is called.
- void `when` (uchar i)
Sets the flags used to decide when a callback is called.
- `Fl_Window` * `window` () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int `x` () const
Gets the widget position in its window.
- int `y` () const
Gets the widget position in its window.
- virtual `~Fl_Widget` ()
Destroys the widget.

Additional Inherited Members

Static Public Member Functions inherited from `Fl_Widget`

- static void `default_callback` (`Fl_Widget` *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int `label_shortcut` (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int `test_shortcut` (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from `Fl_Widget`

- enum {
`INACTIVE` = 1<<0 , `INVISIBLE` = 1<<1 , `OUTPUT` = 1<<2 , `NOBORDER` = 1<<3 ,
`FORCE_POSITION` = 1<<4 , `NON_MODAL` = 1<<5 , `SHORTCUT_LABEL` = 1<<6 , `CHANGED` = 1<<7
, `OVERRIDE` = 1<<8 , `VISIBLE_FOCUS` = 1<<9 , `COPIED_LABEL` = 1<<10 , `CLIP_CHILDREN` = 1<<11
, `MENU_WINDOW` = 1<<12 , `TOOLTIP_WINDOW` = 1<<13 , `MODAL` = 1<<14 , `NO_OVERLAY` = 1<<15
, `GROUP_RELATIVE` = 1<<16 , `COPIED_TOOLTIP` = 1<<17 , `FULLSCREEN` = 1<<18 , `MAC_USE_ACCENTS_MENU`
= 1<<19 ,
`NEEDS_KEYBOARD` = 1<<20 , `IMAGE_BOUND` = 1<<21 , `DEIMAGE_BOUND` = 1<<22 ,
`AUTO_DELETE_USER_DATA` = 1<<23 ,
`MAXIMIZED` = 1<<24 , `POPUP` = 1<<25 , `USERFLAG3` = 1<<29 , `USERFLAG2` = 1<<30 ,
`USERFLAG1` = 1<<31 }
flags possible values enumeration.

Protected Member Functions inherited from [Fl_Button](#)

- void [draw](#) () [FL_OVERRIDE](#)
Draws the widget.
- void [simulate_key_action](#) ()

Protected Member Functions inherited from [Fl_Widget](#)

- void [clear_flag](#) (unsigned int c)
Clears a flag in the flags mask.
- void [draw_backdrop](#) () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void [draw_box](#) () const
Draws the widget box according its box style.
- void [draw_box](#) ([Fl_Boxtype](#) t, [Fl_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void [draw_box](#) ([Fl_Boxtype](#) t, int x, int y, int w, int h, [Fl_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void [draw_focus](#) () const
Draws a focus rectangle around the widget.
- void [draw_focus](#) ([Fl_Boxtype](#) t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void [draw_focus](#) ([Fl_Boxtype](#) t, int x, int y, int w, int h, [Fl_Color](#) bg) const
Draws a focus box for the widget at the given position and size.
- void [draw_label](#) () const
Draws the widget's label at the defined label position.
- void [draw_label](#) (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [Fl_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int [flags](#) () const
Gets the widget flags mask.
- void [h](#) (int v)
Internal use only.
- void [set_flag](#) (unsigned int c)
Sets a flag in the flags mask.
- void [w](#) (int v)
Internal use only.
- void [x](#) (int v)
Internal use only.
- void [y](#) (int v)
Internal use only.

Static Protected Member Functions inherited from [Fl_Button](#)

- static void [key_release_timeout](#) (void *)

Static Protected Attributes inherited from [Fl_Button](#)

- static [Fl_Widget_Tracker](#) * [key_release_tracker](#) = 0

11.115.1 Detailed Description

The [Fl_Repeat_Button](#) is a subclass of [Fl_Button](#) that generates a callback when it is pressed and then repeatedly generates callbacks as long as it is held down.

The speed of the repeat is fixed and depends on the implementation.

11.115.2 Constructor & Destructor Documentation

11.115.2.1 Fl_Repeat_Button()

```
Fl_Repeat_Button::Fl_Repeat_Button (
    int X,
    int Y,
    int W,
    int H,
    const char * l = 0)
```

Creates a new [Fl_Repeat_Button](#) widget using the given position, size, and label string.

The default boxtype is FL_UP_BOX. Deletes the button.

11.115.3 Member Function Documentation

11.115.3.1 handle()

```
int Fl_Repeat_Button::handle (
    int event) [virtual]
```

Handles the specified event.

You normally don't call this method directly, but instead let FLTK do it when the user interacts with the widget.

When implemented in a widget, this function must return 0 if the widget does not use the event or 1 otherwise.

Most of the time, you want to call the inherited [handle\(\)](#) method in your overridden method so that you don't short-circuit events that you don't handle. In this last case you should return the callee retval.

One exception to the rule in the previous paragraph is if you really want to *override* the behavior of the base class. This requires knowledge of the details of the inherited class.

In rare cases you may want to return 1 from your [handle\(\)](#) method although you don't really handle the event. The effect would be to *filter* event processing, for instance if you want to dismiss non-numeric characters (keypresses) in a numeric input widget. You may "ring the bell" or show another visual indication or drop the event silently. In such a case you must not call the [handle\(\)](#) method of the base class and tell FLTK that you *consumed* the event by returning 1 even if you didn't *do* anything with it.

Parameters

in	<i>event</i>	the kind of event received
----	--------------	----------------------------

Return values

0	if the event was not used or understood
1	if the event was used and can be deleted

See also

[Fl_Event](#)

Reimplemented from [Fl_Button](#).

The documentation for this class was generated from the following files:

- [Fl_Repeat_Button.H](#)
- [Fl_Repeat_Button.cxx](#)

11.116 `Fl_Return_Button` Class Reference

The `Fl_Return_Button` is a subclass of `Fl_Button` that generates a callback when it is pressed or when the user presses the Enter key.

```
#include <Fl_Return_Button.H>
```

Inheritance diagram for `Fl_Return_Button`:

Public Member Functions

- `Fl_Return_Button` (int X, int Y, int W, int H, const char *l=0)
Creates a new `Fl_Return_Button` widget using the given position, size, and label string.
- int `handle` (int) `FL_OVERRIDE`
Handles the specified event.

Public Member Functions inherited from `Fl_Button`

- int `clear` ()
Same as `value(0)`.
- `uchar compact` ()
Return true if buttons are rendered as compact buttons.
- void `compact` (`uchar` v)
Decide if buttons should be rendered in compact mode.
- `Fl_Boxtype down_box` () const
Returns the current down box type, which is drawn when `value()` is non-zero.
- void `down_box` (`Fl_Boxtype` b)
Sets the down box type.
- `Fl_Color down_color` () const
(for backwards compatibility)
- void `down_color` (unsigned c)
(for backwards compatibility)
- `Fl_Button` (int X, int Y, int W, int H, const char *L=0)
The constructor creates the button using the given position, size, and label.
- int `set` ()
Same as `value(1)`.
- void `setonly` ()
Turns on this button and turns off all other radio buttons in the group (calling `value(1)` or `set()` does not do this).
- int `shortcut` () const
Returns the current shortcut key for the button.
- void `shortcut` (const char *s)
(for backwards compatibility)
- void `shortcut` (int s)
Sets the shortcut key to s.
- char `value` () const
Returns the current value of the button (0 or 1).
- int `value` (int v)
Sets the current value of the button.

Public Member Functions inherited from FI_Widget

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
Activates the widget.
- unsigned int **active** () const
Returns whether the widget is active.
- int **active_r** () const
Returns whether the widget and all of its parents are active.
- **FI_Align align** () const
Gets the label alignment.
- void **align** (**FI_Align** alignment)
Sets the label alignment.
- long **argument** () const
Gets the current user data (long) argument that is passed to the callback function.
- void **argument** (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class **FI_Gl_Window** * **as_gl_window** ()
Returns an FI_Gl_Window pointer if this widget is an FI_Gl_Window.
- virtual class **FI_Gl_Window** const * **as_gl_window** () const
- virtual **FI_Group** * **as_group** ()
Returns an FI_Group pointer if this widget is an FI_Group.
- virtual **FI_Group** const * **as_group** () const
- virtual **FI_Window** * **as_window** ()
Returns an FI_Window pointer if this widget is an FI_Window.
- virtual **FI_Window** const * **as_window** () const
- void **bind_deimage** (**FI_Image** *img)
Sets the image to use as part of the widget label when in the inactive state.
- void **bind_deimage** (int f)
Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.
- void **bind_image** (**FI_Image** *img)
Sets the image to use as part of the widget label when in the active state.
- void **bind_image** (int f)
Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- **FI_Boxtype box** () const
Gets the box type of the widget.
- void **box** (**FI_Boxtype** new_box)
Sets the box type for the widget.
- **FI_Callback_p callback** () const
Gets the current callback function for the widget.
- void **callback** (**FI_Callback** *cb)
Sets the current callback function for the widget.
- void **callback** (**FI_Callback** *cb, **FI_Callback_User_Data** *p, bool auto_free)
Sets the current callback function and managed user data for the widget.
- void **callback** (**FI_Callback** *cb, void *p)
Sets the current callback function and data for the widget.
- void **callback** (**FI_Callback0** *cb)
Sets the current callback function for the widget.
- void **callback** (**FI_Callback1** *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int **changed** () const

- Checks if the widget value changed since the last callback.*

 - void `clear_active` ()

Marks the widget as inactive without sending events or changing focus.
- void `clear_changed` ()

Marks the value of the widget as unchanged.
- void `clear_damage` (uchar c=0)

Clears or sets the damage flags.
- void `clear_output` ()

Sets a widget to accept input.
- void `clear_visible` ()

Hides the widget.
- void `clear_visible_focus` ()

Disables keyboard focus navigation with this widget.
- `FL_Color` `color` () const

Gets the background color of the widget.
- void `color` (`FL_Color` bg)

Sets the background color of the widget.
- void `color` (`FL_Color` bg, `FL_Color` sel)

Sets the background and selection color of the widget.
- `FL_Color` `color2` () const

For back compatibility only.
- void `color2` (unsigned a)

For back compatibility only.
- int `contains` (const `FL_Widget` *w) const

Checks if w is a child of this widget.
- void `copy_label` (const char *new_label)

Sets the current label.
- void `copy_tooltip` (const char *text)

Sets the current tooltip text.
- `uchar` `damage` () const

Returns non-zero if `draw()` needs to be called.
- void `damage` (uchar c)

Sets the damage bits for the widget.
- void `damage` (uchar c, int x, int y, int w, int h)

Sets the damage bits for an area inside the widget.
- int `damage_resize` (int, int, int, int)

Internal use only.
- void `deactivate` ()

Deactivates the widget.
- `FL_Image` * `deimage` ()

Gets the image that is used as part of the widget label when in the inactive state.
- const `FL_Image` * `deimage` () const

Gets the image that is used as part of the widget label when in the inactive state.
- void `deimage` (`FL_Image` &img)

Sets the image to use as part of the widget label when in the inactive state.
- void `deimage` (`FL_Image` *img)

Sets the image to use as part of the widget label when in the inactive state.
- int `deimage_bound` () const

Returns whether the inactive image is managed by the widget.
- void `do_callback` (`FL_Callback_Reason` reason=`FL_REASON_UNKNOWN`)

Calls the widget callback function with default arguments.

- void `do_callback` (`FL_Widget` *widget, long arg, `FL_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with arbitrary arguments.
- void `do_callback` (`FL_Widget` *widget, void *arg=0, `FL_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with arbitrary arguments.
- void `draw_label` (int, int, int, int, `FL_Align`) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const
Gets the widget height.
- virtual void `hide` ()
Makes a widget invisible.
- int `horizontal_label_margin` ()
Get the spacing between the label and the horizontal edge of the widget.
- void `horizontal_label_margin` (int px)
Set the spacing between the label and the horizontal edge of the widget.
- `FL_Image` * `image` ()
Gets the image that is used as part of the widget label when in the active state.
- const `FL_Image` * `image` () const
Gets the image that is used as part of the widget label when in the active state.
- void `image` (`FL_Image` &img)
Sets the image to use as part of the widget label when in the active state.
- void `image` (`FL_Image` *img)
Sets the image to use as part of the widget label when in the active state.
- int `image_bound` () const
Returns whether the image is managed by the widget.
- int `inside` (const `FL_Widget` *wgt) const
Checks if this widget is a child of wgt.
- int `is_label_copied` () const
Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const
Gets the current label text.
- void `label` (const char *text)
Sets the current label pointer.
- void `label` (`FL_Labeltype` a, const char *b)
Shortcut to set the label text and type in one call.
- int `label_image_spacing` ()
Return the gap size between the label and the image.
- void `label_image_spacing` (int gap)
Set the gap between the label and the image in pixels.
- `FL_Color` `labelcolor` () const
Gets the label color.
- void `labelcolor` (`FL_Color` c)
Sets the label color.
- `FL_Font` `labelfont` () const
Gets the font to use.
- void `labelfont` (`FL_Font` f)
Sets the font to use.
- `FL_Fonsize` `labelsize` () const
Gets the font size in pixels.
- void `labelsize` (`FL_Fonsize` pix)
Sets the font size in pixels.
- `FL_Labeltype` `labeltype` () const

- Gets the label type.*

 - void [labeltype](#) ([Fl_Labeltype](#) a)
- Sets the label type.*

 - void [measure_label](#) (int &ww, int &hh) const
- Sets width ww and height hh accordingly with the label size.*

 - bool [needs_keyboard](#) () const
- Returns whether this widget needs a keyboard.*

 - void [needs_keyboard](#) (bool needs)
- Sets whether this widget needs a keyboard.*

 - unsigned int [output](#) () const
- Returns if a widget is used for output only.*

 - [Fl_Group](#) * [parent](#) () const
- Returns a pointer to the parent widget.*

 - void [parent](#) ([Fl_Group](#) *p)
- Internal use only - "for hacks only".*

 - void [position](#) (int X, int Y)
- Repositions the window or widget.*

 - void [redraw](#) ()
- Schedules the drawing of the widget.*

 - void [redraw_label](#) ()
- Schedules the drawing of the label.*

 - virtual void [resize](#) (int x, int y, int w, int h)
- Changes the size or position of the widget.*

 - [Fl_Color](#) [selection_color](#) () const
- Gets the selection color.*

 - void [selection_color](#) ([Fl_Color](#) a)
- Sets the selection color.*

 - void [set_active](#) ()
- Marks the widget as active without sending events or changing focus.*

 - void [set_changed](#) ()
- Marks the value of the widget as changed.*

 - void [set_output](#) ()
- Sets a widget to output only.*

 - void [set_visible](#) ()
- Makes the widget visible.*

 - void [set_visible_focus](#) ()
- Enables keyboard focus navigation with this widget.*

 - int [shortcut_label](#) () const
- Returns whether the widget's label uses '&' to indicate shortcuts.*

 - void [shortcut_label](#) (int value)
- Sets whether the widget's label uses '&' to indicate shortcuts.*

 - virtual void [show](#) ()
- Makes a widget visible.*

 - void [size](#) (int W, int H)
- Changes the size of the widget.*

 - int [take_focus](#) ()
- Gives the widget the keyboard focus.*

 - unsigned int [takeevents](#) () const
- Returns if the widget is able to take events.*

 - int [test_shortcut](#) ()
- Returns true if the widget's label contains the entered '&x' shortcut.*

- `const char * tooltip () const`
Gets the current tooltip text.
- `void tooltip (const char *text)`
Sets the current tooltip text.
- `FL_Window * top_window () const`
Returns a pointer to the top-level window for the widget.
- `FL_Window * top_window_offset (int &xoff, int &yoff) const`
Finds the x/y offset of the current widget relative to the top-level window.
- `uchar type () const`
Gets the widget type.
- `void type (uchar t)`
Sets the widget type.
- `int use_accents_menu ()`
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- `void * user_data () const`
Gets the user data for this widget.
- `void user_data (FL_Callback_User_Data *v, bool auto_free)`
Sets the user data for this widget.
- `void user_data (void *v)`
Sets the user data for this widget.
- `int vertical_label_margin ()`
Get the spacing between the label and the vertical edge of the widget.
- `void vertical_label_margin (int px)`
Set the spacing between the label and the vertical edge of the widget.
- `unsigned int visible () const`
Returns whether a widget is visible.
- `unsigned int visible_focus () const`
Checks whether this widget has a visible focus.
- `void visible_focus (int v)`
Modifies keyboard focus navigation.
- `int visible_r () const`
Returns whether a widget and all its parents are visible.
- `int w () const`
Gets the widget width.
- `FL_When when () const`
Returns the conditions under which the callback is called.
- `void when (uchar i)`
Sets the flags used to decide when a callback is called.
- `FL_Window * window () const`
Returns a pointer to the nearest parent window up the widget hierarchy.
- `int x () const`
Gets the widget position in its window.
- `int y () const`
Gets the widget position in its window.
- `virtual ~FL_Widget ()`
Destroys the widget.

Protected Member Functions

- `void draw () FL_OVERRIDE`
Draws the widget.

Protected Member Functions inherited from [FI_Button](#)

- void **simulate_key_action** ()

Protected Member Functions inherited from [FI_Widget](#)

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** ([FI_Boxtype](#) t, [FI_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const
Draws a focus rectangle around the widget.
- void **draw_focus** ([FI_Boxtype](#) t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void **draw_focus** ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) bg) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [FI_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

Additional Inherited Members

Static Public Member Functions inherited from [FI_Widget](#)

- static void **default_callback** ([FI_Widget](#) *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int **label_shortcut** (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int **test_shortcut** (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

11.116.1 Detailed Description

The [Fl_Return_Button](#) is a subclass of [Fl_Button](#) that generates a callback when it is pressed or when the user presses the Enter key.

A carriage-return symbol is drawn next to the button label.

Figure 11.37 [Fl_Return_Button](#)

11.116.2 Constructor & Destructor Documentation

11.116.2.1 [Fl_Return_Button\(\)](#)

```
Fl_Return_Button::Fl_Return_Button (
    int X,
    int Y,
    int W,
    int H,
    const char * l = 0)
```

Creates a new [Fl_Return_Button](#) widget using the given position, size, and label string.

The default boxtype is [FL_UP_BOX](#).

The inherited destructor deletes the button.

11.116.3 Member Function Documentation

11.116.3.1 [draw\(\)](#)

```
void Fl_Return_Button::draw () [protected], [virtual]
```

Draws the widget.

Never call this function directly. FLTK will schedule redrawing whenever needed. If your widget must be redrawn as soon as possible, call [redraw\(\)](#) instead.

Override this function to draw your own widgets.

If you ever need to call another widget's draw method *from within your own [draw\(\)](#) method*, e.g. for an embedded scrollbar, you can do it (because [draw\(\)](#) is virtual) like this:

```
Fl_Widget *s = &scrollbar; // scrollbar is an embedded Fl_Scrollbar
s->draw();                // calls Fl_Scrollbar::draw()
```

Reimplemented from [Fl_Button](#).

11.116.3.2 [handle\(\)](#)

```
int Fl_Return_Button::handle (
    int event) [virtual]
```

Handles the specified event.

You normally don't call this method directly, but instead let FLTK do it when the user interacts with the widget.

When implemented in a widget, this function must return 0 if the widget does not use the event or 1 otherwise.

Most of the time, you want to call the inherited [handle\(\)](#) method in your overridden method so that you don't short-circuit events that you don't handle. In this last case you should return the callee retval.

One exception to the rule in the previous paragraph is if you really want to *override* the behavior of the base class. This requires knowledge of the details of the inherited class.

In rare cases you may want to return 1 from your [handle\(\)](#) method although you don't really handle the event. The effect would be to *filter* event processing, for instance if you want to dismiss non-numeric characters (keypresses) in a numeric input widget. You may "ring the bell" or show another visual indication or drop the event silently. In such a case you must not call the [handle\(\)](#) method of the base class and tell FLTK that you *consumed* the event by returning 1 even if you didn't *do* anything with it.

Parameters

in	<i>event</i>	the kind of event received
----	--------------	----------------------------

Return values

0	if the event was not used or understood
1	if the event was used and can be deleted

[Fl_Event](#)

Reimplemented from [Fl_Button](#).

The documentation for this class was generated from the following files:

- [Fl_Return_Button.H](#)
- [Fl_Return_Button.cxx](#)

11.117 [Fl_RGB_Image](#) Class Reference

The [Fl_RGB_Image](#) class supports caching and drawing of full-color images with 1 to 4 channels of color information.

```
#include <Fl_Image.H>
```

Inheritance diagram for [Fl_RGB_Image](#):

Public Member Functions

- virtual [FI_SVG_Image](#) * [as_svg_image](#) ()
Returns whether an image is an [FI_SVG_Image](#) or not.
- int [cache_h](#) ()
- int [cache_w](#) ()
- void [color_average](#) ([FI_Color](#) c, float i) [FL_OVERRIDE](#)
The [color_average\(\)](#) method averages the colors in the image with the provided FLTK color value.
- [FI_Image](#) * [copy](#) () const
- [FI_Image](#) * [copy](#) (int W, int H) const [FL_OVERRIDE](#)
Creates a resized copy of the image.
- void [desaturate](#) () [FL_OVERRIDE](#)
The [desaturate\(\)](#) method converts an image to grayscale.
- void [draw](#) (int X, int Y)
- void [draw](#) (int X, int Y, int W, int H, int cx=0, int cy=0) [FL_OVERRIDE](#)
Draws the image to the current drawing surface with a bounding box.
- [FI_RGB_Image](#) (const [FI_Pixmap](#) *pxm, [FI_Color](#) bg=FL_GRAY)
The constructor creates a new RGBA image from the specified [FI_Pixmap](#).
- [FI_RGB_Image](#) (const [uchar](#) *bits, int bits_length, int W, int H, int D, int LD)
The constructor creates a new image from the specified data.
- [FI_RGB_Image](#) (const [uchar](#) *bits, int W, int H, int D=3, int LD=0)
The constructor creates a new image from the specified data.
- void [label](#) ([FI_Menu_Item](#) *m) [FL_OVERRIDE](#)
This method is an obsolete way to set the image attribute of a menu item.
- void [label](#) ([FI_Widget](#) *w) [FL_OVERRIDE](#)
This method is an obsolete way to set the image attribute of a widget or menu item.
- virtual void [normalize](#) ()
Makes sure the object is fully initialized.
- void [uncache](#) () [FL_OVERRIDE](#)
If the image has been cached for display, delete the cache data.
- ~[FI_RGB_Image](#) () [FL_OVERRIDE](#)
The destructor frees all memory and server resources that are used by the image.

Public Member Functions inherited from [FI_Image](#)

- virtual class [FI_Shared_Image](#) * [as_shared_image](#) ()
Returns whether an image is an [FI_Shared_Image](#) or not.
- [FI_Image](#) * [copy](#) () const
Creates a copy of the image in the same size.
- int [count](#) () const
Returns the number of data values associated with the image.
- int [d](#) () const
Returns the image depth.
- const char *const * [data](#) () const
Returns a pointer to the current image data array.
- int [data_h](#) () const
Returns the height of the image data.
- int [data_w](#) () const
Returns the width of the image data.
- void [draw](#) (int X, int Y)
Draws the image to the current drawing surface.
- int [fail](#) () const

- Returns a value that is not 0 if there is currently no image available.*
- [FI_Image](#) (int W, int H, int D)
The constructor creates an empty image with the specified width, height, and depth.
 - int [h](#) () const
Returns the current image drawing height in FLTK units.
 - void [inactive](#) ()
The [inactive\(\)](#) method calls [color_average](#)([FL_BACKGROUND_COLOR](#), 0.33f) to produce an image that appears grayed out.
 - int [ld](#) () const
Returns the current line data size in bytes.
 - virtual void [release](#) ()
Releases an [FI_Image](#) - the same as 'delete this'.
 - virtual void [scale](#) (int width, int height, int proportional=1, int can_expand=0)
Sets the drawing size of the image.
 - int [w](#) () const
Returns the current image drawing width in FLTK units.
 - virtual ~[FI_Image](#) ()
The destructor is a virtual method that frees all memory used by the image.

Static Public Member Functions

- static size_t [max_size](#) ()
Returns the maximum allowed image size in bytes when creating an [FI_RGB_Image](#) object.
- static void [max_size](#) (size_t size)
Sets the maximum allowed image size in bytes when creating an [FI_RGB_Image](#) object.

Static Public Member Functions inherited from [FI_Image](#)

- static [FI_Labeltype](#) [define_FL_IMAGE_LABEL](#) ()
- static [FI_RGB_Scaling](#) [RGB_scaling](#) ()
Returns the currently used RGB image scaling method.
- static void [RGB_scaling](#) ([FI_RGB_Scaling](#))
Sets the RGB image scaling method used for copy(int, int).
- static [FI_RGB_Scaling](#) [scaling_algorithm](#) ()
Gets what algorithm is used when resizing a source image to draw it.
- static void [scaling_algorithm](#) ([FI_RGB_Scaling](#) algorithm)
Sets what algorithm is used when resizing a source image to draw it.

Public Attributes

- int [alloc_array](#)
If non-zero, the object's data array is delete[]'d when deleting the object.
- const [uchar](#) * [array](#)
Points to the start of the object's data array.

Friends

- class [FI_Graphics_Driver](#)

Additional Inherited Members

Static Public Attributes inherited from FI_Image

- static const int **ERR_FILE_ACCESS** = -2
 - static const int **ERR_FORMAT** = -3
 - static const int **ERR_MEMORY_ACCESS** = -4
 - static const int **ERR_NO_IMAGE** = -1
 - static bool **register_images_done** = false
- True after [fl_register_images\(\)](#) was called, false before.*

Protected Member Functions inherited from FI_Image

- void **d** (int D)
Sets the current image depth.
- void **data** (const char *const *p, int c)
Sets the current data pointer and count of pointers in the array.
- void **draw_empty** (int X, int Y)
The protected method [draw_empty\(\)](#) draws a box with an X in it.
- int **draw_scaled** (int X, int Y, int W, int H)
Draw the image to the current drawing surface rescaled to a given width and height.
- void **h** (int H)
Sets the height of the image data.
- void **ld** (int LD)
Sets the current line data size in bytes.
- void **w** (int W)
Sets the width of the image data.

Static Protected Member Functions inherited from FI_Image

- static void **labeltype** (const FI_Label *lo, int lx, int ly, int lw, int lh, FI_Align la)
- static void **measure** (const FI_Label *lo, int &lw, int &lh)

11.117.1 Detailed Description

The [FI_RGB_Image](#) class supports caching and drawing of full-color images with 1 to 4 channels of color information.

Images with an even number of channels are assumed to contain alpha information, which is used to blend the image with the contents of the screen.

[FI_RGB_Image](#) is defined in [<FL/FI_Image.H>](#), however for compatibility reasons [<FL/FI_RGB_Image.H>](#) should be included.

11.117.2 Constructor & Destructor Documentation

11.117.2.1 FI_RGB_Image() [1/3]

```
FI_RGB_Image::FI_RGB_Image (
    const uchar * bits,
    int W,
    int H,
    int D = 3,
    int LD = 0)
```

The constructor creates a new image from the specified data.

The data array `bits` must contain sufficient data to provide $W * H * D$ image bytes and optional line padding, see `LD`.

`W` and `H` are the width and height of the image in pixels, resp.

`D` is the image depth and can be:

- D=1: each uchar in `bits[]` is a grayscale pixel value
- D=2: each uchar pair in `bits[]` is a grayscale + alpha pixel value
- D=3: each uchar triplet in `bits[]` is an R/G/B pixel value
- D=4: each uchar quad in `bits[]` is an R/G/B/A pixel value

LD specifies the line data size of the array, see [FI_Image::ld\(int\)](#). If LD is zero, then $W * D$ is assumed, otherwise LD must be greater than or equal to $W * D$ to account for (unused) extra data per line (padding).

The caller is responsible that the image data array `bits` persists as long as the image is used.

This constructor sets [FI_RGB_Image::alloc_array](#) to 0. To have the image object control the deallocation of the data array `bits`, set `alloc_array` to non-zero after construction.

Parameters

in	<i>bits</i>	The image data array.
in	<i>W</i>	The width of the image in pixels.
in	<i>H</i>	The height of the image in pixels.
in	<i>D</i>	The image depth, or 'number of channels' (default=3).
in	<i>LD</i>	Line data size (default=0).

See also

[FI_Image::data\(\)](#), [FI_Image::w\(\)](#), [FI_Image::h\(\)](#), [FI_Image::d\(\)](#), [FI_Image::ld\(int\)](#)

11.117.2.2 FI_RGB_Image() [2/3]

```
FI_RGB_Image::FI_RGB_Image (
    const uchar * bits,
    int bits_length,
    int W,
    int H,
    int D,
    int LD)
```

The constructor creates a new image from the specified data.

If the provided array is too small to contain all the image data, the constructor will not generate the image to avoid illegal memory read access and instead set `data` to NULL and `ld` to `ERR_MEMORY_ACCESS`.

Parameters

<i>bits</i>	image data
<i>bits_length</i>	length of the <code>bits</code> array in bytes
<i>W</i>	image width in pixels
<i>H</i>	image height in pixels
<i>D</i>	image depth in bytes, 1 for gray scale, 2 for gray with alpha, 3 for RGB, and 4 for RGB plus alpha
<i>LD</i>	line length in bytes, or 0 to use $W * D$.

See also

[FI_RGB_Image\(const uchar *bits, int W, int H, int D, int LD\)](#)

11.117.2.3 Fl_RGB_Image() [3/3]

```
Fl_RGB_Image::Fl_RGB_Image (
    const Fl_Pixmap * pxm,
    Fl_Color bg = FL_GRAY)
```

The constructor creates a new RGBA image from the specified [Fl_Pixmap](#).

The RGBA image is built fully opaque except for the transparent area of the pixmap that is assigned the `bg` color with full transparency.

This constructor creates a new internal data array and sets [Fl_RGB_Image::alloc_array](#) to 1 so the data array is deleted when the image is destroyed.

11.117.3 Member Function Documentation

11.117.3.1 as_svg_image()

```
virtual Fl_SVG_Image * Fl_RGB_Image::as_svg_image () [inline], [virtual]
```

Returns whether an image is an [Fl_SVG_Image](#) or not.

This virtual method returns a pointer to the [Fl_SVG_Image](#) if this object is an instance of [Fl_SVG_Image](#) or NULL if not.

Reimplemented in [Fl_SVG_Image](#).

11.117.3.2 color_average()

```
void Fl_RGB_Image::color_average (
    Fl_Color c,
    float i) [virtual]
```

The [color_average\(\)](#) method averages the colors in the image with the provided FLTK color value.

The first argument specifies the FLTK color to be used.

The second argument specifies the amount of the original image to combine with the color, so a value of 1.0 results in no color blend, and a value of 0.0 results in a constant image of the specified color.

An internal copy is made of the original image data before changes are applied, to avoid modifying the original image data in memory.

Reimplemented from [Fl_Image](#).

Reimplemented in [Fl_SVG_Image](#).

11.117.3.3 copy()

```
Fl_Image * Fl_RGB_Image::copy (
    int W,
    int H) const [virtual]
```

Creates a resized copy of the image.

It is recommended not to call this member function to reduce the size of an image to the size of the area where this image will be drawn, and to use [Fl_Image::scale\(\)](#) instead.

The new image should be released when you are done with it.

Note: since FLTK 1.4.0 you can use [Fl_Image::release\(\)](#) for all types of images (i.e. all subclasses of [Fl_Image](#)) instead of operator `delete` for [Fl_Image](#)'s and [Fl_Image::release\(\)](#) for [Fl_Shared_Image](#)'s.

The new image data will be converted to the requested size. RGB images are resized using the algorithm set by [Fl_Image::RGB_scaling\(\)](#).

For the new image the following equations are true:

- `w() == data_w() == W`
- `h() == data_h() == H`

Parameters

in	<i>W,H</i>	Requested width and height of the new image
----	------------	---

Note

The returned image can be safely cast to the same image type as that of the source image provided this type is one of [Fl_RGB_Image](#), [Fl_SVG_Image](#), [Fl_Pixmap](#), [Fl_Bitmap](#), [Fl_Tiled_Image](#), [Fl_Anim_GIF_Image](#) and [Fl_Shared_Image](#). Returned objects copied from images of other, derived, image classes belong to the parent class appearing in this list. For example, the copy of an [Fl_GIF_Image](#) is an object of class [Fl_Pixmap](#).

Since FLTK 1.4.0 this method is 'const'. If you derive your own class from [Fl_Image](#) or any subclass your overridden methods of '[Fl_Image::copy\(\) const](#)' and '[Fl_Image::copy\(int, int\) const](#)' **must** also be 'const' for inheritance to work properly. This is different than in FLTK 1.3.x and earlier where these methods have not been 'const'.

Reimplemented from [Fl_Image](#).

Reimplemented in [Fl_SVG_Image](#).

11.117.3.4 desaturate()

```
void Fl_RGB_Image::desaturate () [virtual]
```

The [desaturate\(\)](#) method converts an image to grayscale.

If the image contains an alpha channel (depth = 4), the alpha channel is preserved.

An internal copy is made of the original image data before changes are applied, to avoid modifying the original image data in memory.

Reimplemented from [Fl_Image](#).

Reimplemented in [Fl_SVG_Image](#).

11.117.3.5 draw()

```
void Fl_RGB_Image::draw (
    int X,
    int Y,
    int W,
    int H,
    int cx = 0,
    int cy = 0) [virtual]
```

Draws the image to the current drawing surface with a bounding box.

Arguments X, Y, W, H specify a bounding box for the image, with the origin (upper-left corner) of the image offset by the cx and cy arguments.

Another way to see what part of the image gets drawn and where, is to consider this alternative writing producing the same output:

```
fl_push_clip(X,Y,W,H);
this->draw(X - cx, Y - cy);
fl_pop_clip();
```

Repeated calls to this member function with the same image but varying W, H, cx, or cy arguments may be more efficiently processed using the above alternative writing.

Reimplemented from [Fl_Image](#).

Reimplemented in [Fl_SVG_Image](#).

11.117.3.6 label() [1/2]

```
void Fl_RGB_Image::label (
    Fl_Menu_Item * m) [virtual]
```

This method is an obsolete way to set the image attribute of a menu item.

Deprecated Please use [Fl_Menu_Item::image\(\)](#) instead.

Reimplemented from [Fl_Image](#).

11.117.3.7 label() [2/2]

```
void Fl_RGB_Image::label (
    Fl_Widget * widget) [virtual]
```

This method is an obsolete way to set the image attribute of a widget or menu item.

Deprecated Please use [FI_Widget::image\(\)](#) or [FI_Widget::deimage\(\)](#) instead.

Reimplemented from [FI_Image](#).

11.117.3.8 max_size() [1/2]

```
static size_t Fl_RGB_Image::max_size () [inline], [static]
```

Returns the maximum allowed image size in bytes when creating an [FI_RGB_Image](#) object.

See also

void [FI_RGB_Image::max_size\(size_t\)](#)

11.117.3.9 max_size() [2/2]

```
static void Fl_RGB_Image::max_size (
    size_t size) [inline], [static]
```

Sets the maximum allowed image size in bytes when creating an [FI_RGB_Image](#) object.

The image size in bytes of an [FI_RGB_Image](#) object is the value of the product $w() * h() * d()$. If this product exceeds size, the created object of a derived class of [FI_RGB_Image](#) won't be loaded with the image data. This does not apply to direct RGB image creation with [FI_RGB_Image::FI_RGB_Image\(const uchar *bits, int W, int H, int D, int LD\)](#). The default [max_size\(\)](#) value is essentially infinite.

11.117.3.10 normalize()

```
virtual void Fl_RGB_Image::normalize () [inline], [virtual]
```

Makes sure the object is fully initialized.

In particular, makes sure member variable [array](#) is non-null.

Reimplemented in [FI_SVG_Image](#).

11.117.3.11 uncache()

```
void Fl_RGB_Image::uncache () [virtual]
```

If the image has been cached for display, delete the cache data.

This allows you to change the data used for the image and then redraw it without recreating an image object.

Reimplemented from [FI_Image](#).

11.117.4 Member Data Documentation

11.117.4.1 array

```
const uchar* Fl_RGB_Image::array
```

Points to the start of the object's data array.

See also

class [FI_SVG_Image](#) which delays initialization of this member variable.

The documentation for this class was generated from the following files:

- [FI_Image.H](#)
- [FI_Image.cxx](#)

11.118 FI_Roller Class Reference

The [FI_Roller](#) widget is a "dolly" control commonly used to move 3D objects.

```
#include <FI_Roller.H>
```

Inheritance diagram for [FI_Roller](#):

Public Member Functions

- **Fl_Roller** (int X, int Y, int W, int H, const char *L=0)
Creates a new [Fl_Roller](#) widget using the given position, size, and label string.
- int **handle** (int) [FL_OVERRIDE](#)
Handles the specified event.

Public Member Functions inherited from [Fl_Valuator](#)

- void **bounds** (double a, double b)
Sets the minimum (a) and maximum (b) values for the valuator widget.
- double **clamp** (double)
Clamps the passed value to the valuator range.
- virtual int **format** (char *)
Uses internal rules to format the fields numerical value into the character array pointed to by the passed parameter.
- double **increment** (double, int)
Adds n times the step value to the passed value.
- double **maximum** () const
Gets the maximum value for the valuator.
- void **maximum** (double a)
Sets the maximum value for the valuator.
- double **minimum** () const
Gets the minimum value for the valuator.
- void **minimum** (double a)
Sets the minimum value for the valuator.
- void **precision** (int digits)
Sets the step value to $1.0 / 10^{\text{digits}}$.
- void **range** (double a, double b)
Sets the minimum and maximum values for the valuator.
- double **round** (double)
Round the passed value to the nearest step increment.
- double **step** () const
Gets or sets the step value.
- void **step** (double a, int b)
See double [Fl_Valuator::step\(\)](#) const.
- void **step** (double s)
See double [Fl_Valuator::step\(\)](#) const.
- void **step** (int a)
See double [Fl_Valuator::step\(\)](#) const.
- double **value** () const
Gets the floating point(double) value.
- int **value** (double)
Sets the current value.
- ~**Fl_Valuator** () [FL_OVERRIDE](#)
Destructor is accessible despite protected constructor.

Public Member Functions inherited from FI_Widget

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
Activates the widget.
- unsigned int **active** () const
Returns whether the widget is active.
- int **active_r** () const
Returns whether the widget and all of its parents are active.
- **FI_Align align** () const
Gets the label alignment.
- void **align** (FI_Align alignment)
Sets the label alignment.
- long **argument** () const
Gets the current user data (long) argument that is passed to the callback function.
- void **argument** (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class FI_GL_Window * **as_gl_window** ()
Returns an FI_GL_Window pointer if this widget is an FI_GL_Window.
- virtual class FI_GL_Window const * **as_gl_window** () const
- virtual FI_Group * **as_group** ()
Returns an FI_Group pointer if this widget is an FI_Group.
- virtual FI_Group const * **as_group** () const
- virtual FI_Window * **as_window** ()
Returns an FI_Window pointer if this widget is an FI_Window.
- virtual FI_Window const * **as_window** () const
- void **bind_deimage** (FI_Image *img)
Sets the image to use as part of the widget label when in the inactive state.
- void **bind_deimage** (int f)
Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.
- void **bind_image** (FI_Image *img)
Sets the image to use as part of the widget label when in the active state.
- void **bind_image** (int f)
Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- **FI_Boxtype box** () const
Gets the box type of the widget.
- void **box** (FI_Boxtype new_box)
Sets the box type for the widget.
- **FI_Callback_p callback** () const
Gets the current callback function for the widget.
- void **callback** (FI_Callback *cb)
Sets the current callback function for the widget.
- void **callback** (FI_Callback *cb, FI_Callback_User_Data *p, bool auto_free)
Sets the current callback function and managed user data for the widget.
- void **callback** (FI_Callback *cb, void *p)
Sets the current callback function and data for the widget.
- void **callback** (FI_Callback0 *cb)
Sets the current callback function for the widget.
- void **callback** (FI_Callback1 *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int **changed** () const

- Checks if the widget value changed since the last callback.*

 - void `clear_active` ()

Marks the widget as inactive without sending events or changing focus.
- void `clear_changed` ()

Marks the value of the widget as unchanged.
- void `clear_damage` (uchar c=0)

Clears or sets the damage flags.
- void `clear_output` ()

Sets a widget to accept input.
- void `clear_visible` ()

Hides the widget.
- void `clear_visible_focus` ()

Disables keyboard focus navigation with this widget.
- `FL_Color` `color` () const

Gets the background color of the widget.
- void `color` (`FL_Color` bg)

Sets the background color of the widget.
- void `color` (`FL_Color` bg, `FL_Color` sel)

Sets the background and selection color of the widget.
- `FL_Color` `color2` () const

For back compatibility only.
- void `color2` (unsigned a)

For back compatibility only.
- int `contains` (const `FL_Widget` *w) const

Checks if w is a child of this widget.
- void `copy_label` (const char *new_label)

Sets the current label.
- void `copy_tooltip` (const char *text)

Sets the current tooltip text.
- `uchar` `damage` () const

Returns non-zero if `draw()` needs to be called.
- void `damage` (uchar c)

Sets the damage bits for the widget.
- void `damage` (uchar c, int x, int y, int w, int h)

Sets the damage bits for an area inside the widget.
- int `damage_resize` (int, int, int, int)

Internal use only.
- void `deactivate` ()

Deactivates the widget.
- `FL_Image` * `deimage` ()

Gets the image that is used as part of the widget label when in the inactive state.
- const `FL_Image` * `deimage` () const

Gets the image that is used as part of the widget label when in the inactive state.
- void `deimage` (`FL_Image` &img)

Sets the image to use as part of the widget label when in the inactive state.
- void `deimage` (`FL_Image` *img)

Sets the image to use as part of the widget label when in the inactive state.
- int `deimage_bound` () const

Returns whether the inactive image is managed by the widget.
- void `do_callback` (`FL_Callback_Reason` reason=`FL_REASON_UNKNOWN`)

Calls the widget callback function with default arguments.

- void `do_callback` (`FL_Widget` *widget, long arg, `FL_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with arbitrary arguments.
- void `do_callback` (`FL_Widget` *widget, void *arg=0, `FL_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with arbitrary arguments.
- void `draw_label` (int, int, int, int, `FL_Align`) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const
Gets the widget height.
- virtual void `hide` ()
Makes a widget invisible.
- int `horizontal_label_margin` ()
Get the spacing between the label and the horizontal edge of the widget.
- void `horizontal_label_margin` (int px)
Set the spacing between the label and the horizontal edge of the widget.
- `FL_Image` * `image` ()
Gets the image that is used as part of the widget label when in the active state.
- const `FL_Image` * `image` () const
Gets the image that is used as part of the widget label when in the active state.
- void `image` (`FL_Image` &img)
Sets the image to use as part of the widget label when in the active state.
- void `image` (`FL_Image` *img)
Sets the image to use as part of the widget label when in the active state.
- int `image_bound` () const
Returns whether the image is managed by the widget.
- int `inside` (const `FL_Widget` *wgt) const
Checks if this widget is a child of wgt.
- int `is_label_copied` () const
Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const
Gets the current label text.
- void `label` (const char *text)
Sets the current label pointer.
- void `label` (`FL_Labeltype` a, const char *b)
Shortcut to set the label text and type in one call.
- int `label_image_spacing` ()
Return the gap size between the label and the image.
- void `label_image_spacing` (int gap)
Set the gap between the label and the image in pixels.
- `FL_Color` `labelcolor` () const
Gets the label color.
- void `labelcolor` (`FL_Color` c)
Sets the label color.
- `FL_Font` `labelfont` () const
Gets the font to use.
- void `labelfont` (`FL_Font` f)
Sets the font to use.
- `FL_Fonsize` `labelsize` () const
Gets the font size in pixels.
- void `labelsize` (`FL_Fonsize` pix)
Sets the font size in pixels.
- `FL_Labeltype` `labeltype` () const

- Gets the label type.*

 - void [labeltype](#) ([Fl_Labeltype](#) a)
- Sets the label type.*

 - void [measure_label](#) (int &ww, int &hh) const
- Sets width ww and height hh accordingly with the label size.*

 - bool [needs_keyboard](#) () const
- Returns whether this widget needs a keyboard.*

 - void [needs_keyboard](#) (bool needs)
- Sets whether this widget needs a keyboard.*

 - unsigned int [output](#) () const
- Returns if a widget is used for output only.*

 - [Fl_Group](#) * [parent](#) () const
- Returns a pointer to the parent widget.*

 - void [parent](#) ([Fl_Group](#) *p)
- Internal use only - "for hacks only".*

 - void [position](#) (int X, int Y)
- Repositions the window or widget.*

 - void [redraw](#) ()
- Schedules the drawing of the widget.*

 - void [redraw_label](#) ()
- Schedules the drawing of the label.*

 - virtual void [resize](#) (int x, int y, int w, int h)
- Changes the size or position of the widget.*

 - [Fl_Color](#) [selection_color](#) () const
- Gets the selection color.*

 - void [selection_color](#) ([Fl_Color](#) a)
- Sets the selection color.*

 - void [set_active](#) ()
- Marks the widget as active without sending events or changing focus.*

 - void [set_changed](#) ()
- Marks the value of the widget as changed.*

 - void [set_output](#) ()
- Sets a widget to output only.*

 - void [set_visible](#) ()
- Makes the widget visible.*

 - void [set_visible_focus](#) ()
- Enables keyboard focus navigation with this widget.*

 - int [shortcut_label](#) () const
- Returns whether the widget's label uses '&' to indicate shortcuts.*

 - void [shortcut_label](#) (int value)
- Sets whether the widget's label uses '&' to indicate shortcuts.*

 - virtual void [show](#) ()
- Makes a widget visible.*

 - void [size](#) (int W, int H)
- Changes the size of the widget.*

 - int [take_focus](#) ()
- Gives the widget the keyboard focus.*

 - unsigned int [takeevents](#) () const
- Returns if the widget is able to take events.*

 - int [test_shortcut](#) ()
- Returns true if the widget's label contains the entered '&x' shortcut.*

- `const char * tooltip () const`
Gets the current tooltip text.
- `void tooltip (const char *text)`
Sets the current tooltip text.
- `Fl_Window * top_window () const`
Returns a pointer to the top-level window for the widget.
- `Fl_Window * top_window_offset (int &xoff, int &yoff) const`
Finds the x/y offset of the current widget relative to the top-level window.
- `uchar type () const`
Gets the widget type.
- `void type (uchar t)`
Sets the widget type.
- `int use_accents_menu ()`
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- `void * user_data () const`
Gets the user data for this widget.
- `void user_data (Fl_Callback_User_Data *v, bool auto_free)`
Sets the user data for this widget.
- `void user_data (void *v)`
Sets the user data for this widget.
- `int vertical_label_margin ()`
Get the spacing between the label and the vertical edge of the widget.
- `void vertical_label_margin (int px)`
Set the spacing between the label and the vertical edge of the widget.
- `unsigned int visible () const`
Returns whether a widget is visible.
- `unsigned int visible_focus () const`
Checks whether this widget has a visible focus.
- `void visible_focus (int v)`
Modifies keyboard focus navigation.
- `int visible_r () const`
Returns whether a widget and all its parents are visible.
- `int w () const`
Gets the widget width.
- `Fl_When when () const`
Returns the conditions under which the callback is called.
- `void when (uchar i)`
Sets the flags used to decide when a callback is called.
- `Fl_Window * window () const`
Returns a pointer to the nearest parent window up the widget hierarchy.
- `int x () const`
Gets the widget position in its window.
- `int y () const`
Gets the widget position in its window.
- `virtual ~Fl_Widget ()`
Destroys the widget.

Protected Member Functions

- `void draw () FL_OVERRIDE`
Draws the widget.

Protected Member Functions inherited from [FL_Valuator](#)

- [FL_Valuator](#) (int X, int Y, int W, int H, const char *L)
Creates a new [FL_Valuator](#) widget using the given position, size, and label string.
- void **handle_drag** (double newvalue)
Called during a drag operation, after an [FL_WHEN_CHANGED](#) event is received and before the callback.
- void **handle_push** ()
Stores the current value in the previous value.
- void **handle_release** ()
Called after an [FL_WHEN_RELEASE](#) event is received and before the callback.
- int **horizontal** () const
Tells if the valuator is an [FL_HORIZONTAL](#) one.
- double **previous_value** () const
Gets the previous floating point value before an event changed it.
- void **set_value** (double v)
Sets the current floating point value.
- double **softclamp** (double)
Clamps the value, but accepts v if the previous value is not already out of range.
- virtual void [value_damage](#) ()
Asks for partial redraw.

Protected Member Functions inherited from [FL_Widget](#)

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If [FL_ALIGN_IMAGE_BACKDROP](#) is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** ([FL_Boxtype](#) t, [FL_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** ([FL_Boxtype](#) t, int x, int y, int w, int h, [FL_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void [draw_focus](#) () const
Draws a focus rectangle around the widget.
- void [draw_focus](#) ([FL_Boxtype](#) t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void [draw_focus](#) ([FL_Boxtype](#) t, int x, int y, int w, int h, [FL_Color](#) bg) const
Draws a focus box for the widget at the given position and size.
- void [draw_label](#) () const
Draws the widget's label at the defined label position.
- void [draw_label](#) (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [FL_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)

Internal use only.

- void `x` (int `v`)

Internal use only.

- void `y` (int `v`)

Internal use only.

Additional Inherited Members

Static Public Member Functions inherited from `Fl_Widget`

- static void `default_callback` (`Fl_Widget` *`widget`, void *`data`)

The default callback for all widgets that don't set a callback.

- static unsigned int `label_shortcut` (const char *`t`)

Returns the Unicode value of the '&x' shortcut in a given text.

- static int `test_shortcut` (const char *`t`, const bool `require_alt`=false)

Returns true if the given text `t` contains the entered '&x' shortcut.

Protected Types inherited from `Fl_Widget`

- enum {
`INACTIVE` = 1<<0 , `INVISIBLE` = 1<<1 , `OUTPUT` = 1<<2 , `NOBORDER` = 1<<3 ,
`FORCE_POSITION` = 1<<4 , `NON_MODAL` = 1<<5 , `SHORTCUT_LABEL` = 1<<6 , `CHANGED` = 1<<7
 ,
`OVERRIDE` = 1<<8 , `VISIBLE_FOCUS` = 1<<9 , `COPIED_LABEL` = 1<<10 , `CLIP_CHILDREN` = 1<<11
 ,
`MENU_WINDOW` = 1<<12 , `TOOLTIP_WINDOW` = 1<<13 , `MODAL` = 1<<14 , `NO_OVERLAY` = 1<<15
 ,
`GROUP_RELATIVE` = 1<<16 , `COPIED_TOOLTIP` = 1<<17 , `FULLSCREEN` = 1<<18 , `MAC_USE_ACCENTS_MENU`
 = 1<<19 ,
`NEEDS_KEYBOARD` = 1<<20 , `IMAGE_BOUND` = 1<<21 , `DEIMAGE_BOUND` = 1<<22 ,
`AUTO_DELETE_USER_DATA` = 1<<23 ,
`MAXIMIZED` = 1<<24 , `POPUP` = 1<<25 , `USERFLAG3` = 1<<29 , `USERFLAG2` = 1<<30 ,
`USERFLAG1` = 1<<31 }

flags possible values enumeration.

11.118.1 Detailed Description

The `Fl_Roller` widget is a "dolly" control commonly used to move 3D objects.

The roller can be controlled by clicking and dragging the mouse, by the corresponding arrow keys when the roller has the keyboard focus, or by the mouse wheels when the mouse pointer is positioned over the roller widget.

Figure 11.38 `Fl_Roller`

11.118.2 Constructor & Destructor Documentation

11.118.2.1 `Fl_Roller()`

```
Fl_Roller::Fl_Roller (
    int X,
```

```

    int Y,
    int W,
    int H,
    const char * L = 0)

```

Creates a new [Fl_Roller](#) widget using the given position, size, and label string.

The default boxtype is FL_NO_BOX.

Inherited destructor destroys the valuator.

11.118.3 Member Function Documentation

11.118.3.1 draw()

```
void Fl_Roller::draw () [protected], [virtual]
```

Draws the widget.

Never call this function directly. FLTK will schedule redrawing whenever needed. If your widget must be redrawn as soon as possible, call [redraw\(\)](#) instead.

Override this function to draw your own widgets.

If you ever need to call another widget's draw method *from within your own [draw\(\)](#) method*, e.g. for an embedded scrollbar, you can do it (because [draw\(\)](#) is virtual) like this:

```

Fl_Widget *s = &scrollbar; // scrollbar is an embedded Fl_Scrollbar
s->draw();                 // calls Fl_Scrollbar::draw()

```

Implements [Fl_Widget](#).

11.118.3.2 handle()

```

int Fl_Roller::handle (
    int event) [virtual]

```

Handles the specified event.

You normally don't call this method directly, but instead let FLTK do it when the user interacts with the widget.

When implemented in a widget, this function must return 0 if the widget does not use the event or 1 otherwise.

Most of the time, you want to call the inherited [handle\(\)](#) method in your overridden method so that you don't short-circuit events that you don't handle. In this last case you should return the callee retval.

One exception to the rule in the previous paragraph is if you really want to *override* the behavior of the base class. This requires knowledge of the details of the inherited class.

In rare cases you may want to return 1 from your [handle\(\)](#) method although you don't really handle the event. The effect would be to *filter* event processing, for instance if you want to dismiss non-numeric characters (keypresses) in a numeric input widget. You may "ring the bell" or show another visual indication or drop the event silently. In such a case you must not call the [handle\(\)](#) method of the base class and tell FLTK that you *consumed* the event by returning 1 even if you didn't *do* anything with it.

Parameters

in	<i>event</i>	the kind of event received
----	--------------	----------------------------

Return values

0	if the event was not used or understood
1	if the event was used and can be deleted

11.119 Fl_Round_Button Class Reference

Buttons generate callbacks when they are clicked by the user.

```
#include <Fl_Round_Button.H>
```

Inheritance diagram for Fl_Round_Button:

Public Member Functions

- [Fl_Round_Button](#) (int *x*, int *y*, int *w*, int *h*, const char **l*=0)
Creates a new [Fl_Round_Button](#) widget using the given position, size, and label string.

Public Member Functions inherited from [Fl_Light_Button](#)

- [Fl_Light_Button](#) (int *x*, int *y*, int *w*, int *h*, const char **l*=0)
Creates a new [Fl_Light_Button](#) widget using the given position, size, and label string.
- int [handle](#) (int) [FL_OVERRIDE](#)
Handles the specified event.

Public Member Functions inherited from [Fl_Button](#)

- int [clear](#) ()
Same as `value(0)`.
- uchar [compact](#) ()
Return true if buttons are rendered as compact buttons.
- void [compact](#) (uchar *v*)
Decide if buttons should be rendered in compact mode.
- [Fl_Boxtype](#) [down_box](#) () const
Returns the current down box type, which is drawn when `value()` is non-zero.
- void [down_box](#) ([Fl_Boxtype](#) *b*)
Sets the down box type.
- [Fl_Color](#) [down_color](#) () const
(for backwards compatibility)
- void [down_color](#) (unsigned *c*)
(for backwards compatibility)
- [Fl_Button](#) (int *X*, int *Y*, int *W*, int *H*, const char **L*=0)
The constructor creates the button using the given position, size, and label.
- int [set](#) ()
Same as `value(1)`.
- void [setonly](#) ()
Turns on this button and turns off all other radio buttons in the group (calling `value(1)` or `set()` does not do this).
- int [shortcut](#) () const

- Returns the current shortcut key for the button.*
 - void **shortcut** (const char *s)
(for backwards compatibility)
 - void **shortcut** (int s)
Sets the shortcut key to s.
 - char **value** () const
Returns the current value of the button (0 or 1).
 - int **value** (int v)
Sets the current value of the button.

Public Member Functions inherited from **FI_Widget**

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
Activates the widget.
- unsigned int **active** () const
Returns whether the widget is active.
- int **active_r** () const
Returns whether the widget and all of its parents are active.
- **FI_Align** align () const
Gets the label alignment.
- void **align** (**FI_Align** alignment)
Sets the label alignment.
- long **argument** () const
Gets the current user data (long) argument that is passed to the callback function.
- void **argument** (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class **FI_Gl_Window** * **as_gl_window** ()
*Returns an **FI_Gl_Window** pointer if this widget is an **FI_Gl_Window**.*
- virtual class **FI_Gl_Window** const * **as_gl_window** () const
- virtual **FI_Group** * **as_group** ()
*Returns an **FI_Group** pointer if this widget is an **FI_Group**.*
- virtual **FI_Group** const * **as_group** () const
- virtual **FI_Window** * **as_window** ()
*Returns an **FI_Window** pointer if this widget is an **FI_Window**.*
- virtual **FI_Window** const * **as_window** () const
- void **bind_deimage** (**FI_Image** *img)
Sets the image to use as part of the widget label when in the inactive state.
- void **bind_deimage** (int f)
Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.
- void **bind_image** (**FI_Image** *img)
Sets the image to use as part of the widget label when in the active state.
- void **bind_image** (int f)
Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- **FI_Boxtype** box () const
Gets the box type of the widget.
- void **box** (**FI_Boxtype** new_box)
Sets the box type for the widget.
- **FI_Callback_p** callback () const
Gets the current callback function for the widget.

- void `callback` (`Fl_Callback *`cb)
Sets the current callback function for the widget.
- void `callback` (`Fl_Callback *`cb, `Fl_Callback_User_Data *`p, bool auto_free)
Sets the current callback function and managed user data for the widget.
- void `callback` (`Fl_Callback *`cb, void *p)
Sets the current callback function and data for the widget.
- void `callback` (`Fl_Callback0 *`cb)
Sets the current callback function for the widget.
- void `callback` (`Fl_Callback1 *`cb, long p=0)
Sets the current callback function for the widget.
- unsigned int `changed` () const
Checks if the widget value changed since the last callback.
- void `clear_active` ()
Marks the widget as inactive without sending events or changing focus.
- void `clear_changed` ()
Marks the value of the widget as unchanged.
- void `clear_damage` (`uchar` c=0)
Clears or sets the damage flags.
- void `clear_output` ()
Sets a widget to accept input.
- void `clear_visible` ()
Hides the widget.
- void `clear_visible_focus` ()
Disables keyboard focus navigation with this widget.
- `Fl_Color` `color` () const
Gets the background color of the widget.
- void `color` (`Fl_Color` bg)
Sets the background color of the widget.
- void `color` (`Fl_Color` bg, `Fl_Color` sel)
Sets the background and selection color of the widget.
- `Fl_Color` `color2` () const
For back compatibility only.
- void `color2` (unsigned a)
For back compatibility only.
- int `contains` (const `Fl_Widget *`w) const
Checks if w is a child of this widget.
- void `copy_label` (const char *new_label)
Sets the current label.
- void `copy_tooltip` (const char *text)
Sets the current tooltip text.
- `uchar` `damage` () const
Returns non-zero if `draw()` needs to be called.
- void `damage` (`uchar` c)
Sets the damage bits for the widget.
- void `damage` (`uchar` c, int x, int y, int w, int h)
Sets the damage bits for an area inside the widget.
- int `damage_resize` (int, int, int, int)
Internal use only.
- void `deactivate` ()
Deactivates the widget.
- `Fl_Image *` `deimage` ()

- Gets the image that is used as part of the widget label when in the inactive state.*

 - `const FL_Image * deimage () const`
- Gets the image that is used as part of the widget label when in the inactive state.*

 - `void deimage (FL_Image &img)`
- Sets the image to use as part of the widget label when in the inactive state.*

 - `void deimage (FL_Image *img)`
- Sets the image to use as part of the widget label when in the inactive state.*

 - `int deimage_bound () const`
- Returns whether the inactive image is managed by the widget.*

 - `void do_callback (FL_Callback_Reason reason=FL_REASON_UNKNOWN)`
- Calls the widget callback function with default arguments.*

 - `void do_callback (FL_Widget *widget, long arg, FL_Callback_Reason reason=FL_REASON_UNKNOWN)`
- Calls the widget callback function with arbitrary arguments.*

 - `void do_callback (FL_Widget *widget, void *arg=0, FL_Callback_Reason reason=FL_REASON_UNKNOWN)`
- Calls the widget callback function with arbitrary arguments.*

 - `void draw_label (int, int, int, int, FL_Align) const`
- Draws the label in an arbitrary bounding box with an arbitrary alignment.*

 - `int h () const`
- Gets the widget height.*

 - `virtual void hide ()`
- Makes a widget invisible.*

 - `int horizontal_label_margin ()`
- Get the spacing between the label and the horizontal edge of the widget.*

 - `void horizontal_label_margin (int px)`
- Set the spacing between the label and the horizontal edge of the widget.*

 - `FL_Image * image ()`
- Gets the image that is used as part of the widget label when in the active state.*

 - `const FL_Image * image () const`
- Gets the image that is used as part of the widget label when in the active state.*

 - `void image (FL_Image &img)`
- Sets the image to use as part of the widget label when in the active state.*

 - `void image (FL_Image *img)`
- Sets the image to use as part of the widget label when in the active state.*

 - `int image_bound () const`
- Returns whether the image is managed by the widget.*

 - `int inside (const FL_Widget *wgt) const`
- Checks if this widget is a child of wgt.*

 - `int is_label_copied () const`
- Returns whether the current label was assigned with [copy_label\(\)](#).*

 - `const char * label () const`
- Gets the current label text.*

 - `void label (const char *text)`
- Sets the current label pointer.*

 - `void label (FL_Labeltype a, const char *b)`
- Shortcut to set the label text and type in one call.*

 - `int label_image_spacing ()`
- Return the gap size between the label and the image.*

 - `void label_image_spacing (int gap)`
- Set the gap between the label and the image in pixels.*

 - `FL_Color labelcolor () const`
- Gets the label color.*

- void [labelcolor](#) ([Fl_Color](#) c)
Sets the label color.
- [Fl_Font](#) [labelfont](#) () const
Gets the font to use.
- void [labelfont](#) ([Fl_Font](#) f)
Sets the font to use.
- [Fl_Fontsize](#) [labelsize](#) () const
Gets the font size in pixels.
- void [labelsize](#) ([Fl_Fontsize](#) pix)
Sets the font size in pixels.
- [Fl_Labeltype](#) [labeltype](#) () const
Gets the label type.
- void [labeltype](#) ([Fl_Labeltype](#) a)
Sets the label type.
- void [measure_label](#) (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- bool [needs_keyboard](#) () const
Returns whether this widget needs a keyboard.
- void [needs_keyboard](#) (bool needs)
Sets whether this widget needs a keyboard.
- unsigned int [output](#) () const
Returns if a widget is used for output only.
- [Fl_Group](#) * [parent](#) () const
Returns a pointer to the parent widget.
- void [parent](#) ([Fl_Group](#) *p)
Internal use only - "for hacks only".
- void [position](#) (int X, int Y)
Repositions the window or widget.
- void [redraw](#) ()
Schedules the drawing of the widget.
- void [redraw_label](#) ()
Schedules the drawing of the label.
- virtual void [resize](#) (int x, int y, int w, int h)
Changes the size or position of the widget.
- [Fl_Color](#) [selection_color](#) () const
Gets the selection color.
- void [selection_color](#) ([Fl_Color](#) a)
Sets the selection color.
- void [set_active](#) ()
Marks the widget as active without sending events or changing focus.
- void [set_changed](#) ()
Marks the value of the widget as changed.
- void [set_output](#) ()
Sets a widget to output only.
- void [set_visible](#) ()
Makes the widget visible.
- void [set_visible_focus](#) ()
Enables keyboard focus navigation with this widget.
- int [shortcut_label](#) () const
Returns whether the widget's label uses '&' to indicate shortcuts.
- void [shortcut_label](#) (int value)

- Sets whether the widget's label uses '&' to indicate shortcuts.*

 - virtual void **show** ()
- Makes a widget visible.*

 - void **size** (int W, int H)
- Changes the size of the widget.*

 - int **take_focus** ()
- Gives the widget the keyboard focus.*

 - unsigned int **takeevents** () const
- Returns if the widget is able to take events.*

 - int **test_shortcut** ()
- Returns true if the widget's label contains the entered '&x' shortcut.*

 - const char * **tooltip** () const
- Gets the current tooltip text.*

 - void **tooltip** (const char *text)
- Sets the current tooltip text.*

 - **Fl_Window** * **top_window** () const
- Returns a pointer to the top-level window for the widget.*

 - **Fl_Window** * **top_window_offset** (int &xoff, int &yoff) const
- Finds the x/y offset of the current widget relative to the top-level window.*

 - **uchar** **type** () const
- Gets the widget type.*

 - void **type** (**uchar** t)
- Sets the widget type.*

 - int **use_accents_menu** ()
- Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.*

 - void * **user_data** () const
- Gets the user data for this widget.*

 - void **user_data** (**Fl_Callback_User_Data** *v, bool auto_free)
- Sets the user data for this widget.*

 - void **user_data** (void *v)
- Sets the user data for this widget.*

 - int **vertical_label_margin** ()
- Get the spacing between the label and the vertical edge of the widget.*

 - void **vertical_label_margin** (int px)
- Set the spacing between the label and the vertical edge of the widget.*

 - unsigned int **visible** () const
- Returns whether a widget is visible.*

 - unsigned int **visible_focus** () const
- Checks whether this widget has a visible focus.*

 - void **visible_focus** (int v)
- Modifies keyboard focus navigation.*

 - int **visible_r** () const
- Returns whether a widget and all its parents are visible.*

 - int **w** () const
- Gets the widget width.*

 - **Fl_When** **when** () const
- Returns the conditions under which the callback is called.*

 - void **when** (**uchar** i)
- Sets the flags used to decide when a callback is called.*

 - **Fl_Window** * **window** () const
- Returns a pointer to the nearest parent window up the widget hierarchy.*

- int **x** () const
Gets the widget position in its window.
- int **y** () const
Gets the widget position in its window.
- virtual **~Fl_Widget** ()
Destroys the widget.

Additional Inherited Members

Static Public Member Functions inherited from **Fl_Widget**

- static void **default_callback** (Fl_Widget *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int **label_shortcut** (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int **test_shortcut** (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from **Fl_Widget**

- enum {
INACTIVE = 1<<0 , **INVISIBLE** = 1<<1 , **OUTPUT** = 1<<2 , **NOBORDER** = 1<<3 ,

flags possible values enumeration.

Protected Member Functions inherited from **Fl_Light_Button**

- void **draw** () **FL_OVERRIDE**
Draws the widget.

Protected Member Functions inherited from **Fl_Button**

- void **simulate_key_action** ()

Protected Member Functions inherited from **Fl_Widget**

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** (Fl_Boxtype t, Fl_Color c) const
Draws a box of type t, of color c at the widget's position and size.

- void **draw_box** ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const
Draws a focus rectangle around the widget.
- void **draw_focus** ([FI_Boxtype](#) t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void **draw_focus** ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) bg) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [FI_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

Static Protected Member Functions inherited from [FI_Button](#)

- static void **key_release_timeout** (void *)

Static Protected Attributes inherited from [FI_Button](#)

- static [FI_Widget_Tracker](#) * **key_release_tracker** = 0

11.119.1 Detailed Description

Buttons generate callbacks when they are clicked by the user.

You control exactly when and how by changing the values for [type\(\)](#) and [when\(\)](#).

Figure 11.39 [FI_Round_Button](#)

The [FI_Round_Button](#) subclass displays the "on" state by turning on a light, rather than drawing pushed in. The shape of the "light" is initially set to [FL_ROUND_DOWN_BOX](#). The color of the light when on is controlled with [selection_color\(\)](#), which defaults to [FL_FOREGROUND_COLOR](#).

11.119.2 Constructor & Destructor Documentation

11.119.2.1 Fl_Round_Button()

```
Fl_Round_Button::Fl_Round_Button (
    int X,
    int Y,
    int W,
    int H,
    const char * L = 0)
```

Creates a new [Fl_Round_Button](#) widget using the given position, size, and label string.

Figure 11.40 Fl_Round_Button

The [Fl_Round_Button](#) subclass displays the "ON" state by turning on a light, rather than drawing pushed in.

The default box type is `FL_NO_BOX`, which draws the label w/o a box right of the checkmark.

The shape of the "light" is set with [down_box\(\)](#) and its default value is `FL_ROUND_DOWN_BOX`.

The color of the light when on is controlled with [selection_color\(\)](#), which defaults to `FL_FOREGROUND_COLOR` (usually black).

Parameters

in	<i>X,Y,W,H</i>	position and size of the widget
in	<i>L</i>	widget label, default is no label

The documentation for this class was generated from the following files:

- [Fl_Round_Button.H](#)
- [Fl_Round_Button.cxx](#)

11.120 Fl_Round_Clock Class Reference

A clock widget of type `FL_ROUND_CLOCK`.

```
#include <Fl_Round_Clock.H>
```

Inheritance diagram for [Fl_Round_Clock](#):

Public Member Functions

- [Fl_Round_Clock](#) (int X, int Y, int W, int H, const char *L=0)
Creates the clock widget, setting his type and box.

Public Member Functions inherited from [Fl_Clock](#)

- [Fl_Clock](#) (int X, int Y, int W, int H, const char *L=0)

- Create an *FL_Clock* widget using the given position, size, and label string.

 - *FL_Clock* (*uchar* t, int X, int Y, int W, int H, const char *L)

Create an *FL_Clock* widget using the given clock type *t*, position, size, and label string.
- int *handle* (int) *FL_OVERRIDE*
- Handles the specified event.

 - *~FL_Clock* ()

The destructor removes the clock.

Public Member Functions inherited from *FL_Clock_Output*

- *FL_Clock_Output* (int X, int Y, int W, int H, const char *L=0)
- Create a new *FL_Clock_Output* widget with the given position, size and label.
- int *hour* () const
- Returns the displayed hour (0 to 23).
- int *minute* () const
- Returns the displayed minute (0 to 59).
- int *second* () const
- Returns the displayed second (0 to 60, 60=leap second).
- int *shadow* () const
- Returns the shadow drawing mode of the hands.
- void *shadow* (int mode)
- Sets the shadow drawing mode of the hands.
- *ulong* *value* () const
- Returns the displayed time.
- void *value* (int H, int m, int s)
- Set the displayed time.
- void *value* (*ulong* v)
- Set the displayed time.

Public Member Functions inherited from *FL_Widget*

- void *_clear_fullscreen* ()
- void *_set_fullscreen* ()
- void *activate* ()
- Activates the widget.
- unsigned int *active* () const
- Returns whether the widget is active.
- int *active_r* () const
- Returns whether the widget and all of its parents are active.
- *FL_Align* *align* () const
- Gets the label alignment.
- void *align* (*FL_Align* alignment)
- Sets the label alignment.
- long *argument* () const
- Gets the current user data (long) argument that is passed to the callback function.
- void *argument* (long v)
- Sets the current user data (long) argument that is passed to the callback function.
- virtual class *FL_Gl_Window* * *as_gl_window* ()
- Returns an *FL_Gl_Window* pointer if this widget is an *FL_Gl_Window*.
- virtual class *FL_Gl_Window* const * *as_gl_window* () const
- virtual *FL_Group* * *as_group* ()
- Returns an *FL_Group* pointer if this widget is an *FL_Group*.

- virtual [FI_Group](#) const * **as_group** () const
- virtual [FI_Window](#) * **as_window** ()
 - Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).*
- virtual [FI_Window](#) const * **as_window** () const
- void **bind_deimage** ([FI_Image](#) *img)
 - Sets the image to use as part of the widget label when in the inactive state.*
- void **bind_deimage** (int f)
 - Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.*
- void **bind_image** ([FI_Image](#) *img)
 - Sets the image to use as part of the widget label when in the active state.*
- void **bind_image** (int f)
 - Bind the image to the widget, so the widget will delete the image when it is no longer needed.*
- [FI_Boxtype](#) **box** () const
 - Gets the box type of the widget.*
- void **box** ([FI_Boxtype](#) new_box)
 - Sets the box type for the widget.*
- [FI_Callback_p](#) **callback** () const
 - Gets the current callback function for the widget.*
- void **callback** ([FI_Callback](#) *cb)
 - Sets the current callback function for the widget.*
- void **callback** ([FI_Callback](#) *cb, [FI_Callback_User_Data](#) *p, bool auto_free)
 - Sets the current callback function and managed user data for the widget.*
- void **callback** ([FI_Callback](#) *cb, void *p)
 - Sets the current callback function and data for the widget.*
- void **callback** ([FI_Callback0](#) *cb)
 - Sets the current callback function for the widget.*
- void **callback** ([FI_Callback1](#) *cb, long p=0)
 - Sets the current callback function for the widget.*
- unsigned int **changed** () const
 - Checks if the widget value changed since the last callback.*
- void **clear_active** ()
 - Marks the widget as inactive without sending events or changing focus.*
- void **clear_changed** ()
 - Marks the value of the widget as unchanged.*
- void **clear_damage** (uchar c=0)
 - Clears or sets the damage flags.*
- void **clear_output** ()
 - Sets a widget to accept input.*
- void **clear_visible** ()
 - Hides the widget.*
- void **clear_visible_focus** ()
 - Disables keyboard focus navigation with this widget.*
- [FI_Color](#) **color** () const
 - Gets the background color of the widget.*
- void **color** ([FI_Color](#) bg)
 - Sets the background color of the widget.*
- void **color** ([FI_Color](#) bg, [FI_Color](#) sel)
 - Sets the background and selection color of the widget.*
- [FI_Color](#) **color2** () const
 - For back compatibility only.*
- void **color2** (unsigned a)

- For back compatibility only.*

 - int `contains` (const `Fl_Widget` *w) const
Checks if w is a child of this widget.
 - void `copy_label` (const char *new_label)
Sets the current label.
 - void `copy_tooltip` (const char *text)
Sets the current tooltip text.
 - `uchar` `damage` () const
Returns non-zero if `draw()` needs to be called.
 - void `damage` (`uchar` c)
Sets the damage bits for the widget.
 - void `damage` (`uchar` c, int x, int y, int w, int h)
Sets the damage bits for an area inside the widget.
 - int `damage_resize` (int, int, int, int)
Internal use only.
 - void `deactivate` ()
Deactivates the widget.
 - `Fl_Image` * `deimage` ()
Gets the image that is used as part of the widget label when in the inactive state.
 - const `Fl_Image` * `deimage` () const
Gets the image that is used as part of the widget label when in the inactive state.
 - void `deimage` (`Fl_Image` &img)
Sets the image to use as part of the widget label when in the inactive state.
 - void `deimage` (`Fl_Image` *img)
Sets the image to use as part of the widget label when in the inactive state.
 - int `deimage_bound` () const
Returns whether the inactive image is managed by the widget.
 - void `do_callback` (`Fl_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with default arguments.
 - void `do_callback` (`Fl_Widget` *widget, long arg, `Fl_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with arbitrary arguments.
 - void `do_callback` (`Fl_Widget` *widget, void *arg=0, `Fl_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with arbitrary arguments.
 - void `draw_label` (int, int, int, int, `Fl_Align`) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
 - int `h` () const
Gets the widget height.
 - virtual void `hide` ()
Makes a widget invisible.
 - int `horizontal_label_margin` ()
Get the spacing between the label and the horizontal edge of the widget.
 - void `horizontal_label_margin` (int px)
Set the spacing between the label and the horizontal edge of the widget.
 - `Fl_Image` * `image` ()
Gets the image that is used as part of the widget label when in the active state.
 - const `Fl_Image` * `image` () const
Gets the image that is used as part of the widget label when in the active state.
 - void `image` (`Fl_Image` &img)
Sets the image to use as part of the widget label when in the active state.
 - void `image` (`Fl_Image` *img)
Sets the image to use as part of the widget label when in the active state.

- int `image_bound` () const
Returns whether the image is managed by the widget.
- int `inside` (const `FL_Widget` *wgt) const
Checks if this widget is a child of wgt.
- int `is_label_copied` () const
Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const
Gets the current label text.
- void `label` (const char *text)
Sets the current label pointer.
- void `label` (`FL_Labeltype` a, const char *b)
Shortcut to set the label text and type in one call.
- int `label_image_spacing` ()
Return the gap size between the label and the image.
- void `label_image_spacing` (int gap)
Set the gap between the label and the image in pixels.
- `FL_Color` `labelcolor` () const
Gets the label color.
- void `labelcolor` (`FL_Color` c)
Sets the label color.
- `FL_Font` `labelfont` () const
Gets the font to use.
- void `labelfont` (`FL_Font` f)
Sets the font to use.
- `FL_Fonsize` `labelsize` () const
Gets the font size in pixels.
- void `labelsize` (`FL_Fonsize` pix)
Sets the font size in pixels.
- `FL_Labeltype` `labeltype` () const
Gets the label type.
- void `labeltype` (`FL_Labeltype` a)
Sets the label type.
- void `measure_label` (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- bool `needs_keyboard` () const
Returns whether this widget needs a keyboard.
- void `needs_keyboard` (bool needs)
Sets whether this widget needs a keyboard.
- unsigned int `output` () const
Returns if a widget is used for output only.
- `FL_Group` * `parent` () const
Returns a pointer to the parent widget.
- void `parent` (`FL_Group` *p)
Internal use only - "for hacks only".
- void `position` (int X, int Y)
Repositions the window or widget.
- void `redraw` ()
Schedules the drawing of the widget.
- void `redraw_label` ()
Schedules the drawing of the label.
- virtual void `resize` (int x, int y, int w, int h)

- Changes the size or position of the widget.*

 - [Fl_Color selection_color](#) () const

Gets the selection color.
- void [selection_color](#) ([Fl_Color](#) a)

Sets the selection color.
- void [set_active](#) ()

Marks the widget as active without sending events or changing focus.
- void [set_changed](#) ()

Marks the value of the widget as changed.
- void [set_output](#) ()

Sets a widget to output only.
- void [set_visible](#) ()

Makes the widget visible.
- void [set_visible_focus](#) ()

Enables keyboard focus navigation with this widget.
- int [shortcut_label](#) () const

Returns whether the widget's label uses '&' to indicate shortcuts.
- void [shortcut_label](#) (int value)

Sets whether the widget's label uses '&' to indicate shortcuts.
- virtual void [show](#) ()

Makes a widget visible.
- void [size](#) (int W, int H)

Changes the size of the widget.
- int [take_focus](#) ()

Gives the widget the keyboard focus.
- unsigned int [takeevents](#) () const

Returns if the widget is able to take events.
- int [test_shortcut](#) ()

Returns true if the widget's label contains the entered '&x' shortcut.
- const char * [tooltip](#) () const

Gets the current tooltip text.
- void [tooltip](#) (const char *text)

Sets the current tooltip text.
- [Fl_Window](#) * [top_window](#) () const

Returns a pointer to the top-level window for the widget.
- [Fl_Window](#) * [top_window_offset](#) (int &xoff, int &yoff) const

Finds the x/y offset of the current widget relative to the top-level window.
- [uchar](#) [type](#) () const

Gets the widget type.
- void [type](#) ([uchar](#) t)

Sets the widget type.
- int [use_accents_menu](#) ()

Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * [user_data](#) () const

Gets the user data for this widget.
- void [user_data](#) ([Fl_Callback_User_Data](#) *v, bool auto_free)

Sets the user data for this widget.
- void [user_data](#) (void *v)

Sets the user data for this widget.
- int [vertical_label_margin](#) ()

Get the spacing between the label and the vertical edge of the widget.

- void `vertical_label_margin` (int px)
Set the spacing between the label and the vertical edge of the widget.
- unsigned int `visible` () const
Returns whether a widget is visible.
- unsigned int `visible_focus` () const
Checks whether this widget has a visible focus.
- void `visible_focus` (int v)
Modifies keyboard focus navigation.
- int `visible_r` () const
Returns whether a widget and all its parents are visible.
- int `w` () const
Gets the widget width.
- `FL_When` `when` () const
Returns the conditions under which the callback is called.
- void `when` (uchar i)
Sets the flags used to decide when a callback is called.
- `FL_Window` * `window` () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int `x` () const
Gets the widget position in its window.
- int `y` () const
Gets the widget position in its window.
- virtual `~FL_Widget` ()
Destroys the widget.

Additional Inherited Members

Static Public Member Functions inherited from `FL_Widget`

- static void `default_callback` (`FL_Widget` *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int `label_shortcut` (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int `test_shortcut` (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from `FL_Widget`

- enum {
`INACTIVE` = 1<<0 , `INVISIBLE` = 1<<1 , `OUTPUT` = 1<<2 , `NOBORDER` = 1<<3 ,
`FORCE_POSITION` = 1<<4 , `NON_MODAL` = 1<<5 , `SHORTCUT_LABEL` = 1<<6 , `CHANGED` = 1<<7
, `OVERRIDE` = 1<<8 , `VISIBLE_FOCUS` = 1<<9 , `COPIED_LABEL` = 1<<10 , `CLIP_CHILDREN` = 1<<11
, `MENU_WINDOW` = 1<<12 , `TOOLTIP_WINDOW` = 1<<13 , `MODAL` = 1<<14 , `NO_OVERLAY` = 1<<15
, `GROUP_RELATIVE` = 1<<16 , `COPIED_TOOLTIP` = 1<<17 , `FULLSCREEN` = 1<<18 , `MAC_USE_ACCENTS_MENU`
= 1<<19 ,
`NEEDS_KEYBOARD` = 1<<20 , `IMAGE_BOUND` = 1<<21 , `DEIMAGE_BOUND` = 1<<22 ,
`AUTO_DELETE_USER_DATA` = 1<<23 ,
`MAXIMIZED` = 1<<24 , `POPUP` = 1<<25 , `USERFLAG3` = 1<<29 , `USERFLAG2` = 1<<30 ,
`USERFLAG1` = 1<<31 }
flags possible values enumeration.

Protected Member Functions inherited from [FL_Clock_Output](#)

- void [draw](#) () [FL_OVERRIDE](#)
Draw clock with current position and size.
- void [draw](#) (int X, int Y, int W, int H)
Draw clock with the given position and size.

Protected Member Functions inherited from [FL_Widget](#)

- void [clear_flag](#) (unsigned int c)
Clears a flag in the flags mask.
- void [draw_backdrop](#) () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void [draw_box](#) () const
Draws the widget box according its box style.
- void [draw_box](#) ([FL_Boxtype](#) t, [FL_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void [draw_box](#) ([FL_Boxtype](#) t, int x, int y, int w, int h, [FL_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void [draw_focus](#) () const
Draws a focus rectangle around the widget.
- void [draw_focus](#) ([FL_Boxtype](#) t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void [draw_focus](#) ([FL_Boxtype](#) t, int x, int y, int w, int h, [FL_Color](#) bg) const
Draws a focus box for the widget at the given position and size.
- void [draw_label](#) () const
Draws the widget's label at the defined label position.
- void [draw_label](#) (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [FL_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int [flags](#) () const
Gets the widget flags mask.
- void [h](#) (int v)
Internal use only.
- void [set_flag](#) (unsigned int c)
Sets a flag in the flags mask.
- void [w](#) (int v)
Internal use only.
- void [x](#) (int v)
Internal use only.
- void [y](#) (int v)
Internal use only.

11.120.1 Detailed Description

A clock widget of type FL_ROUND_CLOCK.
Has no box.

11.120.2 Constructor & Destructor Documentation

11.120.2.1 Fl_Round_Clock()

```
Fl_Round_Clock::Fl_Round_Clock (
    int X,
    int Y,
    int W,
    int H,
    const char * L = 0)
```

Creates the clock widget, setting his type and box.

Create an [Fl_Round_Clock](#) widget using the given position, size, and label string.

The clock type is `FL_ROUND_CLOCK` and the boxtype is `FL_NO_BOX`.

This constructor is the same as [Fl_Clock\(FL_ROUND_CLOCK, X, Y, W, H, L\)](#).

See also

[Fl_Clock\(uchar, int, int, int, int, const char *\)](#)

Parameters

in	<i>X,Y,W,H</i>	position and size of the widget
in	<i>L</i>	widget label, default is no label

The documentation for this class was generated from the following files:

- [Fl_Round_Clock.H](#)
- [Fl_Clock.cxx](#)

11.121 Fl_Scheme Class Reference

Static Public Member Functions

- static int [add_scheme_name](#) (const char *name)
Add a scheme name to the list of known schemes.
- static const char ** [names](#) ()
Return a list of all known scheme names.
- static int [num_schemes](#) ()
Return the number of currently registered schemes.

11.121.1 Member Function Documentation

11.121.1.1 add_scheme_name()

```
int Fl_Scheme::add_scheme_name (
    const char * name) [static]
```

Add a scheme name to the list of known schemes.

This method is public in FLTK 1.4.0 because derived classes of [Fl_Scheme](#) are not yet implemented. Thus, users implementing their own schemes can use this method to add the scheme name to the list of known schemes which is for instance used in [Fl_Scheme::names\(\)](#).

Note

Attention! In a future version, when subclasses of [Fl_Scheme](#) will be implemented, this method will either be replaced by another `protected` method or it will no longer do anything (kept only for ABI reasons).

The new scheme name must consist of valid ASCII characters as described below:

- lowercase letters 'a' - 'z'

- numbers '0' - '9'
- any character in "\$+_" (w/o the quotes).

The name must not be longer than 12 ASCII characters (bytes). The new scheme name is added to the **end** of the **unordered** list.

Note

Call this method only once for each scheme name. If the returned value is ≤ 0 you should check the scheme name.

The given scheme `name` is copied and may be freed directly after the call to [add_scheme_name\(\)](#).

Parameters

<code>in</code>	<code>name</code>	New scheme name
-----------------	-------------------	-----------------

Returns

The new number of schemes if the name was successfully added. This is the same as the index of the scheme + 1.

Return values

0	Scheme name already exists
-1	Invalid character(s) in name
-2	The name is too long

Since

1.4.0

11.121.1.2 names()

```
const char ** Fl_Scheme::names () [static]
```

Return a list of all known scheme names.

This list is only valid until a new scheme is added or one is removed. It is possible that scheme names are appended to the list during the runtime of the program but schemes can't be removed.

Getting the list of known schemes can be useful to populate a menu of scheme choices to let the user select a scheme. You should process the names immediately and you should never store a pointer to the list or any individual name for later reference because the location of the list can be changed (reallocated) when schemes are added.

The list of scheme names is nul-terminated.

Note

Currently (in FLTK 1.4.0) schemes can only be added to the list and not removed from the list. This may change in a later version.

Returns

List of currently known scheme names.

11.121.1.3 num_schemes()

```
static int Fl_Scheme::num_schemes () [inline], [static]
```

Return the number of currently registered schemes.

Returns

Number of registered schemes.

The documentation for this class was generated from the following files:

- `Fl_Scheme.H`
- `Fl_Scheme.cxx`

11.122 FI_Scheme_Choice Class Reference

Inheritance diagram for FI_Scheme_Choice:

Public Member Functions

- [FI_Scheme_Choice](#) (int X, int Y, int W, int H, const char *L=0)
The constructor initializes the [FI_Scheme_Choice](#) object with all known schemes.
- int [handle](#) (int event) [FL_OVERRIDE](#)
Handle FLTK events.
- virtual void [init_value](#) ()
Public method to initialize the value of the [FI_Scheme_Choice](#) widget.

Public Member Functions inherited from FI_Choice

- [FI_Choice](#) (int X, int Y, int W, int H, const char *L=0)
Create a new [FI_Choice](#) widget using the given position, size and label string.
- int [value](#) () const
Gets the index of the last item chosen by the user.
- int [value](#) (const [FI_Menu_Item](#) *v)
Sets the currently selected value using a pointer to menu item.
- int [value](#) (int v)
Sets the currently selected value using the index into the menu item array.

Public Member Functions inherited from FI_Menu_

- int [add](#) (const char *)
This is a Forms (and SGI GL library) compatible add function, it adds many menu items, with '|' separating the menu items, and tab separating the menu item names from an optional shortcut string.
- int [add](#) (const char *, int [shortcut](#), [FI_Callback](#) *, void *=0, int=0)
Adds a new menu item.
- int [add](#) (const char *a, const char *b, [FI_Callback](#) *c, void *d=0, int e=0)
See int [FI_Menu_::add](#)(const char* label, int shortcut, [FI_Callback](#)*, void *user_data=0, int flags=0)
- void [clear](#) ()
Same as menu(NULL), set the array pointer to null, indicating a zero-length menu.
- int [clear_submenu](#) (int index)
Clears the specified submenu pointed to by *index* of all menu items.
- void [copy](#) (const [FI_Menu_Item](#) *m, void *user_data=0)
Sets the menu array pointer with a copy of m that will be automatically deleted.
- [FI_Boxtype](#) [down_box](#) () const
This box type is used to surround the currently-selected items in the menus.
- void [down_box](#) ([FI_Boxtype](#) b)
Sets the box type used to surround the currently-selected items in the menus.

- [FL_Color](#) **down_color** () const
For back compatibility, same as [selection_color\(\)](#)
- void **down_color** (unsigned c)
For back compatibility, same as [selection_color\(\)](#)
- int [find_index](#) (const char *name) const
*Find the menu item index for a given menu *pathname*, such as "Edit/Copy".*
- int [find_index](#) (const [FL_Menu_Item](#) *item) const
*Find the index into the menu array for a given *item*.*
- int [find_index](#) ([FL_Callback](#) *cb) const
*Find the index into the menu array for a given callback *cb*.*
- const [FL_Menu_Item](#) * [find_item](#) (const char *name)
*Find the menu item for a given menu *pathname*, such as "Edit/Copy".*
- const [FL_Menu_Item](#) * [find_item](#) ([FL_Callback](#) *)
*Find the menu item for the given callback *cb*.*
- const [FL_Menu_Item](#) * [find_item_with_argument](#) (long)
*Find the menu item for the given user argument *v*.*
- const [FL_Menu_Item](#) * [find_item_with_user_data](#) (void *)
*Find the menu item for the given user data *v*.*
- [FL_Menu_](#) (int, int, int, int, const char * = 0)
Creates a new [FL_Menu_](#) widget using the given position, size, and label string.
- void [global](#) ()
Make the shortcuts for this menu work no matter what window has the focus when you type it.
- int [insert](#) (int index, const char *, int [shortcut](#), [FL_Callback](#) *, void * = 0, int = 0)
*Inserts a new menu item at the specified *index* position.*
- int [insert](#) (int index, const char *a, const char *b, [FL_Callback](#) *c, void *d = 0, int e = 0)
See int [FL_Menu_::insert](#)(const char label, int shortcut, [FL_Callback](#)*, void *user_data = 0, int flags = 0)*
- int [item_pathname](#) (char *name, int namelen, const [FL_Menu_Item](#) *finditem = 0) const
Get the menu 'pathname' for the specified menuitem.
- const [FL_Menu_Item](#) * [menu](#) () const
Returns a pointer to the array of [FL_Menu_Items](#).
- void [menu](#) (const [FL_Menu_Item](#) *m)
Sets the menu array pointer directly.
- [FL_Boxtype](#) [menu_box](#) () const
Get the box type for the menu popup windows.
- void [menu_box](#) ([FL_Boxtype](#) b)
Set the box type for the menu popup windows.
- const [FL_Menu_Item](#) * [menu_end](#) ()
Finishes menu modifications and returns [menu\(\)](#).
- int [mode](#) (int i) const
*Get the flags of item *i*.*
- void [mode](#) (int i, int fl)
*Set the flags of item *i*.*
- const [FL_Menu_Item](#) * [mvalue](#) () const
Return a pointer to the last menu item that was picked.
- const [FL_Menu_Item](#) * [picked](#) (const [FL_Menu_Item](#) *)
When user picks a menu item, call this.
- const [FL_Menu_Item](#) * [prev_mvalue](#) () const
Return a pointer to the menu item that was picked before the current one was picked.
- void [remove](#) (int)
*Deletes item *i* from the menu.*
- void [replace](#) (int, const char *)

- Changes the text of item *i*.*
- void **setonly** (Fl_Menu_Item *item)
 - Turns the radio item "on" for the menu item and turns "off" adjacent radio items of the same group.*
- void **shortcut** (int i, int s)
 - Change the shortcut of item *i* to *s*.*
- int **size** () const
 - This returns the number of Fl_Menu_Item structures that make up the menu, correctly counting submenus.*
- void **size** (int W, int H)
- const Fl_Menu_Item * **test_shortcut** ()
 - Returns the menu item with the entered shortcut (key value).*
- const char * **text** () const
 - Returns the title of the last item chosen.*
- const char * **text** (int i) const
 - Returns the title of item *i*.*
- Fl_Color **textcolor** () const
 - Get the current color of menu item labels.*
- void **textcolor** (Fl_Color c)
 - Sets the current color of menu item labels.*
- Fl_Font **textfont** () const
 - Gets the current font of menu item labels.*
- void **textfont** (Fl_Font c)
 - Sets the current font of menu item labels.*
- Fl_Fonsize **textsize** () const
 - Gets the font size of menu item labels.*
- void **textsize** (Fl_Fonsize c)
 - Sets the font size of menu item labels.*
- int **value** () const
 - Return the index into the *menu()* of the last item chosen by the user.*
- int **value** (const Fl_Menu_Item *)
 - Set the value of a menu to the menu item *m*.*
- int **value** (int i)
 - Set the value of the menu to index *i*.*

Public Member Functions inherited from Fl_Widget

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
 - Activates the widget.*
- unsigned int **active** () const
 - Returns whether the widget is active.*
- int **active_r** () const
 - Returns whether the widget and all of its parents are active.*
- Fl_Align **align** () const
 - Gets the label alignment.*
- void **align** (Fl_Align alignment)
 - Sets the label alignment.*
- long **argument** () const
 - Gets the current user data (long) argument that is passed to the callback function.*
- void **argument** (long v)
 - Sets the current user data (long) argument that is passed to the callback function.*

- virtual class [Fl_Gl_Window](#) * [as_gl_window](#) ()
Returns an [Fl_Gl_Window](#) pointer if this widget is an [Fl_Gl_Window](#).
- virtual class [Fl_Gl_Window](#) const * [as_gl_window](#) () const
- virtual [Fl_Group](#) * [as_group](#) ()
Returns an [Fl_Group](#) pointer if this widget is an [Fl_Group](#).
- virtual [Fl_Group](#) const * [as_group](#) () const
- virtual [Fl_Window](#) * [as_window](#) ()
Returns an [Fl_Window](#) pointer if this widget is an [Fl_Window](#).
- virtual [Fl_Window](#) const * [as_window](#) () const
- void [bind_deimage](#) ([Fl_Image](#) *img)
Sets the image to use as part of the widget label when in the inactive state.
- void [bind_deimage](#) (int f)
Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.
- void [bind_image](#) ([Fl_Image](#) *img)
Sets the image to use as part of the widget label when in the active state.
- void [bind_image](#) (int f)
Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- [Fl_Boxtype](#) [box](#) () const
Gets the box type of the widget.
- void [box](#) ([Fl_Boxtype](#) new_box)
Sets the box type for the widget.
- [Fl_Callback_p](#) [callback](#) () const
Gets the current callback function for the widget.
- void [callback](#) ([Fl_Callback](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([Fl_Callback](#) *cb, [Fl_Callback_User_Data](#) *p, bool auto_free)
Sets the current callback function and managed user data for the widget.
- void [callback](#) ([Fl_Callback](#) *cb, void *p)
Sets the current callback function and data for the widget.
- void [callback](#) ([Fl_Callback0](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([Fl_Callback1](#) *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int [changed](#) () const
Checks if the widget value changed since the last callback.
- void [clear_active](#) ()
Marks the widget as inactive without sending events or changing focus.
- void [clear_changed](#) ()
Marks the value of the widget as unchanged.
- void [clear_damage](#) (uchar c=0)
Clears or sets the damage flags.
- void [clear_output](#) ()
Sets a widget to accept input.
- void [clear_visible](#) ()
Hides the widget.
- void [clear_visible_focus](#) ()
Disables keyboard focus navigation with this widget.
- [Fl_Color](#) [color](#) () const
Gets the background color of the widget.
- void [color](#) ([Fl_Color](#) bg)
Sets the background color of the widget.

- void `color` (`FL_Color` bg, `FL_Color` sel)
Sets the background and selection color of the widget.
- `FL_Color` `color2` () const
For back compatibility only.
- void `color2` (unsigned a)
For back compatibility only.
- int `contains` (const `FL_Widget` *w) const
Checks if w is a child of this widget.
- void `copy_label` (const char *new_label)
Sets the current label.
- void `copy_tooltip` (const char *text)
Sets the current tooltip text.
- `uchar` `damage` () const
Returns non-zero if `draw()` needs to be called.
- void `damage` (`uchar` c)
Sets the damage bits for the widget.
- void `damage` (`uchar` c, int x, int y, int w, int h)
Sets the damage bits for an area inside the widget.
- int `damage_resize` (int, int, int, int)
Internal use only.
- void `deactivate` ()
Deactivates the widget.
- `FL_Image` * `deimage` ()
Gets the image that is used as part of the widget label when in the inactive state.
- const `FL_Image` * `deimage` () const
Gets the image that is used as part of the widget label when in the inactive state.
- void `deimage` (`FL_Image` &img)
Sets the image to use as part of the widget label when in the inactive state.
- void `deimage` (`FL_Image` *img)
Sets the image to use as part of the widget label when in the inactive state.
- int `deimage_bound` () const
Returns whether the inactive image is managed by the widget.
- void `do_callback` (`FL_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with default arguments.
- void `do_callback` (`FL_Widget` *widget, long arg, `FL_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with arbitrary arguments.
- void `do_callback` (`FL_Widget` *widget, void *arg=0, `FL_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with arbitrary arguments.
- void `draw_label` (int, int, int, int, `FL_Align`) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const
Gets the widget height.
- virtual void `hide` ()
Makes a widget invisible.
- int `horizontal_label_margin` ()
Get the spacing between the label and the horizontal edge of the widget.
- void `horizontal_label_margin` (int px)
Set the spacing between the label and the horizontal edge of the widget.
- `FL_Image` * `image` ()
Gets the image that is used as part of the widget label when in the active state.
- const `FL_Image` * `image` () const

- Gets the image that is used as part of the widget label when in the active state.*

 - void [image](#) ([FI_Image](#) &img)

Sets the image to use as part of the widget label when in the active state.

 - void [image](#) ([FI_Image](#) *img)

Sets the image to use as part of the widget label when in the active state.

 - int [image_bound](#) () const

Returns whether the image is managed by the widget.

 - int [inside](#) (const [FI_Widget](#) *wgt) const

Checks if this widget is a child of wgt.

 - int [is_label_copied](#) () const

Returns whether the current label was assigned with [copy_label\(\)](#).

 - const char * [label](#) () const

Gets the current label text.

 - void [label](#) (const char *text)

Sets the current label pointer.

 - void [label](#) ([FI_Labeltype](#) a, const char *b)

Shortcut to set the label text and type in one call.

 - int [label_image_spacing](#) ()

Return the gap size between the label and the image.

 - void [label_image_spacing](#) (int gap)

Set the gap between the label and the image in pixels.

 - [FI_Color](#) [labelcolor](#) () const

Gets the label color.

 - void [labelcolor](#) ([FI_Color](#) c)

Sets the label color.

 - [FI_Font](#) [labelfont](#) () const

Gets the font to use.

 - void [labelfont](#) ([FI_Font](#) f)

Sets the font to use.

 - [FI_Fonsize](#) [labelsize](#) () const

Gets the font size in pixels.

 - void [labelsize](#) ([FI_Fonsize](#) pix)

Sets the font size in pixels.

 - [FI_Labeltype](#) [labeltype](#) () const

Gets the label type.

 - void [labeltype](#) ([FI_Labeltype](#) a)

Sets the label type.

 - void [measure_label](#) (int &ww, int &hh) const

Sets width ww and height hh accordingly with the label size.

 - bool [needs_keyboard](#) () const

Returns whether this widget needs a keyboard.

 - void [needs_keyboard](#) (bool needs)

Sets whether this widget needs a keyboard.

 - unsigned int [output](#) () const

Returns if a widget is used for output only.

 - [FI_Group](#) * [parent](#) () const

Returns a pointer to the parent widget.

 - void [parent](#) ([FI_Group](#) *p)

Internal use only - "for hacks only".

 - void [position](#) (int X, int Y)

Repositions the window or widget.

- void [redraw](#) ()
Schedules the drawing of the widget.
- void [redraw_label](#) ()
Schedules the drawing of the label.
- virtual void [resize](#) (int [x](#), int [y](#), int [w](#), int [h](#))
Changes the size or position of the widget.
- [Fl_Color](#) [selection_color](#) () const
Gets the selection color.
- void [selection_color](#) ([Fl_Color](#) a)
Sets the selection color.
- void [set_active](#) ()
Marks the widget as active without sending events or changing focus.
- void [set_changed](#) ()
Marks the value of the widget as changed.
- void [set_output](#) ()
Sets a widget to output only.
- void [set_visible](#) ()
Makes the widget visible.
- void [set_visible_focus](#) ()
Enables keyboard focus navigation with this widget.
- int [shortcut_label](#) () const
Returns whether the widget's label uses '&' to indicate shortcuts.
- void [shortcut_label](#) (int value)
Sets whether the widget's label uses '&' to indicate shortcuts.
- virtual void [show](#) ()
Makes a widget visible.
- void [size](#) (int W, int H)
Changes the size of the widget.
- int [take_focus](#) ()
Gives the widget the keyboard focus.
- unsigned int [takeevents](#) () const
Returns if the widget is able to take events.
- int [test_shortcut](#) ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * [tooltip](#) () const
Gets the current tooltip text.
- void [tooltip](#) (const char *text)
Sets the current tooltip text.
- [Fl_Window](#) * [top_window](#) () const
Returns a pointer to the top-level window for the widget.
- [Fl_Window](#) * [top_window_offset](#) (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- [uchar](#) [type](#) () const
Gets the widget type.
- void [type](#) ([uchar](#) t)
Sets the widget type.
- int [use_accents_menu](#) ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * [user_data](#) () const
Gets the user data for this widget.
- void [user_data](#) ([Fl_Callback_User_Data](#) *v, bool auto_free)

- Sets the user data for this widget.*

 - void **user_data** (void *v)

Sets the user data for this widget.
- int **vertical_label_margin** ()

Get the spacing between the label and the vertical edge of the widget.
- void **vertical_label_margin** (int px)

Set the spacing between the label and the vertical edge of the widget.
- unsigned int **visible** () const

Returns whether a widget is visible.
- unsigned int **visible_focus** () const

Checks whether this widget has a visible focus.
- void **visible_focus** (int v)

Modifies keyboard focus navigation.
- int **visible_r** () const

Returns whether a widget and all its parents are visible.
- int **w** () const

Gets the widget width.
- **Fl_When when** () const

Returns the conditions under which the callback is called.
- void **when** (uchar i)

Sets the flags used to decide when a callback is called.
- **Fl_Window * window** () const

Returns a pointer to the nearest parent window up the widget hierarchy.
- int **x** () const

Gets the widget position in its window.
- int **y** () const

Gets the widget position in its window.
- virtual **~Fl_Widget** ()

Destroys the widget.

Static Protected Member Functions

- static void **scheme_cb** (**Fl_Widget** *w, void *)

*Internal **Fl_Scheme_Choice** callback function (protected).*

Additional Inherited Members

Static Public Member Functions inherited from **Fl_Widget**

- static void **default_callback** (**Fl_Widget** *widget, void *data)

The default callback for all widgets that don't set a callback.
- static unsigned int **label_shortcut** (const char *t)

Returns the Unicode value of the '&x' shortcut in a given text.
- static int **test_shortcut** (const char *, const bool require_alt=false)

Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from FI_Widget

- enum {
`INACTIVE` = 1<<0 , `INVISIBLE` = 1<<1 , `OUTPUT` = 1<<2 , `NOBORDER` = 1<<3 ,
`FORCE_POSITION` = 1<<4 , `NON_MODAL` = 1<<5 , `SHORTCUT_LABEL` = 1<<6 , `CHANGED` = 1<<7

`MAXIMIZED` = 1<<24 , `POPUP` = 1<<25 , `USERFLAG3` = 1<<29 , `USERFLAG2` = 1<<30 ,
`USERFLAG1` = 1<<31 }

flags possible values enumeration.

Protected Member Functions inherited from FI_Choice

- void `draw` () `FL_OVERRIDE`

Draws the widget.

Protected Member Functions inherited from FI_Menu_

- int `item_pathname` (char *name, int namelen, const `FI_Menu_Item` *finditem, const `FI_Menu_Item` *menu=0) const

Protected Member Functions inherited from FI_Widget

- void `clear_flag` (unsigned int c)
Clears a flag in the flags mask.
- void `draw_backdrop` () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void `draw_box` () const
Draws the widget box according its box style.
- void `draw_box` (`FI_Boxtype` t, `FI_Color` c) const
Draws a box of type t, of color c at the widget's position and size.
- void `draw_box` (`FI_Boxtype` t, int x, int y, int w, int h, `FI_Color` c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void `draw_focus` () const
Draws a focus rectangle around the widget.
- void `draw_focus` (`FI_Boxtype` t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void `draw_focus` (`FI_Boxtype` t, int x, int y, int w, int h, `FI_Color` bg) const
Draws a focus box for the widget at the given position and size.
- void `draw_label` () const
Draws the widget's label at the defined label position.
- void `draw_label` (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- `FI_Widget` (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int `flags` () const
Gets the widget flags mask.

- void [h](#) (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void [w](#) (int v)
Internal use only.
- void [x](#) (int v)
Internal use only.
- void [y](#) (int v)
Internal use only.

Protected Attributes inherited from [Fl_Menu_](#)

- [uchar](#) **alloc**
- [uchar](#) **down_box_**
- [Fl_Boxtype](#) **menu_box_**
- [Fl_Color](#) **textcolor_**
- [Fl_Font](#) **textfont_**
- [Fl_Fontsize](#) **textsize_**

11.122.1 Constructor & Destructor Documentation

11.122.1.1 [Fl_Scheme_Choice](#)()

```
Fl_Scheme_Choice::Fl_Scheme_Choice (
    int X,
    int Y,
    int W,
    int H,
    const char * L = 0)
```

The constructor initializes the [Fl_Scheme_Choice](#) object with all known schemes.

Parameters

in	<i>X,Y</i>	Widget coordinates
in	<i>W,H</i>	Widget size (width, height)
in	<i>L</i>	Widget label (default: NULL, no label)

11.122.2 Member Function Documentation

11.122.2.1 [handle](#)()

```
int Fl_Scheme_Choice::handle (
    int event) [virtual]
```

Handle FLTK events.

This widget uses FL_SHOW and some other events to initialize its [value\(\)](#) according to the current scheme. All events are also handled by the base class [Fl_Choice](#).

Parameters

in	<i>event</i>	
----	--------------	--

Returns

1 if the event was used, 0 otherwise

Reimplemented from [Fl_Choice](#).

11.122.2.2 init_value()

```
void Fl_Scheme_Choice::init_value () [virtual]
```

Public method to initialize the value of the [Fl_Scheme_Choice](#) widget.

Normally you don't need to call this unless you change the current scheme by calling [Fl::scheme\(const char *\)](#).

The [Fl_Scheme_Choice](#) widget does this automatically when the widget is shown (when receiving the FL_SHOW event) which should always be after [Fl_Window::show\(argc, argv\)](#) which may set the current scheme by interpreting the commandline.

Since

1.4.0

11.122.2.3 scheme_cb_()

```
void Fl_Scheme_Choice::scheme_cb_ (
    Fl_Widget * w,
    void * ) [static], [protected]
```

Internal [Fl_Scheme_Choice](#) callback function (protected).

You don't need to set a callback for this widget. The default callback changes the scheme ([Fl::scheme\(\)](#)) and redraws all open windows.

You may override the callback if changing the scheme shall redraw other windows or don't redraw the window at all.

Parameters

in	w	The Fl_Scheme_Choice widget
----	---	---

The documentation for this class was generated from the following files:

- [Fl_Scheme_Choice.H](#)
- [Fl_Scheme_Choice.cxx](#)

11.123 Fl_Scroll Class Reference

This container widget lets you maneuver around a set of widgets much larger than your window.

```
#include <Fl_Scroll.H>
```

Inheritance diagram for [Fl_Scroll](#):

Classes

- struct [Fl_Region_LRTB](#)
A local struct to manage a region defined by left/right/top/bottom.
- struct [Fl_Region_XYWH](#)
A local struct to manage a region defined by xywh.
- struct [Fl_Scrollbar_Data](#)
A local struct to manage a scrollbar's xywh region and tab values.
- struct [ScrollInfo](#)
Structure to manage scrollbar and widget interior sizes.

Public Types

- enum {
HORIZONTAL = 1 , **VERTICAL** = 2 , **BOTH** = 3 , **ALWAYS_ON** = 4 ,
HORIZONTAL_ALWAYS = 5 , **VERTICAL_ALWAYS** = 6 , **BOTH_ALWAYS** = 7 }

Public Member Functions

- void **clear** ()
Clear all but the scrollbars...
- int **delete_child** (int n) **FL_OVERRIDE**
Removes the widget at `index` from the group and deletes it.
- FL_Scroll** (int X, int Y, int W, int H, const char *L=0)
*Creates a new **FL_Scroll** widget using the given position, size, and label string.*
- int **handle** (int) **FL_OVERRIDE**
Handles the specified event.
- void **resize** (int X, int Y, int W, int H) **FL_OVERRIDE**
*Resizes the **FL_Scroll** widget and moves its children if necessary.*
- void **scroll_to** (int, int)
Moves the contents of the scroll group to a new position.
- int **scrollbar_size** () const
Gets the current size of the scrollbars' troughs, in pixels.
- void **scrollbar_size** (int newSize)
Sets the pixel size of the scrollbars' troughs to `newSize`, in pixels.
- int **xposition** () const
Gets the current horizontal scrolling position.
- int **yposition** () const
Gets the current vertical scrolling position.
- virtual ~**FL_Scroll** ()
The destructor also deletes all the children.

Public Member Functions inherited from **FL_Group**

- FL_Widget** *& **_ddfdesign_kludge** ()
This is for forms compatibility only.
- void **add** (**FL_Widget** &)
The widget is removed from its current group (if any) and then added to the end of this group.
- void **add** (**FL_Widget** *o)
*See void **FL_Group::add(FL_Widget &w)***
- void **add_resizable** (**FL_Widget** &o)
Adds a widget to the group and makes it the resizable widget.
- FL_Widget** *const * **array** () const
Returns a pointer to the array of children.
- FL_Group** const * **as_group** () const **FL_OVERRIDE**
- FL_Group** * **as_group** () **FL_OVERRIDE**
*Returns an **FL_Group** pointer if this widget is an **FL_Group**.*
- void **begin** ()
Sets the current group so you can build the widget tree by just constructing the widgets.
- FL_Widget** * **child** (int n) const
Returns the `n`'th child.
- int **children** () const
Returns how many child widgets the group has.
- void **clear** ()

- Deletes all child widgets from memory recursively.*
- unsigned int `clip_children` ()
 - Returns the current clipping mode.*
- void `clip_children` (int c)
 - Controls whether the group widget clips the drawing of child widgets to its bounding box.*
- void `end` ()
 - Exactly the same as `current(this->parent())`.*
- int `find` (const `FL_Widget` &o) const
 - See int `FL_Group::find(const FL_Widget *w)` const.*
- int `find` (const `FL_Widget` *) const
 - Searches the child array for the widget and returns the index.*
- `FL_Group` (int, int, int, int, const char *s=0)
 - Creates a new `FL_Group` widget using the given position, size, and label string.*
- void `focus` (`FL_Widget` *W)
- void `forms_end` ()
 - This is for forms compatibility only.*
- void `init_sizes` ()
 - Resets the internal array of widget sizes and positions.*
- void `insert` (`FL_Widget` &, int i)
 - The widget is removed from its current group (if any) and then inserted into this group.*
- void `insert` (`FL_Widget` &o, `FL_Widget` *before)
 - This does `insert(w, find(before))`.*
- void `remove` (`FL_Widget` &)
 - Removes a widget from the group but does not delete it.*
- void `remove` (`FL_Widget` *o)
 - Removes the widget o from the group.*
- void `remove` (int index)
 - Removes the widget at index from the group but does not delete it.*
- `FL_Widget` * `resizable` () const
 - Returns the group's resizable widget.*
- void `resizable` (`FL_Widget` &o)
 - Sets the group's resizable widget.*
- void `resizable` (`FL_Widget` *o)
 - The resizable widget defines both the resizing box and the resizing behavior of the group and its children.*
- virtual `~FL_Group` ()
 - The destructor also deletes all the children.*

Public Member Functions inherited from `FL_Widget`

- void `_clear_fullscreen` ()
- void `_set_fullscreen` ()
- void `activate` ()
 - Activates the widget.*
- unsigned int `active` () const
 - Returns whether the widget is active.*
- int `active_r` () const
 - Returns whether the widget and all of its parents are active.*
- `FL_Align` `align` () const
 - Gets the label alignment.*
- void `align` (`FL_Align` alignment)
 - Sets the label alignment.*

- long [argument](#) () const
Gets the current user data (long) argument that is passed to the callback function.
- void [argument](#) (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class [FI_Gl_Window](#) * [as_gl_window](#) ()
Returns an [FI_Gl_Window](#) pointer if this widget is an [FI_Gl_Window](#).
- virtual class [FI_Gl_Window](#) const * [as_gl_window](#) () const
- virtual [FI_Window](#) * [as_window](#) ()
Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).
- virtual [FI_Window](#) const * [as_window](#) () const
- void [bind_deimage](#) ([FI_Image](#) *img)
Sets the image to use as part of the widget label when in the inactive state.
- void [bind_deimage](#) (int f)
Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.
- void [bind_image](#) ([FI_Image](#) *img)
Sets the image to use as part of the widget label when in the active state.
- void [bind_image](#) (int f)
Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- [FI_Boxtype](#) [box](#) () const
Gets the box type of the widget.
- void [box](#) ([FI_Boxtype](#) new_box)
Sets the box type for the widget.
- [FI_Callback_p](#) [callback](#) () const
Gets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb, [FI_Callback_User_Data](#) *p, bool auto_free)
Sets the current callback function and managed user data for the widget.
- void [callback](#) ([FI_Callback](#) *cb, void *p)
Sets the current callback function and data for the widget.
- void [callback](#) ([FI_Callback0](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback1](#) *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int [changed](#) () const
Checks if the widget value changed since the last callback.
- void [clear_active](#) ()
Marks the widget as inactive without sending events or changing focus.
- void [clear_changed](#) ()
Marks the value of the widget as unchanged.
- void [clear_damage](#) (uchar c=0)
Clears or sets the damage flags.
- void [clear_output](#) ()
Sets a widget to accept input.
- void [clear_visible](#) ()
Hides the widget.
- void [clear_visible_focus](#) ()
Disables keyboard focus navigation with this widget.
- [FI_Color](#) [color](#) () const
Gets the background color of the widget.
- void [color](#) ([FI_Color](#) bg)

- Sets the background color of the widget.*

 - void [color](#) ([FL_Color](#) bg, [FL_Color](#) sel)
- Sets the background and selection color of the widget.*

 - [FL_Color](#) [color2](#) () const
- For back compatibility only.*

 - void [color2](#) (unsigned a)
- For back compatibility only.*

 - int [contains](#) (const [FL_Widget](#) *w) const
- Checks if w is a child of this widget.*

 - void [copy_label](#) (const char *new_label)
- Sets the current label.*

 - void [copy_tooltip](#) (const char *text)
- Sets the current tooltip text.*

 - [uchar](#) [damage](#) () const
- Returns non-zero if [draw\(\)](#) needs to be called.*

 - void [damage](#) ([uchar](#) c)
- Sets the damage bits for the widget.*

 - void [damage](#) ([uchar](#) c, int x, int y, int w, int h)
- Sets the damage bits for an area inside the widget.*

 - int [damage_resize](#) (int, int, int, int)
- Internal use only.*

 - void [deactivate](#) ()
- Deactivates the widget.*

 - [FL_Image](#) * [deimage](#) ()
- Gets the image that is used as part of the widget label when in the inactive state.*

 - const [FL_Image](#) * [deimage](#) () const
- Gets the image that is used as part of the widget label when in the inactive state.*

 - void [deimage](#) ([FL_Image](#) &img)
- Sets the image to use as part of the widget label when in the inactive state.*

 - void [deimage](#) ([FL_Image](#) *img)
- Sets the image to use as part of the widget label when in the inactive state.*

 - int [deimage_bound](#) () const
- Returns whether the inactive image is managed by the widget.*

 - void [do_callback](#) ([FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
- Calls the widget callback function with default arguments.*

 - void [do_callback](#) ([FL_Widget](#) *widget, long arg, [FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
- Calls the widget callback function with arbitrary arguments.*

 - void [do_callback](#) ([FL_Widget](#) *widget, void *arg=0, [FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
- Calls the widget callback function with arbitrary arguments.*

 - void [draw_label](#) (int, int, int, int, [FL_Align](#)) const
- Draws the label in an arbitrary bounding box with an arbitrary alignment.*

 - int [h](#) () const
- Gets the widget height.*

 - virtual void [hide](#) ()
- Makes a widget invisible.*

 - int [horizontal_label_margin](#) ()
- Get the spacing between the label and the horizontal edge of the widget.*

 - void [horizontal_label_margin](#) (int px)
- Set the spacing between the label and the horizontal edge of the widget.*

 - [FL_Image](#) * [image](#) ()
- Gets the image that is used as part of the widget label when in the active state.*

- `const FI_Image * image () const`
Gets the image that is used as part of the widget label when in the active state.
- `void image (FI_Image &img)`
Sets the image to use as part of the widget label when in the active state.
- `void image (FI_Image *img)`
Sets the image to use as part of the widget label when in the active state.
- `int image_bound () const`
Returns whether the image is managed by the widget.
- `int inside (const FI_Widget *wgt) const`
Checks if this widget is a child of wgt.
- `int is_label_copied () const`
Returns whether the current label was assigned with `copy_label()`.
- `const char * label () const`
Gets the current label text.
- `void label (const char *text)`
Sets the current label pointer.
- `void label (FI_Labeltype a, const char *b)`
Shortcut to set the label text and type in one call.
- `int label_image_spacing ()`
Return the gap size between the label and the image.
- `void label_image_spacing (int gap)`
Set the gap between the label and the image in pixels.
- `FI_Color labelcolor () const`
Gets the label color.
- `void labelcolor (FI_Color c)`
Sets the label color.
- `FI_Font labelfont () const`
Gets the font to use.
- `void labelfont (FI_Font f)`
Sets the font to use.
- `FI_Fonsize labelsiz (int) const`
Gets the font size in pixels.
- `void labelsiz (FI_Fonsize pix)`
Sets the font size in pixels.
- `FI_Labeltype labeltype () const`
Gets the label type.
- `void labeltype (FI_Labeltype a)`
Sets the label type.
- `void measure_label (int &ww, int &hh) const`
Sets width ww and height hh accordingly with the label size.
- `bool needs_keyboard () const`
Returns whether this widget needs a keyboard.
- `void needs_keyboard (bool needs)`
Sets whether this widget needs a keyboard.
- `unsigned int output () const`
Returns if a widget is used for output only.
- `FI_Group * parent () const`
Returns a pointer to the parent widget.
- `void parent (FI_Group *p)`
Internal use only - "for hacks only".
- `void position (int X, int Y)`

- Repositions the window or widget.*

 - void [redraw](#) ()
- Schedules the drawing of the widget.*

 - void [redraw_label](#) ()
- Schedules the drawing of the label.*

 - [FI_Color selection_color](#) () const
- Gets the selection color.*

 - void [selection_color](#) ([FI_Color](#) a)
- Sets the selection color.*

 - void [set_active](#) ()
- Marks the widget as active without sending events or changing focus.*

 - void [set_changed](#) ()
- Marks the value of the widget as changed.*

 - void [set_output](#) ()
- Sets a widget to output only.*

 - void [set_visible](#) ()
- Makes the widget visible.*

 - void [set_visible_focus](#) ()
- Enables keyboard focus navigation with this widget.*

 - int [shortcut_label](#) () const
- Returns whether the widget's label uses '&' to indicate shortcuts.*

 - void [shortcut_label](#) (int value)
- Sets whether the widget's label uses '&' to indicate shortcuts.*

 - virtual void [show](#) ()
- Makes a widget visible.*

 - void [size](#) (int W, int H)
- Changes the size of the widget.*

 - int [take_focus](#) ()
- Gives the widget the keyboard focus.*

 - unsigned int [takeevents](#) () const
- Returns if the widget is able to take events.*

 - int [test_shortcut](#) ()
- Returns true if the widget's label contains the entered '&x' shortcut.*

 - const char * [tooltip](#) () const
- Gets the current tooltip text.*

 - void [tooltip](#) (const char *text)
- Sets the current tooltip text.*

 - [FI_Window * top_window](#) () const
- Returns a pointer to the top-level window for the widget.*

 - [FI_Window * top_window_offset](#) (int &xoff, int &yoff) const
- Finds the x/y offset of the current widget relative to the top-level window.*

 - [uchar type](#) () const
- Gets the widget type.*

 - void [type](#) ([uchar](#) t)
- Sets the widget type.*

 - int [use_accents_menu](#) ()
- Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.*

 - void * [user_data](#) () const
- Gets the user data for this widget.*

 - void [user_data](#) ([FI_Callback_User_Data](#) *v, bool auto_free)
- Sets the user data for this widget.*

- void **user_data** (void *v)
Sets the user data for this widget.
- int **vertical_label_margin** ()
Get the spacing between the label and the vertical edge of the widget.
- void **vertical_label_margin** (int px)
Set the spacing between the label and the vertical edge of the widget.
- unsigned int **visible** () const
Returns whether a widget is visible.
- unsigned int **visible_focus** () const
Checks whether this widget has a visible focus.
- void **visible_focus** (int v)
Modifies keyboard focus navigation.
- int **visible_r** () const
Returns whether a widget and all its parents are visible.
- int **w** () const
Gets the widget width.
- **FL_When** **when** () const
Returns the conditions under which the callback is called.
- void **when** (uchar i)
Sets the flags used to decide when a callback is called.
- **FL_Window** * **window** () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int **x** () const
Gets the widget position in its window.
- int **y** () const
Gets the widget position in its window.
- virtual **~FL_Widget** ()
Destroys the widget.

Public Attributes

- **FL_Scrollbar** **hscrollbar**
- **FL_Scrollbar** **scrollbar**

Protected Member Functions

- void **bbox** (int &, int &, int &, int &) const
Returns the bounding box for the interior of the scrolling area, inside the scrollbars.
- void **draw** () **FL_OVERRIDE**
Draws the widget.
- void **fix_scrollbar_order** ()
Ensure the scrollbars are the last children.
- int **on_insert** (**FL_Widget** *, int) **FL_OVERRIDE**
Change insert position of a child before it is added.
- int **on_move** (int, int) **FL_OVERRIDE**
Change new position of a child before it is moved.
- void **recalc_scrollbars** (**ScrollInfo** &si) const
Calculate visibility/size/position of scrollbars, find children's bounding box.

Protected Member Functions inherited from FL_Group

- `FL_Rect * bounds ()`
Returns the internal array of widget sizes and positions.
- `void draw_child (FL_Widget &widget) const`
Forces a child to redraw.
- `void draw_children ()`
Draws all children of the group.
- `void draw_outside_label (const FL_Widget &widget) const`
Parents normally call this to draw outside labels of child widgets.
- `virtual void on_remove (int)`
Allow derived groups to act when a child widget is removed from the group.
- `int * sizes ()`
Returns the internal array of widget sizes and positions.
- `void update_child (FL_Widget &widget) const`
Draws a child only if it needs it.

Protected Member Functions inherited from FL_Widget

- `void clear_flag (unsigned int c)`
Clears a flag in the flags mask.
- `void draw_backdrop () const`
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- `void draw_box () const`
Draws the widget box according its box style.
- `void draw_box (FL_Boxtype t, FL_Color c) const`
Draws a box of type t, of color c at the widget's position and size.
- `void draw_box (FL_Boxtype t, int x, int y, int w, int h, FL_Color c) const`
Draws a box of type t, of color c at the position X,Y and size W,H.
- `void draw_focus () const`
Draws a focus rectangle around the widget.
- `void draw_focus (FL_Boxtype t, int X, int Y, int W, int H) const`
Draws a focus rectangle around the widget.
- `void draw_focus (FL_Boxtype t, int x, int y, int w, int h, FL_Color bg) const`
Draws a focus box for the widget at the given position and size.
- `void draw_label () const`
Draws the widget's label at the defined label position.
- `void draw_label (int, int, int, int) const`
Draws the label in an arbitrary bounding box.
- `FL_Widget (int x, int y, int w, int h, const char *label=0L)`
Creates a widget at the given position and size.
- `unsigned int flags () const`
Gets the widget flags mask.
- `void h (int v)`
Internal use only.
- `void set_flag (unsigned int c)`
Sets a flag in the flags mask.
- `void w (int v)`
Internal use only.
- `void x (int v)`
Internal use only.
- `void y (int v)`
Internal use only.

Additional Inherited Members

Static Public Member Functions inherited from [FI_Group](#)

- static [FI_Group](#) * [current](#) ()
Returns the currently active group.
- static void [current](#) ([FI_Group](#) *g)
Sets the current group.

Static Public Member Functions inherited from [FI_Widget](#)

- static void [default_callback](#) ([FI_Widget](#) *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int [label_shortcut](#) (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int [test_shortcut](#) (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from [FI_Widget](#)

[USERFLAG1](#) = 1<<31 }
flags possible values enumeration.

11.123.1 Detailed Description

This container widget lets you maneuver around a set of widgets much larger than your window.

If the child widgets are larger than the size of this object then scrollbars will appear so that you can scroll over to them:

Figure 11.41 [FI_Scroll](#)

If all of the child widgets are packed together into a solid rectangle then you want to set [box\(\)](#) to [FL_NO_BOX](#) or one of the [_FRAME](#) types. This will result in the best output. However, if the child widgets are a sparse arrangement you must set [box\(\)](#) to a real [_BOX](#) type. This can result in some blinking during redrawing, but that can be solved by using a [FI_Double_Window](#).

The `FL_Scroll` widget calculates the bounding box of all its children by using their widget positions and sizes (x, y, w, h). Outside labels are not considered. If you need outside labels of any widgets or free space outside of this bounding box you can add a tiny invisible `FL_Box` at the relevant corner(s) of the `FL_Scroll` widget, for instance:

```
FL_Scroll scroll(100, 100, 200, 200); // FL_Scroll at (100, 100)
FL_Box(100, 100, 1, 1);             // FL_Box in top left corner
FL_Input(150, 120, 60, 30, "Input:"); // left most widget with label
// ... more widgets ...
scroll.end();
```

By default you can scroll in both directions, and the scrollbars disappear if the data will fit in the area of the scroll.

Use `FL_Scroll::type()` to change this as follows :

- 0 - No scrollbars
- `FL_Scroll::HORIZONTAL` - Only a horizontal scrollbar.
- `FL_Scroll::VERTICAL` - Only a vertical scrollbar.
- `FL_Scroll::BOTH` - The default is both scrollbars.
- `FL_Scroll::HORIZONTAL_ALWAYS` - Horizontal scrollbar always on, vertical always off.
- `FL_Scroll::VERTICAL_ALWAYS` - Vertical scrollbar always on, horizontal always off.
- `FL_Scroll::BOTH_ALWAYS` - Both always on.

Use `scrollbar.align(int)` (see void `FL_Widget::align(FL_Align)`) : to change what side the scrollbars are drawn on.

If the `FL_ALIGN_LEFT` bit is on, the vertical scrollbar is on the left. If the `FL_ALIGN_TOP` bit is on, the horizontal scrollbar is on the top. Note that only the alignment flags in scrollbar are considered. The flags in `hscrollbar` however are ignored.

This widget can also be used to pan around a single child widget "canvas". This child widget should be of your own class, with a `draw()` method that draws the contents. The scrolling is done by changing the `x()` and `y()` of the widget, so this child must use the `x()` and `y()` to position its drawing. To speed up drawing it should test `fl_not_clipped(int x,int y,int w,int h)` to find out if a particular area of the widget must be drawn.

Another very useful child is a single `FL_Pack`, which is itself a group that packs its children together and changes size to surround them. Filling the `FL_Pack` with `FL_Tabs` groups (and then putting normal widgets inside those) gives you a very powerful scrolling list of individually-openable panels.

Fluid lets you create these, but you can only lay out objects that fit inside the `FL_Scroll` without scrolling. Be sure to leave space for the scrollbars, as Fluid won't show these either.

You cannot use `FL_Window` as a child of this since the clipping is not conveyed to it when drawn, and it will draw over the scrollbars and neighboring objects.

11.123.2 Constructor & Destructor Documentation

11.123.2.1 FL_Scroll()

```
FL_Scroll::FL_Scroll (
    int X,
    int Y,
    int W,
    int H,
    const char * L = 0)
```

Creates a new `FL_Scroll` widget using the given position, size, and label string.

The default boxtype is `FL_NO_BOX`.

The destructor *also deletes all the children*. This allows a whole tree to be deleted at once, without having to keep a pointer to all the children in the user code. A kludge has been done so the `FL_Scroll` and all of its children can be automatic (local) variables, but you must declare the `FL_Scroll` *first*, so that it is destroyed last.

11.123.2.2 ~FL_Scroll()

```
FL_Scroll::~~FL_Scroll () [virtual]
```

The destructor also deletes all the children.

See also

[Fl_Group::~~Fl_Group\(\)](#)

11.123.3 Member Function Documentation

11.123.3.1 bbox()

```
void Fl_Scroll::bbox (
    int & X,
    int & Y,
    int & W,
    int & H) const [protected]
```

Returns the bounding box for the interior of the scrolling area, inside the scrollbars.

This method does not change the scrollbars or their visibility. First the scrollbar positions and visibility are calculated as they **should** be, according to the positions and sizes of the children. Then the bounding box is calculated.

You may need to call [redraw\(\)](#) to make sure the widget gets updated.

See also

[recalc_scrollbars\(\)](#)

11.123.3.2 delete_child()

```
int Fl_Scroll::delete_child (
    int index) [virtual]
```

Removes the widget at `index` from the group and deletes it.

This method does nothing if `index` is out of bounds or if `Fl_Group::child(index)` is one of the scrollbars.

Parameters

<code>in</code>	<code>index</code>	index of child to be removed
-----------------	--------------------	------------------------------

Returns

success (0) or error code

Return values

0	success
1	index out of range
2	widget not allowed to be removed (see note)

See also

[Fl_Group::delete_child\(int index\)](#)

Since

FLTK 1.4.0

Reimplemented from [Fl_Group](#).

11.123.3.3 draw()

```
void Fl_Scroll::draw () [protected], [virtual]
```

Draws the widget.

Never call this function directly. FLTK will schedule redrawing whenever needed. If your widget must be redrawn as soon as possible, call [redraw\(\)](#) instead.

Override this function to draw your own widgets.

If you ever need to call another widget's draw method *from within your own [draw\(\)](#) method*, e.g. for an embedded scrollbar, you can do it (because [draw\(\)](#) is virtual) like this:

```
Fl_Widget *s = &scrollbar; // scrollbar is an embedded Fl_Scrollbar
s->draw();                 // calls Fl_Scrollbar::draw()
```

Reimplemented from [Fl_Group](#).

11.123.3.4 fix_scrollbar_order()

```
void Fl_Scroll::fix_scrollbar_order () [protected]
```

Ensure the scrollbars are the last children.

When [Fl_Scroll](#) is instantiated the first child of the [Fl_Group](#) is the vertical scrollbar `scrollbar` and the second child is the horizontal scrollbar `hscrollbar`.

These two widgets must always be the last two widgets and in this order to guarantee the correct drawing order and event delivery.

Since FLTK 1.4.0 the new method [on_insert\(\)](#) modifies the insert position of other children if it would be after the scrollbars.

11.123.3.5 handle()

```
int Fl_Scroll::handle (
    int event) [virtual]
```

Handles the specified event.

You normally don't call this method directly, but instead let FLTK do it when the user interacts with the widget.

When implemented in a widget, this function must return 0 if the widget does not use the event or 1 otherwise.

Most of the time, you want to call the inherited [handle\(\)](#) method in your overridden method so that you don't short-circuit events that you don't handle. In this last case you should return the callee retval.

One exception to the rule in the previous paragraph is if you really want to *override* the behavior of the base class. This requires knowledge of the details of the inherited class.

In rare cases you may want to return 1 from your [handle\(\)](#) method although you don't really handle the event. The effect would be to *filter* event processing, for instance if you want to dismiss non-numeric characters (keypresses) in a numeric input widget. You may "ring the bell" or show another visual indication or drop the event silently. In such a case you must not call the [handle\(\)](#) method of the base class and tell FLTK that you *consumed* the event by returning 1 even if you didn't *do* anything with it.

Parameters

<code>in</code>	<code>event</code>	the kind of event received
-----------------	--------------------	----------------------------

Return values

<code>0</code>	if the event was not used or understood
<code>1</code>	if the event was used and can be deleted

See also

[Fl_Event](#)

Reimplemented from [Fl_Group](#).

11.123.3.6 on_insert()

```
int Fl_Scroll::on_insert (
    Fl_Widget * candidate,
    int index) [protected], [virtual]
```

Change insert position of a child before it is added.

Fix insert position if the new child is planned to be inserted after the scrollbars. We can assume that the scrollbars are always the last two children!

[Fl_Group](#) calls this when a new widget is added. We return the new index if the new widget would be added after the scrollbars.

Parameters

in	<i>candidate</i>	the candidate will be added to the child array_ after this method returns.
in	<i>index</i>	add the child at this position in the array_

Returns

- index to position the child as planned
- a new index to force the child to a different position
- 1 to keep the group from adding the candidate

Version

1.4.0

See also

[Fl_Group::on_insert\(Fl_Widget *candidate, int index\)](#)

Reimplemented from [Fl_Group](#).

11.123.3.7 on_move()

```
int Fl_Scroll::on_move (
    int old_index,
    int new_index) [protected], [virtual]
```

Change new position of a child before it is moved.

Fix new position if the new child is planned to be moved after the scrollbars. We can assume that the scrollbars are always the last two children!

[Fl_Group](#) calls this when a widget is moved within the list of children. We return a new index if the widget would be moved after the scrollbars.

Parameters

<i>old_index</i>	the current index of the child that will be moved
<i>new_index</i>	the new index of the child

Returns

- new index, possibly corrected to avoid last two scrollbar entries

Reimplemented from [Fl_Group](#).

11.123.3.8 recalc_scrollbars()

```
void Fl_Scroll::recalc_scrollbars (
    ScrollInfo & si) const [protected]
```

Calculate visibility/size/position of scrollbars, find children's bounding box.

The *si* parameter will be filled with data from the calculations. Derived classes can make use of this call to figure out the scrolling area eg. during [resize\(\)](#) handling.

This method does not change the scrollbars or their visibility. It calculates the scrollbar positions and visibility as they **should** be, according to the positions and sizes of the children.

You may need to call [redraw\(\)](#) to make sure the widget gets updated.

Parameters

in, out	<i>si</i>	– ScrollInfo structure, filled with data
---------	-----------	--

See also

[bbox\(\)](#)

11.123.3.9 `resize()`

```
void Fl_Scroll::resize (
    int X,
    int Y,
    int W,
    int H) [virtual]
```

Resizes the [Fl_Scroll](#) widget and moves its children if necessary.

The [Fl_Scroll](#) widget first resizes itself, and then it moves all its children if (and only if) the [Fl_Scroll](#) widget has been moved. The children are moved by the same amount as the [Fl_Scroll](#) widget has been moved, hence all children keep their relative positions.

Note

[Fl_Scroll::resize\(\)](#) does **not** call [Fl_Group::resize\(\)](#), and child widgets are **not** resized.

Since children of an [Fl_Scroll](#) are not resized, the [resizable\(\)](#) widget is ignored (if it is set).

The scrollbars are moved to their proper positions, as given by [Fl_Scroll::scrollbar.align\(\)](#), and switched on or off as necessary.

Note

Due to current (FLTK 1.3.x) implementation constraints some of this may effectively be postponed until the [Fl_Scroll](#) is drawn the next time. This may change in a future release.

See also

[Fl_Group::resizable\(\)](#)

[Fl_Widget::resize\(int,int,int,int\)](#)

Reimplemented from [Fl_Group](#).

11.123.3.10 `scroll_to()`

```
void Fl_Scroll::scroll_to (
    int X,
    int Y)
```

Moves the contents of the scroll group to a new position.

This is like moving the scrollbars of the [Fl_Scroll](#) around. For instance:

```
Fl_Scroll scroll (10,10,200,200);
Fl_Box b1 ( 10, 10,50,50,"b1"); // relative (x,y) = (0,0)
Fl_Box b2 ( 60, 60,50,50,"b2"); // relative (x,y) = (50,50)
Fl_Box b3 ( 60,110,50,50,"b3"); // relative (x,y) = (50,100)
// populate scroll with more children ...
scroll.end();
scroll.scroll_to(50,100);
```

will move the logical origin of the internal scroll area to (-50,-100) relative to the origin of the [Fl_Scroll](#) (10,10), i.e. [Fl_Box](#) b3 will be visible in the top left corner of the scroll area.

11.123.3.11 `scrollbar_size()` [1/2]

```
int Fl_Scroll::scrollbar_size () const [inline]
```

Gets the current size of the scrollbars' troughs, in pixels.

If this value is zero (default), this widget will use the [Fl::scrollbar_size\(\)](#) value as the scrollbar's width.

Returns

Scrollbar size in pixels, or 0 if the global [Fl::scrollbar_size\(\)](#) is being used.

See also

[Fl::scrollbar_size\(int\)](#)

11.123.3.12 scrollbar_size() [2/2]

```
void Fl_Scroll::scrollbar_size (
    int newSize) [inline]
```

Sets the pixel size of the scrollbars' troughs to `newSize`, in pixels.

Normally you should not need this method, and should use [Fl::scrollbar_size\(int\)](#) instead to manage the size of ALL your widgets' scrollbars. This ensures your application has a consistent UI, is the default behavior, and is normally what you want.

Only use THIS method if you really need to override the global scrollbar size. The need for this should be rare.

Setting `newSize` to the special value of 0 causes the widget to track the global [Fl::scrollbar_size\(\)](#), which is the default.

Parameters

in	<i>newSize</i>	Sets the scrollbar size in pixels. If 0 (default), scrollbar size tracks the global Fl::scrollbar_size()
----	----------------	---

See also

[Fl::scrollbar_size\(\)](#)

The documentation for this class was generated from the following files:

- Fl_Scroll.H
- Fl_Scroll.cxx

11.124 Fl_Scrollbar Class Reference

The [Fl_Scrollbar](#) widget displays a slider with arrow buttons at the ends of the scrollbar.

```
#include <Fl_Scrollbar.H>
```

Inheritance diagram for [Fl_Scrollbar](#):

**Public Member Functions**

- [Fl_Scrollbar](#) (int X, int Y, int W, int H, const char *L=0)
Creates a new [Fl_Scrollbar](#) widget with given position, size, and label.
- int [handle](#) (int) [FL_OVERRIDE](#)
Handles the specified event.
- int [linesize](#) () const
Get the size of step, in lines, that the arrow keys move.
- void [linesize](#) (int i)
This number controls how big the steps are that the arrow keys do.
- int [value](#) () const
Gets the integer value (position) of the slider in the scrollbar.
- int [value](#) (int p)

- *Sets the value (position) of the slider in the scrollbar.*
- `int value` (int pos, int windowSize, int first_line, int total_lines)
Sets the position, size and range of the slider in the scrollbar.
- `~FI_Scrollbar ()`
Destroys the Scrollbar.

Public Member Functions inherited from `FI_Slider`

- `void bounds` (double a, double b)
Sets the minimum (a) and maximum (b) values for the valuator widget.
- `FI_Slider` (int X, int Y, int W, int H, const char *L=0)
Creates a new `FI_Slider` widget using the given position, size, and label string.
- `FI_Slider` (uchar t, int X, int Y, int W, int H, const char *L)
Creates a new `FI_Slider` widget using the given type, position, size, and label string.
- `int handle` (int) `FL_OVERRIDE`
Handles the specified event.
- `int scrollvalue` (int pos, int size, int first, int total)
Sets the size and position of the sliding knob in the box.
- `FI_Boxtype slider` () const
Gets the slider box type.
- `void slider` (`FI_Boxtype` c)
Sets the slider box type.
- `float slider_size` () const
Get the dimensions of the moving piece of slider.
- `void slider_size` (double v)
Set the dimensions of the moving piece of slider.

Public Member Functions inherited from `FI_Valuator`

- `void bounds` (double a, double b)
Sets the minimum (a) and maximum (b) values for the valuator widget.
- `double clamp` (double)
Clamps the passed value to the valuator range.
- `virtual int format` (char *)
Uses internal rules to format the fields numerical value into the character array pointed to by the passed parameter.
- `double increment` (double, int)
Adds n times the step value to the passed value.
- `double maximum` () const
Gets the maximum value for the valuator.
- `void maximum` (double a)
Sets the maximum value for the valuator.
- `double minimum` () const
Gets the minimum value for the valuator.
- `void minimum` (double a)
Sets the minimum value for the valuator.
- `void precision` (int digits)
Sets the step value to $1.0 / 10^{\text{digits}}$.
- `void range` (double a, double b)
Sets the minimum and maximum values for the valuator.
- `double round` (double)
Round the passed value to the nearest step increment.
- `double step` () const

- Gets or sets the step value.*
- void **step** (double a, int b)
See double [FL_Valuator::step\(\)](#) const.
- void **step** (double s)
See double [FL_Valuator::step\(\)](#) const.
- void **step** (int a)
See double [FL_Valuator::step\(\)](#) const.
- double **value** () const
Gets the floating point(double) value.
- int **value** (double)
Sets the current value.
- ~**FL_Valuator** () **FL_OVERRIDE**
Destructor is accessible despite protected constructor.

Public Member Functions inherited from [FL_Widget](#)

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
Activates the widget.
- unsigned int **active** () const
Returns whether the widget is active.
- int **active_r** () const
Returns whether the widget and all of its parents are active.
- [FL_Align](#) **align** () const
Gets the label alignment.
- void **align** ([FL_Align](#) alignment)
Sets the label alignment.
- long **argument** () const
Gets the current user data (long) argument that is passed to the callback function.
- void **argument** (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class [FL_Gl_Window](#) * **as_gl_window** ()
Returns an [FL_Gl_Window](#) pointer if this widget is an [FL_Gl_Window](#).
- virtual class [FL_Gl_Window](#) const * **as_gl_window** () const
- virtual [FL_Group](#) * **as_group** ()
Returns an [FL_Group](#) pointer if this widget is an [FL_Group](#).
- virtual [FL_Group](#) const * **as_group** () const
- virtual [FL_Window](#) * **as_window** ()
Returns an [FL_Window](#) pointer if this widget is an [FL_Window](#).
- virtual [FL_Window](#) const * **as_window** () const
- void **bind_deimage** ([FL_Image](#) *img)
Sets the image to use as part of the widget label when in the inactive state.
- void **bind_deimage** (int f)
Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.
- void **bind_image** ([FL_Image](#) *img)
Sets the image to use as part of the widget label when in the active state.
- void **bind_image** (int f)
Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- [FL_Boxtype](#) **box** () const
Gets the box type of the widget.

- void **box** (**FI_Boxtype** new_box)
Sets the box type for the widget.
- **FI_Callback_p** **callback** () const
Gets the current callback function for the widget.
- void **callback** (**FI_Callback** *cb)
Sets the current callback function for the widget.
- void **callback** (**FI_Callback** *cb, **FI_Callback_User_Data** *p, bool auto_free)
Sets the current callback function and managed user data for the widget.
- void **callback** (**FI_Callback** *cb, void *p)
Sets the current callback function and data for the widget.
- void **callback** (**FI_Callback0** *cb)
Sets the current callback function for the widget.
- void **callback** (**FI_Callback1** *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int **changed** () const
Checks if the widget value changed since the last callback.
- void **clear_active** ()
Marks the widget as inactive without sending events or changing focus.
- void **clear_changed** ()
Marks the value of the widget as unchanged.
- void **clear_damage** (**uchar** c=0)
Clears or sets the damage flags.
- void **clear_output** ()
Sets a widget to accept input.
- void **clear_visible** ()
Hides the widget.
- void **clear_visible_focus** ()
Disables keyboard focus navigation with this widget.
- **FI_Color** **color** () const
Gets the background color of the widget.
- void **color** (**FI_Color** bg)
Sets the background color of the widget.
- void **color** (**FI_Color** bg, **FI_Color** sel)
Sets the background and selection color of the widget.
- **FI_Color** **color2** () const
For back compatibility only.
- void **color2** (unsigned a)
For back compatibility only.
- int **contains** (const **FI_Widget** *w) const
Checks if w is a child of this widget.
- void **copy_label** (const char *new_label)
Sets the current label.
- void **copy_tooltip** (const char *text)
Sets the current tooltip text.
- **uchar** **damage** () const
*Returns non-zero if **draw()** needs to be called.*
- void **damage** (**uchar** c)
Sets the damage bits for the widget.
- void **damage** (**uchar** c, int x, int y, int w, int h)
Sets the damage bits for an area inside the widget.
- int **damage_resize** (int, int, int, int)

- Internal use only.*

 - void `deactivate` ()
 - Deactivates the widget.*
 - `FL_Image * deimage` ()
 - Gets the image that is used as part of the widget label when in the inactive state.*
 - const `FL_Image * deimage` () const
 - Gets the image that is used as part of the widget label when in the inactive state.*
 - void `deimage` (`FL_Image &img`)
 - Sets the image to use as part of the widget label when in the inactive state.*
 - void `deimage` (`FL_Image *img`)
 - Sets the image to use as part of the widget label when in the inactive state.*
 - int `deimage_bound` () const
 - Returns whether the inactive image is managed by the widget.*
 - void `do_callback` (`FL_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
 - Calls the widget callback function with default arguments.*
 - void `do_callback` (`FL_Widget *widget`, long arg, `FL_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
 - Calls the widget callback function with arbitrary arguments.*
 - void `do_callback` (`FL_Widget *widget`, void *arg=0, `FL_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
 - Calls the widget callback function with arbitrary arguments.*
 - void `draw_label` (int, int, int, int, `FL_Align`) const
 - Draws the label in an arbitrary bounding box with an arbitrary alignment.*
 - int `h` () const
 - Gets the widget height.*
 - virtual void `hide` ()
 - Makes a widget invisible.*
 - int `horizontal_label_margin` ()
 - Get the spacing between the label and the horizontal edge of the widget.*
 - void `horizontal_label_margin` (int px)
 - Set the spacing between the label and the horizontal edge of the widget.*
 - `FL_Image * image` ()
 - Gets the image that is used as part of the widget label when in the active state.*
 - const `FL_Image * image` () const
 - Gets the image that is used as part of the widget label when in the active state.*
 - void `image` (`FL_Image &img`)
 - Sets the image to use as part of the widget label when in the active state.*
 - void `image` (`FL_Image *img`)
 - Sets the image to use as part of the widget label when in the active state.*
 - int `image_bound` () const
 - Returns whether the image is managed by the widget.*
 - int `inside` (const `FL_Widget *wgt`) const
 - Checks if this widget is a child of wgt.*
 - int `is_label_copied` () const
 - Returns whether the current label was assigned with `copy_label()`.*
 - const char * `label` () const
 - Gets the current label text.*
 - void `label` (const char *text)
 - Sets the current label pointer.*
 - void `label` (`FL_Labeltype` a, const char *b)
 - Shortcut to set the label text and type in one call.*
 - int `label_image_spacing` ()
 - Return the gap size between the label and the image.*

- void [label_image_spacing](#) (int gap)
Set the gap between the label and the image in pixels.
- [FI_Color labelcolor](#) () const
Gets the label color.
- void [labelcolor](#) ([FI_Color](#) c)
Sets the label color.
- [FI_Font labelfont](#) () const
Gets the font to use.
- void [labelfont](#) ([FI_Font](#) f)
Sets the font to use.
- [FI_Fonsize labelsiz](#)e () const
Gets the font size in pixels.
- void [labelsiz](#)e ([FI_Fonsize](#) pix)
Sets the font size in pixels.
- [FI_Labeltype labeltype](#) () const
Gets the label type.
- void [labeltype](#) ([FI_Labeltype](#) a)
Sets the label type.
- void [measure_label](#) (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- bool [needs_keyboard](#) () const
Returns whether this widget needs a keyboard.
- void [needs_keyboard](#) (bool needs)
Sets whether this widget needs a keyboard.
- unsigned int [output](#) () const
Returns if a widget is used for output only.
- [FI_Group * parent](#) () const
Returns a pointer to the parent widget.
- void [parent](#) ([FI_Group](#) *p)
Internal use only - "for hacks only".
- void [position](#) (int X, int Y)
Repositions the window or widget.
- void [redraw](#) ()
Schedules the drawing of the widget.
- void [redraw_label](#) ()
Schedules the drawing of the label.
- virtual void [resize](#) (int x, int y, int w, int h)
Changes the size or position of the widget.
- [FI_Color selection_color](#) () const
Gets the selection color.
- void [selection_color](#) ([FI_Color](#) a)
Sets the selection color.
- void [set_active](#) ()
Marks the widget as active without sending events or changing focus.
- void [set_changed](#) ()
Marks the value of the widget as changed.
- void [set_output](#) ()
Sets a widget to output only.
- void [set_visible](#) ()
Makes the widget visible.
- void [set_visible_focus](#) ()

- Enables keyboard focus navigation with this widget.*

 - int [shortcut_label](#) () const

Returns whether the widget's label uses '&' to indicate shortcuts.
- void [shortcut_label](#) (int value)

Sets whether the widget's label uses '&' to indicate shortcuts.
- virtual void [show](#) ()

Makes a widget visible.
- void [size](#) (int W, int H)

Changes the size of the widget.
- int [take_focus](#) ()

Gives the widget the keyboard focus.
- unsigned int [takeevents](#) () const

Returns if the widget is able to take events.
- int [test_shortcut](#) ()

Returns true if the widget's label contains the entered '&x' shortcut.
- const char * [tooltip](#) () const

Gets the current tooltip text.
- void [tooltip](#) (const char *text)

Sets the current tooltip text.
- [Fl_Window](#) * [top_window](#) () const

Returns a pointer to the top-level window for the widget.
- [Fl_Window](#) * [top_window_offset](#) (int &xoff, int &yoff) const

Finds the x/y offset of the current widget relative to the top-level window.
- [uchar](#) [type](#) () const

Gets the widget type.
- void [type](#) ([uchar](#) t)

Sets the widget type.
- int [use_accents_menu](#) ()

Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * [user_data](#) () const

Gets the user data for this widget.
- void [user_data](#) ([Fl_Callback_User_Data](#) *v, bool auto_free)

Sets the user data for this widget.
- void [user_data](#) (void *v)

Sets the user data for this widget.
- int [vertical_label_margin](#) ()

Get the spacing between the label and the vertical edge of the widget.
- void [vertical_label_margin](#) (int px)

Set the spacing between the label and the vertical edge of the widget.
- unsigned int [visible](#) () const

Returns whether a widget is visible.
- unsigned int [visible_focus](#) () const

Checks whether this widget has a visible focus.
- void [visible_focus](#) (int v)

Modifies keyboard focus navigation.
- int [visible_r](#) () const

Returns whether a widget and all its parents are visible.
- int [w](#) () const

Gets the widget width.
- [Fl_When](#) [when](#) () const

Returns the conditions under which the callback is called.

- void **when** (uchar i)
Sets the flags used to decide when a callback is called.
- **Fl_Window** * **window** () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int **x** () const
Gets the widget position in its window.
- int **y** () const
Gets the widget position in its window.
- virtual ~**Fl_Widget** ()
Destroys the widget.

Protected Member Functions

- void **draw** () **FL_OVERRIDE**
Draws the widget.

Protected Member Functions inherited from **Fl_Slider**

- void **draw** () **FL_OVERRIDE**
Draws the widget.
- void **draw** (int, int, int, int)
- int **handle** (int, int, int, int, int)

Protected Member Functions inherited from **Fl_Valuator**

- **Fl_Valuator** (int X, int Y, int W, int H, const char *L)
*Creates a new **Fl_Valuator** widget using the given position, size, and label string.*
- void **handle_drag** (double newvalue)
*Called during a drag operation, after an **FL_WHEN_CHANGED** event is received and before the callback.*
- void **handle_push** ()
Stores the current value in the previous value.
- void **handle_release** ()
*Called after an **FL_WHEN_RELEASE** event is received and before the callback.*
- int **horizontal** () const
*Tells if the valuator is an **FL_HORIZONTAL** one.*
- double **previous_value** () const
Gets the previous floating point value before an event changed it.
- void **set_value** (double v)
Sets the current floating point value.
- double **softclamp** (double)
Clamps the value, but accepts v if the previous value is not already out of range.
- virtual void **value_damage** ()
Asks for partial redraw.

Protected Member Functions inherited from **Fl_Widget**

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
*If **FL_ALIGN_IMAGE_BACKDROP** is set, the image or deimage will be drawn.*
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** (**Fl_Boxtype** t, **Fl_Color** c) const

- Draws a box of type t, of color c at the widget's position and size.*
- void **draw_box** (FI_Boxtype t, int x, int y, int w, int h, FI_Color c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const
Draws a focus rectangle around the widget.
- void **draw_focus** (FI_Boxtype t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void **draw_focus** (FI_Boxtype t, int x, int y, int w, int h, FI_Color bg) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- FI_Widget (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

Additional Inherited Members

Static Public Member Functions inherited from FI_Widget

- static void **default_callback** (FI_Widget *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int **label_shortcut** (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int **test_shortcut** (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from FI_Widget

- enum {
INACTIVE = 1<<0 , **INVISIBLE** = 1<<1 , **OUTPUT** = 1<<2 , **NOBORDER** = 1<<3 ,
FORCE_POSITION = 1<<4 , **NON_MODAL** = 1<<5 , **SHORTCUT_LABEL** = 1<<6 , **CHANGED** = 1<<7
, **OVERRIDE** = 1<<8 , **VISIBLE_FOCUS** = 1<<9 , **COPIED_LABEL** = 1<<10 , **CLIP_CHILDREN** = 1<<11
, **MENU_WINDOW** = 1<<12 , **TOOLTIP_WINDOW** = 1<<13 , **MODAL** = 1<<14 , **NO_OVERLAY** = 1<<15
, **GROUP_RELATIVE** = 1<<16 , **COPIED_TOOLTIP** = 1<<17 , **FULLSCREEN** = 1<<18 , **MAC_USE_ACCENTS_MENU**
= 1<<19 , **NEEDS_KEYBOARD** = 1<<20 , **IMAGE_BOUND** = 1<<21 , **DEIMAGE_BOUND** = 1<<22 ,

USERFLAG1 = 1<<31 }
flags possible values enumeration.

11.124.1 Detailed Description

The `Fl_Scrollbar` widget displays a slider with arrow buttons at the ends of the scrollbar.

Clicking on the arrows move up/left and down/right by `linesize()`. Scrollbars also accept `FL_SHORTCUT` events: the arrows move by `linesize()`, and vertical scrollbars take Page Up/Down (they move by the page size minus `linesize()`) and Home/End (they jump to the top or bottom).

Scrollbars have `step(1)` preset (they always return integers). If desired you can set the `step()` to non-integer values. You will then have to use casts to get at the floating-point versions of `value()` from `Fl_Slider`.

Figure 11.42 `Fl_Scrollbar`

11.124.2 Constructor & Destructor Documentation

11.124.2.1 `Fl_Scrollbar()`

```
Fl_Scrollbar::Fl_Scrollbar (
    int X,
    int Y,
    int W,
    int H,
    const char * L = 0)
```

Creates a new `Fl_Scrollbar` widget with given position, size, and label.

You need to do `type(FL_HORIZONTAL)` if you want a horizontal scrollbar.

11.124.3 Member Function Documentation

11.124.3.1 `draw()`

```
void Fl_Scrollbar::draw () [protected], [virtual]
```

Draws the widget.

Never call this function directly. FLTK will schedule redrawing whenever needed. If your widget must be redrawn as soon as possible, call `redraw()` instead.

Override this function to draw your own widgets.

If you ever need to call another widget's draw method *from within your own `draw()` method*, e.g. for an embedded scrollbar, you can do it (because `draw()` is virtual) like this:

```
Fl_Widget *s = &scrollbar; // scrollbar is an embedded Fl_Scrollbar
s->draw();                 // calls Fl_Scrollbar::draw()
```

Implements `Fl_Widget`.

11.124.3.2 `handle()`

```
int Fl_Scrollbar::handle (
    int event) [virtual]
```

Handles the specified event.

You normally don't call this method directly, but instead let FLTK do it when the user interacts with the widget.

When implemented in a widget, this function must return 0 if the widget does not use the event or 1 otherwise.

Most of the time, you want to call the inherited `handle()` method in your overridden method so that you don't short-circuit events that you don't handle. In this last case you should return the callee retval.

One exception to the rule in the previous paragraph is if you really want to *override* the behavior of the base class. This requires knowledge of the details of the inherited class.

In rare cases you may want to return 1 from your [handle\(\)](#) method although you don't really handle the event. The effect would be to *filter* event processing, for instance if you want to dismiss non-numeric characters (keypresses) in a numeric input widget. You may "ring the bell" or show another visual indication or drop the event silently. In such a case you must not call the [handle\(\)](#) method of the base class and tell FLTK that you *consumed* the event by returning 1 even if you didn't *do* anything with it.

Parameters

in	event	the kind of event received
--------------------	-----------------------	----------------------------

Return values

0	if the event was not used or understood
1	if the event was used and can be deleted

See also

[Fl_Event](#)

Reimplemented from [Fl_Widget](#).

11.124.3.3 linesize()

```
void Fl_Scrollbar::linesize (
    int i) [inline]
```

This number controls how big the steps are that the arrow keys do.

In addition page up/down move by the size last sent to [value\(\)](#) minus one [linesize\(\)](#). The default is 16.

11.124.3.4 value() [1/3]

```
int Fl_Scrollbar::value () const [inline]
```

Gets the integer value (position) of the slider in the scrollbar.

You can get the floating point value with [Fl_Slider::value\(\)](#).

See also

[Fl_Scrollbar::value\(int p\)](#)

[Fl_Scrollbar::value\(int pos, int size, int first, int total\)](#)

11.124.3.5 value() [2/3]

```
int Fl_Scrollbar::value (
    int p) [inline]
```

Sets the value (position) of the slider in the scrollbar.

See also

[Fl_Scrollbar::value\(\)](#)

[Fl_Scrollbar::value\(int pos, int size, int first, int total\)](#)

11.124.3.6 value() [3/3]

```
int Fl_Scrollbar::value (
    int pos,
    int windowSize,
    int first_line,
    int total_lines) [inline]
```

Sets the position, size and range of the slider in the scrollbar.

Parameters

in	<i>pos</i>	position, first line displayed
in	<i>windowSize</i>	number of lines displayed
in	<i>first_line</i>	number of first line
in	<i>total_lines</i>	total number of lines

You should call this every time your window changes size, your data changes size, or your scroll position changes (even if in response to a callback from this scrollbar). All necessary calls to [redraw\(\)](#) are done.

Calls [Fl_Slider::scrollvalue\(int pos, int size, int first, int total\)](#).

The documentation for this class was generated from the following files:

- `Fl_Scrollbar.H`
- `Fl_Scrollbar.cxx`

11.125 Fl_Scroll::Fl_Scrollbar_Data Struct Reference

A local struct to manage a scrollbar's xywh region and tab values.

```
#include <Fl_Scroll.H>
```

Public Attributes

- int **first**
scrollbar tab's "number of first line"
- int **h**
- int **pos**
scrollbar tab's "position of first line displayed"
- int **size**
scrollbar tab's "size of window in lines"
- int **total**
scrollbar tab's "total number of lines"
- int **w**
- int **x**
- int **y**

11.125.1 Detailed Description

A local struct to manage a scrollbar's xywh region and tab values.

The documentation for this struct was generated from the following file:

- `Fl_Scroll.H`

11.126 Fl_Secret_Input Class Reference

The [Fl_Secret_Input](#) class is a subclass of [Fl_Input](#) that displays its input as a string of placeholders.

```
#include <Fl_Secret_Input.H>
```

Inheritance diagram for [Fl_Secret_Input](#):

Public Member Functions

- [Fl_Secret_Input](#) (int X, int Y, int W, int H, const char *l=0)
Creates a new [Fl_Secret_Input](#) widget using the given position, size, and label string.
- int [handle](#) (int) [FL_OVERRIDE](#)
Handles the specified event.

Public Member Functions inherited from [Fl_Input](#)

- [Fl_Input](#) (int, int, int, int, const char *l=0)
Creates a new [Fl_Input](#) widget using the given position, size, and label string.

Public Member Functions inherited from [Fl_Input_](#)

- int [append](#) (const char *t, int l=0, char keep_selection=0)
Append text at the end.
- bool [can_redo](#) () const
Check if there is a redo action available.
- bool [can_undo](#) () const
Check if the last operation can be undone.
- int [copy](#) (int clipboard)
Put the current selection into the clipboard.
- int [copy_cuts](#) ()
Copies the yank buffer to the clipboard.
- [Fl_Color](#) [cursor_color](#) () const
Gets the color of the cursor.
- void [cursor_color](#) ([Fl_Color](#) n)
Sets the color of the cursor.
- int [cut](#) ()
Deletes the current selection.
- int [cut](#) (int a, int b)
Deletes all characters between index a and b.
- int [cut](#) (int n)
Deletes the next n bytes rounded to characters before or after the cursor.
- double [dvalue](#) () const
Returns the widget text interpreted as a floating point number.
- [Fl_Input_](#) (int, int, int, int, const char *l=0)
Creates a new [Fl_Input_](#) widget.
- unsigned int [index](#) (int i) const
Returns the character at index i.
- int [input_type](#) () const
Gets the input field type.

- void `input_type` (int t)
Sets the input field type.
- int `insert` (const char *t, int l=0)
Inserts text at the cursor position.
- int `insert_position` () const
Gets the position of the text cursor.
- int `insert_position` (int p)
Sets the cursor position and mark.
- int `insert_position` (int p, int m)
Sets the index for the cursor and mark.
- int `ivalue` () const
Returns the widget text interpreted as a signed integer.
- int `mark` () const
Gets the current selection mark.
- int `mark` (int m)
Sets the current selection mark.
- int `maximum_size` () const
Gets the maximum length of the input field in characters.
- void `maximum_size` (int m)
Sets the maximum length of the input field in characters.
- int `position` () const
- int `position` (int p)
- int `position` (int p, int m)
- int `readonly` () const
Gets the read-only state of the input field.
- void `readonly` (int b)
Sets the read-only state of the input field.
- int `redo` ()
Redo previous undo operation.
- int `replace` (int b, int e, const char *text, int ilen=0)
Deletes text from b to e and inserts the new string text.
- void `resize` (int, int, int, int) `FL_OVERRIDE`
Changes the size of the widget.
- int `shortcut` () const
Return the shortcut key associated with this widget.
- void `shortcut` (int s)
Sets the shortcut key associated with this widget.
- int `size` () const
Returns the number of bytes in `value()`.
- void `size` (int W, int H)
Sets the width and height of this widget.
- int `static_value` (const char *)
Changes the widget text.
- int `static_value` (const char *, int)
Changes the widget text.
- int `tab_nav` () const
Gets whether the Tab key causes focus navigation in multiline input fields or not.
- void `tab_nav` (int val)
Sets whether the Tab key does focus navigation, or inserts tab characters into `FL_Multiline_Input`.
- `FL_Color` `textcolor` () const
Gets the color of the text in the input field.

- void `textcolor` (`FI_Color` n)
Sets the color of the text in the input field.
- `FI_Font` `textfont` () const
Gets the font of the text in the input field.
- void `textfont` (`FI_Font` s)
Sets the font of the text in the input field.
- `FI_Fontsize` `textsize` () const
Gets the size of the text in the input field.
- void `textsize` (`FI_Fontsize` s)
Sets the size of the text in the input field.
- int `undo` ()
Undoes previous changes to the text buffer.
- const char * `value` () const
Returns the text displayed in the widget.
- int `value` (const char *)
Changes the widget text.
- int `value` (const char *, int)
Changes the widget text.
- int `value` (double value)
Changes the widget text to a floating point number ("%g").
- int `value` (int value)
Changes the widget text to a signed integer number.
- int `wrap` () const
Gets the word wrapping state of the input field.
- void `wrap` (int b)
Sets the word wrapping state of the input field.
- ~`FI_Input` ()
Destroys the widget.

Public Member Functions inherited from `FI_Widget`

- void `_clear_fullscreen` ()
- void `_set_fullscreen` ()
- void `activate` ()
Activates the widget.
- unsigned int `active` () const
Returns whether the widget is active.
- int `active_r` () const
Returns whether the widget and all of its parents are active.
- `FI_Align` `align` () const
Gets the label alignment.
- void `align` (`FI_Align` alignment)
Sets the label alignment.
- long `argument` () const
Gets the current user data (long) argument that is passed to the callback function.
- void `argument` (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class `FI_Gl_Window` * `as_gl_window` ()
Returns an `FI_Gl_Window` pointer if this widget is an `FI_Gl_Window`.
- virtual class `FI_Gl_Window` const * `as_gl_window` () const
- virtual `FI_Group` * `as_group` ()

- Returns an [FL_Group](#) pointer if this widget is an [FL_Group](#).*

 - virtual [FL_Group](#) const * **as_group** () const
 - virtual [FL_Window](#) * **as_window** ()
- Returns an [FL_Window](#) pointer if this widget is an [FL_Window](#).*

 - virtual [FL_Window](#) const * **as_window** () const
 - void **bind_deimage** ([FL_Image](#) *img)

Sets the image to use as part of the widget label when in the inactive state.

 - void **bind_deimage** (int f)

Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.

 - void **bind_image** ([FL_Image](#) *img)

Sets the image to use as part of the widget label when in the active state.

 - void **bind_image** (int f)

Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- [FL_Boxtype](#) **box** () const
- Gets the box type of the widget.*

 - void **box** ([FL_Boxtype](#) new_box)

Sets the box type for the widget.
- [FL_Callback_p](#) **callback** () const
- Gets the current callback function for the widget.*

 - void **callback** ([FL_Callback](#) *cb)

Sets the current callback function for the widget.
- void **callback** ([FL_Callback](#) *cb, [FL_Callback_User_Data](#) *p, bool auto_free)
- Sets the current callback function and managed user data for the widget.*

 - void **callback** ([FL_Callback](#) *cb, void *p)

Sets the current callback function and data for the widget.
- void **callback** ([FL_Callback0](#) *cb)
- Sets the current callback function for the widget.*

 - void **callback** ([FL_Callback1](#) *cb, long p=0)

Sets the current callback function for the widget.
- unsigned int **changed** () const
- Checks if the widget value changed since the last callback.*

 - void **clear_active** ()

Marks the widget as inactive without sending events or changing focus.
- void **clear_changed** ()
- Marks the value of the widget as unchanged.*

 - void **clear_damage** (uchar c=0)

Clears or sets the damage flags.
- void **clear_output** ()
- Sets a widget to accept input.*

 - void **clear_visible** ()

Hides the widget.
- void **clear_visible_focus** ()
- Disables keyboard focus navigation with this widget.*

 - [FL_Color](#) **color** () const

Gets the background color of the widget.
- void **color** ([FL_Color](#) bg)
- Sets the background color of the widget.*

 - void **color** ([FL_Color](#) bg, [FL_Color](#) sel)

Sets the background and selection color of the widget.
- [FL_Color](#) **color2** () const
- For back compatibility only.*

- void [color2](#) (unsigned a)
For back compatibility only.
- int [contains](#) (const [FL_Widget](#) *w) const
Checks if w is a child of this widget.
- void [copy_label](#) (const char *new_label)
Sets the current label.
- void [copy_tooltip](#) (const char *text)
Sets the current tooltip text.
- [uchar](#) [damage](#) () const
Returns non-zero if [draw\(\)](#) needs to be called.
- void [damage](#) ([uchar](#) c)
Sets the damage bits for the widget.
- void [damage](#) ([uchar](#) c, int x, int y, int w, int h)
Sets the damage bits for an area inside the widget.
- int [damage_resize](#) (int, int, int, int)
Internal use only.
- void [deactivate](#) ()
Deactivates the widget.
- [FL_Image](#) * [deimage](#) ()
Gets the image that is used as part of the widget label when in the inactive state.
- const [FL_Image](#) * [deimage](#) () const
Gets the image that is used as part of the widget label when in the inactive state.
- void [deimage](#) ([FL_Image](#) &img)
Sets the image to use as part of the widget label when in the inactive state.
- void [deimage](#) ([FL_Image](#) *img)
Sets the image to use as part of the widget label when in the inactive state.
- int [deimage_bound](#) () const
Returns whether the inactive image is managed by the widget.
- void [do_callback](#) ([FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
Calls the widget callback function with default arguments.
- void [do_callback](#) ([FL_Widget](#) *widget, long arg, [FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
Calls the widget callback function with arbitrary arguments.
- void [do_callback](#) ([FL_Widget](#) *widget, void *arg=0, [FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
Calls the widget callback function with arbitrary arguments.
- void [draw_label](#) (int, int, int, int, [FL_Align](#)) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int [h](#) () const
Gets the widget height.
- virtual void [hide](#) ()
Makes a widget invisible.
- int [horizontal_label_margin](#) ()
Get the spacing between the label and the horizontal edge of the widget.
- void [horizontal_label_margin](#) (int px)
Set the spacing between the label and the horizontal edge of the widget.
- [FL_Image](#) * [image](#) ()
Gets the image that is used as part of the widget label when in the active state.
- const [FL_Image](#) * [image](#) () const
Gets the image that is used as part of the widget label when in the active state.
- void [image](#) ([FL_Image](#) &img)
Sets the image to use as part of the widget label when in the active state.
- void [image](#) ([FL_Image](#) *img)

- Sets the image to use as part of the widget label when in the active state.*

 - `int image_bound () const`
Returns whether the image is managed by the widget.
 - `int inside (const FL_Widget *wgt) const`
Checks if this widget is a child of wgt.
 - `int is_label_copied () const`
Returns whether the current label was assigned with `copy_label()`.
 - `const char * label () const`
Gets the current label text.
 - `void label (const char *text)`
Sets the current label pointer.
 - `void label (FL_Labeltype a, const char *b)`
Shortcut to set the label text and type in one call.
 - `int label_image_spacing ()`
Return the gap size between the label and the image.
 - `void label_image_spacing (int gap)`
Set the gap between the label and the image in pixels.
 - `FL_Color labelcolor () const`
Gets the label color.
 - `void labelcolor (FL_Color c)`
Sets the label color.
 - `FL_Font labelfont () const`
Gets the font to use.
 - `void labelfont (FL_Font f)`
Sets the font to use.
 - `FL_Fonsize labelsiz (int) const`
Gets the font size in pixels.
 - `void labelsiz (FL_Fonsize pix)`
Sets the font size in pixels.
 - `FL_Labeltype labeltype () const`
Gets the label type.
 - `void labeltype (FL_Labeltype a)`
Sets the label type.
 - `void measure_label (int &ww, int &hh) const`
Sets width ww and height hh accordingly with the label size.
 - `bool needs_keyboard () const`
Returns whether this widget needs a keyboard.
 - `void needs_keyboard (bool needs)`
Sets whether this widget needs a keyboard.
 - `unsigned int output () const`
Returns if a widget is used for output only.
 - `FL_Group * parent () const`
Returns a pointer to the parent widget.
 - `void parent (FL_Group *p)`
Internal use only - "for hacks only".
 - `void position (int X, int Y)`
Repositions the window or widget.
 - `void redraw ()`
Schedules the drawing of the widget.
 - `void redraw_label ()`
Schedules the drawing of the label.

- [FI_Color selection_color](#) () const
Gets the selection color.
- void [selection_color](#) ([FI_Color](#) a)
Sets the selection color.
- void [set_active](#) ()
Marks the widget as active without sending events or changing focus.
- void [set_changed](#) ()
Marks the value of the widget as changed.
- void [set_output](#) ()
Sets a widget to output only.
- void [set_visible](#) ()
Makes the widget visible.
- void [set_visible_focus](#) ()
Enables keyboard focus navigation with this widget.
- int [shortcut_label](#) () const
Returns whether the widget's label uses '&' to indicate shortcuts.
- void [shortcut_label](#) (int value)
Sets whether the widget's label uses '&' to indicate shortcuts.
- virtual void [show](#) ()
Makes a widget visible.
- void [size](#) (int W, int H)
Changes the size of the widget.
- int [take_focus](#) ()
Gives the widget the keyboard focus.
- unsigned int [takeevents](#) () const
Returns if the widget is able to take events.
- int [test_shortcut](#) ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * [tooltip](#) () const
Gets the current tooltip text.
- void [tooltip](#) (const char *text)
Sets the current tooltip text.
- [FI_Window](#) * [top_window](#) () const
Returns a pointer to the top-level window for the widget.
- [FI_Window](#) * [top_window_offset](#) (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- [uchar](#) type () const
Gets the widget type.
- void [type](#) ([uchar](#) t)
Sets the widget type.
- int [use_accents_menu](#) ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * [user_data](#) () const
Gets the user data for this widget.
- void [user_data](#) ([FI_Callback_User_Data](#) *v, bool auto_free)
Sets the user data for this widget.
- void [user_data](#) (void *v)
Sets the user data for this widget.
- int [vertical_label_margin](#) ()
Get the spacing between the label and the vertical edge of the widget.
- void [vertical_label_margin](#) (int px)

- Set the spacing between the label and the vertical edge of the widget.*

 - unsigned int `visible` () const
Returns whether a widget is visible.
 - unsigned int `visible_focus` () const
Checks whether this widget has a visible focus.
 - void `visible_focus` (int v)
Modifies keyboard focus navigation.
 - int `visible_r` () const
Returns whether a widget and all its parents are visible.
 - int `w` () const
Gets the widget width.
 - `FL_When` when () const
Returns the conditions under which the callback is called.
 - void `when` (uchar i)
Sets the flags used to decide when a callback is called.
 - `FL_Window * window` () const
Returns a pointer to the nearest parent window up the widget hierarchy.
 - int `x` () const
Gets the widget position in its window.
 - int `y` () const
Gets the widget position in its window.
 - virtual `~FL_Widget` ()
Destroys the widget.

Additional Inherited Members

Static Public Member Functions inherited from `FL_Widget`

- static void `default_callback` (`FL_Widget *widget`, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int `label_shortcut` (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int `test_shortcut` (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Static Public Attributes inherited from `FL_Input`

- static const char * `copy_menu_text` = "Copy"
[this text may be customized at run-time]
- static const char * `cut_menu_text` = "Cut"
[this text may be customized at run-time]
- static const char * `paste_menu_text` = "Paste"
[this text may be customized at run-time]

Protected Types inherited from `FL_Widget`

- enum {
`INACTIVE` = 1<<0 , `INVISIBLE` = 1<<1 , `OUTPUT` = 1<<2 , `NOBORDER` = 1<<3 ,
`FORCE_POSITION` = 1<<4 , `NON_MODAL` = 1<<5 , `SHORTCUT_LABEL` = 1<<6 , `CHANGED` = 1<<7
, `OVERRIDE` = 1<<8 , `VISIBLE_FOCUS` = 1<<9 , `COPIED_LABEL` = 1<<10 , `CLIP_CHILDREN` = 1<<11
, `MENU_WINDOW` = 1<<12 , `TOOLTIP_WINDOW` = 1<<13 , `MODAL` = 1<<14 , `NO_OVERLAY` = 1<<15
,

```
GROUP_RELATIVE = 1<<16 , COPIED_TOOLTIP = 1<<17 , FULLSCREEN = 1<<18 , MAC_USE_ACCENTS_MENU
= 1<<19 ,
NEEDS_KEYBOARD = 1<<20 , IMAGE_BOUND = 1<<21 , DEIMAGE_BOUND = 1<<22 ,
AUTO_DELETE_USER_DATA = 1<<23 ,
MAXIMIZED = 1<<24 , POPUP = 1<<25 , USERFLAG3 = 1<<29 , USERFLAG2 = 1<<30 ,
USERFLAG1 = 1<<31 }
```

flags possible values enumeration.

Protected Member Functions inherited from FI_Input

- void **draw** () **FL_OVERRIDE**
Draws the widget.
- int **handle_key** ()
Handles a keystroke.
- int **handle_rmb** ()
Handle right mouse button down events.

Protected Member Functions inherited from FI_Input_

- int **apply_undo** ()
Apply the current undo/redo operation.
- void **drawtext** (int, int, int, int)
Draws the text in the passed bounding box.
- void **drawtext** (int, int, int, int, bool draw_active)
Draws the text in the passed bounding box.
- void **handle_mouse** (int, int, int, int, int keepmark=0)
Handles mouse clicks and mouse moves.
- int **handletext** (int e, int, int, int, int)
Handles all kinds of text field related events.
- int **line_end** (int i) const
Finds the end of a line.
- int **line_start** (int i) const
Finds the start of a line.
- int **linesPerPage** ()
- void **maybe_do_callback** (FI_Callback_Reason reason=FL_REASON_UNKNOWN)
- int **up_down_position** (int, int keepmark=0)
Moves the cursor to the column given by up_down_pos.
- int **word_end** (int i) const
Finds the end of a word.
- int **word_start** (int i) const
Finds the start of a word.
- int **xscroll** () const
- int **yscroll** () const
- void **yscroll** (int yOffset)

Protected Member Functions inherited from FI_Widget

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.

- void **draw_box** ([Fl_Boxtype](#) t, [Fl_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** ([Fl_Boxtype](#) t, int x, int y, int w, int h, [Fl_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const
Draws a focus rectangle around the widget.
- void **draw_focus** ([Fl_Boxtype](#) t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void **draw_focus** ([Fl_Boxtype](#) t, int x, int y, int w, int h, [Fl_Color](#) bg) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [Fl_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

11.126.1 Detailed Description

The [Fl_Secret_Input](#) class is a subclass of [Fl_Input](#) that displays its input as a string of placeholders. Depending on the platform this placeholder is either the asterisk ('*') or the Unicode bullet character (U+2022). This subclass is usually used to receive passwords and other "secret" information.

11.126.2 Constructor & Destructor Documentation

11.126.2.1 [Fl_Secret_Input](#)()

```
Fl_Secret_Input::Fl_Secret_Input (
    int X,
    int Y,
    int W,
    int H,
    const char * l = 0)
```

Creates a new [Fl_Secret_Input](#) widget using the given position, size, and label string. The default boxtype is `FL_DOWN_BOX`. Inherited destructor destroys the widget and any value associated with it.

11.126.3 Member Function Documentation

11.126.3.1 handle()

```
int Fl_Secret_Input::handle (
    int event) [virtual]
```

Handles the specified event.

You normally don't call this method directly, but instead let FLTK do it when the user interacts with the widget.

When implemented in a widget, this function must return 0 if the widget does not use the event or 1 otherwise.

Most of the time, you want to call the inherited [handle\(\)](#) method in your overridden method so that you don't short-circuit events that you don't handle. In this last case you should return the callee retval.

One exception to the rule in the previous paragraph is if you really want to *override* the behavior of the base class. This requires knowledge of the details of the inherited class.

In rare cases you may want to return 1 from your [handle\(\)](#) method although you don't really handle the event. The effect would be to *filter* event processing, for instance if you want to dismiss non-numeric characters (keypresses) in a numeric input widget. You may "ring the bell" or show another visual indication or drop the event silently. In such a case you must not call the [handle\(\)](#) method of the base class and tell FLTK that you *consumed* the event by returning 1 even if you didn't *do* anything with it.

Parameters

in	<i>event</i>	the kind of event received
----	--------------	----------------------------

Return values

0	if the event was not used or understood
1	if the event was used and can be deleted

See also

[Fl_Event](#)

Reimplemented from [Fl_Input](#).

The documentation for this class was generated from the following files:

- Fl_Secret_Input.H
- Fl_Input.cxx

11.127 Fl_Select_Browser Class Reference

The class is a subclass of [Fl_Browser](#) which lets the user select a single item, or no items by clicking on the empty space.

```
#include <Fl_Select_Browser.H>
```

Inheritance diagram for Fl_Select_Browser:

Public Member Functions

- [FL_Select_Browser](#) (int X, int Y, int W, int H, const char *L=0)
Creates a new [FL_Select_Browser](#) widget using the given position, size, and label string.

Public Member Functions inherited from [FL_Browser](#)

- void [add](#) (const char *newtext, void *d=0)
Adds a new line to the end of the browser.
- void [bottomline](#) (int line)
*Scrolls the browser so the bottom item in the browser is showing the specified *line*.*
- void [clear](#) ()
Removes all the lines in the browser.
- char [column_char](#) () const
Gets the current column separator character.
- void [column_char](#) (char c)
*Sets the column separator to *c*.*
- const int * [column_widths](#) () const
Gets the current column width array.
- void [column_widths](#) (const int *arr)
*Sets the current array to *arr*.*
- void * [data](#) (int line) const
*Returns the user [data\(\)](#) for specified *line*.*
- void [data](#) (int line, void *d)
*Sets the user data for specified *line* to *d*.*
- void [display](#) (int line, int val=1)
For back compatibility.
- int [displayed](#) (int line) const
*Returns non-zero if *line* has been scrolled to a position where it is being displayed.*
- [FL_Browser](#) (int X, int Y, int W, int H, const char *L=0)
The constructor makes an empty browser.
- char [format_char](#) () const
Gets the current format code prefix character, which by default is '@'.
- void [format_char](#) (char c)
*Sets the current format code prefix character to *c*.*
- void [hide](#) () [FL_OVERRIDE](#)
Hides the entire [FL_Browser](#) widget – opposite of [show\(\)](#).
- void [hide](#) (int line)
*Makes *line* invisible, preventing selection by the user.*
- [FL_Image](#) * [icon](#) (int line) const
*Returns the icon currently defined for *line*.*
- void [icon](#) (int line, [FL_Image](#) *icon)
*Set the image icon for *line* to the value *icon*.*
- void [insert](#) (int line, const char *newtext, void *d=0)
*Insert a new entry whose label is *newtext* above given *line*, optional data *d*.*
- void [lineposition](#) (int line, [FL_Line_Position](#) pos)
*Updates the browser so that *line* is shown at position *pos*.*
- int [load](#) (const char *filename)
Clears the browser and reads the file, adding each line from the file to the browser.
- void [make_visible](#) (int line)
*Make the item at the specified *line* [visible\(\)](#).*
- void [middleline](#) (int line)

- Scrolls the browser so the middle item in the browser is showing the specified line.*

 - void **move** (int to, int from)

Line from is removed and reinserted at to.
- void **remove** (int line)

Remove entry for given line number, making the browser one line shorter.
- void **remove_icon** (int line)

Removes the icon for line.
- void **replace** (int a, const char *b)

For back compatibility only.
- int **select** (int line, int val=1)

Sets the selection state of the item at line to the value val.
- int **selected** (int line) const

Returns 1 if specified line is selected, 0 if not.
- void **show** () **FL_OVERRIDE**

Shows the entire Fl_Browser widget – opposite of hide().
- void **show** (int line)

Makes line visible, and available for selection by user.
- int **size** () const

Returns how many lines are in the browser.
- void **size** (int W, int H)
- void **swap** (int a, int b)

Swaps two browser lines a and b.
- const char * **text** (int line) const

Returns the label text for the specified line.
- void **text** (int line, const char *newtext)

Sets the text for the specified line to newtext.
- **Fl_Fontsize** **textsize** () const

Gets the default text size (in pixels) for the lines in the browser.
- void **textsize** (**Fl_Fontsize** newSize)

Sets the default text size (in pixels) for the lines in the browser to newSize.
- int **topline** () const

Returns the line that is currently visible at the top of the browser.
- void **topline** (int line)

Scrolls the browser so the top item in the browser is showing the specified line.
- int **value** () const

Returns the line number of the currently selected line, or 0 if none selected.
- void **value** (int line)

Sets the browser's value(), which selects the specified line.
- int **visible** (int line) const

Returns non-zero if the specified line is visible, 0 if hidden.
- **~Fl_Browser** ()

The destructor deletes all list items and destroys the browser.

Public Member Functions inherited from Fl_Browser_

- int **deselect** (int docallbacks=0)

Deselects all items in the list and returns 1 if the state changed or 0 if it did not.
- void **display** (void *item)

Displays the item, scrolling the list as necessary.
- int **handle** (int event) **FL_OVERRIDE**

Handles the event within the normal widget bounding box.

- **uchar has_scrollbar** () const
Returns the current scrollbar mode, see [FI_Browser_::has_scrollbar\(uchar\)](#)
- void **has_scrollbar** (uchar mode)
Sets whether the widget should have scrollbars or not (default [FI_Browser_::BOTH](#)).
- int **hposition** () const
*Gets the horizontal scroll position of the list as a pixel position *pos*.*
- void **hposition** (int)
*Sets the horizontal scroll position of the list to pixel position *pos*.*
- int **linespacing** () const
Return the height of additional spacing between browser lines.
- void **linespacing** (int pixels)
Add some space between browser lines.
- int **position** () const
- void **position** (int pos)
- void **position** (int *x*, int *y*)
- void **resize** (int *X*, int *Y*, int *W*, int *H*) [FL_OVERRIDE](#)
Repositions and/or resizes the browser.
- void **scrollbar_left** ()
Moves the vertical scrollbar to the lefthand side of the list.
- void **scrollbar_right** ()
Moves the vertical scrollbar to the righthand side of the list.
- int **scrollbar_size** () const
Gets the current size of the scrollbars' troughs, in pixels.
- void **scrollbar_size** (int newSize)
*Sets the pixel size of the scrollbars' troughs to *newSize*, in pixels.*
- int **scrollbar_width** () const
Returns the global value [Fl::scrollbar_size\(\)](#).
- void **scrollbar_width** (int width)
Sets the global [Fl::scrollbar_size\(\)](#), and forces this instance of the widget to use it.
- int **select** (void *item, int val=1, int docallbacks=0)
*Sets the selection state of *item* to *val*, and returns 1 if the state changed or 0 if it did not.*
- int **select_only** (void *item, int docallbacks=0)
*Selects *item* and returns 1 if the state changed or 0 if it did not.*
- void **sort** (int flags=0)
*Sort the items in the browser based on *flags*.*
- [Fl_Color](#) **textcolor** () const
Gets the default text color for the lines in the browser.
- void **textcolor** ([Fl_Color](#) col)
*Sets the default text color for the lines in the browser to color *col*.*
- [Fl_Font](#) **textfont** () const
Gets the default text font for the lines in the browser.
- void **textfont** ([Fl_Font](#) font)
*Sets the default text font for the lines in the browser to *font*.*
- [Fl_Fontsize](#) **textsize** () const
Gets the default text size (in pixels) for the lines in the browser.
- void **textsize** ([Fl_Fontsize](#) newSize)
*Sets the default text size (in pixels) for the lines in the browser to *size*.*
- int **vposition** () const
*Gets the vertical scroll position of the list as a pixel position *pos*.*
- void **vposition** (int pos)
*Sets the vertical scroll position of the list to pixel position *pos*.*

Public Member Functions inherited from FL_Group

- [FL_Widget](#) *[_ddfdesign_kludge](#) ()
This is for forms compatibility only.
- void **add** ([FL_Widget](#) &)
The widget is removed from its current group (if any) and then added to the end of this group.
- void **add** ([FL_Widget](#) *o)
See void [FL_Group::add\(FL_Widget &w\)](#)
- void **add_resizable** ([FL_Widget](#) &o)
Adds a widget to the group and makes it the resizable widget.
- [FL_Widget](#) *const * **array** () const
Returns a pointer to the array of children.
- [FL_Group](#) const * **as_group** () const [FL_OVERRIDE](#)
- [FL_Group](#) * **as_group** () [FL_OVERRIDE](#)
Returns an [FL_Group](#) pointer if this widget is an [FL_Group](#).
- void **begin** ()
Sets the current group so you can build the widget tree by just constructing the widgets.
- [FL_Widget](#) * **child** (int n) const
Returns the n'th child.
- int **children** () const
Returns how many child widgets the group has.
- void **clear** ()
Deletes all child widgets from memory recursively.
- unsigned int **clip_children** ()
Returns the current clipping mode.
- void **clip_children** (int c)
Controls whether the group widget clips the drawing of child widgets to its bounding box.
- virtual int **delete_child** (int n)
*Removes the widget at *index* from the group and deletes it.*
- void **end** ()
*Exactly the same as *current(this->parent())*.*
- int **find** (const [FL_Widget](#) &o) const
*See int [FL_Group::find\(const FL_Widget *w\)](#) const.*
- int **find** (const [FL_Widget](#) *) const
Searches the child array for the widget and returns the index.
- [FL_Group](#) (int, int, int, int, const char * = 0)
Creates a new [FL_Group](#) widget using the given position, size, and label string.
- void **focus** ([FL_Widget](#) *W)
- void **forms_end** ()
This is for forms compatibility only.
- int **handle** (int) [FL_OVERRIDE](#)
Handles the specified event.
- void **init_sizes** ()
Resets the internal array of widget sizes and positions.
- void **insert** ([FL_Widget](#) &, int i)
The widget is removed from its current group (if any) and then inserted into this group.
- void **insert** ([FL_Widget](#) &o, [FL_Widget](#) *before)
*This does *insert(w, find(before))*.*
- void **remove** ([FL_Widget](#) &)
Removes a widget from the group but does not delete it.
- void **remove** ([FL_Widget](#) *o)

- Removes the widget `o` from the group.*

 - void `remove` (int index)

Removes the widget at `index` from the group but does not delete it.
- `FL_Widget * resizable` () const

Returns the group's resizable widget.
- void `resizable` (`FL_Widget &o`)

Sets the group's resizable widget.
- void `resizable` (`FL_Widget *o`)

The resizable widget defines both the resizing box and the resizing behavior of the group and its children.
- void `resize` (int, int, int, int) `FL_OVERRIDE`

Resizes the `FL_Group` widget and all of its children.
- virtual `~FL_Group` ()

The destructor also deletes all the children.

Public Member Functions inherited from `FL_Widget`

- void `_clear_fullscreen` ()
- void `_set_fullscreen` ()
- void `activate` ()
- Activates the widget.*

 - unsigned int `active` () const

Returns whether the widget is active.
- int `active_r` () const

Returns whether the widget and all of its parents are active.
- `FL_Align align` () const

Gets the label alignment.
- void `align` (`FL_Align alignment`)

Sets the label alignment.
- long `argument` () const

Gets the current user data (long) argument that is passed to the callback function.
- void `argument` (long v)

Sets the current user data (long) argument that is passed to the callback function.
- virtual class `FL_Gl_Window * as_gl_window` ()

Returns an `FL_Gl_Window` pointer if this widget is an `FL_Gl_Window`.
- virtual class `FL_Gl_Window` const * `as_gl_window` () const
- virtual `FL_Window * as_window` ()

Returns an `FL_Window` pointer if this widget is an `FL_Window`.
- virtual `FL_Window` const * `as_window` () const
- void `bind_deimage` (`FL_Image *img`)

Sets the image to use as part of the widget label when in the inactive state.
- void `bind_deimage` (int f)

Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.
- void `bind_image` (`FL_Image *img`)

Sets the image to use as part of the widget label when in the active state.
- void `bind_image` (int f)

Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- `FL_Boxtype box` () const

Gets the box type of the widget.
- void `box` (`FL_Boxtype new_box`)

Sets the box type for the widget.
- `FL_Callback_p callback` () const

- Gets the current callback function for the widget.*
- void [callback](#) ([FI_Callback](#) *cb)
- Sets the current callback function for the widget.*
- void [callback](#) ([FI_Callback](#) *cb, [FI_Callback_User_Data](#) *p, bool auto_free)
- Sets the current callback function and managed user data for the widget.*
- void [callback](#) ([FI_Callback](#) *cb, void *p)
- Sets the current callback function and data for the widget.*
- void [callback](#) ([FI_Callback0](#) *cb)
- Sets the current callback function for the widget.*
- void [callback](#) ([FI_Callback1](#) *cb, long p=0)
- Sets the current callback function for the widget.*
- unsigned int [changed](#) () const
- Checks if the widget value changed since the last callback.*
- void [clear_active](#) ()
- Marks the widget as inactive without sending events or changing focus.*
- void [clear_changed](#) ()
- Marks the value of the widget as unchanged.*
- void [clear_damage](#) ([uchar](#) c=0)
- Clears or sets the damage flags.*
- void [clear_output](#) ()
- Sets a widget to accept input.*
- void [clear_visible](#) ()
- Hides the widget.*
- void [clear_visible_focus](#) ()
- Disables keyboard focus navigation with this widget.*
- [FI_Color](#) [color](#) () const
- Gets the background color of the widget.*
- void [color](#) ([FI_Color](#) bg)
- Sets the background color of the widget.*
- void [color](#) ([FI_Color](#) bg, [FI_Color](#) sel)
- Sets the background and selection color of the widget.*
- [FI_Color](#) [color2](#) () const
- For back compatibility only.*
- void [color2](#) (unsigned a)
- For back compatibility only.*
- int [contains](#) (const [FI_Widget](#) *w) const
- Checks if w is a child of this widget.*
- void [copy_label](#) (const char *new_label)
- Sets the current label.*
- void [copy_tooltip](#) (const char *text)
- Sets the current tooltip text.*
- [uchar](#) [damage](#) () const
- Returns non-zero if [draw\(\)](#) needs to be called.*
- void [damage](#) ([uchar](#) c)
- Sets the damage bits for the widget.*
- void [damage](#) ([uchar](#) c, int x, int y, int w, int h)
- Sets the damage bits for an area inside the widget.*
- int [damage_resize](#) (int, int, int, int)
- Internal use only.*
- void [deactivate](#) ()
- Deactivates the widget.*

- `FI_Image * deimage ()`
Gets the image that is used as part of the widget label when in the inactive state.
- `const FI_Image * deimage () const`
Gets the image that is used as part of the widget label when in the inactive state.
- `void deimage (FI_Image &img)`
Sets the image to use as part of the widget label when in the inactive state.
- `void deimage (FI_Image *img)`
Sets the image to use as part of the widget label when in the inactive state.
- `int deimage_bound () const`
Returns whether the inactive image is managed by the widget.
- `void do_callback (FI_Callback_Reason reason=FL_REASON_UNKNOWN)`
Calls the widget callback function with default arguments.
- `void do_callback (FI_Widget *widget, long arg, FI_Callback_Reason reason=FL_REASON_UNKNOWN)`
Calls the widget callback function with arbitrary arguments.
- `void do_callback (FI_Widget *widget, void *arg=0, FI_Callback_Reason reason=FL_REASON_UNKNOWN)`
Calls the widget callback function with arbitrary arguments.
- `void draw_label (int, int, int, int, FI_Align) const`
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- `int h () const`
Gets the widget height.
- `int horizontal_label_margin ()`
Get the spacing between the label and the horizontal edge of the widget.
- `void horizontal_label_margin (int px)`
Set the spacing between the label and the horizontal edge of the widget.
- `FI_Image * image ()`
Gets the image that is used as part of the widget label when in the active state.
- `const FI_Image * image () const`
Gets the image that is used as part of the widget label when in the active state.
- `void image (FI_Image &img)`
Sets the image to use as part of the widget label when in the active state.
- `void image (FI_Image *img)`
Sets the image to use as part of the widget label when in the active state.
- `int image_bound () const`
Returns whether the image is managed by the widget.
- `int inside (const FI_Widget *wgt) const`
Checks if this widget is a child of wgt.
- `int is_label_copied () const`
Returns whether the current label was assigned with `copy_label()`.
- `const char * label () const`
Gets the current label text.
- `void label (const char *text)`
Sets the current label pointer.
- `void label (FI_Labeltype a, const char *b)`
Shortcut to set the label text and type in one call.
- `int label_image_spacing ()`
Return the gap size between the label and the image.
- `void label_image_spacing (int gap)`
Set the gap between the label and the image in pixels.
- `FI_Color labelcolor () const`
Gets the label color.
- `void labelcolor (FI_Color c)`

- Sets the label color.*
- [Fl_Font](#) [labelfont](#) () const
 - Gets the font to use.*
- void [labelfont](#) ([Fl_Font](#) f)
 - Sets the font to use.*
- [Fl_Fontsize](#) [labelsize](#) () const
 - Gets the font size in pixels.*
- void [labelsize](#) ([Fl_Fontsize](#) pix)
 - Sets the font size in pixels.*
- [Fl_Labeltype](#) [labeltype](#) () const
 - Gets the label type.*
- void [labeltype](#) ([Fl_Labeltype](#) a)
 - Sets the label type.*
- void [measure_label](#) (int &ww, int &hh) const
 - Sets width ww and height hh accordingly with the label size.*
- bool [needs_keyboard](#) () const
 - Returns whether this widget needs a keyboard.*
- void [needs_keyboard](#) (bool needs)
 - Sets whether this widget needs a keyboard.*
- unsigned int [output](#) () const
 - Returns if a widget is used for output only.*
- [Fl_Group](#) * [parent](#) () const
 - Returns a pointer to the parent widget.*
- void [parent](#) ([Fl_Group](#) *p)
 - Internal use only - "for hacks only".*
- void [position](#) (int X, int Y)
 - Repositions the window or widget.*
- void [redraw](#) ()
 - Schedules the drawing of the widget.*
- void [redraw_label](#) ()
 - Schedules the drawing of the label.*
- [Fl_Color](#) [selection_color](#) () const
 - Gets the selection color.*
- void [selection_color](#) ([Fl_Color](#) a)
 - Sets the selection color.*
- void [set_active](#) ()
 - Marks the widget as active without sending events or changing focus.*
- void [set_changed](#) ()
 - Marks the value of the widget as changed.*
- void [set_output](#) ()
 - Sets a widget to output only.*
- void [set_visible](#) ()
 - Makes the widget visible.*
- void [set_visible_focus](#) ()
 - Enables keyboard focus navigation with this widget.*
- int [shortcut_label](#) () const
 - Returns whether the widget's label uses '&' to indicate shortcuts.*
- void [shortcut_label](#) (int value)
 - Sets whether the widget's label uses '&' to indicate shortcuts.*
- void [size](#) (int W, int H)
 - Changes the size of the widget.*

- `int take_focus ()`
Gives the widget the keyboard focus.
- `unsigned int takesevents () const`
Returns if the widget is able to take events.
- `int test_shortcut ()`
Returns true if the widget's label contains the entered '&x' shortcut.
- `const char * tooltip () const`
Gets the current tooltip text.
- `void tooltip (const char *text)`
Sets the current tooltip text.
- `Fl_Window * top_window () const`
Returns a pointer to the top-level window for the widget.
- `Fl_Window * top_window_offset (int &xoff, int &yoff) const`
Finds the x/y offset of the current widget relative to the top-level window.
- `uchar type () const`
Gets the widget type.
- `void type (uchar t)`
Sets the widget type.
- `int use_accents_menu ()`
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- `void * user_data () const`
Gets the user data for this widget.
- `void user_data (Fl_Callback_User_Data *v, bool auto_free)`
Sets the user data for this widget.
- `void user_data (void *v)`
Sets the user data for this widget.
- `int vertical_label_margin ()`
Get the spacing between the label and the vertical edge of the widget.
- `void vertical_label_margin (int px)`
Set the spacing between the label and the vertical edge of the widget.
- `unsigned int visible () const`
Returns whether a widget is visible.
- `unsigned int visible_focus () const`
Checks whether this widget has a visible focus.
- `void visible_focus (int v)`
Modifies keyboard focus navigation.
- `int visible_r () const`
Returns whether a widget and all its parents are visible.
- `int w () const`
Gets the widget width.
- `Fl_When when () const`
Returns the conditions under which the callback is called.
- `void when (uchar i)`
Sets the flags used to decide when a callback is called.
- `Fl_Window * window () const`
Returns a pointer to the nearest parent window up the widget hierarchy.
- `int x () const`
Gets the widget position in its window.
- `int y () const`
Gets the widget position in its window.
- `virtual ~Fl_Widget ()`
Destroys the widget.

Additional Inherited Members

Public Types inherited from FI_Browser

- enum [FI_Line_Position](#) { TOP , BOTTOM , MIDDLE }

For internal use only?

Public Types inherited from FI_Browser_

- enum {
[HORIZONTAL](#) = 1 , [VERTICAL](#) = 2 , [BOTH](#) = 3 , [ALWAYS_ON](#) = 4 ,
[HORIZONTAL_ALWAYS](#) = 5 , [VERTICAL_ALWAYS](#) = 6 , [BOTH_ALWAYS](#) = 7 }

Values for [has_scrollbar\(\)](#).

Static Public Member Functions inherited from FI_Group

- static [FI_Group](#) * [current](#) ()
Returns the currently active group.
- static void [current](#) ([FI_Group](#) *g)
Sets the current group.

Static Public Member Functions inherited from FI_Widget

- static void [default_callback](#) ([FI_Widget](#) *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int [label_shortcut](#) (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int [test_shortcut](#) (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Public Attributes inherited from FI_Browser_

- [FI_Scrollbar](#) [hscrollbar](#)
Horizontal scrollbar.
- [FI_Scrollbar](#) [scrollbar](#)
Vertical scrollbar.

Protected Types inherited from FI_Widget

- enum {
[INACTIVE](#) = 1<<0 , [INVISIBLE](#) = 1<<1 , [OUTPUT](#) = 1<<2 , [NOBORDER](#) = 1<<3 ,
[FORCE_POSITION](#) = 1<<4 , [NON_MODAL](#) = 1<<5 , [SHORTCUT_LABEL](#) = 1<<6 , [CHANGED](#) = 1<<7
, [OVERRIDE](#) = 1<<8 , [VISIBLE_FOCUS](#) = 1<<9 , [COPIED_LABEL](#) = 1<<10 , [CLIP_CHILDREN](#) = 1<<11
, [MENU_WINDOW](#) = 1<<12 , [TOOLTIP_WINDOW](#) = 1<<13 , [MODAL](#) = 1<<14 , [NO_OVERLAY](#) = 1<<15
, [GROUP_RELATIVE](#) = 1<<16 , [COPIED_TOOLTIP](#) = 1<<17 , [FULLSCREEN](#) = 1<<18 , [MAC_USE_ACCENTS_MENU](#)
= 1<<19 ,
[NEEDS_KEYBOARD](#) = 1<<20 , [IMAGE_BOUND](#) = 1<<21 , [DEIMAGE_BOUND](#) = 1<<22 ,

[MAXIMIZED](#) = 1<<24 , [POPOP](#) = 1<<25 , [USERFLAG3](#) = 1<<29 , [USERFLAG2](#) = 1<<30 ,
[USERFLAG1](#) = 1<<31 }

flags possible values enumeration.

Protected Member Functions inherited from [FL_Browser](#)

- [FL_BLINE](#) * [_remove](#) (int line)
Removes the item at the specified line.
- [FL_BLINE](#) * [find_line](#) (int line) const
Returns the item for specified line.
- int [full_height](#) () const [FL_OVERRIDE](#)
The height of the entire list of all [visible\(\)](#) items in pixels.
- int [incr_height](#) () const [FL_OVERRIDE](#)
The default 'average' item height (including inter-item spacing) in pixels.
- void [insert](#) (int line, [FL_BLINE](#) *item)
Insert specified item above line.
- void * [item_at](#) (int line) const [FL_OVERRIDE](#)
Return the item at specified line.
- void [item_draw](#) (void *item, int X, int Y, int W, int H) const [FL_OVERRIDE](#)
Draws item at the position specified by X Y W H.
- void * [item_first](#) () const [FL_OVERRIDE](#)
Returns the very first item in the list.
- int [item_height](#) (void *item) const [FL_OVERRIDE](#)
Returns height of item in pixels.
- void * [item_last](#) () const [FL_OVERRIDE](#)
Returns the very last item in the list.
- void * [item_next](#) (void *item) const [FL_OVERRIDE](#)
Returns the next item after item.
- void * [item_prev](#) (void *item) const [FL_OVERRIDE](#)
Returns the previous item before item.
- void [item_select](#) (void *item, int val) [FL_OVERRIDE](#)
Change the selection state of item to the value val.
- int [item_selected](#) (void *item) const [FL_OVERRIDE](#)
See if item is selected.
- void [item_swap](#) (void *a, void *b) [FL_OVERRIDE](#)
Swap the items a and b.
- const char * [item_text](#) (void *item) const [FL_OVERRIDE](#)
Returns the label text for item.
- int [item_width](#) (void *item) const [FL_OVERRIDE](#)
Returns width of item in pixels.
- int [lineno](#) (void *item) const
Returns line number corresponding to item, or zero if not found.
- void [swap](#) ([FL_BLINE](#) *a, [FL_BLINE](#) *b)
Swap the two items a and b.

Protected Member Functions inherited from [FL_Browser_](#)

- void [bbox](#) (int &X, int &Y, int &W, int &H) const
Returns the bounding box for the interior of the list's display window, inside the scrollbars.
- void [deleting](#) (void *item)
This method should be used when item is being deleted from the list.
- int [displayed](#) (void *item) const
Returns non-zero if item has been scrolled to a position where it is being displayed.
- void [draw](#) () [FL_OVERRIDE](#)
Draws the list within the normal widget bounding box.
- void * [find_item](#) (int ypos)

This method returns the item under mouse y position `ypos`.

- `Fl_Browser_` (int X, int Y, int W, int H, const char *L=0)

The constructor makes an empty browser.

- virtual int `full_width` () const

This method may be provided by the subclass to indicate the full width of the item list, in pixels.

- void `inserting` (void *a, void *b)

This method should be used when an item is in the process of being inserted into the list.

- virtual int `item_quick_height` (void *item) const

This method may be provided by the subclass to return the height of the `item`, in pixels.

- int `leftedge` () const

This method returns the X position of the left edge of the list area after adjusting for the scrollbar and border, if any.

- void `new_list` ()

This method should be called when the list data is completely replaced or cleared.

- void `redraw_line` (void *item)

This method should be called when the contents of `item` has changed, but not its height.

- void `redraw_lines` ()

This method will cause the entire list to be redrawn.

- void `replacing` (void *a, void *b)

This method should be used when item `a` is being replaced by item `b`.

- void * `selection` () const

Returns the item currently selected, or NULL if there is no selection.

- void `swapping` (void *a, void *b)

This method should be used when two items `a` and `b` are being swapped.

- void * `top` () const

Returns the item that appears at the top of the list.

Protected Member Functions inherited from `Fl_Group`

- `Fl_Rect` * `bounds` ()

Returns the internal array of widget sizes and positions.

- void `draw` () `FL_OVERRIDE`

Draws the widget.

- void `draw_child` (`Fl_Widget` &widget) const

Forces a child to redraw.

- void `draw_children` ()

Draws all children of the group.

- void `draw_outside_label` (const `Fl_Widget` &widget) const

Parents normally call this to draw outside labels of child widgets.

- virtual int `on_insert` (`Fl_Widget` *, int)

Allow derived groups to act when a widget is added as a child.

- virtual int `on_move` (int, int)

Allow derived groups to act when a widget is moved within the group.

- virtual void `on_remove` (int)

Allow derived groups to act when a child widget is removed from the group.

- int * `sizes` ()

Returns the internal array of widget sizes and positions.

- void `update_child` (`Fl_Widget` &widget) const

Draws a child only if it needs it.

Protected Member Functions inherited from [Fl_Widget](#)

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** ([Fl_Boxtype](#) t, [Fl_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** ([Fl_Boxtype](#) t, int x, int y, int w, int h, [Fl_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const
Draws a focus rectangle around the widget.
- void **draw_focus** ([Fl_Boxtype](#) t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void **draw_focus** ([Fl_Boxtype](#) t, int x, int y, int w, int h, [Fl_Color](#) bg) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [Fl_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

11.127.1 Detailed Description

The class is a subclass of [Fl_Browser](#) which lets the user select a single item, or no items by clicking on the empty space.

As long as the mouse button is held down on an unselected item it is highlighted. Normally the callback is done when the user presses the mouse, but you can change this with [when\(\)](#).

See [Fl_Browser](#) for methods to add and remove lines from the browser.

11.127.2 Constructor & Destructor Documentation

11.127.2.1 [Fl_Select_Browser\(\)](#)

```
Fl_Select_Browser::Fl_Select_Browser (
    int X,
    int Y,
    int W,
```

```
int H,
const char * L = 0)
```

Creates a new [Fl_Select_Browser](#) widget using the given position, size, and label string.

The default boxtype is FL_DOWN_BOX. The constructor specializes [Fl_Browser\(\)](#) by setting the type to FL_SELECT_BROWSER. The destructor destroys the widget and frees all memory that has been allocated.

The documentation for this class was generated from the following files:

- [Fl_Select_Browser.H](#)
- [Fl_Browser.cxx](#)

11.128 Fl_Shared_Image Class Reference

This class supports caching, loading, and drawing of image files.

```
#include <Fl_Shared_Image.H>
```

Inheritance diagram for Fl_Shared_Image:

Public Member Functions

- [Fl_Shared_Image * as_shared_image \(\)](#) [FL_OVERRIDE](#)
Returns whether an image is an [Fl_Shared_Image](#) or not.
- void [color_average](#) ([Fl_Color](#) c, float i) [FL_OVERRIDE](#)
Averages the colors in the image with the provided FLTK color value.
- [Fl_Image * copy \(\)](#)
Increments the reference counter and returns a pointer to itself.
- [Fl_Image * copy \(\)](#) const
- [Fl_Image * copy](#) (int W, int H) const [FL_OVERRIDE](#)
Return a shared image of this image with the requested size.
- void [desaturate](#) () [FL_OVERRIDE](#)
Convert the image to gray scale.
- void **draw** (int X, int Y)
- void [draw](#) (int X, int Y, int W, int H, int cx=0, int cy=0) [FL_OVERRIDE](#)
Draw this image to the current graphics context.
- const [Fl_Image * image](#) () const
Returns a pointer to the internal [Fl_Image](#) object.
- const char * **name** ()
Returns the filename of the shared image.
- int [original](#) ()
Returns whether this is an original image.
- int [refcount](#) ()
Returns the number of references of this shared image.
- void [release](#) () [FL_OVERRIDE](#)
Releases and possibly destroys (if refcount <= 0) a shared image.
- virtual void **reload** ()
Reloads the shared image from disk.
- void [uncache](#) () [FL_OVERRIDE](#)
Remove the cached device specific image data.

Public Member Functions inherited from [FI_Image](#)

- [FI_Image](#) * [copy](#) () const
Creates a copy of the image in the same size.
- int [count](#) () const
Returns the number of data values associated with the image.
- int [d](#) () const
Returns the image depth.
- const char *const * [data](#) () const
Returns a pointer to the current image data array.
- int [data_h](#) () const
Returns the height of the image data.
- int [data_w](#) () const
Returns the width of the image data.
- void [draw](#) (int X, int Y)
Draws the image to the current drawing surface.
- int [fail](#) () const
Returns a value that is not 0 if there is currently no image available.
- [FI_Image](#) (int W, int H, int D)
The constructor creates an empty image with the specified width, height, and depth.
- int [h](#) () const
Returns the current image drawing height in FLTK units.
- void [inactive](#) ()
The [inactive\(\)](#) method calls [color_average\(FL_BACKGROUND_COLOR, 0.33f\)](#) to produce an image that appears grayed out.
- virtual void [label](#) ([FI_Menu_Item](#) *m)
This method is an obsolete way to set the image attribute of a menu item.
- virtual void [label](#) ([FI_Widget](#) *w)
This method is an obsolete way to set the image attribute of a widget or menu item.
- int [ld](#) () const
Returns the current line data size in bytes.
- virtual void [scale](#) (int width, int height, int proportional=1, int can_expand=0)
Sets the drawing size of the image.
- int [w](#) () const
Returns the current image drawing width in FLTK units.
- virtual ~[FI_Image](#) ()
The destructor is a virtual method that frees all memory used by the image.

Static Public Member Functions

- static void [add_handler](#) ([FI_Shared_Handler](#) f)
Adds a shared image handler, which is basically a test function for adding new image formats.
- static [FI_Shared_Image](#) * [find](#) (const char *name, int W=0, int H=0)
Finds a shared image from its name and size specifications.
- static [FI_Shared_Image](#) * [get](#) (const char *name, int W=0, int H=0)
Find or load an image that can be shared by multiple widgets.
- static [FI_Shared_Image](#) * [get](#) ([FI_RGB_Image](#) *rgb, int own_it=1)
Builds a shared image from a pre-existing [FI_RGB_Image](#).
- static [FI_Shared_Image](#) ** [images](#) ()
Returns the [FI_Shared_Image](#) array.*
- static int [num_images](#) ()
Number of shared images in their various cached sizes.
- static void [remove_handler](#) ([FI_Shared_Handler](#) f)
Removes a shared image handler.

Static Public Member Functions inherited from FI_Image

- static [FI_Labeltype](#) [define_FL_IMAGE_LABEL](#) ()
- static [FI_RGB_Scaling](#) [RGB_scaling](#) ()
Returns the currently used RGB image scaling method.
- static void [RGB_scaling](#) ([FI_RGB_Scaling](#))
Sets the RGB image scaling method used for copy(int, int).
- static [FI_RGB_Scaling](#) [scaling_algorithm](#) ()
Gets what algorithm is used when resizing a source image to draw it.
- static void [scaling_algorithm](#) ([FI_RGB_Scaling](#) algorithm)
Sets what algorithm is used when resizing a source image to draw it.

Protected Member Functions

- void [add](#) ()
Adds a shared image to the image pool.
- [FI_Shared_Image](#) * [copy](#) (int W, int H) const
Create a resized copy of the image and wrap it into the share image class.
- [FI_Shared_Image](#) ()
Creates an empty shared image.
- [FI_Shared_Image](#) (const char *n, [FI_Image](#) *img=0)
Creates a shared image from its filename and its corresponding FI_Image img.*
- void [update](#) ()
Update the dimensions of the shared images.
- virtual [~FI_Shared_Image](#) ()
The destructor frees all memory and server resources that are used by the image.

Protected Member Functions inherited from FI_Image

- void [d](#) (int D)
Sets the current image depth.
- void [data](#) (const char *const *p, int c)
Sets the current data pointer and count of pointers in the array.
- void [draw_empty](#) (int X, int Y)
The protected method [draw_empty\(\)](#) draws a box with an X in it.
- int [draw_scaled](#) (int X, int Y, int W, int H)
Draw the image to the current drawing surface rescaled to a given width and height.
- void [h](#) (int H)
Sets the height of the image data.
- void [ld](#) (int LD)
Sets the current line data size in bytes.
- void [w](#) (int W)
Sets the width of the image data.

Static Protected Member Functions

- static int [compare](#) ([FI_Shared_Image](#) **i0, [FI_Shared_Image](#) **i1)
Compares two shared images.

Static Protected Member Functions inherited from FI_Image

- static void [labeltype](#) (const [FI_Label](#) *lo, int lx, int ly, int lw, int lh, [FI_Align](#) la)
- static void [measure](#) (const [FI_Label](#) *lo, int &lw, int &lh)

Protected Attributes

- int **alloc_image_**
- [Fl_Image](#) * **image_**
- const char * **name_**
- int **original_**
- int **refcount_**

Static Protected Attributes

- static int **alloc_handlers_** = 0
- static int **alloc_images_** = 0
- static [Fl_Shared_Handler](#) * **handlers_** = 0
- static [Fl_Shared_Image](#) ** **images_** = 0
- static int **num_handlers_** = 0
- static int **num_images_** = 0

Friends

- class [Fl_Graphics_Driver](#)
- class [Fl_JPEG_Image](#)
- class [Fl_PNG_Image](#)
- class [Fl_SVG_Image](#)

Additional Inherited Members

Static Public Attributes inherited from [Fl_Image](#)

- static const int **ERR_FILE_ACCESS** = -2
- static const int **ERR_FORMAT** = -3
- static const int **ERR_MEMORY_ACCESS** = -4
- static const int **ERR_NO_IMAGE** = -1
- static bool **register_images_done** = false

True after [fl_register_images\(\)](#) was called, false before.

11.128.1 Detailed Description

This class supports caching, loading, and drawing of image files.

Most applications will also want to link against the fltk_images library and call the [fl_register_images\(\)](#) function to support standard image formats such as BMP, GIF, JPEG, PNG, and SVG (unless the library was built with the option removing SVG support).

Images can be requested (loaded) with [Fl_Shared_Image::get\(\)](#), [find\(\)](#), and some other methods. All images are cached in an internal list of shared images and should be released when they are no longer needed. A refcount is used to determine if a released image is to be destroyed with delete.

[Fl_Shared_Image::release\(\)](#)

11.128.2 Constructor & Destructor Documentation

11.128.2.1 [Fl_Shared_Image\(\)](#) [1/2]

```
Fl_Shared_Image::Fl_Shared_Image () [protected]
```

Creates an empty shared image.

The constructors create a new shared image record in the image cache.

The constructors are protected and cannot be used directly from a program. Use the [get\(\)](#) method instead.

11.128.2.2 FI_Shared_Image() [2/2]

```
Fl_Shared_Image::Fl_Shared_Image (
    const char * n,
    Fl_Image * img = 0) [protected]
```

Creates a shared image from its filename and its corresponding `Fl_Image*` `img`.

The constructors create a new shared image record in the image cache.

The constructors are protected and cannot be used directly from a program. Use the [get\(\)](#) method instead.

Parameters

in	<i>n</i>	filename or pool name of the image, must be unique among shared images
in	<i>img</i>	the image that is made available using the name

11.128.2.3 ~FI_Shared_Image()

```
Fl_Shared_Image::~~Fl_Shared_Image () [protected], [virtual]
```

The destructor frees all memory and server resources that are used by the image.

The destructor is protected and cannot be used directly from a program. Use the [Fl_Shared_Image::release\(\)](#) method instead.

11.128.3 Member Function Documentation

11.128.3.1 add()

```
void Fl_Shared_Image::add () [protected]
```

Adds a shared image to the image pool.

This **protected** method adds an image to the pool, an ordered list of shared images. The pool is searched for a matching image whenever one is requested, for instance with [Fl_Shared_Image::get\(\)](#) or [Fl_Shared_Image::find\(\)](#). This method does not increase or decrease reference counts!

11.128.3.2 add_handler()

```
void Fl_Shared_Image::add_handler (
    Fl_Shared_Handler f) [static]
```

Adds a shared image handler, which is basically a test function for adding new image formats.

This function will be called when an [Fl_Shared_Image](#) is to be loaded (for instance with [Fl_Shared_Image::get\(\)](#)) and the image type is not known to FLTK.

All registered image handlers will be called in the order of registration. You should always call [fl_register_images\(\)](#) before adding your own handlers - unless you need to override a known image file type which should be rare.

See also

[Fl_Shared_Handler](#) for more information of the function you need to define.

11.128.3.3 as_shared_image()

```
Fl_Shared_Image * Fl_Shared_Image::as_shared_image () [inline], [virtual]
```

Returns whether an image is an [Fl_Shared_Image](#) or not.

This virtual method returns a pointer to an [Fl_Shared_Image](#) if this object is an instance of [Fl_Shared_Image](#) or NULL if not. This can be used to detect if a given [Fl_Image](#) object is a shared image, i.e. derived from [Fl_Shared_Image](#).

Since

1.4.0

Reimplemented from [Fl_Image](#).

11.128.3.4 color_average()

```
void Fl_Shared_Image::color_average (
    Fl_Color c,
    float i) [virtual]
```

Averages the colors in the image with the provided FLTK color value. This method changes the pixel data of this specific image.

Note

It does not change any of the resized copies of this image, nor does it necessarily apply the color changes if this image is resized later.

Parameters

in	<i>c</i>	blend with this color
in	<i>i</i>	blend fraction

See also

[Fl_Image::color_average\(Fl_Color c, float i\)](#)

Reimplemented from [Fl_Image](#).

11.128.3.5 compare()

```
int Fl_Shared_Image::compare (
    Fl_Shared_Image ** i0,
    Fl_Shared_Image ** i1) [static], [protected]
```

Compares two shared images.

The order of comparison is:

1. Image name, usually the filename used to load it
2. Image width
3. Image height

Binary search in a sorted array works only if we search for the same parameters that were also used for sorting. No special cases are possible here.

[Fl_Shared_Image::find\(\)](#) requires a search for an element with a matching name and the original_ flags set. This is not implemented via binary search, but by a simple run of the array inside [Fl_Shared_Image::find\(\)](#).

Parameters

in	<i>i0,i1</i>	image pointer pointer for sorting
----	--------------	-----------------------------------

Returns

Whether the images match or their relative sort order (see text).

Return values

0	the images match
<0	Image <i>i0</i> is <i>less</i> than image <i>i1</i>
>0	Image <i>i0</i> is <i>greater</i> than image <i>i1</i>

11.128.3.6 copy() [1/2]

```
Fl_Image * Fl_Shared_Image::copy ()
```

Increments the reference counter and returns a pointer to itself.

When the image is no longer used, call `Fl_Shared_Image::release()`.

To get a copy of the image data, call `this->image()->copy()` instead.

Returns

pointer to an `Fl_Shared_Image` that can be safely cast

11.128.3.7 copy() [2/2]

```
Fl_Image * Fl_Shared_Image::copy (
    int W,
    int H) const [virtual]
```

Return a shared image of this image with the requested size.

This is the same as calling `Fl_Shared_Image::get(this->name(), W, H)`.

If a shared image of the desired size already exists in the shared image pool, the existing image is returned and no copy is made. But the reference counter is incremented. When the image is no longer used, call `Fl_Shared_Image::release()`.

To get a copy of the image data, call `this->image()->copy(W, H)` instead.

Parameters

in	<i>W,H</i>	size of requested image
----	------------	-------------------------

Returns

pointer to an `Fl_Shared_Image` that can be safely cast, or NULL if the image can't be found and can't be created.

Reimplemented from `Fl_Image`.

11.128.3.8 copy_()

```
Fl_Shared_Image * Fl_Shared_Image::copy_ (
    int W,
    int H) const [protected]
```

Create a resized copy of the image and wrap it into the share image class.

This function is usually followed by a call to `returned_image->add()` to add the image to the pool, and `this->refcounter_++` to make sure that the original shared image keeps a reference to the copy. Don't call this function if an image of the given size is already in the pool.

Parameters

in	<i>W,H</i>	new image size
----	------------	----------------

Returns

a new shared image pointer that is not yet in the pool

11.128.3.9 desaturate()

```
void Fl_Shared_Image::desaturate () [virtual]
```

Convert the image to gray scale.

This method changes the pixel data of this specific image.

Note

It does not change any of the resized copies of this image, nor does it necessarily apply the color changes if this image is resized later.

See also

[Fl_Image::desaturate\(\)](#)

Reimplemented from [Fl_Image](#).

11.128.3.10 draw()

```
void Fl_Shared_Image::draw (
    int X,
    int Y,
    int W,
    int H,
    int cx = 0,
    int cy = 0) [virtual]
```

Draw this image to the current graphics context.

Parameters

in	<i>X,Y,W,H</i>	draw at this position and size
in	<i>cx,cy</i>	image origin

Reimplemented from [Fl_Image](#).

11.128.3.11 find()

```
Fl_Shared_Image * Fl_Shared_Image::find (
    const char * name,
    int W = 0,
    int H = 0) [static]
```

Finds a shared image from its name and size specifications.

This uses a binary search in the image cache.

If the image `name` exists with the exact width `W` and height `H`, then it is returned.

If `W == 0` and the image `name` exists with another size, then the **original** image with that `name` is returned.

In either case the refcount of the returned image is increased. The found image should be released with [Fl_Shared_Image::release\(\)](#) when no longer needed.

An image is marked `original` if it was directly loaded from a file or from memory as opposed to copied and resized images.

This comparison is used in [Fl_Shared_Image::find\(\)](#) to find an image that matches the requested one or to find the position where a new image should be entered into the sorted list of shared images.

It is used in two steps by [Fl_Shared_Image::add\(\)](#):

1. search with exact width and height
2. if not found, search again with width = 0 (and height = 0)

The first step will only return a match if the image exists with the same width and height. The second step will match if there is an image marked `original` with the same name, regardless of width and height.

11.128.3.12 get() [1/2]

```
Fl_Shared_Image * Fl_Shared_Image::get (
    const char * name,
    int W = 0,
    int H = 0) [static]
```

Find or load an image that can be shared by multiple widgets.

If the image exists with the requested size, this image will be returned.

If the image exists, but only with another size, then a new copy with the requested size (width *W* and height *H*) will be created as a resized copy of the original image. The new image is added to the internal list of shared images.

If the image does not yet exist, then a new image of the proper dimension is created from the filename *name*. The original image from filename *name* is always added to the list of shared images in its original size. If the requested size differs, then the resized copy with width *W* and height *H* is also added to the list of shared images.

Note

If the sizes differ, then *two* images are created as mentioned above. This is intentional so the original image is cached and preserved. If you request the same image with another size later, then the **original** image will be found, copied, resized, and returned.

Shared JPEG and PNG images can also be created from memory by using their named memory access constructor. You should [release\(\)](#) the image when you're done with it.

Parameters

<i>name</i>	name of the image
<i>W,H</i>	desired size

Returns

the image at the requested size, or NULL if the image could not be found or generated

See also

[FI_Shared_Image::find\(const char *name, int W, int H\)](#)

[FI_Shared_Image::release\(\)](#)

[FI_JPEG_Image::FI_JPEG_Image\(const char *name, const unsigned char *data\)](#)

[FI_PNG_Image::FI_PNG_Image](#) (const char *name_png, const unsigned char *buffer, int maxsize)

11.128.3.13 get() [2/2]

```
FI_Shared_Image * FI_Shared_Image::get (
    FI_RGB_Image * rgb,
    int own_it = 1) [static]
```

Builds a shared image from a pre-existing [FI_RGB_Image](#).

Parameters

in	<i>rgb</i>	an FI_RGB_Image used to build a new shared image.
in	<i>own_it</i>	1 if the shared image should delete <i>rgb</i> when it is itself deleted, 0 otherwise

Version

1.3.4

11.128.3.14 image()

```
const FI_Image * FI_Shared_Image::image () const [inline]
```

Returns a pointer to the internal [FI_Image](#) object.

The output is a pointer to the *internal* image ('[FI_Image](#)' or subclass) which can be used to inspect or copy the image.

Do not try to modify the image! You can copy the image though if you want or need to change any attributes, size etc. If all you need to do is to resize the image you should use [FI_Shared_Image::copy\(int, int\)](#) instead.

Note

The internal image (pointer) is protected for good reasons, e.g. to prevent access to the image so it can't be modified by user code. **DO NOT** cast away the 'const' attribute to modify the image.

User code should rarely need this method. Use with caution.

Returns

const `Fl_Image*` image, the internal [Fl_Image](#)

Since

1.4.0

11.128.3.15 images()

```
Fl_Shared_Image** Fl_Shared_Image::images () [static]
```

Returns the `Fl_Shared_Image*` array.

Returns

a pointer to an array of shared image pointers, sorted by name and size

See also

[Fl_Shared_Image::num_images\(\)](#)

11.128.3.16 num_images()

```
int Fl_Shared_Image::num_images () [static]
```

Number of shared images in their various cached sizes.

Returns

number of entries in the array

See also

[Fl_Shared_Image::images\(\)](#)

11.128.3.17 original()

```
int Fl_Shared_Image::original () [inline]
```

Returns whether this is an original image.

Images loaded from a file or from memory are marked `original` as opposed to images created as a copy of another image with different size (width or height).

Note

This is useful for debugging (rarely used in user code).

Since

FLTK 1.4.0

11.128.3.18 refcount()

```
int Fl_Shared_Image::refcount () [inline]
```

Returns the number of references of this shared image.

When reference is below 1, the image is deleted.

11.128.3.19 `release()`

```
void Fl_Shared_Image::release () [virtual]
```

Releases and possibly destroys (if refcount ≤ 0) a shared image.

In the latter case, it will reorganize the shared image array so that no hole will occur.

Reimplemented from [Fl_Image](#).

11.128.3.20 `uncache()`

```
void Fl_Shared_Image::uncache () [virtual]
```

Remove the cached device specific image data.

See also

[Fl_Image::uncache\(\)](#)

Reimplemented from [Fl_Image](#).

11.128.3.21 `update()`

```
void Fl_Shared_Image::update () [protected]
```

Update the dimensions of the shared images.

Internal method to synchronize shared image data with the actual image data.

The documentation for this class was generated from the following files:

- [Fl_Shared_Image.H](#)
- [Fl_Shared_Image.cxx](#)

11.129 `Fl_Shortcut_Button` Class Reference

A button that allows the user to type a key combination to create shortcuts.

Inheritance diagram for `Fl_Shortcut_Button`:

**Public Member Functions**

- [Fl_Shortcut_Button](#) (int X, int Y, int W, int H, const char *l=0)
Construct a shortcut button.
- [Fl_Shortcut value](#) ()
Return the user selected shortcut.
- void [value](#) ([Fl_Shortcut shortcut](#))
Set the displayed shortcut.

Public Member Functions inherited from [Fl_Button](#)

- int [clear](#) ()
Same as `value(0)`.
- [uchar compact](#) ()
Return true if buttons are rendered as compact buttons.
- void [compact](#) ([uchar v](#))

- Decide if buttons should be rendered in compact mode.*
- [Fl_Boxtype](#) **down_box** () const
Returns the current down box type, which is drawn when [value\(\)](#) is non-zero.
- void **down_box** ([Fl_Boxtype](#) b)
Sets the down box type.
- [Fl_Color](#) **down_color** () const
(for backwards compatibility)
- void **down_color** (unsigned c)
(for backwards compatibility)
- [Fl_Button](#) (int X, int Y, int W, int H, const char *L=0)
The constructor creates the button using the given position, size, and label.
- int **set** ()
Same as [value\(1\)](#).
- void **setonly** ()
Turns on this button and turns off all other radio buttons in the group (calling [value\(1\)](#) or [set\(\)](#) does not do this).
- int **shortcut** () const
Returns the current shortcut key for the button.
- void **shortcut** (const char *s)
(for backwards compatibility)
- void **shortcut** (int s)
Sets the shortcut key to s.
- char **value** () const
Returns the current value of the button (0 or 1).
- int **value** (int v)
Sets the current value of the button.

Public Member Functions inherited from [Fl_Widget](#)

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
Activates the widget.
- unsigned int **active** () const
Returns whether the widget is active.
- int **active_r** () const
Returns whether the widget and all of its parents are active.
- [Fl_Align](#) **align** () const
Gets the label alignment.
- void **align** ([Fl_Align](#) alignment)
Sets the label alignment.
- long **argument** () const
Gets the current user data (long) argument that is passed to the callback function.
- void **argument** (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class [Fl_Gl_Window](#) * **as_gl_window** ()
Returns an [Fl_Gl_Window](#) pointer if this widget is an [Fl_Gl_Window](#).
- virtual class [Fl_Gl_Window](#) const * **as_gl_window** () const
- virtual [Fl_Group](#) * **as_group** ()
Returns an [Fl_Group](#) pointer if this widget is an [Fl_Group](#).
- virtual [Fl_Group](#) const * **as_group** () const
- virtual [Fl_Window](#) * **as_window** ()

- Returns an [FL_Window](#) pointer if this widget is an [FL_Window](#).*
- virtual [FL_Window](#) const * **as_window** () const
- void [bind_deimage](#) ([FL_Image](#) *img)
- Sets the image to use as part of the widget label when in the inactive state.*
- void [bind_deimage](#) (int f)
- Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.*
- void [bind_image](#) ([FL_Image](#) *img)
- Sets the image to use as part of the widget label when in the active state.*
- void [bind_image](#) (int f)
- Bind the image to the widget, so the widget will delete the image when it is no longer needed.*
- [FL_Boxtype](#) **box** () const
- Gets the box type of the widget.*
- void [box](#) ([FL_Boxtype](#) new_box)
- Sets the box type for the widget.*
- [FL_Callback_p](#) **callback** () const
- Gets the current callback function for the widget.*
- void [callback](#) ([FL_Callback](#) *cb)
- Sets the current callback function for the widget.*
- void [callback](#) ([FL_Callback](#) *cb, [FL_Callback_User_Data](#) *p, bool auto_free)
- Sets the current callback function and managed user data for the widget.*
- void [callback](#) ([FL_Callback](#) *cb, void *p)
- Sets the current callback function and data for the widget.*
- void [callback](#) ([FL_Callback0](#) *cb)
- Sets the current callback function for the widget.*
- void [callback](#) ([FL_Callback1](#) *cb, long p=0)
- Sets the current callback function for the widget.*
- unsigned int [changed](#) () const
- Checks if the widget value changed since the last callback.*
- void [clear_active](#) ()
- Marks the widget as inactive without sending events or changing focus.*
- void [clear_changed](#) ()
- Marks the value of the widget as unchanged.*
- void [clear_damage](#) (uchar c=0)
- Clears or sets the damage flags.*
- void [clear_output](#) ()
- Sets a widget to accept input.*
- void [clear_visible](#) ()
- Hides the widget.*
- void [clear_visible_focus](#) ()
- Disables keyboard focus navigation with this widget.*
- [FL_Color](#) **color** () const
- Gets the background color of the widget.*
- void [color](#) ([FL_Color](#) bg)
- Sets the background color of the widget.*
- void [color](#) ([FL_Color](#) bg, [FL_Color](#) sel)
- Sets the background and selection color of the widget.*
- [FL_Color](#) **color2** () const
- For back compatibility only.*
- void [color2](#) (unsigned a)
- For back compatibility only.*
- int [contains](#) (const [FL_Widget](#) *w) const

- Checks if w is a child of this widget.*

 - void [copy_label](#) (const char *new_label)

Sets the current label.
- void [copy_tooltip](#) (const char *text)

Sets the current tooltip text.
- [uchar damage](#) () const

Returns non-zero if [draw\(\)](#) needs to be called.
- void [damage](#) (uchar c)

Sets the damage bits for the widget.
- void [damage](#) (uchar c, int x, int y, int w, int h)

Sets the damage bits for an area inside the widget.
- int [damage_resize](#) (int, int, int, int)

Internal use only.
- void [deactivate](#) ()

Deactivates the widget.
- [FL_Image * deimage](#) ()

Gets the image that is used as part of the widget label when in the inactive state.
- const [FL_Image * deimage](#) () const

Gets the image that is used as part of the widget label when in the inactive state.
- void [deimage](#) ([FL_Image](#) &img)

Sets the image to use as part of the widget label when in the inactive state.
- void [deimage](#) ([FL_Image](#) *img)

Sets the image to use as part of the widget label when in the inactive state.
- int [deimage_bound](#) () const

Returns whether the inactive image is managed by the widget.
- void [do_callback](#) ([FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))

Calls the widget callback function with default arguments.
- void [do_callback](#) ([FL_Widget](#) *widget, long arg, [FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))

Calls the widget callback function with arbitrary arguments.
- void [do_callback](#) ([FL_Widget](#) *widget, void *arg=0, [FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))

Calls the widget callback function with arbitrary arguments.
- void [draw_label](#) (int, int, int, int, [FL_Align](#)) const

Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int [h](#) () const

Gets the widget height.
- virtual void [hide](#) ()

Makes a widget invisible.
- int [horizontal_label_margin](#) ()

Get the spacing between the label and the horizontal edge of the widget.
- void [horizontal_label_margin](#) (int px)

Set the spacing between the label and the horizontal edge of the widget.
- [FL_Image * image](#) ()

Gets the image that is used as part of the widget label when in the active state.
- const [FL_Image * image](#) () const

Gets the image that is used as part of the widget label when in the active state.
- void [image](#) ([FL_Image](#) &img)

Sets the image to use as part of the widget label when in the active state.
- void [image](#) ([FL_Image](#) *img)

Sets the image to use as part of the widget label when in the active state.
- int [image_bound](#) () const

Returns whether the image is managed by the widget.

- int [inside](#) (const [FL_Widget](#) *wgt) const
Checks if this widget is a child of wgt.
- int [is_label_copied](#) () const
Returns whether the current label was assigned with [copy_label\(\)](#).
- const char * [label](#) () const
Gets the current label text.
- void [label](#) (const char *text)
Sets the current label pointer.
- void [label](#) ([FL_Labeltype](#) a, const char *b)
Shortcut to set the label text and type in one call.
- int [label_image_spacing](#) ()
Return the gap size between the label and the image.
- void [label_image_spacing](#) (int gap)
Set the gap between the label and the image in pixels.
- [FL_Color](#) [labelcolor](#) () const
Gets the label color.
- void [labelcolor](#) ([FL_Color](#) c)
Sets the label color.
- [FL_Font](#) [labelfont](#) () const
Gets the font to use.
- void [labelfont](#) ([FL_Font](#) f)
Sets the font to use.
- [FL_Fonsize](#) [labelsize](#) () const
Gets the font size in pixels.
- void [labelsize](#) ([FL_Fonsize](#) pix)
Sets the font size in pixels.
- [FL_Labeltype](#) [labeltype](#) () const
Gets the label type.
- void [labeltype](#) ([FL_Labeltype](#) a)
Sets the label type.
- void [measure_label](#) (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- bool [needs_keyboard](#) () const
Returns whether this widget needs a keyboard.
- void [needs_keyboard](#) (bool needs)
Sets whether this widget needs a keyboard.
- unsigned int [output](#) () const
Returns if a widget is used for output only.
- [FL_Group](#) * [parent](#) () const
Returns a pointer to the parent widget.
- void [parent](#) ([FL_Group](#) *p)
Internal use only - "for hacks only".
- void [position](#) (int X, int Y)
Repositions the window or widget.
- void [redraw](#) ()
Schedules the drawing of the widget.
- void [redraw_label](#) ()
Schedules the drawing of the label.
- virtual void [resize](#) (int x, int y, int w, int h)
Changes the size or position of the widget.
- [FL_Color](#) [selection_color](#) () const

- Gets the selection color.*

 - void `selection_color` (`Fl_Color` a)

Sets the selection color.
- void `set_active` ()

Marks the widget as active without sending events or changing focus.
- void `set_changed` ()

Marks the value of the widget as changed.
- void `set_output` ()

Sets a widget to output only.
- void `set_visible` ()

Makes the widget visible.
- void `set_visible_focus` ()

Enables keyboard focus navigation with this widget.
- int `shortcut_label` () const

Returns whether the widget's label uses '&' to indicate shortcuts.
- void `shortcut_label` (int value)

Sets whether the widget's label uses '&' to indicate shortcuts.
- virtual void `show` ()

Makes a widget visible.
- void `size` (int W, int H)

Changes the size of the widget.
- int `take_focus` ()

Gives the widget the keyboard focus.
- unsigned int `takeevents` () const

Returns if the widget is able to take events.
- int `test_shortcut` ()

Returns true if the widget's label contains the entered '&x' shortcut.
- const char * `tooltip` () const

Gets the current tooltip text.
- void `tooltip` (const char *text)

Sets the current tooltip text.
- `Fl_Window` * `top_window` () const

Returns a pointer to the top-level window for the widget.
- `Fl_Window` * `top_window_offset` (int &xoff, int &yoff) const

Finds the x/y offset of the current widget relative to the top-level window.
- `uchar` `type` () const

Gets the widget type.
- void `type` (`uchar` t)

Sets the widget type.
- int `use_accents_menu` ()

Returns non zero if `MAC_USE_ACCENTS_MENU` flag is set, 0 otherwise.
- void * `user_data` () const

Gets the user data for this widget.
- void `user_data` (`Fl_Callback_User_Data` *v, bool auto_free)

Sets the user data for this widget.
- void `user_data` (void *v)

Sets the user data for this widget.
- int `vertical_label_margin` ()

Get the spacing between the label and the vertical edge of the widget.
- void `vertical_label_margin` (int px)

Set the spacing between the label and the vertical edge of the widget.

- unsigned int **visible** () const
Returns whether a widget is visible.
- unsigned int **visible_focus** () const
Checks whether this widget has a visible focus.
- void **visible_focus** (int v)
Modifies keyboard focus navigation.
- int **visible_r** () const
Returns whether a widget and all its parents are visible.
- int **w** () const
Gets the widget width.
- **FL_When** **when** () const
Returns the conditions under which the callback is called.
- void **when** (uchar i)
Sets the flags used to decide when a callback is called.
- **FL_Window** * **window** () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int **x** () const
Gets the widget position in its window.
- int **y** () const
Gets the widget position in its window.
- virtual **~FL_Widget** ()
Destroys the widget.

Protected Member Functions

- void **do_end_hot_callback** ()
Call the callback if the user is interested.
- void **draw** () **FL_OVERRIDE**
Draw the textual representation of the shortcut button.
- int **handle** (int) **FL_OVERRIDE**
Handle keystrokes to catch the user's shortcut.

Protected Member Functions inherited from **FL_Button**

- void **simulate_key_action** ()

Protected Member Functions inherited from **FL_Widget**

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** (**FL_Boxtype** t, **FL_Color** c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** (**FL_Boxtype** t, int x, int y, int w, int h, **FL_Color** c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const
Draws a focus rectangle around the widget.
- void **draw_focus** (**FL_Boxtype** t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.

- void `draw_focus` (`FI_Boxtype` t, int x, int y, int w, int h, `FI_Color` bg) const
Draws a focus box for the widget at the given position and size.
- void `draw_label` () const
Draws the widget's label at the defined label position.
- void `draw_label` (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- `FI_Widget` (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int `flags` () const
Gets the widget flags mask.
- void `h` (int v)
Internal use only.
- void `set_flag` (unsigned int c)
Sets a flag in the flags mask.
- void `w` (int v)
Internal use only.
- void `x` (int v)
Internal use only.
- void `y` (int v)
Internal use only.

Protected Attributes

- `FI_Shortcut` shortcut_value

Additional Inherited Members

Static Public Member Functions inherited from `FI_Widget`

- static void `default_callback` (`FI_Widget` *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int `label_shortcut` (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int `test_shortcut` (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from `FI_Widget`

- enum {
`INACTIVE` = 1<<0 , `INVISIBLE` = 1<<1 , `OUTPUT` = 1<<2 , `NOBORDER` = 1<<3 ,
`FORCE_POSITION` = 1<<4 , `NON_MODAL` = 1<<5 , `SHORTCUT_LABEL` = 1<<6 , `CHANGED` = 1<<7

`MAXIMIZED` = 1<<24 , `POPUP` = 1<<25 , `USERFLAG3` = 1<<29 , `USERFLAG2` = 1<<30 ,
`USERFLAG1` = 1<<31 }
flags possible values enumeration.

Static Protected Member Functions inherited from [Fl_Button](#)

- static void `key_release_timeout` (void *)

Static Protected Attributes inherited from [Fl_Button](#)

- static [Fl_Widget_Tracker](#) * `key_release_tracker` = 0

11.129.1 Detailed Description

A button that allows the user to type a key combination to create shortcuts.

After clicked once, the button catches the following keyboard events and records the pressed keys and all modifiers. It draws a text representation of the shortcut.

The backspace key deletes the current shortcut. A second click on the button or moving focus makes the last shortcut permanent.

The Shortcut button calls the user callback after every change if `FL_WHEN_CHANGED` is set, and when the button is no longer recording shortcuts if `FL_WHEN_RELEASE` is set.

11.129.2 Constructor & Destructor Documentation

11.129.2.1 `Fl_Shortcut_Button()`

```
Fl_Shortcut_Button::Fl_Shortcut_Button (
    int X,
    int Y,
    int W,
    int H,
    const char * l = 0)
```

Construct a shortcut button.

Parameters

<i>X,Y,W,H</i>	position and size of the button
<i>l</i>	label text when no shortcut is set

11.129.3 Member Function Documentation

11.129.3.1 `draw()`

```
void Fl_Shortcut_Button::draw (
    void ) [protected], [virtual]
```

Draw the textual representation of the shortcut button.

When the button can receive shortcut key events, it's "hot". A hot button is drawn in selection color. A cold button is drawn as a regular text box containing a human readable version of the shortcut key.

Reimplemented from [Fl_Button](#).

11.129.3.2 `handle()`

```
int Fl_Shortcut_Button::handle (
    int e) [protected], [virtual]
```

Handle keystrokes to catch the user's shortcut.

Reimplemented from [Fl_Button](#).

11.129.3.3 `value()` [1/2]

```
Fl\_Shortcut Fl_Shortcut_Button::value ()
```

Return the user selected shortcut.

Returns

shortcut encoded as key and modifier

11.129.3.4 value() [2/2]

```
void Fl_Shortcut_Button::value (
    Fl_Shortcut shortcut)
```

Set the displayed shortcut.

Parameters

in	shortcut	encoded as key and modifier
----	----------	-----------------------------

The documentation for this class was generated from the following files:

- Fl_Shortcut_Button.H
- Fl_Shortcut_Button.cxx

11.130 Fl_Simple_Counter Class Reference

This widget creates a counter with only 2 arrow buttons.

```
#include <Fl_Simple_Counter.H>
```

Inheritance diagram for Fl_Simple_Counter:

**Public Member Functions**

- **Fl_Simple_Counter** (int X, int Y, int W, int H, const char *L=0)

Public Member Functions inherited from Fl_Counter

- **Fl_Counter** (int X, int Y, int W, int H, const char *L=0)
Creates a new [Fl_Counter](#) widget using the given position, size, and label string.
- int **handle** (int) **FL_OVERRIDE**
Handles the specified event.
- void **lstep** (double a)
Sets the increment for the large step buttons.
- double **step** () const
Returns the increment for normal step buttons.
- void **step** (double a)
Sets the increment for the normal step buttons.
- void **step** (double a, double b)
Sets the increments for the normal and large step buttons.
- **Fl_Color** **textcolor** () const

- Gets the font color.*
 - void **textcolor** (FI_Color s)
 - Sets the font color to s.*
- FI_Font **textfont** () const
 - Gets the text font.*
- void **textfont** (FI_Font s)
 - Sets the text font to s.*
- FI_Fontsize **textsize** () const
 - Gets the font size.*
- void **textsize** (FI_Fontsize s)
 - Sets the font size to s.*
- ~FI_Counter ()
 - Destroys the valuator.*

Public Member Functions inherited from FI_Valuator

- void **bounds** (double a, double b)
 - Sets the minimum (a) and maximum (b) values for the valuator widget.*
- double **clamp** (double)
 - Clamps the passed value to the valuator range.*
- virtual int **format** (char *)
 - Uses internal rules to format the fields numerical value into the character array pointed to by the passed parameter.*
- double **increment** (double, int)
 - Adds n times the step value to the passed value.*
- double **maximum** () const
 - Gets the maximum value for the valuator.*
- void **maximum** (double a)
 - Sets the maximum value for the valuator.*
- double **minimum** () const
 - Gets the minimum value for the valuator.*
- void **minimum** (double a)
 - Sets the minimum value for the valuator.*
- void **precision** (int digits)
 - Sets the step value to $1.0 / 10^{\text{digits}}$.*
- void **range** (double a, double b)
 - Sets the minimum and maximum values for the valuator.*
- double **round** (double)
 - Round the passed value to the nearest step increment.*
- double **step** () const
 - Gets or sets the step value.*
- void **step** (double a, int b)
 - See double FI_Valuator::step() const.*
- void **step** (double s)
 - See double FI_Valuator::step() const.*
- void **step** (int a)
 - See double FI_Valuator::step() const.*
- double **value** () const
 - Gets the floating point(double) value.*
- int **value** (double)
 - Sets the current value.*
- ~FI_Valuator () **FL_OVERRIDE**
 - Destructor is accessible despite protected constructor.*

Public Member Functions inherited from [FI_Widget](#)

- void [_clear_fullscreen](#) ()
- void [_set_fullscreen](#) ()
- void [activate](#) ()
Activates the widget.
- unsigned int [active](#) () const
Returns whether the widget is active.
- int [active_r](#) () const
Returns whether the widget and all of its parents are active.
- [FI_Align](#) [align](#) () const
Gets the label alignment.
- void [align](#) ([FI_Align](#) alignment)
Sets the label alignment.
- long [argument](#) () const
Gets the current user data (long) argument that is passed to the callback function.
- void [argument](#) (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class [FI_Gl_Window](#) * [as_gl_window](#) ()
Returns an [FI_Gl_Window](#) pointer if this widget is an [FI_Gl_Window](#).
- virtual class [FI_Gl_Window](#) const * [as_gl_window](#) () const
- virtual [FI_Group](#) * [as_group](#) ()
Returns an [FI_Group](#) pointer if this widget is an [FI_Group](#).
- virtual [FI_Group](#) const * [as_group](#) () const
- virtual [FI_Window](#) * [as_window](#) ()
Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).
- virtual [FI_Window](#) const * [as_window](#) () const
- void [bind_deimage](#) ([FI_Image](#) *img)
Sets the image to use as part of the widget label when in the inactive state.
- void [bind_deimage](#) (int f)
Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.
- void [bind_image](#) ([FI_Image](#) *img)
Sets the image to use as part of the widget label when in the active state.
- void [bind_image](#) (int f)
Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- [FI_Boxtype](#) [box](#) () const
Gets the box type of the widget.
- void [box](#) ([FI_Boxtype](#) new_box)
Sets the box type for the widget.
- [FI_Callback_p](#) [callback](#) () const
Gets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb, [FI_Callback_User_Data](#) *p, bool auto_free)
Sets the current callback function and managed user data for the widget.
- void [callback](#) ([FI_Callback](#) *cb, void *p)
Sets the current callback function and data for the widget.
- void [callback](#) ([FI_Callback0](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback1](#) *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int [changed](#) () const

- Checks if the widget value changed since the last callback.*

 - void `clear_active` ()

Marks the widget as inactive without sending events or changing focus.
- void `clear_changed` ()

Marks the value of the widget as unchanged.
- void `clear_damage` (uchar c=0)

Clears or sets the damage flags.
- void `clear_output` ()

Sets a widget to accept input.
- void `clear_visible` ()

Hides the widget.
- void `clear_visible_focus` ()

Disables keyboard focus navigation with this widget.
- `FL_Color color` () const

Gets the background color of the widget.
- void `color` (FL_Color bg)

Sets the background color of the widget.
- void `color` (FL_Color bg, FL_Color sel)

Sets the background and selection color of the widget.
- `FL_Color color2` () const

For back compatibility only.
- void `color2` (unsigned a)

For back compatibility only.
- int `contains` (const FL_Widget *w) const

Checks if w is a child of this widget.
- void `copy_label` (const char *new_label)

Sets the current label.
- void `copy_tooltip` (const char *text)

Sets the current tooltip text.
- `uchar damage` () const

Returns non-zero if `draw()` needs to be called.
- void `damage` (uchar c)

Sets the damage bits for the widget.
- void `damage` (uchar c, int x, int y, int w, int h)

Sets the damage bits for an area inside the widget.
- int `damage_resize` (int, int, int, int)

Internal use only.
- void `deactivate` ()

Deactivates the widget.
- `FL_Image * deimage` ()

Gets the image that is used as part of the widget label when in the inactive state.
- const `FL_Image * deimage` () const

Gets the image that is used as part of the widget label when in the inactive state.
- void `deimage` (FL_Image &img)

Sets the image to use as part of the widget label when in the inactive state.
- void `deimage` (FL_Image *img)

Sets the image to use as part of the widget label when in the inactive state.
- int `deimage_bound` () const

Returns whether the inactive image is managed by the widget.
- void `do_callback` (FL_Callback_Reason reason=FL_REASON_UNKNOWN)

Calls the widget callback function with default arguments.

- void `do_callback` (`FI_Widget` *widget, long arg, `FI_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with arbitrary arguments.
- void `do_callback` (`FI_Widget` *widget, void *arg=0, `FI_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with arbitrary arguments.
- void `draw_label` (int, int, int, int, `FI_Align`) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const
Gets the widget height.
- virtual void `hide` ()
Makes a widget invisible.
- int `horizontal_label_margin` ()
Get the spacing between the label and the horizontal edge of the widget.
- void `horizontal_label_margin` (int px)
Set the spacing between the label and the horizontal edge of the widget.
- `FI_Image` * `image` ()
Gets the image that is used as part of the widget label when in the active state.
- const `FI_Image` * `image` () const
Gets the image that is used as part of the widget label when in the active state.
- void `image` (`FI_Image` &img)
Sets the image to use as part of the widget label when in the active state.
- void `image` (`FI_Image` *img)
Sets the image to use as part of the widget label when in the active state.
- int `image_bound` () const
Returns whether the image is managed by the widget.
- int `inside` (const `FI_Widget` *wgt) const
Checks if this widget is a child of wgt.
- int `is_label_copied` () const
Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const
Gets the current label text.
- void `label` (const char *text)
Sets the current label pointer.
- void `label` (`FI_Labeltype` a, const char *b)
Shortcut to set the label text and type in one call.
- int `label_image_spacing` ()
Return the gap size between the label and the image.
- void `label_image_spacing` (int gap)
Set the gap between the label and the image in pixels.
- `FI_Color` `labelcolor` () const
Gets the label color.
- void `labelcolor` (`FI_Color` c)
Sets the label color.
- `FI_Font` `labelfont` () const
Gets the font to use.
- void `labelfont` (`FI_Font` f)
Sets the font to use.
- `FI_Fonsize` `labelsize` () const
Gets the font size in pixels.
- void `labelsize` (`FI_Fonsize` pix)
Sets the font size in pixels.
- `FI_Labeltype` `labeltype` () const

- Gets the label type.*

 - void [labeltype](#) ([FL_Labeltype](#) a)
- Sets the label type.*

 - void [measure_label](#) (int &ww, int &hh) const

Sets width ww and height hh accordingly with the label size.
- bool [needs_keyboard](#) () const

Returns whether this widget needs a keyboard.
- void [needs_keyboard](#) (bool needs)

Sets whether this widget needs a keyboard.
- unsigned int [output](#) () const

Returns if a widget is used for output only.
- [FL_Group](#) * [parent](#) () const

Returns a pointer to the parent widget.
- void [parent](#) ([FL_Group](#) *p)

Internal use only - "for hacks only".
- void [position](#) (int X, int Y)

Repositions the window or widget.
- void [redraw](#) ()

Schedules the drawing of the widget.
- void [redraw_label](#) ()

Schedules the drawing of the label.
- virtual void [resize](#) (int x, int y, int w, int h)

Changes the size or position of the widget.
- [FL_Color](#) [selection_color](#) () const

Gets the selection color.
- void [selection_color](#) ([FL_Color](#) a)

Sets the selection color.
- void [set_active](#) ()

Marks the widget as active without sending events or changing focus.
- void [set_changed](#) ()

Marks the value of the widget as changed.
- void [set_output](#) ()

Sets a widget to output only.
- void [set_visible](#) ()

Makes the widget visible.
- void [set_visible_focus](#) ()

Enables keyboard focus navigation with this widget.
- int [shortcut_label](#) () const

Returns whether the widget's label uses '&' to indicate shortcuts.
- void [shortcut_label](#) (int value)

Sets whether the widget's label uses '&' to indicate shortcuts.
- virtual void [show](#) ()

Makes a widget visible.
- void [size](#) (int W, int H)

Changes the size of the widget.
- int [take_focus](#) ()

Gives the widget the keyboard focus.
- unsigned int [takeevents](#) () const

Returns if the widget is able to take events.
- int [test_shortcut](#) ()

Returns true if the widget's label contains the entered '&x' shortcut.

- `const char * tooltip () const`
Gets the current tooltip text.
- `void tooltip (const char *text)`
Sets the current tooltip text.
- `Fl_Window * top_window () const`
Returns a pointer to the top-level window for the widget.
- `Fl_Window * top_window_offset (int &xoff, int &yoff) const`
Finds the x/y offset of the current widget relative to the top-level window.
- `uchar type () const`
Gets the widget type.
- `void type (uchar t)`
Sets the widget type.
- `int use_accents_menu ()`
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- `void * user_data () const`
Gets the user data for this widget.
- `void user_data (Fl_Callback_User_Data *v, bool auto_free)`
Sets the user data for this widget.
- `void user_data (void *v)`
Sets the user data for this widget.
- `int vertical_label_margin ()`
Get the spacing between the label and the vertical edge of the widget.
- `void vertical_label_margin (int px)`
Set the spacing between the label and the vertical edge of the widget.
- `unsigned int visible () const`
Returns whether a widget is visible.
- `unsigned int visible_focus () const`
Checks whether this widget has a visible focus.
- `void visible_focus (int v)`
Modifies keyboard focus navigation.
- `int visible_r () const`
Returns whether a widget and all its parents are visible.
- `int w () const`
Gets the widget width.
- `Fl_When when () const`
Returns the conditions under which the callback is called.
- `void when (uchar i)`
Sets the flags used to decide when a callback is called.
- `Fl_Window * window () const`
Returns a pointer to the nearest parent window up the widget hierarchy.
- `int x () const`
Gets the widget position in its window.
- `int y () const`
Gets the widget position in its window.
- `virtual ~Fl_Widget ()`
Destroys the widget.

Additional Inherited Members

Static Public Member Functions inherited from FI_Widget

- static void [default_callback](#) (FI_Widget *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int [label_shortcut](#) (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int [test_shortcut](#) (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from FI_Widget

- enum {
[INACTIVE](#) = 1<<0 , [INVISIBLE](#) = 1<<1 , [OUTPUT](#) = 1<<2 , [NOBORDER](#) = 1<<3 ,
[FORCE_POSITION](#) = 1<<4 , [NON_MODAL](#) = 1<<5 , [SHORTCUT_LABEL](#) = 1<<6 , [CHANGED](#) = 1<<7
, [OVERRIDE](#) = 1<<8 , [VISIBLE_FOCUS](#) = 1<<9 , [COPIED_LABEL](#) = 1<<10 , [CLIP_CHILDREN](#) = 1<<11
, [MENU_WINDOW](#) = 1<<12 , [TOOLTIP_WINDOW](#) = 1<<13 , [MODAL](#) = 1<<14 , [NO_OVERLAY](#) = 1<<15
, [GROUP_RELATIVE](#) = 1<<16 , [COPIED_TOOLTIP](#) = 1<<17 , [FULLSCREEN](#) = 1<<18 , [MAC_USE_ACCENTS_MENU](#)
= 1<<19 ,
[NEEDS_KEYBOARD](#) = 1<<20 , [IMAGE_BOUND](#) = 1<<21 , [DEIMAGE_BOUND](#) = 1<<22 ,
[AUTO_DELETE_USER_DATA](#) = 1<<23 ,
[MAXIMIZED](#) = 1<<24 , [POPUP](#) = 1<<25 , [USERFLAG3](#) = 1<<29 , [USERFLAG2](#) = 1<<30 ,
[USERFLAG1](#) = 1<<31 }
flags possible values enumeration.

Protected Member Functions inherited from FI_Counter

- void [arrow_widths](#) (int &w1, int &w2)
Compute sizes (widths) of arrow boxes.
- void [draw](#) () [FL_OVERRIDE](#)
Draws the widget.

Protected Member Functions inherited from FI_Valuator

- [FI_Valuator](#) (int X, int Y, int W, int H, const char *L)
Creates a new FI_Valuator widget using the given position, size, and label string.
- void [handle_drag](#) (double newvalue)
Called during a drag operation, after an FL_WHEN_CHANGED event is received and before the callback.
- void [handle_push](#) ()
Stores the current value in the previous value.
- void [handle_release](#) ()
Called after an FL_WHEN_RELEASE event is received and before the callback.
- int [horizontal](#) () const
Tells if the valuator is an FL_HORIZONTAL one.
- double [previous_value](#) () const
Gets the previous floating point value before an event changed it.
- void [set_value](#) (double v)
Sets the current floating point value.
- double [softclamp](#) (double)
Clamps the value, but accepts v if the previous value is not already out of range.
- virtual void [value_damage](#) ()
Asks for partial redraw.

Protected Member Functions inherited from [FI_Widget](#)

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** ([FI_Boxtype](#) t, [FI_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const
Draws a focus rectangle around the widget.
- void **draw_focus** ([FI_Boxtype](#) t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void **draw_focus** ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) bg) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [FI_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

11.130.1 Detailed Description

This widget creates a counter with only 2 arrow buttons.

Figure 11.43 [FI_Simple_Counter](#)

The documentation for this class was generated from the following files:

- [FI_Simple_Counter.H](#)
- [FI_Counter.cxx](#)

11.131 Fl_Single_Window Class Reference

This is the same as [Fl_Window](#).

```
#include <Fl_Single_Window.H>
```

Inheritance diagram for Fl_Single_Window:

Public Member Functions

- **Fl_Single_Window** (int W, int H, const char *l=0)
Creates a new [Fl_Single_Window](#) widget using the given size, and label (title) string.
- **Fl_Single_Window** (int X, int Y, int W, int H, const char *l=0)
Creates a new [Fl_Single_Window](#) widget using the given position, size, and label (title) string.
- void [flush](#) () **FL_OVERRIDE**
Same as [Fl_Window::flush\(\)](#)
- void **make_current** ()
Same as [Fl_Window::make_current\(\)](#)
- void [show](#) () **FL_OVERRIDE**
Makes a widget visible.
- void **show** (int argc, char **argv)
*Same as [Fl_Window::show\(int argc, char **argv\)](#)*

Public Member Functions inherited from [Fl_Window](#)

- void [allow_expand_outside_parent](#) ()
Allow this subwindow to expand outside the area of its parent window.
- virtual class [Fl_Double_Window](#) * [as_double_window](#) ()
Return non-null if this is an [Fl_Double_Window](#) object.
- virtual class [Fl_Overlay_Window](#) * [as_overlay_window](#) ()
Return non-null if this is an [Fl_Overlay_Window](#) object.
- [Fl_Window](#) const * [as_window](#) () const **FL_OVERRIDE**
- [Fl_Window](#) * [as_window](#) () **FL_OVERRIDE**
Returns an [Fl_Window](#) pointer if this widget is an [Fl_Window](#).
- unsigned int **border** () const
Returns whether the window possesses a border.
- void [border](#) (int b)
Sets whether or not the window manager border is around the window.
- void [clear_border](#) ()
Fast inline function to turn the window manager border off.
- void [clear_modal_states](#) ()
Clears the "modal" flags and converts a "modal" or "non-modal" window back into a "normal" window.

- void **copy_label** (const char *a)
Sets the window titlebar label to a copy of a character string.
- void **cursor** (const [FL_RGB_Image](#) *, int, int)
Changes the cursor for this window using the provided image as cursor's shape.
- void **cursor** ([FL_Cursor](#) c, [FL_Color](#), [FL_Color](#)=[FL_WHITE](#))
For back compatibility only.
- void **cursor** ([FL_Cursor](#))
Changes the cursor for this window.
- int **decorated_h** () const
Returns the window height including any window title bar and any frame added by the window manager.
- int **decorated_w** () const
Returns the window width including any frame added by the window manager.
- void **default_cursor** ([FL_Cursor](#) c, [FL_Color](#), [FL_Color](#)=[FL_WHITE](#))
For back compatibility only.
- void **default_cursor** ([FL_Cursor](#))
Sets the default window cursor.
- void **draw_backdrop** ()
Draw the background image if one is set and is aligned inside.
- [FL_Window](#) (int w, int h, const char *title=0)
Creates a window from the given width w, height h, and title.
- [FL_Window](#) (int x, int y, int w, int h, const char *title=0)
Creates a window from the given position (x, y), size (w, h) and title.
- void **free_position** ()
Undoes the effect of a previous [resize\(\)](#) or [show\(\)](#) so that the next time [show\(\)](#) is called the window manager is free to position the window.
- void **fullscreen** ()
Makes the window completely fill one or more screens, without any window manager border visible.
- unsigned int **fullscreen_active** () const
Returns non zero if [FULLSCREEN](#) flag is set, 0 otherwise.
- void **fullscreen_off** ()
Turns off any side effects of [fullscreen\(\)](#)
- void **fullscreen_off** (int X, int Y, int W, int H)
Turns off any side effects of [fullscreen\(\)](#) and does [resize\(x,y,w,h\)](#).
- void **fullscreen_screens** (int top, int bottom, int left, int right)
Sets which screens should be used when this window is in fullscreen mode.
- [uchar](#) **get_size_range** (int *minw, int *minh, int *maxw=NULL, int *maxh=NULL, int *dw=NULL, int *dh=NULL, int *aspect=NULL)
Gets the allowable range to which the user can resize this window.
- int **handle** (int) [FL_OVERRIDE](#)
Handles the specified event.
- void **hide** () [FL_OVERRIDE](#)
Removes the window from the screen.
- void **hotspot** (const [FL_Widget](#) &p, int offscreen=0)
See void [FL_Window::hotspot](#)(int x, int y, int offscreen = 0)
- void **hotspot** (const [FL_Widget](#) *, int offscreen=0)
See void [FL_Window::hotspot](#)(int x, int y, int offscreen = 0)
- void **hotspot** (int x, int y, int offscreen=0)
Positions the window so that the mouse is pointing at the given position, or at the center of the given widget, which may be the window itself.
- const void * **icon** () const
Gets the current icon window target dependent data.

- void [icon](#) (const [FL_RGB_Image](#) *)
Sets or resets a single window icon.
- void [icon](#) (const void *ic)
Platform-specific method to set the window icon usable on Windows and X11 only.
- void [iconize](#) ()
Iconifies the window.
- const char * [iconlabel](#) () const
See void [FL_Window::iconlabel\(const char\)](#)*
- void [iconlabel](#) (const char *)
Sets the icon label.
- void [icons](#) (const [FL_RGB_Image](#) *[], int)
Sets the window icons.
- void [icons](#) (HICON big_icon, HICON small_icon)
Sets the window icons using HICON handles (Windows platform only).
- const char * [label](#) () const
See void [FL_Window::label\(const char\)](#)*
- void [label](#) (const char *)
Sets the window title bar label.
- void [label](#) (const char *label, const char *iconlabel)
Sets the icon label.
- void [make_current](#) ()
Sets things up so that the drawing functions in <[FL/fl_draw.H](#)> will go into this window.
- void [maximize](#) ()
Maximizes a top-level window to its current screen.
- unsigned int [maximize_active](#) () const
Returns whether the window is currently maximized.
- unsigned int [menu_window](#) () const
Returns true if this window is a menu window.
- unsigned int [modal](#) () const
Returns true if this window is modal.
- unsigned int [non_modal](#) () const
Returns true if this window is modal or non-modal.
- [fl_uintptr_t](#) [os_id](#) ()
Returns a platform-specific identification of a shown window, or 0 if not shown.
- unsigned int [override](#) () const
Returns non zero if [OVERRIDE](#) flag is set, 0 otherwise.
- void [resize](#) (int X, int Y, int W, int H) [FL_OVERRIDE](#)
Changes the size and position of the window.
- int [screen_num](#) ()
The number of the screen containing the mapped window.
- void [screen_num](#) (int screen_num)
Set the number of the screen where to map the window.
- void [set_menu_window](#) ()
Marks the window as a menu window.
- void [set_modal](#) ()
A "modal" window, when [shown\(\)](#), will prevent any events from being delivered to other windows in the same program, and will also remain on top of the other windows (if the X window manager supports the "transient for" property).
- void [set_non_modal](#) ()
A "non-modal" window (terminology borrowed from Microsoft Windows) acts like a [modal\(\)](#) one in that it remains on top, but it has no effect on event delivery.
- void [set_override](#) ()

- Activates the flags NOBORDER|OVERRIDE.*

 - void [set_tooltip_window](#) ()

Marks the window as a tooltip window.

 - const [FL_Image](#) * [shape](#) ()
- Returns the image controlling the window shape or NULL.*
- void [shape](#) (const [FL_Image](#) &b)
- Set the window's shape with an [FL_Image](#).*
- void [shape](#) (const [FL_Image](#) *img)
- Assigns a non-rectangular shape to the window.*
- void [show](#) () [FL_OVERRIDE](#)
- Puts the window on the screen.*
- void [show](#) (int argc, char **argv)
- Puts the window on the screen with [show\(\)](#) and parses command-line arguments.*
- int [shown](#) ()
- Returns non-zero if [show\(\)](#) has been called (but not [hide\(\)](#)).*
- void [size_range](#) (int minw, int minh, int maxw=0, int maxh=0, int dw=0, int dh=0, int aspect=0)
- Sets the allowable range to which the user can resize this window.*
- unsigned int [tooltip_window](#) () const
- Returns true if this window is a tooltip window.*
- void [un_maximize](#) ()
- Returns a previously maximized top-level window to its previous size.*
- void [wait_for_expose](#) ()
- Waits for the window to be displayed after calling [show\(\)](#).*
- int [x_root](#) () const
- Gets the x position of the window on the screen.*
- const char * [xclass](#) () const
- Returns the xclass for this window, or a default.*
- void [xclass](#) (const char *c)
- Sets the xclass for this window.*
- int [y_root](#) () const
- Gets the y position of the window on the screen.*
- virtual [~FL_Window](#) ()
- The destructor also deletes all the children.*

Public Member Functions inherited from [FL_Group](#)

- [FL_Widget](#) *& [_ddfdesign_kludge](#) ()
- This is for forms compatibility only.*
- void [add](#) ([FL_Widget](#) &)
- The widget is removed from its current group (if any) and then added to the end of this group.*
- void [add](#) ([FL_Widget](#) *o)
- See void [FL_Group::add\(FL_Widget &w\)](#)*
- void [add_resizable](#) ([FL_Widget](#) &o)
- Adds a widget to the group and makes it the resizable widget.*
- [FL_Widget](#) *const * [array](#) () const
- Returns a pointer to the array of children.*
- [FL_Group](#) const * [as_group](#) () const [FL_OVERRIDE](#)
 - [FL_Group](#) * [as_group](#) () [FL_OVERRIDE](#)
- Returns an [FL_Group](#) pointer if this widget is an [FL_Group](#).*
- void [begin](#) ()
- Sets the current group so you can build the widget tree by just constructing the widgets.*

- `FL_Widget * child (int n) const`
Returns the n'th child.
- `int children () const`
Returns how many child widgets the group has.
- `void clear ()`
Deletes all child widgets from memory recursively.
- `unsigned int clip_children ()`
Returns the current clipping mode.
- `void clip_children (int c)`
Controls whether the group widget clips the drawing of child widgets to its bounding box.
- `virtual int delete_child (int n)`
Removes the widget at `index` from the group and deletes it.
- `void end ()`
Exactly the same as `current(this->parent())`.
- `int find (const FL_Widget &o) const`
*See `int FL_Group::find(const FL_Widget *w) const`.*
- `int find (const FL_Widget *) const`
Searches the child array for the widget and returns the index.
- `FL_Group (int, int, int, int, const char * = 0)`
Creates a new `FL_Group` widget using the given position, size, and label string.
- `void focus (FL_Widget *W)`
- `void forms_end ()`
This is for forms compatibility only.
- `void init_sizes ()`
Resets the internal array of widget sizes and positions.
- `void insert (FL_Widget &, int i)`
The widget is removed from its current group (if any) and then inserted into this group.
- `void insert (FL_Widget &o, FL_Widget *before)`
This does `insert(w, find(before))`.
- `void remove (FL_Widget &)`
Removes a widget from the group but does not delete it.
- `void remove (FL_Widget *o)`
Removes the widget `o` from the group.
- `void remove (int index)`
Removes the widget at `index` from the group but does not delete it.
- `FL_Widget * resizable () const`
Returns the group's resizable widget.
- `void resizable (FL_Widget &o)`
Sets the group's resizable widget.
- `void resizable (FL_Widget *o)`
The resizable widget defines both the resizing box and the resizing behavior of the group and its children.
- `virtual ~FL_Group ()`
The destructor also deletes all the children.

Public Member Functions inherited from [FI_Widget](#)

- void [_clear_fullscreen](#) ()
- void [_set_fullscreen](#) ()
- void [activate](#) ()
Activates the widget.
- unsigned int [active](#) () const
Returns whether the widget is active.
- int [active_r](#) () const
Returns whether the widget and all of its parents are active.
- [FI_Align](#) [align](#) () const
Gets the label alignment.
- void [align](#) ([FI_Align](#) alignment)
Sets the label alignment.
- long [argument](#) () const
Gets the current user data (long) argument that is passed to the callback function.
- void [argument](#) (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class [FI_Gl_Window](#) * [as_gl_window](#) ()
Returns an [FI_Gl_Window](#) pointer if this widget is an [FI_Gl_Window](#).
- virtual class [FI_Gl_Window](#) const * [as_gl_window](#) () const
- void [bind_deimage](#) ([FI_Image](#) *img)
Sets the image to use as part of the widget label when in the inactive state.
- void [bind_deimage](#) (int f)
Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.
- void [bind_image](#) ([FI_Image](#) *img)
Sets the image to use as part of the widget label when in the active state.
- void [bind_image](#) (int f)
Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- [FI_Boxtype](#) [box](#) () const
Gets the box type of the widget.
- void [box](#) ([FI_Boxtype](#) new_box)
Sets the box type for the widget.
- [FI_Callback_p](#) [callback](#) () const
Gets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb, [FI_Callback_User_Data](#) *p, bool auto_free)
Sets the current callback function and managed user data for the widget.
- void [callback](#) ([FI_Callback](#) *cb, void *p)
Sets the current callback function and data for the widget.
- void [callback](#) ([FI_Callback0](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback1](#) *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int [changed](#) () const
Checks if the widget value changed since the last callback.
- void [clear_active](#) ()
Marks the widget as inactive without sending events or changing focus.
- void [clear_changed](#) ()
Marks the value of the widget as unchanged.

- void `clear_damage` (`uchar` c=0)
Clears or sets the damage flags.
- void `clear_output` ()
Sets a widget to accept input.
- void `clear_visible` ()
Hides the widget.
- void `clear_visible_focus` ()
Disables keyboard focus navigation with this widget.
- `FL_Color` `color` () const
Gets the background color of the widget.
- void `color` (`FL_Color` bg)
Sets the background color of the widget.
- void `color` (`FL_Color` bg, `FL_Color` sel)
Sets the background and selection color of the widget.
- `FL_Color` `color2` () const
For back compatibility only.
- void `color2` (unsigned a)
For back compatibility only.
- int `contains` (const `FL_Widget` *w) const
Checks if w is a child of this widget.
- void `copy_label` (const char *new_label)
Sets the current label.
- void `copy_tooltip` (const char *text)
Sets the current tooltip text.
- `uchar` `damage` () const
Returns non-zero if `draw()` needs to be called.
- void `damage` (`uchar` c)
Sets the damage bits for the widget.
- void `damage` (`uchar` c, int x, int y, int w, int h)
Sets the damage bits for an area inside the widget.
- int **`damage_resize`** (int, int, int, int)
Internal use only.
- void `deactivate` ()
Deactivates the widget.
- `FL_Image` * `deimage` ()
Gets the image that is used as part of the widget label when in the inactive state.
- const `FL_Image` * `deimage` () const
Gets the image that is used as part of the widget label when in the inactive state.
- void `deimage` (`FL_Image` &img)
Sets the image to use as part of the widget label when in the inactive state.
- void `deimage` (`FL_Image` *img)
Sets the image to use as part of the widget label when in the inactive state.
- int `deimage_bound` () const
Returns whether the inactive image is managed by the widget.
- void `do_callback` (`FL_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with default arguments.
- void `do_callback` (`FL_Widget` *widget, long arg, `FL_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with arbitrary arguments.
- void `do_callback` (`FL_Widget` *widget, void *arg=0, `FL_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with arbitrary arguments.
- void `draw_label` (int, int, int, int, `FL_Align`) const

- Draws the label in an arbitrary bounding box with an arbitrary alignment.*
- `int h () const`
Gets the widget height.
- `int horizontal_label_margin ()`
Get the spacing between the label and the horizontal edge of the widget.
- `void horizontal_label_margin (int px)`
Set the spacing between the label and the horizontal edge of the widget.
- `FL_Image * image ()`
Gets the image that is used as part of the widget label when in the active state.
- `const FL_Image * image () const`
Gets the image that is used as part of the widget label when in the active state.
- `void image (FL_Image &img)`
Sets the image to use as part of the widget label when in the active state.
- `void image (FL_Image *img)`
Sets the image to use as part of the widget label when in the active state.
- `int image_bound () const`
Returns whether the image is managed by the widget.
- `int inside (const FL_Widget *wgt) const`
Checks if this widget is a child of wgt.
- `int is_label_copied () const`
Returns whether the current label was assigned with `copy_label()`.
- `const char * label () const`
Gets the current label text.
- `void label (const char *text)`
Sets the current label pointer.
- `void label (FL_Labeltype a, const char *b)`
Shortcut to set the label text and type in one call.
- `int label_image_spacing ()`
Return the gap size between the label and the image.
- `void label_image_spacing (int gap)`
Set the gap between the label and the image in pixels.
- `FL_Color labelcolor () const`
Gets the label color.
- `void labelcolor (FL_Color c)`
Sets the label color.
- `FL_Font labelfont () const`
Gets the font to use.
- `void labelfont (FL_Font f)`
Sets the font to use.
- `FL_Fonsize labelsiz () const`
Gets the font size in pixels.
- `void labelsiz (FL_Fonsize pix)`
Sets the font size in pixels.
- `FL_Labeltype labeltype () const`
Gets the label type.
- `void labeltype (FL_Labeltype a)`
Sets the label type.
- `void measure_label (int &ww, int &hh) const`
Sets width ww and height hh accordingly with the label size.
- `bool needs_keyboard () const`
Returns whether this widget needs a keyboard.

- void `needs_keyboard` (bool needs)
Sets whether this widget needs a keyboard.
- unsigned int `output` () const
Returns if a widget is used for output only.
- `FL_Group * parent` () const
Returns a pointer to the parent widget.
- void `parent` (`FL_Group *p`)
Internal use only - "for hacks only".
- void `position` (int X, int Y)
Repositions the window or widget.
- void `redraw` ()
Schedules the drawing of the widget.
- void `redraw_label` ()
Schedules the drawing of the label.
- `FL_Color selection_color` () const
Gets the selection color.
- void `selection_color` (`FL_Color a`)
Sets the selection color.
- void `set_active` ()
Marks the widget as active without sending events or changing focus.
- void `set_changed` ()
Marks the value of the widget as changed.
- void `set_output` ()
Sets a widget to output only.
- void `set_visible` ()
Makes the widget visible.
- void `set_visible_focus` ()
Enables keyboard focus navigation with this widget.
- int `shortcut_label` () const
Returns whether the widget's label uses '&' to indicate shortcuts.
- void `shortcut_label` (int value)
Sets whether the widget's label uses '&' to indicate shortcuts.
- void `size` (int W, int H)
Changes the size of the widget.
- int `take_focus` ()
Gives the widget the keyboard focus.
- unsigned int `takeevents` () const
Returns if the widget is able to take events.
- int `test_shortcut` ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * `tooltip` () const
Gets the current tooltip text.
- void `tooltip` (const char *text)
Sets the current tooltip text.
- `FL_Window * top_window` () const
Returns a pointer to the top-level window for the widget.
- `FL_Window * top_window_offset` (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- `uchar type` () const
Gets the widget type.
- void `type` (`uchar t`)

- Sets the widget type.*
- int **use_accents_menu** ()
 - Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.*
- void * **user_data** () const
 - Gets the user data for this widget.*
- void **user_data** (FI_Callback_User_Data *v, bool auto_free)
 - Sets the user data for this widget.*
- void **user_data** (void *v)
 - Sets the user data for this widget.*
- int **vertical_label_margin** ()
 - Get the spacing between the label and the vertical edge of the widget.*
- void **vertical_label_margin** (int px)
 - Set the spacing between the label and the vertical edge of the widget.*
- unsigned int **visible** () const
 - Returns whether a widget is visible.*
- unsigned int **visible_focus** () const
 - Checks whether this widget has a visible focus.*
- void **visible_focus** (int v)
 - Modifies keyboard focus navigation.*
- int **visible_r** () const
 - Returns whether a widget and all its parents are visible.*
- int **w** () const
 - Gets the widget width.*
- FI_When **when** () const
 - Returns the conditions under which the callback is called.*
- void **when** (uchar i)
 - Sets the flags used to decide when a callback is called.*
- FI_Window * **window** () const
 - Returns a pointer to the nearest parent window up the widget hierarchy.*
- int **x** () const
 - Gets the widget position in its window.*
- int **y** () const
 - Gets the widget position in its window.*
- virtual ~FI_Widget ()
 - Destroys the widget.*

Additional Inherited Members

Public Types inherited from FI_Window

- typedef struct HICON__ * HICON

Static Public Member Functions inherited from FI_Window

- static FI_Window * **current** ()
 - Returns the last window that was made current.*
- static void **default_callback** (FI_Window *, void *v)
 - Back compatibility: Sets the default callback v for win to call on close event.*
- static void **default_icon** (const FI_RGB_Image *)
 - Sets a single default window icon.*
- static void **default_icons** (const FI_RGB_Image *[], int)
 - Sets the default window icons.*

- static void [default_icons](#) (HICON big_icon, HICON small_icon)
Sets the default window icons (Windows platform only).
- static const char * [default_xclass](#) ()
Returns the default xclass.
- static void [default_xclass](#) (const char *)
Sets the default window xclass.
- static bool [is_a_rescale](#) ()
Returns true when a window is being rescaled.
- static char [show_next_window_iconic](#) ()
Returns the static flag whether the next window should be opened iconified.
- static void [show_next_window_iconic](#) (char stat)
Sets a static flag whether the next window should be opened iconified.

Static Public Member Functions inherited from [FI_Group](#)

- static [FI_Group](#) * [current](#) ()
Returns the currently active group.
- static void [current](#) ([FI_Group](#) *g)
Sets the current group.

Static Public Member Functions inherited from [FI_Widget](#)

- static void [default_callback](#) ([FI_Widget](#) *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int [label_shortcut](#) (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int [test_shortcut](#) (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

[USERFLAG1](#) = 1<<31 }
flags possible values enumeration.

Protected Member Functions inherited from [FI_Window](#)

- void [default_size_range](#) ()
Protected method to calculate the default size range of a window.
- void [draw](#) () [FL_OVERRIDE](#)
Draws the widget.
- int [force_position](#) () const

- Returns the internal state of the window's `FORCE_POSITION` flag.*
- void `force_position` (int force)
Sets an internal flag that tells FLTK and the window manager to honor position requests.
- void `free_icons` ()
Deletes all icons previously attached to the window.
- int `is_resizable` ()
Protected method to determine whether a window is resizable.

Protected Member Functions inherited from `Fl_Group`

- `Fl_Rect *` `bounds` ()
Returns the internal array of widget sizes and positions.
- void `draw_child` (`Fl_Widget` &widget) const
Forces a child to redraw.
- void `draw_children` ()
Draws all children of the group.
- void `draw_outside_label` (const `Fl_Widget` &widget) const
Parents normally call this to draw outside labels of child widgets.
- virtual int `on_insert` (`Fl_Widget` *, int)
Allow derived groups to act when a widget is added as a child.
- virtual int `on_move` (int, int)
Allow derived groups to act when a widget is moved within the group.
- virtual void `on_remove` (int)
Allow derived groups to act when a child widget is removed from the group.
- int * `sizes` ()
Returns the internal array of widget sizes and positions.
- void `update_child` (`Fl_Widget` &widget) const
Draws a child only if it needs it.

Protected Member Functions inherited from `Fl_Widget`

- void `clear_flag` (unsigned int c)
Clears a flag in the flags mask.
- void `draw_backdrop` () const
If `FL_ALIGN_IMAGE_BACKDROP` is set, the image or deimage will be drawn.
- void `draw_box` () const
Draws the widget box according its box style.
- void `draw_box` (`Fl_Boxtype` t, `Fl_Color` c) const
Draws a box of type t, of color c at the widget's position and size.
- void `draw_box` (`Fl_Boxtype` t, int x, int y, int w, int h, `Fl_Color` c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void `draw_focus` () const
Draws a focus rectangle around the widget.
- void `draw_focus` (`Fl_Boxtype` t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void `draw_focus` (`Fl_Boxtype` t, int x, int y, int w, int h, `Fl_Color` bg) const
Draws a focus box for the widget at the given position and size.
- void `draw_label` () const
Draws the widget's label at the defined label position.
- void `draw_label` (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- `Fl_Widget` (int x, int y, int w, int h, const char *label=0L)

- Creates a widget at the given position and size.*

 - unsigned int **flags** () const

Gets the widget flags mask.
- void **h** (int v)

Internal use only.
- void **set_flag** (unsigned int c)

Sets a flag in the flags mask.
- void **w** (int v)

Internal use only.
- void **x** (int v)

Internal use only.
- void **y** (int v)

Internal use only.

Static Protected Attributes inherited from `Fl_Window`

- static `Fl_Window * current_`
- Stores the last window that was made current.*

11.131.1 Detailed Description

This is the same as `Fl_Window`.

However, it is possible that some implementations will provide double-buffered windows by default. This subclass can be used to force single-buffering. This may be useful for modifying existing programs that use incremental update, or for some types of image data, such as a movie flipbook.

11.131.2 Member Function Documentation

11.131.2.1 `flush()`

```
void Fl_Single_Window::flush () [inline], [virtual]
```

Same as `Fl_Window::flush()`

Reimplemented from `Fl_Window`.

11.131.2.2 `show()`

```
void Fl_Single_Window::show () [virtual]
```

Makes a widget visible.

An invisible widget never gets redrawn and does not get keyboard or mouse events, but can receive a few other events like `FL_SHOW`.

The `visible()` method returns true if the widget is set to be visible. The `visible_r()` method returns true if the widget and all of its parents are visible. A widget is only visible if `visible()` is true on it *and all of its parents*.

Changing it will send `FL_SHOW` or `FL_HIDE` events to the widget. *Do not change it if the parent is not visible, as this will send false `FL_SHOW` or `FL_HIDE` events to the widget.* `redraw()` is called if necessary on this or the parent.

See also

`hide()`, `visible()`, `visible_r()`

Reimplemented from `Fl_Widget`.

The documentation for this class was generated from the following files:

- `Fl_Single_Window.H`
- `Fl_Single_Window.cxx`

11.132 FL_Slider Class Reference

The [FL_Slider](#) widget contains a sliding knob inside a box.

```
#include <FL_Slider.H>
```

Inheritance diagram for [FL_Slider](#):

Public Member Functions

- void [bounds](#) (double a, double b)
Sets the minimum (a) and maximum (b) values for the valuator widget.
- [FL_Slider](#) (int X, int Y, int W, int H, const char *L=0)
Creates a new [FL_Slider](#) widget using the given position, size, and label string.
- [FL_Slider](#) (uchar t, int X, int Y, int W, int H, const char *L)
Creates a new [FL_Slider](#) widget using the given type, position, size, and label string.
- int [handle](#) (int) [FL_OVERRIDE](#)
Handles the specified event.
- int [scrollvalue](#) (int pos, int [size](#), int first, int total)
Sets the size and position of the sliding knob in the box.
- [FL_Boxtype slider](#) () const
Gets the slider box type.
- void [slider](#) ([FL_Boxtype](#) c)
Sets the slider box type.
- float [slider_size](#) () const
Get the dimensions of the moving piece of slider.
- void [slider_size](#) (double v)
Set the dimensions of the moving piece of slider.

Public Member Functions inherited from [FL_Valuator](#)

- void [bounds](#) (double a, double b)
Sets the minimum (a) and maximum (b) values for the valuator widget.
- double [clamp](#) (double)
Clamps the passed value to the valuator range.
- virtual int [format](#) (char *)
Uses internal rules to format the fields numerical value into the character array pointed to by the passed parameter.
- double [increment](#) (double, int)
Adds n times the step value to the passed value.
- double [maximum](#) () const
Gets the maximum value for the valuator.
- void [maximum](#) (double a)
Sets the maximum value for the valuator.
- double [minimum](#) () const
Gets the minimum value for the valuator.
- void [minimum](#) (double a)
Sets the minimum value for the valuator.

- void **precision** (int digits)
Sets the step value to $1.0 / 10^{\text{digits}}$.
- void **range** (double a, double b)
Sets the minimum and maximum values for the valuator.
- double **round** (double)
Round the passed value to the nearest step increment.
- double **step** () const
Gets or sets the step value.
- void **step** (double a, int b)
See double [FI_Valuator::step\(\)](#) const.
- void **step** (double s)
See double [FI_Valuator::step\(\)](#) const.
- void **step** (int a)
See double [FI_Valuator::step\(\)](#) const.
- double **value** () const
Gets the floating point(double) value.
- int **value** (double)
Sets the current value.
- **~FI_Valuator** () **FL_OVERRIDE**
Destructor is accessible despite protected constructor.

Public Member Functions inherited from [FI_Widget](#)

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
Activates the widget.
- unsigned int **active** () const
Returns whether the widget is active.
- int **active_r** () const
Returns whether the widget and all of its parents are active.
- [FI_Align](#) **align** () const
Gets the label alignment.
- void **align** ([FI_Align](#) alignment)
Sets the label alignment.
- long **argument** () const
Gets the current user data (long) argument that is passed to the callback function.
- void **argument** (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class [FI_Gl_Window](#) * **as_gl_window** ()
Returns an [FI_Gl_Window](#) pointer if this widget is an [FI_Gl_Window](#).
- virtual class [FI_Gl_Window](#) const * **as_gl_window** () const
- virtual [FI_Group](#) * **as_group** ()
Returns an [FI_Group](#) pointer if this widget is an [FI_Group](#).
- virtual [FI_Group](#) const * **as_group** () const
- virtual [FI_Window](#) * **as_window** ()
Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).
- virtual [FI_Window](#) const * **as_window** () const
- void **bind_deimage** ([FI_Image](#) *img)
Sets the image to use as part of the widget label when in the inactive state.
- void **bind_deimage** (int f)

- Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.*

 - void `bind_image` (`FI_Image` *img)

Sets the image to use as part of the widget label when in the active state.
- void `bind_image` (int f)

Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- `FI_Boxtype` `box` () const

Gets the box type of the widget.
- void `box` (`FI_Boxtype` new_box)

Sets the box type for the widget.
- `FI_Callback_p` `callback` () const

Gets the current callback function for the widget.
- void `callback` (`FI_Callback` *cb)

Sets the current callback function for the widget.
- void `callback` (`FI_Callback` *cb, `FI_Callback_User_Data` *p, bool auto_free)

Sets the current callback function and managed user data for the widget.
- void `callback` (`FI_Callback` *cb, void *p)

Sets the current callback function and data for the widget.
- void `callback` (`FI_Callback0` *cb)

Sets the current callback function for the widget.
- void `callback` (`FI_Callback1` *cb, long p=0)

Sets the current callback function for the widget.
- unsigned int `changed` () const

Checks if the widget value changed since the last callback.
- void `clear_active` ()

Marks the widget as inactive without sending events or changing focus.
- void `clear_changed` ()

Marks the value of the widget as unchanged.
- void `clear_damage` (uchar c=0)

Clears or sets the damage flags.
- void `clear_output` ()

Sets a widget to accept input.
- void `clear_visible` ()

Hides the widget.
- void `clear_visible_focus` ()

Disables keyboard focus navigation with this widget.
- `FI_Color` `color` () const

Gets the background color of the widget.
- void `color` (`FI_Color` bg)

Sets the background color of the widget.
- void `color` (`FI_Color` bg, `FI_Color` sel)

Sets the background and selection color of the widget.
- `FI_Color` `color2` () const

For back compatibility only.
- void `color2` (unsigned a)

For back compatibility only.
- int `contains` (const `FI_Widget` *w) const

Checks if w is a child of this widget.
- void `copy_label` (const char *new_label)

Sets the current label.
- void `copy_tooltip` (const char *text)

Sets the current tooltip text.

- `uchar damage () const`
Returns non-zero if `draw()` needs to be called.
- `void damage (uchar c)`
Sets the damage bits for the widget.
- `void damage (uchar c, int x, int y, int w, int h)`
Sets the damage bits for an area inside the widget.
- `int damage_resize (int, int, int, int)`
Internal use only.
- `void deactivate ()`
Deactivates the widget.
- `FL_Image * deimage ()`
Gets the image that is used as part of the widget label when in the inactive state.
- `const FL_Image * deimage () const`
Gets the image that is used as part of the widget label when in the inactive state.
- `void deimage (FL_Image &img)`
Sets the image to use as part of the widget label when in the inactive state.
- `void deimage (FL_Image *img)`
Sets the image to use as part of the widget label when in the inactive state.
- `int deimage_bound () const`
Returns whether the inactive image is managed by the widget.
- `void do_callback (FL_Callback_Reason reason=FL_REASON_UNKNOWN)`
Calls the widget callback function with default arguments.
- `void do_callback (FL_Widget *widget, long arg, FL_Callback_Reason reason=FL_REASON_UNKNOWN)`
Calls the widget callback function with arbitrary arguments.
- `void do_callback (FL_Widget *widget, void *arg=0, FL_Callback_Reason reason=FL_REASON_UNKNOWN)`
Calls the widget callback function with arbitrary arguments.
- `void draw_label (int, int, int, int, FL_Align) const`
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- `int h () const`
Gets the widget height.
- `virtual void hide ()`
Makes a widget invisible.
- `int horizontal_label_margin ()`
Get the spacing between the label and the horizontal edge of the widget.
- `void horizontal_label_margin (int px)`
Set the spacing between the label and the horizontal edge of the widget.
- `FL_Image * image ()`
Gets the image that is used as part of the widget label when in the active state.
- `const FL_Image * image () const`
Gets the image that is used as part of the widget label when in the active state.
- `void image (FL_Image &img)`
Sets the image to use as part of the widget label when in the active state.
- `void image (FL_Image *img)`
Sets the image to use as part of the widget label when in the active state.
- `int image_bound () const`
Returns whether the image is managed by the widget.
- `int inside (const FL_Widget *wgt) const`
Checks if this widget is a child of `wgt`.
- `int is_label_copied () const`
Returns whether the current label was assigned with `copy_label()`.
- `const char * label () const`

- Gets the current label text.*

 - void [label](#) (const char *text)
- Sets the current label pointer.*

 - void [label](#) (FI_Labeltype a, const char *b)
- Shortcut to set the label text and type in one call.*

 - int [label_image_spacing](#) ()
- Return the gap size between the label and the image.*

 - void [label_image_spacing](#) (int gap)
- Set the gap between the label and the image in pixels.*

 - [FI_Color](#) [labelcolor](#) () const
- Gets the label color.*

 - void [labelcolor](#) ([FI_Color](#) c)
- Sets the label color.*

 - [FI_Font](#) [labelfont](#) () const
- Gets the font to use.*

 - void [labelfont](#) ([FI_Font](#) f)
- Sets the font to use.*

 - [FI_Fonsize](#) [labelsize](#) () const
- Gets the font size in pixels.*

 - void [labelsize](#) ([FI_Fonsize](#) pix)
- Sets the font size in pixels.*

 - [FI_Labeltype](#) [labeltype](#) () const
- Gets the label type.*

 - void [labeltype](#) ([FI_Labeltype](#) a)
- Sets the label type.*

 - void [measure_label](#) (int &ww, int &hh) const
- Sets width ww and height hh accordingly with the label size.*

 - bool [needs_keyboard](#) () const
- Returns whether this widget needs a keyboard.*

 - void [needs_keyboard](#) (bool needs)
- Sets whether this widget needs a keyboard.*

 - unsigned int [output](#) () const
- Returns if a widget is used for output only.*

 - [FI_Group](#) * [parent](#) () const
- Returns a pointer to the parent widget.*

 - void [parent](#) ([FI_Group](#) *p)
- Internal use only - "for hacks only".*

 - void [position](#) (int X, int Y)
- Repositions the window or widget.*

 - void [redraw](#) ()
- Schedules the drawing of the widget.*

 - void [redraw_label](#) ()
- Schedules the drawing of the label.*

 - virtual void [resize](#) (int x, int y, int w, int h)
- Changes the size or position of the widget.*

 - [FI_Color](#) [selection_color](#) () const
- Gets the selection color.*

 - void [selection_color](#) ([FI_Color](#) a)
- Sets the selection color.*

 - void [set_active](#) ()
- Marks the widget as active without sending events or changing focus.*

- void [set_changed](#) ()
Marks the value of the widget as changed.
- void [set_output](#) ()
Sets a widget to output only.
- void [set_visible](#) ()
Makes the widget visible.
- void [set_visible_focus](#) ()
Enables keyboard focus navigation with this widget.
- int [shortcut_label](#) () const
Returns whether the widget's label uses '&' to indicate shortcuts.
- void [shortcut_label](#) (int value)
Sets whether the widget's label uses '&' to indicate shortcuts.
- virtual void [show](#) ()
Makes a widget visible.
- void [size](#) (int W, int H)
Changes the size of the widget.
- int [take_focus](#) ()
Gives the widget the keyboard focus.
- unsigned int [takeevents](#) () const
Returns if the widget is able to take events.
- int [test_shortcut](#) ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * [tooltip](#) () const
Gets the current tooltip text.
- void [tooltip](#) (const char *text)
Sets the current tooltip text.
- [Fl_Window](#) * [top_window](#) () const
Returns a pointer to the top-level window for the widget.
- [Fl_Window](#) * [top_window_offset](#) (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- [uchar](#) [type](#) () const
Gets the widget type.
- void [type](#) ([uchar](#) t)
Sets the widget type.
- int [use_accents_menu](#) ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * [user_data](#) () const
Gets the user data for this widget.
- void [user_data](#) ([Fl_Callback_User_Data](#) *v, bool auto_free)
Sets the user data for this widget.
- void [user_data](#) (void *v)
Sets the user data for this widget.
- int [vertical_label_margin](#) ()
Get the spacing between the label and the vertical edge of the widget.
- void [vertical_label_margin](#) (int px)
Set the spacing between the label and the vertical edge of the widget.
- unsigned int [visible](#) () const
Returns whether a widget is visible.
- unsigned int [visible_focus](#) () const
Checks whether this widget has a visible focus.
- void [visible_focus](#) (int v)

- Modifies keyboard focus navigation.*

 - int **visible_r** () const
Returns whether a widget and all its parents are visible.
 - int **w** () const
Gets the widget width.
 - **FL_When when** () const
Returns the conditions under which the callback is called.
 - void **when** (uchar i)
Sets the flags used to decide when a callback is called.
 - **FL_Window * window** () const
Returns a pointer to the nearest parent window up the widget hierarchy.
 - int **x** () const
Gets the widget position in its window.
 - int **y** () const
Gets the widget position in its window.
 - virtual **~FL_Widget** ()
Destroys the widget.

Protected Member Functions

- void **draw** () **FL_OVERRIDE**
Draws the widget.
- void **draw** (int, int, int, int)
- int **handle** (int, int, int, int, int)

Protected Member Functions inherited from **FL_Valuator**

- **FL_Valuator** (int X, int Y, int W, int H, const char *L)
*Creates a new **FL_Valuator** widget using the given position, size, and label string.*
- void **handle_drag** (double newvalue)
*Called during a drag operation, after an **FL_WHEN_CHANGED** event is received and before the callback.*
- void **handle_push** ()
Stores the current value in the previous value.
- void **handle_release** ()
*Called after an **FL_WHEN_RELEASE** event is received and before the callback.*
- int **horizontal** () const
*Tells if the valuator is an **FL_HORIZONTAL** one.*
- double **previous_value** () const
Gets the previous floating point value before an event changed it.
- void **set_value** (double v)
Sets the current floating point value.
- double **softclamp** (double)
Clamps the value, but accepts v if the previous value is not already out of range.
- virtual void **value_damage** ()
Asks for partial redraw.

Protected Member Functions inherited from FI_Widget

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** (FI_Boxtype t, FI_Color c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** (FI_Boxtype t, int x, int y, int w, int h, FI_Color c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const
Draws a focus rectangle around the widget.
- void **draw_focus** (FI_Boxtype t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void **draw_focus** (FI_Boxtype t, int x, int y, int w, int h, FI_Color bg) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- FI_Widget (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

Additional Inherited Members

Static Public Member Functions inherited from FI_Widget

- static void **default_callback** (FI_Widget *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int **label_shortcut** (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int **test_shortcut** (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from [Fl_Widget](#)

- enum {
[INACTIVE](#) = 1<<0 , [INVISIBLE](#) = 1<<1 , [OUTPUT](#) = 1<<2 , [NOBORDER](#) = 1<<3 ,
[FORCE_POSITION](#) = 1<<4 , [NON_MODAL](#) = 1<<5 , [SHORTCUT_LABEL](#) = 1<<6 , [CHANGED](#) = 1<<7

[USERFLAG1](#) = 1<<31 }

flags possible values enumeration.

11.132.1 Detailed Description

The [Fl_Slider](#) widget contains a sliding knob inside a box.

It is often used as a scrollbar. Moving the box all the way to the top/left sets it to the [minimum\(\)](#), and to the bottom/right to the [maximum\(\)](#). The [minimum\(\)](#) may be greater than the [maximum\(\)](#) to reverse the slider direction.

Use void [Fl_Widget::type\(int\)](#) to set how the slider is drawn, which can be one of the following:

- [FL_VERTICAL](#) - Draws a vertical slider (this is the default).
- [FL_HORIZONTAL](#) - Draws a horizontal slider.
- [FL_VERT_FILL_SLIDER](#) - Draws a filled vertical slider, useful as a progress or value meter.
- [FL_HOR_FILL_SLIDER](#) - Draws a filled horizontal slider, useful as a progress or value meter.
- [FL_VERT_NICE_SLIDER](#) - Draws a vertical slider with a nice looking control knob.
- [FL_HOR_NICE_SLIDER](#) - Draws a horizontal slider with a nice looking control knob.

Figure 11.44 [Fl_Slider](#)

11.132.2 Constructor & Destructor Documentation

11.132.2.1 [Fl_Slider\(\)](#)

```
Fl_Slider::Fl_Slider (
    int X,
    int Y,
    int W,
    int H,
    const char * L = 0)
```

Creates a new [Fl_Slider](#) widget using the given position, size, and label string.

The default boxtype is [FL_DOWN_BOX](#).

11.132.3 Member Function Documentation

11.132.3.1 bounds()

```
void Fl_Slider::bounds (
    double a,
    double b)
```

Sets the minimum (a) and maximum (b) values for the valuator widget.
if at least one of the values is changed, a partial redraw is asked.

11.132.3.2 draw()

```
void Fl_Slider::draw () [protected], [virtual]
```

Draws the widget.

Never call this function directly. FLTK will schedule redrawing whenever needed. If your widget must be redrawn as soon as possible, call [redraw\(\)](#) instead.

Override this function to draw your own widgets.

If you ever need to call another widget's draw method *from within your own [draw\(\)](#) method*, e.g. for an embedded scrollbar, you can do it (because [draw\(\)](#) is virtual) like this:

```
Fl_Widget *s = &scrollbar; // scrollbar is an embedded Fl_Scrollbar
s->draw();                 // calls Fl_Scrollbar::draw()
```

Implements [Fl_Widget](#).

Reimplemented in [Fl_Value_Slider](#).

11.132.3.3 handle()

```
int Fl_Slider::handle (
    int event) [virtual]
```

Handles the specified event.

You normally don't call this method directly, but instead let FLTK do it when the user interacts with the widget.

When implemented in a widget, this function must return 0 if the widget does not use the event or 1 otherwise.

Most of the time, you want to call the inherited `handle()` method in your overridden method so that you don't short-circuit events that you don't handle. In this last case you should return the callee `retval`.

One exception to the rule in the previous paragraph is if you really want to *override* the behavior of the base class. This requires knowledge of the details of the inherited class.

In rare cases you may want to return 1 from your `handle()` method although you don't really handle the event. The effect would be to *filter* event processing, for instance if you want to dismiss non-numeric characters (keypresses) in a numeric input widget. You may "ring the bell" or show another visual indication or drop the event silently. In such a case you must not call the `handle()` method of the base class and tell FLTK that you *consumed* the event by returning 1 even if you didn't *do* anything with it.

Parameters

in	<i>event</i>	the kind of event received
----	--------------	----------------------------

Return values

0	if the event was not used or understood
1	if the event was used and can be deleted

See also

[Fl_Event](#)

Reimplemented from [Fl_Widget](#).

Reimplemented in [Fl_Value_Slider](#).

11.132.3.4 scrollvalue()

```
int Fl_Slider::scrollvalue (
    int pos,
    int size,
    int first,
    int total)
```

Sets the size and position of the sliding knob in the box.

Parameters

in	<i>pos</i>	position of first line displayed
in	<i>size</i>	size of window in lines
in	<i>first</i>	number of first line
in	<i>total</i>	total number of lines Returns Fl_Valuator::value(p)

11.132.3.5 slider_size()

```
void Fl_Slider::slider_size (
    double v)
```

Set the dimensions of the moving piece of slider.

This is the fraction of the size of the entire widget. If you set this to 1 then the slider cannot move. The default value is .08.

For the "fill" sliders this is the size of the area around the end that causes a drag effect rather than causing the slider to jump to the mouse.

The documentation for this class was generated from the following files:

- Fl_Slider.H
- Fl_Slider.cxx

11.133 Fl_Spinner Class Reference

This widget is a combination of a numerical input widget and repeat buttons.

```
#include <Fl_Spinner.H>
```

Inheritance diagram for Fl_Spinner:

Classes

- class [Fl_Spinner_Input](#)

Public Member Functions

- [Fl_Color](#) **color** () const
Returns the background color of the spinner widget's input field.
- void **color** ([Fl_Color](#) v)
Sets the background color of the spinner widget's input field.
- [Fl_Spinner](#) (int X, int Y, int W, int H, const char *L=0)

- Creates a new [FL_Spinner](#) widget using the given position, size, and label string.*

 - `const char * format () const`
Returns the format string for the value.
 - `void format (const char *f)`
Sets the format string for the value.
 - `int handle (int event) FL_OVERRIDE`
Handles the specified event.
 - `double maximum () const`
Gets the maximum value of the widget.
 - `void maximum (double m)`
Sets the maximum value of the widget.
 - `int maximum_size () const`
Returns the maximum width of the input field.
 - `void maximum_size (int m)`
Sets the maximum width of the input field.
 - `double minimum () const`
Gets the minimum value of the widget.
 - `void minimum (double m)`
Sets the minimum value of the widget.
 - `void range (double a, double b)`
Sets the minimum and maximum values for the widget.
 - `void resize (int X, int Y, int W, int H) FL_OVERRIDE`
Resizes the [FL_Group](#) widget and all of its children.
 - `FL_Color selection_color () const`
Returns the selection color of the spinner widget's input field.
 - `void selection_color (FL_Color val)`
Sets the selection color of the spinner widget's input field.
 - `double step () const`
Gets the amount to change the value when the user clicks a button.
 - `void step (double s)`
Sets or returns the amount to change the value when the user clicks a button.
 - `FL_Color textcolor () const`
Gets the color of the text in the input field.
 - `void textcolor (FL_Color c)`
Sets the color of the text in the input field.
 - `FL_Font textfont () const`
Gets the font of the text in the input field.
 - `void textfont (FL_Font f)`
Sets the font of the text in the input field.
 - `FL_Fontsize textsize () const`
Gets the size of the text in the input field.
 - `void textsize (FL_Fontsize s)`
Sets the size of the text in the input field.
 - `uchar type () const`
Gets the numeric representation in the input field.
 - `void type (uchar v)`
Sets the numeric representation in the input field.
 - `double value () const`
Gets the current value of the widget.
 - `void value (double v)`
Sets the current value of the input widget.

- `int wrap () const`
Gets the wrap mode of the `FL_Spinner` widget.
- `void wrap (int set)`
Sets whether the spinner wraps around at upper and lower bounds.

Public Member Functions inherited from `FL_Group`

- `FL_Widget *& _ddfdesign_kludge ()`
This is for forms compatibility only.
- `void add (FL_Widget &)`
The widget is removed from its current group (if any) and then added to the end of this group.
- `void add (FL_Widget *o)`
See void `FL_Group::add(FL_Widget &w)`
- `void add_resizable (FL_Widget &o)`
Adds a widget to the group and makes it the resizable widget.
- `FL_Widget *const * array () const`
Returns a pointer to the array of children.
- `FL_Group const * as_group () const FL_OVERRIDE`
- `FL_Group * as_group () FL_OVERRIDE`
Returns an `FL_Group` pointer if this widget is an `FL_Group`.
- `void begin ()`
Sets the current group so you can build the widget tree by just constructing the widgets.
- `FL_Widget * child (int n) const`
Returns the n'th child.
- `int children () const`
Returns how many child widgets the group has.
- `void clear ()`
Deletes all child widgets from memory recursively.
- `unsigned int clip_children ()`
Returns the current clipping mode.
- `void clip_children (int c)`
Controls whether the group widget clips the drawing of child widgets to its bounding box.
- `virtual int delete_child (int n)`
Removes the widget at `index` from the group and deletes it.
- `void end ()`
Exactly the same as `current(this->parent())`.
- `int find (const FL_Widget &o) const`
*See int `FL_Group::find(const FL_Widget *w) const`.*
- `int find (const FL_Widget *) const`
Searches the child array for the widget and returns the index.
- `FL_Group (int, int, int, int, const char * = 0)`
Creates a new `FL_Group` widget using the given position, size, and label string.
- `void focus (FL_Widget *W)`
- `void forms_end ()`
This is for forms compatibility only.
- `void init_sizes ()`
Resets the internal array of widget sizes and positions.
- `void insert (FL_Widget &, int i)`
The widget is removed from its current group (if any) and then inserted into this group.
- `void insert (FL_Widget &o, FL_Widget *before)`
This does `insert(w, find(before))`.

- void **remove** (FL_Widget &)
Removes a widget from the group but does not delete it.
- void **remove** (FL_Widget *o)
Removes the widget o from the group.
- void **remove** (int index)
Removes the widget at index from the group but does not delete it.
- FL_Widget * **resizable** () const
Returns the group's resizable widget.
- void **resizable** (FL_Widget &o)
Sets the group's resizable widget.
- void **resizable** (FL_Widget *o)
The resizable widget defines both the resizing box and the resizing behavior of the group and its children.
- virtual ~FL_Group ()
The destructor also deletes all the children.

Public Member Functions inherited from FL_Widget

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
Activates the widget.
- unsigned int **active** () const
Returns whether the widget is active.
- int **active_r** () const
Returns whether the widget and all of its parents are active.
- FL_Align **align** () const
Gets the label alignment.
- void **align** (FL_Align alignment)
Sets the label alignment.
- long **argument** () const
Gets the current user data (long) argument that is passed to the callback function.
- void **argument** (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class FL_Gl_Window * **as_gl_window** ()
Returns an FL_Gl_Window pointer if this widget is an FL_Gl_Window.
- virtual class FL_Gl_Window const * **as_gl_window** () const
- virtual FL_Window * **as_window** ()
Returns an FL_Window pointer if this widget is an FL_Window.
- virtual FL_Window const * **as_window** () const
- void **bind_deimage** (FL_Image *img)
Sets the image to use as part of the widget label when in the inactive state.
- void **bind_deimage** (int f)
Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.
- void **bind_image** (FL_Image *img)
Sets the image to use as part of the widget label when in the active state.
- void **bind_image** (int f)
Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- FL_Boxtype **box** () const
Gets the box type of the widget.
- void **box** (FL_Boxtype new_box)
Sets the box type for the widget.

- [FI_Callback_p callback](#) () const
Gets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb, [FI_Callback_User_Data](#) *p, bool auto_free)
Sets the current callback function and managed user data for the widget.
- void [callback](#) ([FI_Callback](#) *cb, void *p)
Sets the current callback function and data for the widget.
- void [callback](#) ([FI_Callback0](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback1](#) *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int [changed](#) () const
Checks if the widget value changed since the last callback.
- void [clear_active](#) ()
Marks the widget as inactive without sending events or changing focus.
- void [clear_changed](#) ()
Marks the value of the widget as unchanged.
- void [clear_damage](#) (uchar c=0)
Clears or sets the damage flags.
- void [clear_output](#) ()
Sets a widget to accept input.
- void [clear_visible](#) ()
Hides the widget.
- void [clear_visible_focus](#) ()
Disables keyboard focus navigation with this widget.
- [FI_Color color](#) () const
Gets the background color of the widget.
- void [color](#) ([FI_Color](#) bg)
Sets the background color of the widget.
- void [color](#) ([FI_Color](#) bg, [FI_Color](#) sel)
Sets the background and selection color of the widget.
- [FI_Color color2](#) () const
For back compatibility only.
- void [color2](#) (unsigned a)
For back compatibility only.
- int [contains](#) (const [FI_Widget](#) *w) const
Checks if w is a child of this widget.
- void [copy_label](#) (const char *new_label)
Sets the current label.
- void [copy_tooltip](#) (const char *text)
Sets the current tooltip text.
- uchar [damage](#) () const
Returns non-zero if [draw\(\)](#) needs to be called.
- void [damage](#) (uchar c)
Sets the damage bits for the widget.
- void [damage](#) (uchar c, int x, int y, int w, int h)
Sets the damage bits for an area inside the widget.
- int [damage_resize](#) (int, int, int, int)
Internal use only.
- void [deactivate](#) ()

- Deactivates the widget.*
- [FL_Image](#) * [deimage](#) ()
Gets the image that is used as part of the widget label when in the inactive state.
- const [FL_Image](#) * [deimage](#) () const
Gets the image that is used as part of the widget label when in the inactive state.
- void [deimage](#) ([FL_Image](#) &img)
Sets the image to use as part of the widget label when in the inactive state.
- void [deimage](#) ([FL_Image](#) *img)
Sets the image to use as part of the widget label when in the inactive state.
- int [deimage_bound](#) () const
Returns whether the inactive image is managed by the widget.
- void [do_callback](#) ([FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
Calls the widget callback function with default arguments.
- void [do_callback](#) ([FL_Widget](#) *widget, long arg, [FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
Calls the widget callback function with arbitrary arguments.
- void [do_callback](#) ([FL_Widget](#) *widget, void *arg=0, [FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
Calls the widget callback function with arbitrary arguments.
- void [draw_label](#) (int, int, int, int, [FL_Align](#)) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int [h](#) () const
Gets the widget height.
- virtual void [hide](#) ()
Makes a widget invisible.
- int [horizontal_label_margin](#) ()
Get the spacing between the label and the horizontal edge of the widget.
- void [horizontal_label_margin](#) (int px)
Set the spacing between the label and the horizontal edge of the widget.
- [FL_Image](#) * [image](#) ()
Gets the image that is used as part of the widget label when in the active state.
- const [FL_Image](#) * [image](#) () const
Gets the image that is used as part of the widget label when in the active state.
- void [image](#) ([FL_Image](#) &img)
Sets the image to use as part of the widget label when in the active state.
- void [image](#) ([FL_Image](#) *img)
Sets the image to use as part of the widget label when in the active state.
- int [image_bound](#) () const
Returns whether the image is managed by the widget.
- int [inside](#) (const [FL_Widget](#) *wgt) const
Checks if this widget is a child of wgt.
- int [is_label_copied](#) () const
Returns whether the current label was assigned with [copy_label\(\)](#).
- const char * [label](#) () const
Gets the current label text.
- void [label](#) (const char *text)
Sets the current label pointer.
- void [label](#) ([FL_Labeltype](#) a, const char *b)
Shortcut to set the label text and type in one call.
- int [label_image_spacing](#) ()
Return the gap size between the label and the image.
- void [label_image_spacing](#) (int gap)
Set the gap between the label and the image in pixels.

- [FL_Color labelcolor](#) () const
Gets the label color.
- void [labelcolor](#) ([FL_Color](#) c)
Sets the label color.
- [FL_Font labelfont](#) () const
Gets the font to use.
- void [labelfont](#) ([FL_Font](#) f)
Sets the font to use.
- [FL_Fonsize labelsiz](#)e () const
Gets the font size in pixels.
- void [labelsiz](#)e ([FL_Fonsize](#) pix)
Sets the font size in pixels.
- [FL_Labeltype labeltyp](#)e () const
Gets the label type.
- void [labeltyp](#)e ([FL_Labeltype](#) a)
Sets the label type.
- void [measure_label](#) (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- bool [needs_keyboard](#) () const
Returns whether this widget needs a keyboard.
- void [needs_keyboard](#) (bool needs)
Sets whether this widget needs a keyboard.
- unsigned int [output](#) () const
Returns if a widget is used for output only.
- [FL_Group * parent](#) () const
Returns a pointer to the parent widget.
- void [parent](#) ([FL_Group](#) *p)
Internal use only - "for hacks only".
- void [position](#) (int X, int Y)
Repositions the window or widget.
- void [redraw](#) ()
Schedules the drawing of the widget.
- void [redraw_label](#) ()
Schedules the drawing of the label.
- [FL_Color selection_color](#) () const
Gets the selection color.
- void [selection_color](#) ([FL_Color](#) a)
Sets the selection color.
- void [set_active](#) ()
Marks the widget as active without sending events or changing focus.
- void [set_changed](#) ()
Marks the value of the widget as changed.
- void [set_output](#) ()
Sets a widget to output only.
- void [set_visible](#) ()
Makes the widget visible.
- void [set_visible_focus](#) ()
Enables keyboard focus navigation with this widget.
- int [shortcut_label](#) () const
Returns whether the widget's label uses '&' to indicate shortcuts.
- void [shortcut_label](#) (int value)

- Sets whether the widget's label uses '&' to indicate shortcuts.*

 - virtual void **show** ()
- Makes a widget visible.*

 - void **size** (int W, int H)
- Changes the size of the widget.*

 - int **take_focus** ()
- Gives the widget the keyboard focus.*

 - unsigned int **takeevents** () const
- Returns if the widget is able to take events.*

 - int **test_shortcut** ()
- Returns true if the widget's label contains the entered '&x' shortcut.*

 - const char * **tooltip** () const
- Gets the current tooltip text.*

 - void **tooltip** (const char *text)
- Sets the current tooltip text.*

 - Fl_Window * **top_window** () const
- Returns a pointer to the top-level window for the widget.*

 - Fl_Window * **top_window_offset** (int &xoff, int &yoff) const
- Finds the x/y offset of the current widget relative to the top-level window.*

 - uchar **type** () const
- Gets the widget type.*

 - void **type** (uchar t)
- Sets the widget type.*

 - int **use_accents_menu** ()
- Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.*

 - void * **user_data** () const
- Gets the user data for this widget.*

 - void **user_data** (Fl_Callback_User_Data *v, bool auto_free)
- Sets the user data for this widget.*

 - void **user_data** (void *v)
- Sets the user data for this widget.*

 - int **vertical_label_margin** ()
- Get the spacing between the label and the vertical edge of the widget.*

 - void **vertical_label_margin** (int px)
- Set the spacing between the label and the vertical edge of the widget.*

 - unsigned int **visible** () const
- Returns whether a widget is visible.*

 - unsigned int **visible_focus** () const
- Checks whether this widget has a visible focus.*

 - void **visible_focus** (int v)
- Modifies keyboard focus navigation.*

 - int **visible_r** () const
- Returns whether a widget and all its parents are visible.*

 - int **w** () const
- Gets the widget width.*

 - Fl_When **when** () const
- Returns the conditions under which the callback is called.*

 - void **when** (uchar i)
- Sets the flags used to decide when a callback is called.*

 - Fl_Window * **window** () const
- Returns a pointer to the nearest parent window up the widget hierarchy.*

- `int x () const`
Gets the widget position in its window.
- `int y () const`
Gets the widget position in its window.
- `virtual ~FL_Widget ()`
Destroys the widget.

Protected Member Functions

- `void draw () FL_OVERRIDE`
Draws the widget.

Protected Member Functions inherited from `FL_Group`

- `FL_Rect * bounds ()`
Returns the internal array of widget sizes and positions.
- `void draw_child (FL_Widget &widget) const`
Forces a child to redraw.
- `void draw_children ()`
Draws all children of the group.
- `void draw_outside_label (const FL_Widget &widget) const`
Parents normally call this to draw outside labels of child widgets.
- `virtual int on_insert (FL_Widget *, int)`
Allow derived groups to act when a widget is added as a child.
- `virtual int on_move (int, int)`
Allow derived groups to act when a widget is moved within the group.
- `virtual void on_remove (int)`
Allow derived groups to act when a child widget is removed from the group.
- `int * sizes ()`
Returns the internal array of widget sizes and positions.
- `void update_child (FL_Widget &widget) const`
Draws a child only if it needs it.

Protected Member Functions inherited from `FL_Widget`

- `void clear_flag (unsigned int c)`
Clears a flag in the flags mask.
- `void draw_backdrop () const`
If `FL_ALIGN_IMAGE_BACKDROP` is set, the image or deimage will be drawn.
- `void draw_box () const`
Draws the widget box according its box style.
- `void draw_box (FL_Boxtype t, FL_Color c) const`
Draws a box of type t, of color c at the widget's position and size.
- `void draw_box (FL_Boxtype t, int x, int y, int w, int h, FL_Color c) const`
Draws a box of type t, of color c at the position X,Y and size W,H.
- `void draw_focus () const`
Draws a focus rectangle around the widget.
- `void draw_focus (FL_Boxtype t, int X, int Y, int W, int H) const`
Draws a focus rectangle around the widget.
- `void draw_focus (FL_Boxtype t, int x, int y, int w, int h, FL_Color bg) const`
Draws a focus box for the widget at the given position and size.
- `void draw_label () const`

- Draws the widget's label at the defined label position.*
- void [draw_label](#) (int, int, int, int) const
- Draws the label in an arbitrary bounding box.*
- [FI_Widget](#) (int [x](#), int [y](#), int [w](#), int [h](#), const char *[label](#)=0L)
- Creates a widget at the given position and size.*
- unsigned int **flags** () const
- Gets the widget flags mask.*
- void [h](#) (int v)
- Internal use only.*
- void **set_flag** (unsigned int c)
- Sets a flag in the flags mask.*
- void [w](#) (int v)
- Internal use only.*
- void [x](#) (int v)
- Internal use only.*
- void [y](#) (int v)
- Internal use only.*

Protected Attributes

- [FI_Repeat_Button](#) **down_button_**
- [FI_Spinner_Input](#) **input_**
- [FI_Repeat_Button](#) **up_button_**

Additional Inherited Members

Static Public Member Functions inherited from [FI_Group](#)

- static [FI_Group](#) * **current** ()
- Returns the currently active group.*
- static void **current** ([FI_Group](#) *g)
- Sets the current group.*

Static Public Member Functions inherited from [FI_Widget](#)

- static void **default_callback** ([FI_Widget](#) *widget, void *data)
- The default callback for all widgets that don't set a callback.*
- static unsigned int **label_shortcut** (const char *t)
- Returns the Unicode value of the '&x' shortcut in a given text.*
- static int **test_shortcut** (const char *, const bool require_alt=false)
- Returns true if the given text t contains the entered '&x' shortcut.*

Protected Types inherited from [FI_Widget](#)

```

flags possible values enumeration.

11.133.1 Detailed Description

This widget is a combination of a numerical input widget and repeat buttons. The user can either type into the input area or use the buttons to change the value.

Figure 11.45 Fl_Spinner widget

11.133.2 Constructor & Destructor Documentation

11.133.2.1 Fl_Spinner()

```
Fl_Spinner::Fl_Spinner (
    int X,
    int Y,
    int W,
    int H,
    const char * L = 0)
```

Creates a new [Fl_Spinner](#) widget using the given position, size, and label string. The inherited destructor destroys the widget and any value associated with it.

11.133.3 Member Function Documentation

11.133.3.1 draw()

```
void Fl_Spinner::draw () [protected], [virtual]
```

Draws the widget.

Never call this function directly. FLTK will schedule redrawing whenever needed. If your widget must be redrawn as soon as possible, call [redraw\(\)](#) instead.

Override this function to draw your own widgets.

If you ever need to call another widget's draw method *from within your own [draw\(\)](#) method*, e.g. for an embedded scrollbar, you can do it (because [draw\(\)](#) is virtual) like this:

```
Fl_Widget *s = &scrollbar; // scrollbar is an embedded Fl_Scrollbar
s->draw(); // calls Fl_Scrollbar::draw()
```

Reimplemented from [Fl_Group](#).

11.133.3.2 handle()

```
int Fl_Spinner::handle (
    int event) [virtual]
```

Handles the specified event.

You normally don't call this method directly, but instead let FLTK do it when the user interacts with the widget.

When implemented in a widget, this function must return 0 if the widget does not use the event or 1 otherwise.

Most of the time, you want to call the inherited [handle\(\)](#) method in your overridden method so that you don't short-circuit events that you don't handle. In this last case you should return the callee retval.

One exception to the rule in the previous paragraph is if you really want to *override* the behavior of the base class. This requires knowledge of the details of the inherited class.

In rare cases you may want to return 1 from your [handle\(\)](#) method although you don't really handle the event. The effect would be to *filter* event processing, for instance if you want to dismiss non-numeric characters (keypresses) in a numeric input widget. You may "ring the bell" or show another visual indication or drop the event silently. In such a case you must not call the [handle\(\)](#) method of the base class and tell FLTK that you *consumed* the event by returning 1 even if you didn't *do* anything with it.

Parameters

<code>in</code>	<code>event</code>	the kind of event received
-----------------	--------------------	----------------------------

Return values

<code>0</code>	if the event was not used or understood
<code>1</code>	if the event was used and can be deleted

See also

[Fl_Event](#)

Reimplemented from [Fl_Group](#).

11.133.3.3 [resize\(\)](#)

```
void Fl_Spinner::resize (
    int X,
    int Y,
    int W,
    int H) [virtual]
```

Resizes the [Fl_Group](#) widget and all of its children.

The [Fl_Group](#) widget first resizes itself, and then it moves and resizes all its children according to the rules documented for [Fl_Group::resizable\(Fl_Widget*\)](#)

See also

[Fl_Group::resizable\(Fl_Widget*\)](#)

[Fl_Group::resizable\(\)](#)

[Fl_Widget::resize\(int,int,int,int\)](#)

Reimplemented from [Fl_Group](#).

11.133.3.4 [step\(\)](#) [1/2]

```
double Fl_Spinner::step () const [inline]
```

Gets the amount to change the value when the user clicks a button.

See also

[Fl_Spinner::step\(double\)](#)

11.133.3.5 [step\(\)](#) [2/2]

```
void Fl_Spinner::step (
    double s)
```

Sets or returns the amount to change the value when the user clicks a button.

Before setting step to a non-integer value, the spinner [type\(\)](#) should be changed to floating point.

See also

`double Fl_Spinner::step\(\) const`

11.133.3.6 type() [1/2]

```
uchar Fl_Spinner::type () const [inline]
```

Gets the numeric representation in the input field.

See also

[Fl_Spinner::type\(uchar\)](#)

11.133.3.7 type() [2/2]

```
void Fl_Spinner::type (
    uchar v)
```

Sets the numeric representation in the input field.

Valid values are FL_INT_INPUT and FL_FLOAT_INPUT. Also changes the [format\(\)](#) template. Setting a new spinner type via a superclass pointer will not work.

Note

[type\(\)](#) is not a virtual function.

11.133.3.8 value()

```
void Fl_Spinner::value (
    double v) [inline]
```

Sets the current value of the input widget.

Before setting value to a non-integer value, the spinner [type\(\)](#) should be changed to floating point.

11.133.3.9 wrap() [1/2]

```
int Fl_Spinner::wrap () const [inline]
```

Gets the wrap mode of the [Fl_Spinner](#) widget.

See also

void [wrap\(int\)](#)

Since

1.4.0

11.133.3.10 wrap() [2/2]

```
void Fl_Spinner::wrap (
    int set) [inline]
```

Sets whether the spinner wraps around at upper and lower bounds.

If wrap mode is on the spinner value is set to the [minimum\(\)](#) or [maximum\(\)](#) if the value exceeds the upper or lower bounds, resp., if it was changed by one of the buttons or the FL_Up or FL_Down keys.

The spinner stops at the upper and lower bounds if wrap mode is off.

The default wrap mode is on for backwards compatibility with FLTK 1.3.x and older versions.

Note

Wrap mode does not apply to the input field if the input value is edited directly as a number. The input value is always clipped to the allowed range as if wrap mode was off when the input field is left (i.e. loses focus).

See also

[minimum\(\)](#), [maximum\(\)](#)

Parameters

<code>in</code>	<code>set</code>	non-zero sets wrap mode, zero resets wrap mode
-----------------	------------------	--

Since

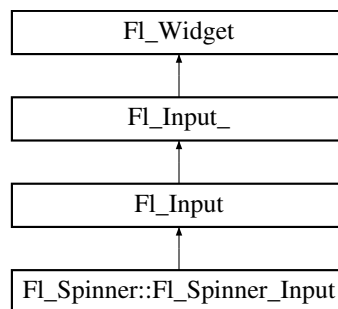

1.4.0

The documentation for this class was generated from the following files:

- FI_Spinner.H
- FI_Spinner.cxx

11.134 FI_Spinner::FI_Spinner_Input Class Reference

Inheritance diagram for FI_Spinner::FI_Spinner_Input:

Public Member Functions

- **FI_Spinner_Input** (int X, int Y, int W, int H)
- int **handle** (int event) **FL_OVERRIDE**
Handles events of [FI_Spinner](#)'s embedded input widget.

Public Member Functions inherited from [FI_Input](#)

- [FI_Input](#) (int, int, int, int, const char *=0)
Creates a new [FI_Input](#) widget using the given position, size, and label string.

Public Member Functions inherited from [FI_Input_](#)

- int [append](#) (const char *t, int l=0, char keep_selection=0)
Append text at the end.
- bool [can_redo](#) () const
Check if there is a redo action available.
- bool [can_undo](#) () const
Check if the last operation can be undone.
- int [copy](#) (int clipboard)
Put the current selection into the clipboard.
- int [copy_cuts](#) ()
Copies the yank buffer to the clipboard.
- [FI_Color](#) [cursor_color](#) () const
Gets the color of the cursor.
- void [cursor_color](#) ([FI_Color](#) n)
Sets the color of the cursor.

- `int cut ()`
Deletes the current selection.
- `int cut (int a, int b)`
*Deletes all characters between index *a* and *b*.*
- `int cut (int n)`
*Deletes the next *n* bytes rounded to characters before or after the cursor.*
- `double dvalue () const`
Returns the widget text interpreted as a floating point number.
- `FL_Input_ (int, int, int, int, const char *=0)`
*Creates a new *FL_Input_* widget.*
- `unsigned int index (int i) const`
*Returns the character at index *i*.*
- `int input_type () const`
Gets the input field type.
- `void input_type (int t)`
Sets the input field type.
- `int insert (const char *t, int l=0)`
Inserts text at the cursor position.
- `int insert_position () const`
Gets the position of the text cursor.
- `int insert_position (int p)`
Sets the cursor position and mark.
- `int insert_position (int p, int m)`
Sets the index for the cursor and mark.
- `int ivalue () const`
Returns the widget text interpreted as a signed integer.
- `int mark () const`
Gets the current selection mark.
- `int mark (int m)`
Sets the current selection mark.
- `int maximum_size () const`
Gets the maximum length of the input field in characters.
- `void maximum_size (int m)`
Sets the maximum length of the input field in characters.
- `int position () const`
- `int position (int p)`
- `int position (int p, int m)`
- `int readonly () const`
Gets the read-only state of the input field.
- `void readonly (int b)`
Sets the read-only state of the input field.
- `int redo ()`
Redo previous undo operation.
- `int replace (int b, int e, const char *text, int ilen=0)`
*Deletes text from *b* to *e* and inserts the new string *text*.*
- `void resize (int, int, int, int) FL_OVERRIDE`
Changes the size of the widget.
- `int shortcut () const`
Return the shortcut key associated with this widget.
- `void shortcut (int s)`
Sets the shortcut key associated with this widget.

- int **size** () const
*Returns the number of bytes in **value()**.*
- void **size** (int W, int H)
Sets the width and height of this widget.
- int **static_value** (const char *)
Changes the widget text.
- int **static_value** (const char *, int)
Changes the widget text.
- int **tab_nav** () const
Gets whether the Tab key causes focus navigation in multiline input fields or not.
- void **tab_nav** (int val)
*Sets whether the Tab key does focus navigation, or inserts tab characters into **Fl_Multiline_Input**.*
- **Fl_Color** **textcolor** () const
Gets the color of the text in the input field.
- void **textcolor** (**Fl_Color** n)
Sets the color of the text in the input field.
- **Fl_Font** **textfont** () const
Gets the font of the text in the input field.
- void **textfont** (**Fl_Font** s)
Sets the font of the text in the input field.
- **Fl_Fontsize** **textsize** () const
Gets the size of the text in the input field.
- void **textsize** (**Fl_Fontsize** s)
Sets the size of the text in the input field.
- int **undo** ()
Undoes previous changes to the text buffer.
- const char * **value** () const
Returns the text displayed in the widget.
- int **value** (const char *)
Changes the widget text.
- int **value** (const char *, int)
Changes the widget text.
- int **value** (double value)
Changes the widget text to a floating point number ("%g").
- int **value** (int value)
Changes the widget text to a signed integer number.
- int **wrap** () const
Gets the word wrapping state of the input field.
- void **wrap** (int b)
Sets the word wrapping state of the input field.
- ~**Fl_Input** ()
Destroys the widget.

Public Member Functions inherited from **Fl_Widget**

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
Activates the widget.
- unsigned int **active** () const
Returns whether the widget is active.

- int [active_r](#) () const
Returns whether the widget and all of its parents are active.
- [Fl_Align](#) align () const
Gets the label alignment.
- void [align](#) ([Fl_Align](#) alignment)
Sets the label alignment.
- long [argument](#) () const
Gets the current user data (long) argument that is passed to the callback function.
- void [argument](#) (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class [Fl_Gl_Window](#) * [as_gl_window](#) ()
Returns an [Fl_Gl_Window](#) pointer if this widget is an [Fl_Gl_Window](#).
- virtual class [Fl_Gl_Window](#) const * [as_gl_window](#) () const
- virtual [Fl_Group](#) * [as_group](#) ()
Returns an [Fl_Group](#) pointer if this widget is an [Fl_Group](#).
- virtual [Fl_Group](#) const * [as_group](#) () const
- virtual [Fl_Window](#) * [as_window](#) ()
Returns an [Fl_Window](#) pointer if this widget is an [Fl_Window](#).
- virtual [Fl_Window](#) const * [as_window](#) () const
- void [bind_deimage](#) ([Fl_Image](#) *img)
Sets the image to use as part of the widget label when in the inactive state.
- void [bind_deimage](#) (int f)
Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.
- void [bind_image](#) ([Fl_Image](#) *img)
Sets the image to use as part of the widget label when in the active state.
- void [bind_image](#) (int f)
Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- [Fl_Boxtype](#) box () const
Gets the box type of the widget.
- void [box](#) ([Fl_Boxtype](#) new_box)
Sets the box type for the widget.
- [Fl_Callback_p](#) callback () const
Gets the current callback function for the widget.
- void [callback](#) ([Fl_Callback](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([Fl_Callback](#) *cb, [Fl_Callback_User_Data](#) *p, bool auto_free)
Sets the current callback function and managed user data for the widget.
- void [callback](#) ([Fl_Callback](#) *cb, void *p)
Sets the current callback function and data for the widget.
- void [callback](#) ([Fl_Callback0](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([Fl_Callback1](#) *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int [changed](#) () const
Checks if the widget value changed since the last callback.
- void [clear_active](#) ()
Marks the widget as inactive without sending events or changing focus.
- void [clear_changed](#) ()
Marks the value of the widget as unchanged.
- void [clear_damage](#) (uchar c=0)
Clears or sets the damage flags.

- void `clear_output` ()
Sets a widget to accept input.
- void `clear_visible` ()
Hides the widget.
- void `clear_visible_focus` ()
Disables keyboard focus navigation with this widget.
- `Fl_Color` `color` () const
Gets the background color of the widget.
- void `color` (`Fl_Color` bg)
Sets the background color of the widget.
- void `color` (`Fl_Color` bg, `Fl_Color` sel)
Sets the background and selection color of the widget.
- `Fl_Color` `color2` () const
For back compatibility only.
- void `color2` (unsigned a)
For back compatibility only.
- int `contains` (const `Fl_Widget` *w) const
Checks if w is a child of this widget.
- void `copy_label` (const char *new_label)
Sets the current label.
- void `copy_tooltip` (const char *text)
Sets the current tooltip text.
- `uchar` `damage` () const
Returns non-zero if `draw()` needs to be called.
- void `damage` (`uchar` c)
Sets the damage bits for the widget.
- void `damage` (`uchar` c, int x, int y, int w, int h)
Sets the damage bits for an area inside the widget.
- int `damage_resize` (int, int, int, int)
Internal use only.
- void `deactivate` ()
Deactivates the widget.
- `Fl_Image` * `deimage` ()
Gets the image that is used as part of the widget label when in the inactive state.
- const `Fl_Image` * `deimage` () const
Gets the image that is used as part of the widget label when in the inactive state.
- void `deimage` (`Fl_Image` &img)
Sets the image to use as part of the widget label when in the inactive state.
- void `deimage` (`Fl_Image` *img)
Sets the image to use as part of the widget label when in the inactive state.
- int `deimage_bound` () const
Returns whether the inactive image is managed by the widget.
- void `do_callback` (`Fl_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with default arguments.
- void `do_callback` (`Fl_Widget` *widget, long arg, `Fl_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with arbitrary arguments.
- void `do_callback` (`Fl_Widget` *widget, void *arg=0, `Fl_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with arbitrary arguments.
- void `draw_label` (int, int, int, int, `Fl_Align`) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const

- Gets the widget height.*

 - virtual void `hide` ()
- Makes a widget invisible.*

 - int `horizontal_label_margin` ()

Get the spacing between the label and the horizontal edge of the widget.

 - void `horizontal_label_margin` (int px)

Set the spacing between the label and the horizontal edge of the widget.

 - `FL_Image` * `image` ()

Gets the image that is used as part of the widget label when in the active state.

 - const `FL_Image` * `image` () const

Gets the image that is used as part of the widget label when in the active state.

 - void `image` (`FL_Image` &img)

Sets the image to use as part of the widget label when in the active state.

 - void `image` (`FL_Image` *img)

Sets the image to use as part of the widget label when in the active state.

 - int `image_bound` () const

Returns whether the image is managed by the widget.

 - int `inside` (const `FL_Widget` *wgt) const

Checks if this widget is a child of wgt.

 - int `is_label_copied` () const

Returns whether the current label was assigned with `copy_label()`.

 - const char * `label` () const

Gets the current label text.

 - void `label` (const char *text)

Sets the current label pointer.

 - void `label` (`FL_Labeltype` a, const char *b)

Shortcut to set the label text and type in one call.

 - int `label_image_spacing` ()

Return the gap size between the label and the image.

 - void `label_image_spacing` (int gap)

Set the gap between the label and the image in pixels.

 - `FL_Color` `labelcolor` () const

Gets the label color.

 - void `labelcolor` (`FL_Color` c)

Sets the label color.

 - `FL_Font` `labelfont` () const

Gets the font to use.

 - void `labelfont` (`FL_Font` f)

Sets the font to use.

 - `FL_Fonsize` `labelsize` () const

Gets the font size in pixels.

 - void `labelsize` (`FL_Fonsize` pix)

Sets the font size in pixels.

 - `FL_Labeltype` `labeltype` () const

Gets the label type.

 - void `labeltype` (`FL_Labeltype` a)

Sets the label type.

 - void `measure_label` (int &ww, int &hh) const

Sets width ww and height hh accordingly with the label size.

 - bool `needs_keyboard` () const

Returns whether this widget needs a keyboard.

- void [needs_keyboard](#) (bool needs)
Sets whether this widget needs a keyboard.
- unsigned int [output](#) () const
Returns if a widget is used for output only.
- [FL_Group](#) * [parent](#) () const
Returns a pointer to the parent widget.
- void [parent](#) ([FL_Group](#) *p)
Internal use only - "for hacks only".
- void [position](#) (int X, int Y)
Repositions the window or widget.
- void [redraw](#) ()
Schedules the drawing of the widget.
- void [redraw_label](#) ()
Schedules the drawing of the label.
- [FL_Color](#) [selection_color](#) () const
Gets the selection color.
- void [selection_color](#) ([FL_Color](#) a)
Sets the selection color.
- void [set_active](#) ()
Marks the widget as active without sending events or changing focus.
- void [set_changed](#) ()
Marks the value of the widget as changed.
- void [set_output](#) ()
Sets a widget to output only.
- void [set_visible](#) ()
Makes the widget visible.
- void [set_visible_focus](#) ()
Enables keyboard focus navigation with this widget.
- int [shortcut_label](#) () const
Returns whether the widget's label uses '&' to indicate shortcuts.
- void [shortcut_label](#) (int value)
Sets whether the widget's label uses '&' to indicate shortcuts.
- virtual void [show](#) ()
Makes a widget visible.
- void [size](#) (int W, int H)
Changes the size of the widget.
- int [take_focus](#) ()
Gives the widget the keyboard focus.
- unsigned int [takeevents](#) () const
Returns if the widget is able to take events.
- int [test_shortcut](#) ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * [tooltip](#) () const
Gets the current tooltip text.
- void [tooltip](#) (const char *text)
Sets the current tooltip text.
- [FL_Window](#) * [top_window](#) () const
Returns a pointer to the top-level window for the widget.
- [FL_Window](#) * [top_window_offset](#) (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- [uchar](#) [type](#) () const

- Gets the widget type.*

 - void **type** (uchar t)

Sets the widget type.
- int **use_accents_menu** ()

Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * **user_data** () const

Gets the user data for this widget.
- void **user_data** (FI_Callback_User_Data *v, bool auto_free)

Sets the user data for this widget.
- void **user_data** (void *v)

Sets the user data for this widget.
- int **vertical_label_margin** ()

Get the spacing between the label and the vertical edge of the widget.
- void **vertical_label_margin** (int px)

Set the spacing between the label and the vertical edge of the widget.
- unsigned int **visible** () const

Returns whether a widget is visible.
- unsigned int **visible_focus** () const

Checks whether this widget has a visible focus.
- void **visible_focus** (int v)

Modifies keyboard focus navigation.
- int **visible_r** () const

Returns whether a widget and all its parents are visible.
- int **w** () const

Gets the widget width.
- **FI_When when** () const

Returns the conditions under which the callback is called.
- void **when** (uchar i)

Sets the flags used to decide when a callback is called.
- **FI_Window * window** () const

Returns a pointer to the nearest parent window up the widget hierarchy.
- int **x** () const

Gets the widget position in its window.
- int **y** () const

Gets the widget position in its window.
- virtual **~FI_Widget** ()

Destroys the widget.

Additional Inherited Members

Static Public Member Functions inherited from FI_Widget

- static void **default_callback** (FI_Widget *widget, void *data)

The default callback for all widgets that don't set a callback.
- static unsigned int **label_shortcut** (const char *t)

Returns the Unicode value of the '&x' shortcut in a given text.
- static int **test_shortcut** (const char *, const bool require_alt=false)

Returns true if the given text t contains the entered '&x' shortcut.

Static Public Attributes inherited from FI_Input

- static const char * **copy_menu_text** = "Copy"
[this text may be customized at run-time]
- static const char * **cut_menu_text** = "Cut"
[this text may be customized at run-time]
- static const char * **paste_menu_text** = "Paste"
[this text may be customized at run-time]

Protected Types inherited from FI_Widget

- enum {
INACTIVE = 1<<0 , **INVISIBLE** = 1<<1 , **OUTPUT** = 1<<2 , **NOBORDER** = 1<<3 ,
FORCE_POSITION = 1<<4 , **NON_MODAL** = 1<<5 , **SHORTCUT_LABEL** = 1<<6 , **CHANGED** = 1<<7
, **OVERRIDE** = 1<<8 , **VISIBLE_FOCUS** = 1<<9 , **COPIED_LABEL** = 1<<10 , **CLIP_CHILDREN** = 1<<11
, **MENU_WINDOW** = 1<<12 , **TOOLTIP_WINDOW** = 1<<13 , **MODAL** = 1<<14 , **NO_OVERLAY** = 1<<15
, **GROUP_RELATIVE** = 1<<16 , **COPIED_TOOLTIP** = 1<<17 , **FULLSCREEN** = 1<<18 , **MAC_USE_ACCENTS_MENU**
= 1<<19 ,
NEEDS_KEYBOARD = 1<<20 , **IMAGE_BOUND** = 1<<21 , **DEIMAGE_BOUND** = 1<<22 ,
AUTO_DELETE_USER_DATA = 1<<23 ,
MAXIMIZED = 1<<24 , **POPUP** = 1<<25 , **USERFLAG3** = 1<<29 , **USERFLAG2** = 1<<30 ,
USERFLAG1 = 1<<31 }
flags possible values enumeration.

Protected Member Functions inherited from FI_Input

- void **draw** () **FL_OVERRIDE**
Draws the widget.
- int **handle_key** ()
Handles a keystroke.
- int **handle_rmb** ()
Handle right mouse button down events.

Protected Member Functions inherited from FI_Input_

- int **apply_undo** ()
Apply the current undo/redo operation.
- void **drawtext** (int, int, int, int)
Draws the text in the passed bounding box.
- void **drawtext** (int, int, int, int, bool draw_active)
Draws the text in the passed bounding box.
- void **handle_mouse** (int, int, int, int, int keepmark=0)
Handles mouse clicks and mouse moves.
- int **handletext** (int e, int, int, int, int)
Handles all kinds of text field related events.
- int **line_end** (int i) const
Finds the end of a line.
- int **line_start** (int i) const
Finds the start of a line.
- int **linesPerPage** ()
- void **maybe_do_callback** (FI_Callback_Reason reason=FL_REASON_UNKNOWN)

- int [up_down_position](#) (int, int keepmark=0)
Moves the cursor to the column given by `up_down_pos`.
- int [word_end](#) (int i) const
Finds the end of a word.
- int [word_start](#) (int i) const
Finds the start of a word.
- int [xscroll](#) () const
- int [yscroll](#) () const
- void [yscroll](#) (int yOffset)

Protected Member Functions inherited from [Fl_Widget](#)

- void [clear_flag](#) (unsigned int c)
Clears a flag in the flags mask.
- void [draw_backdrop](#) () const
If `FL_ALIGN_IMAGE_BACKDROP` is set, the image or deimage will be drawn.
- void [draw_box](#) () const
Draws the widget box according its box style.
- void [draw_box](#) ([Fl_Boxtype](#) t, [Fl_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void [draw_box](#) ([Fl_Boxtype](#) t, int x, int y, int w, int h, [Fl_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void [draw_focus](#) () const
Draws a focus rectangle around the widget.
- void [draw_focus](#) ([Fl_Boxtype](#) t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void [draw_focus](#) ([Fl_Boxtype](#) t, int x, int y, int w, int h, [Fl_Color](#) bg) const
Draws a focus box for the widget at the given position and size.
- void [draw_label](#) () const
Draws the widget's label at the defined label position.
- void [draw_label](#) (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [Fl_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int [flags](#) () const
Gets the widget flags mask.
- void [h](#) (int v)
Internal use only.
- void [set_flag](#) (unsigned int c)
Sets a flag in the flags mask.
- void [w](#) (int v)
Internal use only.
- void [x](#) (int v)
Internal use only.
- void [y](#) (int v)
Internal use only.

11.134.1 Member Function Documentation

11.134.1.1 handle()

```
int Fl_Spinner::Fl_Spinner_Input::handle (
    int event) [virtual]
```

Handles events of [Fl_Spinner](#)'s embedded input widget.

Works like [Fl_Input::handle\(\)](#) but ignores FL_Up and FL_Down keys so they can be handled by the parent widget ([Fl_Spinner](#)).

Reimplemented from [Fl_Input](#).

The documentation for this class was generated from the following files:

- [Fl_Spinner.H](#)
- [Fl_Spinner.cxx](#)

11.135 Fl_Surface_Device Class Reference

A drawing surface that's susceptible to receive graphical output.

```
#include <Fl_Device.H>
```

Inheritance diagram for [Fl_Surface_Device](#):

Public Member Functions

- [Fl_Graphics_Driver](#) * **driver** ()
Returns the graphics driver of this drawing surface.
- virtual bool [is_current](#) ()
Is this surface the current drawing surface?
- virtual void [set_current](#) (void)
Make this surface the current drawing surface.
- virtual ~**Fl_Surface_Device** ()
The destructor.

Static Public Member Functions

- static [Fl_Surface_Device](#) * [pop_current](#) ()
Removes the top element from the current drawing surface stack, and makes the new top element current.
- static void [push_current](#) ([Fl_Surface_Device](#) *new_current)
Pushes new_current on top of the stack of current drawing surfaces, and makes it current.
- static [Fl_Surface_Device](#) * [surface](#) ()
The current drawing surface.

Protected Member Functions

- void **driver** ([Fl_Graphics_Driver](#) *graphics_driver)
Sets the graphics driver of this drawing surface.
- virtual void [end_current](#) ()
FLTK calls this each time a surface ceases to be the current drawing surface.
- **Fl_Surface_Device** ([Fl_Graphics_Driver](#) *graphics_driver)
Constructor that sets the graphics driver to use for the created surface.

11.135.1 Detailed Description

A drawing surface that's susceptible to receive graphical output.

Any FLTK application has at any time a current drawing surface to which all drawing requests are directed. The current surface is given by [Fl_Surface_Device::surface\(\)](#). When `main()` begins running, the current drawing surface has been set to the computer's display, an instance of the [Fl_Display_Device](#) class.

A drawing surface other than the computer's display, is typically used as follows:

1. Create `surface`, an object from an [Fl_Surface_Device](#) derived class (e.g., [Fl_Image_Surface](#), [Fl_Printer](#), [Fl_Copy_Surface](#)).
2. Call `Fl_Surface_Device::push_current(surface);` to redirect all graphics requests to `surface` which becomes the new current drawing surface (not necessary with classes [Fl_Printer](#) / [Fl_PostScript_File_Device](#) / [Fl_PDF_File_Surface](#) because it is done by [Fl_Paged_Device::begin_page\(\)](#)).
3. At this point all of the [Drawing functions](#) (e.g., [fl_rect\(\)](#)) or the [Color & Font functions](#) or [Drawing Images](#) functions (e.g., [fl_draw_image\(\)](#), [Fl_Image::draw\(\)](#)) operate on the new current drawing surface. It's also possible to draw to the current surface any widget with [Fl_Widget_Surface::draw\(Fl_Widget*, int, int\)](#), a window and its titlebar with [Fl_Widget_Surface::draw_decorated_window\(\)](#), or the content of a rectangular zone of a window with [Fl_Widget_Surface::print_window_part\(\)](#).
4. After all drawing requests have been performed, redirect graphics requests back to their previous destination with `Fl_Surface_Device::pop_current();` (not necessary with classes [Fl_Printer](#) / [Fl_PostScript_File_Device](#) / [Fl_PDF_File_Surface](#)).
5. Delete `surface`.

For back-compatibility, it is also possible to use the [Fl_Surface_Device::set_current\(\)](#) member function to change the current drawing surface, once to the new surface, once to the previous one.

11.135.2 Member Function Documentation

11.135.2.1 end_current()

```
virtual void Fl_Surface_Device::end_current () [inline], [protected], [virtual]
```

FLTK calls this each time a surface ceases to be the current drawing surface.

This member function is mostly of interest to developers of new [Fl_Surface_Device](#) derived classes. It allows to perform surface-specific operations necessary when this surface ceases to be current. Each implementation should end with a call to [Fl_Surface_Device::end_current\(\)](#).

Reimplemented in [Fl_PostScript_File_Device](#).

11.135.2.2 is_current()

```
bool Fl_Surface_Device::is_current () [virtual]
```

Is this surface the current drawing surface?

Reimplemented in [Fl_Copy_Surface](#), [Fl_Image_Surface](#), [Fl_PDF_File_Surface](#), and [Fl_Printer](#).

11.135.2.3 pop_current()

```
Fl_Surface_Device * Fl_Surface_Device::pop_current () [static]
```

Removes the top element from the current drawing surface stack, and makes the new top element current.

Returns

A pointer to the new current drawing surface.

See also

[Fl_Surface_Device::push_current\(Fl_Surface_Device *\)](#)

Version

1.4.0

11.135.2.4 push_current()

```
void Fl_Surface_Device::push_current (
    Fl_Surface_Device * new_current) [static]
```

Pushes `new_current` on top of the stack of current drawing surfaces, and makes it current.

`new_current` will receive all future graphics requests.

Any call to `push_current()` must be matched by a subsequent call to `Fl_Surface_Device::pop_current()`. The max height of this stack is 16.

Version

1.4.0

11.135.2.5 set_current()

```
void Fl_Surface_Device::set_current (
    void ) [virtual]
```

Make this surface the current drawing surface.

This surface will receive all future graphics requests.

Since FLTK 1.4.0 the preferred API to change the current drawing surface is `Fl_Surface_Device::push_current()` / `Fl_Surface_Device::pop_current()`.

Note

It is recommended to use this function only as follows :

- The current drawing surface is the display;
- make current another surface, e.g., an `Fl_Printer` or an `Fl_Image_Surface` object, calling `set_current()` on this object;
- draw to that surface;
- make the display current again with `Fl_Display_Device::display_device()->set_current()`; don't do any other call to `set_current()` before this one.

Other scenarios of drawing surface changes should be performed via `Fl_Surface_Device::push_current()` and `Fl_Surface_Device::pop_current()`.

Reimplemented in `Fl_Copy_Surface`, `Fl_Image_Surface`, `Fl_PDF_File_Surface`, `Fl_PostScript_File_Device`, and `Fl_Printer`.

11.135.2.6 surface()

```
static Fl_Surface_Device * Fl_Surface_Device::surface () [inline], [static]
```

The current drawing surface.

In other words, the `Fl_Surface_Device` object that currently receives all graphics requests.

Note

It's possible to transiently remove the GUI scaling factor in place in the current drawing surface with `fl_override_scale()`.

The documentation for this class was generated from the following files:

- `Fl_Device.H`
- `Fl_Device.cxx`

11.136 Fl_SVG_File_Surface Class Reference

A drawing surface producing a Scalable Vector Graphics (SVG) file.

```
#include <Fl_SVG_File_Surface.H>
```

Inheritance diagram for `Fl_SVG_File_Surface`:

Public Member Functions

- `int close ()`
Closes the FILE pointer where SVG data is output.
- `FILE * file ()`
Returns the underlying FILE pointer.
- `Fl_SVG_File_Surface (int width, int height, FILE *svg, int(*closef)(FILE *)=NULL)`
Constructor of the SVG drawing surface.
- `void origin (int *x, int *y) FL_OVERRIDE`
Computes the coordinates of the current origin of graphics functions.
- `void origin (int x, int y) FL_OVERRIDE`
Sets the position of the origin of graphics in the drawable part of the drawing surface.
- `int printable_rect (int *w, int *h) FL_OVERRIDE`
Computes the width and height of the drawable area of the drawing surface.
- `void translate (int x, int y) FL_OVERRIDE`
Translates the current graphics origin accounting for the current rotation.
- `void untranslate () FL_OVERRIDE`
Undoes the effect of a previous `translate()` call.
- `~Fl_SVG_File_Surface ()`
Destructor.

Public Member Functions inherited from `Fl_Widget_Surface`

- `void draw (Fl_Widget *widget, int delta_x=0, int delta_y=0)`
Draws the widget on the drawing surface.
- `void draw_decorated_window (Fl_Window *win, int x_offset=0, int y_offset=0)`
Draws a window with its title bar and frame if any.
- `void print_window_part (Fl_Window *win, int x, int y, int w, int h, int delta_x=0, int delta_y=0)`
Draws a rectangular part of an on-screen window.

Public Member Functions inherited from `Fl_Surface_Device`

- `Fl_Graphics_Driver * driver ()`
Returns the graphics driver of this drawing surface.
- `virtual bool is_current ()`
Is this surface the current drawing surface?
- `virtual void set_current (void)`
Make this surface the current drawing surface.
- `virtual ~Fl_Surface_Device ()`
The destructor.

Additional Inherited Members

Static Public Member Functions inherited from [Fl_Surface_Device](#)

- static [Fl_Surface_Device](#) * [pop_current](#) ()
Removes the top element from the current drawing surface stack, and makes the new top element current.
- static void [push_current](#) ([Fl_Surface_Device](#) *new_current)
Pushes new_current on top of the stack of current drawing surfaces, and makes it current.
- static [Fl_Surface_Device](#) * [surface](#) ()
The current drawing surface.

Protected Member Functions inherited from [Fl_Widget_Surface](#)

- [Fl_Widget_Surface](#) ([Fl_Graphics_Driver](#) *d)
The constructor.

Protected Member Functions inherited from [Fl_Surface_Device](#)

- void [driver](#) ([Fl_Graphics_Driver](#) *graphics_driver)
Sets the graphics driver of this drawing surface.
- virtual void [end_current](#) ()
FLTK calls this each time a surface ceases to be the current drawing surface.
- [Fl_Surface_Device](#) ([Fl_Graphics_Driver](#) *graphics_driver)
Constructor that sets the graphics driver to use for the created surface.

Protected Attributes inherited from [Fl_Widget_Surface](#)

- int [x_offset](#)
horizontal offset to the origin of graphics coordinates
- int [y_offset](#)
vertical offset to the origin of graphics coordinates

11.136.1 Detailed Description

A drawing surface producing a Scalable Vector Graphics (SVG) file.

This drawing surface allows to store any FLTK graphics in vectorial form in a "Scalable Vector Graphics" file.

Usage example:

```
Fl_Window *win = ...// Window to draw to a .svg file
int ww = win->decorated_w();
int wh = win->decorated_h();
FILE *svg = fl_fopen("/path/to/mywindow.svg", "w");
if (svg) {
    Fl_SVG_File_Surface *surface = new Fl_SVG_File_Surface(ww, wh, svg);
    Fl_Surface_Device::push_current(surface);
    fl_color(FL_WHITE);
    fl_rectf(0, 0, ww, wh);
    surface->draw_decorated_window(win);
    Fl_Surface_Device::pop_current();
    delete surface; // the .svg file is not complete until the destructor was run
    fclose(svg);
}
```

Note

FLTK uses the PNG and JPEG libraries to encode images to the SVG format. For this reason, class [Fl_SVG_File_Surface](#) is placed in the fltk_images library. If JPEG is not available at application build time, PNG is enough (but produces a quite larger output). If PNG isn't available either, images don't appear in the SVG output.

11.136.2 Constructor & Destructor Documentation

11.136.2.1 Fl_SVG_File_Surface()

```
Fl_SVG_File_Surface::Fl_SVG_File_Surface (
    int width,
    int height,
    FILE * svg,
    int (* closef ) (FILE *) = NULL)
```

Constructor of the SVG drawing surface.

Parameters

<i>width,height</i>	Width and height of the graphics area in FLTK drawing units
<i>svg</i>	A writable FILE pointer where the SVG data are to be sent. The resulting SVG data are not complete until after destruction of the Fl_SVG_File_Surface object or after calling close() .
<i>closef</i>	If not NULL, the destructor and close() will call <code>closef(svg)</code> after all SVG data has been sent. If NULL, <code>fclose(svg)</code> is called instead. This allows to close the FILE pointer by, e.g., <code>pclose</code> , or, using a function such as <code>"int keep_open(FILE*) {return 0;}"</code> , to keep it open after completion of all output to <code>svg</code> . Function <code>closef</code> should return non zero to indicate an error.

11.136.2.2 ~Fl_SVG_File_Surface()

```
Fl_SVG_File_Surface::~~Fl_SVG_File_Surface ()
```

Destructor.

The underlying FILE pointer is processed as by [close\(\)](#).

11.136.3 Member Function Documentation

11.136.3.1 close()

```
int Fl_SVG_File_Surface::close ()
```

Closes the FILE pointer where SVG data is output.

The underlying FILE is closed by function `fclose()` unless another function was set at object's construction time. The only operation possible after this on the [Fl_SVG_File_Surface](#) object is its destruction.

Returns

The value returned by the closing function call.

11.136.3.2 origin() [1/2]

```
void Fl_SVG_File_Surface::origin (
    int * x,
    int * y) [virtual]
```

Computes the coordinates of the current origin of graphics functions.

Parameters

out	<i>x,y</i>	If non-null, *x and *y are set to the horizontal and vertical coordinates of the graphics origin.
-----	------------	---

Reimplemented from [Fl_Widget_Surface](#).

11.136.3.3 origin() [2/2]

```
void Fl_SVG_File_Surface::origin (
    int x,
    int y) [virtual]
```

Sets the position of the origin of graphics in the drawable part of the drawing surface.

Arguments should be expressed relatively to the result of a previous [printable_rect\(\)](#) call. That is, `printable_rect(&w, &h); origin(w/2, 0);` sets the graphics origin at the top center of the drawable area. Successive [origin\(\)](#) calls don't combine their effects. [Origin\(\)](#) calls are not affected by [rotate\(\)](#) calls (for classes derived from [Fl_Paged_Device](#)).

Parameters

<code>in</code>	<code>x,y</code>	Horizontal and vertical positions in the drawing surface of the desired origin of graphics.
-----------------	------------------	---

Reimplemented from [Fl_Widget_Surface](#).

11.136.3.4 printable_rect()

```
int Fl_SVG_File_Surface::printable_rect (
    int * w,
    int * h) [virtual]
```

Computes the width and height of the drawable area of the drawing surface.

Values are in the same unit as that used by FLTK drawing functions and are unchanged by calls to [origin\(\)](#). If the object is derived from class [Fl_Paged_Device](#), values account for the user-selected paper type and print orientation and are changed by [scale\(\)](#) calls.

Returns

0 if OK, non-zero if any error

Reimplemented from [Fl_Widget_Surface](#).

11.136.3.5 translate()

```
void Fl_SVG_File_Surface::translate (
    int x,
    int y) [virtual]
```

Translates the current graphics origin accounting for the current rotation.

Each [translate\(\)](#) call must be matched by an [untranslate\(\)](#) call. Successive [translate\(\)](#) calls add up their effects.

Reimplemented from [Fl_Widget_Surface](#).

11.136.3.6 untranslate()

```
void Fl_SVG_File_Surface::untranslate (
    void ) [virtual]
```

Undoes the effect of a previous [translate\(\)](#) call.

Reimplemented from [Fl_Widget_Surface](#).

The documentation for this class was generated from the following file:

- [Fl_SVG_File_Surface.H](#)

11.137 Fl_SVG_Image Class Reference

The [Fl_SVG_Image](#) class supports loading, caching and drawing of scalable vector graphics (SVG) images.

```
#include <Fl_SVG_Image.H>
```

Inheritance diagram for [Fl_SVG_Image](#):

Public Member Functions

- [FI_SVG_Image](#) * [as_svg_image](#) () [FL_OVERRIDE](#)
Returns whether an image is an [FI_SVG_Image](#) or not.
- void [color_average](#) ([FI_Color](#) c, float i) [FL_OVERRIDE](#)
The [color_average\(\)](#) method averages the colors in the image with the provided FLTK color value.
- [FI_Image](#) * [copy](#) () const
- [FI_Image](#) * [copy](#) (int W, int H) const [FL_OVERRIDE](#)
Creates a resized copy of the image.
- void [desaturate](#) () [FL_OVERRIDE](#)
The [desaturate\(\)](#) method converts an image to grayscale.
- void [draw](#) (int X, int Y)
- void [draw](#) (int X, int Y, int W, int H, int cx=0, int cy=0) [FL_OVERRIDE](#)
Draws the image to the current drawing surface with a bounding box.
- [FI_SVG_Image](#) (const char *filename)
Load an SVG image from a file.
- [FI_SVG_Image](#) (const char *sharedname, const char *svg_data)
Load an SVG image from memory.
- [FI_SVG_Image](#) (const char *sharedname, const unsigned char *svg_data, size_t length)
Load an SVG image from memory.
- void [normalize](#) () [FL_OVERRIDE](#)
Makes sure the object is fully initialized.
- void [resize](#) (int width, int height)
Have the svg data (re-)rasterized using the given width and height values.
- virtual ~[FI_SVG_Image](#) ()
The destructor frees all memory and server resources that are used by the SVG image.

Public Member Functions inherited from [FI_RGB_Image](#)

- int [cache_h](#) ()
- int [cache_w](#) ()
- [FI_Image](#) * [copy](#) () const
- void [draw](#) (int X, int Y)
- [FI_RGB_Image](#) (const [FI_Pixmap](#) *pxm, [FI_Color](#) bg=[FL_GRAY](#))
The constructor creates a new RGBA image from the specified [FI_Pixmap](#).
- [FI_RGB_Image](#) (const [uchar](#) *bits, int bits_length, int W, int H, int D, int LD)
The constructor creates a new image from the specified data.
- [FI_RGB_Image](#) (const [uchar](#) *bits, int W, int H, int D=3, int LD=0)
The constructor creates a new image from the specified data.
- void [label](#) ([FI_Menu_Item](#) *m) [FL_OVERRIDE](#)
This method is an obsolete way to set the image attribute of a menu item.
- void [label](#) ([FI_Widget](#) *w) [FL_OVERRIDE](#)
This method is an obsolete way to set the image attribute of a widget or menu item.
- void [uncache](#) () [FL_OVERRIDE](#)
If the image has been cached for display, delete the cache data.
- ~[FI_RGB_Image](#) () [FL_OVERRIDE](#)
The destructor frees all memory and server resources that are used by the image.

Public Member Functions inherited from FI_Image

- virtual class FI_Shared_Image * **as_shared_image** ()
Returns whether an image is an FI_Shared_Image or not.
- FI_Image * **copy** () const
Creates a copy of the image in the same size.
- int **count** () const
Returns the number of data values associated with the image.
- int **d** () const
Returns the image depth.
- const char *const * **data** () const
Returns a pointer to the current image data array.
- int **data_h** () const
Returns the height of the image data.
- int **data_w** () const
Returns the width of the image data.
- void **draw** (int X, int Y)
Draws the image to the current drawing surface.
- int **fail** () const
Returns a value that is not 0 if there is currently no image available.
- FI_Image (int W, int H, int D)
The constructor creates an empty image with the specified width, height, and depth.
- int **h** () const
Returns the current image drawing height in FLTK units.
- void **inactive** ()
*The **inactive()** method calls **color_average(FL_BACKGROUND_COLOR, 0.33f)** to produce an image that appears grayed out.*
- int **ld** () const
Returns the current line data size in bytes.
- virtual void **release** ()
Releases an FI_Image - the same as 'delete this'.
- virtual void **scale** (int width, int height, int proportional=1, int can_expand=0)
Sets the drawing size of the image.
- int **w** () const
Returns the current image drawing width in FLTK units.
- virtual ~FI_Image ()
The destructor is a virtual method that frees all memory used by the image.

Public Attributes

- bool **proportional**
*Set this to *false* to allow image re-scaling that alters the image aspect ratio.*

Public Attributes inherited from FI_RGB_Image

- int **alloc_array**
If non-zero, the object's data array is delete[]'d when deleting the object.
- const uchar * **array**
Points to the start of the object's data array.

Additional Inherited Members

Static Public Member Functions inherited from [FI_RGB_Image](#)

- static `size_t max_size ()`
Returns the maximum allowed image size in bytes when creating an [FI_RGB_Image](#) object.
- static void `max_size (size_t size)`
Sets the maximum allowed image size in bytes when creating an [FI_RGB_Image](#) object.

Static Public Member Functions inherited from [FI_Image](#)

- static `FI_Labeltype define_FL_IMAGE_LABEL ()`
- static `FI_RGB_Scaling RGB_scaling ()`
Returns the currently used RGB image scaling method.
- static void `RGB_scaling (FI_RGB_Scaling)`
Sets the RGB image scaling method used for copy(int, int).
- static `FI_RGB_Scaling scaling_algorithm ()`
Gets what algorithm is used when resizing a source image to draw it.
- static void `scaling_algorithm (FI_RGB_Scaling algorithm)`
Sets what algorithm is used when resizing a source image to draw it.

Static Public Attributes inherited from [FI_Image](#)

- static const int `ERR_FILE_ACCESS = -2`
- static const int `ERR_FORMAT = -3`
- static const int `ERR_MEMORY_ACCESS = -4`
- static const int `ERR_NO_IMAGE = -1`
- static bool `register_images_done = false`
True after [fl_register_images\(\)](#) was called, false before.

Protected Member Functions inherited from [FI_Image](#)

- void `d (int D)`
Sets the current image depth.
- void `data (const char *const *p, int c)`
Sets the current data pointer and count of pointers in the array.
- void `draw_empty (int X, int Y)`
The protected method [draw_empty\(\)](#) draws a box with an X in it.
- int `draw_scaled (int X, int Y, int W, int H)`
Draw the image to the current drawing surface rescaled to a given width and height.
- void `h (int H)`
Sets the height of the image data.
- void `ld (int LD)`
Sets the current line data size in bytes.
- void `w (int W)`
Sets the width of the image data.

Static Protected Member Functions inherited from [FI_Image](#)

- static void `labeltype (const FI_Label *lo, int lx, int ly, int lw, int lh, FI_Align la)`
- static void `measure (const FI_Label *lo, int &lw, int &lh)`

11.137.1 Detailed Description

The `Fl_SVG_Image` class supports loading, caching and drawing of scalable vector graphics (SVG) images.

The FLTK library performs parsing and rasterization of SVG data using a modified version of the `nanosvg` software (<https://github.com/memononen/nanosvg>). The software modification allows the option to change the image ratio while performing rasterization.

Use `Fl_Image::fail()` to check if the `Fl_SVG_Image` failed to load. `fail()` returns `ERR_FILE_ACCESS` if the file could not be opened or read, and `ERR_FORMAT` if the SVG format could not be decoded. If the image has loaded correctly, `w()`, `h()`, and `d()` should return values greater than zero.

Rasterization is not done until the image is first drawn or `resize()` or `normalize()` is called. Therefore, `array` is `NULL` until then. The delayed rasterization ensures an `Fl_SVG_Image` is always rasterized to the exact screen resolution at which it is drawn.

The `Fl_SVG_Image` class draws images computed by `nanosvg` with the following known limitations

- text between `<text>` and `</text>` marks,
- image elements, and
- `<use>` statements

are not rendered.

The FLTK library can optionally be built without SVG support; in that case, class `Fl_SVG_Image` is unavailable.

Example of displaying a hard-coded svg file:

```
#include <FL/Fl.H>
#include <FL/Fl_Window.H>
#include <FL/Fl_Box.H>
#include <FL/Fl_SVG_Image.H>

// A black rotated rectangle
const char *svg_data = "<svg viewBox=\"0 0 200 200\" version = \"1.1\">\n"
    "<rect x=\"25\" y=\"50\" width=\"150\" height=\"100\" fill=\"black\" \" "
    "transform=\"rotate(45 100 100)\"> </svg>\n";

int main(int argc, char **argv) {
    Fl_SVG_Image *svg = new Fl_SVG_Image(0, svg_data); // create SVG object
    Fl_Window *win = new Fl_Window(720, 486, "svg test");
    Fl_Box *box = new Fl_Box(0, 0, win->w(), win->h());
    box->image(svg); // assign svg object to Fl_Box
    win->end();
    win->show(argc, argv);
    return(Fl::run());
}
```

Example of displaying an svg image from a file:

```
#include <errno.h> // errno
#include <string.h> // strerror
#include <FL/Fl.H>
#include <FL/Fl_Window.H>
#include <FL/Fl_Box.H>
#include <FL/Fl_SVG_Image.H>
#include <FL/fl_message.H>

int main(int argc, char **argv) {
    Fl_Window *win = new Fl_Window(720, 486, "svg test");
    Fl_Box *box = new Fl_Box(0, 0, win->w(), win->h());

    // Load svg image from disk, assign to a box
    const char *svgpath = "/var/tmp/simple.svg";
    Fl_SVG_Image *svg = new Fl_SVG_Image(svgpath); // load SVG object from disk
    switch (svg->fail()) {
        case Fl_Image::ERR_FILE_ACCESS:
            // File couldn't load? show path + os error to user
            fl_alert("%s: %s", svgpath, strerror(errno));
            return 1;
        case Fl_Image::ERR_FORMAT:
            // Parsing error
            fl_alert("%s: couldn't decode image", svgpath);
            return 1;
    }
    box->image(svg); // assign svg object to box

    win->end();
    win->show(argc, argv);
    return(Fl::run());
}
```

Example of fitting an svg image to a resizable `Fl_Box`:

```
#include <FL/Fl_Window.H>
#include <FL/Fl_SVG_Image.H>
```

```
#include <Fl/Fl_Box.H>

class resizable_box : public Fl_Box {
public:
    resizable_box(int w, int h) : Fl_Box(0, 0, w, h, NULL) {}
    virtual void resize(int x, int y, int w, int h) {
        image()->scale(w, h, 1, 1); // p3 = proportional, p4 = can_expand
        Fl_Box::resize(x, y, w, h);
    }
};

int main(int argc, char **argv) {
    Fl_Window *win = new Fl_Window(130, 130);
    resizable_box *box = new resizable_box(win->w(), win->h());
    Fl_SVG_Image *svg = new Fl_SVG_Image("/path/to/image.svg");
    box->image(svg);
    svg->scale(box->w(), box->h());
    win->end();
    win->resizable(win);
    win->show(argc, argv);
    return Fl::run();
}
```

11.137.2 Constructor & Destructor Documentation

11.137.2.1 Fl_SVG_Image() [1/3]

```
Fl_SVG_Image::Fl_SVG_Image (
    const char * filename)
```

Load an SVG image from a file.

This constructor loads the SVG image from a .svg or .svgz file. The reader recognizes if the data is compressed, and decompresses it if zlib is available (HAVE_LIBZ).

Parameters

<i>filename</i>	the filename for a .svg or .svgz file
-----------------	---------------------------------------

11.137.2.2 Fl_SVG_Image() [2/3]

```
Fl_SVG_Image::Fl_SVG_Image (
    const char * sharedname,
    const char * svg_data)
```

Load an SVG image from memory.

This constructor loads the SVG image from a block of memory. This version is commonly used for uncompressed text data, but the reader recognizes if the data is compressed, and decompresses it if zlib is available (HAVE_LIBZ).

Parameters

<i>sharedname</i>	if not NULL, a shared image will be generated with this name
<i>svg_data</i>	a pointer to the memory location of the SVG image data

Note

In-memory SVG data is parsed by the object constructor and is no longer needed after construction.

11.137.2.3 Fl_SVG_Image() [3/3]

```
Fl_SVG_Image::Fl_SVG_Image (
    const char * name,
    const unsigned char * svg_data,
    size_t length)
```

Load an SVG image from memory.

This constructor loads the SVG image from a block of memory. This version is commonly used for compressed binary data, but the reader recognizes if the data is uncompressed, and reads it as a text block.

Parameters

<i>name</i>	if not NULL, a shared image will be generated with this name
<i>svg_data</i>	a pointer to the memory location of the SVG image data
<i>length</i>	of <i>svg_data</i> or 0 if the length is unknown. This will protect memory outside of the <i>svg_data</i> array from illegal read operations for compressed SVG data

Note

In-memory SVG data is parsed by the object constructor and is no longer needed after construction.

11.137.3 Member Function Documentation

11.137.3.1 as_svg_image()

```
Fl_SVG_Image * Fl_SVG_Image::as_svg_image () [inline], [virtual]
```

Returns whether an image is an [Fl_SVG_Image](#) or not.

This virtual method returns a pointer to the [Fl_SVG_Image](#) if this object is an instance of [Fl_SVG_Image](#) or NULL if not.

Reimplemented from [Fl_RGB_Image](#).

11.137.3.2 color_average()

```
void Fl_SVG_Image::color_average (
    Fl_Color c,
    float i) [virtual]
```

The [color_average\(\)](#) method averages the colors in the image with the provided FLTK color value.

The first argument specifies the FLTK color to be used.

The second argument specifies the amount of the original image to combine with the color, so a value of 1.0 results in no color blend, and a value of 0.0 results in a constant image of the specified color.

An internal copy is made of the original image data before changes are applied, to avoid modifying the original image data in memory.

Reimplemented from [Fl_RGB_Image](#).

11.137.3.3 copy()

```
Fl_Image * Fl_SVG_Image::copy (
    int W,
    int H) const [virtual]
```

Creates a resized copy of the image.

It is recommended not to call this member function to reduce the size of an image to the size of the area where this image will be drawn, and to use [Fl_Image::scale\(\)](#) instead.

The new image should be released when you are done with it.

Note: since FLTK 1.4.0 you can use [Fl_Image::release\(\)](#) for all types of images (i.e. all subclasses of [Fl_Image](#)) instead of operator *delete* for [Fl_Image](#)'s and [Fl_Image::release\(\)](#) for [Fl_Shared_Image](#)'s.

The new image data will be converted to the requested size. RGB images are resized using the algorithm set by [Fl_Image::RGB_scaling\(\)](#).

For the new image the following equations are true:

- $w() == data_w() == W$
- $h() == data_h() == H$

Parameters

in	<i>W,H</i>	Requested width and height of the new image
----	------------	---

Note

The returned image can be safely cast to the same image type as that of the source image provided this type is one of [Fl_RGB_Image](#), [Fl_SVG_Image](#), [Fl_Pixmap](#), [Fl_Bitmap](#), [Fl_Tiled_Image](#), [Fl_Anim_GIF_Image](#) and [Fl_Shared_Image](#). Returned objects copied from images of other, derived, image classes belong to the parent class appearing in this list. For example, the copy of an [Fl_GIF_Image](#) is an object of class [Fl_Pixmap](#).

Since FLTK 1.4.0 this method is 'const'. If you derive your own class from [Fl_Image](#) or any subclass your overridden methods of '[Fl_Image::copy\(\) const](#)' and '[Fl_Image::copy\(int, int\) const](#)' **must** also be 'const' for inheritance to work properly. This is different than in FLTK 1.3.x and earlier where these methods have not been 'const'.

Reimplemented from [Fl_RGB_Image](#).

11.137.3.4 desaturate()

```
void Fl_SVG_Image::desaturate () [virtual]
```

The [desaturate\(\)](#) method converts an image to grayscale.

If the image contains an alpha channel (depth = 4), the alpha channel is preserved.

An internal copy is made of the original image data before changes are applied, to avoid modifying the original image data in memory.

Reimplemented from [Fl_RGB_Image](#).

11.137.3.5 draw()

```
void Fl_SVG_Image::draw (
    int X,
    int Y,
    int W,
    int H,
    int cx = 0,
    int cy = 0) [virtual]
```

Draws the image to the current drawing surface with a bounding box.

Arguments X, Y, W, H specify a bounding box for the image, with the origin (upper-left corner) of the image offset by the cx and cy arguments.

Another way to see what part of the image gets drawn and where, is to consider this alternative writing producing the same output:

```
fl_push_clip(X,Y,W,H);
this->draw(X - cx, Y - cy);
fl_pop_clip();
```

Repeated calls to this member function with the same image but varying W, H, cx, or cy arguments may be more efficiently processed using the above alternative writing.

Reimplemented from [Fl_RGB_Image](#).

11.137.3.6 normalize()

```
void Fl_SVG_Image::normalize () [virtual]
```

Makes sure the object is fully initialized.

This function rasterizes the SVG image, and consequently initializes its [array](#) member, if that was not done before.

Reimplemented from [Fl_RGB_Image](#).

11.137.3.7 resize()

```
void Fl_SVG_Image::resize (
    int width,
    int height)
```

Have the svg data (re-)rasterized using the given width and height values.

By default, the resulting image w() and h() will be close to width and height while preserving the width/height ratio of the SVG data. If [proportional](#) was set to false, the image is rasterized to the exact width and height values. In both cases, [data_w\(\)](#) and [data_h\(\)](#) values are set to w() and h(), respectively.

11.137.4 Member Data Documentation

11.137.4.1 proportional

`bool Fl_SVG_Image::proportional`

Set this to `false` to allow image re-scaling that alters the image aspect ratio.

Upon object creation, `proportional` is set to `true`, and the aspect ratio is kept constant.

The documentation for this class was generated from the following files:

- `Fl_SVG_Image.H`
- `Fl_SVG_Image.cxx`

11.138 Fl_Sys_Menu_Bar Class Reference

A class to create and modify menus that appear on macOS in the menu bar at the top of the screen.

`#include <Fl_Sys_Menu_Bar.H>`

Inheritance diagram for `Fl_Sys_Menu_Bar`:

Public Types

- enum `window_menu_style_enum` { `no_window_menu` = 0, `tabbing_mode_none`, `tabbing_mode_automatic`, `tabbing_mode_preferred` }

Possible styles of the Window menu in the system menu bar.

Public Member Functions

- `int add` (const char *label, const char *shortcut, `Fl_Callback` *cb, void *user_data=0, int flags=0)
Adds a new menu item.
- `int add` (const char *label, int shortcut, `Fl_Callback` *, void *user_data=0, int flags=0)
Add a new menu item to the system menu bar.
- `int add` (const char *str)
Forms-compatible procedure to add items to the system menu bar.
- `void clear` ()
Set the `Fl_Menu_Item` array pointer to null, indicating a zero-length menu.
- `int clear_submenu` (int index)
Clears the specified submenu pointed to by index of all menu items.
- `Fl_Sys_Menu_Bar` (int x, int y, int w, int h, const char *l=0)
The constructor.
- `int insert` (int index, const char *label, const char *shortcut, `Fl_Callback` *cb, void *user_data=0, int flags=0)
Insert a new menu item.
- `int insert` (int index, const char *label, int shortcut, `Fl_Callback` *cb, void *user_data=0, int flags=0)
insert in the system menu bar a new menu item
- `const Fl_Menu_Item * menu` () const
Return the system menu's array of `Fl_Menu_Item`'s.

- void **menu** (const [FI_Menu_Item](#) *m)
create a system menu bar using the given list of menu structs
- int **mode** (int i) const
Gets the flags of item i.
- void **mode** (int i, int fl)
Sets the flags of item i.
- void **play_menu** (const [FI_Menu_Item](#) *) [FL_OVERRIDE](#)
Opens the 1st level submenu of the menubar corresponding to item.
- void **remove** (int n)
remove an item from the system menu bar
- void **replace** (int index, const char *name)
rename an item from the system menu bar
- void **setonly** ([FI_Menu_Item](#) *item)
Turns the radio item "on" for the menu item and turns "off" adjacent radio items of the same group.
- void **shortcut** (int i, int s)
Changes the shortcut of item i to n.
- void **update** () [FL_OVERRIDE](#)
Updates the menu bar after any change to its items.
- virtual ~**FI_Sys_Menu_Bar** ()
The destructor.

Public Member Functions inherited from [FI_Menu_Bar](#)

- [FI_Menu_Bar](#) (int X, int Y, int W, int H, const char *l=0)
Creates a new [FI_Menu_Bar](#) widget using the given position, size, and label string.
- int **handle** (int) [FL_OVERRIDE](#)
Handles the specified event.

Public Member Functions inherited from [FI_Menu_](#)

- int **add** (const char *)
This is a Forms (and SGI GL library) compatible add function, it adds many menu items, with '|' separating the menu items, and tab separating the menu item names from an optional shortcut string.
- int **add** (const char *, int [shortcut](#), [FI_Callback](#) *, void *=0, int=0)
Adds a new menu item.
- int **add** (const char *a, const char *b, [FI_Callback](#) *c, void *d=0, int e=0)
See int [FI_Menu_::add](#)(const char label, int shortcut, [FI_Callback](#)*, void *user_data=0, int flags=0)*
- void **clear** ()
Same as menu(NULL), set the array pointer to null, indicating a zero-length menu.
- int **clear_submenu** (int index)
Clears the specified submenu pointed to by index of all menu items.
- void **copy** (const [FI_Menu_Item](#) *m, void *user_data=0)
Sets the menu array pointer with a copy of m that will be automatically deleted.
- [FI_Boxtype](#) **down_box** () const
This box type is used to surround the currently-selected items in the menus.
- void **down_box** ([FI_Boxtype](#) b)
Sets the box type used to surround the currently-selected items in the menus.
- [FI_Color](#) **down_color** () const
For back compatibility, same as [selection_color\(\)](#)
- void **down_color** (unsigned c)
For back compatibility, same as [selection_color\(\)](#)
- int **find_index** (const char *name) const

- Find the menu item index for a given menu `pathname`, such as "Edit/Copy".*

 - int `find_index` (const `Fl_Menu_Item` *item) const

Find the index into the menu array for a given `item`.
- int `find_index` (`Fl_Callback` *cb) const

Find the index into the menu array for a given callback `cb`.
- const `Fl_Menu_Item` * `find_item` (const char *name)

Find the menu item for a given menu `pathname`, such as "Edit/Copy".
- const `Fl_Menu_Item` * `find_item` (`Fl_Callback` *)

Find the menu item for the given callback `cb`.
- const `Fl_Menu_Item` * `find_item_with_argument` (long)

Find the menu item for the given user argument `v`.
- const `Fl_Menu_Item` * `find_item_with_user_data` (void *)

Find the menu item for the given user data `v`.
- `Fl_Menu_` (int, int, int, int, const char * = 0)

Creates a new `Fl_Menu_` widget using the given position, size, and label string.
- void `global` ()

Make the shortcuts for this menu work no matter what window has the focus when you type it.
- int `insert` (int index, const char *, int `shortcut`, `Fl_Callback` *, void * = 0, int = 0)

Inserts a new menu item at the specified `index` position.
- int `insert` (int index, const char *a, const char *b, `Fl_Callback` *c, void *d = 0, int e = 0)

See int `Fl_Menu_::insert`(const char label, int shortcut, `Fl_Callback`*, void *user_data = 0, int flags = 0)*
- int `item_pathname` (char *name, int namelen, const `Fl_Menu_Item` *finditem = 0) const

Get the menu 'pathname' for the specified menuitem.
- const `Fl_Menu_Item` * `menu` () const

Returns a pointer to the array of `Fl_Menu_Items`.
- void `menu` (const `Fl_Menu_Item` *m)

Sets the menu array pointer directly.
- `Fl_Boxtype` `menu_box` () const

Get the box type for the menu popup windows.
- void `menu_box` (`Fl_Boxtype` b)

Set the box type for the menu popup windows.
- const `Fl_Menu_Item` * `menu_end` ()

Finishes menu modifications and returns `menu()`.
- int `mode` (int i) const

Get the flags of item `i`.
- void `mode` (int i, int fl)

Set the flags of item `i`.
- const `Fl_Menu_Item` * `mvalue` () const

Return a pointer to the last menu item that was picked.
- const `Fl_Menu_Item` * `picked` (const `Fl_Menu_Item` *)

When user picks a menu item, call this.
- const `Fl_Menu_Item` * `prev_mvalue` () const

Return a pointer to the menu item that was picked before the current one was picked.
- void `remove` (int)

Deletes item `i` from the menu.
- void `replace` (int, const char *)

Changes the text of item `i`.
- void `setonly` (`Fl_Menu_Item` *item)

Turns the radio item "on" for the menu item and turns "off" adjacent radio items of the same group.
- void `shortcut` (int i, int s)

Change the shortcut of item `i` to `s`.

- `int size () const`
This returns the number of `FI_Menu_Item` structures that make up the menu, correctly counting submenus.
- `void size (int W, int H)`
- `const FI_Menu_Item * test_shortcut ()`
Returns the menu item with the entered shortcut (key value).
- `const char * text () const`
Returns the title of the last item chosen.
- `const char * text (int i) const`
*Returns the title of item *i*.*
- `FI_Color textcolor () const`
Get the current color of menu item labels.
- `void textcolor (FI_Color c)`
Sets the current color of menu item labels.
- `FI_Font textfont () const`
Gets the current font of menu item labels.
- `void textfont (FI_Font c)`
Sets the current font of menu item labels.
- `FI_Fontsize textsize () const`
Gets the font size of menu item labels.
- `void textsize (FI_Fontsize c)`
Sets the font size of menu item labels.
- `int value () const`
Return the index into the `menu()` of the last item chosen by the user.
- `int value (const FI_Menu_Item *)`
*Set the value of a menu to the menu item *m*.*
- `int value (int i)`
*Set the value of the menu to index *i*.*

Public Member Functions inherited from `FI_Widget`

- `void _clear_fullscreen ()`
- `void _set_fullscreen ()`
- `void activate ()`
Activates the widget.
- `unsigned int active () const`
Returns whether the widget is active.
- `int active_r () const`
Returns whether the widget and all of its parents are active.
- `FI_Align align () const`
Gets the label alignment.
- `void align (FI_Align alignment)`
Sets the label alignment.
- `long argument () const`
Gets the current user data (long) argument that is passed to the callback function.
- `void argument (long v)`
Sets the current user data (long) argument that is passed to the callback function.
- `virtual class FI_GL_Window * as_gl_window ()`
Returns an `FI_GL_Window` pointer if this widget is an `FI_GL_Window`.
- `virtual class FI_GL_Window const * as_gl_window () const`
- `virtual FI_Group * as_group ()`
Returns an `FI_Group` pointer if this widget is an `FI_Group`.

- virtual [FI_Group](#) const * **as_group** () const
- virtual [FI_Window](#) * **as_window** ()
 - Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).*
- virtual [FI_Window](#) const * **as_window** () const
- void **bind_deimage** ([FI_Image](#) *img)
 - Sets the image to use as part of the widget label when in the inactive state.*
- void **bind_deimage** (int f)
 - Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.*
- void **bind_image** ([FI_Image](#) *img)
 - Sets the image to use as part of the widget label when in the active state.*
- void **bind_image** (int f)
 - Bind the image to the widget, so the widget will delete the image when it is no longer needed.*
- [FI_Boxtype](#) **box** () const
 - Gets the box type of the widget.*
- void **box** ([FI_Boxtype](#) new_box)
 - Sets the box type for the widget.*
- [FI_Callback_p](#) **callback** () const
 - Gets the current callback function for the widget.*
- void **callback** ([FI_Callback](#) *cb)
 - Sets the current callback function for the widget.*
- void **callback** ([FI_Callback](#) *cb, [FI_Callback_User_Data](#) *p, bool auto_free)
 - Sets the current callback function and managed user data for the widget.*
- void **callback** ([FI_Callback](#) *cb, void *p)
 - Sets the current callback function and data for the widget.*
- void **callback** ([FI_Callback0](#) *cb)
 - Sets the current callback function for the widget.*
- void **callback** ([FI_Callback1](#) *cb, long p=0)
 - Sets the current callback function for the widget.*
- unsigned int **changed** () const
 - Checks if the widget value changed since the last callback.*
- void **clear_active** ()
 - Marks the widget as inactive without sending events or changing focus.*
- void **clear_changed** ()
 - Marks the value of the widget as unchanged.*
- void **clear_damage** (uchar c=0)
 - Clears or sets the damage flags.*
- void **clear_output** ()
 - Sets a widget to accept input.*
- void **clear_visible** ()
 - Hides the widget.*
- void **clear_visible_focus** ()
 - Disables keyboard focus navigation with this widget.*
- [FI_Color](#) **color** () const
 - Gets the background color of the widget.*
- void **color** ([FI_Color](#) bg)
 - Sets the background color of the widget.*
- void **color** ([FI_Color](#) bg, [FI_Color](#) sel)
 - Sets the background and selection color of the widget.*
- [FI_Color](#) **color2** () const
 - For back compatibility only.*
- void **color2** (unsigned a)

- For back compatibility only.*

 - int `contains` (const `Fl_Widget` *w) const
Checks if w is a child of this widget.
 - void `copy_label` (const char *new_label)
Sets the current label.
 - void `copy_tooltip` (const char *text)
Sets the current tooltip text.
 - uchar `damage` () const
Returns non-zero if `draw()` needs to be called.
 - void `damage` (uchar c)
Sets the damage bits for the widget.
 - void `damage` (uchar c, int x, int y, int w, int h)
Sets the damage bits for an area inside the widget.
 - int `damage_resize` (int, int, int, int)
Internal use only.
 - void `deactivate` ()
Deactivates the widget.
 - `Fl_Image` * `deimage` ()
Gets the image that is used as part of the widget label when in the inactive state.
 - const `Fl_Image` * `deimage` () const
Gets the image that is used as part of the widget label when in the inactive state.
 - void `deimage` (`Fl_Image` &img)
Sets the image to use as part of the widget label when in the inactive state.
 - void `deimage` (`Fl_Image` *img)
Sets the image to use as part of the widget label when in the inactive state.
 - int `deimage_bound` () const
Returns whether the inactive image is managed by the widget.
 - void `do_callback` (`Fl_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with default arguments.
 - void `do_callback` (`Fl_Widget` *widget, long arg, `Fl_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with arbitrary arguments.
 - void `do_callback` (`Fl_Widget` *widget, void *arg=0, `Fl_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with arbitrary arguments.
 - void `draw_label` (int, int, int, int, `Fl_Align`) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
 - int `h` () const
Gets the widget height.
 - virtual void `hide` ()
Makes a widget invisible.
 - int `horizontal_label_margin` ()
Get the spacing between the label and the horizontal edge of the widget.
 - void `horizontal_label_margin` (int px)
Set the spacing between the label and the horizontal edge of the widget.
 - `Fl_Image` * `image` ()
Gets the image that is used as part of the widget label when in the active state.
 - const `Fl_Image` * `image` () const
Gets the image that is used as part of the widget label when in the active state.
 - void `image` (`Fl_Image` &img)
Sets the image to use as part of the widget label when in the active state.
 - void `image` (`Fl_Image` *img)
Sets the image to use as part of the widget label when in the active state.

- int `image_bound` () const
Returns whether the image is managed by the widget.
- int `inside` (const `FL_Widget` *wgt) const
Checks if this widget is a child of wgt.
- int `is_label_copied` () const
Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const
Gets the current label text.
- void `label` (const char *text)
Sets the current label pointer.
- void `label` (`FL_Labeltype` a, const char *b)
Shortcut to set the label text and type in one call.
- int `label_image_spacing` ()
Return the gap size between the label and the image.
- void `label_image_spacing` (int gap)
Set the gap between the label and the image in pixels.
- `FL_Color` `labelcolor` () const
Gets the label color.
- void `labelcolor` (`FL_Color` c)
Sets the label color.
- `FL_Font` `labelfont` () const
Gets the font to use.
- void `labelfont` (`FL_Font` f)
Sets the font to use.
- `FL_Fonsize` `labelsize` () const
Gets the font size in pixels.
- void `labelsize` (`FL_Fonsize` pix)
Sets the font size in pixels.
- `FL_Labeltype` `labeltype` () const
Gets the label type.
- void `labeltype` (`FL_Labeltype` a)
Sets the label type.
- void `measure_label` (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- bool `needs_keyboard` () const
Returns whether this widget needs a keyboard.
- void `needs_keyboard` (bool needs)
Sets whether this widget needs a keyboard.
- unsigned int `output` () const
Returns if a widget is used for output only.
- `FL_Group` * `parent` () const
Returns a pointer to the parent widget.
- void `parent` (`FL_Group` *p)
Internal use only - "for hacks only".
- void `position` (int X, int Y)
Repositions the window or widget.
- void `redraw` ()
Schedules the drawing of the widget.
- void `redraw_label` ()
Schedules the drawing of the label.
- virtual void `resize` (int x, int y, int w, int h)

- Changes the size or position of the widget.*

 - [Fl_Color selection_color](#) () const

Gets the selection color.
- void [selection_color](#) ([Fl_Color](#) a)

Sets the selection color.
- void [set_active](#) ()

Marks the widget as active without sending events or changing focus.
- void [set_changed](#) ()

Marks the value of the widget as changed.
- void [set_output](#) ()

Sets a widget to output only.
- void [set_visible](#) ()

Makes the widget visible.
- void [set_visible_focus](#) ()

Enables keyboard focus navigation with this widget.
- int [shortcut_label](#) () const

Returns whether the widget's label uses '&' to indicate shortcuts.
- void [shortcut_label](#) (int value)

Sets whether the widget's label uses '&' to indicate shortcuts.
- virtual void [show](#) ()

Makes a widget visible.
- void [size](#) (int W, int H)

Changes the size of the widget.
- int [take_focus](#) ()

Gives the widget the keyboard focus.
- unsigned int [takeevents](#) () const

Returns if the widget is able to take events.
- int [test_shortcut](#) ()

Returns true if the widget's label contains the entered '&x' shortcut.
- const char * [tooltip](#) () const

Gets the current tooltip text.
- void [tooltip](#) (const char *text)

Sets the current tooltip text.
- [Fl_Window](#) * [top_window](#) () const

Returns a pointer to the top-level window for the widget.
- [Fl_Window](#) * [top_window_offset](#) (int &xoff, int &yoff) const

Finds the x/y offset of the current widget relative to the top-level window.
- [uchar](#) [type](#) () const

Gets the widget type.
- void [type](#) ([uchar](#) t)

Sets the widget type.
- int [use_accents_menu](#) ()

Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * [user_data](#) () const

Gets the user data for this widget.
- void [user_data](#) ([Fl_Callback_User_Data](#) *v, bool auto_free)

Sets the user data for this widget.
- void [user_data](#) (void *v)

Sets the user data for this widget.
- int [vertical_label_margin](#) ()

Get the spacing between the label and the vertical edge of the widget.

- void [vertical_label_margin](#) (int px)
Set the spacing between the label and the vertical edge of the widget.
- unsigned int [visible](#) () const
Returns whether a widget is visible.
- unsigned int [visible_focus](#) () const
Checks whether this widget has a visible focus.
- void [visible_focus](#) (int v)
Modifies keyboard focus navigation.
- int [visible_r](#) () const
Returns whether a widget and all its parents are visible.
- int [w](#) () const
Gets the widget width.
- [Fl_When](#) [when](#) () const
Returns the conditions under which the callback is called.
- void [when](#) (uchar i)
Sets the flags used to decide when a callback is called.
- [Fl_Window](#) * [window](#) () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int [x](#) () const
Gets the widget position in its window.
- int [y](#) () const
Gets the widget position in its window.
- virtual [~Fl_Widget](#) ()
Destroys the widget.

Static Public Member Functions

- static void [about](#) ([Fl_Callback](#) *cb, void *data)
Attaches a callback to the "About myprog" item of the system application menu.
- static void [create_window_menu](#) ()
Adds a Window menu, to the end of the system menu bar.
- static [window_menu_style_enum](#) [window_menu_style](#) ()
Get the style of the Window menu in the system menu bar.
- static void [window_menu_style](#) ([window_menu_style_enum](#) style)
Set the desired style of the Window menu in the system menu bar.

Static Public Member Functions inherited from [Fl_Widget](#)

- static void [default_callback](#) ([Fl_Widget](#) *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int [label_shortcut](#) (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int [test_shortcut](#) (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Member Functions

- void [draw](#) () [FL_OVERRIDE](#)
Draws the widget.

Protected Member Functions inherited from [Fl_Menu_](#)

- int [item_pathname](#)_ (char *name, int namelen, const [Fl_Menu_Item](#) *finditem, const [Fl_Menu_Item](#) *menu=0) const

Protected Member Functions inherited from [FI_Widget](#)

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** ([FI_Boxtype](#) t, [FI_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const
Draws a focus rectangle around the widget.
- void **draw_focus** ([FI_Boxtype](#) t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void **draw_focus** ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) bg) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [FI_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

Additional Inherited Members

Protected Types inherited from [FI_Widget](#)

11.138.1 Detailed Description

A class to create and modify menus that appear on macOS in the menu bar at the top of the screen.

On other than macOS platforms, [Fl_Sys_Menu_Bar](#) is a synonym of class [Fl_Menu_Bar](#).

On the macOS platform, replace [Fl_Menu_Bar](#) with [Fl_Sys_Menu_Bar](#), and a system menu at the top of the screen will be available. This menu will match an array of [Fl_Menu_Item](#)'s exactly as in all other FLTK menus (except for the submenu with the application's own name and the 'Window' menu; see below). There is, though, an important difference between an [Fl_Sys_Menu_Bar](#) object under macOS and under other platforms: only a single object from this class can be created, because macOS uses a single system menu bar. Therefore, porting to macOS an app that creates, on other platforms, several [Fl_Menu_Bar](#) objects, one for each of several windows, is more complex than just replacing [Fl_Menu_Bar](#) by [Fl_Sys_Menu_Bar](#).

On the macOS platform, the system menu bar of any FLTK app begins with the Application menu which the FLTK library automatically constructs. Functions [Fl_Mac_App_Menu::custom_application_menu_items\(\)](#) and [Fl_Sys_Menu_Bar::about\(\)](#) can be used to further customize the Application menu. The FLTK library also automatically constructs and handles a Window menu which can be further customized (or even removed) calling [Fl_Sys_Menu_Bar::window_menu_style\(window_menu_style_enum style\)](#). Other member functions of this class allow the app to generate the rest of the system menu bar. It is recommended to localize the system menu bar using the standard Mac OS X localization procedure (see [Internationalization](#)).

Changes to the menu state are immediately visible in the menubar when they are made using member functions of the [Fl_Sys_Menu_Bar](#) class. Other changes (e.g., by a call to [Fl_Menu_Item::set\(\)](#)) should be followed by a call to [update\(\)](#) to be visible in the menubar across all platforms. macOS global variable `fl_sys_menu_bar` points to the unique, current system menu bar.

A few FLTK menu features are not supported by the Mac System menu:

- no symbolic labels
- no embossed labels
- no font sizes

As described above, the submenu with the application's own name (usually the second submenu from the left, immediately following the "Apple" submenu) is a special case, and can be managed with [Fl_Mac_App_Menu::custom_application_menu_items\(\)](#). For example, to make your own "Appname -> Preferences" dialog, you might use:

```
#include <FL/platform.H>           // for Fl_Mac_App_Menu class
#include <FL/Fl_Sys_Menu_Bar.H>    // for Fl_Menu_Item
:
void prefs_cb(Fl_Widget *w, void *data) {
    // ..Open your preferences dialog here..
}
:
int main(..) {
    :
    // Items to add to the application menu
    static Fl_Menu_Item appitems[] = {
        { "Preferences", 0, prefs_cb, 0, 0 },
        { 0 }, { 0 }
    };
    Fl_Mac_App_Menu::custom_application_menu_items(appitems); // adds it
}
```

..the result being:

Figure 11.46 Mac Application submenu

11.138.2 Member Enumeration Documentation

11.138.2.1 window_menu_style_enum

enum [Fl_Sys_Menu_Bar::window_menu_style_enum](#)

Possible styles of the Window menu in the system menu bar.

Enumerator

<code>no_window_menu</code>	No Window menu in the system menu bar.
<code>tabbing_mode_none</code>	No tabbed windows, but the system menu bar contains a Window menu.
<code>tabbing_mode_automatic</code>	Windows are created by themselves but can be tabbed later.
<code>tabbing_mode_preferred</code>	Windows are tabbed when created.

11.138.3 Constructor & Destructor Documentation

11.138.3.1 Fl_Sys_Menu_Bar()

```
Fl_Sys_Menu_Bar::Fl_Sys_Menu_Bar (
    int x,
    int y,
    int w,
    int h,
    const char * l = 0)
```

The constructor.

On Mac OS X, all arguments are unused. On other platforms they are used as by [Fl_Menu_Bar::Fl_Menu_Bar\(\)](#).

11.138.4 Member Function Documentation

11.138.4.1 about()

```
void Fl_Sys_Menu_Bar::about (
    Fl\_Callback * cb,
    void * data) [static]
```

Attaches a callback to the "About myprog" item of the system application menu.

This cross-platform function is effective only under the MacOS platform.

Parameters

<i>cb</i>	a callback that will be called by "About myprog" menu item with NULL 1st argument.
<i>data</i>	a pointer transmitted as 2nd argument to the callback.

11.138.4.2 add() [1/3]

```
int Fl_Sys_Menu_Bar::add (
    const char * label,
```

```
const char * shortcut,
Fl_Callback * cb,
void * user_data = 0,
int flags = 0) [inline]
```

Adds a new menu item.

See also

[Fl_Menu_::add](#)(const char* [label](#), int [shortcut](#), [Fl_Callback*](#), void *[user_data](#)=0, int [flags](#)=0)

11.138.4.3 add() [2/3]

```
int Fl_Sys_Menu_Bar::add (
    const char * label,
    int shortcut,
    Fl_Callback * cb,
    void * user_data = 0,
    int flags = 0)
```

Add a new menu item to the system menu bar.

Add to the system menu bar a new menu item, with a title string, shortcut int, callback, argument to the callback, and flags.

Parameters

<i>label</i>	- new menu item's label
<i>shortcut</i>	- new menu item's integer shortcut (can be 0 for none, or e.g. FL_ALT+'x')
<i>cb</i>	- callback to be invoked when item selected (can be 0 for none, in which case the menubar's callback() can be used instead)
<i>user_data</i>	- argument to the callback
<i>flags</i>	- item's flags, e.g. FL_MENU_TOGGLE , etc.

Returns

the index into the [menu\(\)](#) array, where the entry was added

See also

[Fl_Menu_::add](#)(const char* [label](#), int [shortcut](#), [Fl_Callback](#) *[cb](#), void *[user_data](#), int [flags](#))

11.138.4.4 add() [3/3]

```
int Fl_Sys_Menu_Bar::add (
    const char * str)
```

Forms-compatible procedure to add items to the system menu bar.

Returns

the index into the [menu\(\)](#) array, where the entry was added

See also

[Fl_Menu_::add](#)(const char* [str](#))

11.138.4.5 clear()

```
void Fl_Sys_Menu_Bar::clear ()
```

Set the [Fl_Menu_Item](#) array pointer to null, indicating a zero-length menu.

See also

[Fl_Menu_::clear](#)()

11.138.4.6 clear_submenu()

```
int Fl_Sys_Menu_Bar::clear_submenu (
    int index)
```

Clears the specified submenu pointed to by index of all menu items.

See also

[Fl_Menu_::clear_submenu\(int index\)](#)

11.138.4.7 create_window_menu()

```
void Fl_Sys_Menu_Bar::create_window_menu () [static]
```

Adds a Window menu, to the end of the system menu bar.

FLTK apps typically don't need to call this function which is automatically called by the library the first time a window is shown. The default system menu bar contains a Window menu with a "Merge All Windows" item. Other Window menu styles can be obtained calling [Fl_Sys_Menu_Bar::window_menu_style\(window_menu_style_enum\)](#) before the first [Fl_Window::show\(\)](#). Alternatively, an app can call [create_window_menu\(\)](#) after having populated the system menu bar, for example with [menu\(const Fl_Menu_Item *\)](#), and before the first [Fl_Window::show\(\)](#).

This function does nothing on non MacOS platforms.

Version

1.4

11.138.4.8 draw()

```
void Fl_Sys_Menu_Bar::draw () [protected], [virtual]
```

Draws the widget.

Never call this function directly. FLTK will schedule redrawing whenever needed. If your widget must be redrawn as soon as possible, call [redraw\(\)](#) instead.

Override this function to draw your own widgets.

If you ever need to call another widget's draw method *from within your own [draw\(\)](#) method*, e.g. for an embedded scrollbar, you can do it (because [draw\(\)](#) is virtual) like this:

```
Fl_Widget *s = &scrollbar; // scrollbar is an embedded Fl_Scrollbar
s->draw();                 // calls Fl_Scrollbar::draw()
```

Reimplemented from [Fl_Menu_Bar](#).

11.138.4.9 insert() [1/2]

```
int Fl_Sys_Menu_Bar::insert (
    int index,
    const char * label,
    const char * shortcut,
    Fl_Callback * cb,
    void * user_data = 0,
    int flags = 0) [inline]
```

Insert a new menu item.

See also

[Fl_Menu_::insert\(int index, const char* label, const char* shortcut, Fl_Callback *cb, void *user_data=0, int flags=0\)](#)

11.138.4.10 insert() [2/2]

```
int Fl_Sys_Menu_Bar::insert (
    int index,
    const char * label,
    int shortcut,
```

```

    Fl_Callback * cb,
    void * user_data = 0,
    int flags = 0)

```

insert in the system menu bar a new menu item

Insert in the system menu bar a new menu item, with a title string, shortcut int, callback, argument to the callback, and flags.

Returns

the index into the [menu\(\)](#) array, where the entry was inserted

See also

[Fl_Menu_::insert\(int index, const char* label, int shortcut, Fl_Callback *cb, void *user_data, int flags\)](#)

11.138.4.11 menu()

```

void Fl_Sys_Menu_Bar::menu (
    const Fl_Menu_Item * m)

```

create a system menu bar using the given list of menu structs

Author

Matthias Melcher

Parameters

<i>m</i>	Zero-ending list of Fl_Menu_Item 's
----------	---

11.138.4.12 mode()

```

void Fl_Sys_Menu_Bar::mode (
    int i,
    int fl)

```

Sets the flags of item i.

See also

[Fl_Menu_::mode\(int i, int fl\)](#)

11.138.4.13 play_menu()

```

void Fl_Sys_Menu_Bar::play_menu (
    const Fl_Menu_Item * item) [virtual]

```

Opens the 1st level submenu of the menubar corresponding to item.

Since

1.4.0

Reimplemented from [Fl_Menu_Bar](#).

11.138.4.14 remove()

```

void Fl_Sys_Menu_Bar::remove (
    int index)

```

remove an item from the system menu bar

Parameters

<i>index</i>	the index of the item to remove
--------------	---------------------------------

11.138.4.15 replace()

```
void Fl_Sys_Menu_Bar::replace (
    int index,
    const char * name)
```

rename an item from the system menu bar

Parameters

<i>index</i>	the index of the item to rename
<i>name</i>	the new item name as a UTF8 string

11.138.4.16 update()

```
void Fl_Sys_Menu_Bar::update () [virtual]
```

Updates the menu bar after any change to its items.

This is useful when the menu bar can be an [Fl_Sys_Menu_Bar](#) object.

Reimplemented from [Fl_Menu_Bar](#).

11.138.4.17 window_menu_style()

```
void Fl_Sys_Menu_Bar::window_menu_style (
    Fl\_Sys\_Menu\_Bar::window\_menu\_style\_enum style) [static]
```

Set the desired style of the Window menu in the system menu bar.

This function, to be called before the first call to [Fl_Window::show\(\)](#), allows to control whether the system menu bar should contain a Window menu, and if yes, whether new windows should be displayed in tabbed form. These are the effects of various values for *style* :

- `no_window_menu` : don't add a Window menu to the system menu bar
- `tabbing_mode_none` : add a simple Window menu to the system menu bar
- `tabbing_mode_automatic` : the window menu also contains "Merge All Windows" to group all windows in a single tabbed display mode. This is the **default** Window menu style for FLTK apps.
- `tabbing_mode_preferred` : new windows are displayed in tabbed mode when first created

The Window menu, if present, is entirely created and controlled by the FLTK library. Mac OS version 10.12 or later must be running for windows to be displayed in tabbed form. Under non MacOS platforms, this function does nothing.

Version

1.4

The documentation for this class was generated from the following files:

- [Fl_Sys_Menu_Bar.H](#)
- [Fl_Sys_Menu_Bar.cxx](#)

11.139 Fl_Table Class Reference

A table of widgets or other content.

```
#include <Fl_Table.H>
```

Inheritance diagram for Fl_Table:

Public Types

- enum `TableContext` {
`CONTEXT_NONE` = 0 , `CONTEXT_STARTPAGE` = 0x01 , `CONTEXT_ENDPAGE` = 0x02 , `CONTEXT_ROW_HEADER`
= 0x04 ,
`CONTEXT_COL_HEADER` = 0x08 , `CONTEXT_CELL` = 0x10 , `CONTEXT_TABLE` = 0x20 , `CONTEXT_RC_RESIZE`
= 0x40 }

The context bit flags for *Fl_Table* related callbacks.

Public Member Functions

- void **add** (*Fl_Widget* &wgt)
The specified widget is removed from its current group (if any) and added to the end of *Fl_Table*'s group.
- void **add** (*Fl_Widget* *wgt)
The specified widget is removed from its current group (if any) and added to the end of *Fl_Table*'s group.
- Fl_Widget* *const * **array** ()
Returns a pointer to the array of children.
- void **begin** ()
- void **callback** (*Fl_Widget* *, void *)
Callbacks will be called depending on the setting of *Fl_Widget::when()*.
- int **callback_col** ()
Returns the current column the event occurred on.
- `TableContext` **callback_context** ()
Returns the current 'table context'.
- int **callback_row** ()
Returns the current row the event occurred on.
- Fl_Widget* * **child** (int n) const
Returns the child widget by an index.
- int **children** () const
Returns the number of children in the table.
- virtual void **clear** ()
Clears the table to zero rows (*rows(0)*), zero columns (*cols(0)*), and clears any widgets (*table->clear()*) that were added with *begin()/end()* or *add()/insert()/etc.*
- int **col_header** ()
Returns if column headers are enabled or not.
- void **col_header** (int flag)
Enable or disable column headers.

- [FI_Color](#) **col_header_color** ()
Gets the color for column headers.
- void **col_header_color** ([FI_Color](#) val)
Sets the color for column headers and redraws the table.
- int **col_header_height** ()
Gets the column header height.
- void **col_header_height** (int height)
Sets the height in pixels for column headers and redraws the table.
- int **col_position** ()
Returns the current column scroll position as a column number.
- void **col_position** (int col)
Sets the horizontal scroll position so 'col' is at the left, and causes the screen to redraw.
- int **col_resize** ()
Returns if column resizing by the user is allowed.
- void **col_resize** (int flag)
Allows/disallows column resizing by the user.
- int **col_resize_min** ()
Returns the current column minimum resize value.
- void **col_resize_min** (int val)
Sets the current column minimum resize value.
- int **col_width** (int col)
Returns the current width of the specified column in pixels.
- void **col_width** (int col, int width)
Sets the width of the specified column in pixels, and the table is redrawn.
- void **col_width_all** (int width)
Convenience method to set the width of all columns to the same value, in pixels.
- int **cols** ()
Get the number of columns in the table.
- virtual void **cols** (int val)
Set the number of columns in the table and redraw.
- void **do_callback** ([TableContext](#) context, int row, int col)
Calls the widget callback.
- void **end** ()
- int **find** (const [FI_Widget](#) &wgt) const
- int **find** (const [FI_Widget](#) *wgt) const
- [FI_Table](#) (int X, int Y, int W, int H, const char *l=0)
The constructor for [FI_Table](#).
- void **get_selection** (int &row_top, int &col_left, int &row_bot, int &col_right) const
Gets the region of cells selected (highlighted).
- void **init_sizes** ()
Resets the internal array of widget sizes and positions.
- void **insert** ([FI_Widget](#) &wgt, [FI_Widget](#) *w2)
The specified widget is removed from its current group (if any) and inserted into [FI_Table](#)'s group before widget 'w2'.
- void **insert** ([FI_Widget](#) &wgt, int n)
The specified widget is removed from its current group (if any) and inserted into the [FI_Table](#)'s group at position 'n'.
- int **is_interactive_resize** ()
Returns 1 if someone is interactively resizing a row or column.
- int **is_selected** (int r, int c)
*See if the cell at row *r* and column *c* is selected.*
- int **move_cursor** (int R, int C)
Same as `move_cursor(R,C,1);`.

- int [move_cursor](#) (int R, int C, int shiftselect)
Moves the selection cursor a relative number of rows/columns specified by R/C.
- void [remove](#) ([FL_Widget](#) &wgt)
The specified widget is removed from [FL_Table](#)'s group.
- void [resize](#) (int X, int Y, int W, int H) [FL_OVERRIDE](#)
Handle resize events if user resizes parent window.
- int [row_header](#) ()
Returns if row headers are enabled or not.
- void [row_header](#) (int flag)
Enables/disables showing the row headers.
- [FL_Color](#) [row_header_color](#) ()
Returns the current row header color.
- void [row_header_color](#) ([FL_Color](#) val)
Sets the row header color and causes the screen to redraw.
- int [row_header_width](#) ()
Returns the current row header width (in pixels).
- void [row_header_width](#) (int width)
Sets the row header width to n and causes the screen to redraw.
- int [row_height](#) (int row)
Returns the current height of the specified row as a value in pixels.
- void [row_height](#) (int row, int height)
Sets the height of the specified row in pixels, and the table is redrawn.
- void [row_height_all](#) (int height)
Convenience method to set the height of all rows to the same value, in pixels.
- int [row_position](#) ()
Returns the current row scroll position as a row number.
- void [row_position](#) (int row)
Sets the vertical scroll position so 'row' is at the top, and causes the screen to redraw.
- int [row_resize](#) ()
Returns if row resizing by the user is allowed.
- void [row_resize](#) (int flag)
Allows/disallows row resizing by the user.
- int [row_resize_min](#) ()
Returns the current row minimum resize value.
- void [row_resize_min](#) (int val)
Sets the current row minimum resize value.
- int [rows](#) ()
Returns the number of rows in the table.
- virtual void [rows](#) (int val)
Sets the number of rows in the table, and the table is redrawn.
- int [scrollbar_size](#) () const
Gets the current size of the scrollbars' troughs, in pixels.
- void [scrollbar_size](#) (int newSize)
Sets the pixel size of the scrollbars' troughs to newSize, in pixels.
- void [set_selection](#) (int row_top, int col_left, int row_bot, int col_right)
Sets the region of cells to be selected (highlighted).
- int [tab_cell_nav](#) () const
Get state of table's 'Tab' key cell navigation flag.
- void [tab_cell_nav](#) (int val)
Flag to control if Tab navigates table cells or not.
- void [table_box](#) ([FL_Boxtype](#) val)

- Sets the kind of box drawn around the data table, the default being FL_NO_BOX.*

 - [FL_Boxtype](#) **table_box** (void)

Returns the current box type used for the data table.
- int [top_row](#) ()
- Returns the current top row shown in the table.*
- void [top_row](#) (int row)
- Sets which row should be at the top of the table, scrolling as necessary, and the table is redrawn.*
- void [visible_cells](#) (int &r1, int &r2, int &c1, int &c2)
- Returns the range of row and column numbers for all visible and partially visible cells in the table.*
- void [when](#) ([FL_When](#) flags)
- The [FL_Widget::when\(\)](#) function is used to set a group of flags, determining when the widget callback is called:*
- [~FL_Table](#) ()
- The destructor for [FL_Table](#).*

Public Member Functions inherited from [FL_Group](#)

- [FL_Widget](#) *& [_ddfdesign_kludge](#) ()
- This is for forms compatibility only.*
- void **add** ([FL_Widget](#) &)
- The widget is removed from its current group (if any) and then added to the end of this group.*
- void **add** ([FL_Widget](#) *o)
- See void [FL_Group::add\(FL_Widget &w\)](#)*
- void **add_resizable** ([FL_Widget](#) &o)
- Adds a widget to the group and makes it the resizable widget.*
- [FL_Widget](#) *const * [array](#) () const
- Returns a pointer to the array of children.*
- [FL_Group](#) const * [as_group](#) () const [FL_OVERRIDE](#)
- [FL_Group](#) * [as_group](#) () [FL_OVERRIDE](#)
- Returns an [FL_Group](#) pointer if this widget is an [FL_Group](#).*
- void [begin](#) ()
- Sets the current group so you can build the widget tree by just constructing the widgets.*
- [FL_Widget](#) * [child](#) (int n) const
- Returns the n'th child.*
- int **children** () const
- Returns how many child widgets the group has.*
- void [clear](#) ()
- Deletes all child widgets from memory recursively.*
- unsigned int [clip_children](#) ()
- Returns the current clipping mode.*
- void [clip_children](#) (int c)
- Controls whether the group widget clips the drawing of child widgets to its bounding box.*
- virtual int [delete_child](#) (int n)
- Removes the widget at *index* from the group and deletes it.*
- void [end](#) ()
- Exactly the same as [current\(this->parent\(\)\)](#).*
- int **find** (const [FL_Widget](#) &o) const
- See int [FL_Group::find\(const FL_Widget *w\)](#) const.*
- int [find](#) (const [FL_Widget](#) *) const
- Searches the child array for the widget and returns the index.*
- [FL_Group](#) (int, int, int, int, const char *=0)
- Creates a new [FL_Group](#) widget using the given position, size, and label string.*

- void **focus** (FL_Widget *W)
- void **forms_end** ()
This is for forms compatibility only.
- void **init_sizes** ()
Resets the internal array of widget sizes and positions.
- void **insert** (FL_Widget &, int i)
The widget is removed from its current group (if any) and then inserted into this group.
- void **insert** (FL_Widget &o, FL_Widget *before)
This does insert(w, find(before)).
- void **remove** (FL_Widget &)
Removes a widget from the group but does not delete it.
- void **remove** (FL_Widget *o)
Removes the widget o from the group.
- void **remove** (int index)
Removes the widget at index from the group but does not delete it.
- FL_Widget * **resizable** () const
Returns the group's resizable widget.
- void **resizable** (FL_Widget &o)
Sets the group's resizable widget.
- void **resizable** (FL_Widget *o)
The resizable widget defines both the resizing box and the resizing behavior of the group and its children.
- virtual ~FL_Group ()
The destructor also deletes all the children.

Public Member Functions inherited from FL_Widget

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
Activates the widget.
- unsigned int **active** () const
Returns whether the widget is active.
- int **active_r** () const
Returns whether the widget and all of its parents are active.
- FL_Align **align** () const
Gets the label alignment.
- void **align** (FL_Align alignment)
Sets the label alignment.
- long **argument** () const
Gets the current user data (long) argument that is passed to the callback function.
- void **argument** (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class FL_Gl_Window * **as_gl_window** ()
Returns an FL_Gl_Window pointer if this widget is an FL_Gl_Window.
- virtual class FL_Gl_Window const * **as_gl_window** () const
- virtual FL_Window * **as_window** ()
Returns an FL_Window pointer if this widget is an FL_Window.
- virtual FL_Window const * **as_window** () const
- void **bind_deimage** (FL_Image *img)
Sets the image to use as part of the widget label when in the inactive state.
- void **bind_deimage** (int f)

- Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.*

 - void `bind_image` (`FI_Image` *img)

Sets the image to use as part of the widget label when in the active state.
- void `bind_image` (int f)

Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- `FI_Boxtype` `box` () const

Gets the box type of the widget.
- void `box` (`FI_Boxtype` new_box)

Sets the box type for the widget.
- `FI_Callback_p` `callback` () const

Gets the current callback function for the widget.
- void `callback` (`FI_Callback` *cb)

Sets the current callback function for the widget.
- void `callback` (`FI_Callback` *cb, `FI_Callback_User_Data` *p, bool auto_free)

Sets the current callback function and managed user data for the widget.
- void `callback` (`FI_Callback` *cb, void *p)

Sets the current callback function and data for the widget.
- void `callback` (`FI_Callback0` *cb)

Sets the current callback function for the widget.
- void `callback` (`FI_Callback1` *cb, long p=0)

Sets the current callback function for the widget.
- unsigned int `changed` () const

Checks if the widget value changed since the last callback.
- void `clear_active` ()

Marks the widget as inactive without sending events or changing focus.
- void `clear_changed` ()

Marks the value of the widget as unchanged.
- void `clear_damage` (uchar c=0)

Clears or sets the damage flags.
- void `clear_output` ()

Sets a widget to accept input.
- void `clear_visible` ()

Hides the widget.
- void `clear_visible_focus` ()

Disables keyboard focus navigation with this widget.
- `FI_Color` `color` () const

Gets the background color of the widget.
- void `color` (`FI_Color` bg)

Sets the background color of the widget.
- void `color` (`FI_Color` bg, `FI_Color` sel)

Sets the background and selection color of the widget.
- `FI_Color` `color2` () const

For back compatibility only.
- void `color2` (unsigned a)

For back compatibility only.
- int `contains` (const `FI_Widget` *w) const

Checks if w is a child of this widget.
- void `copy_label` (const char *new_label)

Sets the current label.
- void `copy_tooltip` (const char *text)

Sets the current tooltip text.

- `uchar damage () const`
Returns non-zero if `draw()` needs to be called.
- `void damage (uchar c)`
Sets the damage bits for the widget.
- `void damage (uchar c, int x, int y, int w, int h)`
Sets the damage bits for an area inside the widget.
- `int damage_resize (int, int, int, int)`
Internal use only.
- `void deactivate ()`
Deactivates the widget.
- `FL_Image * deimage ()`
Gets the image that is used as part of the widget label when in the inactive state.
- `const FL_Image * deimage () const`
Gets the image that is used as part of the widget label when in the inactive state.
- `void deimage (FL_Image &img)`
Sets the image to use as part of the widget label when in the inactive state.
- `void deimage (FL_Image *img)`
Sets the image to use as part of the widget label when in the inactive state.
- `int deimage_bound () const`
Returns whether the inactive image is managed by the widget.
- `void do_callback (FL_Callback_Reason reason=FL_REASON_UNKNOWN)`
Calls the widget callback function with default arguments.
- `void do_callback (FL_Widget *widget, long arg, FL_Callback_Reason reason=FL_REASON_UNKNOWN)`
Calls the widget callback function with arbitrary arguments.
- `void do_callback (FL_Widget *widget, void *arg=0, FL_Callback_Reason reason=FL_REASON_UNKNOWN)`
Calls the widget callback function with arbitrary arguments.
- `void draw_label (int, int, int, int, FL_Align) const`
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- `int h () const`
Gets the widget height.
- `virtual void hide ()`
Makes a widget invisible.
- `int horizontal_label_margin ()`
Get the spacing between the label and the horizontal edge of the widget.
- `void horizontal_label_margin (int px)`
Set the spacing between the label and the horizontal edge of the widget.
- `FL_Image * image ()`
Gets the image that is used as part of the widget label when in the active state.
- `const FL_Image * image () const`
Gets the image that is used as part of the widget label when in the active state.
- `void image (FL_Image &img)`
Sets the image to use as part of the widget label when in the active state.
- `void image (FL_Image *img)`
Sets the image to use as part of the widget label when in the active state.
- `int image_bound () const`
Returns whether the image is managed by the widget.
- `int inside (const FL_Widget *wgt) const`
Checks if this widget is a child of `wgt`.
- `int is_label_copied () const`
Returns whether the current label was assigned with `copy_label()`.
- `const char * label () const`

- Gets the current label text.*

 - void [label](#) (const char *text)
- Sets the current label pointer.*

 - void [label](#) (FI_Labeltype a, const char *b)
- Shortcut to set the label text and type in one call.*

 - int [label_image_spacing](#) ()
- Return the gap size between the label and the image.*

 - void [label_image_spacing](#) (int gap)
- Set the gap between the label and the image in pixels.*

 - [FI_Color](#) [labelcolor](#) () const
- Gets the label color.*

 - void [labelcolor](#) ([FI_Color](#) c)
- Sets the label color.*

 - [FI_Font](#) [labelfont](#) () const
- Gets the font to use.*

 - void [labelfont](#) ([FI_Font](#) f)
- Sets the font to use.*

 - [FI_Fonsize](#) [labelsize](#) () const
- Gets the font size in pixels.*

 - void [labelsize](#) ([FI_Fonsize](#) pix)
- Sets the font size in pixels.*

 - [FI_Labeltype](#) [labeltype](#) () const
- Gets the label type.*

 - void [labeltype](#) ([FI_Labeltype](#) a)
- Sets the label type.*

 - void [measure_label](#) (int &ww, int &hh) const
- Sets width ww and height hh accordingly with the label size.*

 - bool [needs_keyboard](#) () const
- Returns whether this widget needs a keyboard.*

 - void [needs_keyboard](#) (bool needs)
- Sets whether this widget needs a keyboard.*

 - unsigned int [output](#) () const
- Returns if a widget is used for output only.*

 - [FI_Group](#) * [parent](#) () const
- Returns a pointer to the parent widget.*

 - void [parent](#) ([FI_Group](#) *p)
- Internal use only - "for hacks only".*

 - void [position](#) (int X, int Y)
- Repositions the window or widget.*

 - void [redraw](#) ()
- Schedules the drawing of the widget.*

 - void [redraw_label](#) ()
- Schedules the drawing of the label.*

 - [FI_Color](#) [selection_color](#) () const
- Gets the selection color.*

 - void [selection_color](#) ([FI_Color](#) a)
- Sets the selection color.*

 - void [set_active](#) ()
- Marks the widget as active without sending events or changing focus.*

 - void [set_changed](#) ()
- Marks the value of the widget as changed.*

- void [set_output](#) ()
Sets a widget to output only.
- void [set_visible](#) ()
Makes the widget visible.
- void [set_visible_focus](#) ()
Enables keyboard focus navigation with this widget.
- int [shortcut_label](#) () const
Returns whether the widget's label uses '&' to indicate shortcuts.
- void [shortcut_label](#) (int value)
Sets whether the widget's label uses '&' to indicate shortcuts.
- virtual void [show](#) ()
Makes a widget visible.
- void [size](#) (int W, int H)
Changes the size of the widget.
- int [take_focus](#) ()
Gives the widget the keyboard focus.
- unsigned int [takeevents](#) () const
Returns if the widget is able to take events.
- int [test_shortcut](#) ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * [tooltip](#) () const
Gets the current tooltip text.
- void [tooltip](#) (const char *text)
Sets the current tooltip text.
- [Fl_Window](#) * [top_window](#) () const
Returns a pointer to the top-level window for the widget.
- [Fl_Window](#) * [top_window_offset](#) (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- [uchar](#) [type](#) () const
Gets the widget type.
- void [type](#) ([uchar](#) t)
Sets the widget type.
- int [use_accents_menu](#) ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * [user_data](#) () const
Gets the user data for this widget.
- void [user_data](#) ([Fl_Callback_User_Data](#) *v, bool auto_free)
Sets the user data for this widget.
- void [user_data](#) (void *v)
Sets the user data for this widget.
- int [vertical_label_margin](#) ()
Get the spacing between the label and the vertical edge of the widget.
- void [vertical_label_margin](#) (int px)
Set the spacing between the label and the vertical edge of the widget.
- unsigned int [visible](#) () const
Returns whether a widget is visible.
- unsigned int [visible_focus](#) () const
Checks whether this widget has a visible focus.
- void [visible_focus](#) (int v)
Modifies keyboard focus navigation.
- int [visible_r](#) () const

- Returns whether a widget and all its parents are visible.*
- int **w** () const
Gets the widget width.
- **Fl_When** when () const
Returns the conditions under which the callback is called.
- void **when** (uchar i)
Sets the flags used to decide when a callback is called.
- **Fl_Window** * **window** () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int **x** () const
Gets the widget position in its window.
- int **y** () const
Gets the widget position in its window.
- virtual ~**Fl_Widget** ()
Destroys the widget.

Protected Types

- enum **ResizeFlag** {
RESIZE_NONE = 0 , **RESIZE_COL_LEFT** = 1 , **RESIZE_COL_RIGHT** = 2 , **RESIZE_ROW_ABOVE** = 3 ,
RESIZE_ROW_BELOW = 4 }

Protected Types inherited from **Fl_Widget**

- enum {
INACTIVE = 1<<0 , **INVISIBLE** = 1<<1 , **OUTPUT** = 1<<2 , **NOBORDER** = 1<<3 ,
FORCE_POSITION = 1<<4 , **NON_MODAL** = 1<<5 , **SHORTCUT_LABEL** = 1<<6 , **CHANGED** = 1<<7
, **OVERRIDE** = 1<<8 , **VISIBLE_FOCUS** = 1<<9 , **COPIED_LABEL** = 1<<10 , **CLIP_CHILDREN** = 1<<11
, **MENU_WINDOW** = 1<<12 , **TOOLTIP_WINDOW** = 1<<13 , **MODAL** = 1<<14 , **NO_OVERLAY** = 1<<15

USERFLAG1 = 1<<31 }
- flags possible values enumeration.*

Protected Member Functions

- void **change_cursor** (**Fl_Cursor** newcursor)
Change mouse cursor to different type.
- long **col_scroll_position** (int col)
Returns the scroll position (in pixels) of the specified column 'col'.
- **TableContext** **cursor2rowcol** (int &R, int &C, **ResizeFlag** &resizeflag)
Find row/col for the recent mouse event.
- void **damage_zone** (int r1, int c1, int r2, int c2, int r3=0, int c3=0)
Sets the damage zone to the specified row/col values.
- void **draw** () **FL_OVERRIDE**
*Draws the entire **Fl_Table**.*
- virtual void **draw_cell** (**TableContext** context, int R=0, int C=0, int X=0, int Y=0, int W=0, int H=0)
Subclass should override this method to handle drawing the cells.

- int **find_cell** (TableContext context, int R, int C, int &X, int &Y, int &W, int &H)
Find a cell's X/Y/W/H region for the specified cell in row 'R', column 'C'.
- void **get_bounds** (TableContext context, int &X, int &Y, int &W, int &H)
Returns the (X,Y,W,H) bounding region for the specified 'context'.
- int **handle** (int e) FL_OVERRIDE
Handle FLTK events.
- int **is_fltk_container** ()
Does the table contain any child fltk widgets?
- void **recalc_dimensions** ()
Recalculate the dimensions of the table, and affect any children.
- void **redraw_range** (int topRow, int botRow, int leftCol, int rightCol)
Define region of cells to be redrawn by specified range of rows/cols, and then sets damage(DAMAGE_CHILD).
- int **row_col_clamp** (TableContext context, int &R, int &C)
Return specified row/col values R and C to within the table's current row/col limits.
- long **row_scroll_position** (int row)
Returns the scroll position (in pixels) of the specified 'row'.
- void **table_resized** ()
Call this if table was resized, to recalculate internal data.
- void **table_scrolled** ()
Recalculate internals after a scroll.

Protected Member Functions inherited from Fl_Group

- Fl_Rect * **bounds** ()
Returns the internal array of widget sizes and positions.
- void **draw_child** (Fl_Widget &widget) const
Forces a child to redraw.
- void **draw_children** ()
Draws all children of the group.
- void **draw_outside_label** (const Fl_Widget &widget) const
Parents normally call this to draw outside labels of child widgets.
- virtual int **on_insert** (Fl_Widget *, int)
Allow derived groups to act when a widget is added as a child.
- virtual int **on_move** (int, int)
Allow derived groups to act when a widget is moved within the group.
- virtual void **on_remove** (int)
Allow derived groups to act when a child widget is removed from the group.
- int * **sizes** ()
Returns the internal array of widget sizes and positions.
- void **update_child** (Fl_Widget &widget) const
Draws a child only if it needs it.

Protected Member Functions inherited from Fl_Widget

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** (Fl_Boxtype t, Fl_Color c) const

- Draws a box of type t, of color c at the widget's position and size.*
- void **draw_box** (FI_Boxtype t, int x, int y, int w, int h, FI_Color c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const
Draws a focus rectangle around the widget.
- void **draw_focus** (FI_Boxtype t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void **draw_focus** (FI_Boxtype t, int x, int y, int w, int h, FI_Color bg) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- FI_Widget (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

Static Protected Member Functions

- static void **scroll_cb** (FI_Widget *, void *)
Callback for when someone moves a scrollbar.

Protected Attributes

- int **botrow**
bottom row# of currently visible table on screen
- int **current_col**
selection cursor's current column (-1 if none)
- int **current_row**
selection cursor's current row (-1 if none)
- FI_Scrollbar * **hscrollbar**
child horizontal scrollbar widget
- int **leftcol**
left column# of currently visible table on screen
- int **leftcol_scrollpos**
precomputed scroll position for left column
- int **rightcol**
right column# of currently visible table on screen
- int **select_col**
extended selection column (-1 if none)
- int **select_row**

- extended selection row (-1 if none)*
- **FI_Scroll * table**
child FI_Scroll widget container for child fltk widgets (if any)
- int **table_h**
table's virtual height (in pixels)
- int **table_w**
table's virtual width (in pixels)
- int **tih**
Data table's inner h dimension, inside bounding box. See [Table Dimension Diagram](#).
- int **tiw**
Data table's inner w dimension, inside bounding box. See [Table Dimension Diagram](#).
- int **tix**
Data table's inner x dimension, inside bounding box. See [Table Dimension Diagram](#).
- int **tiy**
Data table's inner y dimension, inside bounding box. See [Table Dimension Diagram](#).
- int **toh**
Data table's outer h dimension, outside bounding box. See [Table Dimension Diagram](#).
- int **toprow**
top row# of currently visible table on screen
- int **toprow_scrollpos**
precomputed scroll position for top row
- int **tow**
Data table's outer w dimension, outside bounding box. See [Table Dimension Diagram](#).
- int **tox**
Data table's outer x dimension, outside bounding box. See [Table Dimension Diagram](#).
- int **toy**
Data table's outer y dimension, outside bounding box. See [Table Dimension Diagram](#).
- **FI_Scrollbar * vscrollbar**
child vertical scrollbar widget
- int **wih**
Table widget's inner h dimension, inside bounding box. See [Table Dimension Diagram](#).
- int **wiw**
Table widget's inner w dimension, inside bounding box. See [Table Dimension Diagram](#).
- int **wix**
Table widget's inner x dimension, inside bounding box. See [Table Dimension Diagram](#).
- int **wiy**
Table widget's inner y dimension, inside bounding box. See [Table Dimension Diagram](#).

Additional Inherited Members

Static Public Member Functions inherited from FI_Group

- static **FI_Group * current** ()
Returns the currently active group.
- static void **current** (FI_Group *g)
Sets the current group.

Static Public Member Functions inherited from FI_Widget

- static void **default_callback** (FI_Widget *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int **label_shortcut** (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int **test_shortcut** (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

11.139.1 Detailed Description

A table of widgets or other content.

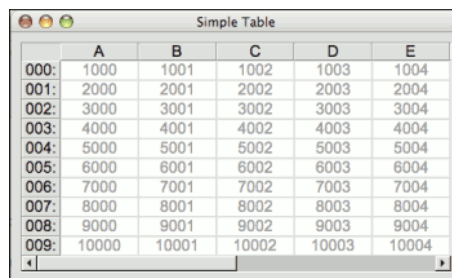

This is the base class for table widgets.

To be useful it must be subclassed and several virtual functions defined. Normally applications use widgets derived from this widget, and do not use this widget directly; this widget is usually too low level to be used directly by applications.

This widget does *not* handle the data in the table. The `draw_cell()` method must be overridden by a subclass to manage drawing the contents of the cells.

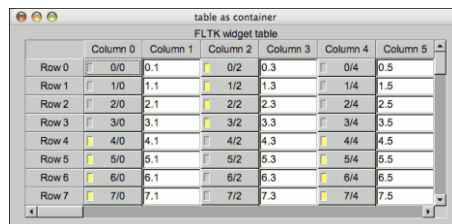

This widget can be used in several ways:

- As a custom widget; see `examples/table-simple.cxx` and `test/table.cxx`. Very optimal for even extremely large tables.
- As a table made up of a single FLTK widget instanced all over the table, simulating a numeric spreadsheet. See `examples/table-spreadsheet.cxx` and `examples/table-spreadsheet-with-keyboard-nav.cxx`. Optimal for large tables.
- As a regular container of FLTK widgets, one widget per cell. See `examples/table-as-container.cxx`. *Not* recommended for large tables.

	A	B	C	D	E
000:	1000	1001	1002	1003	1004
001:	2000	2001	2002	2003	2004
002:	3000	3001	3002	3003	3004
003:	4000	4001	4002	4003	4004
004:	5000	5001	5002	5003	5004
005:	6000	6001	6002	6003	6004
006:	7000	7001	7002	7003	7004
007:	8000	8001	8002	8003	8004
008:	9000	9001	9002	9003	9004
009:	10000	10001	10002	10003	10004

Figure 11.47 table-simple example

	Column 0	Column 1	Column 2	Column 3	Column 4	Column 5
Row 0	0/0	0.1	0/2	0.3	0/4	0.5
Row 1	1/0	1.1	1/2	1.3	1/4	1.5
Row 2	2/0	2.1	2/2	2.3	2/4	2.5
Row 3	3/0	3.1	3/2	3.3	3/4	3.5
Row 4	4/0	4.1	4/2	4.3	4/4	4.5
Row 5	5/0	5.1	5/2	5.3	5/4	5.5
Row 6	6/0	6.1	6/2	6.3	6/4	6.5
Row 7	7/0	7.1	7/2	7.3	7/4	7.5

Figure 11.48 table-as-container example

When acting as part of a custom widget, events on the cells and/or headings generate callbacks when they are clicked by the user. You control when events are generated based on the setting for `Fl_Table::when()`.

When acting as a container for FLTK widgets, the FLTK widgets maintain themselves. Although the `draw_cell()` method must be overridden, its contents can be very simple. See the `draw_cell()` code in `examples/table-simple.cxx`.

The following variables are available to classes deriving from [Fl_Table](#):

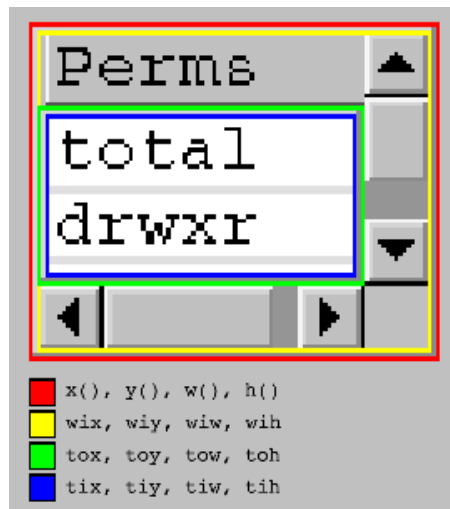

Figure 11.49 Fl_Table Dimensions

<code>x()/y()/w()/h()</code>	Fl_Table widget's outer dimension. The outer edge of the border of the Fl_Table . (Red in the diagram above)
<code>wix/wiy/wiw/wih</code>	Fl_Table widget's inner dimension. The inner edge of the border of the Fl_Table . eg. if the Fl_Table 's <code>box()</code> is <code>FL_NO_BOX</code> , these values are the same as <code>x()/y()/w()/h()</code> . (Yellow in the diagram above)
<code>tox/toy/tow/toh</code>	The table's outer dimension. The outer edge of the border around the cells, but inside the row/col headings and scrollbars. (Green in the diagram above)
<code>tix/tiy/tiw/tih</code>	The table's inner dimension. The inner edge of the border around the cells, but inside the row/col headings and scrollbars. AKA the table's clip region. eg. if the <code>table_box()</code> is <code>FL_↔ NO_BOX</code> , these values are the same as <code>tox/toy/tow/toh</code> . (Blue in the diagram above)

CORE DEVELOPERS

- Greg Ercolano : 12/16/2002 - initial implementation 12/16/02. [Fl_Table](#), [Fl_Table_Row](#), docs.
- Jean-Marc Lienher : 02/22/2004 - added keyboard nav + mouse selection, and ported [Fl_Table](#) into fltk-utf8-1.1.4

OTHER CONTRIBUTORS

- Inspired by the Feb 2000 version of FLVW's `Flvw_Table` widget. Mucho thanks to those folks.
- Mister Satan : 04/07/2003 - MinGW porting mods, and `singleinput.cxx`; a cool [Fl_Input](#) oriented spreadsheet example
- Marek Paliwoda : 01/08/2003 - Porting mods for Borland
- Ori Berger : 03/16/2006 - Optimizations for >500k rows/cols

LICENSE

Greg kindly gave his permission to integrate [Fl_Table](#) and [Fl_Table_Row](#) into FLTK, allowing FLTK license to apply while his widgets are part of the library. [updated by Greg, 04/26/17]

11.139.2 Member Enumeration Documentation

11.139.2.1 TableContext

enum `Fl_Table::TableContext`

The context bit flags for `Fl_Table` related callbacks.

Should be used in `draw_cell()` to determine what's being drawn, or in a `callback()` to determine where a recent event occurred.

Enumerator

CONTEXT_NONE	no known context
CONTEXT_STARTPAGE	before the table is redrawn
CONTEXT_ENDPAGE	after the table is redrawn
CONTEXT_ROW_HEADER	drawing or event occurred in the row header
CONTEXT_COL_HEADER	drawing or event occurred in the col header
CONTEXT_CELL	drawing or event occurred in a cell
CONTEXT_TABLE	drawing or event occurred in a dead zone of table
CONTEXT_RC_RESIZE	column or row is being resized

11.139.3 Constructor & Destructor Documentation

11.139.3.1 Fl_Table()

```
Fl_Table::Fl_Table (
    int X,
    int Y,
    int W,
    int H,
    const char * l = 0)
```

The constructor for `Fl_Table`.

This creates an empty table with no rows or columns, with headers and row/column resize behavior disabled.

11.139.3.2 ~Fl_Table()

```
Fl_Table::~~Fl_Table ()
```

The destructor for `Fl_Table`.

Destroys the table and its associated widgets.

11.139.4 Member Function Documentation

11.139.4.1 array()

```
Fl_Widget *const * Fl_Table::array () [inline]
```

Returns a pointer to the array of children.

This pointer is only valid until the next time a child is added or removed.

11.139.4.2 callback()

```
void Fl_Table::callback (
    Fl_Widget * ,
    void * )
```

Callbacks will be called depending on the setting of `Fl_Widget::when()`.

Callback functions should use the following functions to determine the context/row/column:

- `Fl_Table::callback_row()` returns current row
- `Fl_Table::callback_col()` returns current column

- `Fl_Table::callback_context()` returns current table context

`callback_row()` and `callback_col()` will be set to the row and column number the event occurred on. If someone clicked on a row header, `col` will be 0. If someone clicked on a column header, `row` will be 0.

`callback_context()` will return one of the following:

<code>Fl_Table::CONTEXT_ROW_HEADER</code>	Someone clicked on a row header. Excludes resizing.
<code>Fl_Table::CONTEXT_COL_HEADER</code>	Someone clicked on a column header. Excludes resizing.
<code>Fl_Table::CONTEXT_CELL</code>	Someone clicked on a cell. To receive callbacks for FL_RELEASE events, you must set when(FL_WHEN_RELEASE).
<code>Fl_Table::CONTEXT_RC_RESIZE</code>	Someone is resizing rows/columns either interactively, or via the <code>col_width()</code> or <code>row_height()</code> API. Use <code>is_interactive_resize()</code> to determine interactive resizing. If resizing a column, R=0 and C=column being resized. If resizing a row, C=0 and R=row being resized. NOTE: To receive resize events, you must set when(FL_WHEN↵_CHANGED).

```
class MyTable : public Fl_Table {
    [...]
private:
    // Handle events that happen on the table
    void event_callback2() {
        int R = callback_row(),           // row where event occurred
        C = callback_col();               // column where event occurred
        TableContext context = callback_context(); // which part of table
        fprintf(stderr, "callback: Row=%d Col=%d Context=%d Event=%d\n",
            R, C, (int)context, (int)Fl::event());
    }

    // Actual static callback
    static void event_callback(Fl_Widget*, void* data) {
        MyTable *o = (MyTable*)data;
        o->event_callback2();
    }

public:
    // Constructor
    MyTable() {
        [...]
        table.callback(&event_callback, (void*)this); // setup callback
        table.when(FL_WHEN_CHANGED|FL_WHEN_RELEASE); // when to call it
    }
};
```

11.139.4.3 callback_col()

```
int Fl_Table::callback_col () [inline]
```

Returns the current column the event occurred on.

This function should only be used from within the user's callback function.

11.139.4.4 callback_context()

```
TableContext Fl_Table::callback_context () [inline]
```

Returns the current 'table context'.

This function should only be used from within the user's callback function.

11.139.4.5 callback_row()

```
int Fl_Table::callback_row () [inline]
```

Returns the current row the event occurred on.

This function should only be used from within the user's callback function.

11.139.4.6 child()

```
Fl_Widget * Fl_Table::child (
    int n) const [inline]
```

Returns the child widget by an index.

When using the [Fl_Table](#) as a container for FLTK widgets, this method returns the widget pointer from the internal array of widgets in the container.

Typically used in loops, eg:

```
for ( int i=0; i<children(); i++ ) {
    Fl_Widget *w = child(i);
    [...]
}
```

11.139.4.7 children()

```
int Fl_Table::children () const [inline]
```

Returns the number of children in the table.

When using the [Fl_Table](#) as a container for FLTK widgets, this method returns how many child widgets the table has.

See also

[child\(int\)](#)

11.139.4.8 clear()

```
virtual void Fl_Table::clear () [inline], [virtual]
```

Clears the table to zero rows ([rows\(0\)](#)), zero columns ([cols\(0\)](#)), and clears any widgets ([table->clear\(\)](#)) that were added with [begin\(\)/end\(\)](#) or [add\(\)/insert\(\)/etc.](#)

See also

[rows\(int\)](#), [cols\(int\)](#)

Reimplemented in [Fl_Table_Row](#).

11.139.4.9 col_header()

```
void Fl_Table::col_header (
    int flag) [inline]
```

Enable or disable column headers.

If changed, the table is redrawn.

11.139.4.10 col_resize()

```
void Fl_Table::col_resize (
    int flag) [inline]
```

Allows/disallows column resizing by the user.

1=allow interactive resizing, 0=disallow interactive resizing. Since interactive resizing is done via the column headers, [col_header\(\)](#) must also be enabled to allow resizing.

11.139.4.11 col_resize_min()

```
void Fl_Table::col_resize_min (
    int val) [inline]
```

Sets the current column minimum resize value.

This is used to prevent the user from interactively resizing any column to be smaller than 'pixels'. Must be a value ≥ 1 .

11.139.4.12 col_width()

```
void Fl_Table::col_width (
    int col,
    int width)
```

Sets the width of the specified column in pixels, and the table is redrawn.

[callback\(\)](#) will be invoked with `CONTEXT_RC_RESIZE` if the column's width was actually changed, and [when\(\)](#) is `FL_WHEN_CHANGED`.

11.139.4.13 col_width_all()

```
void Fl_Table::col_width_all (
    int width) [inline]
```

Convenience method to set the width of all columns to the same value, in pixels.
The screen is redrawn.

11.139.4.14 cursor2rowcol()

```
Fl_Table::TableContext Fl_Table::cursor2rowcol (
    int & R,
    int & C,
    ResizeFlag & resizeflag) [protected]
```

Find row/col for the recent mouse event.

Returns the context, and the row/column values in R/C. Also returns 'resizeflag' if mouse is hovered over a resize boundary.

11.139.4.15 damage_zone()

```
void Fl_Table::damage_zone (
    int r1,
    int c1,
    int r2,
    int c2,
    int r3 = 0,
    int c3 = 0) [protected]
```

Sets the damage zone to the specified row/col values.

Calls [redraw_range\(\)](#).

11.139.4.16 do_callback()

```
void Fl_Table::do_callback (
    TableContext context,
    int row,
    int col) [inline]
```

Calls the widget callback.

Saves the specified 'context', 'row', and 'col' values, so that the user's callback can then access them with the member functions [callback_context\(\)](#), [callback_row\(\)](#) and [callback_col\(\)](#).

11.139.4.17 draw()

```
void Fl_Table::draw (
    void ) [protected], [virtual]
```

Draws the entire [Fl_Table](#).

Lets fltk widgets draw themselves first, followed by the cells via calls to [draw_cell\(\)](#).

Reimplemented from [Fl_Group](#).

11.139.4.18 draw_cell()

```
virtual void Fl_Table::draw_cell (
    TableContext context,
    int R = 0,
    int C = 0,
    int X = 0,
    int Y = 0,
    int W = 0,
    int H = 0) [inline], [protected], [virtual]
```

Subclass should override this method to handle drawing the cells.

This method will be called whenever the table is redrawn, once per cell.

Only cells that are completely (or partially) visible will be told to draw.
context will be one of the following:

<code>Fl_Table::CONTEXT_STARTPAGE</code>	When table, or parts of the table, are about to be redrawn. Use to initialize static data, such as font selections. R/C will be zero, X/Y/W/H will be the dimensions of the table's entire data area. (Useful for locking a database before accessing; see also visible_cells())
<code>Fl_Table::CONTEXT_ENDPAGE</code>	When table has completed being redrawn. R/C will be zero, X/Y/W/H dimensions of table's data area. (Useful for unlocking a database after accessing)
<code>Fl_Table::CONTEXT_ROW_HEADER</code>	Whenever a row header cell needs to be drawn. R will be the row number of the header being redrawn, C will be zero, X/Y/W/H will be the fltk drawing area of the row header in the window
<code>Fl_Table::CONTEXT_COL_HEADER</code>	Whenever a column header cell needs to be drawn. R will be zero, C will be the column number of the header being redrawn, X/Y/W/H will be the fltk drawing area of the column header in the window
<code>Fl_Table::CONTEXT_CELL</code>	Whenever a data cell in the table needs to be drawn. R/C will be the row/column of the cell to be drawn, X/Y/W/H will be the fltk drawing area of the cell in the window
<code>Fl_Table::CONTEXT_RC_RESIZE</code>	Whenever table or row/column is resized or scrolled, either interactively or via col_width() or row_height() . R/C/X/Y/W/H will all be zero. Useful for fltk containers that need to resize or move the child fltk widgets.

R and C will be set to the row and column number of the cell being drawn. In the case of row headers, C will be 0. In the case of column headers, R will be 0.

X/Y/W/H will be the position and dimensions of where the cell should be drawn.

In the case of custom widgets, a minimal [draw_cell\(\)](#) override might look like the following. With custom widgets it is up to the caller to handle drawing everything within the dimensions of the cell, including handling the selection color. Note all clipping must be handled as well; this allows drawing outside the dimensions of the cell if so desired for 'custom effects'.

```
// This is called whenever Fl_Table wants you to draw a cell
void MyTable::draw_cell(TableContext context, int R=0, int C=0, int X=0, int Y=0, int W=0, int H=0) {
    static char s[40];
    sprintf(s, "%d/%d", R, C);           // text for each cell
    switch ( context ) {
        case CONTEXT_STARTPAGE:          // Fl_Table telling us it's starting to draw page
            fl_font(FL_HELVETICA, 16);
            return;

        case CONTEXT_ROW_HEADER:          // Fl_Table telling us to draw row/col headers
        case CONTEXT_COL_HEADER:
            fl_push_clip(X, Y, W, H);
            {
                fl_draw_box(FL_THIN_UP_BOX, X, Y, W, H, color());
                fl_color(FL_BLACK);
                fl_draw(s, X, Y, W, H, FL_ALIGN_CENTER);
            }
            fl_pop_clip();
            return;

        case CONTEXT_CELL:                // Fl_Table telling us to draw cells
            fl_push_clip(X, Y, W, H);
            {
                // BG COLOR
                fl_color(is_selected(R, C) ? selection_color() : FL_WHITE);
                fl_rectf(X, Y, W, H);

                // TEXT
                fl_color(FL_BLACK);
```

```

        fl_draw(s, X, Y, W, H, FL_ALIGN_CENTER);

        // BORDER
        fl_color(FL_LIGHT2);
        fl_rect(X, Y, W, H);
    }
    fl_pop_clip();
    return;

default:
    return;
}
//NOTREACHED
}

```

11.139.4.19 find_cell()

```

int Fl_Table::find_cell (
    TableContext context,
    int R,
    int C,
    int & X,
    int & Y,
    int & W,
    int & H) [protected]

```

Find a cell's X/Y/W/H region for the specified cell in row 'R', column 'C'.

Returns

- 0 – on success, XYWH returns the region of the specified cell.
- -1 – if R or C are out of range, and X/Y/W/H will be set to zero.

11.139.4.20 get_selection()

```

void Fl_Table::get_selection (
    int & row_top,
    int & col_left,
    int & row_bot,
    int & col_right) const

```

Gets the region of cells selected (highlighted).

Parameters

in	<i>row_top</i>	Returns the top row of selection area
in	<i>col_left</i>	Returns the left column of selection area
in	<i>row_bot</i>	Returns the bottom row of selection area
in	<i>col_right</i>	Returns the right column of selection area

11.139.4.21 handle()

```

int Fl_Table::handle (
    int e) [protected], [virtual]

```

Handle FLTK events.

Reimplemented from [Fl_Group](#).

Reimplemented in [Fl_Table_Row](#).

11.139.4.22 init_sizes()

```

void Fl_Table::init_sizes () [inline]

```

Resets the internal array of widget sizes and positions.

See also

[Fl_Group::init_sizes\(\)](#)

11.139.4.23 insert()

```
void Fl_Table::insert (
    Fl_Widget & wgt,
    Fl_Widget * w2) [inline]
```

The specified widget is removed from its current group (if any) and inserted into [Fl_Table](#)'s group before widget 'w2'. This will append if 'w2' is not in [Fl_Table](#)'s group.

11.139.4.24 is_interactive_resize()

```
int Fl_Table::is_interactive_resize () [inline]
```

Returns 1 if someone is interactively resizing a row or column.
You can currently call this only from within your [callback\(\)](#).

11.139.4.25 is_selected()

```
int Fl_Table::is_selected (
    int r,
    int c)
```

See if the cell at row *r* and column *c* is selected.

Returns

1 if the cell is selected, 0 if not.

11.139.4.26 move_cursor()

```
int Fl_Table::move_cursor (
    int R,
    int C,
    int shiftselect)
```

Moves the selection cursor a relative number of rows/columns specified by R/C.

R/C can be positive or negative, depending on the direction to move. A value of 0 for R or C prevents cursor movement on that axis.

If shiftselect is set, the selection range is extended to the new cursor position. If clear, the cursor is simply moved, and any previous selection is cancelled.

Used mainly by keyboard events (e.g. [Fl_Right](#), [Fl_Home](#), [Fl_End](#)..) to let the user keyboard navigate the selection cursor around.

The scroll positions may be modified if the selection cursor traverses into cells off the screen's edge.

Internal variables `select_row/select_col` and `current_row/current_col` are modified, among others.

Examples:

```
R=1, C=0 -- moves the selection cursor one row downward.
R=5, C=0 -- moves the selection cursor 5 rows downward.
R=-5, C=0 -- moves the cursor 5 rows upward.
R=2, C=2 -- moves the cursor 2 rows down and 2 columns to the right.
```

11.139.4.27 recalc_dimensions()

```
void Fl_Table::recalc_dimensions () [protected]
```

Recalculate the dimensions of the table, and affect any children.
Internally, [Fl_Group::resize\(\)](#) and [init_sizes\(\)](#) are called.

11.139.4.28 redraw_range()

```
void Fl_Table::redraw_range (
    int topRow,
    int botRow,
```

```

    int leftCol,
    int rightCol) [inline], [protected]

```

Define region of cells to be redrawn by specified range of rows/cols, and then sets damage(DAMAGE_CHILD). Extends any previously defined range to redraw.

11.139.4.29 `resize()`

```

void Fl_Table::resize (
    int X,
    int Y,
    int W,
    int H) [virtual]

```

Handle resize events if user resizes parent window. This changes the size of [Fl_Table](#), causing it to redraw. Reimplemented from [Fl_Group](#).

11.139.4.30 `row_col_clamp()`

```

int Fl_Table::row_col_clamp (
    TableContext context,
    int & R,
    int & C) [protected]

```

Return specified row/col values R and C to within the table's current row/col limits.

Returns

0 if no changes were made, or 1 if they were.

11.139.4.31 `row_header()`

```

void Fl_Table::row_header (
    int flag) [inline]

```

Enables/disables showing the row headers. 1=enabled, 0=disabled. If changed, the table is redrawn.

11.139.4.32 `row_height()`

```

void Fl_Table::row_height (
    int row,
    int height)

```

Sets the height of the specified row in pixels, and the table is redrawn. [callback\(\)](#) will be invoked with CONTEXT_RC_RESIZE if the row's height was actually changed, and [when\(\)](#) is FL_WHEN_CHANGED.

11.139.4.33 `row_height_all()`

```

void Fl_Table::row_height_all (
    int height) [inline]

```

Convenience method to set the height of all rows to the same value, in pixels. The screen is redrawn.

11.139.4.34 `row_resize()`

```

void Fl_Table::row_resize (
    int flag) [inline]

```

Allows/disallows row resizing by the user. 1=allow interactive resizing, 0=disallow interactive resizing. Since interactive resizing is done via the row headers, [row_header\(\)](#) must also be enabled to allow resizing.

11.139.4.35 row_resize_min()

```
void Fl_Table::row_resize_min (
    int val) [inline]
```

Sets the current row minimum resize value.

This is used to prevent the user from interactively resizing any row to be smaller than 'pixels'. Must be a value ≥ 1 .

11.139.4.36 rows()

```
void Fl_Table::rows (
    int val) [virtual]
```

Sets the number of rows in the table, and the table is redrawn.

Reimplemented in [Fl_Table_Row](#).

11.139.4.37 scrollbar_size() [1/2]

```
int Fl_Table::scrollbar_size () const [inline]
```

Gets the current size of the scrollbars' troughs, in pixels.

If this value is zero (default), this widget will use the [Fl::scrollbar_size\(\)](#) value as the scrollbar's width.

Returns

Scrollbar size in pixels, or 0 if the global [Fl::scrollbar_size\(\)](#) is being used.

See also

[Fl::scrollbar_size\(int\)](#)

11.139.4.38 scrollbar_size() [2/2]

```
void Fl_Table::scrollbar_size (
    int newSize) [inline]
```

Sets the pixel size of the scrollbars' troughs to `newSize`, in pixels.

Normally you should not need this method, and should use [Fl::scrollbar_size\(int\)](#) instead to manage the size of ALL your widgets' scrollbars. This ensures your application has a consistent UI, is the default behavior, and is normally what you want.

Only use THIS method if you really need to override the global scrollbar size. The need for this should be rare.

Setting `newSize` to the special value of 0 causes the widget to track the global [Fl::scrollbar_size\(\)](#), which is the default.

Parameters

in	<i>newSize</i>	Sets the scrollbar size in pixels. If 0 (default), scrollbar size tracks the global Fl::scrollbar_size()
----	----------------	---

See also

[Fl::scrollbar_size\(\)](#)

11.139.4.39 set_selection()

```
void Fl_Table::set_selection (
    int row_top,
    int col_left,
    int row_bot,
    int col_right)
```

Sets the region of cells to be selected (highlighted).

So for instance, `set_selection(0,0,0,0)` selects the top/left cell in the table. And `set_selection(0,0,1,1)` selects the four cells in rows 0 and 1, column 0 and 1.

To deselect all cells, use `set_selection(-1,-1,-1,-1);`

Parameters

in	<i>row_top</i>	Top row of selection area
in	<i>col_left</i>	Left column of selection area
in	<i>row_bot</i>	Bottom row of selection area
in	<i>col_right</i>	Right column of selection area

11.139.4.40 tab_cell_nav() [1/2]

```
int Fl_Table::tab_cell_nav () const [inline]
```

Get state of table's 'Tab' key cell navigation flag.

Returns

1 if Tab configured to navigate cells in table
0 to navigate widget focus (default)

See also

[tab_cell_nav\(int\)](#)

11.139.4.41 tab_cell_nav() [2/2]

```
void Fl_Table::tab_cell_nav (
    int val) [inline]
```

Flag to control if Tab navigates table cells or not.

If on, Tab key navigates table cells. If off, Tab key navigates fltk widget focus. (default)

As of fltk 1.3, the default behavior of the Tab key is to navigate focus off of the current widget, and on to the next one. But in some applications, it's useful for Tab to be used to navigate cells in the [Fl_Table](#).

Parameters

in	<i>val</i>	If <i>val</i> is 1, Tab key navigates cells in table, not fltk widgets. If <i>val</i> is 0, Tab key will advance focus to the next fltk widget (default), and does not navigate cells in table.
----	------------	--

11.139.4.42 table_box()

```
void Fl_Table::table_box (
    Fl_Boxtype val) [inline]
```

Sets the kind of box drawn around the data table, the default being FL_NO_BOX.

Changing this value will cause the table to redraw.

11.139.4.43 table_resized()

```
void Fl_Table::table_resized () [protected]
```

Call this if table was resized, to recalculate internal data.

Calls [recall_dimensions\(\)](#), and recalculates scrollbar sizes.

11.139.4.44 table_scrolled()

```
void Fl_Table::table_scrolled () [protected]
```

Recalculate internals after a scroll.

Call this if table has been scrolled or resized. Does not handle [redraw\(\)](#). TODO: Assumes [ti\[xywh\]](#) has already been recalculated.

11.139.4.45 top_row() [1/2]

```
int Fl_Table::top_row () [inline]
```

Returns the current top row shown in the table.

This row may be partially obscured.

11.139.4.46 top_row() [2/2]

```
void Fl_Table::top_row (
    int row) [inline]
```

Sets which row should be at the top of the table, scrolling as necessary, and the table is redrawn.

If the table cannot be scrolled that far, it is scrolled as far as possible.

11.139.4.47 visible_cells()

```
void Fl_Table::visible_cells (
    int & r1,
    int & r2,
    int & c1,
    int & c2) [inline]
```

Returns the range of row and column numbers for all visible and partially visible cells in the table.

These values can be used e.g. by your [draw_cell\(\)](#) routine during CONTEXT_STARTPAGE to figure out what cells are about to be redrawn for the purposes of locking the data from a database before it's drawn.

```

      leftcol      rightcol
      :           :
toprow .. :-----:
          | V I S I B L E |
          |   T A B L E   |
          |-----|
botrow .. :-----:
```

e.g. in a table where the visible rows are 5-20, and the visible columns are 100-120, then those variables would be:

- toprow = 5
- botrow = 20
- leftcol = 100
- rightcol = 120

11.139.4.48 when()

```
void Fl_Table::when (
    Fl_When flags)
```

The [Fl_Widget::when\(\)](#) function is used to set a group of flags, determining when the widget callback is called:

FL_WHEN_CHANGED	callback() will be called when rows or columns are resized (interactively or via col_width() or row_height()), passing CONTEXT_RC_RESIZE via callback_context() .
FL_WHEN_RELEASE	callback() will be called during FL_RELEASE events, such as when someone releases a mouse button somewhere on the table.

The [callback\(\)](#) routine is sent a [TableContext](#) that indicates the context the event occurred in, such as in a cell, in a header, or elsewhere on the table. When an event occurs in a cell or header, [callback_row\(\)](#) and [callback_col\(\)](#) can be used to determine the row and column. The callback can also look at the regular fltk event values (ie. [Fl::event\(\)](#) and [Fl::event_button\(\)](#)) to determine what kind of event is occurring.

The documentation for this class was generated from the following files:

- Fl_Table.H
- Fl_Table.cxx

11.140 Fl_Table_Row Class Reference

A table with row selection capabilities.

```
#include <Fl_Table_Row.H>
```

Inheritance diagram for Fl_Table_Row:

Public Types

- enum **TableRowSelectMode** { **SELECT_NONE** , **SELECT_SINGLE** , **SELECT_MULTI** }

Public Types inherited from Fl_Table

- enum **TableContext** {
CONTEXT_NONE = 0 , **CONTEXT_STARTPAGE** = 0x01 , **CONTEXT_ENDPAGE** = 0x02 , **CONTEXT_ROW_HEADER**
 = 0x04 ,
CONTEXT_COL_HEADER = 0x08 , **CONTEXT_CELL** = 0x10 , **CONTEXT_TABLE** = 0x20 , **CONTEXT_RC_RESIZE**
 = 0x40 }

The context bit flags for Fl_Table related callbacks.

Public Member Functions

- void **clear** () **FL_OVERRIDE**
Clears the table to zero rows (rows(0)), zero columns (cols(0)), and clears any widgets (table->clear()) that were added with begin()/end() or add()/insert()/etc.
- Fl_Table_Row** (int X, int Y, int W, int H, const char *l=0)
The constructor for the Fl_Table_Row.
- int **row_selected** (int row)
Checks to see if 'row' is selected.
- int **rows** ()
- void **rows** (int val) **FL_OVERRIDE**
Sets the number of rows in the table, and the table is redrawn.
- void **select_all_rows** (int flag=1)
This convenience function changes the selection state for all rows based on 'flag'.
- int **select_row** (int row, int flag=1)
Changes the selection state for 'row', depending on the value of 'flag'.
- TableRowSelectMode **type** () const
- void **type** (TableRowSelectMode val)
Sets the table selection mode.
- ~Fl_Table_Row** ()
The destructor for the Fl_Table_Row.

Public Member Functions inherited from [FI_Table](#)

- void **add** ([FI_Widget](#) &wgt)
The specified widget is removed from its current group (if any) and added to the end of [FI_Table](#)'s group.
- void **add** ([FI_Widget](#) *wgt)
The specified widget is removed from its current group (if any) and added to the end of [FI_Table](#)'s group.
- [FI_Widget](#) *const * **array** ()
Returns a pointer to the array of children.
- void **begin** ()
- void **callback** ([FI_Widget](#) *, void *)
Callbacks will be called depending on the setting of [FI_Widget::when\(\)](#).
- int **callback_col** ()
Returns the current column the event occurred on.
- [TableContext](#) **callback_context** ()
Returns the current 'table context'.
- int **callback_row** ()
Returns the current row the event occurred on.
- [FI_Widget](#) * **child** (int n) const
Returns the child widget by an index.
- int **children** () const
Returns the number of children in the table.
- int **col_header** ()
Returns if column headers are enabled or not.
- void **col_header** (int flag)
Enable or disable column headers.
- [FI_Color](#) **col_header_color** ()
Gets the color for column headers.
- void **col_header_color** ([FI_Color](#) val)
Sets the color for column headers and redraws the table.
- int **col_header_height** ()
Gets the column header height.
- void **col_header_height** (int height)
Sets the height in pixels for column headers and redraws the table.
- int **col_position** ()
Returns the current column scroll position as a column number.
- void **col_position** (int col)
Sets the horizontal scroll position so 'col' is at the left, and causes the screen to redraw.
- int **col_resize** ()
Returns if column resizing by the user is allowed.
- void **col_resize** (int flag)
Allows/disallows column resizing by the user.
- int **col_resize_min** ()
Returns the current column minimum resize value.
- void **col_resize_min** (int val)
Sets the current column minimum resize value.
- int **col_width** (int col)
Returns the current width of the specified column in pixels.
- void **col_width** (int col, int width)
Sets the width of the specified column in pixels, and the table is redrawn.
- void **col_width_all** (int width)
Convenience method to set the width of all columns to the same value, in pixels.

- **int cols ()**
Get the number of columns in the table.
- **virtual void cols (int val)**
Set the number of columns in the table and redraw.
- **void do_callback (TableContext context, int row, int col)**
Calls the widget callback.
- **void end ()**
- **int find (const FL_Widget &wgt) const**
- **int find (const FL_Widget *wgt) const**
- **FL_Table (int X, int Y, int W, int H, const char *l=0)**
The constructor for FL_Table.
- **void get_selection (int &row_top, int &col_left, int &row_bot, int &col_right) const**
Gets the region of cells selected (highlighted).
- **void init_sizes ()**
Resets the internal array of widget sizes and positions.
- **void insert (FL_Widget &wgt, FL_Widget *w2)**
The specified widget is removed from its current group (if any) and inserted into FL_Table's group before widget 'w2'.
- **void insert (FL_Widget &wgt, int n)**
The specified widget is removed from its current group (if any) and inserted into the FL_Table's group at position 'n'.
- **int is_interactive_resize ()**
Returns 1 if someone is interactively resizing a row or column.
- **int is_selected (int r, int c)**
*See if the cell at row *r* and column *c* is selected.*
- **int move_cursor (int R, int C)**
Same as move_cursor(R,C,1);.
- **int move_cursor (int R, int C, int shiftselect)**
Moves the selection cursor a relative number of rows/columns specified by R/C.
- **void remove (FL_Widget &wgt)**
The specified widget is removed from FL_Table's group.
- **void resize (int X, int Y, int W, int H) FL_OVERRIDE**
Handle resize events if user resizes parent window.
- **int row_header ()**
Returns if row headers are enabled or not.
- **void row_header (int flag)**
Enables/disables showing the row headers.
- **FL_Color row_header_color ()**
Returns the current row header color.
- **void row_header_color (FL_Color val)**
Sets the row header color and causes the screen to redraw.
- **int row_header_width ()**
Returns the current row header width (in pixels).
- **void row_header_width (int width)**
*Sets the row header width to *n* and causes the screen to redraw.*
- **int row_height (int row)**
Returns the current height of the specified row as a value in pixels.
- **void row_height (int row, int height)**
Sets the height of the specified row in pixels, and the table is redrawn.
- **void row_height_all (int height)**
Convenience method to set the height of all rows to the same value, in pixels.
- **int row_position ()**
Returns the current row scroll position as a row number.

- void **row_position** (int row)
Sets the vertical scroll position so 'row' is at the top, and causes the screen to redraw.
- int **row_resize** ()
Returns if row resizing by the user is allowed.
- void **row_resize** (int flag)
Allows/disallows row resizing by the user.
- int **row_resize_min** ()
Returns the current row minimum resize value.
- void **row_resize_min** (int val)
Sets the current row minimum resize value.
- int **rows** ()
Returns the number of rows in the table.
- int **scrollbar_size** () const
Gets the current size of the scrollbars' troughs, in pixels.
- void **scrollbar_size** (int newSize)
Sets the pixel size of the scrollbars' troughs to newSize, in pixels.
- void **set_selection** (int row_top, int col_left, int row_bot, int col_right)
Sets the region of cells to be selected (highlighted).
- int **tab_cell_nav** () const
Get state of table's 'Tab' key cell navigation flag.
- void **tab_cell_nav** (int val)
Flag to control if Tab navigates table cells or not.
- void **table_box** (FL_Boxtype val)
Sets the kind of box drawn around the data table, the default being FL_NO_BOX.
- **FL_Boxtype table_box** (void)
Returns the current box type used for the data table.
- int **top_row** ()
Returns the current top row shown in the table.
- void **top_row** (int row)
Sets which row should be at the top of the table, scrolling as necessary, and the table is redrawn.
- void **visible_cells** (int &r1, int &r2, int &c1, int &c2)
Returns the range of row and column numbers for all visible and partially visible cells in the table.
- void **when** (FL_When flags)
The FL_Widget::when() function is used to set a group of flags, determining when the widget callback is called:
- **~FL_Table** ()
The destructor for FL_Table.

Public Member Functions inherited from **FL_Group**

- **FL_Widget *& _ddfdesign_kludge** ()
This is for forms compatibility only.
- void **add** (FL_Widget &)
The widget is removed from its current group (if any) and then added to the end of this group.
- void **add** (FL_Widget *o)
See void FL_Group::add(FL_Widget &w)
- void **add_resizable** (FL_Widget &o)
Adds a widget to the group and makes it the resizable widget.
- **FL_Widget *const * array** () const
Returns a pointer to the array of children.
- **FL_Group const * as_group** () const **FL_OVERRIDE**
- **FL_Group * as_group** () **FL_OVERRIDE**

- Returns an *FL_Group* pointer if this widget is an *FL_Group*.

 - void **begin** ()

Sets the current group so you can build the widget tree by just constructing the widgets.
- *FL_Widget* * **child** (int n) const

Returns the *n*'th child.
- int **children** () const

Returns how many child widgets the group has.
- void **clear** ()

Deletes all child widgets from memory recursively.
- unsigned int **clip_children** ()

Returns the current clipping mode.
- void **clip_children** (int c)

Controls whether the group widget clips the drawing of child widgets to its bounding box.
- virtual int **delete_child** (int n)

Removes the widget at *index* from the group and deletes it.
- void **end** ()

Exactly the same as `current(this->parent())`.
- int **find** (const *FL_Widget* &o) const

See `int FL_Group::find(const FL_Widget *w) const`.
- int **find** (const *FL_Widget* *) const

Searches the child array for the widget and returns the index.
- *FL_Group* (int, int, int, int, const char *s)

Creates a new *FL_Group* widget using the given position, size, and label string.
- void **focus** (*FL_Widget* *W)
- void **forms_end** ()

This is for forms compatibility only.
- void **init_sizes** ()

Resets the internal array of widget sizes and positions.
- void **insert** (*FL_Widget* &, int i)

The widget is removed from its current group (if any) and then inserted into this group.
- void **insert** (*FL_Widget* &o, *FL_Widget* *before)

This does `insert(w, find(before))`.
- void **remove** (*FL_Widget* &)

Removes a widget from the group but does not delete it.
- void **remove** (*FL_Widget* *o)

Removes the widget *o* from the group.
- void **remove** (int index)

Removes the widget at *index* from the group but does not delete it.
- *FL_Widget* * **resizable** () const

Returns the group's resizable widget.
- void **resizable** (*FL_Widget* &o)

Sets the group's resizable widget.
- void **resizable** (*FL_Widget* *o)

The resizable widget defines both the resizing box and the resizing behavior of the group and its children.
- virtual ~*FL_Group* ()

The destructor also deletes all the children.

Public Member Functions inherited from [FI_Widget](#)

- void [_clear_fullscreen](#) ()
- void [_set_fullscreen](#) ()
- void [activate](#) ()
Activates the widget.
- unsigned int [active](#) () const
Returns whether the widget is active.
- int [active_r](#) () const
Returns whether the widget and all of its parents are active.
- [FI_Align](#) [align](#) () const
Gets the label alignment.
- void [align](#) ([FI_Align](#) alignment)
Sets the label alignment.
- long [argument](#) () const
Gets the current user data (long) argument that is passed to the callback function.
- void [argument](#) (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class [FI_Gl_Window](#) * [as_gl_window](#) ()
Returns an [FI_Gl_Window](#) pointer if this widget is an [FI_Gl_Window](#).
- virtual class [FI_Gl_Window](#) const * [as_gl_window](#) () const
- virtual [FI_Window](#) * [as_window](#) ()
Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).
- virtual [FI_Window](#) const * [as_window](#) () const
- void [bind_deimage](#) ([FI_Image](#) *img)
Sets the image to use as part of the widget label when in the inactive state.
- void [bind_deimage](#) (int f)
Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.
- void [bind_image](#) ([FI_Image](#) *img)
Sets the image to use as part of the widget label when in the active state.
- void [bind_image](#) (int f)
Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- [FI_Boxtype](#) [box](#) () const
Gets the box type of the widget.
- void [box](#) ([FI_Boxtype](#) new_box)
Sets the box type for the widget.
- [FI_Callback_p](#) [callback](#) () const
Gets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb, [FI_Callback_User_Data](#) *p, bool auto_free)
Sets the current callback function and managed user data for the widget.
- void [callback](#) ([FI_Callback](#) *cb, void *p)
Sets the current callback function and data for the widget.
- void [callback](#) ([FI_Callback0](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback1](#) *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int [changed](#) () const
Checks if the widget value changed since the last callback.
- void [clear_active](#) ()

- Marks the widget as inactive without sending events or changing focus.*

 - void `clear_changed` ()
- Marks the value of the widget as unchanged.*

 - void `clear_damage` (uchar c=0)
- Clears or sets the damage flags.*

 - void `clear_output` ()
- Sets a widget to accept input.*

 - void `clear_visible` ()
- Hides the widget.*

 - void `clear_visible_focus` ()
- Disables keyboard focus navigation with this widget.*

 - `FL_Color` `color` () const
- Gets the background color of the widget.*

 - void `color` (FL_Color bg)
- Sets the background color of the widget.*

 - void `color` (FL_Color bg, FL_Color sel)
- Sets the background and selection color of the widget.*

 - `FL_Color` `color2` () const
- For back compatibility only.*

 - void `color2` (unsigned a)
- For back compatibility only.*

 - int `contains` (const FL_Widget *w) const
- Checks if w is a child of this widget.*

 - void `copy_label` (const char *new_label)
- Sets the current label.*

 - void `copy_tooltip` (const char *text)
- Sets the current tooltip text.*

 - uchar `damage` () const
- Returns non-zero if `draw()` needs to be called.*

 - void `damage` (uchar c)
- Sets the damage bits for the widget.*

 - void `damage` (uchar c, int x, int y, int w, int h)
- Sets the damage bits for an area inside the widget.*

 - int `damage_resize` (int, int, int, int)
- Internal use only.*

 - void `deactivate` ()
- Deactivates the widget.*

 - `FL_Image` * `deimage` ()
- Gets the image that is used as part of the widget label when in the inactive state.*

 - const `FL_Image` * `deimage` () const
- Gets the image that is used as part of the widget label when in the inactive state.*

 - void `deimage` (FL_Image &img)
- Sets the image to use as part of the widget label when in the inactive state.*

 - void `deimage` (FL_Image *img)
- Sets the image to use as part of the widget label when in the inactive state.*

 - int `deimage_bound` () const
- Returns whether the inactive image is managed by the widget.*

 - void `do_callback` (FL_Callback_Reason reason=FL_REASON_UNKNOWN)
- Calls the widget callback function with default arguments.*

 - void `do_callback` (FL_Widget *widget, long arg, FL_Callback_Reason reason=FL_REASON_UNKNOWN)
- Calls the widget callback function with arbitrary arguments.*

- void `do_callback` (`FL_Widget *widget`, void *arg=0, `FL_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with arbitrary arguments.
- void `draw_label` (int, int, int, int, `FL_Align`) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const
Gets the widget height.
- virtual void `hide` ()
Makes a widget invisible.
- int `horizontal_label_margin` ()
Get the spacing between the label and the horizontal edge of the widget.
- void `horizontal_label_margin` (int px)
Set the spacing between the label and the horizontal edge of the widget.
- `FL_Image * image` ()
Gets the image that is used as part of the widget label when in the active state.
- const `FL_Image * image` () const
Gets the image that is used as part of the widget label when in the active state.
- void `image` (`FL_Image &img`)
Sets the image to use as part of the widget label when in the active state.
- void `image` (`FL_Image *img`)
Sets the image to use as part of the widget label when in the active state.
- int `image_bound` () const
Returns whether the image is managed by the widget.
- int `inside` (const `FL_Widget *wgt`) const
Checks if this widget is a child of wgt.
- int `is_label_copied` () const
Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const
Gets the current label text.
- void `label` (const char *text)
Sets the current label pointer.
- void `label` (`FL_Labeltype` a, const char *b)
Shortcut to set the label text and type in one call.
- int `label_image_spacing` ()
Return the gap size between the label and the image.
- void `label_image_spacing` (int gap)
Set the gap between the label and the image in pixels.
- `FL_Color labelcolor` () const
Gets the label color.
- void `labelcolor` (`FL_Color` c)
Sets the label color.
- `FL_Font labelfont` () const
Gets the font to use.
- void `labelfont` (`FL_Font` f)
Sets the font to use.
- `FL_Fonsize labelsz` () const
Gets the font size in pixels.
- void `labelsize` (`FL_Fonsize` pix)
Sets the font size in pixels.
- `FL_Labeltype labeltype` () const
Gets the label type.
- void `labeltype` (`FL_Labeltype` a)

- Sets the label type.*

 - void `measure_label` (int &ww, int &hh) const

Sets width ww and height hh accordingly with the label size.
- bool `needs_keyboard` () const

Returns whether this widget needs a keyboard.
- void `needs_keyboard` (bool needs)

Sets whether this widget needs a keyboard.
- unsigned int `output` () const

Returns if a widget is used for output only.
- `Fl_Group` * `parent` () const

Returns a pointer to the parent widget.
- void `parent` (`Fl_Group` *p)

Internal use only - "for hacks only".
- void `position` (int X, int Y)

Repositions the window or widget.
- void `redraw` ()

Schedules the drawing of the widget.
- void `redraw_label` ()

Schedules the drawing of the label.
- `Fl_Color` `selection_color` () const

Gets the selection color.
- void `selection_color` (`Fl_Color` a)

Sets the selection color.
- void `set_active` ()

Marks the widget as active without sending events or changing focus.
- void `set_changed` ()

Marks the value of the widget as changed.
- void `set_output` ()

Sets a widget to output only.
- void `set_visible` ()

Makes the widget visible.
- void `set_visible_focus` ()

Enables keyboard focus navigation with this widget.
- int `shortcut_label` () const

Returns whether the widget's label uses '&' to indicate shortcuts.
- void `shortcut_label` (int value)

Sets whether the widget's label uses '&' to indicate shortcuts.
- virtual void `show` ()

Makes a widget visible.
- void `size` (int W, int H)

Changes the size of the widget.
- int `take_focus` ()

Gives the widget the keyboard focus.
- unsigned int `takeevents` () const

Returns if the widget is able to take events.
- int `test_shortcut` ()

Returns true if the widget's label contains the entered '&x' shortcut.
- const char * `tooltip` () const

Gets the current tooltip text.
- void `tooltip` (const char *text)

Sets the current tooltip text.

- [Fl_Window](#) * [top_window](#) () const
Returns a pointer to the top-level window for the widget.
- [Fl_Window](#) * [top_window_offset](#) (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- [uchar](#) [type](#) () const
Gets the widget type.
- void [type](#) ([uchar](#) t)
Sets the widget type.
- int [use_accents_menu](#) ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * [user_data](#) () const
Gets the user data for this widget.
- void [user_data](#) ([Fl_Callback_User_Data](#) *v, bool auto_free)
Sets the user data for this widget.
- void [user_data](#) (void *v)
Sets the user data for this widget.
- int [vertical_label_margin](#) ()
Get the spacing between the label and the vertical edge of the widget.
- void [vertical_label_margin](#) (int px)
Set the spacing between the label and the vertical edge of the widget.
- unsigned int [visible](#) () const
Returns whether a widget is visible.
- unsigned int [visible_focus](#) () const
Checks whether this widget has a visible focus.
- void [visible_focus](#) (int v)
Modifies keyboard focus navigation.
- int [visible_r](#) () const
Returns whether a widget and all its parents are visible.
- int [w](#) () const
Gets the widget width.
- [Fl_When](#) [when](#) () const
Returns the conditions under which the callback is called.
- void [when](#) ([uchar](#) i)
Sets the flags used to decide when a callback is called.
- [Fl_Window](#) * [window](#) () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int [x](#) () const
Gets the widget position in its window.
- int [y](#) () const
Gets the widget position in its window.
- virtual ~[Fl_Widget](#) ()
Destroys the widget.

Protected Member Functions

- int [find_cell](#) ([TableContext](#) context, int R, int C, int &X, int &Y, int &W, int &H)
- int [handle](#) (int event) [FL_OVERRIDE](#)
Handle FLTK events.

Protected Member Functions inherited from FI_Table

- void **change_cursor** (FI_Cursor newcursor)
Change mouse cursor to different type.
- long **col_scroll_position** (int col)
Returns the scroll position (in pixels) of the specified column 'col'.
- **TableContext** **cursor2rowcol** (int &R, int &C, ResizeFlag &resizeflag)
Find row/col for the recent mouse event.
- void **damage_zone** (int r1, int c1, int r2, int c2, int r3=0, int c3=0)
Sets the damage zone to the specified row/col values.
- void **draw** () **FL_OVERRIDE**
Draws the entire FI_Table.
- virtual void **draw_cell** (TableContext context, int R=0, int C=0, int X=0, int Y=0, int W=0, int H=0)
Subclass should override this method to handle drawing the cells.
- int **find_cell** (TableContext context, int R, int C, int &X, int &Y, int &W, int &H)
Find a cell's X/Y/W/H region for the specified cell in row 'R', column 'C'.
- void **get_bounds** (TableContext context, int &X, int &Y, int &W, int &H)
Returns the (X,Y,W,H) bounding region for the specified 'context'.
- int **is_fltk_container** ()
Does the table contain any child fltk widgets?
- void **recalc_dimensions** ()
Recalculate the dimensions of the table, and affect any children.
- void **redraw_range** (int topRow, int botRow, int leftCol, int rightCol)
Define region of cells to be redrawn by specified range of rows/cols, and then sets damage(DAMAGE_CHILD).
- int **row_col_clamp** (TableContext context, int &R, int &C)
Return specified row/col values R and C to within the table's current row/col limits.
- long **row_scroll_position** (int row)
Returns the scroll position (in pixels) of the specified 'row'.
- void **table_resized** ()
Call this if table was resized, to recalculate internal data.
- void **table_scrolled** ()
Recalculate internals after a scroll.

Protected Member Functions inherited from FI_Group

- FI_Rect * **bounds** ()
Returns the internal array of widget sizes and positions.
- void **draw_child** (FI_Widget &widget) const
Forces a child to redraw.
- void **draw_children** ()
Draws all children of the group.
- void **draw_outside_label** (const FI_Widget &widget) const
Parents normally call this to draw outside labels of child widgets.
- virtual int **on_insert** (FI_Widget *, int)
Allow derived groups to act when a widget is added as a child.
- virtual int **on_move** (int, int)
Allow derived groups to act when a widget is moved within the group.
- virtual void **on_remove** (int)
Allow derived groups to act when a child widget is removed from the group.
- int * **sizes** ()
Returns the internal array of widget sizes and positions.
- void **update_child** (FI_Widget &widget) const
Draws a child only if it needs it.

Protected Member Functions inherited from [FI_Widget](#)

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** ([FI_Boxtype](#) t, [FI_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const
Draws a focus rectangle around the widget.
- void **draw_focus** ([FI_Boxtype](#) t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void **draw_focus** ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) bg) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [FI_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

Additional Inherited Members

Static Public Member Functions inherited from [FI_Group](#)

- static [FI_Group](#) * **current** ()
Returns the currently active group.
- static void **current** ([FI_Group](#) *g)
Sets the current group.

Static Public Member Functions inherited from [FI_Widget](#)

- static void **default_callback** ([FI_Widget](#) *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int **label_shortcut** (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int **test_shortcut** (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from [Fl_Table](#)

- enum **ResizeFlag** {
RESIZE_NONE = 0 , **RESIZE_COL_LEFT** = 1 , **RESIZE_COL_RIGHT** = 2 , **RESIZE_ROW_ABOVE** = 3 ,
RESIZE_ROW_BELOW = 4 }

Protected Types inherited from [Fl_Widget](#)

- enum {
INACTIVE = 1<<0 , **INVISIBLE** = 1<<1 , **OUTPUT** = 1<<2 , **NOBORDER** = 1<<3 ,

MAXIMIZED = 1<<24 , **POPUP** = 1<<25 , **USERFLAG3** = 1<<29 , **USERFLAG2** = 1<<30 ,
USERFLAG1 = 1<<31 }

flags possible values enumeration.

Static Protected Member Functions inherited from [Fl_Table](#)

- static void **scroll_cb** ([Fl_Widget](#) *, void *)
Callback for when someone moves a scrollbar.

Protected Attributes inherited from [Fl_Table](#)

- int **botrow**
bottom row# of currently visible table on screen
- int **current_col**
selection cursor's current column (-1 if none)
- int **current_row**
selection cursor's current row (-1 if none)
- [Fl_Scrollbar](#) * **hscrollbar**
child horizontal scrollbar widget
- int **leftcol**
left column# of currently visible table on screen
- int **leftcol_scrollpos**
precomputed scroll position for left column
- int **rightcol**
right column# of currently visible table on screen
- int **select_col**
extended selection column (-1 if none)
- int **select_row**
extended selection row (-1 if none)
- [Fl_Scroll](#) * **table**
child [Fl_Scroll](#) widget container for child fltk widgets (if any)
- int **table_h**
table's virtual height (in pixels)
- int **table_w**
table's virtual width (in pixels)

- int **tih**
Data table's inner h dimension, inside bounding box. See [Table Dimension Diagram](#).
- int **tiw**
Data table's inner w dimension, inside bounding box. See [Table Dimension Diagram](#).
- int **tix**
Data table's inner x dimension, inside bounding box. See [Table Dimension Diagram](#).
- int **tiy**
Data table's inner y dimension, inside bounding box. See [Table Dimension Diagram](#).
- int **toh**
Data table's outer h dimension, outside bounding box. See [Table Dimension Diagram](#).
- int **toprow**
top row# of currently visible table on screen
- int **toprow_scrollpos**
precomputed scroll position for top row
- int **tow**
Data table's outer w dimension, outside bounding box. See [Table Dimension Diagram](#).
- int **tox**
Data table's outer x dimension, outside bounding box. See [Table Dimension Diagram](#).
- int **toy**
Data table's outer y dimension, outside bounding box. See [Table Dimension Diagram](#).
- [Fl_Scrollbar](#) * **vscrollbar**
child vertical scrollbar widget
- int **wih**
Table widget's inner h dimension, inside bounding box. See [Table Dimension Diagram](#).
- int **wiw**
Table widget's inner w dimension, inside bounding box. See [Table Dimension Diagram](#).
- int **wix**
Table widget's inner x dimension, inside bounding box. See [Table Dimension Diagram](#).
- int **wiy**
Table widget's inner y dimension, inside bounding box. See [Table Dimension Diagram](#).

11.140.1 Detailed Description

A table with row selection capabilities.

This class implements a simple table with the ability to select rows. This widget is similar to an [Fl_Browser](#) with columns. Most methods of importance will be found in the [Fl_Table](#) widget, such as [Fl_Table::rows\(\)](#) and [Fl_Table::cols\(\)](#).

To be useful it must be subclassed and at minimum the [draw_cell\(\)](#) method must be overridden to provide the content of the cells. This widget does *not* manage the cell's data content; it is up to the parent class's [draw_cell\(\)](#) method override to provide this.

Events on the cells and/or headings generate callbacks when they are clicked by the user. You control when events are generated based on the values you supply for [Fl_Table::when\(\)](#).

11.140.2 Constructor & Destructor Documentation

11.140.2.1 Fl_Table_Row()

```
Fl_Table_Row::Fl_Table_Row (
    int X,
    int Y,
    int W,
    int H,
    const char * l = 0) [inline]
```

The constructor for the [Fl_Table_Row](#).

This creates an empty table with no rows or columns, with headers and row/column resize behavior disabled.

11.140.2.2 ~Fl_Table_Row()

```
Fl_Table_Row::~Fl_Table_Row () [inline]
```

The destructor for the [Fl_Table_Row](#).

Destroys the table and its associated widgets.

11.140.3 Member Function Documentation

11.140.3.1 clear()

```
void Fl_Table_Row::clear () [inline], [virtual]
```

Clears the table to zero rows (`rows(0)`), zero columns (`cols(0)`), and clears any widgets (`table->clear()`) that were added with `begin()/end()` or `add()/insert()/etc.`

See also

[rows\(int\)](#), [cols\(int\)](#)

Reimplemented from [Fl_Table](#).

11.140.3.2 handle()

```
int Fl_Table_Row::handle (
    int e) [protected], [virtual]
```

Handle FLTK events.

Reimplemented from [Fl_Table](#).

11.140.3.3 row_selected()

```
int Fl_Table_Row::row_selected (
    int row)
```

Checks to see if 'row' is selected.

Returns 1 if selected, 0 if not. You can change the selection of a row by clicking on it, or by using [select_row\(row, flag\)](#)

`row` **should** be a valid row. If the row is out of range the return value is 0 (zero).

Parameters

<code>in</code>	<code>row</code>	row to be checked
-----------------	------------------	-------------------

Returns

whether given row is selected

Return values

<code>1</code>	row is selected
<code>0</code>	row is not selected or <code>row</code> is out of range

11.140.3.4 rows()

```
void Fl_Table_Row::rows (
    int val) [virtual]
```

Sets the number of rows in the table, and the table is redrawn.

Reimplemented from [Fl_Table](#).

11.140.3.5 select_all_rows()

```
void Fl_Table_Row::select_all_rows (
    int flag = 1)
```

This convenience function changes the selection state for *all* rows based on 'flag'.
0=deselect, 1=select, 2=toggle existing state.

11.140.3.6 select_row()

```
int Fl_Table_Row::select_row (
    int row,
    int flag = 1)
```

Changes the selection state for 'row', depending on the value of 'flag'.
The optional flag can be:

- 0: clear selection
- 1: set selection (default)
- 2: toggle selection

Parameters

in	<i>row</i>	row to be selected, deselected, or toggled
in	<i>flag</i>	change mode, see description

Returns

result of modification, see description

Return values

0	selection state did not change
1	selection state changed
-1	row out of range or incorrect selection mode (flag)

11.140.3.7 type()

```
void Fl_Table_Row::type (
    TableRowSelectMode val)
```

Sets the table selection mode.

- `Fl_Table_Row::SELECT_NONE` - No selection allowed
- `Fl_Table_Row::SELECT_SINGLE` - Only single rows can be selected
- `Fl_Table_Row::SELECT_MULTII` - Multiple rows can be selected

The documentation for this class was generated from the following files:

- `Fl_Table_Row.H`
- `Fl_Table_Row.cxx`

11.141 Fl_Tabs Class Reference

The [Fl_Tabs](#) widget is a container widget that displays a set of tabs, with each tab representing a different child widget.

```
#include <Fl_Tabs.H>
```

Inheritance diagram for Fl_Tabs:

Public Types

- enum { [OVERFLOW_COMPRESS](#) = 0 , [OVERFLOW_CLIP](#) , [OVERFLOW_PULLDOWN](#) , [OVERFLOW_DRAG](#) }

Public Member Functions

- void [client_area](#) (int &rx, int &ry, int &rw, int &rh, int tabh=0)
Returns the position and size available to be used by its children.
- [Fl_Tabs](#) (int X, int Y, int W, int H, const char *L=0)
Creates a new [Fl_Tabs](#) widget using the given position, size, and label string.
- int [handle](#) (int) [FL_OVERRIDE](#)
Handle all events in the tabs area and forward the rest to the selected child.
- void [handle_overflow](#) (int ov)
Set a method to handle an overflowing tab bar.
- [Fl_Widget](#) * [push](#) () const
Returns the tab group for the tab the user has currently down-clicked on and remains over until [FL_RELEASE](#).
- int [push](#) ([Fl_Widget](#) *)
This is called by the tab widget's [handle\(\)](#) method to set the tab group widget the user last [FL_PUSH](#)'ed on.
- void [resize](#) (int, int, int, int) [FL_OVERRIDE](#)
Make sure that we redraw all tabs when the widget size changes.
- void [show](#) () [FL_OVERRIDE](#)
Ensure proper placement of selected tab.
- [Fl_Align](#) [tab_align](#) () const
Gets the tab label alignment.
- void [tab_align](#) ([Fl_Align](#) a)
Sets the tab label alignment.
- [Fl_Widget](#) * [value](#) ()
Gets the currently visible widget/tab.
- int [value](#) ([Fl_Widget](#) *)
Sets the widget to become the currently visible widget/tab.
- virtual [Fl_Widget](#) * [which](#) (int event_x, int event_y)
Return a pointer to the child widget with a tab at the given coordinates.
- ~[Fl_Tabs](#) () [FL_OVERRIDE](#)
Delete allocated resources and destroy all children.

Public Member Functions inherited from [FL_Group](#)

- [FL_Widget](#) *[_ddfdesign_kludge](#) ()
This is for forms compatibility only.
- void [add](#) ([FL_Widget](#) &)
The widget is removed from its current group (if any) and then added to the end of this group.
- void [add](#) ([FL_Widget](#) *o)
See void [FL_Group::add\(FL_Widget &w\)](#)
- void [add_resizable](#) ([FL_Widget](#) &o)
Adds a widget to the group and makes it the resizable widget.
- [FL_Widget](#) *const * [array](#) () const
Returns a pointer to the array of children.
- [FL_Group](#) const * [as_group](#) () const [FL_OVERRIDE](#)
- [FL_Group](#) * [as_group](#) () [FL_OVERRIDE](#)
Returns an [FL_Group](#) pointer if this widget is an [FL_Group](#).
- void [begin](#) ()
Sets the current group so you can build the widget tree by just constructing the widgets.
- [FL_Widget](#) * [child](#) (int n) const
Returns the n'th child.
- int [children](#) () const
Returns how many child widgets the group has.
- void [clear](#) ()
Deletes all child widgets from memory recursively.
- unsigned int [clip_children](#) ()
Returns the current clipping mode.
- void [clip_children](#) (int c)
Controls whether the group widget clips the drawing of child widgets to its bounding box.
- virtual int [delete_child](#) (int n)
*Removes the widget at *index* from the group and deletes it.*
- void [end](#) ()
*Exactly the same as *current(this->parent())*.*
- int [find](#) (const [FL_Widget](#) &o) const
*See int [FL_Group::find\(const FL_Widget *w\)](#) const.*
- int [find](#) (const [FL_Widget](#) *) const
Searches the child array for the widget and returns the index.
- [FL_Group](#) (int, int, int, int, const char *==0)
Creates a new [FL_Group](#) widget using the given position, size, and label string.
- void [focus](#) ([FL_Widget](#) *W)
- void [forms_end](#) ()
This is for forms compatibility only.
- void [init_sizes](#) ()
Resets the internal array of widget sizes and positions.
- void [insert](#) ([FL_Widget](#) &, int i)
The widget is removed from its current group (if any) and then inserted into this group.
- void [insert](#) ([FL_Widget](#) &o, [FL_Widget](#) *before)
*This does *insert(w, find(before))*.*
- void [remove](#) ([FL_Widget](#) &)
Removes a widget from the group but does not delete it.
- void [remove](#) ([FL_Widget](#) *o)
Removes the widget o from the group.
- void [remove](#) (int index)

- Removes the widget at `index` from the group but does not delete it.*
- `FL_Widget * resizable () const`
 - Returns the group's resizable widget.*
- `void resizable (FL_Widget &o)`
 - Sets the group's resizable widget.*
- `void resizable (FL_Widget *o)`
 - The resizable widget defines both the resizing box and the resizing behavior of the group and its children.*
- `virtual ~FL_Group ()`
 - The destructor also deletes all the children.*

Public Member Functions inherited from FL_Widget

- `void _clear_fullscreen ()`
- `void _set_fullscreen ()`
- `void activate ()`
 - Activates the widget.*
- `unsigned int active () const`
 - Returns whether the widget is active.*
- `int active_r () const`
 - Returns whether the widget and all of its parents are active.*
- `FL_Align align () const`
 - Gets the label alignment.*
- `void align (FL_Align alignment)`
 - Sets the label alignment.*
- `long argument () const`
 - Gets the current user data (long) argument that is passed to the callback function.*
- `void argument (long v)`
 - Sets the current user data (long) argument that is passed to the callback function.*
- `virtual class FL_Gl_Window * as_gl_window ()`
 - Returns an `FL_Gl_Window` pointer if this widget is an `FL_Gl_Window`.*
- `virtual class FL_Gl_Window const * as_gl_window () const`
- `virtual FL_Window * as_window ()`
 - Returns an `FL_Window` pointer if this widget is an `FL_Window`.*
- `virtual FL_Window const * as_window () const`
- `void bind_deimage (FL_Image *img)`
 - Sets the image to use as part of the widget label when in the inactive state.*
- `void bind_deimage (int f)`
 - Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.*
- `void bind_image (FL_Image *img)`
 - Sets the image to use as part of the widget label when in the active state.*
- `void bind_image (int f)`
 - Bind the image to the widget, so the widget will delete the image when it is no longer needed.*
- `FL_Boxtype box () const`
 - Gets the box type of the widget.*
- `void box (FL_Boxtype new_box)`
 - Sets the box type for the widget.*
- `FL_Callback_p callback () const`
 - Gets the current callback function for the widget.*
- `void callback (FL_Callback *cb)`
 - Sets the current callback function for the widget.*
- `void callback (FL_Callback *cb, FL_Callback_User_Data *p, bool auto_free)`

- Sets the current callback function and managed user data for the widget.*

 - void [callback](#) ([FI_Callback](#) *cb, void *p)

Sets the current callback function and data for the widget.

 - void [callback](#) ([FI_Callback0](#) *cb)

Sets the current callback function for the widget.

 - void [callback](#) ([FI_Callback1](#) *cb, long p=0)

Sets the current callback function for the widget.

 - unsigned int [changed](#) () const

Checks if the widget value changed since the last callback.

 - void [clear_active](#) ()

Marks the widget as inactive without sending events or changing focus.

 - void [clear_changed](#) ()

Marks the value of the widget as unchanged.

 - void [clear_damage](#) (uchar c=0)

Clears or sets the damage flags.

 - void [clear_output](#) ()

Sets a widget to accept input.

 - void [clear_visible](#) ()

Hides the widget.

 - void [clear_visible_focus](#) ()

Disables keyboard focus navigation with this widget.

 - [FI_Color](#) [color](#) () const

Gets the background color of the widget.

 - void [color](#) ([FI_Color](#) bg)

Sets the background color of the widget.

 - void [color](#) ([FI_Color](#) bg, [FI_Color](#) sel)

Sets the background and selection color of the widget.

 - [FI_Color](#) [color2](#) () const

For back compatibility only.

 - void [color2](#) (unsigned a)

For back compatibility only.

 - int [contains](#) (const [FI_Widget](#) *w) const

Checks if w is a child of this widget.

 - void [copy_label](#) (const char *new_label)

Sets the current label.

 - void [copy_tooltip](#) (const char *text)

Sets the current tooltip text.

 - [uchar](#) [damage](#) () const

Returns non-zero if [draw\(\)](#) needs to be called.

 - void [damage](#) ([uchar](#) c)

Sets the damage bits for the widget.

 - void [damage](#) ([uchar](#) c, int x, int y, int w, int h)

Sets the damage bits for an area inside the widget.

 - int [damage_resize](#) (int, int, int, int)

Internal use only.

 - void [deactivate](#) ()

Deactivates the widget.

 - [FI_Image](#) * [deimage](#) ()

Gets the image that is used as part of the widget label when in the inactive state.

 - const [FI_Image](#) * [deimage](#) () const

Gets the image that is used as part of the widget label when in the inactive state.

- void [deimage](#) ([FL_Image](#) &img)
Sets the image to use as part of the widget label when in the inactive state.
- void [deimage](#) ([FL_Image](#) *img)
Sets the image to use as part of the widget label when in the inactive state.
- int [deimage_bound](#) () const
Returns whether the inactive image is managed by the widget.
- void [do_callback](#) ([FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
Calls the widget callback function with default arguments.
- void [do_callback](#) ([FL_Widget](#) *widget, long arg, [FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
Calls the widget callback function with arbitrary arguments.
- void [do_callback](#) ([FL_Widget](#) *widget, void *arg=0, [FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
Calls the widget callback function with arbitrary arguments.
- void [draw_label](#) (int, int, int, int, [FL_Align](#)) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int [h](#) () const
Gets the widget height.
- virtual void [hide](#) ()
Makes a widget invisible.
- int [horizontal_label_margin](#) ()
Get the spacing between the label and the horizontal edge of the widget.
- void [horizontal_label_margin](#) (int px)
Set the spacing between the label and the horizontal edge of the widget.
- [FL_Image](#) * [image](#) ()
Gets the image that is used as part of the widget label when in the active state.
- const [FL_Image](#) * [image](#) () const
Gets the image that is used as part of the widget label when in the active state.
- void [image](#) ([FL_Image](#) &img)
Sets the image to use as part of the widget label when in the active state.
- void [image](#) ([FL_Image](#) *img)
Sets the image to use as part of the widget label when in the active state.
- int [image_bound](#) () const
Returns whether the image is managed by the widget.
- int [inside](#) (const [FL_Widget](#) *wgt) const
Checks if this widget is a child of wgt.
- int [is_label_copied](#) () const
Returns whether the current label was assigned with [copy_label\(\)](#).
- const char * [label](#) () const
Gets the current label text.
- void [label](#) (const char *text)
Sets the current label pointer.
- void [label](#) ([FL_Labeltype](#) a, const char *b)
Shortcut to set the label text and type in one call.
- int [label_image_spacing](#) ()
Return the gap size between the label and the image.
- void [label_image_spacing](#) (int gap)
Set the gap between the label and the image in pixels.
- [FL_Color](#) [labelcolor](#) () const
Gets the label color.
- void [labelcolor](#) ([FL_Color](#) c)
Sets the label color.
- [FL_Font](#) [labelfont](#) () const

- Gets the font to use.*

 - void [labelfont](#) ([FI_Font](#) f)

Sets the font to use.
- [FI_Fontsize](#) [labelsize](#) () const

Gets the font size in pixels.
- void [labelsize](#) ([FI_Fontsize](#) pix)

Sets the font size in pixels.
- [FI_Labeltype](#) [labeltype](#) () const

Gets the label type.
- void [labeltype](#) ([FI_Labeltype](#) a)

Sets the label type.
- void [measure_label](#) (int &ww, int &hh) const

Sets width ww and height hh accordingly with the label size.
- bool [needs_keyboard](#) () const

Returns whether this widget needs a keyboard.
- void [needs_keyboard](#) (bool needs)

Sets whether this widget needs a keyboard.
- unsigned int [output](#) () const

Returns if a widget is used for output only.
- [FI_Group](#) * [parent](#) () const

Returns a pointer to the parent widget.
- void [parent](#) ([FI_Group](#) *p)

Internal use only - "for hacks only".
- void [position](#) (int X, int Y)

Repositions the window or widget.
- void [redraw](#) ()

Schedules the drawing of the widget.
- void [redraw_label](#) ()

Schedules the drawing of the label.
- [FI_Color](#) [selection_color](#) () const

Gets the selection color.
- void [selection_color](#) ([FI_Color](#) a)

Sets the selection color.
- void [set_active](#) ()

Marks the widget as active without sending events or changing focus.
- void [set_changed](#) ()

Marks the value of the widget as changed.
- void [set_output](#) ()

Sets a widget to output only.
- void [set_visible](#) ()

Makes the widget visible.
- void [set_visible_focus](#) ()

Enables keyboard focus navigation with this widget.
- int [shortcut_label](#) () const

Returns whether the widget's label uses '&' to indicate shortcuts.
- void [shortcut_label](#) (int value)

Sets whether the widget's label uses '&' to indicate shortcuts.
- void [size](#) (int W, int H)

Changes the size of the widget.
- int [take_focus](#) ()

Gives the widget the keyboard focus.

- unsigned int [takeevents](#) () const
Returns if the widget is able to take events.
- int [test_shortcut](#) ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * [tooltip](#) () const
Gets the current tooltip text.
- void [tooltip](#) (const char *text)
Sets the current tooltip text.
- [Fl_Window](#) * [top_window](#) () const
Returns a pointer to the top-level window for the widget.
- [Fl_Window](#) * [top_window_offset](#) (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- [uchar](#) [type](#) () const
Gets the widget type.
- void [type](#) ([uchar](#) t)
Sets the widget type.
- int [use_accents_menu](#) ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * [user_data](#) () const
Gets the user data for this widget.
- void [user_data](#) ([Fl_Callback_User_Data](#) *v, bool auto_free)
Sets the user data for this widget.
- void [user_data](#) (void *v)
Sets the user data for this widget.
- int [vertical_label_margin](#) ()
Get the spacing between the label and the vertical edge of the widget.
- void [vertical_label_margin](#) (int px)
Set the spacing between the label and the vertical edge of the widget.
- unsigned int [visible](#) () const
Returns whether a widget is visible.
- unsigned int [visible_focus](#) () const
Checks whether this widget has a visible focus.
- void [visible_focus](#) (int v)
Modifies keyboard focus navigation.
- int [visible_r](#) () const
Returns whether a widget and all its parents are visible.
- int [w](#) () const
Gets the widget width.
- [Fl_When](#) [when](#) () const
Returns the conditions under which the callback is called.
- void [when](#) ([uchar](#) i)
Sets the flags used to decide when a callback is called.
- [Fl_Window](#) * [window](#) () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int [x](#) () const
Gets the widget position in its window.
- int [y](#) () const
Gets the widget position in its window.
- virtual [~Fl_Widget](#) ()
Destroys the widget.

Protected Member Functions

- void **check_overflow_menu** ()
Check if the tabs overflow and sets the has_overflow_menu flag accordingly.
- virtual void **clear_tab_positions** ()
Clear internal array of tab positions and widths.
- void **draw** () **FL_OVERRIDE**
Draw the tabs area, the optional pulldown button, and all children.
- void **draw_overflow_menu_button** ()
Draw square button-like graphics with a down arrow in the top or bottom right corner.
- virtual void **draw_tab** (int x1, int x2, int W, int H, **FI_Widget** *o, int flags, int sel)
Draw a tab in the top or bottom tabs area.
- void **handle_overflow_menu** ()
This is called when the user clicks the overflow pulldown menu button.
- virtual int **hit_close** (**FI_Widget** *o, int event_x, int event_y)
Check whether the coordinates fall within the "close" button area of the tab.
- virtual int **hit_overflow_menu** (int event_x, int event_y)
Determine if the coordinates are in the area of the overflow menu button.
- virtual int **hit_tabs_area** (int event_x, int event_y)
Determine if the coordinates are within the tabs area.
- int **maybe_do_callback** (**FI_Widget** *o)
Set tab o as selected and call callbacks if needed.
- int **on_insert** (**FI_Widget** *, int) **FL_OVERRIDE**
Make sure that we redraw all tabs when new children are added.
- int **on_move** (int, int) **FL_OVERRIDE**
Make sure that we redraw all tabs when children are moved.
- void **on_remove** (int) **FL_OVERRIDE**
Make sure that we redraw all tabs when new children are removed.
- virtual void **redraw_tabs** ()
Redraw all tabs (and only the tabs).
- virtual int **tab_height** ()
Return space (height) in pixels usable for tabs.
- virtual int **tab_positions** ()
Calculate tab positions and widths.
- void **take_focus** (**FI_Widget** *o)
Take keyboard focus if o is not NULL.

Protected Member Functions inherited from **FI_Group**

- **FI_Rect** * **bounds** ()
Returns the internal array of widget sizes and positions.
- void **draw_child** (**FI_Widget** &widget) const
Forces a child to redraw.
- void **draw_children** ()
Draws all children of the group.
- void **draw_outside_label** (const **FI_Widget** &widget) const
Parents normally call this to draw outside labels of child widgets.
- int * **sizes** ()
Returns the internal array of widget sizes and positions.
- void **update_child** (**FI_Widget** &widget) const
Draws a child only if it needs it.

Protected Member Functions inherited from Fl_Widget

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** (Fl_Boxtype t, Fl_Color c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** (Fl_Boxtype t, int x, int y, int w, int h, Fl_Color c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const
Draws a focus rectangle around the widget.
- void **draw_focus** (Fl_Boxtype t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void **draw_focus** (Fl_Boxtype t, int x, int y, int w, int h, Fl_Color bg) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- **Fl_Widget** (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

Protected Attributes

- int **has_overflow_menu**
set in OVERFLOW_PULLDOWN mode if tabs overflow. The actual menu array is created only on demand
- int **overflow_type**
- **Fl_Align** **tab_align_**
tab label alignment
- int **tab_count**
Array size of tab positions etc.
- int * **tab_flags**
Array of tab flag of tabs per child.
- int **tab_offset**
for pulldown and drag overflow, this is the horizontal offset when the tabs bar is dragged by the user
- int * **tab_pos**
Array of x-offsets of tabs per child + 1.
- int * **tab_width**
Array of widths of tabs per child.

Additional Inherited Members

Static Public Member Functions inherited from [FI_Group](#)

- static [FI_Group](#) * [current](#) ()
Returns the currently active group.
- static void [current](#) ([FI_Group](#) *g)
Sets the current group.

Static Public Member Functions inherited from [FI_Widget](#)

- static void [default_callback](#) ([FI_Widget](#) *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int [label_shortcut](#) (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int [test_shortcut](#) (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from [FI_Widget](#)

- enum {
[INACTIVE](#) = 1<<0 , [INVISIBLE](#) = 1<<1 , [OUTPUT](#) = 1<<2 , [NOBORDER](#) = 1<<3 ,

[USERFLAG1](#) = 1<<31 }
flags possible values enumeration.

11.141.1 Detailed Description

The [FI_Tabs](#) widget is a container widget that displays a set of tabs, with each tab representing a different child widget.

The user can select a tab by clicking on it, and the corresponding child widget will be displayed. The [FI_Tabs](#) widget is useful for organizing a large number of controls or other widgets into a compact space, allowing the user to switch between different sets of controls as needed.

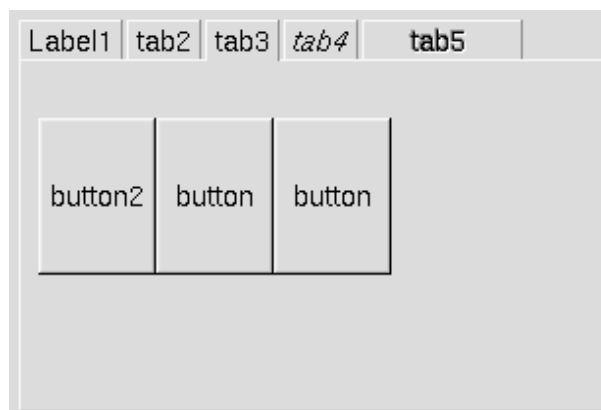

Figure 11.50 [FI_Tabs](#)

Clicking the tab makes a child `visible()` by calling `show()` on it, and all other children are made invisible by calling `hide()` on them. Usually the children are `Fl_Group` widgets containing several widgets themselves.

Each child makes a card, and its `label()` is printed on the card tab, including the label font and style. The selection color of that child is used to color the tab, while the color of the child determines the background color of the pane. '&' in labels are used to prefix a shortcut that is drawn underlined and that activates the corresponding tab; repeated '&&' avoids that.

The size of the tabs is controlled by the bounding box of the children (there should be some space between the children and the edge of the `Fl_Tabs`), and the tabs may be placed "inverted" on the bottom - this is determined by which gap is larger. It is easiest to lay this out in FLUID, using the FLUID browser to select each child group and resize them until the tabs look the way you want them to.

Note: The widgets contained in each child should leave some clear space (five pixels as of FLTK 1.4.x) at the top or bottom of the group (where the tabs are displayed). Otherwise drawing the children may interfere with the selection border between the tabs and the children. This is particularly important if the child group is an `Fl_Scroll` widget: either the `Fl_Scroll` widget must be inset by five pixels relative to other children or it can be wrapped inside another `Fl_Group` and inset by five pixels within this group so the contents of the `Fl_Scroll` widget are kept away from the tabs by this amount.

The background area behind and to the right of the tabs is "transparent", exposing the background detail of the parent. The value of `Fl_Tabs::box()` does not affect this area. So if `Fl_Tabs` is resized by itself without the parent, force the appropriate parent (visible behind the tabs) to `redraw()` to prevent artifacts.

See "Resizing Caveats" below on how to keep tab heights constant. See "Callback's Use Of `when()`" on how to control the details of how clicks invoke the `callback()`.

A typical use of the `Fl_Tabs` widget:

```
// Typical use of Fl_Tabs
Fl_Tabs *tabs = new Fl_Tabs(10,10,300,200);
{
    Fl_Group *grp1 = new Fl_Group(20,30,280,170,"Tab1");
    {
        ..widgets that go in tab#1..
    }
    grp1->end();
    Fl_Group *grp2 = new Fl_Group(20,30,280,170,"Tab2");
    {
        ..widgets that go in tab#2..
    }
    grp2->end();
}
tabs->end();
```

Default Appearance

The appearance of each "tab" is taken from the `label()` and `color()` of the child group corresponding to that "tab" and panel. Where the "tabs" appear depends on the position and size of the child groups that make up the panels within the `Fl_Tabs` widget, i.e. whether there is more space above or below them. The height of the "tabs" depends on how much free space is available.

Figure 11.51 `Fl_Tabs` Default Appearance

Highlighting The Selected Tab

The selected "tab" can be highlighted further by setting the `selection_color()` of the `Fl_Tab` itself, e.g.

```
..
tabs = new Fl_Tabs(..);
tabs->selection_color(FL_DARK3);
..
```

The result of the above looks like:

Figure 11.52 Highlighting the selected tab

Uniform Tab and Panel Appearance

In order to have uniform tab and panel appearance, not only must the `color()` and `selection_color()` for each child group be set, but also the `selection_color()` of the `Fl_Tabs` itself any time a new "tab" is selected. This can be achieved within the `Fl_Tabs` callback, e.g.

```
void MyTabCallback(Fl_Widget *w, void*) {
    Fl_Tabs *tabs = (Fl_Tabs*)w;
    // When tab changed, make sure it has same color as its group
    tabs->selection_color( (tabs->value())->color() );
}

..
int main(..) {
    // Define tabs widget
    tabs = new Fl_Tabs(..);
    tabs->callback(MyTabCallback);

    // Create three tabs each colored differently
    grp1 = new Fl_Group(.. "One");
    grp1->color(9);
    grp1->selection_color(9);
    grp1->end();

    grp2 = new Fl_Group(.. "Two");
    grp2->color(10);
    grp2->selection_color(10);
    grp2->end();

    grp3 = new Fl_Group(.. "Three");
    grp3->color(14);
    grp3->selection_color(14);
    grp3->end();
    ..
    // Make sure default tab has same color as its group
    tabs->selection_color( (tab->value())->color() );
    ..
    return Fl::run();
}
```

The result of the above looks like:

Figure 11.53 `Fl_Tabs` with uniform colors

If `Fl_Tabs` has no children, the widget will be drawn as a flat rectangle in the background color set by `color()`.

Close Button on Tabs

The `Fl_Tabs` widget allows you to specify that a child widget should display a close button in its tab. If the `FL_WHEN_CLOSED` flag is set for the child widget, an "X" symbol will be displayed to the left of the label text in the tab. When the close button is clicked, the child widget's callback function will be called with the `FL_REASON_CLOSED` reason. It is then the responsibility of the child widget to remove itself from the `Fl_Tabs` container.

Tabs that are in a compressed state will not display a close button until they are fully expanded.

Overflowing Tabs

When the combined width of the tabs exceeds that of the `Fl_Tabs` widget, the tabs will overflow. `Fl_Tabs` provides four options for managing tabs overflow:

- `FL_Tabs::OVERFLOW_COMPRESS`: proportionally compress the tabs to the left and right of the selected tab until they all fit within the widget.
- `FL_Tabs::OVERFLOW_CLIP`: clip any tabs that extend beyond the right edge of the `FL_Tabs` widget, making some tabs unreachable.
- `FL_Tabs::OVERFLOW_PULLDOWN`: don't compress the tabs but instead generate a pulldown menu at the right end of the tabs area, displaying all available tabs.
- `FL_Tabs::OVERFLOW_DRAG`: maintain the tabs' original sizes, allowing horizontal dragging of the tabs area using the mouse, a horizontal mouse wheel, or the horizontal scrolling gesture on touchpads.

Resizing Caveats

When `FL_Tabs` is resized vertically, the default behavior scales the tab's height as well as its children. To keep the tab height constant during resizing, set the tab widget's `resizable()` to one of the tab's child groups, i.e.

```
tabs = new FL_Tabs(..);
grp1 = new FL_Group(..);
..
grp2 = new FL_Group(..);
..
tabs->end();
tabs->resizable(grp1);      // keeps tab height constant
```

Callback's Use Of `when()`

As of FLTK 1.3.3, `FL_Tabs()` supports the following flags for `when()`:

- `FL_WHEN_NEVER` – callback never invoked (all flags off)
- `FL_WHEN_CHANGED` – if flag set, invokes callback when a tab has been changed (on click or keyboard navigation)
- `FL_WHEN_NOT_CHANGED` – if flag set, invokes callback when the tabs remain unchanged (on click or keyboard navigation)
- `FL_WHEN_RELEASE` – if flag set, invokes callback on RELEASE of mouse button or keyboard navigation

Notes:

1. The above flags can be logically OR-ed (`|`) or added (`+`) to combine behaviors.
2. The default value for `when()` is `FL_WHEN_RELEASE` (inherited from `FL_Widget`).
3. If `FL_WHEN_RELEASE` is the *only* flag specified, the behavior will be as if (`FL_WHEN_RELEASE|FL_WHEN_CHANGED`) was specified.
4. The value of `changed()` will be valid during the callback.
5. If both `FL_WHEN_CHANGED` and `FL_WHEN_NOT_CHANGED` are specified, the callback is invoked whether the tab has been changed or not. The `changed()` method can be used to determine the cause.
6. `FL_WHEN_NOT_CHANGED` can happen if someone clicks on an already selected tab, or if a keyboard navigation attempt results in no change to the tabs, such as using the arrow keys while at the left or right end of the tabs.
7. `FL::callback_reason()` returns `FL_REASON_SELECTED` or `FL_REASON_RESELECTED`

11.141.2 Member Enumeration Documentation

11.141.2.1 anonymous enum

anonymous enum

Enumerator

OVERFLOW_COMPRESS	Tabs will be compressed and overlaid on top of each other.
OVERFLOW_CLIP	Only the first tabs that fit will be displayed.
OVERFLOW_PULLDOWN	Tabs that do not fit will be placed in a pull-down menu.
OVERFLOW_DRAG	The tab bar can be dragged horizontally to reveal additional tabs.

11.141.3 Constructor & Destructor Documentation

11.141.3.1 Fl_Tabs()

```
Fl_Tabs::Fl_Tabs (
    int X,
    int Y,
    int W,
    int H,
    const char * L = 0)
```

Creates a new [Fl_Tabs](#) widget using the given position, size, and label string.

The default boxtype is FL_THIN_UP_BOX.

Use [add\(Fl_Widget*\)](#) to add each child, which are usually [Fl_Group](#) widgets. The children should be sized to stay away from the top or bottom edge of the [Fl_Tabs](#) widget, which is where the tabs will be drawn.

All children of [Fl_Tabs](#) should have the same size and exactly fit on top of each other. They should only leave space above or below where the tabs will go, but not on the sides. If the first child of [Fl_Tabs](#) is set to "resizable()", the riders will not resize when the tabs are resized.

The destructor *also deletes all the children*. This allows a whole tree to be deleted at once, without having to keep a pointer to all the children in the user code. A kludge has been done so the [Fl_Tabs](#) and all of its children can be automatic (local) variables, but you must declare the [Fl_Tabs](#) widget *first* so that it is destroyed last.

11.141.4 Member Function Documentation

11.141.4.1 clear_tab_positions()

```
void Fl_Tabs::clear_tab_positions () [protected], [virtual]
```

Clear internal array of tab positions and widths.

See also

[tab_positions\(\)](#).

11.141.4.2 client_area()

```
void Fl_Tabs::client_area (
    int & rx,
    int & ry,
    int & rw,
    int & rh,
    int tabh = 0)
```

Returns the position and size available to be used by its children.

If there isn't any child yet the `tabh` parameter will be used to calculate the return values. This assumes that the children's labelsize is the same as the [Fl_Tabs](#)' labelsize and adds a small border.

If there are already children, the values of `child(0)` are returned, and `tabh` is ignored.

Note

Children should always use the same positions and sizes.

This function requires access to the display drivers to determine the selected font height. If `client_area` is invoked before the first window is displayed, ensure that [fl_open_display\(\)](#) is called beforehand.

`tabh` can be one of

- 0: calculate label size, tabs on top
- -1: calculate label size, tabs on bottom
- > 0: use given `tabh` value, tabs on top (height = `tabh`)
- < -1: use given `tabh` value, tabs on bottom (height = `-tabh`)

Parameters

in	<i>tabh</i>	position and optional height of tabs (see above)
out	<i>rx,ry,rw,rh</i>	(x,y,w,h) of client area for children

Since

FLTK 1.3.0

11.141.4.3 draw()

```
void Fl_Tabs::draw (
    void ) [protected], [virtual]
```

Draw the tabs area, the optional pulldown button, and all children.

Reimplemented from [Fl_Group](#).

11.141.4.4 draw_tab()

```
void Fl_Tabs::draw_tab (
    int x1,
    int x2,
    int W,
    int H,
    Fl_Widget * o,
    int flags,
    int what) [protected], [virtual]
```

Draw a tab in the top or bottom tabs area.

Tabs can be selected, or on the left or right side of the selected tab. If overlapping, left tabs are drawn bottom to top using clipping. The selected tab is then the topmost, followed by the right side tabs drawn top to bottom.

Tabs with the `FL_WHEN_CLOSE` bit set will draw a cross on their left side only if they are not compressed/overlapping.

Parameters

in	<i>x1</i>	horizontal position of the left visible edge of the tab
in	<i>x2</i>	horizontal position of the following tab
in	<i>W,H</i>	width and height of the tab
in	<i>o</i>	the child widget that corresponds to this tab
in	<i>flags</i>	if bit 1 is set, this tab is overlapped by another tab
in	<i>what</i>	can be <code>LEFT</code> , <code>SELECTED</code> , or <code>RIGHT</code> to indicate if the tab is to the left side or the right side of the selected tab, or the selected tab itself

11.141.4.5 handle()

```
int Fl_Tabs::handle (
    int event) [virtual]
```

Handle all events in the tabs area and forward the rest to the selected child.

Parameters

in	<i>event</i>	handle this event
----	--------------	-------------------

Returns

1 if the event was handled

Reimplemented from [Fl_Group](#).

11.141.4.6 handle_overflow()

```
void Fl_Tabs::handle_overflow (
    int ov)
```

Set a method to handle an overflowing tab bar.

The [Fl_Tabs](#) widget allows you to specify how to handle the situation where there are more tabs than can be displayed at once. The available options are:

- `OVERFLOW_COMPRESS`: Tabs will be compressed and overlaid on top of each other.
- `OVERFLOW_CLIP`: Only the first tabs that fit will be displayed.
- `OVERFLOW_PULLDOWN`: Tabs that do not fit will be placed in a pull-down menu.
- `OVERFLOW_DRAG`: The tab bar can be dragged horizontally to reveal additional tabs.

You can set the desired behavior using the `overflow()` method.

Parameters

<i>ov</i>	overflow type
-----------	---------------

See also

[OVERFLOW_COMPRESS](#), [OVERFLOW_CLIP](#), [OVERFLOW_PULLDOWN](#), [OVERFLOW_DRAG](#)

11.141.4.7 handle_overflow_menu()

```
void Fl_Tabs::handle_overflow_menu () [protected]
```

This is called when the user clicks the overflow pulldown menu button.

This method creates a menu item array that contains the titles of all tabs in the [Fl_Tabs](#) group. Visible and invisible tabs are separated by dividers to indicate their state.

The menu is then presented until the user selects an item or cancels. The chosen tab is then selected and made visible.

The menu item array is then deleted.

11.141.4.8 hit_close()

```
int Fl_Tabs::hit_close (
    Fl_Widget * o,
    int event_x,
    int event_y) [protected], [virtual]
```

Check whether the coordinates fall within the "close" button area of the tab.

The [Fl_Tabs::hit_close\(\)](#) method checks whether the given event coordinates fall within the area of the "close" button on the tab of the specified child widget. This method should be called after the [Fl_Tabs::which\(\)](#) method, which updates a lookup table used to determine the width of each tab.

Parameters

<i>o</i>	check the tab of this widget
----------	------------------------------

<i>event_x, event_y</i>	event coordinates
-------------------------	-------------------

Returns

1 if we hit the close button, and 0 otherwise

11.141.4.9 hit_overflow_menu()

```
int Fl_Tabs::hit_overflow_menu (  
    int event_x,  
    int event_y) [protected], [virtual]
```

Determine if the coordinates are in the area of the overflow menu button.

Parameters

<i>event_x, event_y</i>	event coordinates
-------------------------	-------------------

Returns

1 if we hit the overflow menu button, and 0 otherwise

11.141.4.10 hit_tabs_area()

```
int Fl_Tabs::hit_tabs_area (  
    int event_x,  
    int event_y) [protected], [virtual]
```

Determine if the coordinates are within the tabs area.

Parameters

<i>event_x, event_y</i>	event coordinates
-------------------------	-------------------

Returns

1 if we hit the tabs area, and 0 otherwise

11.141.4.11 maybe_do_callback()

```
int Fl_Tabs::maybe_do_callback (  
    Fl_Widget * o) [protected]
```

Set tab o as selected and call callbacks if needed.

Parameters

in	o	the newly selected tab
----	---	------------------------

Returns

0 if o is invalid or was deleted by the callback and must no longer be used

11.141.4.12 on_insert()

```
int Fl_Tabs::on_insert (
    Fl_Widget * candidate,
    int index) [protected], [virtual]
```

Make sure that we redraw all tabs when new children are added.

Reimplemented from [Fl_Group](#).

11.141.4.13 on_move()

```
int Fl_Tabs::on_move (
    int a,
    int b) [protected], [virtual]
```

Make sure that we redraw all tabs when children are moved.

Reimplemented from [Fl_Group](#).

11.141.4.14 on_remove()

```
void Fl_Tabs::on_remove (
    int index) [protected], [virtual]
```

Make sure that we redraw all tabs when new children are removed.

Reimplemented from [Fl_Group](#).

11.141.4.15 push() [1/2]

```
Fl_Widget * Fl_Tabs::push () const [inline]
```

Returns the tab group for the tab the user has currently down-clicked on and remains over until FL_RELEASE.

Otherwise, returns NULL.

While the user is down-clicked on a tab, the return value is the tab group for that tab. But as soon as the user releases, or drags off the tab with the button still down, the return value will be NULL.

See also

[push\(Fl_Widget*\)](#).

11.141.4.16 push() [2/2]

```
int Fl_Tabs::push (
    Fl_Widget * o)
```

This is called by the tab widget's [handle\(\)](#) method to set the tab group widget the user last FL_PUSH'ed on.

Set back to zero on FL_RELEASE.

As of this writing, the value is mainly used by [draw_tab\(\)](#) to determine whether or not to draw a 'down' box for the tab when it's clicked, and to turn it off if the user drags off it.

See also

[push\(\)](#).

11.141.4.17 redraw_tabs()

```
void Fl_Tabs::redraw_tabs () [protected], [virtual]
```

Redraw all tabs (and only the tabs).

This method sets the Fl_Tab's damage flags so the tab area is redrawn.

11.141.4.18 resize()

```
void Fl_Tabs::resize (
    int X,
    int Y,
```

```
int W,
int H) [virtual]
```

Make sure that we redraw all tabs when the widget size changes.
Reimplemented from [Fl_Group](#).

11.141.4.19 show()

```
void Fl_Tabs::show () [virtual]
```

Ensure proper placement of selected tab.
Reimplemented from [Fl_Widget](#).

11.141.4.20 tab_align() [1/2]

```
Fl_Align Fl_Tabs::tab_align () const [inline]
```

Gets the tab label alignment.

See also

[tab_align\(Fl_Align\)](#)

11.141.4.21 tab_align() [2/2]

```
void Fl_Tabs::tab_align (
    Fl_Align a) [inline]
```

Sets the tab label alignment.

The default is `FL_ALIGN_CENTER` so tab labels are centered, but since the label space is measured (per label) to fit the labels, there wouldn't be any difference if labels were aligned left or right.

If you want to show an image (icon) next to the group's label you can set a different label alignment. `FL_ALIGN_IMAGE_NEXT_TO_TEXT` is the recommended alignment to show the icon left of the text.

11.141.4.22 tab_height()

```
int Fl_Tabs::tab_height () [protected], [virtual]
```

Return space (height) in pixels usable for tabs.

The calculated height is the largest space between all children and the upper and lower widget boundaries, respectively. If the space at the bottom is larger than at the top, the value will be negative and the tabs should be placed at the bottom.

Returns

Vertical space that can be used for the tabs.

Return values

<code>>0</code>	To put the tabs at the top of the widget.
<code><0</code>	To put the tabs on the bottom.
<i>Full</i>	height, if <code>children() == 0</code> .

11.141.4.23 tab_positions()

```
int Fl_Tabs::tab_positions () [protected], [virtual]
```

Calculate tab positions and widths.

This protected method calculates the horizontal display positions and widths of all tabs. If the number of children 'nc' (see below) is `> 0` three internal arrays are allocated, otherwise the arrays are free'd and the pointers are set to NULL. Note that the first array is larger (nc+1).

- `tab_pos[nc+1]` : The left edges of each tab plus a fake left edge for a tab past the right-hand one.
- `tab_width[nc]` : The width of each tab

- `tab_flags[nc]` : Flags, bit 0 is set if the tab is compressed

If needed, these arrays are (re)allocated.

These positions are actually of the left edge of the slope. They are either separated by the correct distance or by EXTRASPACE or by zero.

In OVERFLOW_COMPRESS mode, tab positions and widths are compressed to make the entire tabs bar fit into the width of [Fl_Tabs](#) while keeping the selected tab fully visible.

In other overflow modes, the tabs area may be dragged horizontally using [tab_offset](#). The `tab_pos` array is not adjusted to the horizontal offset, but starts at this->x() plus the box's left margin.

The protected variable `tab_count` is set to the currently allocated size, i.e. the number of children (`nc`).

Returns

Index of the selected item

Return values

-1	If the number of children is 0 (zero).
----	--

Note

Return values in 1.3 were not documented. Return values before Sep 2023 were documented as 1 based index and 0 if there were no children. This was actually never the case. It always returned a 0 based index and the (useless) value of also 0 if there were no children. The current version returns -1 if there are no children.

For this method to work, only a single child should be selected. Calling the method [value\(\)](#) before calling [tab_positions\(\)](#) will ensure that exactly one child is selected and return a pointer to that child.

See also

[clear_tab_positions\(\)](#)

11.141.4.24 take_focus()

```
void Fl_Tabs::take_focus (
    Fl_Widget * o) [protected]
```

Take keyboard focus if `o` is not NULL.

Parameters

<code>in</code>	<code>o</code>	selected tab
-----------------	----------------	--------------

11.141.4.25 value() [1/2]

```
Fl_Widget * Fl_Tabs::value ()
```

Gets the currently visible widget/tab.

The [Fl_Tabs::value\(\)](#) method returns a pointer to the currently visible child widget of the [Fl_Tabs](#) container. The visible child is the first child that is currently being displayed, or the last child if none of the children are being displayed.

If child widgets have been added, moved, or deleted, this method ensures that only one tab is visible at a time.

Returns

a pointer to the currently visible child

11.141.4.26 value() [2/2]

```
int Fl_Tabs::value (  
    Fl_Widget * newvalue)
```

Sets the widget to become the currently visible widget/tab.

The `Fl_Tabs::value()` method allows you to set a particular child widget of the `Fl_Tabs` container to be the currently visible widget. If the specified widget is a child of the `Fl_Tabs` container, it will be made visible and all other children will be hidden. The method returns 1 if the value was changed, and 0 if the specified value was already set.

Parameters

in	<i>newvalue</i>	a pointer to a child widget
----	-----------------	-----------------------------

Returns

- 1 if a different tab was chosen
- 0 if there was no change (new value already set)

11.141.4.27 which()

```
Fl_Widget * Fl_Tabs::which (
    int event_x,
    int event_y) [virtual]
```

Return a pointer to the child widget with a tab at the given coordinates.

The [Fl_Tabs::which\(\)](#) method returns a pointer to the child widget of the [Fl_Tabs](#) container that corresponds to the tab at the given event coordinates. If the event coordinates are outside the area of the tabs or if the [Fl_Tabs](#) container has no children, the method returns NULL.

Parameters

<i>event_x, event_y</i>	event coordinates
-------------------------	-------------------

Returns

- pointer to the selected child widget, or NULL

11.141.5 Member Data Documentation**11.141.5.1 overflow_type**

- `Fl_Tabs.cxx`

11.142 Fl_Terminal Class Reference

Terminal widget supporting Unicode/utf-8, ANSI/xterm escape codes with full RGB color control.

```
#include <Fl_Terminal.H>
```

Inheritance diagram for `Fl_Terminal`:

Classes

- class [CharStyle](#)
- class [Cursor](#)
- class [EscapeSeq](#)
- class [Margin](#)
- class [PartialUtf8Buf](#)
- class [RingBuffer](#)
- class [Selection](#)
- class [Utf8Char](#)

Public Types

- enum [Attrib](#) {
NORMAL = 0x00 , **BOLD** = 0x01 , **DIM** = 0x02 , **ITALIC** = 0x04 ,
UNDERLINE = 0x08 , **_RESERVED_1** = 0x10 , **INVERSE** = 0x20 , **_RESERVED_2** = 0x40 ,
STRIKEOUT = 0x80 }

Bits for the per-character attributes, which control text features such as italic, bold, underlined text, etc.

- enum [CharFlags](#) {
FG_XTERM = 0x01 , **BG_XTERM** = 0x02 , **EOL** = 0x04 , **RESV_A** = 0x08 ,
RESV_B = 0x10 , **RESV_C** = 0x20 , **RESV_D** = 0x40 , **RESV_E** = 0x80 ,
COLORMASK = (FG_XTERM | BG_XTERM) }

Per-character 8 bit flags (uchar) used to manage special states for characters.

- enum `OutFlags` { `OFF` = 0x00 , `CR_TO_LF` = 0x01 , `LF_TO_CR` = 0x02 , `LF_TO_CRLF` = 0x04 }

Output translation flags for special control character translations.

- enum `RedrawStyle` { `NO_REDRAW` = 0 , `RATE_LIMITED` , `PER_WRITE` }

Determines when `FI_Terminal` calls `redraw()` if new text is added.

- enum `ScrollbarStyle` { `SCROLLBAR_OFF` = 0x00 , `SCROLLBAR_AUTO` = 0x01 , `SCROLLBAR_ON` = 0x02 }

Behavior of scrollbars.

Public Member Functions

- void `ansi` (bool val)
Enable/disable the ANSI mode flag.
- bool `ansi` (void) const
Return the state of the ANSI flag.
- void `append` (const char *s, int len=-1)
Appends string s to the terminal at the current cursor position using the current text color/attributes.
- void `append_ascii` (const char *s)
Append NULL terminated ASCII string to terminal, slightly more efficient than `append_utf8()`.
- void `append_utf8` (const char *buf, int len=-1)
Append NULL terminated UTF-8 string to terminal.
- void `box` (`FI_Boxtype` val)
Sets the box type, updates terminal margins et al.
- `FI_Boxtype` `box` (void) const
Returns the current box type.
- void `clear` (`FI_Color` val)
Clears the screen to a specific color val and homes the cursor.
- void `clear` (void)
Clears the screen to the current `textbgcolor()`, and homes the cursor.
- void `clear_history` (void)
Clears the scroll history buffer and adjusts scrollbar, forcing it to `redraw()`.
- void `clear_screen` (bool scroll_to_hist=true)
Clear the terminal screen only; does not affect the cursor position.
- void `clear_screen_home` (bool scroll_to_hist=true)
Clear the terminal screen and home the cursor.
- void `color` (`FI_Color` val)
Sets the background color for the terminal's `FI_Group::box()`.
- `FI_Color` `color` (void) const
Return base widget `FI_Group`'s `box()` color()
- int `cursor_col` (void) const
Return the cursor's current column position on the screen.
- void `cursor_home` (void)
Move cursor to the home position (top/left).
- int `cursor_row` (void) const
Return the cursor's current row position on the screen.
- void `cursorbgcolor` (`FI_Color` val)
Set the cursor's background color used for the cursor itself.
- `FI_Color` `cursorbgcolor` (void) const
Get the cursor's background color used for the cursor itself.
- void `cursorfgcolor` (`FI_Color` val)
Set the cursor's foreground color used for text under the cursor.
- `FI_Color` `cursorfgcolor` (void) const

- Get the cursor's foreground color used for text under the cursor.*

 - void [display_columns](#) (int val)

Set terminal's display width in columns of text characters.

 - int [display_columns](#) (void) const

Return terminal's display width in columns of text characters.

 - void [display_rows](#) (int val)

Set terminal's display height in lines of text (rows).

 - int [display_rows](#) (void) const

Return terminal's display height in lines of text (rows).

 - void [draw](#) (void) [FL_OVERRIDE](#)

Draws the entire [FL_Terminal](#).

 - void [error_char](#) (const char *val)

Sets the "error character" utf8 string shown for invalid utf8 or bad ANSI sequences if [show_unknown\(\)](#) is true.

 - const char * [error_char](#) (void) const

Returns the "error character" utf8 string, which is shown for invalid utf8 or bad ANSI sequences if [show_unknown\(\)](#) is true.

 - [FL_Terminal](#) (int X, int Y, int W, int H, const char *L, int rows, int cols, int hist)

Same as the default FLTK constructor, but lets the user force the rows, columns and history to specific sizes on creation.

 - [FL_Terminal](#) (int X, int Y, int W, int H, const char *L=0)

The constructor for [FL_Terminal](#).

 - int [handle](#) (int e) [FL_OVERRIDE](#)

Handle FLTK events.

 - void [history_lines](#) (int val)

Set the number of lines of screen history.

 - int [history_lines](#) (void) const

Return the number of lines of screen history.

 - void [history_rows](#) (int val)

Set terminal's scrollbar history buffer size in lines of text (rows).

 - int [history_rows](#) (void) const

Return terminal's scrollbar history buffer size in lines of text (rows).

 - int [history_use](#) (void) const

Returns how many lines are "in use" by the screen history buffer.

 - void [hscrollbar_style](#) ([ScrollbarStyle](#) val)

Set the horizontal scrollbar behavior style.

 - [ScrollbarStyle](#) [hscrollbar_style](#) (void) const

Get the horizontal scrollbar behavior style.

 - void [margin_bottom](#) (int val)

Set the bottom margin; see [Margins](#).

 - int [margin_bottom](#) (void) const

Return the bottom margin; see [Margins](#).

 - void [margin_left](#) (int val)

Set the left margin; see [Margins](#).

 - int [margin_left](#) (void) const

Return the left margin; see [Margins](#).

 - void [margin_right](#) (int val)

Set the right margin; see [Margins](#).

 - int [margin_right](#) (void) const

Return the right margin; see [Margins](#).

 - void [margin_top](#) (int val)

Set the top margin; see [Margins](#).

- int **margin_top** (void) const
Return the top margin; see [Margins](#).
- void **output_translate** (FL_Terminal::OutFlags val)
Sets the combined output translation flags to val.
- FL_Terminal::OutFlags **output_translate** (void) const
Return the current combined output translation flags.
- void **plot_char** (char c, int drow, int dcol)
Plot the ASCII character c at the terminal's display position (drow,dcol).
- void **plot_char** (const char *text, int len, int drow, int dcol)
Plot the UTF-8 character text of length len at display position (drow,dcol).
- void **print_char** (char c)
Prints single ASCII char c at current cursor position, and advances the cursor.
- void **print_char** (const char *text, int len=-1)
Prints single UTF-8 char text of optional byte length len at current cursor position, and advances the cursor if the character is printable.
- void **printf** (const char *fmt,...)
Appends printf formatted messages to the terminal.
- void **redraw_rate** (float val)
Set the maximum rate redraw speed in floating point seconds if [redraw_style\(\)](#) is set to RATE_LIMITED.
- float **redraw_rate** (void) const
Get max rate redraw speed in floating point seconds.
- void **redraw_style** (RedrawStyle val)
Set how FL_Terminal manages screen redrawing.
- RedrawStyle **redraw_style** (void) const
Get the redraw style.
- void **reset_terminal** (void)
Resets terminal to default colors, clears screen, history and mouse selection, homes cursor, resets tabstops.
- void **resize** (int X, int Y, int W, int H) FL_OVERRIDE
Handle widget resizing, such as if user resizes parent window.
- int **scrollbar_actual_size** (void) const
Returns the scrollbar's actual "trough size", which is the width of FL_VERTICAL scrollbars, or height of FL_↔ HORIZONTAL scrollbars.
- void **scrollbar_size** (int val)
Set the pixel size of both horizontal and vertical scrollbar's "trough" to val.
- int **scrollbar_size** (void) const
Get current pixel size of all the scrollbar's troughs for this widget, or zero if the global [FL::scrollbar_size\(\)](#) is being used (default).
- const char * **selection_text** (void) const
Return text selection (for copy()/paste() operations)
- int **selection_text_len** (void) const
Return byte length of all UTF-8 chars in selection, or 0 if no selection.
- void **selectionbgcolor** (FL_Color val)
Set mouse selection background color.
- FL_Color **selectionbgcolor** (void) const
Get mouse selection background color.
- void **selectionfgcolor** (FL_Color val)
Set mouse selection foreground color.
- FL_Color **selectionfgcolor** (void) const
Get mouse selection foreground color.
- void **show_unknown** (bool val)
Set the "show unknown" flag.

- bool [show_unknown](#) (void) const
Return the "show unknown" flag.
- const char * [text](#) (bool lines_below_cursor=false) const
Return a string copy of all lines in the terminal (including history).
- [uchar textattrib](#) () const
Get text attribute bits (underline, inverse, etc).
- void [textattrib](#) ([uchar](#) val)
Set text attribute bits (underline, inverse, etc).
- void [textbgcolor](#) ([FI_Color](#) val)
Set text background color to fltk color `val` used by any new text added.
- [FI_Color textbgcolor](#) (void) const
Return text's current background color.
- void [textbgcolor_default](#) ([FI_Color](#) val)
Set the default text background color used by any new text added after a reset (`<ESC>c`, `<ESC>[0m`, or `reset_terminal()`).
- [FI_Color textbgcolor_default](#) (void) const
Return text's default background color.
- void [textbgcolor_xterm](#) ([uchar](#) val)
Sets the background text color as one of the 8 'xterm color' values.
- void [textcolor](#) ([FI_Color](#) val)
Set the text color for the terminal.
- [FI_Color textcolor](#) (void) const
Return `textcolor()`. This is a convenience method that returns `textfgcolor_default()`
- void [textfgcolor](#) ([FI_Color](#) val)
Set text foreground drawing color to fltk color `val` used by any new text added.
- [FI_Color textfgcolor](#) (void) const
Return text's current foreground color.
- void [textfgcolor_default](#) ([FI_Color](#) val)
Set the default text foreground color used by `<ESC>c`, `<ESC>[0m`, and `reset_terminal()`.
- [FI_Color textfgcolor_default](#) (void) const
Return text's default foreground color.
- void [textfgcolor_xterm](#) ([uchar](#) val)
Sets the foreground text color as one of the 8 'xterm color' values.
- void [textfont](#) ([FI_Font](#) val)
Sets the font used for all text displayed in the terminal.
- [FI_Font textfont](#) (void) const
Return text font used to draw all text in the terminal.
- void [textsize](#) ([FI_Fonsize](#) val)
Sets the font size used for all text displayed in the terminal.
- [FI_Fonsize textsize](#) (void) const
Return text font size used to draw all text in the terminal.
- void [vprintf](#) (const char *fmt, va_list ap)
Appends printf formatted messages to the terminal.
- [~FI_Terminal](#) (void)
The destructor for [FI_Terminal](#).

Public Member Functions inherited from [FL_Group](#)

- [FL_Widget](#) *[_ddfdesign_kludge](#) ()
This is for forms compatibility only.
- void [add](#) ([FL_Widget](#) &)
The widget is removed from its current group (if any) and then added to the end of this group.
- void [add](#) ([FL_Widget](#) *o)
See void [FL_Group::add\(FL_Widget &w\)](#)
- void [add_resizable](#) ([FL_Widget](#) &o)
Adds a widget to the group and makes it the resizable widget.
- [FL_Widget](#) *const * [array](#) () const
Returns a pointer to the array of children.
- [FL_Group](#) const * [as_group](#) () const [FL_OVERRIDE](#)
- [FL_Group](#) * [as_group](#) () [FL_OVERRIDE](#)
Returns an [FL_Group](#) pointer if this widget is an [FL_Group](#).
- void [begin](#) ()
Sets the current group so you can build the widget tree by just constructing the widgets.
- [FL_Widget](#) * [child](#) (int n) const
Returns the n'th child.
- int [children](#) () const
Returns how many child widgets the group has.
- void [clear](#) ()
Deletes all child widgets from memory recursively.
- unsigned int [clip_children](#) ()
Returns the current clipping mode.
- void [clip_children](#) (int c)
Controls whether the group widget clips the drawing of child widgets to its bounding box.
- virtual int [delete_child](#) (int n)
*Removes the widget at *index* from the group and deletes it.*
- void [end](#) ()
*Exactly the same as *current(this->parent())*.*
- int [find](#) (const [FL_Widget](#) &o) const
*See int [FL_Group::find\(const FL_Widget *w\)](#) const.*
- int [find](#) (const [FL_Widget](#) *) const
Searches the child array for the widget and returns the index.
- [FL_Group](#) (int, int, int, int, const char *s=0)
Creates a new [FL_Group](#) widget using the given position, size, and label string.
- void [focus](#) ([FL_Widget](#) *W)
- void [forms_end](#) ()
This is for forms compatibility only.
- void [init_sizes](#) ()
Resets the internal array of widget sizes and positions.
- void [insert](#) ([FL_Widget](#) &, int i)
The widget is removed from its current group (if any) and then inserted into this group.
- void [insert](#) ([FL_Widget](#) &o, [FL_Widget](#) *before)
*This does *insert(w, find(before))*.*
- void [remove](#) ([FL_Widget](#) &)
Removes a widget from the group but does not delete it.
- void [remove](#) ([FL_Widget](#) *o)
Removes the widget o from the group.
- void [remove](#) (int index)

- Removes the widget at `index` from the group but does not delete it.*

 - `FL_Widget * resizable () const`
 - Returns the group's resizable widget.*
 - `void resizable (FL_Widget &o)`
 - Sets the group's resizable widget.*
 - `void resizable (FL_Widget *o)`
 - The resizable widget defines both the resizing box and the resizing behavior of the group and its children.*
 - `virtual ~FL_Group ()`
 - The destructor also deletes all the children.*

Public Member Functions inherited from FL_Widget

- `void _clear_fullscreen ()`
- `void _set_fullscreen ()`
- `void activate ()`
 - Activates the widget.*
- `unsigned int active () const`
 - Returns whether the widget is active.*
- `int active_r () const`
 - Returns whether the widget and all of its parents are active.*
- `FL_Align align () const`
 - Gets the label alignment.*
- `void align (FL_Align alignment)`
 - Sets the label alignment.*
- `long argument () const`
 - Gets the current user data (long) argument that is passed to the callback function.*
- `void argument (long v)`
 - Sets the current user data (long) argument that is passed to the callback function.*
- `virtual class FL_Gl_Window * as_gl_window ()`
 - Returns an `FL_Gl_Window` pointer if this widget is an `FL_Gl_Window`.*
- `virtual class FL_Gl_Window const * as_gl_window () const`
- `virtual FL_Window * as_window ()`
 - Returns an `FL_Window` pointer if this widget is an `FL_Window`.*
- `virtual FL_Window const * as_window () const`
- `void bind_deimage (FL_Image *img)`
 - Sets the image to use as part of the widget label when in the inactive state.*
- `void bind_deimage (int f)`
 - Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.*
- `void bind_image (FL_Image *img)`
 - Sets the image to use as part of the widget label when in the active state.*
- `void bind_image (int f)`
 - Bind the image to the widget, so the widget will delete the image when it is no longer needed.*
- `FL_Boxtype box () const`
 - Gets the box type of the widget.*
- `void box (FL_Boxtype new_box)`
 - Sets the box type for the widget.*
- `FL_Callback_p callback () const`
 - Gets the current callback function for the widget.*
- `void callback (FL_Callback *cb)`
 - Sets the current callback function for the widget.*
- `void callback (FL_Callback *cb, FL_Callback_User_Data *p, bool auto_free)`

- Sets the current callback function and managed user data for the widget.*

 - void [callback](#) ([FI_Callback](#) *cb, void *p)

Sets the current callback function and data for the widget.

 - void [callback](#) ([FI_Callback0](#) *cb)

Sets the current callback function for the widget.

 - void [callback](#) ([FI_Callback1](#) *cb, long p=0)

Sets the current callback function for the widget.

 - unsigned int [changed](#) () const

Checks if the widget value changed since the last callback.

 - void [clear_active](#) ()

Marks the widget as inactive without sending events or changing focus.

 - void [clear_changed](#) ()

Marks the value of the widget as unchanged.

 - void [clear_damage](#) ([uchar](#) c=0)

Clears or sets the damage flags.

 - void [clear_output](#) ()

Sets a widget to accept input.

 - void [clear_visible](#) ()

Hides the widget.

 - void [clear_visible_focus](#) ()

Disables keyboard focus navigation with this widget.

 - [FI_Color](#) [color](#) () const

Gets the background color of the widget.

 - void [color](#) ([FI_Color](#) bg)

Sets the background color of the widget.

 - void [color](#) ([FI_Color](#) bg, [FI_Color](#) sel)

Sets the background and selection color of the widget.

 - [FI_Color](#) [color2](#) () const

For back compatibility only.

 - void [color2](#) (unsigned a)

For back compatibility only.

 - int [contains](#) (const [FI_Widget](#) *w) const

Checks if w is a child of this widget.

 - void [copy_label](#) (const char *new_label)

Sets the current label.

 - void [copy_tooltip](#) (const char *text)

Sets the current tooltip text.

 - [uchar](#) [damage](#) () const

Returns non-zero if [draw\(\)](#) needs to be called.

 - void [damage](#) ([uchar](#) c)

Sets the damage bits for the widget.

 - void [damage](#) ([uchar](#) c, int x, int y, int w, int h)

Sets the damage bits for an area inside the widget.

 - int [damage_resize](#) (int, int, int, int)

Internal use only.

 - void [deactivate](#) ()

Deactivates the widget.

 - [FI_Image](#) * [deimage](#) ()

Gets the image that is used as part of the widget label when in the inactive state.

 - const [FI_Image](#) * [deimage](#) () const

Gets the image that is used as part of the widget label when in the inactive state.

- void [deimage](#) ([FL_Image](#) &img)
Sets the image to use as part of the widget label when in the inactive state.
- void [deimage](#) ([FL_Image](#) *img)
Sets the image to use as part of the widget label when in the inactive state.
- int [deimage_bound](#) () const
Returns whether the inactive image is managed by the widget.
- void [do_callback](#) ([FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
Calls the widget callback function with default arguments.
- void [do_callback](#) ([FL_Widget](#) *widget, long arg, [FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
Calls the widget callback function with arbitrary arguments.
- void [do_callback](#) ([FL_Widget](#) *widget, void *arg=0, [FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
Calls the widget callback function with arbitrary arguments.
- void [draw_label](#) (int, int, int, int, [FL_Align](#)) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int [h](#) () const
Gets the widget height.
- virtual void [hide](#) ()
Makes a widget invisible.
- int [horizontal_label_margin](#) ()
Get the spacing between the label and the horizontal edge of the widget.
- void [horizontal_label_margin](#) (int px)
Set the spacing between the label and the horizontal edge of the widget.
- [FL_Image](#) * [image](#) ()
Gets the image that is used as part of the widget label when in the active state.
- const [FL_Image](#) * [image](#) () const
Gets the image that is used as part of the widget label when in the active state.
- void [image](#) ([FL_Image](#) &img)
Sets the image to use as part of the widget label when in the active state.
- void [image](#) ([FL_Image](#) *img)
Sets the image to use as part of the widget label when in the active state.
- int [image_bound](#) () const
Returns whether the image is managed by the widget.
- int [inside](#) (const [FL_Widget](#) *wgt) const
Checks if this widget is a child of wgt.
- int [is_label_copied](#) () const
Returns whether the current label was assigned with [copy_label\(\)](#).
- const char * [label](#) () const
Gets the current label text.
- void [label](#) (const char *text)
Sets the current label pointer.
- void [label](#) ([FL_Labeltype](#) a, const char *b)
Shortcut to set the label text and type in one call.
- int [label_image_spacing](#) ()
Return the gap size between the label and the image.
- void [label_image_spacing](#) (int gap)
Set the gap between the label and the image in pixels.
- [FL_Color](#) [labelcolor](#) () const
Gets the label color.
- void [labelcolor](#) ([FL_Color](#) c)
Sets the label color.
- [FL_Font](#) [labelfont](#) () const

- Gets the font to use.*

 - void [labelfont](#) ([FI_Font](#) f)

Sets the font to use.
- [FI_Fontsize](#) [labelsize](#) () const

Gets the font size in pixels.
- void [labelsize](#) ([FI_Fontsize](#) pix)

Sets the font size in pixels.
- [FI_Labeltype](#) [labeltype](#) () const

Gets the label type.
- void [labeltype](#) ([FI_Labeltype](#) a)

Sets the label type.
- void [measure_label](#) (int &ww, int &hh) const

Sets width ww and height hh accordingly with the label size.
- bool [needs_keyboard](#) () const

Returns whether this widget needs a keyboard.
- void [needs_keyboard](#) (bool needs)

Sets whether this widget needs a keyboard.
- unsigned int [output](#) () const

Returns if a widget is used for output only.
- [FI_Group](#) * [parent](#) () const

Returns a pointer to the parent widget.
- void [parent](#) ([FI_Group](#) *p)

Internal use only - "for hacks only".
- void [position](#) (int X, int Y)

Repositions the window or widget.
- void [redraw](#) ()

Schedules the drawing of the widget.
- void [redraw_label](#) ()

Schedules the drawing of the label.
- [FI_Color](#) [selection_color](#) () const

Gets the selection color.
- void [selection_color](#) ([FI_Color](#) a)

Sets the selection color.
- void [set_active](#) ()

Marks the widget as active without sending events or changing focus.
- void [set_changed](#) ()

Marks the value of the widget as changed.
- void [set_output](#) ()

Sets a widget to output only.
- void [set_visible](#) ()

Makes the widget visible.
- void [set_visible_focus](#) ()

Enables keyboard focus navigation with this widget.
- int [shortcut_label](#) () const

Returns whether the widget's label uses '&' to indicate shortcuts.
- void [shortcut_label](#) (int value)

Sets whether the widget's label uses '&' to indicate shortcuts.
- virtual void [show](#) ()

Makes a widget visible.
- void [size](#) (int W, int H)

Changes the size of the widget.

- int [take_focus](#) ()
Gives the widget the keyboard focus.
- unsigned int [takeevents](#) () const
Returns if the widget is able to take events.
- int [test_shortcut](#) ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * [tooltip](#) () const
Gets the current tooltip text.
- void [tooltip](#) (const char *text)
Sets the current tooltip text.
- [Fl_Window](#) * [top_window](#) () const
Returns a pointer to the top-level window for the widget.
- [Fl_Window](#) * [top_window_offset](#) (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- uchar [type](#) () const
Gets the widget type.
- void [type](#) (uchar t)
Sets the widget type.
- int [use_accents_menu](#) ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * [user_data](#) () const
Gets the user data for this widget.
- void [user_data](#) ([Fl_Callback_User_Data](#) *v, bool auto_free)
Sets the user data for this widget.
- void [user_data](#) (void *v)
Sets the user data for this widget.
- int [vertical_label_margin](#) ()
Get the spacing between the label and the vertical edge of the widget.
- void [vertical_label_margin](#) (int px)
Set the spacing between the label and the vertical edge of the widget.
- unsigned int [visible](#) () const
Returns whether a widget is visible.
- unsigned int [visible_focus](#) () const
Checks whether this widget has a visible focus.
- void [visible_focus](#) (int v)
Modifies keyboard focus navigation.
- int [visible_r](#) () const
Returns whether a widget and all its parents are visible.
- int [w](#) () const
Gets the widget width.
- [Fl_When](#) [when](#) () const
Returns the conditions under which the callback is called.
- void [when](#) (uchar i)
Sets the flags used to decide when a callback is called.
- [Fl_Window](#) * [window](#) () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int [x](#) () const
Gets the widget position in its window.
- int [y](#) () const
Gets the widget position in its window.
- virtual ~[Fl_Widget](#) ()
Destroys the widget.

Public Attributes

- [Fl_Scrollbar](#) * [hscrollbar](#)
Horizontal scrollbar.
- [Fl_Scrollbar](#) * [scrollbar](#)
Vertical scrollbar.

Protected Member Functions

- void **clear_eod** (void)
Clear from cursor to End Of Display (EOD), like "<ESC> [J<ESC> [0J".
- void **clear_eol** (void)
Clear from cursor to End Of Line (EOL), like "<ESC> [K".
- void **clear_line** (int row)
Clear entire line for specified row.
- void **clear_line** (void)
Clear entire line cursor is currently on.
- void **clear_mouse_selection** (void)
Clear any current mouse selection.
- void **clear_sod** (void)
Clear from cursor to Start Of Display (EOD), like "<ESC> [1J".
- void **clear_sol** (void)
Clear from cursor to Start Of Line (SOL), like "<ESC> [1K".
- void **current_style** (const [CharStyle](#) &sty)
Set current style for rendering text.
- [CharStyle](#) & **current_style** (void) const
Return reference to internal current style for rendering text.
- void **cursor_col** (int col)
*Move cursor to the specified column *col*.*
- void **cursor_cr** (void)
Move cursor as if a CR (\r) was received.
- void **cursor_crlf** (int count=1)
Move cursor as if a CR/LF pair (\r\n) was received.
- void **cursor_down** (int count=1, bool do_scroll=false)
*Moves cursor down *count* lines.*
- void **cursor_eol** (void)
Move cursor to the last column (at the far right) on the current line.
- void **cursor_left** (int count=1)
*Moves cursor left *count* columns, and cursor stops (does not wrap) if it hits screen edge.*
- void **cursor_right** (int count=1, bool do_scroll=false)
*Moves cursor right *count* columns.*
- void **cursor_row** (int row)
*Move cursor to the specified row *row*.*
- void **cursor_sol** (void)
Move cursor to the first column (at the far left) on the current line.
- void **cursor_tab_left** (int count=1)
Tab left, do not wrap beyond left edge.
- void **cursor_tab_right** (int count=1)
Tab right, do not wrap beyond right edge.
- void **cursor_up** (int count=1, bool do_scroll=false)
*Moves cursor up *count* lines.*
- void **delete_chars** (int drow, int dcol, int rep)

- Delete char(s) at (drow,dcol) for 'rep' times.*

 - void **delete_chars** (int rep)
- Delete char(s) at cursor position for 'rep' times.*

 - void **delete_rows** (int count)
- Delete (count) rows at cursor position.*

 - int **disp_cols** (void) const
- Return the number of columns in the display area.*

 - int **disp_erow** (void) const
- Return the ending row# in the display area.*

 - int **disp_rows** (void) const
- Return the number of rows in the display area.*

 - int **disp_srow** (void) const
- Return the starting row# in the display area.*

 - void **draw_buff** (int Y) const
- Draws the buffer position we are scrolled to onto the FLTK screen starting at pixel position Y.*

 - void **draw_row** (int grow, int Y) const
- Draw the specified global row, which is the row in ring_chars[].*

 - void **draw_row_bg** (int grow, int X, int Y) const
- Draw the background for the specified ring_chars[] global row grow starting at FLTK coords X and Y.*

 - bool **get_selection** (int &srow, int &scol, int &erow, int &ecol) const
- Return mouse selection's start/end position in the ring buffer, if any.*

 - int **h_to_row** (int H) const
- Given a height in pixels, return number of rows that "fits" into that area.*

 - int **handle_unknown_char** (int drow, int dcol)
- Handle an unknown char by either emitting an error symbol to the tty, or do nothing, depending on the user configurable value of show_unknown().*

 - int **handle_unknown_char** (void)
- Handle an unknown char by either emitting an error symbol to the tty, or do nothing, depending on the user configurable value of show_unknown().*

 - int **hist_cols** (void) const
- Return the number of columns in the scrollbar history.*

 - int **hist_erow** (void) const
- Return the ending row# of the scrollbar history.*

 - int **hist_rows** (void) const
- Return the number of rows in the scrollbar history.*

 - int **hist_srow** (void) const
- Return the starting row# of the scrollbar history.*

 - int **hist_use** (void) const
- Return number of rows in use by the scrollbar history.*

 - int **hist_use_srow** (void) const
- Return the starting row of the "in use" scrollbar history.*

 - void **insert_char** (char c, int rep)
- Insert char 'c' at the current cursor position for 'rep' times.*

 - void **insert_char_eol** (char c, int drow, int dcol, int rep)
- Insert char 'c' for 'rep' times at display row 'drow' and column 'dcol'.*

 - void **insert_rows** (int count)
- Insert (count) rows at current cursor position.*

 - bool **is_inside_selection** (int row, int col) const
- Is global row/column inside the current mouse selection?*

 - bool **is_selection** (void) const
- Returns true if there's a mouse selection.*

- int **offset** (void) const
Returns the current offset into the ring buffer.
- void **restore_cursor** (void)
Restore previously saved cursor position, if any. Used by ESC [u.
- int **ring_cols** (void) const
Return the number of columns in the ring buffer.
- int **ring_erow** (void) const
Return the ending row# in the ring buffer (Always [ring_rows\(\)](#)-1)
- int **ring_rows** (void) const
Return the number of rows in the ring buffer.
- int **ring_srow** (void) const
Return the starting row# in the ring buffer. (Always 0)
- void **save_cursor** (void)
Save current cursor position. Used by ESC [s.
- void **scroll** (int rows)
Scroll the display up(+) or down(-) the specified rows.
- void **select_line** (int grow)
Select the entire row.
- void **select_word** (int grow, int gcol)
Select the word around the given row and column.
- bool **selection_extend** (int X, int Y)
Extend selection to FLTK coords X,Y.
- [Utf8Char](#) * **u8c_cursor** (void)
Return the Utf8Char for character under cursor.*
- [Utf8Char](#) * **u8c_disp_row** (int drow)
Return pointer to the first u8c character in row drow of the display.
- const [Utf8Char](#) * **u8c_disp_row** (int drow) const
See docs for non-const version of [u8c_disp_row\(int\)](#)
- [Utf8Char](#) * **u8c_hist_row** (int hrow)
Return u8c for beginning of a row inside the scrollbar history.
- const [Utf8Char](#) * **u8c_hist_row** (int hrow) const
See docs for non-const version of [u8c_hist_row\(int\)](#)
- const [Utf8Char](#) * **u8c_hist_use_row** (int hrow) const
See docs for non-const version of [u8c_hist_use_row\(int\)](#)
- [Utf8Char](#) * **u8c_hist_use_row** (int hurow)
Return u8c for beginning of row hurow inside the 'in use' part of the scrollbar history.
- [Utf8Char](#) * **u8c_ring_row** (int grow)
Return UTF-8 char for row grow in the ring buffer.
- const [Utf8Char](#) * **u8c_ring_row** (int grow) const
See docs for non-const version of [u8c_ring_row\(int\)](#)
- const [Utf8Char](#) * **utf8_char_at_disp** (int drow, int dcol) const
Return Utf8Char for char at specified display row and column.*
- const [Utf8Char](#) * **utf8_char_at_glob** (int grow, int gcol) const
Return Utf8Char for char at specified global (grow,gcol).*
- int **w_to_col** (int W) const
Given a width in pixels, return number of columns that "fits" into that area.
- const [Utf8Char](#) * **walk_selection** (const [Utf8Char](#) *u8c, int &row, int &col) const
Walk the mouse selection one character at a time from beginning to end, returning a Utf8Char to the next character in the selection, or NULL if the end was reached, or if there's no selection.*

Protected Member Functions inherited from FL_Group

- `FL_Rect * bounds ()`
Returns the internal array of widget sizes and positions.
- `void draw_child (FL_Widget &widget) const`
Forces a child to redraw.
- `void draw_children ()`
Draws all children of the group.
- `void draw_outside_label (const FL_Widget &widget) const`
Parents normally call this to draw outside labels of child widgets.
- `virtual int on_insert (FL_Widget *, int)`
Allow derived groups to act when a widget is added as a child.
- `virtual int on_move (int, int)`
Allow derived groups to act when a widget is moved within the group.
- `virtual void on_remove (int)`
Allow derived groups to act when a child widget is removed from the group.
- `int * sizes ()`
Returns the internal array of widget sizes and positions.
- `void update_child (FL_Widget &widget) const`
Draws a child only if it needs it.

Protected Member Functions inherited from FL_Widget

- `void clear_flag (unsigned int c)`
Clears a flag in the flags mask.
- `void draw_backdrop () const`
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- `void draw_box () const`
Draws the widget box according its box style.
- `void draw_box (FL_Boxtype t, FL_Color c) const`
Draws a box of type t, of color c at the widget's position and size.
- `void draw_box (FL_Boxtype t, int x, int y, int w, int h, FL_Color c) const`
Draws a box of type t, of color c at the position X,Y and size W,H.
- `void draw_focus () const`
Draws a focus rectangle around the widget.
- `void draw_focus (FL_Boxtype t, int X, int Y, int W, int H) const`
Draws a focus rectangle around the widget.
- `void draw_focus (FL_Boxtype t, int x, int y, int w, int h, FL_Color bg) const`
Draws a focus box for the widget at the given position and size.
- `void draw_label () const`
Draws the widget's label at the defined label position.
- `void draw_label (int, int, int, int) const`
Draws the label in an arbitrary bounding box.
- `FL_Widget (int x, int y, int w, int h, const char *label=0L)`
Creates a widget at the given position and size.
- `unsigned int flags () const`
Gets the widget flags mask.
- `void h (int v)`
Internal use only.
- `void set_flag (unsigned int c)`
Sets a flag in the flags mask.
- `void w (int v)`

Internal use only.

- void `x` (int v)

Internal use only.

- void `y` (int v)

Internal use only.

Additional Inherited Members

Static Public Member Functions inherited from `Fl_Group`

- static `Fl_Group * current` ()
Returns the currently active group.
- static void `current` (`Fl_Group *g`)
Sets the current group.

Static Public Member Functions inherited from `Fl_Widget`

- static void `default_callback` (`Fl_Widget *widget`, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int `label_shortcut` (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int `test_shortcut` (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from `Fl_Widget`

- enum {
`INACTIVE` = 1<<0 , `INVISIBLE` = 1<<1 , `OUTPUT` = 1<<2 , `NOBORDER` = 1<<3 ,
`FORCE_POSITION` = 1<<4 , `NON_MODAL` = 1<<5 , `SHORTCUT_LABEL` = 1<<6 , `CHANGED` = 1<<7
 ,
`OVERRIDE` = 1<<8 , `VISIBLE_FOCUS` = 1<<9 , `COPIED_LABEL` = 1<<10 , `CLIP_CHILDREN` = 1<<11
 ,
`MENU_WINDOW` = 1<<12 , `TOOLTIP_WINDOW` = 1<<13 , `MODAL` = 1<<14 , `NO_OVERLAY` = 1<<15
 ,
`GROUP_RELATIVE` = 1<<16 , `COPIED_TOOLTIP` = 1<<17 , `FULLSCREEN` = 1<<18 , `MAC_USE_ACCENTS_MENU`
 = 1<<19 ,
`NEEDS_KEYBOARD` = 1<<20 , `IMAGE_BOUND` = 1<<21 , `DEIMAGE_BOUND` = 1<<22 ,
`AUTO_DELETE_USER_DATA` = 1<<23 ,
`MAXIMIZED` = 1<<24 , `POPUP` = 1<<25 , `USERFLAG3` = 1<<29 , `USERFLAG2` = 1<<30 ,
`USERFLAG1` = 1<<31 }
flags possible values enumeration.

11.142.1 Detailed Description

Terminal widget supporting Unicode/utf-8, ANSI/xterm escape codes with full RGB color control.

11.142.2 FI_Terminal

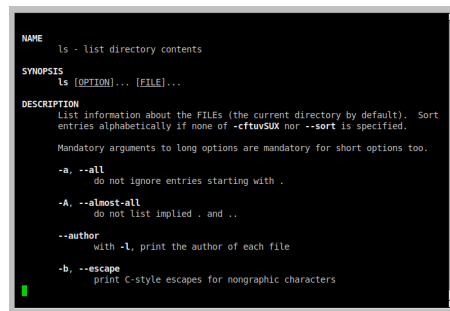

Figure 11.54 FI_Terminal widget showing a linux manual page

[FI_Terminal](#) is an output-only text widget supporting ASCII and UTF-8/Unicode. It supports most terminal text features, such as most VT100/xterm style escape sequences (see [The Escape Codes FI_Terminal Supports](#)), text colors/attributes, scrollback history, mouse selection, etc.

It is recommended that accessing features such as setting text colors and cursor positioning is best done with ANSI/XTERM escape sequences. But if one sets `ansi(false)` then this is not possible, so the public API can be used for common operations, e.g.

Public API	ESC code equivalent	Description
clear_screen_home()	ESC [H ESC [2 J	Clear screen, home cursor
cursor_home()	ESC [H	Home the cursor
clear_history()	ESC [3 J	Clear scrollback history
reset_terminal()	ESC [c	Reset terminal

To access more advanced API calls, one can derive a class from [FI_Terminal](#) to access protected methods manipulate the terminal more directly, e.g.

Protected API	ESC code equiv.	Description
current_style()	ESC [# m	Set text attributes
clear_eod()	ESC [0 J	Clear from cursor to end of display
clear_sod()	ESC [1 J	Clear from cursor to start of display
clear_eol()	ESC [0 K	Clear from cursor to end of line
clear_sol()	ESC [1 K	Clear from cursor to start of line
clear_line()	ESC [2 K	Clear line cursor is on
scroll(int) // >0 for up	ESC [1 S	Scroll up one line
scroll(int) // <0 for down	ESC [1 T	Scroll down one line
cursor_left()	ESC [1 D	Move cursor left (no wrap)
cursor_right()	ESC [1 C	Move cursor right (no wrap)
cursor_up()	ESC [1 B	Move cursor up (no scroll or wrap)
cursor_down()	ESC [1 A	Move cursor down (no scroll or wrap)
cursor_row() cursor_col()	ESC [# ; # H	Move cursor to row# / column#
insert_char()	ESC [# @	Insert a char at cursor position
delete_chars()	ESC [# P	Delete chars at cursor position
insert_rows()	ESC [# L	Insert rows at cursor position
delete_rows()	ESC [# M	Delete rows at cursor position
etc...	etc...	etc...

Many commonly used API functions are public, such as [textfgcolor\(\)](#) for setting text colors. Others, such as [cursor_up\(\)](#) are protected to prevent common misuse, and are available only to subclasses. Some common operations:

- Set the terminal's background color, see [color\(FI_Color\)](#)
- Set the terminal's default text color, see [textfgcolor_default\(FI_Color\)](#)
- Printing text to the terminal, see [FI_Terminal::printf\(\)](#) and [FI_Terminal::append\(\)](#)
- Clearing the screen, see [clear\(\)](#)
- Getting the terminal's buffer contents, see [text\(\)](#)
- Getting single utf8 characters by row/col from the terminal display, see [utf8_char_at_disp\(\)](#)
- Getting the text from a text selection, see [get_selection\(\)](#)

For applications that need input support, the widget can be subclassed to provide keyboard input, and advanced features like pseudo ttys, termio, serial port I/O, etc., as such features are beyond the scope of FLTK.

11.142.2.1 Examples

```
//
// FI_Terminal: Simple Use
//
FI_Terminal *tty = new FI_Terminal(...);
:
tty->append("Hello world.\n"); // simple strings
tty->append("\033[31mThis text is red.\033[0m\n"); // colored text
tty->append("\033[32mThis text is green.\033[0m\n");
tty->printf("The value of x is %.02f\n", x); // printf() formatting
```

There are also public methods for doing what most "\033[" escape codes do, so that if [ansi\(bool\)](#) is set to "false", one can still change text colors or clear the screen via application control, e.g.

```
tty->home(); // home the cursor
tty->clear_screen(); // clear the screen
tty->textfgcolor(0xff000000); // change the text color to RED
tty->textbgcolor(0x0000ff00); // change the background color to BLUE
//
// R G B
```

When creating the widget, the width/height determine the default column and row count for the terminal's display based on the current font size. The column width determines where text will wrap.

You can specify wider column sizes than the screen using [display_columns\(colwidth\)](#). When this value is larger than the widget's width, text will wrap off-screen, and can be revealed by resizing the widget wider.

11.142.2.2 Writing To Terminal From Applications

An application needing terminal output as part of its user interface can instance [FI_Terminal](#), and write text strings with:

- `append()` to append strings
- `printf()` to append formatted strings

Single character output can be done with:

- `print_char()` to print a single ASCII/UTF-8 char at the cursor
- `plot_char()` to put single ASCII/UTF-8 char at an x,y position

11.142.2.3 Text Attributes

The terminal's text supports these attributes:

- Italic - italicized text: `\033[3m`
- Bold - brighter/thicker text: `\033[1m`
- Dim - lower brightness text: `\033[2m`
- Underline - text that is underlined: `\033[4m`
- Strikeout - text that has a line through the text: `\033[9m`
- Inverse - text whose background and foreground colors are swapped: `\033[7m`
- Normal - normal text: `\033[0m`

Figure 11.55 FI_Terminal screen

11.142.2.4 Text and Background Colors

There's at least two ways to specify colors for text and background colors:

- 3 bit / 8 Color Values
- Full 24 bit R/G/B colors

Example of 3 bit colors:

Figure 11.56 FI_Terminal 3 bit colors

Example application source code using 3 bit colors:

```
//
// Text colors
//
tty->append("\033[31m Red text.\033[0m\n"); // Print red text..
tty->append("\033[32m Green text.\033[0m\n");
:
tty->append("\033[36m Cyan text.\033[0m\n");
tty->append("\033[37m White text.\033[0m\n");
//
// Background colors
//
tty->append("\033[41m Red Background.\033[0m\n"); // background will be red
tty->append("\033[42m Green Background.\033[0m\n");
:
tty->append("\033[46m Cyan Background.\033[0m\n");
tty->append("\033[47m White Background.\033[0m\n");
```

Example of 24 bit colors:

Figure 11.57 FI_Terminal 24 bit colors

Example application source code using 24 bit colors:

```
//
// 24 bit Text Color
//
tty->append("\033[38;2;0;0;255m Text is BLUE.\033[0m\n"); // RGB: R=0, G=0, B=255
tty->append("\033[38;2;255;0;0m Text is RED.\033[0m\n"); // RGB: R=255, G=0, B=0
tty->append("\033[38;2;127;64;0m Text is DARK ORANGE.\033[0m\n"); // RGB: R=127, G=64, B=0
//
// 24 bit Background Color
//
tty->append("\033[48;2;0;0;255m Background is BLUE.\033[0m\n"); // RGB: R=0, G=0, B=255
tty->append("\033[48;2;255;0;0m Background is RED.\033[0m\n"); // RGB: R=255, G=0, B=0
tty->append("\033[48;2;127;64;0m Background is DARK ORANGE.\033[0m\n"); // RGB: R=127, G=64, B=0
```

For more on the ANSI escape codes, see [The Escape Codes FI_Terminal Supports](#).

11.142.2.5 Features

Most standard terminal behaviors are supported, e.g.

- ASCII + UTF-8/Unicode
- scrollback history management
- mouse selection + copy/paste (^C, ^A)
- autoscroll during selection

Most popular ANSI/DEC VT100/Xterm escape sequences are supported (see [The Escape Codes FI_Terminal Supports](#)), including:

- per-character colors for text and background
- per-character text attributes: bold/dim, underline, strikeout
- scrolling up/down
- character insert/delete for characters/rows/screen
- clearing characters/rows/screen

Does not (yet) support:

- programmable regions (scroll regions and attribute blocks)
- dynamic line wrap (where resizing display dynamically re-wraps long lines)

Will likely never implement as part of this widget:

- pty/termio management (such features should be *subclassed*)
- Different per-character font family + sizes (font family/size is global only)
- variable width fonts

Regarding the font family+size; the way the terminal is currently designed, the font family and size must not vary within text; rows have to be consistent height. Varying widths are tricky too, esp. when it comes to moving the cursor up/down within a column; varying *widths* are supported (due to Unicode characters sometimes being "wide", but not heights).

11.142.2.6 Margins

The margins define the amount of space (in pixels) around the outside of the text display area, the space between the widget's inner edge (inside the [box\(\)](#)) and the text display area's outer edge. The margins can be inspected and changed with the [margin_left\(\)](#), [margin_right\(\)](#), [margin_top\(\)](#) and [margin_bottom\(\)](#) methods.

Enumerator

UNDERLINE	underlined text
_RESERVED↔ _1	(reserved for internal future use)
INVERSE	inverse text; fg/bg color are swapped
_RESERVED↔ _2	(reserved for internal future use)
STRIKEOUT	strikeout text

11.142.3.2 CharFlags

```
enum Fl_Terminal::CharFlags
```

Per-character 8 bit flags (uchar) used to manage special states for characters.

Enumerator

FG_XTERM	this char's fg color is an XTERM color; can be affected by Dim+Bold
BG_XTERM	this char's bg color is an XTERM color; can be affected by Dim+Bold
EOL	TODO: char at EOL, used for line re-wrap during screen resizing.

11.142.3.3 OutFlags

```
enum Fl_Terminal::OutFlags
```

Output translation flags for special control character translations.

Enumerator

OFF	no output translation
CR_TO_LF	carriage return generates a vertical line-feed (\r -> \n)
LF_TO_CR	line-feed generates a carriage return (\n -> \r)
LF_TO_CRLF	line-feed generates a carriage return line-feed (\n -> \r\n)

11.142.3.4 RedrawStyle

```
enum Fl_Terminal::RedrawStyle
```

Determines when [Fl_Terminal](#) calls [redraw\(\)](#) if new text is added.

RATE_LIMITED is the recommended setting, using [redraw_rate\(float\)](#) to determine the maximum rate of redraws.

See also

[redraw_style\(\)](#), [redraw_rate\(\)](#)

Enumerator

NO_REDRAW	app must call redraw() as needed to update text to screen
RATE_LIMITED	timer controlled redraws. (DEFAULT)
PER_WRITE	redraw triggered after every append() / printf() / etc. operation

11.142.3.5 ScrollbarStyle

```
enum Fl_Terminal::ScrollbarStyle
```

Behavior of scrollbars.

Enumerator

SCROLLBAR_OFF	scrollbar always invisible
SCROLLBAR_AUTO	scrollbar visible if widget resized in a way that hides columns (default)
SCROLLBAR_ON	scrollbar always visible

11.142.4 Constructor & Destructor Documentation

11.142.4.1 Fl_Terminal() [1/2]

```
Fl_Terminal::Fl_Terminal (
    int X,
    int Y,
    int W,
    int H,
    const char * L = 0)
```

The constructor for [Fl_Terminal](#).

This creates an empty terminal with defaults:

- white on black text; see [textfgcolor\(Fl_Color\)](#), [textbgcolor\(Fl_Color\)](#)
- rows/cols based on the W and H values, see [display_rows\(\)](#), [display_columns\(\)](#)
- scrollbar history of 100 lines, see [history_rows\(\)](#)
- [redraw_style\(\)](#) set to RATE_LIMITED, [redraw_rate\(\)](#) set to 0.10 seconds

Note: While [Fl_Terminal](#) derives from [Fl_Group](#), it's not intended for user code to use it as a parent for other widgets, so [end\(\)](#) is called.

Parameters

in	<i>X,Y,W,H</i>	position and size.
in	<i>L</i>	label string (optional), may be NULL.

11.142.4.2 Fl_Terminal() [2/2]

```
Fl_Terminal::Fl_Terminal (
    int X,
    int Y,
    int W,
    int H,
    const char * L,
    int rows,
    int cols,
    int hist)
```

Same as the default FLTK constructor, but lets the user force the rows, columns and history to specific sizes on creation.

Since the row/cols/hist are specified directly, this prevents the widget from auto-calculating the initial text buffer size based on the widget's pixel width/height, bypassing calls to the font system before the widget is displayed.

Note

fluid uses this constructor internally to avoid font calculations that opens the display, useful for when running in a headless context. (issue 837)

11.142.4.3 ~Fl_Terminal()

```
Fl_Terminal::~~Fl_Terminal (
    void )
```

The destructor for [Fl_Terminal](#).

Destroys the terminal display, scroll history, and associated widgets.

11.142.5 Member Function Documentation

11.142.5.1 ansi() [1/2]

```
void Fl_Terminal::ansi (
    bool val)
```

Enable/disable the ANSI mode flag.

If true, ANSI and VT100/xterm codes will be processed. If false, these codes won't be processed and will either be ignored or print the error character "?", depending on the value of [show_unknown\(\)](#).

See also

[show_unknown\(\)](#), [The Escape Codes Fl_Terminal Supports](#)

11.142.5.2 ansi() [2/2]

```
bool Fl_Terminal::ansi (
    void ) const
```

Return the state of the ANSI flag.

See also

[ansi\(bool\)](#)

11.142.5.3 append()

```
void Fl_Terminal::append (
    const char * s,
    int len = -1)
```

Appends string *s* to the terminal at the current cursor position using the current text color/attributes.

If *s* is NULL, the UTF-8 character cache is cleared, which is recommended before starting a block reading loop, and again after the block loop has completed.

If *len* is not specified, it's assumed *s* is a NULL terminated string. If *len* IS specified, it can be used for writing strings that aren't NULL terminated, such as block reads on a pipe, network, or other block oriented data source.

Redraws of the terminal widget are by default handled automatically, but can be changed with [redraw_rate\(\)](#) and [redraw_style\(\)](#).

Block I/O

When reading block oriented sources (such as pipes), [append\(\)](#) will handle partial UTF-8 chars straddling the block boundaries. It does this using an internal byte cache, which should be cleared before and after block I/O loops by calling `append(NULL)` as shown in the example below, to prevent the possibilities of partial UTF-8 characters left behind by an interrupted or incomplete block loop.

```
// Example block reading a command pipe in Unix

// Run command and read as a pipe
FILE *fp = popen("ls -la", "r");
if (!fp) { ..error_handling.. }

// Enable non-blocking I/O
int fd = fileno(fp);
fcntl(fd, F_SETFL, O_NONBLOCK);

// Clear UTF-8 character cache before starting block loop
G_tty->append(NULL); // prevents leftover partial UTF-8 bytes

// Block read loop
while (1) {
```

```

    Fl::wait(0.05); // give fltk .05 secs of cpu to manage UI
    ssize_t bytes = read(fd, s, sizeof(s)); // read block from pipe
    if (bytes == -1 && errno == EAGAIN) continue; // no data yet? continue
    if (bytes > 0) G_tty->append(s); // append output to terminal
    else break; // end of pipe?
}

// Flush cache again after block loop completes
G_tty->append(NULL);

// Close pipe, done
pclose(fp);

```

Note

- String can contain ASCII or UTF-8 chars
- `len` is optional; if unspecified, expects `s` to be a NULL terminated string
- Handles partial UTF-8 chars split between calls (e.g. block oriented writes)
- If `s` is NULL, this clears the "partial UTF-8" character cache
- Redraws are managed automatically by default; see [redraw_style\(\)](#)

11.142.5.4 `append_ascii()`

```

void Fl_Terminal::append_ascii (
    const char * s)

```

Append NULL terminated ASCII string to terminal, slightly more efficient than [append_utf8\(\)](#).

- If `s` is NULL, behavior is to do nothing
- Redraws are triggered automatically, depending on [redraw_style\(\)](#)

11.142.5.5 `append_utf8()`

```

void Fl_Terminal::append_utf8 (
    const char * buf,
    int len = -1)

```

Append NULL terminated UTF-8 string to terminal.

- If `buf` is NULL, UTF-8 cache buffer is cleared
- If optional `len` isn't specified or is -1, `strlen(text)` is used.
- If `len` is 0 or <-1, no changes are made
- Handles UTF-8 chars split across calls (e.g. block writes from pipes, etc)
- Redraws are triggered automatically, depending on [redraw_style\(\)](#)

11.142.5.6 `box()`

```

void Fl_Terminal::box (
    Fl_Boxtype val) [inline]

```

Sets the box type, updates terminal margins et al.

Default is `FL_DOWN_FRAME`.

`FL_XXX_FRAME` types are handled in a special way by this widget, and guarantee the background is a flat field.

`FL_XXX_BOX` may draw gradients as inherited by [Fl::scheme\(\)](#).

11.142.5.7 clear() [1/2]

```
void Fl_Terminal::clear (
    Fl_Color val)
```

Clears the screen to a specific color `val` and homes the cursor.

See also

[clear_screen\(\)](#), [clear_screen_home\(\)](#), [cursor_home\(\)](#)

11.142.5.8 clear() [2/2]

```
void Fl_Terminal::clear (
    void )
```

Clears the screen to the current [textbgcolor\(\)](#), and homes the cursor.

See also

[clear_screen\(\)](#), [clear_screen_home\(\)](#), [cursor_home\(\)](#)

11.142.5.9 clear_screen()

```
void Fl_Terminal::clear_screen (
    bool scroll_to_hist = true)
```

Clear the terminal screen only; does not affect the cursor position.

Also clears the current mouse selection.

If 'scroll_to_hist' is true, the screen is cleared by scrolling the contents into the scrollbar history, where it can be retrieved with the scrollbar. This is the default behavior. If false, the screen is cleared and the scrollbar history is unchanged.

Similar to the escape sequence "<ESC>[2J".

See also

[clear_screen_home\(\)](#)

11.142.5.10 clear_screen_home()

```
void Fl_Terminal::clear_screen_home (
    bool scroll_to_hist = true)
```

Clear the terminal screen and home the cursor.

Also clears the current mouse selection.

If 'scroll_to_hist' is true, the screen is cleared by scrolling the contents into the scrollbar history, where it can be retrieved with the scrollbar. This is the default behavior. If false, the screen is cleared and the scrollbar history is unchanged.

Similar to the escape sequence "<ESC>[2J<ESC>[H".

See also

[clear_screen\(\)](#)

11.142.5.11 color()

```
void Fl_Terminal::color (
    Fl_Color val)
```

Sets the background color for the terminal's [Fl_Group::box\(\)](#).

If the [textbgcolor\(\)](#) and [textbgcolor_default\(\)](#) are set to the special "see through" color 0xffffffff when any text was added, changing [color\(\)](#) affects the color that shows through behind that existing text.

Otherwise, whatever specific background color was set for existing text will persist after changing [color\(\)](#).

To see the effects of a change to [color\(\)](#), follow up with a call to [redraw\(\)](#).

The default value is 0x0.

11.142.5.12 `cursor_col()`

```
void Fl_Terminal::cursor_col (
    int col) [protected]
```

Move cursor to the specified column `col`.

This value is clamped to the range (0..`display_columns()`-1).

11.142.5.13 `cursor_cr()`

```
void Fl_Terminal::cursor_cr (
    void ) [protected]
```

Move cursor as if a CR (\r) was received.

Same as `cursor_sol()`

11.142.5.14 `cursor_down()`

```
void Fl_Terminal::cursor_down (
    int count = 1,
    bool do_scroll = false) [protected]
```

Moves cursor down `count` lines.

If cursor hits screen bottom, it either stops (does not wrap) if `do_scroll` is false, or wraps and scrolls up if `do_scroll` is true.

Parameters

<i>count</i>	Number of lines to move cursor down
<i>do_scroll</i>	Enable scrolling if set to true

11.142.5.15 `cursor_right()`

```
void Fl_Terminal::cursor_right (
    int count = 1,
    bool do_scroll = false) [protected]
```

Moves cursor right `count` columns.

If cursor hits right edge of screen, it either stops (does not wrap) if `do_scroll` is false, or wraps and scrolls up one line if `do_scroll` is true.

11.142.5.16 `cursor_row()`

```
void Fl_Terminal::cursor_row (
    int row) [protected]
```

Move cursor to the specified row `row`.

This value is clamped to the range (0..`display_rows()`-1).

11.142.5.17 `cursor_up()`

```
void Fl_Terminal::cursor_up (
    int count = 1,
    bool do_scroll = false) [protected]
```

Moves cursor up `count` lines.

If cursor hits screen top, it either stops (does not wrap) if `do_scroll` is false, or scrolls down if `do_scroll` is true.

11.142.5.18 `delete_rows()`

```
void Fl_Terminal::delete_rows (
    int count) [protected]
```

Delete (`count`) rows at cursor position.

Causes rows to scroll up, and empty lines created at bottom of screen. Lines deleted by scroll up are NOT moved into the scroll history.

11.142.5.19 display_columns() [1/2]

```
void Fl_Terminal::display_columns (
    int dcols)
```

Set terminal's display width in columns of text characters.

This value is normally managed automatically by [resize\(\)](#) based on the current font size, and should not be changed. You CAN make the [display_columns\(\)](#) larger than the width of the widget; text in the terminal will simply run off the screen edge and be clipped; the only way to reveal that text is if the user enlarges the widget, or the font size made smaller.

To change the display width, it is best to use [resize\(\)](#) instead.

11.142.5.20 display_columns() [2/2]

```
int Fl_Terminal::display_columns (
    void ) const
```

Return terminal's display width in columns of text characters.

This value is normally managed automatically by [resize\(\)](#) based on the current font size.

11.142.5.21 display_rows() [1/2]

```
void Fl_Terminal::display_rows (
    int drows)
```

Set terminal's display height in lines of text (rows).

This value is normally managed automatically by [resize\(\)](#) based on the current font size, and should not be changed.

To change the display height, use [resize\(\)](#) instead.

11.142.5.22 display_rows() [2/2]

```
int Fl_Terminal::display_rows (
    void ) const
```

Return terminal's display height in lines of text (rows).

This value is normally managed automatically by [resize\(\)](#) based on the current font size.

11.142.5.23 draw()

```
void Fl_Terminal::draw (
    void ) [virtual]
```

Draws the entire [Fl_Terminal](#).

Lets the group draw itself first (scrollbars should be only members), followed by the terminal's screen contents.

Reimplemented from [Fl_Group](#).

11.142.5.24 draw_buff()

```
void Fl_Terminal::draw_buff (
    int Y) const [protected]
```

Draws the buffer position we are scrolled to onto the FLTK screen starting at pixel position Y.

This can be anywhere in the ring buffer, not just the 'active display'; depends on what position the scrollbar is set to.

Handles attributes, colors, text selections, cursor.

Parameters

in	Y	top position of top left character in the window in FLTK coordinates
----	---	--

11.142.5.25 draw_row()

```
void Fl_Terminal::draw_row (
    int grow,
    int Y) const [protected]
```

Draw the specified global row, which is the row in `ring_chars[]`.

The global row includes history + display buffers.

Parameters

in	<i>grow</i>	row number
in	<i>Y</i>	top position of characters in the row in FLTK coordinates

11.142.5.26 draw_row_bg()

```
void Fl_Terminal::draw_row_bg (
    int grow,
    int X,
    int Y) const [protected]
```

Draw the background for the specified `ring_chars[]` global row `grow` starting at FLTK coords `X` and `Y`.

Note we may be called to draw display, or even history if we're scrolled back. If there's any change in bg color, we draw the filled rects here.

If the bg color for a character is the special "see through" color 0xffffffff, no pixels are drawn.

Parameters

in	<i>grow</i>	row number
in	<i>X,Y</i>	top left corner of the row in FLTK coordinates

11.142.5.27 error_char() [1/2]

```
void Fl_Terminal::error_char (
    const char * val) [inline]
```

Sets the "error character" utf8 string shown for invalid utf8 or bad ANSI sequences if [show_unknown\(\)](#) is true. Default: "¿".

See also

[show_unknown\(bool\)](#)

11.142.5.28 error_char() [2/2]

```
const char * Fl_Terminal::error_char (
    void ) const [inline]
```

Returns the "error character" utf8 string, which is shown for invalid utf8 or bad ANSI sequences if [show_unknown\(\)](#) is true.

See also

[show_unknown\(bool\)](#)

11.142.5.29 get_selection()

```
bool Fl_Terminal::get_selection (
    int & srow,
    int & scol,
```

```
int & erow,
int & ecol) const [protected]
```

Return mouse selection's start/end position in the ring buffer, if any.

Ensures (start < end) to allow walking 'forward' thru selection, left-to-right, top-to-bottom. The row/col values are indexes into the entire ring buffer.

Example: walk the characters of the mouse selection:

```
// Get selection
int srow,scol,erow,ecol;
if (get_selection(srow,scol,erow,ecol)) { // mouse selection exists?
    // Walk entire selection from start to end
    for (int row=srow; row<=erow; row++) { // walk rows of selection
        const Utf8Char *u8c = u8c_ring_row(row); // ptr to first character in row
        int col_start = (row==srow) ? scol : 0; // start row? start at scol
        int col_end = (row==erow) ? ecol : ring_cols(); // end row? end at ecol
        u8c += col_start; // include col offset (if any)
        for (int col=col_start; col<=col_end; col++,u8c++) { // walk columns
            ..do something with each char at *u8c..
        }
    }
}
```

Returns:

- true – valid selection values returned
- false – no selection was made, returned values undefined

See also

[walk_selection\(\)](#), [is_selection\(\)](#)

Parameters

<i>srow</i>	starting row for selection
<i>scol</i>	starting column for selection
<i>erow</i>	ending row for selection
<i>ecol</i>	ending column for selection

11.142.5.30 h_to_row()

```
int Fl_Terminal::h_to_row (
    int H) const [protected]
```

Given a height in pixels, return number of rows that "fits" into that area.

This is used by the constructor to size the row/cols to fit the widget size.

11.142.5.31 handle()

```
int Fl_Terminal::handle (
    int e) [virtual]
```

Handle FLTK events.

Reimplemented from [Fl_Group](#).

11.142.5.32 handle_unknown_char() [1/2]

```
int Fl_Terminal::handle_unknown_char (
    int drow,
    int dcol) [protected]
```

Handle an unknown char by either emitting an error symbol to the tty, or do nothing, depending on the user configurable value of [show_unknown\(\)](#).

This writes the "unknown" character to the display position (drow,dcol) if [show_unknown\(\)](#) is true.

Returns 1 if tty modified, 0 if not.

See also

[show_unknown\(\)](#)

11.142.5.33 `handle_unknown_char()` [2/2]

```
int Fl_Terminal::handle_unknown_char (
    void ) [protected]
```

Handle an unknown char by either emitting an error symbol to the tty, or do nothing, depending on the user configurable value of [show_unknown\(\)](#).

This writes the "unknown" character to the output stream if [show_unknown\(\)](#) is true.

Returns 1 if tty modified, 0 if not.

See also

[show_unknown\(\)](#)

11.142.5.34 `history_lines()`

```
void Fl_Terminal::history_lines (
    int val)
```

Set the number of lines of screen history.

Large values can be briefly heavy on cpu and memory usage.

11.142.5.35 `history_use()`

```
int Fl_Terminal::history_use (
    void ) const
```

Returns how many lines are "in use" by the screen history buffer.

This value will be 0 if history was recently cleared with e.g. [clear_history\(\)](#) or "<ESC>c".

Return value will be in the range 0 .. ([history_lines\(\)](#)-1).

11.142.5.36 `hscrollbar_style()` [1/2]

```
void Fl_Terminal::hscrollbar_style (
    ScrollbarStyle val)
```

Set the horizontal scrollbar behavior style.

This determines when the scrollbar is visible.

ScrollbarStyle enum	Description
SCROLLBAR_ON	Horizontal scrollbar always displayed.
SCROLLBAR_OFF	Horizontal scrollbar never displayed.
SCROLLBAR_AUTO	Horizontal scrollbar displayed whenever widget width hides columns.

The default style is [SCROLLBAR_AUTO](#).

See also

[ScrollbarStyle](#)

11.142.5.37 `hscrollbar_style()` [2/2]

```
Fl_Terminal::ScrollbarStyle Fl_Terminal::hscrollbar_style (
    void ) const
```

Get the horizontal scrollbar behavior style.

This determines when the scrollbar is visible.

Value will be one of the [Fl_Terminal::ScrollbarStyle](#) enum values.

See also

[hscrollbar_style\(Fl_Terminal::ScrollbarStyle\)](#)

11.142.5.38 insert_char()

```
void Fl_Terminal::insert_char (
    char c,
    int rep) [protected]
```

Insert char 'c' at the current cursor position for 'rep' times.
Does not wrap; characters at end of line are lost.

11.142.5.39 insert_rows()

```
void Fl_Terminal::insert_rows (
    int count) [protected]
```

Insert (count) rows at current cursor position.

Causes rows below to scroll down, and empty lines created. Lines deleted by scroll down are NOT moved into the scroll history.

11.142.5.40 is_inside_selection()

```
bool Fl_Terminal::is_inside_selection (
    int grow,
    int gcol) const [protected]
```

Is global row/column inside the current mouse selection?

Returns

- true – (grow, gcol) is inside a valid selection.
- false – (grow, gcol) is outside, or no valid selection.

11.142.5.41 output_translate()

```
void Fl_Terminal::output_translate (
    Fl_Terminal::OutFlags val)
```

Sets the combined output translation flags to val.

val can be sensible combinations of the [OutFlags](#) bit flags.

The default is LF_TO_CRLF, so that \n will generate both carriage-return (CR) and line-feed (LF).

For \r and \n to be handled literally, use `output_translate(Fl_Terminal::OutFlags::OFF)`;

To disable all output translations, use 0 or [Fl_Terminal::OutFlags::OFF](#).

11.142.5.42 plot_char() [1/2]

```
void Fl_Terminal::plot_char (
    char c,
    int drow,
    int dcol)
```

Plot the ASCII character c at the terminal's display position (drow,dcol).

The character MUST be printable (in range 0x20 - 0x7e), and is displayed using the current text color/attributes.

Characters outside that range are either ignored or print the error character (¿), depending on [show_unknown\(bool\)](#).

This is a very low level method.

No range checking is done on drow,dcol:

- drow must be in range 0..[\(display_rows\(\)-1\)](#)
- dcol must be in range 0..[\(display_columns\(\)-1\)](#)
- Does not trigger redraws
- Does NOT handle control codes, ANSI or XTERM escape sequences.

See also

[show_unknown\(bool\)](#), [handle_unknown_char\(\)](#), [is_printable\(\)](#)

11.142.5.43 `plot_char()` [2/2]

```
void Fl_Terminal::plot_char (
    const char * text,
    int len,
    int drow,
    int dcol)
```

Plot the UTF-8 character `text` of length `len` at display position (`drow`,`dcol`).

The character is displayed using the current text color/attributes.

This is a very low level method.

No range checking is done on `drow`,`dcol`:

- `drow` must be in range 0..[\(display_rows\(\)-1\)](#)
- `dcol` must be in range 0..[\(display_columns\(\)-1\)](#)
- Does not trigger redraws
- Does not handle control codes, ANSI or XTERM escape sequences.
- Invalid UTF-8 chars show the error character (`¿`) depending on [show_unknown\(bool\)](#).

See also

[handle_unknown_char\(\)](#)

11.142.5.44 `print_char()` [1/2]

```
void Fl_Terminal::print_char (
    char c)
```

Prints single ASCII char `c` at current cursor position, and advances the cursor.

The character is displayed at the current cursor position using the current text color/attributes.

- `c` must be ASCII, not utf-8
- Does not trigger redraws

11.142.5.45 `print_char()` [2/2]

```
void Fl_Terminal::print_char (
    const char * text,
    int len = -1)
```

Prints single UTF-8 char `text` of optional byte length `len` at current cursor position, and advances the cursor if the character is printable.

Handles ASCII and control codes (CR, LF, etc).

The character is displayed at the current cursor position using the current text color/attributes.

Handles control codes and can be used to construct ANSI/XTERM escape sequences.

- If optional `len` isn't specified or `<0`, `strlen(text)` is used.
- `text` must not be NULL.
- `len` must not be 0.
- `text` must be a single char only (whether UTF-8 or ASCII)
- `text` can be an ASCII character, though not as efficient as [print_char\(\)](#)
- Invalid UTF-8 chars show the error character (`¿`) depending on [show_unknown\(bool\)](#).
- Does not trigger redraws

See also

[show_unknown\(bool\)](#), [handle_unknown_char\(\)](#)

11.142.5.46 printf()

```
void Fl_Terminal::printf (
    const char * fmt,
    ...)
```

Appends printf formatted messages to the terminal.

The string can contain UTF-8, crlf's, and ANSI sequences are also supported. Example:

```
#include <FL/Fl_Terminal.H>
int main(..) {
    :
    // Create a terminal, and append some messages to it
    Fl_Terminal *tty = new Fl_Terminal(..);
    :
    // Append three lines of formatted text to the buffer
    tty->printf("The current date is: %s.\nThe time is: %s\n", date_str, time_str);
    tty->printf("The current PID is %ld.\n", (long)getpid());
    :
}
```

Note

The expanded string is currently limited to 1024 characters (including NULL). For longer strings use [append\(\)](#) which has no string limits.

11.142.5.47 redraw_rate()

```
void Fl_Terminal::redraw_rate (
    float val)
```

Set the maximum rate redraw speed in floating point seconds if [redraw_style\(\)](#) is set to RATE_LIMITED.

When output is sent to the terminal, rather than calling [redraw\(\)](#) right away, a timer is started with this value indicating how long to wait before calling [redraw\(\)](#), causing the output to be shown. 0.10 is recommended (1/10th of a second), to limit redraws to no more than 10 redraws per second.

The value that works best depends on how fast data arrives, and how fast the font system can draw text at runtime. Values too small cause too many redraws to occur, causing the terminal to get backlogged if large bursts of data arrive quickly. Values too large cause realtime output to be too "choppy".

11.142.5.48 redraw_style() [1/2]

```
void Fl_Terminal::redraw_style (
    RedrawStyle val)
```

Set how [Fl_Terminal](#) manages screen redrawing.

This setting is relevant when [Fl_Terminal](#) is used for high bandwidth data; too many redraws will slow things down, too few cause redraws to be 'choppy' when realtime data comes in.

Redrawing can be cpu intensive, depending on how many rows/cols are being displayed; worst case: large display + small font. Speed largely depends on the end user's graphics hardware and font drawing system.

RedrawStyle enum	Description
NO_REDRAW	App must call redraw() as needed to update text to screen
RATE_LIMITED	Rate limited, timer controlled redraws. (DEFAULT) See redraw_rate()
PER_WRITE	Redraw triggered <i>every</i> call to append() / printf() / etc.

The default style is RATE_LIMITED, which is the easiest to use, and automates redrawing to be capped at 10 redraws per second max. See [redraw_rate\(float\)](#) to control this automated redraw speed.

See also

[redraw_rate\(\)](#), [RedrawStyle](#)

11.142.5.49 [redraw_style\(\)](#) [2/2]

```
Fl_Terminal::RedrawStyle Fl_Terminal::redraw_style (
    void ) const
```

Get the redraw style.

This determines when the terminal redraws itself while text is being added to it.

Value will be one of the [Fl_Terminal::RedrawStyle](#) enum values.

See also

[redraw_style\(Fl_Terminal::RedrawStyle\)](#)

11.142.5.50 [reset_terminal\(\)](#)

```
void Fl_Terminal::reset_terminal (
    void )
```

Resets terminal to default colors, clears screen, history and mouse selection, homes cursor, resets tabstops.

Same as "<ESC>c"

11.142.5.51 [resize\(\)](#)

```
void Fl_Terminal::resize (
    int X,
    int Y,
    int W,
    int H) [virtual]
```

Handle widget resizing, such as if user resizes parent window.

This may increase the column width of the widget if the width of the widget is made larger than it was.

Note

Resizing currently does not rewrap existing text. Currently enlarging makes room for longer lines, and shrinking the size lets long lines run off the right edge of the display, hidden from view. This behavior may change in the future to rewrap.

Reimplemented from [Fl_Group](#).

11.142.5.52 [scroll\(\)](#)

```
void Fl_Terminal::scroll (
    int rows) [protected]
```

Scroll the display up(+) or down(-) the specified rows.

- Negative value scrolls "down", clearing top line, and history unaffected.
- Postive value scrolls "up", clearing bottom line, rotating top line into history.

11.142.5.53 [scrollbar_actual_size\(\)](#)

```
int Fl_Terminal::scrollbar_actual_size (
    void ) const
```

Returns the scrollbar's actual "trough size", which is the width of FL_VERTICAL scrollbars, or height of FL_↔ HORIZONTAL scrollbars.

If [scrollbar_size\(\)](#) is zero (default), then the value of the global [Fl::scrollbar_size\(\)](#) is returned, which is the default global scrollbar size for the entire application.

11.142.5.54 scrollbar_size() [1/2]

```
void Fl_Terminal::scrollbar_size (
    int val)
```

Set the pixel size of both horizontal and vertical scrollbar's "trough" to `val`.

Setting `val` to the special value 0 causes the widget to track the global [Fl::scrollbar_size\(\)](#).

Use non-zero values *only* if you need to override the global [Fl::scrollbar_size\(\)](#) size.

See also

[Fl::scrollbar_size\(\)](#), [scrollbar_actual_size\(\)](#)

11.142.5.55 scrollbar_size() [2/2]

```
int Fl_Terminal::scrollbar_size (
    void ) const
```

Get current pixel size of all the scrollbar's troughs for this widget, or zero if the global [Fl::scrollbar_size\(\)](#) is being used (default).

If this value returns zero, this widget's scrollbars are using the global [Fl::scrollbar_size\(\)](#), in which case use [scrollbar_actual_size\(\)](#) to get the actual (effective) pixel scrollbar size being used.

Returns

Scrollbar trough size in pixels, or 0 if the global [Fl::scrollbar_size\(\)](#) is being used.

See also

[Fl::scrollbar_size\(int\)](#), [scrollbar_actual_size\(\)](#)

11.142.5.56 selection_extend()

```
bool Fl_Terminal::selection_extend (
    int X,
    int Y) [protected]
```

Extend selection to FLTK coords X,Y.

Returns true if extended, false if nothing done (X,Y offscreen)

11.142.5.57 selection_text()

```
const char * Fl_Terminal::selection_text (
    void ) const
```

Return text selection (for copy()/paste() operations)

- Returns allocated NULL terminated string for entire selection.
- Caller must free() this memory when done.
- Unicode safe.

11.142.5.58 selection_text_len()

```
int Fl_Terminal::selection_text_len (
    void ) const
```

Return byte length of all UTF-8 chars in selection, or 0 if no selection.

NOTE: Length includes trailing white on each line.

11.142.5.59 show_unknown() [1/2]

```
void Fl_Terminal::show_unknown (
    bool val)
```

Set the "show unknown" flag.

If true, invalid utf8 and invalid ANSI sequences will be shown with the error character "¿".

If false, errors characters won't be shown.

See also

[handle_unknown_char\(\)](#), [error_char\(const char*\)](#).

11.142.5.60 show_unknown() [2/2]

```
bool Fl_Terminal::show_unknown (
    void ) const
```

Return the "show unknown" flag.

See also

[show_unknown\(bool\)](#), [error_char\(const char*\)](#).

11.142.5.61 text()

```
const char * Fl_Terminal::text (
    bool lines_below_cursor = false) const
```

Return a string copy of all lines in the terminal (including history).

The returned string is allocated with `strdup(3)`, which the caller must `free(3)`.

If 'lines_below_cursor' is false (default), lines below the cursor on down to the bottom of the display are ignored, and not included in the returned string.

If 'lines_below_cursor' is true, then all lines in the display are returned including any below the cursor, even if all are blank.

Example use:

```
Fl_Terminal *tty = new Fl_Terminal(..);
:
const char *s = tty->text(); // get a copy of the terminal's contents
printf("Terminal's contents is:\n%s\n", s);
free((void*)s); // free() the copy when done!
```

Parameters

in	<i>lines_below_cursor</i>	include lines below cursor, default: false
----	---------------------------	--

Returns

A string allocated with `strdup(3)` which must be free'd, text is UTF-8.

11.142.5.62 textattrib() [1/2]

```
uchar Fl_Terminal::textattrib () const
```

Get text attribute bits (underline, inverse, etc).

This is the default attribute used for all newly printed text.

See also

[textattrib\(uchar\)](#), [Fl_Terminal::Attrib](#)

11.142.5.63 textattrib() [2/2]

```
void Fl_Terminal::textattrib (
    uchar val)
```

Set text attribute bits (underline, inverse, etc).

This will be the default attribute used for all newly printed text.

See also

[Fl_Terminal::Attrib](#)

11.142.5.64 textbgcolor()

```
void Fl_Terminal::textbgcolor (
    Fl_Color val)
```

Set text background color to fltk color `val` used by any new text added.

Use this for temporary color changes, similar to `<ESC>[48;2;<R>;<G>;m`

Colors set this way will NOT be influenced by the xterm Dim/Bold color intensity attributes. For that, use [textbgcolor_xterm\(uchar\)](#) instead.

This setting does *not* affect the 'default' text colors used by `<ESC>[0m`, `<ESC>c`, [reset_terminal\(\)](#), etc. To set that too, also set [textbgcolor_default\(Fl_Color\)](#), e.g.

```
// Set both 'current' and 'default' colors
Fl_Color darkamber = 0x20100000;
tty->textbgcolor(darkamber);           // set 'current' bg color
tty->textbgcolor_default(darkamber);    // set 'default' bg color used by ESC[0m reset
```

The special color value `0xffffffff` (all ff's) is the "see through" color, which lets the widget's own [Fl_Group::color\(\)](#) show through behind the text. This special text background color is the *default*, and is what most situations need.

See also

[textbgcolor_default\(Fl_Color\)](#), [textbgcolor_xterm\(uchar\)](#)

11.142.5.65 textbgcolor_default() [1/2]

```
void Fl_Terminal::textbgcolor_default (
    Fl_Color val)
```

Set the default text background color used by any new text added after a reset (`<ESC>c`, `<ESC>[0m`, or [reset_terminal\(\)](#)).

Does not affect the 'current' text background color; use [textbgcolor\(Fl_Color\)](#) to set that.

The special color value `0xffffffff` (all ff's) is the "see through" color, which lets the widget's own [Fl_Group::color\(\)](#) show through behind the text. This special text background color is the *default*, and is what most situations need.

See also

[textbgcolor\(Fl_Color\)](#)

11.142.5.66 textbgcolor_default() [2/2]

```
Fl_Color Fl_Terminal::textbgcolor_default (
    void ) const [inline]
```

Return text's default background color.

See also

[textbgcolor\(\)](#)

11.142.5.67 textbgcolor_xterm()

```
void Fl_Terminal::textbgcolor_xterm (
    uchar val)
```

Sets the background text color as one of the 8 'xterm color' values.

This will be the foreground color used for all newly printed text, similar to the `<ESC>[#m` escape sequence, where `#` is between 40 and 47.

This color will be reset to the default bg color if [reset_terminal\(\)](#) is called, or by `<ESC>c`, `<ESC>[0m`, etc.

The xterm color intensity values can be influenced by the Dim/Bold/Normal modes (which can be set with e.g. `<ESC>[1m`, [textattrib\(\)](#), etc), so the actual RGB values of these colors allow room for Dim/Bold to influence their brightness. For instance, "Normal Red" is not full brightness to allow "Bold Red" to be brighter. This goes for all colors except 'Black', which is not influenced by Dim or Bold; Black is always Black.

The 8 color xterm values are:

- 0 = Black
- 1 = Red
- 2 = Green
- 3 = Yellow
- 4 = Blue
- 5 = Magenta
- 6 = Cyan
- 7 = White

See also

[textbgcolor_default\(Fl_Color\)](#)

11.142.5.68 textcolor()

```
void Fl_Terminal::textcolor (
    Fl_Color val)
```

Set the text color for the terminal.

This is a convenience method that sets *both* [textfgcolor\(\)](#) and [textfgcolor_default\(\)](#), ensuring both are set to the same value.

Colors set this way will NOT be influenced by the xterm Dim/Bold color intensity attributes. For that, use [textcolor_xterm\(\)](#) instead.

See also

[textfgcolor\(Fl_Color\)](#), [textfgcolor_default\(Fl_Color\)](#), [textbgcolor_xterm\(uchar\)](#)

11.142.5.69 textfgcolor()

```
void Fl_Terminal::textfgcolor (
    Fl_Color val)
```

Set text foreground drawing color to fltk color `val` used by any new text added.

Use this for temporary color changes, similar to `<ESC>[38;2;<R>;<G>;m`

Colors set this way will NOT be influenced by the xterm Dim/Bold color intensity attributes. For that, use [textfgcolor_xterm\(uchar\)](#) instead.

This setting does *not* affect the 'default' text colors used by `<ESC>[0m`, `<ESC>c`, [reset_terminal\(\)](#), etc. To change both the current *and* default fg color, also use [textfgcolor_default\(Fl_Color\)](#). Example:

```
// Set both 'current' and 'default' colors
Fl_Color amber = 0xd0704000;
tty->textfgcolor(amber); // set 'current' fg color
tty->textfgcolor_default(amber); // set 'default' fg color used by ESC[0m reset
```

See also

[textfgcolor_default\(Fl_Color\)](#), [textfgcolor_xterm\(uchar\)](#)

11.142.5.70 textfgcolor_default() [1/2]

```
void Fl_Terminal::textfgcolor_default (
    Fl_Color val)
```

Set the default text foreground color used by `<ESC>c`, `<ESC>[0m`, and [reset_terminal\(\)](#). Does not affect the 'current' text foreground color; use [textfgcolor\(Fl_Color\)](#) to set that.

See also

[textfgcolor\(Fl_Color\)](#)

11.142.5.71 textfgcolor_default() [2/2]

```
Fl_Color Fl_Terminal::textfgcolor_default (
    void ) const [inline]
```

Return text's default foreground color.

See also

[textfgcolor\(\)](#)

11.142.5.72 textfgcolor_xterm()

```
void Fl_Terminal::textfgcolor_xterm (
    uchar val)
```

Sets the foreground text color as one of the 8 'xterm color' values.

This will be the foreground color used for all newly printed text, similar to the `<ESC>[#m` escape sequence, where # is between 30 and 37.

This color will be reset to the default fg color if [reset_terminal\(\)](#) is called, or by `<ESC>c`, `<ESC>[0m`, etc.

The xterm color intensity values can be influenced by the Dim/Bold/Normal modes (which can be set with e.g. `<ESC>[1m`, [textattrib\(\)](#), etc), so the actual RGB values of these colors allow room for Dim/Bold to influence their brightness. For instance, "Normal Red" is not full brightness to allow "Bold Red" to be brighter. This goes for all colors except 'Black', which is not influenced by Dim or Bold; Black is always Black.

The 8 color xterm values are:

- 0 = Black
- 1 = Red
- 2 = Green
- 3 = Yellow
- 4 = Blue
- 5 = Magenta
- 6 = Cyan
- 7 = White

See also

[textfgcolor_default\(Fl_Color\)](#)

11.142.5.73 textfont()

```
void Fl_Terminal::textfont (
    Fl_Font val)
```

Sets the font used for all text displayed in the terminal.

This affects all existing text (in display and history) as well as any newly printed text.

Only monospace fonts are recommended, such as FL_COURIER or FL_SCREEN. Custom fonts configured with [Fl::set_font\(\)](#) will also work, as long as they are monospace.

11.142.5.74 textsize()

```
void Fl_Terminal::textsize (
    Fl_Fontsize val)
```

Sets the font size used for all text displayed in the terminal.

This affects all existing text (in display and history) as well as any newly printed text.

Changing this will affect the [display_rows\(\)](#) and [display_columns\(\)](#).

11.142.5.75 u8c_disp_row()

```
Fl_Terminal::Utf8Char * Fl_Terminal::u8c_disp_row (
    int drow) [protected]
```

Return pointer to the first u8c character in row `drow` of the display.

- 'drow' is indexed relative to the beginning of the display buffer.
- This can be used to walk all columns in the specified row, e.g.

```
// Print all chars in first row of display (ASCII and UTF-8)
Utf8Char *u8c = u8c_disp_row(0);           // first char of first display row
int scol = 0, ecol = disp_cols();          // start/end for column loop
for (int col=scol; col<ecol; col++,u8c++) { // loop from first char to last
    char *text = u8c->text_utf8();          // text string for char
    int len = u8c->length();                // text string length for char
    ::printf("<%.s>", len, text);            // print potentially multibyte char
}
```

- This can also be used to walk all rows on the display screen up to the cursor row, e.g.

```
// Write all chars in display up to cursor row to stdout
for (int row=0; row<disp_rows() && row<=cursor_row(); row++) {
    const Utf8Char *u8c = u8c_disp_row(row); // first char in row
    for (int col=0; col<=display_cols(); col++,u8c++) { // walk columns left-to-right
        // ..Do things here with each u8c char..
        ::printf("%.s", u8c->text_utf8(), u8c->length()); // write each utf8 char to stdout
    }
    ::printf("\n");
}
```

See also

[u8c_hist_use_row\(\)](#) for examples of walking the screen history

11.142.5.76 u8c_hist_row()

```
Fl_Terminal::Utf8Char * Fl_Terminal::u8c_hist_row (
    int hrow) [protected]
```

Return u8c for beginning of a row inside the scrollbar history.

'hrow' is indexed relative to the beginning of the scrollbar history buffer.

See also

[u8c_disp_row\(int\)](#) for example use.

11.142.5.77 u8c_hist_use_row()

```
Fl_Terminal::Utf8Char * Fl_Terminal::u8c_hist_use_row (
    int hurow) [protected]
```

Return u8c for beginning of row `hurow` inside the 'in use' part of the scrollbar history.

'hurow' is indexed relative to the beginning of the 'in use' part of the scrollbar history buffer. This may be a different from `u8c_hist_row(int)` if the history was recently cleared, and there aren't many (or any) rows in the history buffer that have been populated with scrollbar text yet.

Example to walk all "in use" lines of the history buffer:

```
// Walk the entire screen history ("in use") and display to stdout
for (int row=0; row<hist_use(); row++) {
    const Utf8Char *u8c = u8c_hist_use_row(row);           // first char in row
    for (int col=0; col<=hist_cols(); col++,u8c++) {       // walk columns left-to-right
        // ..Do things here with each u8c char..
        ::printf("%.*s", u8c->length(), u8c->text_utf8()); // show each utf8 char to stdout
    }
    ::printf("\n"); // end of each line
}
```

See also

[u8c_disp_row\(int\)](#) for example use.

11.142.5.78 u8c_ring_row()

```
Fl_Terminal::Utf8Char * Fl_Terminal::u8c_ring_row (
    int grow) [protected]
```

Return UTF-8 char for row `grow` in the ring buffer.

`grow` is globally indexed relative to the beginning of the ring buffer, so this method can access ANY character in the entire ring buffer (hist or disp) by the global index.

Scrolling offset is NOT applied; this is raw access to the ring's rows.

Should really ONLY be used for making a complete copy of the ring.

Example:

```
// Walk ALL rows and cols in the raw ring buffer..
// These will not necessarily be in order as they appear
// on-screen.
// For walking the terminal lines in order, see examples
// for u8c_hist_use_row() and u8c_disp_row().
//
for (int row=0; row<ring_rows(); row++) {
    Utf8Char *u8c = u8c_ring_row(row);
    for (int col=0; col<ring_cols(); col++,u8c++) {
        ..make use of u8c->xxx() methods..
    }
}
```

11.142.5.79 utf8_char_at_disp()

```
const Fl_Terminal::Utf8Char * Fl_Terminal::utf8_char_at_disp (
    int drow,
    int dcol) const [protected]
```

Return `Utf8Char*` for char at specified display row and column.

This accesses any character in the display part of the ring buffer.

No range checking done on `drow`,`dcol`:

- `drow` must be in range 0..[\(disp_rows\(\)-1\)](#)
- `dcol` must be in range 0..[\(disp_cols\(\)-1\)](#)

See also

[u8c_disp_row\(\)](#)

11.142.5.80 utf8_char_at_glob()

```
const Fl_Terminal::Utf8Char * Fl_Terminal::utf8_char_at_glob (
    int grow,
    int gcol) const [protected]
```

Return Utf8Char* for char at specified global (grow,gcol).

This accesses any character in the ring buffer (history + display).

No range checking done on grow,gcol:

- grow must be in range 0..[ring_rows\(\)](#)-1)
- gcol must be in range 0..[ring_cols\(\)](#)-1)

See also

[u8c_ring_row\(\)](#)

11.142.5.81 vprintf()

```
void Fl_Terminal::vprintf (
    const char * fmt,
    va_list ap)
```

Appends printf formatted messages to the terminal.

Subclasses can use this to implement their own [printf\(\)](#) functionality.

The string can contain UTF-8, crlf's, and ANSI sequences are also supported when [ansi\(bool\)](#) is set to 'true'.

Note

The expanded string is currently limited to 1024 characters (including NULL). For longer strings use [append\(\)](#) which has no string limits.

Parameters

<i>fmt</i>	is a printf format string for the message text.
<i>ap</i>	is a va_list created by va_start() and closed with va_end(), which the caller is responsible for handling.

11.142.5.82 w_to_col()

```
int Fl_Terminal::w_to_col (
    int W) const [protected]
```

Given a width in pixels, return number of columns that "fits" into that area.

This is used by the constructor to size the row/cols to fit the widget size.

11.142.5.83 walk_selection()

```
const Fl_Terminal::Utf8Char * Fl_Terminal::walk_selection (
    const Utf8Char * u8c,
    int & row,
    int & col) const [protected]
```

Walk the mouse selection one character at a time from beginning to end, returning a Utf8Char* to the next character in the selection, or NULL if the end was reached, or if there's no selection.

This is easier to use for walking the selection than [get_selection\(\)](#).

u8c should start out as NULL, rewinding to the beginning of the selection. If the returned Utf8Char* is not NULL, *row* and *col* return the character's row/column position in the ring buffer.

```
// EXAMPLE: Walk the entire mouse selection, if any
int row,col;                                // the returned row/col for each char
Utf8Char *u8c = NULL;                      // start with NULL to begin walk
while ((u8c = walk_selection(u8c, row, col))) { // loop until end char reached
    ..do something with *u8c..
}
```

See also

[get_selection\(\)](#), [is_selection\(\)](#)

Parameters

<i>u8c</i>	NULL on first iter
<i>row</i>	returned row#
<i>col</i>	returned col#

11.142.6 Member Data Documentation

11.142.6.1 hscrollbar

[Fl_Scrollbar*](#) [Fl_Terminal::hscrollbar](#)

Horizontal scrollbar.

This is public so it can be accessed directly, e.g.

- [hscrollbar->value\(\)](#) returns the column offset position from the left edge of the display; 0 being the left edge (default).
- [hscrollbar->value\(int\)](#) similarly sets the column offset, which should be in the range [0 .. [Fl_Scrollbar::maximum\(\)](#)].
- [hscrollbar->step\(double\)](#) sets the smoothness of scrolling, default is 0.25 for 4 steps of motion per column.

11.142.6.2 scrollbar

[Fl_Scrollbar*](#) [Fl_Terminal::scrollbar](#)

Vertical scrollbar.

This is public so it can be accessed directly, e.g.

- [scrollbar->value\(\)](#) returns the row offset from the bottom of the display, 0 being the bottom (default).
- [scrollbar->value\(int\)](#) similarly sets the row offset, which should be in the range [0 .. [Fl_Scrollbar::maximum\(\)](#)].
- [scrollbar->step\(double\)](#) sets the smoothness of scrolling, default is 0.25 for 4 steps of motion per column.

Todo Support scrollbar_left/right() - See [Fl_Browser_::scrollbar](#) docs
Support new [ScrollbarStyle](#)

The documentation for this class was generated from the following files:

- [Fl_Terminal.H](#)
- [Fl_Terminal.cxx](#)

11.143 Fl_Text_Buffer Class Reference

This class manages Unicode text displayed in one or more [Fl_Text_Display](#) widgets.

```
#include <Fl_Text_Buffer.H>
```

Public Member Functions

- void [add_modify_callback](#) (FI_Text_Modify_Cb bufModifiedCB, void *cbArg)
Adds a callback function that is called whenever the text buffer is modified.
- void [add_predelete_callback](#) (FI_Text_Predelete_Cb bufPredeleCB, void *cbArg)
Adds a callback routine to be called before text is deleted from the buffer.
- char * [address](#) (int pos)
Convert a byte offset in buffer into a memory address.
- const char * [address](#) (int pos) const
Convert a byte offset in buffer into a memory address.
- void [append](#) (const char *t, int addedLength=-1)
Appends the text string to the end of the buffer.
- int [appendfile](#) (const char *file, int buflen=128 *1024)
Appends the named file to the end of the buffer.
- char [byte_at](#) (int pos) const
Returns the raw byte at the specified position pos in the buffer.
- void [call_modify_callbacks](#) ()
Calls all modify callbacks that have been registered using the [add_modify_callback\(\)](#) method.
- void [call_predelete_callbacks](#) ()
Calls the stored pre-delete callback procedure(s) for this buffer to update the changed area(s) on the screen and any other listeners.
- bool [can_redo](#) () const
Check if undo is enabled and if the last undo action can be redone.
- bool [can_undo](#) () const
Check if undo is enabled and if the last action can be undone.
- void [canUndo](#) (char flag=1)
Enable or disable undo actions for this text buffer.
- unsigned int [char_at](#) (int pos) const
Returns the character at the specified position pos in the buffer.
- void [copy](#) (FI_Text_Buffer *fromBuf, int fromStart, int fromEnd, int toPos)
Copies text from another [FI_Text_Buffer](#) to this one.
- int [count_displayed_characters](#) (int lineStartPos, int targetPos) const
Count the number of displayed characters between buffer position lineStartPos and targetPos.
- int [count_lines](#) (int startPos, int endPos) const
Counts the number of newlines between startPos and endPos in buffer.
- int [estimate_lines](#) (int startPos, int endPos, int lineLen) const
Estimate the number of newlines between startPos and endPos in buffer.
- int [findchar_backward](#) (int startPos, unsigned int searchChar, int *foundPos) const
Search backwards in buffer buf for character searchChar, starting with the character before startPos, returning the result in foundPos.
- int [findchar_forward](#) (int startPos, unsigned searchChar, int *foundPos) const
Finds the next occurrence of the specified character.
- [FI_Text_Buffer](#) (int requestedSize=0, int preferredGapSize=1024)
Create an empty text buffer of a pre-determined size.
- int [highlight](#) ()
Returns a non-zero value if text has been highlighted, 0 otherwise.
- void [highlight](#) (int start, int end)
Highlights the specified text within the buffer.
- int [highlight_position](#) (int *start, int *end)
Highlights the specified text between start and end within the buffer.
- const [FI_Text_Selection](#) * [highlight_selection](#) () const
Returns the current highlight selection.

- char * [highlight_text](#) ()
Returns the highlighted text.
- void [insert](#) (int pos, const char *[text](#), int insertedLength=-1)
Inserts null-terminated string [text](#) at position [pos](#).
- int [insertfile](#) (const char *file, int pos, int buflen=128 *1024)
Inserts a file at the specified position.
- bool [is_word_separator](#) (int pos) const
Returns whether character at position [pos](#) is a word separator.
- int [length](#) () const
Returns the number of bytes in the buffer.
- int [line_end](#) (int pos) const
Finds and returns the position of the end of the line containing position [pos](#) (which is either a pointer to the newline character ending the line or a pointer to one character beyond the end of the buffer).
- int [line_start](#) (int pos) const
Returns the position of the start of the line containing position [pos](#).
- char * [line_text](#) (int pos) const
Returns the text from the entire line containing the specified character position.
- int [loadfile](#) (const char *file, int buflen=128 *1024)
Loads a text file into the buffer.
- int [next_char](#) (int pos) const
Returns the index of the next character.
- int [next_char_clipped](#) (int pos) const
- int [outputfile](#) (const char *file, int start, int end, int buflen=128 *1024)
Writes the specified portions of the text buffer to a file.
- int [prev_char](#) (int pos) const
Returns the index of the previous character.
- int [prev_char_clipped](#) (int pos) const
- [FI_Text_Selection](#) * [primary_selection](#) ()
Returns the primary selection.
- const [FI_Text_Selection](#) * [primary_selection](#) () const
Returns the primary selection.
- void [printf](#) (const char *fmt,...)
Appends printf formatted messages to the end of the buffer.
- int [redo](#) (int *cp=0)
Redo previous undo action.
- void [remove](#) (int start, int end)
Deletes a range of characters in the buffer.
- void [remove_modify_callback](#) ([FI_Text_Modify_Cb](#) bufModifiedCB, void *cbArg)
Removes a modify callback.
- void [remove_predelete_callback](#) ([FI_Text_Predelete_Cb](#) predelCB, void *cbArg)
Removes a callback routine [bufPreDeleteCB](#) associated with argument [cbArg](#) to be called before text is deleted from the buffer.
- void [remove_secondary_selection](#) ()
Removes the text from the buffer corresponding to the secondary text selection object.
- void [remove_selection](#) ()
Removes the text in the primary selection.
- void [replace](#) (int start, int end, const char *[text](#), int insertedLength=-1)
Deletes the characters between [start](#) and [end](#), and inserts the null-terminated string [text](#) in their place in the buffer.
- void [replace_secondary_selection](#) (const char *[text](#))
Replaces the text from the buffer corresponding to the secondary text selection object with the new string [text](#).

- void **replace_selection** (const char *[text](#))
Replaces the text in the primary selection.
- int [rewind_lines](#) (int startPos, int nLines)
*Finds and returns the position of the first character of the line *nLines* backwards from *startPos* (not counting the character pointed to by *startpos* if that is a newline) in the buffer.*
- int [savefile](#) (const char *file, int buflen=128 *1024)
Saves a text file from the current buffer.
- int [search_backward](#) (int startPos, const char *searchString, int *foundPos, int matchCase=0) const
*Search backwards in buffer for string *searchString*, starting with the character at *startPos*, returning the result in *foundPos*.*
- int [search_forward](#) (int startPos, const char *searchString, int *foundPos, int matchCase=0) const
*Search forwards in buffer for string *searchString*, starting with the character *startPos*, and returning the result in *foundPos*.*
- void **secondary_select** (int start, int end)
Selects a range of characters in the secondary selection.
- int **secondary_selected** ()
Returns a non-zero value if text has been selected in the secondary text selection, 0 otherwise.
- const [Fl_Text_Selection](#) * **secondary_selection** () const
Returns the secondary selection.
- int **secondary_selection_position** (int *start, int *end)
Returns the current selection in the secondary text selection object.
- char * [secondary_selection_text](#) ()
Returns the text in the secondary selection.
- void **secondary_unselect** ()
Clears any selection in the secondary text selection object.
- void **select** (int start, int end)
Selects a range of characters in the buffer.
- int **selected** () const
Returns a non-zero value if text has been selected, 0 otherwise.
- int **selection_position** (int *start, int *end)
Gets the selection position.
- char * [selection_text](#) ()
Returns the currently selected text.
- int [skip_displayed_characters](#) (int lineStartPos, int nChars)
*Count forward from buffer position *startPos* in displayed characters.*
- int **skip_lines** (int startPos, int nLines)
*Finds the first character of the line *nLines* forward from *startPos* in the buffer and returns its position.*
- int [tab_distance](#) () const
Gets the tab width.
- void **tab_distance** (int tabDist)
Set the hardware tab distance (width) used by all displays for this buffer, and used in computing offsets for rectangular selection operations.
- char * [text](#) () const
Get a copy of the entire contents of the text buffer.
- void [text](#) (const char *text)
Replaces the entire contents of the text buffer.
- char * [text_range](#) (int start, int end) const
Get a copy of a part of the text buffer.
- int [undo](#) (int *cp=0)
Undo text modification according to the undo variables or insert text from the undo buffer.
- void **unhighlight** ()

- Unhighlights text in the buffer.*
- void **unselect** ()
 - Cancels any previous selection on the primary text selection object.*
- int **utf8_align** (int) const
 - Align an index into the buffer to the current or previous UTF-8 boundary.*
- void **vprintf** (const char *fmt, va_list ap)
 - Can be used by subclasses that need their own [printf\(\)](#) style functionality.*
- int **word_end** (int pos) const
 - Returns the position corresponding to the end of the word.*
- int **word_start** (int pos) const
 - Returns the position corresponding to the start of the word.*
- ~**FI_Text_Buffer** ()
 - Frees a text buffer.*

Public Attributes

- int **input_file_was_transcoded**
 - true if the loaded file has been transcoded to UTF-8.*
- void(* **transcoding_warning_action**)(FI_Text_Buffer *)
 - Pointer to a function called after reading a non UTF-8 encoded file.*

Static Public Attributes

- static const char * **file_encoding_warning_message**
 - This message may be displayed using the [fl_alert\(\)](#) function when a file which was not UTF-8 encoded is input.*

Protected Member Functions

- int **apply_undo** (FI_Text_Undo_Action *action, int *cursorPos)
 - Apply the current undo/redo operation, called from [undo\(\)](#) or [redo\(\)](#).*
- void **call_modify_callbacks** (int pos, int nDeleted, int nInserted, int nRestyled, const char *deletedText) const
 - Calls the stored modify callback procedure(s) for this buffer to update the changed area(s) on the screen and any other listeners.*
- void **call_predelete_callbacks** (int pos, int nDeleted) const
 - Calls the stored pre-delete callback procedure(s) for this buffer to update the changed area(s) on the screen and any other listeners.*
- int **insert_** (int pos, const char *text, int insertedLength=-1)
 - Internal (non-redisplaying) version of [insert\(\)](#).*
- void **move_gap** (int pos)
 - Move the gap to start at a new position.*
- void **reallocate_with_gap** (int newGapStart, int newGapLen)
 - Reallocates the text storage in the buffer to have a gap starting at *newGapStart* and a gap size of *newGapLen*, preserving the buffer's current contents.*
- void **redisplay_selection** (FI_Text_Selection *oldSelection, FI_Text_Selection *newSelection) const
 - Calls the stored redisplay procedure(s) for this buffer to update the screen for a change in a selection.*
- void **remove_** (int start, int end)
 - Internal (non-redisplaying) version of [remove\(\)](#).*
- void **remove_selection_** (FI_Text_Selection *sel)
 - Removes the text from the buffer corresponding to *sel*.*
- void **replace_selection_** (FI_Text_Selection *sel, const char *text)
 - Replaces the *text* in selection *sel*.*
- char * **selection_text_** (FI_Text_Selection *sel) const
- void **update_selections** (int pos, int nDeleted, int nInserted)
 - Updates all of the selections in the buffer for changes in the buffer's text.*

Protected Attributes

- char * **mBuf**
allocated memory where the text is stored
- char **mCanUndo**
if this buffer is used for attributes, it must not do any undo calls
- void ** **mCbArgs**
caller arguments for modifyProcs above
- int **mCursorPosHint**
hint for reasonable cursor position after a buffer modification operation
- int **mGapEnd**
points to the first character after the gap
- int **mGapStart**
points to the first character of the gap
- [FI_Text_Selection](#) **mHighlight**
highlighted areas
- int **mLength**
length of the text in the buffer (the length of the buffer itself must be calculated: gapEnd - gapStart + length)
- [FI_Text_Modify_Cb](#) * **mModifyProcs**
procedures to call when buffer is modified to redisplay contents
- int **mNModifyProcs**
number of modify-redisplay procs attached
- int **mNPredeleteProcs**
number of pre-delete procs attached
- void ** **mPredeleteCbArgs**
caller argument for pre-delete proc above
- [FI_Text_Predelete_Cb](#) * **mPredeleteProcs**
procedure to call before text is deleted from the buffer; at most one is supported.
- int **mPreferredGapSize**
the default allocation for the text gap is 1024 bytes and should only be increased if frequent and large changes in buffer size are expected
- [FI_Text_Selection](#) **mPrimary**
highlighted areas
- [FI_Text_Undo_Action_List](#) * **mRedoList**
List of redo event.
- [FI_Text_Selection](#) **mSecondary**
highlighted areas
- int [mTabDist](#)
equiv.
- [FI_Text_Undo_Action](#) * **mUndo**
local undo event
- [FI_Text_Undo_Action_List](#) * **mUndoList**
List of undo event.

11.143.1 Detailed Description

This class manages Unicode text displayed in one or more [FI_Text_Display](#) widgets.

All text in [FI_Text_Buffer](#) must be encoded in UTF-8. All indices used in the function calls must be aligned to the start of a UTF-8 sequence. All indices and pointers returned will be aligned. All functions that return a single character will return that in an unsigned int in UCS-4 encoding.

The [FI_Text_Buffer](#) class is used by the [FI_Text_Display](#) and [FI_Text_Editor](#) to manage complex text data and is based upon the excellent NEdit text editor engine - see <https://sourceforge.net/projects/ncedit/>.

11.143.2 Constructor & Destructor Documentation

11.143.2.1 Fl_Text_Buffer()

```
Fl_Text_Buffer::Fl_Text_Buffer (
    int requestedSize = 0,
    int preferredGapSize = 1024)
```

Create an empty text buffer of a pre-determined size.

Parameters

<i>requestedSize</i>	use this to avoid unnecessary re-allocation if you know exactly how much the buffer will need to hold
<i>preferredGapSize</i>	Initial size for the buffer gap (empty space in the buffer where text might be inserted if the user is typing sequential characters)

11.143.3 Member Function Documentation

11.143.3.1 add_modify_callback()

```
void Fl_Text_Buffer::add_modify_callback (
    Fl_Text_Modify_Cb bufModifiedCB,
    void * cbArg)
```

Adds a callback function that is called whenever the text buffer is modified.

The callback function is declared as follows:

```
typedef void (*Fl_Text_Modify_Cb)(int pos, int nInserted, int nDeleted,
    int nRestyled, const char* deletedText,
    void* cbArg);
```

11.143.3.2 address() [1/2]

```
char * Fl_Text_Buffer::address (
    int pos) [inline]
```

Convert a byte offset in buffer into a memory address.

Parameters

<i>pos</i>	byte offset into buffer
------------	-------------------------

Returns

byte offset converted to a memory address

11.143.3.3 address() [2/2]

```
const char * Fl_Text_Buffer::address (
    int pos) const [inline]
```

Convert a byte offset in buffer into a memory address.

Parameters

<i>pos</i>	byte offset into buffer
------------	-------------------------

Returns

byte offset converted to a memory address

11.143.3.4 `append()`

```
void Fl_Text_Buffer::append (
    const char * t,
    int addedLength = -1) [inline]
```

Appends the text string to the end of the buffer.

Parameters

<i>t</i>	UTF-8 encoded text
<i>addedLength</i>	number of bytes to append, or -1 to indicate <i>t</i> is null-terminated

11.143.3.5 `appendfile()`

```
int Fl_Text_Buffer::appendfile (
    const char * file,
    int buflen = 128*1024) [inline]
```

Appends the named file to the end of the buffer.

See also [insertfile\(\)](#).

11.143.3.6 `byte_at()`

```
char Fl_Text_Buffer::byte_at (
    int pos) const
```

Returns the raw byte at the specified position *pos* in the buffer.

Positions start at 0.

Parameters

<i>pos</i>	byte offset into buffer
------------	-------------------------

Returns

unencoded raw byte

11.143.3.7 `can_redo()`

```
bool Fl_Text_Buffer::can_redo () const
```

Check if undo is enabled and if the last undo action can be redone.

Check if undo is enabled and if the last undo action can be redone.

See also

[canUndo\(\)](#)

11.143.3.8 `can_undo()`

```
bool Fl_Text_Buffer::can_undo () const
```

Check if undo is enabled and if the last action can be undone.

See also

[canUndo\(\)](#)

11.143.3.9 canUndo()

```
void Fl_Text_Buffer::canUndo (
    char flag = 1)
```

Enable or disable undo actions for this text buffer.

Undo actions are enable for text buffer by default. If used as a style buffer in [Fl_Text_Display](#), undo actions are disabled as they are handled by the text buffer.

See also

[can_undo\(\)](#)

11.143.3.10 char_at()

```
unsigned int Fl_Text_Buffer::char_at (
    int pos) const
```

Returns the character at the specified position *pos* in the buffer.

Positions start at 0.

Parameters

<i>pos</i>	byte offset into buffer, <i>pos</i> must be at a UTF-8 character boundary
------------	---

Returns

Unicode UCS-4 encoded character

11.143.3.11 copy()

```
void Fl_Text_Buffer::copy (
    Fl_Text_Buffer * fromBuf,
    int fromStart,
    int fromEnd,
    int toPos)
```

Copies text from another [Fl_Text_Buffer](#) to this one.

Parameters

<i>fromBuf</i>	source text buffer, may be the same as this
<i>fromStart</i>	byte offset into buffer
<i>fromEnd</i>	byte offset into buffer
<i>toPos</i>	destination byte offset into buffer

11.143.3.12 count_displayed_characters()

```
int Fl_Text_Buffer::count_displayed_characters (
    int lineStartPos,
    int targetPos) const
```

Count the number of displayed characters between buffer position *lineStartPos* and *targetPos*.

Displayed characters are the characters shown on the screen to represent characters in the buffer, where tabs and control characters are expanded.

11.143.3.13 count_lines()

```
int Fl_Text_Buffer::count_lines (
    int startPos,
    int endPos) const
```

Counts the number of newlines between *startPos* and *endPos* in buffer.

The character at position *endPos* is not counted.

11.143.3.14 estimate_lines()

```
int Fl_Text_Buffer::estimate_lines (
    int startPos,
    int endPos,
    int lineLen) const
```

Estimate the number of newlines between `startPos` and `endPos` in buffer.

This call takes line wrapping into account. It assumes a line break at every `lineLen` characters after the beginning of a line.

11.143.3.15 findchar_backward()

```
int Fl_Text_Buffer::findchar_backward (
    int startPos,
    unsigned int searchChar,
    int * foundPos) const
```

Search backwards in buffer `buf` for character `searchChar`, starting with the character *before* `startPos`, returning the result in `foundPos`.

Returns 1 if found, 0 if not. The difference between this and [search_backward\(\)](#) is that it's optimized for single characters. The overall performance of the text widget is dependent on its ability to count lines quickly, hence searching for a single character: newline.

Parameters

<i>startPos</i>	byte offset to start position
<i>searchChar</i>	UCS-4 character that we want to find
<i>foundPos</i>	byte offset where the character was found

Returns

1 if found, 0 if not

11.143.3.16 findchar_forward()

```
int Fl_Text_Buffer::findchar_forward (
    int startPos,
    unsigned searchChar,
    int * foundPos) const
```

Finds the next occurrence of the specified character.

Search forwards in buffer for character `searchChar`, starting with the character `startPos`, and returning the result in `foundPos`. Returns 1 if found, 0 if not. The difference between this and [search_forward\(\)](#) is that it's optimized for single characters. The overall performance of the text widget is dependent on its ability to count lines quickly, hence searching for a single character: newline.

Parameters

<i>startPos</i>	byte offset to start position
<i>searchChar</i>	UCS-4 character that we want to find
<i>foundPos</i>	byte offset where the character was found

Returns

1 if found, 0 if not

11.143.3.17 highlight_text()

```
char * Fl_Text_Buffer::highlight_text ()
```

Returns the highlighted text.

When you are done with the text, free it using the `free()` function.

11.143.3.18 insert()

```
void Fl_Text_Buffer::insert (
    int pos,
    const char * text,
    int insertedLength = -1)
```

Inserts null-terminated string `text` at position `pos`.

Parameters

<i>pos</i>	insertion position as byte offset (must be UTF-8 character aligned)
<i>text</i>	UTF-8 encoded text
<i>insertedLength</i>	number of bytes to insert, or -1 to indicate <code>text</code> is null-terminated

11.143.3.19 insert_()

```
int Fl_Text_Buffer::insert_ (
    int pos,
    const char * text,
    int insertedLength = -1) [protected]
```

Internal (non-redisplaying) version of [insert\(\)](#).

Returns the length of text inserted (this is just `strlen(text)` if `insertedLength == -1`, however this calculation can be expensive and the length will be required by any caller who will continue on to call `redisplay`). `pos` must be contiguous with the existing text in the buffer (i.e. not past the end).

Returns

the number of bytes inserted

11.143.3.20 insertfile()

```
int Fl_Text_Buffer::insertfile (
    const char * file,
    int pos,
    int buflen = 128*1024)
```

Inserts a file at the specified position.

Returns

- 0 on success
- non-zero on error (`strerror()` contains reason)
- 1 indicates open for read failed (no data loaded)
- 2 indicates error occurred while reading data (data was partially loaded)

File can be UTF-8 or CP1252 encoded. If the input file is not UTF-8 encoded, the [Fl_Text_Buffer](#) widget will contain data transcoded to UTF-8. By default, the message [Fl_Text_Buffer::file_encoding_warning_message](#) will warn the user about this.

See also

[input_file_was_transcoded](#) and [transcoding_warning_action](#).

11.143.3.21 is_word_separator()

```
bool Fl_Text_Buffer::is_word_separator (
    int pos) const
```

Returns whether character at position `pos` is a word separator.

Pos must be at a character boundary.

11.143.3.22 length()

```
int Fl_Text_Buffer::length () const [inline]
```

Returns the number of bytes in the buffer.

Returns

size of text in bytes

11.143.3.23 line_end()

```
int Fl_Text_Buffer::line_end (  
    int pos) const
```

Finds and returns the position of the end of the line containing position `pos` (which is either a pointer to the newline character ending the line or a pointer to one character beyond the end of the buffer).

Parameters

<i>pos</i>	byte index into buffer
------------	------------------------

Returns

byte offset to line end

11.143.3.24 line_start()

```
int Fl_Text_Buffer::line_start (  
    int pos) const
```

Returns the position of the start of the line containing position `pos`.

Parameters

<i>pos</i>	byte index into buffer
------------	------------------------

Returns

byte offset to line start

11.143.3.25 line_text()

```
char * Fl_Text_Buffer::line_text (  
    int pos) const
```

Returns the text from the entire line containing the specified character position. When you are done with the text, free it using the `free()` function.

Parameters

<i>pos</i>	byte index into buffer
------------	------------------------

Returns

copy of UTF-8 text, must be free'd

11.143.3.26 loadfile()

```
int Fl_Text_Buffer::loadfile (  
    const char * file,  
    int buflen = 128*1024) [inline]
```

Loads a text file into the buffer.

See also [insertfile\(\)](#).

11.143.3.27 next_char()

```
int Fl_Text_Buffer::next_char (  
    int pos) const
```

Returns the index of the next character.

This function processes an emoji sequence (see [fl_utf8_next_composed_char](#)) as a single character. Returns [length\(\)](#) if the end of the buffer is reached.

Parameters

in	<i>pos</i>	index to the current character
----	------------	--------------------------------

11.143.3.28 outputfile()

```
int Fl_Text_Buffer::outputfile (  
    const char * file,  
    int start,  
    int end,  
    int buflen = 128*1024)
```

Writes the specified portions of the text buffer to a file.

Returns

- 0 on success
- non-zero on error (strerror() contains reason)
- 1 indicates open for write failed (no data saved)
- 2 indicates error occurred while writing data (data was partially saved)

See also

[savefile\(const char *file, int buflen\)](#)

11.143.3.29 prev_char()

```
int Fl_Text_Buffer::prev_char (  
    int pos) const
```

Returns the index of the previous character.

This function processes an emoji sequence (see [fl_utf8_next_composed_char](#)) as a single character.

Parameters

in	<i>pos</i>	index of the current character
----	------------	--------------------------------

Returns

index of the previous character

Return values

-1	if the beginning of the buffer is reached.
----	--

11.143.3.30 printf()

```
void Fl_Text_Buffer::printf (
    const char * fmt,
    ...)
```

Appends printf formatted messages to the end of the buffer.

Example:

```
#include <FL/Fl_Text_Display.H>
int main(..) {
    :
    // Create a text display widget and assign it a text buffer
    Fl_Text_Display *tdsp = new Fl_Text_Display(..);
    Fl_Text_Buffer *tbuf = new Fl_Text_Buffer();
    tdsp->buffer(tbuf);
    :
    // Append three lines of formatted text to the buffer
    tbuf->printf("The current date is: %s.\nThe time is: %s\n", date_str, time_str);
    tbuf->printf("The current PID is %ld.\n", (long) getpid());
    :
}
```

Note

The expanded string is currently limited to 1024 characters.

Parameters

<i>in</i>	<i>fmt</i>	is a printf format string for the message text.
-----------	------------	---

11.143.3.31 remove()

```
void Fl_Text_Buffer::remove (
    int start,
    int end)
```

Deletes a range of characters in the buffer.

Parameters

<i>start</i>	byte offset to first character to be removed
<i>end</i>	byte offset to character after last character to be removed

11.143.3.32 remove_()

```
void Fl_Text_Buffer::remove_ (
    int start,
    int end) [protected]
```

Internal (non-redisplaying) version of [remove\(\)](#).

Removes the contents of the buffer between *start* and *end* (and moves the gap to the site of the delete).

11.143.3.33 replace()

```
void Fl_Text_Buffer::replace (
    int start,
    int end,
    const char * text,
    int insertedLength = -1)
```

Deletes the characters between *start* and *end*, and inserts the null-terminated string *text* in their place in the buffer.

Parameters

<i>start</i>	byte offset to first character to be removed and new insert position
--------------	--

Parameters

<i>end</i>	byte offset to character after last character to be removed
<i>text</i>	UTF-8 encoded text
<i>insertedLength</i>	number of bytes to insert, or -1 to indicate <i>text</i> is null-terminated

11.143.3.34 rewind_lines()

```
int Fl_Text_Buffer::rewind_lines (
    int startPos,
    int nLines)
```

Finds and returns the position of the first character of the line *nLines* backwards from *startPos* (not counting the character pointed to by *startpos* if that is a newline) in the buffer.

nLines == 0 means find the beginning of the line.

11.143.3.35 savefile()

```
int Fl_Text_Buffer::savefile (
    const char * file,
    int buflen = 128*1024) [inline]
```

Saves a text file from the current buffer.

Returns

- 0 on success
- non-zero on error (strerror() contains reason)
- 1 indicates open for write failed (no data saved)
- 2 indicates error occurred while writing data (data was partially saved)

See also

[outfile\(const char *file, int start, int end, int buflen\)](#)

11.143.3.36 search_backward()

```
int Fl_Text_Buffer::search_backward (
    int startPos,
    const char * searchString,
    int * foundPos,
    int matchCase = 0) const
```

Search backwards in buffer for string *searchString*, starting with the character *at* *startPos*, returning the result in *foundPos*.

Returns 1 if found, 0 if not.

Parameters

<i>startPos</i>	byte offset to start position
<i>searchString</i>	UTF-8 string that we want to find
<i>foundPos</i>	byte offset where the string was found
<i>matchCase</i>	if set, match character case

Returns

1 if found, 0 if not

11.143.3.37 search_forward()

```
int Fl_Text_Buffer::search_forward (
    int startPos,
    const char * searchString,
    int * foundPos,
    int matchCase = 0) const
```

Search forwards in buffer for string `searchString`, starting with the character `startPos`, and returning the result in `foundPos`.

Returns 1 if found, 0 if not.

Parameters

<i>startPos</i>	byte offset to start position
<i>searchString</i>	UTF-8 string that we want to find
<i>foundPos</i>	byte offset where the string was found
<i>matchCase</i>	if set, match character case

Returns

1 if found, 0 if not

11.143.3.38 secondary_selection_text()

```
char * Fl_Text_Buffer::secondary_selection_text ()
```

Returns the text in the secondary selection.

When you are done with the text, free it using the `free()` function.

11.143.3.39 selection_text()

```
char * Fl_Text_Buffer::selection_text ()
```

Returns the currently selected text.

When you are done with the text, free it using the `free()` function.

11.143.3.40 skip_displayed_characters()

```
int Fl_Text_Buffer::skip_displayed_characters (
    int lineStartPos,
    int nChars)
```

Count forward from buffer position `startPos` in displayed characters.

Displayed characters are the characters shown on the screen to represent characters in the buffer, where tabs and control characters are expanded.

Parameters

<i>lineStartPos</i>	byte offset into buffer
<i>nChars</i>	number of bytes that are sent to the display

Returns

byte offset in input after all output bytes are sent

11.143.3.41 tab_distance()

```
int Fl_Text_Buffer::tab_distance () const [inline]
```

Gets the tab width.

The tab width is measured in characters. The pixel position is calculated using an average character width.

11.143.3.42 text() [1/2]

```
char * Fl_Text_Buffer::text () const
```

Get a copy of the entire contents of the text buffer.

Memory is allocated to contain the returned string, which the caller must free.

Returns

newly allocated text buffer - must be free'd, text is UTF-8

11.143.3.43 text() [2/2]

```
void Fl_Text_Buffer::text (
    const char * text)
```

Replaces the entire contents of the text buffer.

Parameters

<i>text</i>	Text must be valid UTF-8. If null, an empty string is substituted.
-------------	--

11.143.3.44 text_range()

```
char * Fl_Text_Buffer::text_range (
    int start,
    int end) const
```

Get a copy of a part of the text buffer.

Return a copy of the text between *start* and *end* character positions from text buffer *buf*. Positions start at 0, and the range does not include the character pointed to by *end*. When you are done with the text, free it using the `free()` function.

Parameters

<i>start</i>	byte offset to first character
<i>end</i>	byte offset after last character in range

Returns

newly allocated text buffer - must be free'd, text is UTF-8

11.143.3.45 undo()

```
int Fl_Text_Buffer::undo (
    int * cursorPos = 0)
```

Undo text modification according to the undo variables or insert text from the undo buffer.

Take the previous changes and undo them.

Return the previous cursor position in *cursorPos*. Returns 1 if the undo was applied. *CursorPos* will be at a character boundary.

11.143.3.46 vprintf()

```
void Fl_Text_Buffer::vprintf (
    const char * fmt,
    va_list ap)
```

Can be used by subclasses that need their own `printf()` style functionality.

Note

The expanded string is currently limited to 1024 characters.

Parameters

<code>in</code>	<code>fmt</code>	is a printf format string for the message text.
<code>in</code>	<code>ap</code>	is a <code>va_list</code> created by <code>va_start()</code> and closed with <code>va_end()</code> , which the caller is responsible for handling.

11.143.3.47 word_end()

```
int Fl_Text_Buffer::word_end (
    int pos) const
```

Returns the position corresponding to the end of the word.

Parameters

<code>pos</code>	byte index into buffer
------------------	------------------------

Returns

byte offset to word end

11.143.3.48 word_start()

```
int Fl_Text_Buffer::word_start (
    int pos) const
```

Returns the position corresponding to the start of the word.

Parameters

<code>pos</code>	byte index into buffer
------------------	------------------------

Returns

byte offset to word start

11.143.4 Member Data Documentation**11.143.4.1 file_encoding_warning_message**

```
const char * Fl_Text_Buffer::file_encoding_warning_message [static]
```

Initial value:

```
=
"Displayed text contains the UTF-8 transcoding\n"
"of the input file which was not UTF-8 encoded.\n"
"Some changes may have occurred."
```

This message may be displayed using the `fl_alert()` function when a file which was not UTF-8 encoded is input.

11.143.4.2 mTabDist

```
int Fl_Text_Buffer::mTabDist [protected]
```

equiv.

number of characters in a tab

11.143.4.3 transcoding_warning_action

```
void(* Fl_Text_Buffer::transcoding_warning_action) (Fl_Text_Buffer *)
```

Pointer to a function called after reading a non UTF-8 encoded file.

This function is called after reading a file if the file content was transcoded to UTF-8. Its default implementation calls `fl_alert()` with the text of [file_encoding_warning_message](#). No warning message is displayed if this pointer is set to NULL. Use [input_file_was_transcoded](#) to be informed if file input required transcoding to UTF-8.

The documentation for this class was generated from the following files:

- [Fl_Text_Buffer.H](#)
- [Fl_Text_Buffer.cxx](#)

11.144 Fl_Text_Display Class Reference

Rich text display widget.

```
#include <Fl_Text_Display.H>
```

Inheritance diagram for `Fl_Text_Display`:

Classes

- struct [Style_Table_Entry](#)

This structure associates the color, font, and font size of a string to draw with an attribute mask matching attr.

Public Types

- enum {
[NORMAL_CURSOR](#) , [CARET_CURSOR](#) , [DIM_CURSOR](#) , [BLOCK_CURSOR](#) ,
[HEAVY_CURSOR](#) , [SIMPLE_CURSOR](#) }
text display cursor shapes enumeration
- enum {
[ATTR_BGCOLOR](#) = 0x0001 , [ATTR_BGCOLOR_EXT](#) = 0x0002 , [ATTR_BGCOLOR_EXT](#) = 0x0003 ,
[ATTR_UNDERLINE](#) = 0x0004 ,
[ATTR_GRAMMAR](#) = 0x0008 , [ATTR_SPELLING](#) = 0x000C , [ATTR_STRIKE_THROUGH](#) = 0x0010 ,
[ATTR_LINES_MASK](#) = 0x001C }
attribute flags in [Style_Table_Entry.attr](#)
- enum { [CURSOR_POS](#) , [CHARACTER_POS](#) }
the character position is the left edge of a character, whereas the cursor is thought to be between the centers of two consecutive characters.
- enum { [WRAP_NONE](#) , [WRAP_AT_COLUMN](#) , [WRAP_AT_PIXEL](#) , [WRAP_AT_BOUNDS](#) }
wrap types - used in [wrap_mode\(\)](#)
- enum {
[DRAG_NONE](#) = -2 , [DRAG_START_DND](#) = -1 , [DRAG_CHAR](#) = 0 , [DRAG_WORD](#) = 1 ,
[DRAG_LINE](#) = 2 }
drag types - they match [Fl::event_clicks\(\)](#) so that single clicking to start a collection selects by character, double clicking selects by word and triple clicking selects by line.
- typedef void(* [Unfinished_Style_Cb](#)) (int, void *)

Public Member Functions

- [Fl_Text_Buffer](#) * [buffer](#) () const
Gets the current text buffer associated with the text widget.
- void [buffer](#) ([Fl_Text_Buffer](#) &buf)
Sets the current text buffer associated with the text widget.

- void **buffer** ([FI_Text_Buffer](#) *buf)
Attach a text buffer to display, replacing the current buffer (if any).
- double **col_to_x** (double col) const
Convert a column number into an x pixel position.
- int **count_lines** (int start, int **end**, bool start_pos_is_line_start) const
Count the number of lines between two positions.
- [FI_Color](#) **cursor_color** () const
Gets the text cursor color.
- void **cursor_color** ([FI_Color](#) n)
Sets the text cursor color.
- int **cursor_style** () const
- void **cursor_style** (int style)
Sets the text cursor style.
- virtual void **display_needs_recalc** ()
Schedule a [recalc_display\(\)](#) to be done on next [draw\(\)](#).
- [FI_Text_Display](#) (int X, int Y, int W, int H, const char *l=0)
Creates a new text display widget.
- int **get_absolute_top_line_number** () const
Returns the absolute (non-wrapped) line number of the first line displayed.
- [FI_Color](#) **grammar_underline_color** () const
Gets the underline color for style attribute ATTR_GRAMMAR.
- void **grammar_underline_color** ([FI_Color](#) color)
Sets the underline color for style attribute ATTR_GRAMMAR.
- int **handle** (int e) [FL_OVERRIDE](#)
Event handling.
- void **hide_cursor** ()
Hides the text cursor.
- void **highlight_data** ([FI_Text_Buffer](#) *styleBuffer, const [Style_Table_Entry](#) *styleTable, int nStyles, char unfinishedStyle, Unfinished_Style_Cb unfinishedHighlightCB, void *cbArg)
Attach (or remove) highlight information in text display and redisplay.
- int **in_selection** (int x, int y) const
Check if a pixel position is within the primary selection.
- void **insert** (const char *text)
Inserts "text" at the current cursor location.
- int **insert_position** () const
Gets the position of the text insertion cursor for text display.
- void **insert_position** (int newPos)
Sets the position of the text insertion cursor for text display.
- int **line_end** (int startPos, bool startPosIsLineStart) const
Returns the end of a line.
- int **line_start** (int pos) const
Return the beginning of a line.
- [FI_Align](#) **linenumber_align** () const
Returns the alignment used for line numbers (if enabled).
- void **linenumber_align** ([FI_Align](#) val)
Set alignment for line numbers (if enabled).
- [FI_Color](#) **linenumber_bgcolor** () const
Returns the background color used for line numbers (if enabled).
- void **linenumber_bgcolor** ([FI_Color](#) val)
Set the background color used for line numbers (if enabled).
- [FI_Color](#) **linenumber_fgcolor** () const

- Return the foreground color used for line numbers (if enabled).*
- void **linenumber_fgcolor** (FL_Color val)
 - Set the foreground color used for line numbers (if enabled).*
- FL_Font **linenumber_font** () const
 - Return the font used for line numbers (if enabled).*
- void **linenumber_font** (FL_Font val)
 - Set the font used for line numbers (if enabled).*
- const char * **linenumber_format** () const
 - Returns the line number printf() format string.*
- void **linenumber_format** (const char *val)
 - Sets the printf() style format string used for line numbers.*
- FL_Fontsize **linenumber_size** () const
 - Return the font size used for line numbers (if enabled).*
- void **linenumber_size** (FL_Fontsize val)
 - Set the font size used for line numbers (if enabled).*
- int **linenumber_width** () const
 - Return the screen area width provided for line numbers.*
- void **linenumber_width** (int width)
 - Set width of screen area for line numbers.*
- int **move_down** ()
 - Moves the current insert position down one line.*
- int **move_left** ()
 - Moves the current insert position left one character.*
- int **move_right** ()
 - Moves the current insert position right one character.*
- int **move_up** ()
 - Moves the current insert position up one line.*
- void **next_word** (void)
 - Moves the current insert position right one word.*
- void **overstrike** (const char *text)
 - Replaces text at the current insert position.*
- int **position_style** (int lineStartPos, int lineLen, int lineIndex) const
 - Find the correct style for a character.*
- int **position_to_xy** (int pos, int *x, int *y) const
 - Convert a character index into a pixel position.*
- void **previous_word** (void)
 - Moves the current insert position left one word.*
- virtual void **recalc_display** ()
 - Recalculate the display's visible lines and scrollbar sizes.*
- void **redisplay_range** (int start, int end)
 - Marks text from start to end as needing a redraw.*
- void **resize** (int X, int Y, int W, int H) FL_OVERRIDE
 - Change the size of the displayed text area.*
- int **rewind_lines** (int startPos, int nLines)
 - Skip a number of lines back.*
- void **scroll** (int topLineNum, int horizOffset)
 - Scrolls the current buffer to start at the specified line and column.*
- int **scroll_col** ()
- int **scroll_row** ()
- FL_Align **scrollbar_align** () const
 - Gets the scrollbar alignment type.*

- void `scrollbar_align` (`Fl_Align` a)
Sets the scrollbar alignment type.
- int `scrollbar_size` () const
Gets the current size of the scrollbars' troughs, in pixels.
- void `scrollbar_size` (int newSize)
Sets the pixel size of the scrollbars' troughs to `newSize`, in pixels.
- int `scrollbar_width` () const
Returns the global value `Fl::scrollbar_size()` unless a specific `scrollbar_width_` has been set.
- void `scrollbar_width` (int width)
Sets the global `Fl::scrollbar_size()`, and forces this instance of the widget to use it.
- `Fl_Color` `secondary_selection_color` () const
Gets the background color for the secondary selection block.
- void `secondary_selection_color` (`Fl_Color` color)
Sets the background color for the secondary selection block.
- int `shortcut` () const
- void `shortcut` (int s)
- void `show_cursor` (int b=1)
Shows the text cursor.
- void `show_insert_position` ()
Scrolls the text buffer to show the current insert position.
- int `skip_lines` (int startPos, int nLines, bool startPosIsLineStart)
Skip a number of lines forward.
- `Fl_Color` `spelling_underline_color` () const
Gets the underline color for style attribute `ATTR_SPELLING`.
- void `spelling_underline_color` (`Fl_Color` color)
Sets the underline color for style attribute `ATTR_SPELLING`.
- `Fl_Text_Buffer` * `style_buffer` () const
Gets the current style buffer associated with the text widget.
- `Fl_Color` `textcolor` () const
Gets the default color of text in the widget.
- void `textcolor` (`Fl_Color` n)
Sets the default color of text in the widget.
- `Fl_Font` `textfont` () const
Gets the default font used when drawing text in the widget.
- void `textfont` (`Fl_Font` s)
Sets the default font used when drawing text in the widget.
- `Fl_Fontsize` `textsize` () const
Gets the default size of text in the widget.
- void `textsize` (`Fl_Fontsize` s)
Sets the default size of text in the widget.
- int `word_end` (int pos) const
Moves the insert position to the end of the current word.
- int `word_start` (int pos) const
Moves the insert position to the beginning of the current word.
- void `wrap_mode` (int wrap, int wrap_margin)
Set the new text wrap mode.
- int `wrapped_column` (int row, int column) const
Nobody knows what this function does.
- int `wrapped_row` (int row) const
Nobody knows what this function does.
- double `x_to_col` (double x) const
Convert an x pixel position into a column number.
- ~`Fl_Text_Display` ()
Free a text display and release its associated memory.

Public Member Functions inherited from FL_Group

- [FL_Widget](#) *[_ddfdesign_kludge](#) ()
This is for forms compatibility only.
- void **add** ([FL_Widget](#) &)
The widget is removed from its current group (if any) and then added to the end of this group.
- void **add** ([FL_Widget](#) *o)
See void [FL_Group::add\(FL_Widget &w\)](#)
- void **add_resizable** ([FL_Widget](#) &o)
Adds a widget to the group and makes it the resizable widget.
- [FL_Widget](#) *const * **array** () const
Returns a pointer to the array of children.
- [FL_Group](#) const * **as_group** () const [FL_OVERRIDE](#)
- [FL_Group](#) * **as_group** () [FL_OVERRIDE](#)
Returns an [FL_Group](#) pointer if this widget is an [FL_Group](#).
- void **begin** ()
Sets the current group so you can build the widget tree by just constructing the widgets.
- [FL_Widget](#) * **child** (int n) const
Returns the n'th child.
- int **children** () const
Returns how many child widgets the group has.
- void **clear** ()
Deletes all child widgets from memory recursively.
- unsigned int **clip_children** ()
Returns the current clipping mode.
- void **clip_children** (int c)
Controls whether the group widget clips the drawing of child widgets to its bounding box.
- virtual int **delete_child** (int n)
*Removes the widget at *index* from the group and deletes it.*
- void **end** ()
*Exactly the same as *current(this->parent())*.*
- int **find** (const [FL_Widget](#) &o) const
*See int [FL_Group::find\(const FL_Widget *w\)](#) const.*
- int **find** (const [FL_Widget](#) *) const
Searches the child array for the widget and returns the index.
- [FL_Group](#) (int, int, int, int, const char * = 0)
Creates a new [FL_Group](#) widget using the given position, size, and label string.
- void **focus** ([FL_Widget](#) *W)
- void **forms_end** ()
This is for forms compatibility only.
- void **init_sizes** ()
Resets the internal array of widget sizes and positions.
- void **insert** ([FL_Widget](#) &, int i)
The widget is removed from its current group (if any) and then inserted into this group.
- void **insert** ([FL_Widget](#) &o, [FL_Widget](#) *before)
*This does *insert(w, find(before))*.*
- void **remove** ([FL_Widget](#) &)
Removes a widget from the group but does not delete it.
- void **remove** ([FL_Widget](#) *o)
Removes the widget o from the group.
- void **remove** (int index)

- Removes the widget at `index` from the group but does not delete it.*

 - `FI_Widget * resizable () const`
 - Returns the group's resizable widget.*
 - `void resizable (FI_Widget &o)`
 - Sets the group's resizable widget.*
 - `void resizable (FI_Widget *o)`
 - The resizable widget defines both the resizing box and the resizing behavior of the group and its children.*
 - `virtual ~FI_Group ()`
 - The destructor also deletes all the children.*

Public Member Functions inherited from `FI_Widget`

- `void _clear_fullscreen ()`
- `void _set_fullscreen ()`
- `void activate ()`
 - Activates the widget.*
- `unsigned int active () const`
 - Returns whether the widget is active.*
- `int active_r () const`
 - Returns whether the widget and all of its parents are active.*
- `FI_Align align () const`
 - Gets the label alignment.*
- `void align (FI_Align alignment)`
 - Sets the label alignment.*
- `long argument () const`
 - Gets the current user data (long) argument that is passed to the callback function.*
- `void argument (long v)`
 - Sets the current user data (long) argument that is passed to the callback function.*
- `virtual class FI_GL_Window * as_gl_window ()`
 - Returns an `FI_GL_Window` pointer if this widget is an `FI_GL_Window`.*
- `virtual class FI_GL_Window const * as_gl_window () const`
- `virtual FI_Window * as_window ()`
 - Returns an `FI_Window` pointer if this widget is an `FI_Window`.*
- `virtual FI_Window const * as_window () const`
- `void bind_deimage (FI_Image *img)`
 - Sets the image to use as part of the widget label when in the inactive state.*
- `void bind_deimage (int f)`
 - Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.*
- `void bind_image (FI_Image *img)`
 - Sets the image to use as part of the widget label when in the active state.*
- `void bind_image (int f)`
 - Bind the image to the widget, so the widget will delete the image when it is no longer needed.*
- `FI_Boxtype box () const`
 - Gets the box type of the widget.*
- `void box (FI_Boxtype new_box)`
 - Sets the box type for the widget.*
- `FI_Callback_p callback () const`
 - Gets the current callback function for the widget.*
- `void callback (FI_Callback *cb)`
 - Sets the current callback function for the widget.*
- `void callback (FI_Callback *cb, FI_Callback_User_Data *p, bool auto_free)`

- Sets the current callback function and managed user data for the widget.*

 - void [callback](#) ([Fl_Callback](#) *cb, void *p)
- Sets the current callback function and data for the widget.*

 - void [callback](#) ([Fl_Callback0](#) *cb)
- Sets the current callback function for the widget.*

 - void [callback](#) ([Fl_Callback1](#) *cb, long p=0)
- Sets the current callback function for the widget.*

 - unsigned int [changed](#) () const
- Checks if the widget value changed since the last callback.*

 - void [clear_active](#) ()
- Marks the widget as inactive without sending events or changing focus.*

 - void [clear_changed](#) ()
- Marks the value of the widget as unchanged.*

 - void [clear_damage](#) ([uchar](#) c=0)
- Clears or sets the damage flags.*

 - void [clear_output](#) ()
- Sets a widget to accept input.*

 - void [clear_visible](#) ()
- Hides the widget.*

 - void [clear_visible_focus](#) ()
- Disables keyboard focus navigation with this widget.*

 - [Fl_Color](#) [color](#) () const
- Gets the background color of the widget.*

 - void [color](#) ([Fl_Color](#) bg)
- Sets the background color of the widget.*

 - void [color](#) ([Fl_Color](#) bg, [Fl_Color](#) sel)
- Sets the background and selection color of the widget.*

 - [Fl_Color](#) [color2](#) () const
- For back compatibility only.*

 - void [color2](#) (unsigned a)
- For back compatibility only.*

 - int [contains](#) (const [Fl_Widget](#) *w) const
- Checks if w is a child of this widget.*

 - void [copy_label](#) (const char *new_label)
- Sets the current label.*

 - void [copy_tooltip](#) (const char *text)
- Sets the current tooltip text.*

 - [uchar](#) [damage](#) () const
- Returns non-zero if [draw\(\)](#) needs to be called.*

 - void [damage](#) ([uchar](#) c)
- Sets the damage bits for the widget.*

 - void [damage](#) ([uchar](#) c, int x, int y, int w, int h)
- Sets the damage bits for an area inside the widget.*

 - int [damage_resize](#) (int, int, int, int)
- Internal use only.*

 - void [deactivate](#) ()
- Deactivates the widget.*

 - [Fl_Image](#) * [deimage](#) ()
- Gets the image that is used as part of the widget label when in the inactive state.*

 - const [Fl_Image](#) * [deimage](#) () const
- Gets the image that is used as part of the widget label when in the inactive state.*

- void [deimage](#) ([FL_Image](#) &img)
Sets the image to use as part of the widget label when in the inactive state.
- void [deimage](#) ([FL_Image](#) *img)
Sets the image to use as part of the widget label when in the inactive state.
- int [deimage_bound](#) () const
Returns whether the inactive image is managed by the widget.
- void [do_callback](#) ([FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
Calls the widget callback function with default arguments.
- void [do_callback](#) ([FL_Widget](#) *widget, long arg, [FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
Calls the widget callback function with arbitrary arguments.
- void [do_callback](#) ([FL_Widget](#) *widget, void *arg=0, [FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
Calls the widget callback function with arbitrary arguments.
- void [draw_label](#) (int, int, int, int, [FL_Align](#)) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int [h](#) () const
Gets the widget height.
- virtual void [hide](#) ()
Makes a widget invisible.
- int [horizontal_label_margin](#) ()
Get the spacing between the label and the horizontal edge of the widget.
- void [horizontal_label_margin](#) (int px)
Set the spacing between the label and the horizontal edge of the widget.
- [FL_Image](#) * [image](#) ()
Gets the image that is used as part of the widget label when in the active state.
- const [FL_Image](#) * [image](#) () const
Gets the image that is used as part of the widget label when in the active state.
- void [image](#) ([FL_Image](#) &img)
Sets the image to use as part of the widget label when in the active state.
- void [image](#) ([FL_Image](#) *img)
Sets the image to use as part of the widget label when in the active state.
- int [image_bound](#) () const
Returns whether the image is managed by the widget.
- int [inside](#) (const [FL_Widget](#) *wgt) const
Checks if this widget is a child of wgt.
- int [is_label_copied](#) () const
Returns whether the current label was assigned with [copy_label\(\)](#).
- const char * [label](#) () const
Gets the current label text.
- void [label](#) (const char *text)
Sets the current label pointer.
- void [label](#) ([FL_Labeltype](#) a, const char *b)
Shortcut to set the label text and type in one call.
- int [label_image_spacing](#) ()
Return the gap size between the label and the image.
- void [label_image_spacing](#) (int gap)
Set the gap between the label and the image in pixels.
- [FL_Color](#) [labelcolor](#) () const
Gets the label color.
- void [labelcolor](#) ([FL_Color](#) c)
Sets the label color.
- [FL_Font](#) [labelfont](#) () const

- Gets the font to use.*

 - void [labelfont](#) ([FI_Font](#) f)
- Sets the font to use.*

 - [FI_Fontsize](#) [labelsize](#) () const
- Gets the font size in pixels.*

 - void [labelsize](#) ([FI_Fontsize](#) pix)
- Sets the font size in pixels.*

 - [FI_Labeltype](#) [labeltype](#) () const
- Gets the label type.*

 - void [labeltype](#) ([FI_Labeltype](#) a)
- Sets the label type.*

 - void [measure_label](#) (int &ww, int &hh) const
- Sets width ww and height hh accordingly with the label size.*

 - bool [needs_keyboard](#) () const
- Returns whether this widget needs a keyboard.*

 - void [needs_keyboard](#) (bool needs)
- Sets whether this widget needs a keyboard.*

 - unsigned int [output](#) () const
- Returns if a widget is used for output only.*

 - [FI_Group](#) * [parent](#) () const
- Returns a pointer to the parent widget.*

 - void [parent](#) ([FI_Group](#) *p)
- Internal use only - "for hacks only".*

 - void [position](#) (int X, int Y)
- Repositions the window or widget.*

 - void [redraw](#) ()
- Schedules the drawing of the widget.*

 - void [redraw_label](#) ()
- Schedules the drawing of the label.*

 - [FI_Color](#) [selection_color](#) () const
- Gets the selection color.*

 - void [selection_color](#) ([FI_Color](#) a)
- Sets the selection color.*

 - void [set_active](#) ()
- Marks the widget as active without sending events or changing focus.*

 - void [set_changed](#) ()
- Marks the value of the widget as changed.*

 - void [set_output](#) ()
- Sets a widget to output only.*

 - void [set_visible](#) ()
- Makes the widget visible.*

 - void [set_visible_focus](#) ()
- Enables keyboard focus navigation with this widget.*

 - int [shortcut_label](#) () const
- Returns whether the widget's label uses '&' to indicate shortcuts.*

 - void [shortcut_label](#) (int value)
- Sets whether the widget's label uses '&' to indicate shortcuts.*

 - virtual void [show](#) ()
- Makes a widget visible.*

 - void [size](#) (int W, int H)
- Changes the size of the widget.*

- int [take_focus](#) ()
Gives the widget the keyboard focus.
- unsigned int [takeevents](#) () const
Returns if the widget is able to take events.
- int [test_shortcut](#) ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * [tooltip](#) () const
Gets the current tooltip text.
- void [tooltip](#) (const char *text)
Sets the current tooltip text.
- [Fl_Window](#) * [top_window](#) () const
Returns a pointer to the top-level window for the widget.
- [Fl_Window](#) * [top_window_offset](#) (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- uchar [type](#) () const
Gets the widget type.
- void [type](#) (uchar t)
Sets the widget type.
- int [use_accents_menu](#) ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * [user_data](#) () const
Gets the user data for this widget.
- void [user_data](#) ([Fl_Callback_User_Data](#) *v, bool auto_free)
Sets the user data for this widget.
- void [user_data](#) (void *v)
Sets the user data for this widget.
- int [vertical_label_margin](#) ()
Get the spacing between the label and the vertical edge of the widget.
- void [vertical_label_margin](#) (int px)
Set the spacing between the label and the vertical edge of the widget.
- unsigned int [visible](#) () const
Returns whether a widget is visible.
- unsigned int [visible_focus](#) () const
Checks whether this widget has a visible focus.
- void [visible_focus](#) (int v)
Modifies keyboard focus navigation.
- int [visible_r](#) () const
Returns whether a widget and all its parents are visible.
- int [w](#) () const
Gets the widget width.
- [Fl_When](#) [when](#) () const
Returns the conditions under which the callback is called.
- void [when](#) (uchar i)
Sets the flags used to decide when a callback is called.
- [Fl_Window](#) * [window](#) () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int [x](#) () const
Gets the widget position in its window.
- int [y](#) () const
Gets the widget position in its window.
- virtual ~[Fl_Widget](#) ()
Destroys the widget.

Protected Types

flags possible values enumeration.

Protected Member Functions

- void [absolute_top_line_number](#) (int oldFirstChar)
Re-calculate absolute top line number for a change in scroll position.
- void [calc_last_char](#) ()
Update last display character index.
- void [calc_line_starts](#) (int startLine, int endLine)
Update the line starts array.
- void [clear_rect](#) (int style, int x, int y, int width, int height) const
*Clear a rectangle with the appropriate background color for *style*.*
- void [display_insert](#) ()
Scroll the display to bring insertion cursor into view.
- void [draw](#) () **FL_OVERRIDE**
Draw the widget.
- void [draw_cursor](#) (int, int)
Draw a cursor with top center at X, Y.
- void [draw_line_numbers](#) (bool clearAll)
Refresh the line number area.
- void [draw_range](#) (int start, int end)
Draw a range of text.
- void [draw_string](#) (int style, int x, int y, int toX, const char *string, int nChars) const
Draw a text segment in a single style.
- void [draw_text](#) (int X, int Y, int W, int H)
Refresh a rectangle of the text display.
- void [draw_vline](#) (int visLineNum, int leftClip, int rightClip, int leftCharIndex, int rightCharIndex)
Draw a single line of text.
- int [empty_vlines](#) () const
Return true if there are lines visible with no corresponding buffer text.
- void [extend_range_for_styles](#) (int *start, int *end)
I don't know what this does!

- void [find_line_end](#) (int pos, bool start_pos_is_line_start, int *lineEnd, int *nextLineStart) const
Finds both the end of the current line and the start of the next line.
- void [find_wrap_range](#) (const char *deletedText, int pos, int nInserted, int nDeleted, int *modRangeStart, int *modRangeEnd, int *linesInserted, int *linesDeleted)
Wrapping calculations.
- int [find_x](#) (const char *s, int len, int style, int x) const
Find the index of the character that lies at the given x position / closest cursor position.
- int [handle_rmb](#) (int readonly)
Handle right mouse button down events.
- int [handle_vline](#) (int mode, int lineStart, int lineLen, int leftChar, int rightChar, int topClip, int bottomClip, int leftClip, int rightClip) const
Universal pixel machine.
- int [longest_vline](#) () const
Find the longest line of all visible lines.
- void [maintain_absolute_top_line_number](#) (int state)
Line numbering stuff, currently unused.
- int [maintaining_absolute_top_line_number](#) () const
Returns true if a separate absolute top line number is being maintained.
- void [measure_deleted_lines](#) (int pos, int nDeleted)
Wrapping calculations.
- double [measure_proportional_character](#) (const char *s, int colNum, int pos) const
Wrapping calculations.
- int [measure_vline](#) (int visLineNum) const
Returns the width in pixels of the displayed line pointed to by "visLineNum".
- void [offset_line_starts](#) (int newTopLineNum)
Offset line start counters for a new vertical scroll position.
- int [position_to_line](#) (int pos, int *lineNum) const
Convert a position index into a line number offset.
- int [position_to_linecol](#) (int pos, int *lineNum, int *column) const
Find the line and column number of position pos.
- void [reset_absolute_top_line_number](#) ()
Reestablish the absolute (non-wrapped) top line number.
- int [scroll_](#) (int topLineNum, int horizOffset)
Scrolls the current buffer to start at the specified line and column.
- double [string_width](#) (const char *string, int length, int style) const
Find the width of a string in the font of a particular style.
- void [update_h_scrollbar](#) ()
Update horizontal scrollbar.
- void [update_line_starts](#) (int pos, int charsInserted, int charsDeleted, int linesInserted, int linesDeleted, int *scrolled)
Update line start arrays and variables.
- void [update_v_scrollbar](#) ()
Update vertical scrollbar.
- int [vline_length](#) (int visLineNum) const
Count number of bytes in a visible line.
- int [wrap_uses_character](#) (int lineEndPos) const
Check if the line break is caused by a newline or by line wrapping.
- void [wrapped_line_counter](#) (FI_Text_Buffer *buf, int startPos, int maxPos, int maxLines, bool startPosIs↵
LineStart, int styleBufOffset, int *retPos, int *retLines, int *retLineStart, int *retLineEnd, bool countLast↵
LineMissingNewLine=true) const
Wrapping calculations.

- int [xy_to_position](#) (int x, int y, int PosType=CHARACTER_POS) const
Translate a pixel position into a character index.
- void [xy_to_rowcol](#) (int x, int y, int *row, int *column, int PosType=CHARACTER_POS) const
Translate pixel coordinates into row and column.

Protected Member Functions inherited from [FL_Group](#)

- [FL_Rect](#) * [bounds](#) ()
Returns the internal array of widget sizes and positions.
- void [draw_child](#) ([FL_Widget](#) &widget) const
Forces a child to redraw.
- void [draw_children](#) ()
Draws all children of the group.
- void [draw_outside_label](#) (const [FL_Widget](#) &widget) const
Parents normally call this to draw outside labels of child widgets.
- virtual int [on_insert](#) ([FL_Widget](#) *, int)
Allow derived groups to act when a widget is added as a child.
- virtual int [on_move](#) (int, int)
Allow derived groups to act when a widget is moved within the group.
- virtual void [on_remove](#) (int)
Allow derived groups to act when a child widget is removed from the group.
- int * [sizes](#) ()
Returns the internal array of widget sizes and positions.
- void [update_child](#) ([FL_Widget](#) &widget) const
Draws a child only if it needs it.

Protected Member Functions inherited from [FL_Widget](#)

- void [clear_flag](#) (unsigned int c)
Clears a flag in the flags mask.
- void [draw_backdrop](#) () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void [draw_box](#) () const
Draws the widget box according its box style.
- void [draw_box](#) ([FL_Boxtype](#) t, [FL_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void [draw_box](#) ([FL_Boxtype](#) t, int x, int y, int w, int h, [FL_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void [draw_focus](#) () const
Draws a focus rectangle around the widget.
- void [draw_focus](#) ([FL_Boxtype](#) t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void [draw_focus](#) ([FL_Boxtype](#) t, int x, int y, int w, int h, [FL_Color](#) bg) const
Draws a focus box for the widget at the given position and size.
- void [draw_label](#) () const
Draws the widget's label at the defined label position.
- void [draw_label](#) (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [FL_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int [flags](#) () const

Gets the widget flags mask.

- void **h** (int v)

Internal use only.

- void **set_flag** (unsigned int c)

Sets a flag in the flags mask.

- void **w** (int v)

Internal use only.

- void **x** (int v)

Internal use only.

- void **y** (int v)

Internal use only.

Static Protected Member Functions

- static void **buffer_modified_cb** (int pos, int nInserted, int nDeleted, int nRestyled, const char *deletedText, void *cbArg)

This is called whenever the buffer is modified.

- static void **buffer_predelete_cb** (int pos, int nDeleted, void *cbArg)

This is called before any characters are deleted.

- static void **h_scrollbar_cb** (FI_Scrollbar *w, FI_Text_Display *d)

Callback for drag or valueChanged on horizontal scrollbar.

- static void **scroll_timer_cb** (void *)

Timer callback for scroll events.

- static void **v_scrollbar_cb** (FI_Scrollbar *w, FI_Text_Display *d)

Callback for drag or valueChanged on vertical scrollbar.

Protected Attributes

Additional Inherited Members

Static Public Member Functions inherited from [Fl_Group](#)

- static [Fl_Group](#) * `current` ()
Returns the currently active group.
- static void `current` ([Fl_Group](#) *g)
Sets the current group.

Static Public Member Functions inherited from [Fl_Widget](#)

- static void [default_callback](#) ([Fl_Widget](#) *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int [label_shortcut](#) (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int [test_shortcut](#) (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

11.144.1 Detailed Description

Rich text display widget.

This is the FLTK text display widget. It allows the user to view multiple lines of text and supports highlighting, word wrap, mixes of font faces and colors, line numbers and scrolling. The buffer that is displayed in the widget is managed by the [Fl_Text_Buffer](#) class. A single Text Buffer can be displayed by multiple Text Displays.

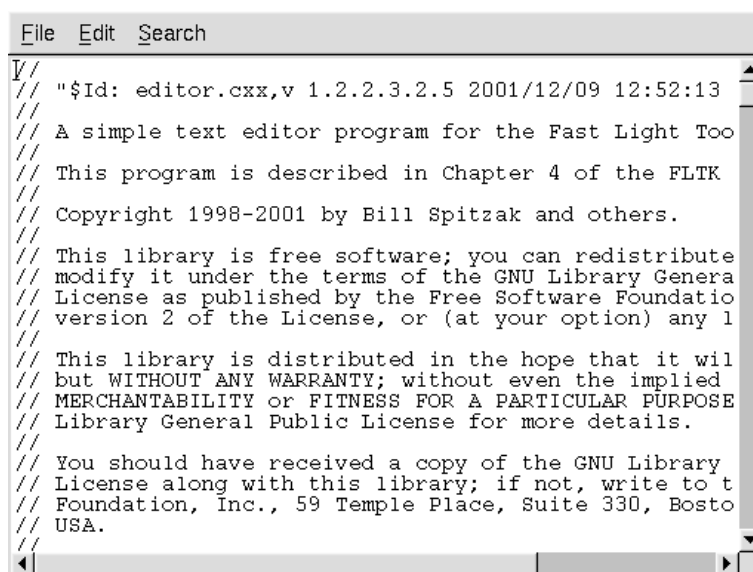

Figure 11.58 [Fl_Text_Display](#) widget

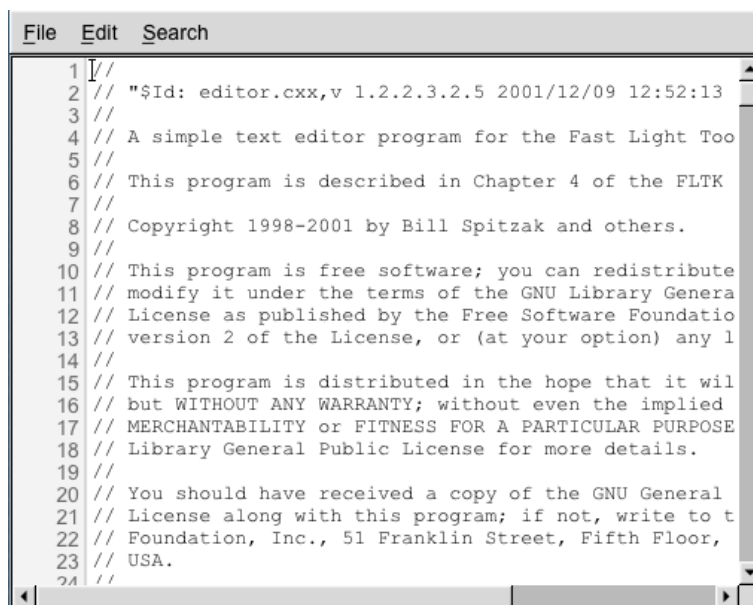

Figure 11.59 Fl_Text_Display widget with line numbers enabled

Example Use

```
#include <FL/Fl_Text_Display.H>
..
int main() {
    ..
    Fl_Text_Buffer *buff = new Fl_Text_Buffer();
    Fl_Text_Display *disp = new Fl_Text_Display(10, 10, 640, 480);
    disp->buffer(buff);           // attach text buffer to display widget
    buff->text("line one\nline two"); // add some text to buffer
    ..
}
```

Features

- Word wrap: [wrap_mode\(\)](#), [wrapped_column\(\)](#), [wrapped_row\(\)](#)
- Font control: [textfont\(\)](#), [textsize\(\)](#), [textcolor\(\)](#)
- Font styling: [highlight_data\(\)](#)
- Cursor: [cursor_style\(\)](#), [show_cursor\(\)](#), [hide_cursor\(\)](#), [cursor_color\(\)](#)
- Line numbers: [linenumber_width\(\)](#), [linenumber_font\(\)](#), [linenumber_size\(\)](#), [linenumber_fgcolor\(\)](#), [linenumber_bgcolor\(\)](#), [linenumber_align\(\)](#), [linenumber_format\(\)](#)

Note that other features may be available via [Fl_Text_Editor](#) and [Fl_Text_Buffer](#) classes.

Note

Line numbers were added in FLTK 1.3.3.

11.144.2 Member Enumeration Documentation

11.144.2.1 anonymous enum

anonymous enum

text display cursor shapes enumeration

Enumerator

NORMAL_CURSOR	I-beam.
---------------	---------

Enumerator

CARET_CURSOR	caret under the text
DIM_CURSOR	dim I-beam
BLOCK_CURSOR	unfill box under the current character
HEAVY_CURSOR	thick I-beam
SIMPLE_CURSOR	as cursor as Fl_Input cursor

11.144.2.2 anonymous enum

anonymous enum

attribute flags in [Style_Table_Entry.attr](#)

Enumerator

ATTR_BGCOLOR	use the background color in the <code>bgcolor</code> field
ATTR_BGCOLOR_EXT_	(internal use)
ATTR_BGCOLOR_EXT	extend background color to the end of the line
ATTR_UNDERLINE	a single underline, underline types are mutually exclusive
ATTR_GRAMMAR	grammar suggestion (blue dotted underline)
ATTR_SPELLING	spelling suggestion (red dotted underline)
ATTR_STRIKE_THROUGH	line through the middle of the text
ATTR_LINES_MASK	the mask for all underline and strike through types

11.144.2.3 anonymous enum

anonymous enum

wrap types - used in [wrap_mode\(\)](#)

Enumerator

WRAP_NONE	don't wrap text at all
WRAP_AT_COLUMN	wrap text at the given text column
WRAP_AT_PIXEL	wrap text at a pixel position
WRAP_AT_BOUNDS	wrap text so that it fits into the widget width

11.144.3 Constructor & Destructor Documentation**11.144.3.1 Fl_Text_Display()**

```
Fl_Text_Display::Fl_Text_Display (
    int X,
    int Y,
    int W,
    int H,
    const char * l = 0)
```

Creates a new text display widget.

Parameters

<i>X,Y,W,H</i>	position and size of widget
<i>l</i>	label text, defaults to none

11.144.3.2 ~Fl_Text_Display()

```
Fl_Text_Display::~Fl_Text_Display ()
```

Free a text display and release its associated memory.

Note

The text buffer that the text display displays is a separate entity and is not freed, nor are the style buffer or style table.

See also

[Fl_Text_Display::buffer\(Fl_Text_Buffer* buf\)](#)

11.144.4 Member Function Documentation**11.144.4.1 absolute_top_line_number()**

```
void Fl_Text_Display::absolute_top_line_number (
    int oldFirstChar) [protected]
```

Re-calculate absolute top line number for a change in scroll position.

Does nothing if the absolute top line number is not being maintained.

11.144.4.2 buffer() [1/3]

```
Fl_Text_Buffer * Fl_Text_Display::buffer () const [inline]
```

Gets the current text buffer associated with the text widget.

Multiple text widgets can be associated with the same text buffer.

Returns

current text buffer

See also

[Fl_Text_Display::buffer\(Fl_Text_Buffer* buf\)](#)

[Fl_Text_Display::buffer\(Fl_Text_Buffer& buf\)](#)

11.144.4.3 buffer() [2/3]

```
void Fl_Text_Display::buffer (
    Fl_Text_Buffer & buf) [inline]
```

Sets the current text buffer associated with the text widget.

Multiple text widgets can be associated with the same text buffer.

Parameters

<i>buf</i>	new text buffer
------------	-----------------

See also

[Fl_Text_Display::buffer\(Fl_Text_Buffer* buf\)](#)

11.144.4.4 buffer() [3/3]

```
void Fl_Text_Display::buffer (
    Fl_Text_Buffer * buf)
```

Attach a text buffer to display, replacing the current buffer (if any).

Multiple text widgets can be associated with the same text buffer.

Note

The caller is responsible for the old (replaced) buffer (if any). This method does not delete the old buffer.

Parameters

<i>buf</i>	attach this text buffer
------------	-------------------------

11.144.4.5 buffer_modified_cb()

```
void Fl_Text_Display::buffer_modified_cb (
    int pos,
    int nInserted,
    int nDeleted,
    int nRestyled,
    const char * deletedText,
    void * cbArg) [static], [protected]
```

This is called whenever the buffer is modified.

Callback attached to the text buffer to receive modification information.

This callback can be used to adjust the display or update other setting. It is not advisable to change any buffers or text in this callback, or line counting may get out of sync.

Parameters

<i>pos</i>	starting index of modification
<i>nInserted</i>	number of bytes we inserted (must be UTF-8 aligned!)
<i>nDeleted</i>	number of bytes deleted (must be UTF-8 aligned!)
<i>nRestyled</i>	??
<i>deletedText</i>	this is what was removed, must not be NULL if nDeleted is set
<i>cbArg</i>	"this" pointer for static callback function

11.144.4.6 buffer_predelete_cb()

```
void Fl_Text_Display::buffer_predelete_cb (
    int pos,
    int nDeleted,
    void * cbArg) [static], [protected]
```

This is called before any characters are deleted.

Callback attached to the text buffer to receive delete information before the modifications are actually made.

This callback can be used to adjust the display or update other setting. It is not advisable to change any buffers or text in this callback, or line counting may get out of sync.

Parameters

<i>pos</i>	starting index of deletion
<i>nDeleted</i>	number of bytes we will delete (must be UTF-8 aligned!)
<i>cbArg</i>	"this" pointer for static callback function

11.144.4.7 calc_last_char()

```
void Fl_Text_Display::calc_last_char () [protected]
```

Update last display character index.

Given a [Fl_Text_Display](#) with a complete, up-to-date lineStarts array, update the lastChar entry to point to the last buffer position displayed.

11.144.4.8 calc_line_starts()

```
void Fl_Text_Display::calc_line_starts (
    int startLine,
    int endLine) [protected]
```

Update the line starts array.

Scan through the text in the Text Display's buffer and recalculate the line starts array values beginning at index "startLine" and continuing through (including) "endLine". It assumes that the line starts entry preceding "startLine" (or mFirstChar if startLine is 0) is good, and re-counts newlines to fill in the requested entries. Out of range values for "startLine" and "endLine" are acceptable.

Parameters

<i>startLine,endLine</i>	range of lines to scan as line numbers
--------------------------	--

11.144.4.9 clear_rect()

```
void Fl_Text_Display::clear_rect (
    int style,
    int X,
    int Y,
    int width,
    int height) const [protected]
```

Clear a rectangle with the appropriate background color for *style*.

Parameters

<i>style</i>	index into style table
<i>X,Y,width,height</i>	size and position of background area

11.144.4.10 col_to_x()

```
double Fl_Text_Display::col_to_x (
    double col) const
```

Convert a column number into an x pixel position.

Parameters

<i>col</i>	an approximate column number based on the main font
------------	---

Returns

number of pixels from the left margin to the left of an average sized character

See also

[x_to_col\(\)](#)

11.144.4.11 count_lines()

```
int Fl_Text_Display::count_lines (
    int startPos,
    int endPos,
    bool startPosIsLineStart) const
```

Count the number of lines between two positions.

Same as [Fl_Text_Buffer::count_lines\(\)](#), but takes into account wrapping if wrapping is turned on. If the caller knows that *startPos* is at a line start, it can pass *startPosIsLineStart* as *True* to make the call more efficient by avoiding the additional step of scanning back to the last newline.

Parameters

<i>startPos</i>	index to first character
<i>endPos</i>	index after last character
<i>startPosIsLineStart</i>	avoid scanning back to the line start

Returns

number of lines

11.144.4.12 cursor_color() [1/2]

```
Fl_Color Fl_Text_Display::cursor_color () const [inline]
```

Gets the text cursor color.

Returns

cursor color

11.144.4.13 cursor_color() [2/2]

```
void Fl_Text_Display::cursor_color (
    Fl_Color n) [inline]
```

Sets the text cursor color.

Parameters

<i>n</i>	new cursor color
----------	------------------

11.144.4.14 cursor_style()

```
void Fl_Text_Display::cursor_style (
    int style)
```

Sets the text cursor style.

Sets the text cursor style to one of the following:

- [Fl_Text_Display::NORMAL_CURSOR](#) - Shows an I beam.
- [Fl_Text_Display::CARET_CURSOR](#) - Shows a caret under the text.
- [Fl_Text_Display::DIM_CURSOR](#) - Shows a dimmed I beam.
- [Fl_Text_Display::BLOCK_CURSOR](#) - Shows an unfilled box around the current character.
- [Fl_Text_Display::HEAVY_CURSOR](#) - Shows a thick I beam.

This call also switches the cursor on and may trigger a redraw.

Parameters

<i>style</i>	new cursor style
--------------	------------------

11.144.4.15 display_insert()

```
void Fl_Text_Display::display_insert () [protected]
```

Scroll the display to bring insertion cursor into view.

Note: it would be nice to be able to do this without counting lines twice ([scroll_\(\)](#) counts them too) and/or to count from the most efficient starting point, but the efficiency of this routine is not as important to the overall performance of the text display.

11.144.4.16 display_needs_recalc()

```
void Fl_Text_Display::display_needs_recalc () [virtual]
```

Schedule a [recalc_display\(\)](#) to be done on next [draw\(\)](#).

Call this from methods that might be called repeatedly, to defers potentially CPU intensive [recalc_display\(\)](#) until it's actually needed just before [draw\(\)](#).

11.144.4.17 draw()

```
void Fl_Text_Display::draw (
    void ) [protected], [virtual]
```

Draw the widget.

This function tries to limit drawing to smaller areas if possible.

Reimplemented from [Fl_Group](#).

11.144.4.18 draw_cursor()

```
void Fl_Text_Display::draw_cursor (
    int X,
    int Y) [protected]
```

Draw a cursor with top center at X, Y.

Parameters

X,Y	cursor position in pixels
-----	---------------------------

11.144.4.19 draw_line_numbers()

```
void Fl_Text_Display::draw_line_numbers (
    bool clearAll) [protected]
```

Refresh the line number area.

Parameters

<i>clearAll</i>	– (currently unused) If False, only draws the line number text, does not clear the area behind it. If True, clears the area and redraws the text. Use False to avoid a 'flash' for single buffered windows.
-----------------	---

11.144.4.20 draw_range()

```
void Fl_Text_Display::draw_range (
    int startpos,
    int endpos) [protected]
```

Draw a range of text.

Refresh all of the text between buffer positions *startpos* and *endpos* not including the character at the position *endpos*.

If *endpos* points beyond the end of the buffer, refresh the whole display after *startpos*, including blank lines which are not technically part of any range of characters.

Parameters

<i>startpos</i>	index of first character to draw
<i>endpos</i>	index after last character to draw

11.144.4.21 draw_string()

```
void Fl_Text_Display::draw_string (
    int style,
    int X,
    int Y,
    int toX,
    const char * string,
    int nChars) const [protected]
```

Draw a text segment in a single style.

Draw a string or blank area according to parameter *style*, using the appropriate colors and drawing method for that style, with top left corner at *X*, *Y*. If *style* says to draw text, use *string* as source of characters, and draw *nChars*, if *style* is FILL, erase rectangle where text would have drawn from *X* to *toX* and from *Y* to the maximum *y* extent of the current font(s).

Parameters

<i>style</i>	index into style lookup table
<i>X,Y</i>	drawing origin
<i>toX</i>	rightmost position if this is a fill operation
<i>string</i>	text if this is a drawing operation
<i>nChars</i>	number of characters to draw

11.144.4.22 draw_text()

```
void Fl_Text_Display::draw_text (
    int left,
    int top,
    int width,
    int height) [protected]
```

Refresh a rectangle of the text display.

Parameters

<i>left,top</i>	are in coordinates of the text drawing window.
<i>width,height</i>	size in pixels

11.144.4.23 draw_vline()

```
void Fl_Text_Display::draw_vline (
    int visLineNum,
    int leftClip,
    int rightClip,
    int leftCharIndex,
    int rightCharIndex) [protected]
```

Draw a single line of text.

Draw the text on a single line represented by *visLineNum* (the number of lines down from the top of the display), limited by *leftClip* and *rightClip* window coordinates and *leftCharIndex* and *rightCharIndex* character positions (not including the character at position *rightCharIndex*).

Parameters

<i>visLineNum</i>	index of line in the visible line number lookup
<i>leftClip,rightClip</i>	pixel position of clipped area
<i>leftCharIndex,rightCharIndex</i>	index into line of segment that we want to draw

11.144.4.24 empty_vlines()

```
int Fl_Text_Display::empty_vlines () const [protected]
```

Return true if there are lines visible with no corresponding buffer text.

Returns

1 if there are empty lines

11.144.4.25 extend_range_for_styles()

```
void Fl_Text_Display::extend_range_for_styles (
    int * startpos,
    int * endpos) [protected]
```

I don't know what this does!

Extend the range of a redraw request (from *start to *end) with additional redraw requests resulting from changes to the attached style buffer (which contains auxiliary information for coloring or styling text).

Parameters

<i>startpos</i>	??
<i>endpos</i>	??

Todo Unicode?

11.144.4.26 find_line_end()

```
void Fl_Text_Display::find_line_end (
    int startPos,
    bool startPosIsLineStart,
    int * lineEnd,
    int * nextLineStart) const [protected]
```

Finds both the end of the current line and the start of the next line.

Why? In continuous wrap mode, if you need to know both, figuring out one from the other can be expensive or error prone. The problem comes when there's a trailing space or tab just before the end of the buffer. To translate an end of line value to or from the next lines start value, you need to know whether the trailing space or tab is being used as a line break or just a normal character, and to find that out would otherwise require counting all the way back to the beginning of the line.

Parameters

	<i>startPos</i>	
	<i>startPosIsLineStart</i>	
out	<i>lineEnd</i>	
out	<i>nextLineStart</i>	

11.144.4.27 find_wrap_range()

```
void Fl_Text_Display::find_wrap_range (
    const char * deletedText,
    int pos,
    int nInserted,
    int nDeleted,
    int * modRangeStart,
    int * modRangeEnd,
```

```

    int * linesInserted,
    int * linesDeleted) [protected]

```

Wrapping calculations.

When continuous wrap is on, and the user inserts or deletes characters, wrapping can happen before and beyond the changed position. This routine finds the extent of the changes, and counts the deleted and inserted lines over that range. It also attempts to minimize the size of the range to what has to be counted and re-displayed, so the results can be useful both for delimiting where the line starts need to be recalculated, and for deciding what part of the text to redisplay.

Parameters

<i>deletedText</i>	
<i>pos</i>	
<i>nInserted</i>	
<i>nDeleted</i>	
<i>modRangeStart</i>	
<i>modRangeEnd</i>	
<i>linesInserted</i>	
<i>linesDeleted</i>	

11.144.4.28 find_x()

```

int Fl_Text_Display::find_x (
    const char * s,
    int len,
    int style,
    int x) const [protected]

```

Find the index of the character that lies at the given x position / closest cursor position.

Parameters

<i>s</i>	UTF-8 text string
<i>len</i>	length of string
<i>style</i>	index into style lookup table
<i>x</i>	position in pixels - negative returns closest cursor position

Returns

index into buffer

11.144.4.29 get_absolute_top_line_number()

```

int Fl_Text_Display::get_absolute_top_line_number () const

```

Returns the absolute (non-wrapped) line number of the first line displayed.

Returns 0 if the absolute top line number is not being maintained.

11.144.4.30 grammar_underline_color() [1/2]

```

Fl_Color Fl_Text_Display::grammar_underline_color () const [inline]

```

Gets the underline color for style attribute ATTR_GRAMMAR.

Returns

underline color

11.144.4.31 grammar_underline_color() [2/2]

```
void Fl_Text_Display::grammar_underline_color (
    Fl\_Color color) [inline]
```

Sets the underline color for style attribute ATTR_GRAMMAR.

Parameters

<i>color</i>	underline color
--------------	-----------------

11.144.4.32 handle()

```
int Fl_Text_Display::handle (
    int e) [virtual]
```

Event handling.

Reimplemented from [Fl_Group](#).

Reimplemented in [Fl_Text_Editor](#).

11.144.4.33 handle_rmb()

```
int Fl_Text_Display::handle_rmb (
    int readonly) [protected]
```

Handle right mouse button down events.

Returns

0 for no op, 1 to cut, 2 to copy, 3 to paste

11.144.4.34 handle_vline()

```
int Fl_Text_Display::handle_vline (
    int mode,
    int lineStartPos,
    int lineLen,
    int leftChar,
    int rightChar,
    int Y,
    int bottomClip,
    int leftClip,
    int rightClip) const [protected]
```

Universal pixel machine.

We use a single function that handles all line layout, measuring, and drawing

- draw a text range
- return the width of a text range in pixels
- return the index of a character that is at a pixel position

Parameters

in	<i>mode</i>	DRAW_LINE, GET_WIDTH, FIND_INDEX, FIND_INDEX_FROM_ZERO, or FIND_CURSOR_INDEX
in	<i>lineStartPos</i>	index of first character
in	<i>lineLen</i>	size of string in bytes
in	<i>leftChar, rightChar</i>	
in	<i>Y</i>	drawing position
in	<i>bottomClip, leftClip, rightClip</i>	stop work when we reach the clipped area. rightClip is the X position that we search in FIND_INDEX.

Return values

<i>DRAW_LINE</i>	index of last drawn character
<i>GET_WIDTH</i>	width in pixels of text segment if we would draw it
<i>FIND_INDEX</i>	index of character at given x position in window coordinates
<i>FIND_INDEX_FROM_ZERO</i>	index of character at given x position without scrolling and widget offsets

Todo we need to handle hidden hyphens and tabs here!

we handle all styles and selections

we must provide code to get pixel positions of the middle of a character as well

11.144.4.35 highlight_data()

```
void Fl_Text_Display::highlight_data (
    Fl_Text_Buffer * styleBuffer,
    const Style_Table_Entry * styleTable,
    int nStyles,
    char unfinishedStyle,
    Unfinished_Style_Cb unfinishedHighlightCB,
    void * cbArg)
```

Attach (or remove) highlight information in text display and redisplay.

Highlighting information consists of a style buffer which parallels the normal text buffer, but codes font and color information for the display; a style table which translates style buffer codes (indexed by buffer character - 'A') into fonts and colors; and a callback mechanism for as-needed highlighting, triggered by a style buffer entry of "unfinished↵ Style". Style buffer can trigger additional redisplay during a normal buffer modification if the buffer contains a primary [Fl_Text_Selection](#) (see [extend_range_for_styles\(\)](#) for more information on this protocol).

Style buffers, tables and their associated memory are managed by the caller.

Styles are ranged from 65 ('A') to 126.

Note

Style information in the style buffer must have the same byte offset as the corresponding character in the text buffer. UTF-8 characters can have a maximum length of four bytes. Style information must take this into account and fill the unused bytes with 0. See [fl_utf8len\(\)](#).

Text: "**g* r ü *n**", where normal style is 'A', and bold is 'B'

```
Text Buffer(hex):  67 72 c3 bc 6e : gr..n
Style Buffer(hex): 42 41 41 00 42 : BAA.B
```

Parameters

<i>styleBuffer</i>	this buffer works in parallel to the text buffer. For every character in the text buffer, the style buffer has a byte at the same offset that contains an index into an array of possible styles.
<i>styleTable</i>	a list of styles indexed by the style buffer
<i>nStyles</i>	number of styles in the style table
<i>unfinishedStyle</i>	if this style is found, the callback below is called
<i>unfinishedHighlightCB</i>	if a character with an unfinished style is found, this callback will be called
<i>cbArg</i>	an optional argument for the callback above, usually a pointer to the Text Display.

See also

[Fl_Text_Display::style_buffer\(\)](#)

11.144.4.36 in_selection()

```
int Fl_Text_Display::in_selection (
    int X,
    int Y) const
```

Check if a pixel position is within the primary selection.

Parameters

<i>X,Y</i>	pixel position to test
------------	------------------------

Returns

1 if position (X, Y) is inside of the primary [Fl_Text_Selection](#)

11.144.4.37 insert()

```
void Fl_Text_Display::insert (
    const char * text)
```

Inserts "text" at the current cursor location.

This has the same effect as inserting the text into the buffer using `insert(insert_position(),text)` and then moving the insert position after the newly inserted text, except that it's optimized to do less redrawing.

Parameters

<i>text</i>	new text in UTF-8 encoding.
-------------	-----------------------------

11.144.4.38 insert_position() [1/2]

```
int Fl_Text_Display::insert_position () const [inline]
```

Gets the position of the text insertion cursor for text display.

The insert position is the byte count (offset) from the beginning of the text buffer (starting with 0). Returns 0 (zero) if no buffer is associated to the text display. Returns `buffer()->length()` if the insert position is at the end of the buffer.

Returns

insert position index into text buffer

See also

[insert_position\(int\)](#)

11.144.4.39 insert_position() [2/2]

```
void Fl_Text_Display::insert_position (
    int newPos)
```

Sets the position of the text insertion cursor for text display.

Moves the insertion cursor in front of the character at `newPos`. This function may trigger a redraw.

Parameters

<i>newPos</i>	new caret position
---------------	--------------------

11.144.4.40 line_end()

```
int Fl_Text_Display::line_end (
    int startPos,
    bool startPosIsLineStart) const
```

Returns the end of a line.

Same as `buffer()->line_end(startPos)`, but takes into account line breaks when wrapping is turned on. If the caller knows that `startPos` is at a line start, it can pass `startPosIsLineStart` as `True` to make the call more efficient by avoiding the additional step of scanning back to the last newline.

Note that the definition of the end of a line is less clear when continuous wrap is on. With continuous wrap off, it's just a pointer to the newline that ends the line. When it's on, it's the character beyond the last **displayable** character on the line, where a whitespace character which has been "converted" to a newline for wrapping is not considered displayable. Also note that a line can be wrapped at a non-whitespace character if the line had no whitespace. In this case, this routine returns a pointer to the start of the next line. This is also consistent with the model used by `visLineLength`.

Parameters

<i>startPos</i>	index to starting character
<i>startPosIsLineStart</i>	avoid scanning back to the line start

Returns

new position as index

11.144.4.41 line_start()

```
int Fl_Text_Display::line_start (
    int pos) const
```

Return the beginning of a line.

Same as `buffer()->line_start(pos)`, but returns the character after last wrap point rather than the last newline.

Parameters

<i>pos</i>	index to starting character
------------	-----------------------------

Returns

new position as index

11.144.4.42 linewidth_align()

```
void Fl_Text_Display::linewidth_align (
    Fl_Align val)
```

Set alignment for line numbers (if enabled).

Valid values are `FL_ALIGN_LEFT`, `FL_ALIGN_CENTER` or `FL_ALIGN_RIGHT`.

Version

1.3.3

11.144.4.43 linewidth_bgcolor()

```
void Fl_Text_Display::linewidth_bgcolor (
    Fl_Color val)
```

Set the background color used for line numbers (if enabled).

Version

1.3.3

11.144.4.44 `linenumber_fgcolor()`

```
void Fl_Text_Display::linenumber_fgcolor (
    Fl_Color val)
```

Set the foreground color used for line numbers (if enabled).

Version

1.3.3

11.144.4.45 `linenumber_font()`

```
void Fl_Text_Display::linenumber_font (
    Fl_Font val)
```

Set the font used for line numbers (if enabled).

Version

1.3.3

11.144.4.46 `linenumber_format()`

```
void Fl_Text_Display::linenumber_format (
    const char * val)
```

Sets the printf() style format string used for line numbers.

Default is "%d" for normal unpadded decimal integers.

An internal copy of `val` is allocated and managed; it is automatically freed whenever a new value is assigned, or when the widget is destroyed.

The value of `val` must *not* be NULL.

Example values:

```
- "%d"    -- For normal line numbers without padding (Default)
- "%03d"  -- For 000 padding
- "%x"    -- For hexadecimal line numbers
- "%o"    -- For octal line numbers
```

Version

1.3.3

11.144.4.47 `linenumber_size()`

```
void Fl_Text_Display::linenumber_size (
    Fl_Fontsize val)
```

Set the font size used for line numbers (if enabled).

Version

1.3.3

11.144.4.48 `linenumber_width()`

```
void Fl_Text_Display::linenumber_width (
    int width)
```

Set width of screen area for line numbers.

Use to also enable/disable line numbers. A value of 0 disables line numbering, values >0 enable the line number display.

Parameters

<i>width</i>	The new width of the area for line numbers to appear, in pixels. 0 disables line numbers (default)
--------------	--

11.144.4.49 longest_vline()

```
int Fl_Text_Display::longest_vline () const [protected]
```

Find the longest line of all visible lines.

Returns

the width of the longest visible line in pixels

11.144.4.50 maintain_absolute_top_line_number()

```
void Fl_Text_Display::maintain_absolute_top_line_number (
    int state) [protected]
```

Line numbering stuff, currently unused.

In continuous wrap mode, internal line numbers are calculated after wrapping. A separate non-wrapped line count is maintained when line numbering is turned on. There is some performance cost to maintaining this line count, so normally absolute line numbers are not tracked if line numbering is off. This routine allows callers to specify that they still want this line count maintained (for use via [Fl_Text_Display::position_to_linecol\(\)](#)). More specifically, this allows the line number reported in the statistics line to be calibrated in absolute lines, rather than post-wrapped lines.

11.144.4.51 maintaining_absolute_top_line_number()

```
int Fl_Text_Display::maintaining_absolute_top_line_number () const [protected]
```

Returns true if a separate absolute top line number is being maintained.

The absolute top line number is used for displaying line numbers in continuous wrap mode or showing in the statistics line (the latter is currently not available in FLTK).

11.144.4.52 measure_deleted_lines()

```
void Fl_Text_Display::measure_deleted_lines (
    int pos,
    int nDeleted) [protected]
```

Wrapping calculations.

This is a stripped-down version of the `findWrapRange()` function above, intended to be used to calculate the number of "deleted" lines during a buffer modification. It is called *before* the modification takes place.

This function should only be called in continuous wrap mode with a non-fixed font width. In that case, it is impossible to calculate the number of deleted lines, because the necessary style information is no longer available *after* the modification. In other cases, we can still perform the calculation afterwards (possibly even more efficiently).

Parameters

<i>pos</i>	
<i>nDeleted</i>	

11.144.4.53 measure_proportional_character()

```
double Fl_Text_Display::measure_proportional_character (
    const char * s,
    int xPix,
    int pos) const [protected]
```

Wrapping calculations.

Measure the width in pixels of the first character of string "s" at a particular column "colNum" and buffer position "pos". This is for measuring characters in proportional or mixed-width highlighting fonts.

A note about proportional and mixed-width fonts: the mixed width and proportional font code in nedit does not get much use in general editing, because nedit doesn't allow per-language-mode fonts, and editing programs in a proportional font is usually a bad idea, so very few users would choose a proportional font as a default. There are still probably mixed-width syntax highlighting cases where things don't redraw properly for insertion/deletion,

though static display and wrapping and resizing should now be solid because they are now used for online help display.

Parameters

<i>s</i>	text string
<i>xPix</i>	x pixel position needed for calculating tab widths
<i>pos</i>	offset within string

Returns

width of character in pixels

11.144.4.54 measure_vline()

```
int Fl_Text_Display::measure_vline (  
    int visLineNum) const [protected]
```

Returns the width in pixels of the displayed line pointed to by "visLineNum".

Parameters

<i>visLineNum</i>	index into visible lines array
-------------------	--------------------------------

Returns

width of line in pixels

11.144.4.55 move_down()

```
int Fl_Text_Display::move_down ()
```

Moves the current insert position down one line.

Returns

1 if the cursor moved, 0 if the beginning of the text was reached

11.144.4.56 move_left()

```
int Fl_Text_Display::move_left ()
```

Moves the current insert position left one character.

Returns

1 if the cursor moved, 0 if the beginning of the text was reached

11.144.4.57 move_right()

```
int Fl_Text_Display::move_right ()
```

Moves the current insert position right one character.

Returns

1 if the cursor moved, 0 if the end of the text was reached

11.144.4.58 move_up()

```
int Fl_Text_Display::move_up ()
```

Moves the current insert position up one line.

Returns

1 if the cursor moved, 0 if the beginning of the text was reached

11.144.4.59 offset_line_starts()

```
void Fl_Text_Display::offset_line_starts (
    int newTopLineNum) [protected]
```

Offset line start counters for a new vertical scroll position.

Offset the line starts array, mTopLineNum, mFirstChar and lastChar, for a new vertical scroll position given by newTopLineNum. If any currently displayed lines will still be visible, salvage the line starts values, otherwise, count lines from the nearest known line start (start or end of buffer, or the closest value in the mLineStarts array)

Parameters

<i>newTopLineNum</i>	index into buffer
----------------------	-------------------

11.144.4.60 overstrike()

```
void Fl_Text_Display::overstrike (
    const char * text)
```

Replaces text at the current insert position.

Parameters

<i>text</i>	new text in UTF-8 encoding
-------------	----------------------------

Todo Unicode? Find out exactly what we do here and simplify.

11.144.4.61 position_style()

```
int Fl_Text_Display::position_style (
    int lineStartPos,
    int lineLen,
    int lineIndex) const
```

Find the correct style for a character.

Determine the drawing method to use to draw a specific character from "buf".

lineStartPos gives the character index where the line begins, lineIndex, the number of characters past the beginning of the line, and lineLen the number of displayed characters past the beginning of the line. Passing lineStartPos of -1 returns the drawing style for "no text".

Why not just: position_style(pos)? Because style applies to blank areas of the window beyond the text boundaries, and because this routine must also decide whether a position is inside of a rectangular [Fl_Text_Selection](#), and do so efficiently, without re-counting character positions from the start of the line.

Note that style is a somewhat incorrect name, drawing method would be more appropriate.

If lineIndex is pointing to the last character in a line, and the second to last character has the ATTR_BGCOLOR_EXT set, the background color will extend into the remaining line.

Parameters

<i>lineStartPos</i>	beginning of this line
<i>lineLen</i>	number of bytes in line
<i>lineIndex</i>	position of character within line

Returns

style for the given character

11.144.4.62 position_to_line()

```
int Fl_Text_Display::position_to_line (
    int pos,
    int * lineNum) const [protected]
```

Convert a position index into a line number offset.

Find the line number of position `pos` relative to the first line of displayed text, counting from 0 to *visible lines* - 1.

The line number is returned in `lineNum`.

Returns 0 if the line is not displayed. In this case `lineNum` is 0 as well.

Returns 1 if the line is displayed. In this case `lineNum` is the relative line number.

Parameters

in	<i>pos</i>	byte position in buffer
out	<i>lineNum</i>	relative line number of byte <code>pos</code> in buffer

Returns

whether the character at byte position `pos` is currently displayed

Return values

0	<code>pos</code> is not displayed; <code>lineNum</code> is invalid (zero)
1	<code>pos</code> is displayed; <code>lineNum</code> is valid

11.144.4.63 position_to_linecol()

```
int Fl_Text_Display::position_to_linecol (
    int pos,
    int * lineNum,
    int * column) const [protected]
```

Find the line and column number of position `pos`.

This only works for displayed lines. If the line is not displayed, the function returns 0 (without the `mLineStarts` array it could turn in to very long calculation involving scanning large amounts of text in the buffer). If continuous wrap mode is on, returns the absolute line number (as opposed to the wrapped line number which is used for scrolling).

Parameters

	<i>pos</i>	character index
out	<i>lineNum</i>	absolute (unwrapped) line number
out	<i>column</i>	character offset to the beginning of the line

Returns

0 if `pos` is off screen, line number otherwise

Todo a column number makes little sense in the UTF-8/variable font width environment. We will have to further define what exactly we want to return. Please check the functions that call this particular function.

11.144.4.64 position_to_xy()

```
int Fl_Text_Display::position_to_xy (
    int pos,
    int * X,
    int * Y) const
```

Convert a character index into a pixel position.

Translate a buffer text position to the XY location where the top left of the cursor would be positioned to point to that character. Returns 0 if the position is not displayed because it is ***vertically out*** of view. If the position is horizontally out of view, returns the X coordinate where the position would be if it were visible.

Parameters

	<i>pos</i>	character index
out	<i>X,Y</i>	pixel position of character on screen

Returns

0 if character vertically out of view, X & Y positions otherwise

11.144.4.65 recalc_display()

```
void Fl_Text_Display::recalc_display () [virtual]
```

Recalculate the display's visible lines and scrollbar sizes.

Beware calling this directly may cause a lot of CPU if called repeatedly (issue 300). Better to call [display_needs_recalc\(\)](#) to flag a recalc to be done during next [draw\(\)](#).

11.144.4.66 redisplay_range()

```
void Fl_Text_Display::redisplay_range (
    int startpos,
    int endpos)
```

Marks text from start to end as needing a redraw.

This function will trigger a damage event and later a redraw of parts of the widget.

Parameters

<i>startpos</i>	index of first character needing redraw
<i>endpos</i>	index after last character needing redraw

11.144.4.67 reset_absolute_top_line_number()

```
void Fl_Text_Display::reset_absolute_top_line_number () [protected]
```

Reestablish the absolute (non-wrapped) top line number.

Count lines from the beginning of the buffer to reestablish the absolute (non-wrapped) top line number. If mode is not continuous wrap, or the number is not being maintained, does nothing.

11.144.4.68 resize()

```
void Fl_Text_Display::resize (
    int X,
    int Y,
    int W,
    int H) [virtual]
```

Change the size of the displayed text area.

Calling this function will trigger a recalculation of all visible lines and of all scrollbar sizes.

Parameters

<i>X,Y,W,H</i>	new position and size of this widget
----------------	--------------------------------------

Reimplemented from [Fl_Group](#).

11.144.4.69 rewind_lines()

```
int Fl_Text_Display::rewind_lines (
    int startPos,
    int nLines)
```

Skip a number of lines back.

Same as `buffer()->rewind_lines(startPos, nLines)`, but takes into account line breaks when wrapping is turned on.

Parameters

<i>startPos</i>	index to starting character
<i>nLines</i>	number of lines to skip back

Returns

new position as index

11.144.4.70 scroll()

```
void Fl_Text_Display::scroll (
    int topLineNum,
    int horizOffset)
```

Scrolls the current buffer to start at the specified line and column.

Parameters

<i>topLineNum</i>	top line number
<i>horizOffset</i>	column number

Todo Column numbers make little sense here.

11.144.4.71 scroll_()

```
int Fl_Text_Display::scroll_ (
    int topLineNum,
    int horizOffset) [protected]
```

Scrolls the current buffer to start at the specified line and column.

Parameters

<i>topLineNum</i>	top line number
<i>horizOffset</i>	in pixels

Returns

0 if nothing changed, 1 if we scrolled

11.144.4.72 scroll_timer_cb()

```
void Fl_Text_Display::scroll_timer_cb (
    void * user_data) [static], [protected]
```

Timer callback for scroll events.

This timer event scrolls the text view proportionally to how far the mouse pointer has left the text area. This allows for smooth scrolling without "wiggeling" the mouse.

11.144.4.73 scrollbar_align() [1/2]

```
Fl_Align Fl_Text_Display::scrollbar_align () const [inline]
```

Gets the scrollbar alignment type.

Returns

scrollbar alignment

11.144.4.74 scrollbar_align() [2/2]

```
void Fl_Text_Display::scrollbar_align (
    Fl_Align a) [inline]
```

Sets the scrollbar alignment type.

Parameters

<i>a</i>	new scrollbar alignment
----------	-------------------------

11.144.4.75 scrollbar_size() [1/2]

```
int Fl_Text_Display::scrollbar_size () const [inline]
```

Gets the current size of the scrollbars' troughs, in pixels.

If this value is zero (default), this widget will use the [Fl::scrollbar_size\(\)](#) value as the scrollbar's width.

Returns

Scrollbar size in pixels, or 0 if the global [Fl::scrollbar_size\(\)](#) is being used.

See also

[Fl::scrollbar_size\(int\)](#)

11.144.4.76 scrollbar_size() [2/2]

```
void Fl_Text_Display::scrollbar_size (
    int newSize) [inline]
```

Sets the pixel size of the scrollbars' troughs to *newSize*, in pixels.

Normally you should not need this method, and should use [Fl::scrollbar_size\(int\)](#) instead to manage the size of ALL your widgets' scrollbars. This ensures your application has a consistent UI, is the default behavior, and is normally what you want.

Only use THIS method if you really need to override the global scrollbar size. The need for this should be rare.

Setting *newSize* to the special value of 0 causes the widget to track the global [Fl::scrollbar_size\(\)](#), which is the default.

Parameters

<i>in</i>	<i>newSize</i>	Sets the scrollbar size in pixels. If 0 (default), scrollbar size tracks the global Fl::scrollbar_size()
-----------	----------------	---

See also

[Fl::scrollbar_size\(\)](#)

11.144.4.77 scrollbar_width() [1/2]

```
int Fl_Text_Display::scrollbar_width () const [inline]
```

Returns the global value [Fl::scrollbar_size\(\)](#) unless a specific `scrollbar_width_` has been set.

Deprecated Use [scrollbar_size\(\)](#) instead.

Todo This method should eventually be removed.

11.144.4.78 scrollbar_width() [2/2]

```
void Fl_Text_Display::scrollbar_width (
    int width) [inline]
```

Sets the global [Fl::scrollbar_size\(\)](#), and forces this instance of the widget to use it.

Deprecated Use [scrollbar_size\(\)](#) instead.

Todo This method should eventually be removed

11.144.4.79 secondary_selection_color() [1/2]

```
Fl_Color Fl_Text_Display::secondary_selection_color () const [inline]
```

Gets the background color for the secondary selection block.

Returns

background color color

11.144.4.80 secondary_selection_color() [2/2]

```
void Fl_Text_Display::secondary_selection_color (
    Fl_Color color) [inline]
```

Sets the background color for the secondary selection block.

Parameters

<i>color</i>	background color
--------------	------------------

11.144.4.81 shortcut() [1/2]

```
int Fl_Text_Display::shortcut () const [inline]
```

Todo FIXME : get set methods pointing on `shortcut_` have no effects as `shortcut_` is unused in this class and derived!

Returns

the current shortcut key

11.144.4.82 shortcut() [2/2]

```
void Fl_Text_Display::shortcut (
    int s) [inline]
```

Todo FIXME : get set methods pointing on `shortcut_` have no effects as `shortcut_` is unused in this class and derived!

Parameters

<i>s</i>	the new shortcut key
----------	----------------------

11.144.4.83 show_cursor()

```
void Fl_Text_Display::show_cursor (
    int b = 1)
```

Shows the text cursor.

This function may trigger a redraw.

Parameters

<i>b</i>	show(1) or hide(0) the text cursor (caret).
----------	---

11.144.4.84 show_insert_position()

```
void Fl_Text_Display::show_insert_position ()
```

Scrolls the text buffer to show the current insert position.

This function triggers a complete recalculation, ending in a call to [Fl_Text_Display::display_insert\(\)](#)

11.144.4.85 skip_lines()

```
int Fl_Text_Display::skip_lines (
    int startPos,
    int nLines,
    bool startPosIsLineStart)
```

Skip a number of lines forward.

Same as `Fl_Text_Buffer::skip_lines(startPos, nLines)`, but takes into account line breaks when wrapping is turned on. If the caller knows that `startPos` is at a line start, it can pass `startPosIsLineStart` as `True` to make the call more efficient by avoiding the additional step of scanning back to the last newline.

Parameters

<i>startPos</i>	index to starting character
<i>nLines</i>	number of lines to skip ahead
<i>startPosIsLineStart</i>	avoid scanning back to the line start

Returns

new position as index

11.144.4.86 spelling_underline_color() [1/2]

```
Fl_Color Fl_Text_Display::spelling_underline_color () const [inline]
```

Gets the underline color for style attribute `ATTR_SPELLING`.

Returns

underline color

11.144.4.87 spelling_underline_color() [2/2]

```
void Fl_Text_Display::spelling_underline_color (
    Fl_Color color) [inline]
```

Sets the underline color for style attribute `ATTR_SPELLING`.

Parameters

<i>color</i>	underline color
--------------	-----------------

11.144.4.88 string_width()

```
double Fl_Text_Display::string_width (
    const char * string,
    int length,
    int style) const [protected]
```

Find the width of a string in the font of a particular style.

Parameters

<i>string</i>	the text
<i>length</i>	number of bytes in string
<i>style</i>	index into style table

Returns

width of text segment in pixels

11.144.4.89 style_buffer()

```
Fl_Text_Buffer * Fl_Text_Display::style_buffer () const [inline]
```

Gets the current style buffer associated with the text widget.

Multiple text widgets can be associated with the same style buffer.

Returns

current style buffer

See also

[Fl_Text_Display::highlight_data\(\)](#)

11.144.4.90 textcolor() [1/2]

```
Fl_Color Fl_Text_Display::textcolor () const [inline]
```

Gets the default color of text in the widget.

Returns

text color unless overridden by a style

11.144.4.91 textcolor() [2/2]

```
void Fl_Text_Display::textcolor (
    Fl_Color n) [inline]
```

Sets the default color of text in the widget.

Parameters

<i>n</i>	new text color
----------	----------------

11.144.4.92 textfont() [1/2]

```
Fl_Font Fl_Text_Display::textfont () const [inline]
```

Gets the default font used when drawing text in the widget.

Returns

current text font face unless overridden by a style

11.144.4.93 textfont() [2/2]

```
void Fl_Text_Display::textfont (
    Fl_Font s) [inline]
```

Sets the default font used when drawing text in the widget.

Parameters

<i>s</i>	default text font face
----------	------------------------

11.144.4.94 `textsize()` [1/2]

```
Fl_Fontsize Fl_Text_Display::textsize () const [inline]
```

Gets the default size of text in the widget.

Returns

current text height unless overridden by a style

11.144.4.95 `textsize()` [2/2]

```
void Fl_Text_Display::textsize (
    Fl_Fontsize s) [inline]
```

Sets the default size of text in the widget.

Parameters

<i>s</i>	new text size
----------	---------------

11.144.4.96 `update_h_scrollbar()`

```
void Fl_Text_Display::update_h_scrollbar () [protected]
```

Update horizontal scrollbar.

Update the minimum, maximum, slider size, page increment, and value for the horizontal scrollbar.

11.144.4.97 `update_line_starts()`

```
void Fl_Text_Display::update_line_starts (
    int pos,
    int charsInserted,
    int charsDeleted,
    int linesInserted,
    int linesDeleted,
    int * scrolled) [protected]
```

Update line start arrays and variables.

Update the line starts array, `mTopLineNum`, `mFirstChar` and `lastChar` for this text display after a modification to the text buffer, given by the position `pos` where the change began, and the numbers of characters and lines inserted and deleted.

Parameters

	<i>pos</i>	index into buffer of recent changes
	<i>charsInserted</i>	number of bytes(!) inserted
	<i>charsDeleted</i>	number of bytes(!) deleted
	<i>linesInserted</i>	number of lines
	<i>linesDeleted</i>	number of lines
out	<i>scrolled</i>	set to 1 if the text display needs to be scrolled

11.144.4.98 `update_v_scrollbar()`

```
void Fl_Text_Display::update_v_scrollbar () [protected]
```

Update vertical scrollbar.

Update the minimum, maximum, slider size, page increment, and value for the vertical scrollbar.

11.144.4.99 vline_length()

```
int Fl_Text_Display::vline_length (
    int visLineNum) const [protected]
```

Count number of bytes in a visible line.

Return the length of a line (number of bytes) by examining entries in the line starts array rather than by scanning for newlines.

Parameters

<i>visLineNum</i>	index of line in visible line array
-------------------	-------------------------------------

Returns

number of bytes in this line

11.144.4.100 word_end()

```
int Fl_Text_Display::word_end (
    int pos) const [inline]
```

Moves the insert position to the end of the current word.

Parameters

<i>pos</i>	start calculation at this index
------------	---------------------------------

Returns

index of first character after the end of the word

11.144.4.101 word_start()

```
int Fl_Text_Display::word_start (
    int pos) const [inline]
```

Moves the insert position to the beginning of the current word.

Parameters

<i>pos</i>	start calculation at this index
------------	---------------------------------

Returns

beginning of the words

11.144.4.102 wrap_mode()

```
void Fl_Text_Display::wrap_mode (
    int wrap,
    int wrapMargin)
```

Set the new text wrap mode.

If `wrap` mode is not zero, this call enables automatic word wrapping at column `wrapMargin`. Word-wrapping does not change the text buffer itself, only the way the text is displayed. Different Text Displays can have different wrap modes, even if they share the same Text Buffer.

Valid wrap modes are:

- `WRAP_NONE` : don't wrap text at all

- WRAP_AT_COLUMN : wrap text at the given text column
- WRAP_AT_PIXEL : wrap text at a pixel position
- WRAP_AT_BOUNDS : wrap text so that it fits into the widget width

Parameters

<i>wrap</i>	new wrap mode (see above)
<i>wrapMargin</i>	in WRAP_AT_COLUMN mode, text will wrap at the n'th character. For variable width fonts, an average character width is calculated. The column width is calculated using the current textfont or the first style when this function is called. If the font size changes, this function must be called again. In WRAP_AT_PIXEL mode, this is the pixel position.

11.144.4.103 wrap_uses_character()

```
int Fl_Text_Display::wrap_uses_character (
    int lineEndPos) const [protected]
```

Check if the line break is caused by a newline or by line wrapping.

Line breaks in continuous wrap mode usually happen at newlines (\n) or whitespace. This line-terminating character is not included in line width measurements and has a special status as a non-visible character. However, lines with no whitespace are wrapped without the benefit of a line terminating character, and this distinction causes endless trouble with all of the text display code which was originally written without continuous wrap mode and always expects to wrap at a newline character.

Given the position of the end of the line, as returned by [Fl_Text_Display::line_end\(\)](#) or [Fl_Text_Buffer::line_end\(\)](#), this returns true if there is a line terminating character, and false if there's not. On the last character in the buffer, this function can't tell for certain whether a trailing space was used as a wrap point, and just guesses that it wasn't. So if an exact accounting is necessary, don't use this function.

Parameters

<i>lineEndPos</i>	index of character where the line wraps
-------------------	---

Returns

1 if a \n character causes the line wrap

11.144.4.104 wrapped_column()

```
int Fl_Text_Display::wrapped_column (
    int row,
    int column) const
```

Nobody knows what this function does.

Correct a column number based on an unconstrained position (as returned by [TextDXYToUnconstrainedPosition](#)) to be relative to the last actual newline in the buffer before the row and column position given, rather than the last line start created by line wrapping. This is an adapter for rectangular selections and code written before continuous wrap mode, which thinks that the unconstrained column is the number of characters from the last newline. Obviously this is time consuming, because it involves character re-counting.

Parameters

<i>row</i>	
<i>column</i>	

Returns

something unknown

Todo What does this do and how is it useful? Column numbers mean little in this context. Which functions depend on this one? Function [TextDXYToUnconstrainedPosition](#) does not exist (nedit port?)

Todo Unicode?

11.144.4.105 wrapped_line_counter()

```
void Fl_Text_Display::wrapped_line_counter (
    Fl_Text_Buffer * buf,
    int startPos,
    int maxPos,
    int maxLines,
    bool startPosIsLineStart,
    int styleBufOffset,
    int * retPos,
    int * retLines,
    int * retLineStart,
    int * retLineEnd,
    bool countLastLineMissingNewLine = true) const [protected]
```

Wrapping calculations.

Count forward from startPos to either maxPos or maxLines (whichever is reached first), and return all relevant positions and line count. The provided textBuffer may differ from the actual text buffer of the widget. In that case it must be a (partial) copy of the actual text buffer and the styleBufOffset argument must indicate the starting position of the copy, to take into account the correct style information.

Parameters

in	<i>buf</i>	The text buffer to operate on
in	<i>startPos</i>	Starting index position into the buffer
in	<i>maxPos</i>	Maximum index position into the buffer we'll reach
in	<i>maxLines</i>	Maximum number of lines we'll reach
in	<i>startPosIsLineStart</i>	Flag indicating if startPos is start of line. (If set, prevents our having to find the line start)
in	<i>styleBufOffset</i>	Offset index position into style buffer.
out	<i>retPos</i>	Position where counting ended. When counting lines, the position returned is the start of the line "maxLines" lines beyond "startPos".
out	<i>retLines</i>	Number of line breaks counted
out	<i>retLineStart</i>	Start of the line where counting ended
out	<i>retLineEnd</i>	End position of the last line traversed
out	<i>countLastLineMissingNewLine</i>	

11.144.4.106 wrapped_row()

```
int Fl_Text_Display::wrapped_row (
    int row) const
```

Nobody knows what this function does.

Correct a row number from an unconstrained position (as returned by TextDXYToUnconstrainedPosition) to a straight number of newlines from the top line of the display. Because rectangular selections are based on newlines, rather than display wrapping, and anywhere a rectangular selection needs a row, it needs it in terms of un-wrapped lines.

Parameters

<i>row</i>	
------------	--

Returns

something unknown

Todo What does this do and how is it useful? Column numbers mean little in this context. Which functions depend on this one? Function TextDXYToUnconstrainedPosition does not exist (nedit port?)

11.144.4.107 x_to_col()

```
double Fl_Text_Display::x_to_col (
    double x) const
```

Convert an x pixel position into a column number.

Parameters

<i>x</i>	number of pixels from the left margin
----------	---------------------------------------

Returns

an approximate column number based on the main font

11.144.4.108 xy_to_position()

```
int Fl_Text_Display::xy_to_position (
    int X,
    int Y,
    int posType = CHARACTER_POS) const [protected]
```

Translate a pixel position into a character index.

Translate window coordinates to the nearest (insert cursor or character cell) text position. The parameter *posType* specifies how to interpret the position: `CURSOR_POS` means translate the coordinates to the nearest cursor position, and `CHARACTER_POS` means return the position of the character closest to (X, Y).

Parameters

<i>X, Y</i>	pixel position
<i>posType</i>	<code>CURSOR_POS</code> or <code>CHARACTER_POS</code>

Returns

index into text buffer

11.144.4.109 xy_to_rowcol()

```
void Fl_Text_Display::xy_to_rowcol (
    int X,
    int Y,
    int * row,
    int * column,
    int posType = CHARACTER_POS) const [protected]
```

Translate pixel coordinates into row and column.

Translate window coordinates to the nearest row and column number for positioning the cursor. This, of course, makes no sense when the font is proportional, since there are no absolute columns. The parameter *posType* specifies how to interpret the position: `CURSOR_POS` means translate the coordinates to the nearest position between characters, and `CHARACTER_POS` means translate the position to the nearest character cell.

Parameters

	<i>X, Y</i>	pixel coordinates
<i>out</i>	<i>row, column</i>	nearest row and column
	<i>posType</i>	<code>CURSOR_POS</code> or <code>CHARACTER_POS</code>

The documentation for this class was generated from the following files:

- `Fl_Text_Display.H`
- `Fl_Text_Display.cxx`

11.145 Fl_Text_Editor Class Reference

This is the FLTK text editor widget.

```
#include <Fl_Text_Editor.H>
```

Inheritance diagram for Fl_Text_Editor:

Classes

- struct [Key_Binding](#)
Simple linked list item associating a key/state to a function.

Public Types

- typedef int(* **Key_Func**) (int key, [Fl_Text_Editor](#) *editor)
Key function binding callback type.

Public Types inherited from [Fl_Text_Display](#)

- enum {
[NORMAL_CURSOR](#) , [CARET_CURSOR](#) , [DIM_CURSOR](#) , [BLOCK_CURSOR](#) ,
[HEAVY_CURSOR](#) , [SIMPLE_CURSOR](#) }
text display cursor shapes enumeration
- enum {
[ATTR_BGCOLOR](#) = 0x0001 , [ATTR_BGCOLOR_EXT](#) = 0x0002 , [ATTR_BGCOLOR_EXT](#) = 0x0003 ,
[ATTR_UNDERLINE](#) = 0x0004 ,
[ATTR_GRAMMAR](#) = 0x0008 , [ATTR_SPELLING](#) = 0x000C , [ATTR_STRIKE_THROUGH](#) = 0x0010 ,
[ATTR_LINES_MASK](#) = 0x001C }
attribute flags in [Style_Table_Entry.attr](#)
- enum { [CURSOR_POS](#) , [CHARACTER_POS](#) }
the character position is the left edge of a character, whereas the cursor is thought to be between the centers of two consecutive characters.
- enum { [WRAP_NONE](#) , [WRAP_AT_COLUMN](#) , [WRAP_AT_PIXEL](#) , [WRAP_AT_BOUNDS](#) }
wrap types - used in [wrap_mode\(\)](#)
- enum {
[DRAG_NONE](#) = -2 , [DRAG_START_DND](#) = -1 , [DRAG_CHAR](#) = 0 , [DRAG_WORD](#) = 1 ,
[DRAG_LINE](#) = 2 }
drag types - they match [Fl::event_clicks\(\)](#) so that single clicking to start a collection selects by character, double clicking selects by word and triple clicking selects by line.
- typedef void(* **Unfinished_Style_Cb**) (int, void *)

Public Member Functions

- void **add_default_key_bindings** ([Key_Binding](#) **list)
Adds all of the default editor key bindings to the specified key binding list.
- void **add_key_binding** (int key, int state, [Key_Func](#) f)

- Adds a key of state `state` with the function `f`.*

 - void `add_key_binding` (int key, int state, `Key_Func` f, `Key_Binding` **list)

Adds a key of state `state` with the function `function` to an arbitrary key binding list `list`.
- `Key_Func` `bound_key_function` (int key, int state) const

Returns the function associated with a key binding.
- `Key_Func` `bound_key_function` (int key, int state, `Key_Binding` *list) const

Returns the function associated with a key binding.
- void `default_key_function` (`Key_Func` f)

Sets the default key function for unassigned keys.
- `FI_Text_Editor` (int X, int Y, int W, int H, const char *l=0)

The constructor creates a new text editor widget.
- int `handle` (int e) `FL_OVERRIDE`

Event handling.
- int `insert_mode` ()

Gets the current insert mode; if non-zero, new text is inserted before the current cursor position.
- void `insert_mode` (int b)

Sets the current insert mode; if non-zero, new text is inserted before the current cursor position.
- void `remove_all_key_bindings` ()

Removes all of the key bindings associated with the text editor or list.
- void `remove_all_key_bindings` (`Key_Binding` **list)

Removes all of the key bindings associated with the text editor or list.
- void `remove_key_binding` (int key, int state)

Removes the key binding associated with the key "key" of state "state".
- void `remove_key_binding` (int key, int state, `Key_Binding` **list)

Removes the key binding associated with the key `key` of state `state` from the `Key_Binding` list `list`.
- int `tab_nav` () const

Check if Tab focus navigation is enabled.
- void `tab_nav` (int val)

Enables or disables Tab key focus navigation.

Public Member Functions inherited from `FI_Text_Display`

- `FI_Text_Buffer` * `buffer` () const

Gets the current text buffer associated with the text widget.
- void `buffer` (`FI_Text_Buffer` &buf)

Sets the current text buffer associated with the text widget.
- void `buffer` (`FI_Text_Buffer` *buf)

Attach a text buffer to display, replacing the current buffer (if any).
- double `col_to_x` (double col) const

Convert a column number into an x pixel position.
- int `count_lines` (int start, int end, bool start_pos_is_line_start) const

Count the number of lines between two positions.
- `FI_Color` `cursor_color` () const

Gets the text cursor color.
- void `cursor_color` (`FI_Color` n)

Sets the text cursor color.
- int `cursor_style` () const
- void `cursor_style` (int style)

Sets the text cursor style.
- virtual void `display_needs_recalc` ()

Schedule a `recalc_display()` to be done on next `draw()`.

- [FI_Text_Display](#) (int X, int Y, int W, int H, const char *l=0)
Creates a new text display widget.
- int [get_absolute_top_line_number](#) () const
Returns the absolute (non-wrapped) line number of the first line displayed.
- [FI_Color grammar_underline_color](#) () const
Gets the underline color for style attribute ATTR_GRAMMAR.
- void [grammar_underline_color](#) (FI_Color color)
Sets the underline color for style attribute ATTR_GRAMMAR.
- void [hide_cursor](#) ()
Hides the text cursor.
- void [highlight_data](#) (FI_Text_Buffer *styleBuffer, const [Style_Table_Entry](#) *styleTable, int nStyles, char unfinishedStyle, Unfinished_Style_Cb unfinishedHighlightCB, void *cbArg)
Attach (or remove) highlight information in text display and redisplay.
- int [in_selection](#) (int x, int y) const
Check if a pixel position is within the primary selection.
- void [insert](#) (const char *text)
Inserts "text" at the current cursor location.
- int [insert_position](#) () const
Gets the position of the text insertion cursor for text display.
- void [insert_position](#) (int newPos)
Sets the position of the text insertion cursor for text display.
- int [line_end](#) (int startPos, bool startPosIsLineStart) const
Returns the end of a line.
- int [line_start](#) (int pos) const
Return the beginning of a line.
- [FI_Align linenumber_align](#) () const
Returns the alignment used for line numbers (if enabled).
- void [linenumber_align](#) (FI_Align val)
Set alignment for line numbers (if enabled).
- [FI_Color linenumber_bgcolor](#) () const
Returns the background color used for line numbers (if enabled).
- void [linenumber_bgcolor](#) (FI_Color val)
Set the background color used for line numbers (if enabled).
- [FI_Color linenumber_fgcolor](#) () const
Return the foreground color used for line numbers (if enabled).
- void [linenumber_fgcolor](#) (FI_Color val)
Set the foreground color used for line numbers (if enabled).
- [FI_Font linenumber_font](#) () const
Return the font used for line numbers (if enabled).
- void [linenumber_font](#) (FI_Font val)
Set the font used for line numbers (if enabled).
- const char * [linenumber_format](#) () const
Returns the line number printf() format string.
- void [linenumber_format](#) (const char *val)
Sets the printf() style format string used for line numbers.
- [FI_Fontsize linenumber_size](#) () const
Return the font size used for line numbers (if enabled).
- void [linenumber_size](#) (FI_Fontsize val)
Set the font size used for line numbers (if enabled).
- int [linenumber_width](#) () const
Return the screen area width provided for line numbers.

- void `linenumber_width` (int width)
Set width of screen area for line numbers.
- int `move_down` ()
Moves the current insert position down one line.
- int `move_left` ()
Moves the current insert position left one character.
- int `move_right` ()
Moves the current insert position right one character.
- int `move_up` ()
Moves the current insert position up one line.
- void `next_word` (void)
Moves the current insert position right one word.
- void `overstrike` (const char *text)
Replaces text at the current insert position.
- int `position_style` (int lineStartPos, int lineLen, int lineIndex) const
Find the correct style for a character.
- int `position_to_xy` (int pos, int *x, int *y) const
Convert a character index into a pixel position.
- void `previous_word` (void)
Moves the current insert position left one word.
- virtual void `recalc_display` ()
Recalculate the display's visible lines and scrollbar sizes.
- void `redisplay_range` (int start, int end)
Marks text from start to end as needing a redraw.
- void `resize` (int X, int Y, int W, int H) **FL_OVERRIDE**
Change the size of the displayed text area.
- int `rewind_lines` (int startPos, int nLines)
Skip a number of lines back.
- void `scroll` (int topLineNum, int horizOffset)
Scrolls the current buffer to start at the specified line and column.
- int `scroll_col` ()
- int `scroll_row` ()
- **Fl_Align** `scrollbar_align` () const
Gets the scrollbar alignment type.
- void `scrollbar_align` (**Fl_Align** a)
Sets the scrollbar alignment type.
- int `scrollbar_size` () const
Gets the current size of the scrollbars' troughs, in pixels.
- void `scrollbar_size` (int newSize)
Sets the pixel size of the scrollbars' troughs to newSize, in pixels.
- int `scrollbar_width` () const
Returns the global value Fl::scrollbar_size() unless a specific scrollbar_width_ has been set.
- void `scrollbar_width` (int width)
Sets the global Fl::scrollbar_size(), and forces this instance of the widget to use it.
- **Fl_Color** `secondary_selection_color` () const
Gets the background color for the secondary selection block.
- void `secondary_selection_color` (**Fl_Color** color)
Sets the background color for the secondary selection block.
- int `shortcut` () const
- void `shortcut` (int s)
- void `show_cursor` (int b=1)

- Shows the text cursor.*

 - void [show_insert_position](#) ()

Scrolls the text buffer to show the current insert position.
- int [skip_lines](#) (int startPos, int nLines, bool startPosIsLineStart)

Skip a number of lines forward.
- [Fl_Color](#) [spelling_underline_color](#) () const

Gets the underline color for style attribute ATTR_SPELLING.
- void [spelling_underline_color](#) ([Fl_Color](#) color)

Sets the underline color for style attribute ATTR_SPELLING.
- [Fl_Text_Buffer](#) * [style_buffer](#) () const

Gets the current style buffer associated with the text widget.
- [Fl_Color](#) [textcolor](#) () const

Gets the default color of text in the widget.
- void [textcolor](#) ([Fl_Color](#) n)

Sets the default color of text in the widget.
- [Fl_Font](#) [textfont](#) () const

Gets the default font used when drawing text in the widget.
- void [textfont](#) ([Fl_Font](#) s)

Sets the default font used when drawing text in the widget.
- [Fl_Fontsize](#) [textsize](#) () const

Gets the default size of text in the widget.
- void [textsize](#) ([Fl_Fontsize](#) s)

Sets the default size of text in the widget.
- int [word_end](#) (int pos) const

Moves the insert position to the end of the current word.
- int [word_start](#) (int pos) const

Moves the insert position to the beginning of the current word.
- void [wrap_mode](#) (int wrap, int wrap_margin)

Set the new text wrap mode.
- int [wrapped_column](#) (int row, int column) const

Nobody knows what this function does.
- int [wrapped_row](#) (int row) const

Nobody knows what this function does.
- double [x_to_col](#) (double x) const

Convert an x pixel position into a column number.
- [~Fl_Text_Display](#) ()

Free a text display and release its associated memory.

Public Member Functions inherited from [Fl_Group](#)

- [Fl_Widget](#) *& [_ddfdesign_kludge](#) ()

This is for forms compatibility only.
- void [add](#) ([Fl_Widget](#) &)

The widget is removed from its current group (if any) and then added to the end of this group.
- void [add](#) ([Fl_Widget](#) *o)

See void [Fl_Group::add\(Fl_Widget &w\)](#)
- void [add_resizable](#) ([Fl_Widget](#) &o)

Adds a widget to the group and makes it the resizable widget.
- [Fl_Widget](#) *const * [array](#) () const

Returns a pointer to the array of children.
- [Fl_Group](#) const * [as_group](#) () const [FL_OVERRIDE](#)

- `FL_Group * as_group () FL_OVERRIDE`
Returns an `FL_Group` pointer if this widget is an `FL_Group`.
- `void begin ()`
Sets the current group so you can build the widget tree by just constructing the widgets.
- `FL_Widget * child (int n) const`
Returns the *n*'th child.
- `int children () const`
Returns how many child widgets the group has.
- `void clear ()`
Deletes all child widgets from memory recursively.
- `unsigned int clip_children ()`
Returns the current clipping mode.
- `void clip_children (int c)`
Controls whether the group widget clips the drawing of child widgets to its bounding box.
- `virtual int delete_child (int n)`
Removes the widget at *index* from the group and deletes it.
- `void end ()`
Exactly the same as `current(this->parent())`.
- `int find (const FL_Widget &o) const`
See `int FL_Group::find(const FL_Widget *w) const`.
- `int find (const FL_Widget *) const`
Searches the child array for the widget and returns the index.
- `FL_Group (int, int, int, int, const char * = 0)`
Creates a new `FL_Group` widget using the given position, size, and label string.
- `void focus (FL_Widget *W)`
- `void forms_end ()`
This is for forms compatibility only.
- `void init_sizes ()`
Resets the internal array of widget sizes and positions.
- `void insert (FL_Widget &, int i)`
The widget is removed from its current group (if any) and then inserted into this group.
- `void insert (FL_Widget &o, FL_Widget *before)`
This does `insert(w, find(before))`.
- `void remove (FL_Widget &)`
Removes a widget from the group but does not delete it.
- `void remove (FL_Widget *o)`
Removes the widget *o* from the group.
- `void remove (int index)`
Removes the widget at *index* from the group but does not delete it.
- `FL_Widget * resizable () const`
Returns the group's resizable widget.
- `void resizable (FL_Widget &o)`
Sets the group's resizable widget.
- `void resizable (FL_Widget *o)`
The resizable widget defines both the resizing box and the resizing behavior of the group and its children.
- `virtual ~FL_Group ()`
The destructor also deletes all the children.

Public Member Functions inherited from [FI_Widget](#)

- void [_clear_fullscreen](#) ()
- void [_set_fullscreen](#) ()
- void [activate](#) ()
Activates the widget.
- unsigned int [active](#) () const
Returns whether the widget is active.
- int [active_r](#) () const
Returns whether the widget and all of its parents are active.
- [FI_Align](#) [align](#) () const
Gets the label alignment.
- void [align](#) ([FI_Align](#) alignment)
Sets the label alignment.
- long [argument](#) () const
Gets the current user data (long) argument that is passed to the callback function.
- void [argument](#) (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class [FI_Gl_Window](#) * [as_gl_window](#) ()
Returns an [FI_Gl_Window](#) pointer if this widget is an [FI_Gl_Window](#).
- virtual class [FI_Gl_Window](#) const * [as_gl_window](#) () const
- virtual [FI_Window](#) * [as_window](#) ()
Returns an [FI_Window](#) pointer if this widget is an [FI_Window](#).
- virtual [FI_Window](#) const * [as_window](#) () const
- void [bind_deimage](#) ([FI_Image](#) *img)
Sets the image to use as part of the widget label when in the inactive state.
- void [bind_deimage](#) (int f)
Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.
- void [bind_image](#) ([FI_Image](#) *img)
Sets the image to use as part of the widget label when in the active state.
- void [bind_image](#) (int f)
Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- [FI_Boxtype](#) [box](#) () const
Gets the box type of the widget.
- void [box](#) ([FI_Boxtype](#) new_box)
Sets the box type for the widget.
- [FI_Callback_p](#) [callback](#) () const
Gets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback](#) *cb, [FI_Callback_User_Data](#) *p, bool auto_free)
Sets the current callback function and managed user data for the widget.
- void [callback](#) ([FI_Callback](#) *cb, void *p)
Sets the current callback function and data for the widget.
- void [callback](#) ([FI_Callback0](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FI_Callback1](#) *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int [changed](#) () const
Checks if the widget value changed since the last callback.
- void [clear_active](#) ()

- Marks the widget as inactive without sending events or changing focus.*

 - void `clear_changed` ()
- Marks the value of the widget as unchanged.*

 - void `clear_damage` (uchar c=0)
- Clears or sets the damage flags.*

 - void `clear_output` ()
- Sets a widget to accept input.*

 - void `clear_visible` ()
- Hides the widget.*

 - void `clear_visible_focus` ()
- Disables keyboard focus navigation with this widget.*

 - `FL_Color` `color` () const
- Gets the background color of the widget.*

 - void `color` (FL_Color bg)
- Sets the background color of the widget.*

 - void `color` (FL_Color bg, FL_Color sel)
- Sets the background and selection color of the widget.*

 - `FL_Color` `color2` () const
- For back compatibility only.*

 - void `color2` (unsigned a)
- For back compatibility only.*

 - int `contains` (const FL_Widget *w) const
- Checks if w is a child of this widget.*

 - void `copy_label` (const char *new_label)
- Sets the current label.*

 - void `copy_tooltip` (const char *text)
- Sets the current tooltip text.*

 - uchar `damage` () const
- Returns non-zero if `draw()` needs to be called.*

 - void `damage` (uchar c)
- Sets the damage bits for the widget.*

 - void `damage` (uchar c, int x, int y, int w, int h)
- Sets the damage bits for an area inside the widget.*

 - int `damage_resize` (int, int, int, int)
- Internal use only.*

 - void `deactivate` ()
- Deactivates the widget.*

 - `FL_Image` * `deimage` ()
- Gets the image that is used as part of the widget label when in the inactive state.*

 - const `FL_Image` * `deimage` () const
- Gets the image that is used as part of the widget label when in the inactive state.*

 - void `deimage` (FL_Image &img)
- Sets the image to use as part of the widget label when in the inactive state.*

 - void `deimage` (FL_Image *img)
- Sets the image to use as part of the widget label when in the inactive state.*

 - int `deimage_bound` () const
- Returns whether the inactive image is managed by the widget.*

 - void `do_callback` (FL_Callback_Reason reason=FL_REASON_UNKNOWN)
- Calls the widget callback function with default arguments.*

 - void `do_callback` (FL_Widget *widget, long arg, FL_Callback_Reason reason=FL_REASON_UNKNOWN)
- Calls the widget callback function with arbitrary arguments.*

- void `do_callback` (`FL_Widget *widget`, void *arg=0, `FL_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with arbitrary arguments.
- void `draw_label` (int, int, int, int, `FL_Align`) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const
Gets the widget height.
- virtual void `hide` ()
Makes a widget invisible.
- int `horizontal_label_margin` ()
Get the spacing between the label and the horizontal edge of the widget.
- void `horizontal_label_margin` (int px)
Set the spacing between the label and the horizontal edge of the widget.
- `FL_Image * image` ()
Gets the image that is used as part of the widget label when in the active state.
- const `FL_Image * image` () const
Gets the image that is used as part of the widget label when in the active state.
- void `image` (`FL_Image &img`)
Sets the image to use as part of the widget label when in the active state.
- void `image` (`FL_Image *img`)
Sets the image to use as part of the widget label when in the active state.
- int `image_bound` () const
Returns whether the image is managed by the widget.
- int `inside` (const `FL_Widget *wgt`) const
Checks if this widget is a child of wgt.
- int `is_label_copied` () const
Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const
Gets the current label text.
- void `label` (const char *text)
Sets the current label pointer.
- void `label` (`FL_Labeltype` a, const char *b)
Shortcut to set the label text and type in one call.
- int `label_image_spacing` ()
Return the gap size between the label and the image.
- void `label_image_spacing` (int gap)
Set the gap between the label and the image in pixels.
- `FL_Color labelcolor` () const
Gets the label color.
- void `labelcolor` (`FL_Color` c)
Sets the label color.
- `FL_Font labelfont` () const
Gets the font to use.
- void `labelfont` (`FL_Font` f)
Sets the font to use.
- `FL_Fonsize labelsz` () const
Gets the font size in pixels.
- void `labelsize` (`FL_Fonsize` pix)
Sets the font size in pixels.
- `FL_Labeltype labeltype` () const
Gets the label type.
- void `labeltype` (`FL_Labeltype` a)

- Sets the label type.*

 - void `measure_label` (int &ww, int &hh) const

Sets width ww and height hh accordingly with the label size.
- bool `needs_keyboard` () const

Returns whether this widget needs a keyboard.
- void `needs_keyboard` (bool needs)

Sets whether this widget needs a keyboard.
- unsigned int `output` () const

Returns if a widget is used for output only.
- `Fl_Group` * `parent` () const

Returns a pointer to the parent widget.
- void `parent` (`Fl_Group` *p)

Internal use only - "for hacks only".
- void `position` (int X, int Y)

Repositions the window or widget.
- void `redraw` ()

Schedules the drawing of the widget.
- void `redraw_label` ()

Schedules the drawing of the label.
- `Fl_Color` `selection_color` () const

Gets the selection color.
- void `selection_color` (`Fl_Color` a)

Sets the selection color.
- void `set_active` ()

Marks the widget as active without sending events or changing focus.
- void `set_changed` ()

Marks the value of the widget as changed.
- void `set_output` ()

Sets a widget to output only.
- void `set_visible` ()

Makes the widget visible.
- void `set_visible_focus` ()

Enables keyboard focus navigation with this widget.
- int `shortcut_label` () const

Returns whether the widget's label uses '&' to indicate shortcuts.
- void `shortcut_label` (int value)

Sets whether the widget's label uses '&' to indicate shortcuts.
- virtual void `show` ()

Makes a widget visible.
- void `size` (int W, int H)

Changes the size of the widget.
- int `take_focus` ()

Gives the widget the keyboard focus.
- unsigned int `takeevents` () const

Returns if the widget is able to take events.
- int `test_shortcut` ()

Returns true if the widget's label contains the entered '&x' shortcut.
- const char * `tooltip` () const

Gets the current tooltip text.
- void `tooltip` (const char *text)

Sets the current tooltip text.

- [Fl_Window](#) * [top_window](#) () const
Returns a pointer to the top-level window for the widget.
- [Fl_Window](#) * [top_window_offset](#) (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- [uchar](#) [type](#) () const
Gets the widget type.
- void [type](#) ([uchar](#) t)
Sets the widget type.
- int [use_accents_menu](#) ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * [user_data](#) () const
Gets the user data for this widget.
- void [user_data](#) ([Fl_Callback_User_Data](#) *v, bool auto_free)
Sets the user data for this widget.
- void [user_data](#) (void *v)
Sets the user data for this widget.
- int [vertical_label_margin](#) ()
Get the spacing between the label and the vertical edge of the widget.
- void [vertical_label_margin](#) (int px)
Set the spacing between the label and the vertical edge of the widget.
- unsigned int [visible](#) () const
Returns whether a widget is visible.
- unsigned int [visible_focus](#) () const
Checks whether this widget has a visible focus.
- void [visible_focus](#) (int v)
Modifies keyboard focus navigation.
- int [visible_r](#) () const
Returns whether a widget and all its parents are visible.
- int [w](#) () const
Gets the widget width.
- [Fl_When](#) [when](#) () const
Returns the conditions under which the callback is called.
- void [when](#) ([uchar](#) i)
Sets the flags used to decide when a callback is called.
- [Fl_Window](#) * [window](#) () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int [x](#) () const
Gets the widget position in its window.
- int [y](#) () const
Gets the widget position in its window.
- virtual ~[Fl_Widget](#) ()
Destroys the widget.

Static Public Member Functions

- static int [kf_backspace](#) (int c, [Fl_Text_Editor](#) *e)
Does a backspace for key 'c' in the current buffer of editor 'e'.
- static int [kf_c_s_move](#) (int c, [Fl_Text_Editor](#) *e)
Extends the current selection in the direction indicated by control key 'c' in editor 'e'.
- static int [kf_copy](#) (int c, [Fl_Text_Editor](#) *e)
Does a copy of selected text or the current character in the current buffer of editor 'e'.

- static int [kf_ctrl_move](#) (int c, [FI_Text_Editor](#) *e)
Moves the current text cursor in the direction indicated by control key 'c' in editor 'e'.
- static int [kf_cut](#) (int c, [FI_Text_Editor](#) *e)
Does a cut of selected text in the current buffer of editor 'e'.
- static int [kf_default](#) (int c, [FI_Text_Editor](#) *e)
Inserts the text associated with key 'c' in editor 'e'.
- static int [kf_delete](#) (int c, [FI_Text_Editor](#) *e)
Does a delete of selected text or the current character in the current buffer of editor 'e'.
- static int [kf_down](#) (int c, [FI_Text_Editor](#) *e)
Moves the text cursor one line down for editor 'e'.
- static int [kf_end](#) (int c, [FI_Text_Editor](#) *e)
Moves the text cursor to the end of the current line in editor 'e'.
- static int [kf_enter](#) (int c, [FI_Text_Editor](#) *e)
Inserts a newline for key 'c' at the current cursor position in editor 'e'.
- static int [kf_home](#) (int, [FI_Text_Editor](#) *e)
Moves the text cursor to the beginning of the current line in editor 'e'.
- static int [kf_ignore](#) (int c, [FI_Text_Editor](#) *e)
Ignores the key 'c' in editor 'e'.
- static int [kf_insert](#) (int c, [FI_Text_Editor](#) *e)
Toggles the insert mode for editor 'e'.
- static int [kf_left](#) (int c, [FI_Text_Editor](#) *e)
Moves the text cursor one character to the left in editor 'e'.
- static int [kf_m_s_move](#) (int c, [FI_Text_Editor](#) *e)
Extends the current selection in the direction indicated by meta key 'c' in editor 'e'.
- static int [kf_meta_move](#) (int c, [FI_Text_Editor](#) *e)
Moves the current text cursor in the direction indicated by meta key 'c' in editor 'e'.
- static int [kf_move](#) (int c, [FI_Text_Editor](#) *e)
Moves the text cursor in the direction indicated by key 'c' in editor 'e'.
- static int [kf_page_down](#) (int c, [FI_Text_Editor](#) *e)
Moves the text cursor down one page for editor 'e'.
- static int [kf_page_up](#) (int c, [FI_Text_Editor](#) *e)
Moves the text cursor up one page for editor 'e'.
- static int [kf_paste](#) (int c, [FI_Text_Editor](#) *e)
Does a paste of selected text in the current buffer of editor 'e'.
- static int [kf_redo](#) (int c, [FI_Text_Editor](#) *e)
Redo last undo action.
- static int [kf_right](#) (int c, [FI_Text_Editor](#) *e)
Moves the text cursor one character to the right for editor 'e'.
- static int [kf_select_all](#) (int c, [FI_Text_Editor](#) *e)
Selects all text in the current buffer in editor 'e'.
- static int [kf_shift_move](#) (int c, [FI_Text_Editor](#) *e)
Extends the current selection in the direction of key 'c' in editor 'e'.
- static int [kf_undo](#) (int c, [FI_Text_Editor](#) *e)
Undo last edit in the current buffer of editor 'e'.
- static int [kf_up](#) (int c, [FI_Text_Editor](#) *e)
Moves the text cursor one line up for editor 'e'.

Static Public Member Functions inherited from [FI_Group](#)

- static [FI_Group](#) * [current](#) ()
Returns the currently active group.
- static void [current](#) ([FI_Group](#) *g)
Sets the current group.

Static Public Member Functions inherited from [FI_Widget](#)

- static void [default_callback](#) ([FI_Widget](#) *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int [label_shortcut](#) (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int [test_shortcut](#) (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Member Functions

- int [handle_key](#) ()
Handles a key press in the editor.
- void [maybe_do_callback](#) ([FI_Callback_Reason](#) reason=[FL_REASON_CHANGED](#))
does or does not a callback according to [changed\(\)](#) and [when\(\)](#) settings

Protected Member Functions inherited from [FI_Text_Display](#)

- void [absolute_top_line_number](#) (int oldFirstChar)
Re-calculate absolute top line number for a change in scroll position.
- void [calc_last_char](#) ()
Update last display character index.
- void [calc_line_starts](#) (int startLine, int endLine)
Update the line starts array.
- void [clear_rect](#) (int style, int x, int y, int width, int height) const
*Clear a rectangle with the appropriate background color for *style*.*
- void [display_insert](#) ()
Scroll the display to bring insertion cursor into view.
- void [draw](#) () [FL_OVERRIDE](#)
Draw the widget.
- void [draw_cursor](#) (int, int)
Draw a cursor with top center at X, Y.
- void [draw_line_numbers](#) (bool clearAll)
Refresh the line number area.
- void [draw_range](#) (int start, int end)
Draw a range of text.
- void [draw_string](#) (int style, int x, int y, int toX, const char *string, int nChars) const
Draw a text segment in a single style.
- void [draw_text](#) (int X, int Y, int W, int H)
Refresh a rectangle of the text display.
- void [draw_vline](#) (int visLineNum, int leftClip, int rightClip, int leftCharIndex, int rightCharIndex)
Draw a single line of text.
- int [empty_vlines](#) () const
Return true if there are lines visible with no corresponding buffer text.
- void [extend_range_for_styles](#) (int *start, int *end)
I don't know what this does!
- void [find_line_end](#) (int pos, bool start_pos_is_line_start, int *lineEnd, int *nextLineStart) const
Finds both the end of the current line and the start of the next line.
- void [find_wrap_range](#) (const char *deletedText, int pos, int nInserted, int nDeleted, int *modRangeStart, int *modRangeEnd, int *linesInserted, int *linesDeleted)
Wrapping calculations.
- int [find_x](#) (const char *s, int len, int style, int x) const

- Find the index of the character that lies at the given x position / closest cursor position.*

 - int [handle_rmb](#) (int readonly)

Handle right mouse button down events.
- int [handle_vline](#) (int mode, int lineStart, int lineLen, int leftChar, int rightChar, int topClip, int bottomClip, int leftClip, int rightClip) const

Universal pixel machine.
- int [longest_vline](#) () const

Find the longest line of all visible lines.
- void [maintain_absolute_top_line_number](#) (int state)

Line numbering stuff, currently unused.
- int [maintaining_absolute_top_line_number](#) () const

Returns true if a separate absolute top line number is being maintained.
- void [measure_deleted_lines](#) (int pos, int nDeleted)

Wrapping calculations.
- double [measure_proportional_character](#) (const char *s, int colNum, int pos) const

Wrapping calculations.
- int [measure_vline](#) (int visLineNum) const

Returns the width in pixels of the displayed line pointed to by "visLineNum".
- void [offset_line_starts](#) (int newTopLineNum)

Offset line start counters for a new vertical scroll position.
- int [position_to_line](#) (int pos, int *lineNum) const

Convert a position index into a line number offset.
- int [position_to_linecol](#) (int pos, int *lineNum, int *column) const

Find the line and column number of position pos.
- void [reset_absolute_top_line_number](#) ()

Reestablish the absolute (non-wrapped) top line number.
- int [scroll_](#) (int topLineNum, int horizOffset)

Scrolls the current buffer to start at the specified line and column.
- double [string_width](#) (const char *string, int length, int style) const

Find the width of a string in the font of a particular style.
- void [update_h_scrollbar](#) ()

Update horizontal scrollbar.
- void [update_line_starts](#) (int pos, int charsInserted, int charsDeleted, int linesInserted, int linesDeleted, int *scrolled)

Update line start arrays and variables.
- void [update_v_scrollbar](#) ()

Update vertical scrollbar.
- int [vline_length](#) (int visLineNum) const

Count number of bytes in a visible line.
- int [wrap_uses_character](#) (int lineEndPos) const

Check if the line break is caused by a newline or by line wrapping.
- void [wrapped_line_counter](#) (FI_Text_Buffer *buf, int startPos, int maxPos, int maxLines, bool startPosIs↵LineStart, int styleBufOffset, int *retPos, int *retLines, int *retLineStart, int *retLineEnd, bool countLast↵LineMissingNewLine=true) const

Wrapping calculations.
- int [xy_to_position](#) (int x, int y, int PosType=CHARACTER_POS) const

Translate a pixel position into a character index.
- void [xy_to_rowcol](#) (int x, int y, int *row, int *column, int PosType=CHARACTER_POS) const

Translate pixel coordinates into row and column.

Protected Member Functions inherited from [FI_Group](#)

- [FI_Rect](#) * [bounds](#) ()
Returns the internal array of widget sizes and positions.
- void [draw_child](#) ([FI_Widget](#) &widget) const
Forces a child to redraw.
- void [draw_children](#) ()
Draws all children of the group.
- void [draw_outside_label](#) (const [FI_Widget](#) &widget) const
Parents normally call this to draw outside labels of child widgets.
- virtual int [on_insert](#) ([FI_Widget](#) *, int)
Allow derived groups to act when a widget is added as a child.
- virtual int [on_move](#) (int, int)
Allow derived groups to act when a widget is moved within the group.
- virtual void [on_remove](#) (int)
Allow derived groups to act when a child widget is removed from the group.
- int * [sizes](#) ()
Returns the internal array of widget sizes and positions.
- void [update_child](#) ([FI_Widget](#) &widget) const
Draws a child only if it needs it.

Protected Member Functions inherited from [FI_Widget](#)

- void [clear_flag](#) (unsigned int c)
Clears a flag in the flags mask.
- void [draw_backdrop](#) () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void [draw_box](#) () const
Draws the widget box according its box style.
- void [draw_box](#) ([FI_Boxtype](#) t, [FI_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void [draw_box](#) ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void [draw_focus](#) () const
Draws a focus rectangle around the widget.
- void [draw_focus](#) ([FI_Boxtype](#) t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void [draw_focus](#) ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) bg) const
Draws a focus box for the widget at the given position and size.
- void [draw_label](#) () const
Draws the widget's label at the defined label position.
- void [draw_label](#) (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [FI_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int [flags](#) () const
Gets the widget flags mask.
- void [h](#) (int v)
Internal use only.
- void [set_flag](#) (unsigned int c)
Sets a flag in the flags mask.
- void [w](#) (int v)

Internal use only.

- void `x` (int v)

Internal use only.

- void `y` (int v)

Internal use only.

Static Protected Attributes

- static `Key_Binding * global_key_bindings`

Global key binding list.

Additional Inherited Members

Protected Types inherited from `FI_Text_Display`

- enum {
`DRAW_LINE` , `FIND_INDEX` , `FIND_INDEX_FROM_ZERO` , `GET_WIDTH` ,
`FIND_CURSOR_INDEX` }

flags possible values enumeration.

Static Protected Member Functions inherited from `FI_Text_Display`

- static void `buffer_modified_cb` (int pos, int nInserted, int nDeleted, int nRestyled, const char *deletedText, void *cbArg)

This is called whenever the buffer is modified.

- static void `buffer_predelete_cb` (int pos, int nDeleted, void *cbArg)

This is called before any characters are deleted.

- static void `h_scrollbar_cb` (`FI_Scrollbar *w`, `FI_Text_Display *d`)

Callback for drag or valueChanged on horizontal scrollbar.

- static void `scroll_timer_cb` (void *)

Timer callback for scroll events.

- static void `v_scrollbar_cb` (`FI_Scrollbar *w`, `FI_Text_Display *d`)

Callback for drag or valueChanged on vertical scrollbar.

11.145.1 Detailed Description

This is the FLTK text editor widget.

It allows the user to edit multiple lines of text and supports highlighting and scrolling. The buffer that is displayed in the widget is managed by the [Fl_Text_Buffer](#) class.

11.145.2 Member Function Documentation

11.145.2.1 add_key_binding()

```
void Fl_Text_Editor::add_key_binding (
    int key,
    int state,
    Key_Func function,
    Key_Binding ** list)
```

Adds a key of state `state` with the function `function` to an arbitrary key binding list `list`.

This can be used in derived classes to add global key bindings by using the global (static) [Key_Binding](#) list [Fl_Text_Editor::global_key_bindings](#).

11.145.2.2 handle()

```
int Fl_Text_Editor::handle (
    int e) [virtual]
```

Event handling.

Reimplemented from [Fl_Text_Display](#).

11.145.2.3 insert_mode() [1/2]

```
int Fl_Text_Editor::insert_mode () [inline]
```

Gets the current insert mode; if non-zero, new text is inserted before the current cursor position.

Otherwise, new text replaces text at the current cursor position.

11.145.2.4 insert_mode() [2/2]

```
void Fl_Text_Editor::insert_mode (
    int b) [inline]
```

Sets the current insert mode; if non-zero, new text is inserted before the current cursor position.

Otherwise, new text replaces text at the current cursor position.

11.145.2.5 kf_backspace()

```
int Fl_Text_Editor::kf_backspace (
    int c,
    Fl_Text_Editor * e) [static]
```

Does a backspace for key 'c' in the current buffer of editor 'e'.

Any current selection is deleted. Otherwise, the character left is deleted and the cursor moved. The key value 'c' is currently unused.

11.145.2.6 kf_c_s_move()

```
int Fl_Text_Editor::kf_c_s_move (
    int c,
    Fl_Text_Editor * e) [static]
```

Extends the current selection in the direction indicated by control key 'c' in editor 'e'.

See also

[kf_ctrl_move\(\)](#).

11.145.2.7 kf_copy()

```
int Fl_Text_Editor::kf_copy (
    int c,
    Fl_Text_Editor * e) [static]
```

Does a copy of selected text or the current character in the current buffer of editor 'e'.
The key value 'c' is currently unused.

11.145.2.8 kf_ctrl_move()

```
int Fl_Text_Editor::kf_ctrl_move (
    int c,
    Fl_Text_Editor * e) [static]
```

Moves the current text cursor in the direction indicated by control key 'c' in editor 'e'.

Supported values for 'c' are currently:

```
FL_Home      -- moves the cursor to the beginning of the document
FL_End       -- moves the cursor to the end of the document
FL_Left      -- moves the cursor left one word
FL_Right     -- moves the cursor right one word
FL_Up        -- scrolls up one line, without moving cursor
FL_Down      -- scrolls down one line, without moving cursor
FL_Page_Up   -- moves the cursor to the beginning of the top line on the current page
FL_Page_Down -- moves the cursor to the beginning of the last line on the current page
```

11.145.2.9 kf_cut()

```
int Fl_Text_Editor::kf_cut (
    int c,
    Fl_Text_Editor * e) [static]
```

Does a cut of selected text in the current buffer of editor 'e'.
The key value 'c' is currently unused.

11.145.2.10 kf_default()

```
int Fl_Text_Editor::kf_default (
    int c,
    Fl_Text_Editor * e) [static]
```

Inserts the text associated with key 'c' in editor 'e'.
Honors the current selection and insert/overstrike mode.

11.145.2.11 kf_delete()

```
int Fl_Text_Editor::kf_delete (
    int c,
    Fl_Text_Editor * e) [static]
```

Does a delete of selected text or the current character in the current buffer of editor 'e'.
The key value 'c' is currently unused.

11.145.2.12 kf_down()

```
int Fl_Text_Editor::kf_down (
    int c,
    Fl_Text_Editor * e) [static]
```

Moves the text cursor one line down for editor 'e'.

Same as kf_move(FL_Down, e). The key value 'c' is currently unused.

11.145.2.13 kf_end()

```
int Fl_Text_Editor::kf_end (
    int c,
    Fl_Text_Editor * e) [static]
```

Moves the text cursor to the end of the current line in editor 'e'.

Same as kf_move(FL_End, e). The key value 'c' is currently unused.

11.145.2.14 kf_enter()

```
int Fl_Text_Editor::kf_enter (
    int c,
    Fl_Text_Editor * e) [static]
```

Inserts a newline for key 'c' at the current cursor position in editor 'e'.

The key value 'c' is currently unused.

11.145.2.15 kf_home()

```
int Fl_Text_Editor::kf_home (
    int ,
    Fl_Text_Editor * e) [static]
```

Moves the text cursor to the beginning of the current line in editor 'e'.

Same as kf_move(FL_Home, e). The key value 'c' is currently unused.

11.145.2.16 kf_ignore()

```
int Fl_Text_Editor::kf_ignore (
    int c,
    Fl_Text_Editor * e) [static]
```

Ignores the key 'c' in editor 'e'.

This method can be used as a keyboard binding to disable a key that might otherwise be handled or entered as text.

An example would be disabling FL_Escape, so that it isn't added to the buffer when invoked by the user.

11.145.2.17 kf_insert()

```
int Fl_Text_Editor::kf_insert (
    int c,
    Fl_Text_Editor * e) [static]
```

Toggles the insert mode for editor 'e'.

The key value 'c' is currently unused.

11.145.2.18 kf_left()

```
int Fl_Text_Editor::kf_left (
    int c,
    Fl_Text_Editor * e) [static]
```

Moves the text cursor one character to the left in editor 'e'.

Same as kf_move(FL_Left, e). The key value 'c' is currently unused.

11.145.2.19 kf_m_s_move()

```
int Fl_Text_Editor::kf_m_s_move (
    int c,
    Fl_Text_Editor * e) [static]
```

Extends the current selection in the direction indicated by meta key 'c' in editor 'e'.

See also

[kf_meta_move\(\)](#).

11.145.2.20 kf_meta_move()

```
int Fl_Text_Editor::kf_meta_move (
    int c,
    Fl_Text_Editor * e) [static]
```

Moves the current text cursor in the direction indicated by meta key 'c' in editor 'e'.

Supported values for 'c' are currently:

```
FL_Up      -- moves cursor to the beginning of the current document
FL_Down    -- moves cursor to the end of the current document
FL_Left    -- moves the cursor to the beginning of the current line
FL_Right   -- moves the cursor to the end of the current line
```

11.145.2.21 kf_move()

```
int Fl_Text_Editor::kf_move (
    int c,
    Fl_Text_Editor * e) [static]
```

Moves the text cursor in the direction indicated by key 'c' in editor 'e'.

Supported values for 'c' are currently:

```
FL_Home    -- moves the cursor to the beginning of the current line
FL_End     -- moves the cursor to the end of the current line
FL_Left    -- moves the cursor left one character
FL_Right   -- moves the cursor right one character
FL_Up      -- moves the cursor up one line
FL_Down    -- moves the cursor down one line
FL_Page_Up -- moves the cursor up one page
FL_Page_Down -- moves the cursor down one page
```

11.145.2.22 kf_page_down()

```
int Fl_Text_Editor::kf_page_down (
    int c,
    Fl_Text_Editor * e) [static]
```

Moves the text cursor down one page for editor 'e'.

Same as `kf_move(FL_Page_Down, e)`. The key value 'c' is currently unused.

11.145.2.23 kf_page_up()

```
int Fl_Text_Editor::kf_page_up (
    int c,
    Fl_Text_Editor * e) [static]
```

Moves the text cursor up one page for editor 'e'.

Same as `kf_move(FL_Page_Up, e)`. The key value 'c' is currently unused.

11.145.2.24 kf_paste()

```
int Fl_Text_Editor::kf_paste (
    int c,
    Fl_Text_Editor * e) [static]
```

Does a paste of selected text in the current buffer of editor 'e'.

Any current selection is replaced with the pasted content. The key value 'c' is currently unused.

11.145.2.25 kf_redo()

```
int Fl_Text_Editor::kf_redo (
    int c,
    Fl_Text_Editor * e) [static]
```

Redo last undo action.

Also deselects previous selection. The key value 'c' is currently unused.

11.145.2.26 kf_right()

```
int Fl_Text_Editor::kf_right (
    int c,
    Fl_Text_Editor * e) [static]
```

Moves the text cursor one character to the right for editor 'e'.

Same as `kf_move(FL_Right, e)`. The key value 'c' is currently unused.

11.145.2.27 kf_select_all()

```
int Fl_Text_Editor::kf_select_all (
    int c,
    Fl_Text_Editor * e) [static]
```

Selects all text in the current buffer in editor 'e'.

The key value 'c' is currently unused.

11.145.2.28 kf_shift_move()

```
int Fl_Text_Editor::kf_shift_move (
    int c,
    Fl_Text_Editor * e) [static]
```

Extends the current selection in the direction of key 'c' in editor 'e'.

See also

[kf_move\(\)](#)

11.145.2.29 kf_undo()

```
int Fl_Text_Editor::kf_undo (
    int c,
    Fl_Text_Editor * e) [static]
```

Undo last edit in the current buffer of editor 'e'.

Also deselects previous selection. The key value 'c' is currently unused.

11.145.2.30 kf_up()

```
int Fl_Text_Editor::kf_up (
    int c,
    Fl_Text_Editor * e) [static]
```

Moves the text cursor one line up for editor 'e'.

Same as `kf_move(FL_Up, e)`. The key value 'c' is currently unused.

11.145.2.31 remove_key_binding()

```
void Fl_Text_Editor::remove_key_binding (
    int key,
    int state,
    Key_Binding ** list)
```

Removes the key binding associated with the key `key` of state `state` from the [Key_Binding](#) list `list`.

This can be used in derived classes to remove global key bindings by using the global (static) [Key_Binding](#) list `Fl_Text_Editor::global_key_bindings`.

11.145.2.32 tab_nav() [1/2]

```
int Fl_Text_Editor::tab_nav () const
```

Check if Tab focus navigation is enabled.

If disabled (default), hitting Tab inserts a tab character into the editor buffer.

If enabled, hitting Tab navigates focus to the next widget, and Shift-Tab navigates focus to the previous widget.

Returns

if Tab inserts tab characters or moves the focus

Return values

0	Tab inserts tab characters (default)
1	Tab navigation is enabled.

See also

[tab_nav\(int\)](#), [Fl::OPTION_ARROW_FOCUS](#).

Version

1.3.4 ABI feature

11.145.2.33 tab_nav() [2/2]

```
void Fl_Text_Editor::tab_nav (
    int val)
```

Enables or disables Tab key focus navigation.

When disabled (default), tab characters are inserted into [Fl_Text_Editor](#). Only the mouse can change focus. This behavior is desirable when [Fl_Text_Editor](#) is used, e.g. in a source code editor.

When enabled, Tab navigates focus to the next widget, and Shift-Tab navigates focus to the previous widget. This behavior is desirable when [Fl_Text_Editor](#) is used e.g. in a database input form.

Currently, this method is implemented as a convenience method that adjusts the key bindings for the Tab key. This implementation detail may change in the future. Know that changing the editor's key bindings for Tab and Shift-Tab may affect tab navigation.

Parameters

in	<i>val</i>	If <i>val</i> is 0, Tab inserts a tab character (default). If <i>val</i> is 1, Tab navigates widget focus.
----	------------	---

11.145.3 Member Data Documentation**11.145.3.1 global_key_bindings**

```
Key_Binding* Fl_Text_Editor::global_key_bindings [static], [protected]
```

Global key binding list.

Derived classes can add key bindings for all [Fl_Text_Editor](#) widgets by adding a [Key_Binding](#) to this list.

See also

[add_key_binding](#)(int key, int state, Key_Func f, Key_Binding** list);

The documentation for this class was generated from the following files:

- FI_Text_Editor.H
- FI_Text_Editor.cxx

11.146 FI_Text_Selection Class Reference

This is an internal class for [FI_Text_Buffer](#) to manage text selections.

```
#include <FI_Text_Buffer.H>
```

Public Member Functions

- int [end](#) () const
Returns the byte offset to the character after the last selected character.
- int [includes](#) (int pos) const
*Returns true if position *pos* is in the [FI_Text_Selection](#).*
- int [length](#) () const
Returns the size in bytes of the selection.
- int [position](#) (int *startpos, int *endpos) const
- bool [selected](#) () const
Returns true if any text is selected.
- void [selected](#) (bool b)
Modifies the 'selected' flag.
- int [selected](#) (int *startpos, int *endpos) const
Returns the status and the positions of this selection.
- void [set](#) (int startpos, int endpos)
Sets the selection range.
- int [start](#) () const
Returns the byte offset to the first selected character.
- void [update](#) (int pos, int nDeleted, int nInserted)
Updates a selection after text was modified.

Protected Attributes

- int **mEnd**
byte offset to the character after the last selected character
- bool **mSelected**
this flag is set if any text is selected
- int **mStart**
byte offset to the first selected character

Friends

- class [FI_Text_Buffer](#)

11.146.1 Detailed Description

This is an internal class for [Fl_Text_Buffer](#) to manage text selections.

All methods use byte (not UTF-8 character) offsets and start at 0. This class works correctly with UTF-8 strings assuming that the parameters for all calls are on character boundaries.

If the selection is inactive (not currently used), then [selected\(\)](#) returns `false` and [start\(\)](#) and [end\(\)](#) return 0 (zero).

The stored offsets are in ascending order, hence the following conditions are true (pseudo code):

```
if ( !selected() ) : (start() == 0) && (end() == 0) && (start() == end())
if ( selected() ) : start() < end()
always           : 0 <= start() <= end()
always           : length() == end() - start()
```

The selection size in bytes can always (unconditionally) be computed by

```
int size = sel->end() - sel->start();
```

See also

[length\(\)](#)

Note

The **protected** member variables `mStart` and `mEnd` are not necessarily 0 (zero) if `mSelected == false` because they are not cleared when `selected(false)` is called (as of Jul 2017). This may be changed in the future.

11.146.2 Member Function Documentation

11.146.2.1 end()

```
int Fl_Text_Selection::end () const [inline]
```

Returns the byte offset to the character after the last selected character.

The returned offset is only valid if [selected\(\)](#) returns true (non-zero). The offset is 0 if no text is selected (since FLTK 1.4.0).

Note

In FLTK 1.3.x the returned offset could be non-zero even if [selected\(\)](#) would have returned 0.

Returns

byte offset or 0 if not selected.

11.146.2.2 includes()

```
int Fl_Text_Selection::includes (
    int pos) const
```

Returns true if position `pos` is in the [Fl_Text_Selection](#).

`pos` must be at a character boundary.

11.146.2.3 length()

```
int Fl_Text_Selection::length () const [inline]
```

Returns the size in bytes of the selection.

This is a convenience method. It always returns the same as

```
end() - start()
```

and it returns 0 if [selected\(\) == false](#).

Returns

size in bytes or 0 if not selected.

Since

FLTK 1.4.0

11.146.2.4 position()

```
int Fl_Text_Selection::position (
    int * startpos,
    int * endpos) const [inline]
```

Deprecated "since 1.4.0 - use selected(startpos, endpos) instead"

11.146.2.5 selected() [1/3]

```
bool Fl_Text_Selection::selected () const [inline]
```

Returns true if any text is selected.

Returns

true if any text has been selected, or false if no text is selected.

11.146.2.6 selected() [2/3]

```
void Fl_Text_Selection::selected (
    bool b) [inline]
```

Modifies the 'selected' flag.

Parameters

<i>b</i>	new flag
----------	----------

11.146.2.7 selected() [3/3]

```
int Fl_Text_Selection::selected (
    int * startpos,
    int * endpos) const
```

Returns the status and the positions of this selection.

This method returns the same as [selected\(\)](#) as an `int` (0 or 1) in its return value and the offsets to the start of the selection in `startpos` and to the byte after the last selected character in `endpos`, if [selected\(\)](#) is true.

If [selected\(\)](#) is false, both offsets are set to 0.

Note

In FLTK 1.3.x `startpos` and `endpos` were **not modified** if [selected\(\)](#) was false.

Parameters

<i>startpos</i>	return byte offset to first selected character
<i>endpos</i>	return byte offset pointing after last selected character

Returns

whether the selection is active ([selected\(\)](#)) or not

Return values

0	if not selected
1	if selected

See also

[selected\(\)](#), [start\(\)](#), [end\(\)](#)

11.146.2.8 set()

```
void Fl_Text_Selection::set (
    int startpos,
    int endpos)
```

Sets the selection range.

startpos and endpos must be at a character boundary.

If startpos != endpos [selected\(\)](#) is set to true, else to false.

If startpos is greater than endpos they are swapped so that startpos <= endpos.

Parameters

in	<i>startpos</i>	byte offset to first selected character
in	<i>endpos</i>	byte offset pointing after last selected character

11.146.2.9 start()

```
int Fl_Text_Selection::start () const [inline]
```

Returns the byte offset to the first selected character.

The returned offset is only valid if [selected\(\)](#) returns true. If the selection is not valid the returned offset is 0 since FLTK 1.4.0.

Note

In FLTK 1.3.x the returned offset could be non-zero even if [selected\(\)](#) would have returned 0.

Returns

byte offset or 0 if not selected.

11.146.2.10 update()

```
void Fl_Text_Selection::update (
    int pos,
    int nDeleted,
    int nInserted)
```

Updates a selection after text was modified.

Updates an individual selection for changes in the corresponding text.

Parameters

<i>pos</i>	byte offset into text buffer at which the change occurred
<i>nDeleted</i>	number of bytes deleted from the buffer
<i>nInserted</i>	number of bytes inserted into the buffer

The documentation for this class was generated from the following files:

- `Fl_Text_Buffer.H`
- `Fl_Text_Buffer.cxx`

11.147 Fl_Tile Class Reference

The [Fl_Tile](#) class lets you resize its children by dragging the border between them.

Inheritance diagram for `Fl_Tile`:

Classes

- struct [Size_Range](#)

Public Member Functions

- virtual void [drag_intersection](#) (int oldx, int oldy, int newx, int newy)
Drags the intersection at (oldx,oldy) to (newx,newy).
- [FL_Tile](#) (int X, int Y, int W, int H, const char *L=0)
Creates a new [FL_Tile](#) widget using the given position, size, and label string.
- int [handle](#) (int event) [FL_OVERRIDE](#)
Handles the specified event.
- void [init_size_range](#) (int default_min_w=-1, int default_min_h=-1)
Initialize the size range mode of [FL_Tile](#) and set the default minimum width and height.
- virtual void [move_intersection](#) (int oldx, int oldy, int newx, int newy)
Drags the intersection at (oldx,oldy) to (newx,newy).
- void [position](#) (int oldx, int oldy, int newx, int newy)
- void [position](#) (int x, int y)
- void [resize](#) (int X, int Y, int W, int H) [FL_OVERRIDE](#)
Resizes the [FL_Tile](#) widget and its children.
- void [size_range](#) ([FL_Widget](#) *w, int minw, int minh, int maxw=0x7FFFFFFF, int maxh=0x7FFFFFFF)
Set the allowed size range for the give child widget.
- void [size_range](#) (int index, int minw, int minh, int maxw=0x7FFFFFFF, int maxh=0x7FFFFFFF)
Set the allowed size range for the child at the given index.
- [~FL_Tile](#) () [FL_OVERRIDE](#)
Destructor.

Public Member Functions inherited from [FL_Group](#)

- [FL_Widget](#) *& [_ddfdesign_kludge](#) ()
This is for forms compatibility only.
- void [add](#) ([FL_Widget](#) &)
The widget is removed from its current group (if any) and then added to the end of this group.
- void [add](#) ([FL_Widget](#) *o)
See void [FL_Group::add\(FL_Widget &w\)](#)
- void [add_resizable](#) ([FL_Widget](#) &o)
Adds a widget to the group and makes it the resizable widget.
- [FL_Widget](#) *const * [array](#) () const
Returns a pointer to the array of children.
- [FL_Group](#) const * [as_group](#) () const [FL_OVERRIDE](#)
- [FL_Group](#) * [as_group](#) () [FL_OVERRIDE](#)
Returns an [FL_Group](#) pointer if this widget is an [FL_Group](#).
- void [begin](#) ()
Sets the current group so you can build the widget tree by just constructing the widgets.

- `FL_Widget * child (int n) const`
Returns the n'th child.
- `int children () const`
Returns how many child widgets the group has.
- `void clear ()`
Deletes all child widgets from memory recursively.
- `unsigned int clip_children ()`
Returns the current clipping mode.
- `void clip_children (int c)`
Controls whether the group widget clips the drawing of child widgets to its bounding box.
- `virtual int delete_child (int n)`
Removes the widget at `index` from the group and deletes it.
- `void end ()`
Exactly the same as `current(this->parent())`.
- `int find (const FL_Widget &o) const`
*See `int FL_Group::find(const FL_Widget *w) const`.*
- `int find (const FL_Widget *) const`
Searches the child array for the widget and returns the index.
- `FL_Group (int, int, int, int, const char * = 0)`
Creates a new `FL_Group` widget using the given position, size, and label string.
- `void focus (FL_Widget *W)`
- `void forms_end ()`
This is for forms compatibility only.
- `void init_sizes ()`
Resets the internal array of widget sizes and positions.
- `void insert (FL_Widget &, int i)`
The widget is removed from its current group (if any) and then inserted into this group.
- `void insert (FL_Widget &o, FL_Widget *before)`
This does `insert(w, find(before))`.
- `void remove (FL_Widget &)`
Removes a widget from the group but does not delete it.
- `void remove (FL_Widget *o)`
Removes the widget `o` from the group.
- `void remove (int index)`
Removes the widget at `index` from the group but does not delete it.
- `FL_Widget * resizable () const`
Returns the group's resizable widget.
- `void resizable (FL_Widget &o)`
Sets the group's resizable widget.
- `void resizable (FL_Widget *o)`
The resizable widget defines both the resizing box and the resizing behavior of the group and its children.
- `virtual ~FL_Group ()`
The destructor also deletes all the children.

Public Member Functions inherited from [FL_Widget](#)

- void [_clear_fullscreen](#) ()
- void [_set_fullscreen](#) ()
- void [activate](#) ()
Activates the widget.
- unsigned int [active](#) () const
Returns whether the widget is active.
- int [active_r](#) () const
Returns whether the widget and all of its parents are active.
- [FL_Align](#) [align](#) () const
Gets the label alignment.
- void [align](#) ([FL_Align](#) alignment)
Sets the label alignment.
- long [argument](#) () const
Gets the current user data (long) argument that is passed to the callback function.
- void [argument](#) (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class [FL_Gl_Window](#) * [as_gl_window](#) ()
Returns an [FL_Gl_Window](#) pointer if this widget is an [FL_Gl_Window](#).
- virtual class [FL_Gl_Window](#) const * [as_gl_window](#) () const
- virtual [FL_Window](#) * [as_window](#) ()
Returns an [FL_Window](#) pointer if this widget is an [FL_Window](#).
- virtual [FL_Window](#) const * [as_window](#) () const
- void [bind_deimage](#) ([FL_Image](#) *img)
Sets the image to use as part of the widget label when in the inactive state.
- void [bind_deimage](#) (int f)
Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.
- void [bind_image](#) ([FL_Image](#) *img)
Sets the image to use as part of the widget label when in the active state.
- void [bind_image](#) (int f)
Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- [FL_Boxtype](#) [box](#) () const
Gets the box type of the widget.
- void [box](#) ([FL_Boxtype](#) new_box)
Sets the box type for the widget.
- [FL_Callback_p](#) [callback](#) () const
Gets the current callback function for the widget.
- void [callback](#) ([FL_Callback](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FL_Callback](#) *cb, [FL_Callback_User_Data](#) *p, bool auto_free)
Sets the current callback function and managed user data for the widget.
- void [callback](#) ([FL_Callback](#) *cb, void *p)
Sets the current callback function and data for the widget.
- void [callback](#) ([FL_Callback0](#) *cb)
Sets the current callback function for the widget.
- void [callback](#) ([FL_Callback1](#) *cb, long p=0)
Sets the current callback function for the widget.
- unsigned int [changed](#) () const
Checks if the widget value changed since the last callback.
- void [clear_active](#) ()

- Marks the widget as inactive without sending events or changing focus.*

 - void `clear_changed` ()
- Marks the value of the widget as unchanged.*

 - void `clear_damage` (uchar c=0)
- Clears or sets the damage flags.*

 - void `clear_output` ()
- Sets a widget to accept input.*

 - void `clear_visible` ()
- Hides the widget.*

 - void `clear_visible_focus` ()
- Disables keyboard focus navigation with this widget.*

 - `FL_Color` `color` () const
- Gets the background color of the widget.*

 - void `color` (`FL_Color` bg)
- Sets the background color of the widget.*

 - void `color` (`FL_Color` bg, `FL_Color` sel)
- Sets the background and selection color of the widget.*

 - `FL_Color` `color2` () const
- For back compatibility only.*

 - void `color2` (unsigned a)
- For back compatibility only.*

 - int `contains` (const `FL_Widget` *w) const
- Checks if w is a child of this widget.*

 - void `copy_label` (const char *new_label)
- Sets the current label.*

 - void `copy_tooltip` (const char *text)
- Sets the current tooltip text.*

 - `uchar` `damage` () const
- Returns non-zero if `draw()` needs to be called.*

 - void `damage` (uchar c)
- Sets the damage bits for the widget.*

 - void `damage` (uchar c, int x, int y, int w, int h)
- Sets the damage bits for an area inside the widget.*

 - int `damage_resize` (int, int, int, int)
- Internal use only.*

 - void `deactivate` ()
- Deactivates the widget.*

 - `FL_Image` * `deimage` ()
- Gets the image that is used as part of the widget label when in the inactive state.*

 - const `FL_Image` * `deimage` () const
- Gets the image that is used as part of the widget label when in the inactive state.*

 - void `deimage` (`FL_Image` &img)
- Sets the image to use as part of the widget label when in the inactive state.*

 - void `deimage` (`FL_Image` *img)
- Sets the image to use as part of the widget label when in the inactive state.*

 - int `deimage_bound` () const
- Returns whether the inactive image is managed by the widget.*

 - void `do_callback` (`FL_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
- Calls the widget callback function with default arguments.*

 - void `do_callback` (`FL_Widget` *widget, long arg, `FL_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
- Calls the widget callback function with arbitrary arguments.*

- void `do_callback` (`Fl_Widget` *widget, void *arg=0, `Fl_Callback_Reason` reason=`FL_REASON_UNKNOWN`)
Calls the widget callback function with arbitrary arguments.
- void `draw_label` (int, int, int, int, `Fl_Align`) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const
Gets the widget height.
- virtual void `hide` ()
Makes a widget invisible.
- int `horizontal_label_margin` ()
Get the spacing between the label and the horizontal edge of the widget.
- void `horizontal_label_margin` (int px)
Set the spacing between the label and the horizontal edge of the widget.
- `Fl_Image` * `image` ()
Gets the image that is used as part of the widget label when in the active state.
- const `Fl_Image` * `image` () const
Gets the image that is used as part of the widget label when in the active state.
- void `image` (`Fl_Image` &img)
Sets the image to use as part of the widget label when in the active state.
- void `image` (`Fl_Image` *img)
Sets the image to use as part of the widget label when in the active state.
- int `image_bound` () const
Returns whether the image is managed by the widget.
- int `inside` (const `Fl_Widget` *wgt) const
Checks if this widget is a child of wgt.
- int `is_label_copied` () const
Returns whether the current label was assigned with `copy_label()`.
- const char * `label` () const
Gets the current label text.
- void `label` (const char *text)
Sets the current label pointer.
- void `label` (`Fl_Labeltype` a, const char *b)
Shortcut to set the label text and type in one call.
- int `label_image_spacing` ()
Return the gap size between the label and the image.
- void `label_image_spacing` (int gap)
Set the gap between the label and the image in pixels.
- `Fl_Color` `labelcolor` () const
Gets the label color.
- void `labelcolor` (`Fl_Color` c)
Sets the label color.
- `Fl_Font` `labelfont` () const
Gets the font to use.
- void `labelfont` (`Fl_Font` f)
Sets the font to use.
- `Fl_Fontsize` `labelsize` () const
Gets the font size in pixels.
- void `labelsize` (`Fl_Fontsize` pix)
Sets the font size in pixels.
- `Fl_Labeltype` `labeltype` () const
Gets the label type.
- void `labeltype` (`Fl_Labeltype` a)

- Sets the label type.*

 - void `measure_label` (int &ww, int &hh) const

Sets width ww and height hh accordingly with the label size.
- bool `needs_keyboard` () const

Returns whether this widget needs a keyboard.
- void `needs_keyboard` (bool needs)

Sets whether this widget needs a keyboard.
- unsigned int `output` () const

Returns if a widget is used for output only.
- `FI_Group` * `parent` () const

Returns a pointer to the parent widget.
- void `parent` (`FI_Group` *p)

Internal use only - "for hacks only".
- void `position` (int X, int Y)

Repositions the window or widget.
- void `redraw` ()

Schedules the drawing of the widget.
- void `redraw_label` ()

Schedules the drawing of the label.
- `FI_Color` `selection_color` () const

Gets the selection color.
- void `selection_color` (`FI_Color` a)

Sets the selection color.
- void `set_active` ()

Marks the widget as active without sending events or changing focus.
- void `set_changed` ()

Marks the value of the widget as changed.
- void `set_output` ()

Sets a widget to output only.
- void `set_visible` ()

Makes the widget visible.
- void `set_visible_focus` ()

Enables keyboard focus navigation with this widget.
- int `shortcut_label` () const

Returns whether the widget's label uses '&' to indicate shortcuts.
- void `shortcut_label` (int value)

Sets whether the widget's label uses '&' to indicate shortcuts.
- virtual void `show` ()

Makes a widget visible.
- void `size` (int W, int H)

Changes the size of the widget.
- int `take_focus` ()

Gives the widget the keyboard focus.
- unsigned int `takeevents` () const

Returns if the widget is able to take events.
- int `test_shortcut` ()

Returns true if the widget's label contains the entered '&x' shortcut.
- const char * `tooltip` () const

Gets the current tooltip text.
- void `tooltip` (const char *text)

Sets the current tooltip text.

- `Fl_Window * top_window ()` const
Returns a pointer to the top-level window for the widget.
- `Fl_Window * top_window_offset (int &xoff, int &yoff)` const
Finds the x/y offset of the current widget relative to the top-level window.
- `uchar type ()` const
Gets the widget type.
- `void type (uchar t)`
Sets the widget type.
- `int use_accents_menu ()`
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- `void * user_data ()` const
Gets the user data for this widget.
- `void user_data (Fl_Callback_User_Data *v, bool auto_free)`
Sets the user data for this widget.
- `void user_data (void *v)`
Sets the user data for this widget.
- `int vertical_label_margin ()`
Get the spacing between the label and the vertical edge of the widget.
- `void vertical_label_margin (int px)`
Set the spacing between the label and the vertical edge of the widget.
- `unsigned int visible ()` const
Returns whether a widget is visible.
- `unsigned int visible_focus ()` const
Checks whether this widget has a visible focus.
- `void visible_focus (int v)`
Modifies keyboard focus navigation.
- `int visible_r ()` const
Returns whether a widget and all its parents are visible.
- `int w ()` const
Gets the widget width.
- `Fl_When when ()` const
Returns the conditions under which the callback is called.
- `void when (uchar i)`
Sets the flags used to decide when a callback is called.
- `Fl_Window * window ()` const
Returns a pointer to the nearest parent window up the widget hierarchy.
- `int x ()` const
Gets the widget position in its window.
- `int y ()` const
Gets the widget position in its window.
- `virtual ~Fl_Widget ()`
Destroys the widget.

Protected Member Functions

- `Fl_Cursor cursor (int n)`
Returns the cursor for cursor index n.
- `int on_insert (Fl_Widget *, int) FL_OVERRIDE`
Insert a new entry in the size range list.
- `int on_move (int, int) FL_OVERRIDE`
Move the entry in the size range list.

- void **on_remove** (int) **FL_OVERRIDE**
Remove the entry from the size range list.
- void **request_grow_b** (int old_b, int &new_b, **FI_Rect** *final_size)
Request for children to change their layout.
- void **request_grow_l** (int old_l, int &new_l, **FI_Rect** *final_size)
Request for children to change their layout.
- void **request_grow_r** (int old_r, int &new_r, **FI_Rect** *final_size)
Request for children to change their layout.
- void **request_grow_t** (int old_t, int &new_t, **FI_Rect** *final_size)
Request for children to change their layout.
- void **request_shrink_b** (int old_b, int &new_b, **FI_Rect** *final_size)
Request for children to change their layout.
- void **request_shrink_l** (int old_l, int &new_l, **FI_Rect** *final_size)
Request for children to change their layout.
- void **request_shrink_r** (int old_r, int &new_r, **FI_Rect** *final_size)
Request for children to change their layout.
- void **request_shrink_t** (int old_t, int &new_t, **FI_Rect** *final_size)
Request for children to change their layout.
- void **set_cursor** (int n)
Set one of four cursors used for dragging etc. . .

Protected Member Functions inherited from **FI_Group**

- **FI_Rect** * **bounds** ()
Returns the internal array of widget sizes and positions.
- void **draw** () **FL_OVERRIDE**
Draws the widget.
- void **draw_child** (**FI_Widget** &widget) const
Forces a child to redraw.
- void **draw_children** ()
Draws all children of the group.
- void **draw_outside_label** (const **FI_Widget** &widget) const
Parents normally call this to draw outside labels of child widgets.
- int * **sizes** ()
Returns the internal array of widget sizes and positions.
- void **update_child** (**FI_Widget** &widget) const
Draws a child only if it needs it.

Protected Member Functions inherited from **FI_Widget**

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** (**FI_Boxtype** t, **FI_Color** c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** (**FI_Boxtype** t, int x, int y, int w, int h, **FI_Color** c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const

- Draws a focus rectangle around the widget.*
- void [draw_focus](#) ([Fl_Boxtype](#) t, int X, int Y, int W, int H) const
- Draws a focus rectangle around the widget.*
- void [draw_focus](#) ([Fl_Boxtype](#) t, int x, int y, int w, int h, [Fl_Color](#) bg) const
- Draws a focus box for the widget at the given position and size.*
- void [draw_label](#) () const
- Draws the widget's label at the defined label position.*
- void [draw_label](#) (int, int, int, int) const
- Draws the label in an arbitrary bounding box.*
- [Fl_Widget](#) (int x, int y, int w, int h, const char *label=0L)
- Creates a widget at the given position and size.*
- unsigned int [flags](#) () const
- Gets the widget flags mask.*
- void [h](#) (int v)
- Internal use only.*
- void [set_flag](#) (unsigned int c)
- Sets a flag in the flags mask.*
- void [w](#) (int v)
- Internal use only.*
- void [x](#) (int v)
- Internal use only.*
- void [y](#) (int v)
- Internal use only.*

Protected Attributes

- int [cursor_](#)
- current cursor index (0..3)*
- [Fl_Cursor](#) * [cursors_](#)
- points at the array of 4 cursors (may be overridden)*
- int [default_min_h_](#)
- int [default_min_w_](#)
- [Size_Range](#) * [size_range_](#)
- int [size_range_capacity_](#)
- int [size_range_size_](#)

Additional Inherited Members

Static Public Member Functions inherited from [Fl_Group](#)

- static [Fl_Group](#) * [current](#) ()
- Returns the currently active group.*
- static void [current](#) ([Fl_Group](#) *g)
- Sets the current group.*

Static Public Member Functions inherited from [Fl_Widget](#)

- static void [default_callback](#) ([Fl_Widget](#) *widget, void *data)
- The default callback for all widgets that don't set a callback.*
- static unsigned int [label_shortcut](#) (const char *t)
- Returns the Unicode value of the '&x' shortcut in a given text.*
- static int [test_shortcut](#) (const char *, const bool require_alt=false)
- Returns true if the given text t contains the entered '&x' shortcut.*

flags possible values enumeration.

11.147.1 Detailed Description

The [Fl_Tile](#) class lets you resize its children by dragging the border between them.

Figure 11.60 [Fl_Tile](#)

For the tiling to work correctly, the children of an [Fl_Tile](#) **must** cover the entire area of the widget, but **must not** overlap. This means that all children must touch each other at their edges, and no gaps can be left inside the [Fl_Tile](#).

[Fl_Tile](#) does not normally draw any graphics of its own. The "borders" which can be seen in the snapshot above are actually part of the children. Their boxtypes have been set to `FL_DOWN_BOX` creating the impression of "ridges" where the boxes touch. What you see are actually two adjacent `FL_DOWN_BOX`'s drawn next to each other. All neighboring widgets share the same edge - the widget's thick borders make it appear as though the widgets aren't actually touching, but they are. If the edges of adjacent widgets do not touch, then it will be impossible to drag the corresponding edges.

Note

[Fl_Tile](#) works in two distinctive modes. In classic mode, the range of motion for edges and intersections is controlled using an invisible child that is marked as the [resizable\(\)](#) widget of the tile group. Classic mode is described in detail a few paragraphs down.

[Fl_Tile](#) size_range mode

By assigning a default minimum size to all children with `Fl_Tile::init_size_range(int default_minimum_width,` or by assigning minimal sizes to individual children with `size_range(Fl_Widget *child, int minimum_width, int` the tile group is put into size_range operation mode.

In this mode, the child that is marked [resizable\(\)](#) will behave as it would in a regular [Fl_Group](#) widget. When dragging edges or intersections with the mouse, [Fl_Tile](#) will ensure that none of the children shrinks to a size that is smaller

than requested. When resizing the [Fl_Tile](#) group, size ranges are not enforced by the tile. Instead, the size range of the enclosing window should be limited to a valid range.

Tile does not differentiate between visible and invisible children. If children are created smaller than their assigned minimum size, dragging intersections may cause unexpected jumps in size. Zero width or height widget are not harmful, but should be avoided.

Example for a center document tile and two tool boxes on the left and right

```
Fl_Window win(400, 300, "My App");

Fl_Tile tile(0, 0, 400, 300);

Fl_Box left_tool_box(0, 0, 100, 300, "Tools");
left_tool_box.box(FL_DOWN_BOX);
tile.size_range(&left_tool_box, 50, 50);

Fl_Box document(100, 0, 200, 300, "Document");
document.box(FL_DOWN_BOX);
tile.size_range(&document, 100, 50);

Fl_Box right_tool_box(300, 0, 100, 300, "More\nTools");
right_tool_box.box(FL_DOWN_BOX);
tile.size_range(&right_tool_box, 50, 50);

tile.end();
tile.resizable(document);

win.end();
win.resizable(tile);
win.show(argc, argv);
win.size_range(200, 50);
```

Fl_Tile classic mode

[Fl_Tile](#) allows objects to be resized to zero dimensions. To prevent this you can use the [resizable\(\)](#) to limit where corners can be dragged to. For more information see note below.

Even though objects can be resized to zero sizes, they must initially have non-zero sizes so the [Fl_Tile](#) can figure out their layout. If desired, call [position\(\)](#) after creating the children but before displaying the window to set the borders where you want.

Note on [resizable\(Fl_Widget &w\)](#): The "resizable" child widget (which should be invisible) limits where the borders can be dragged to. All dragging will be limited inside the resizable widget's borders. If you don't set it, it will be possible to drag the borders right to the edges of the [Fl_Tile](#) widget, and thus resize objects on the edges to zero width or height. When the entire [Fl_Tile](#) widget is resized, the [resizable\(\)](#) widget will keep its border distance to all borders the same (this is normal resize behavior), so that you can effectively set a border width that will never change. To ensure correct event delivery to all child widgets the [resizable\(\)](#) widget must be the first child of the [Fl_Tile](#) widget group. Otherwise some events (e.g. FL_MOVE and FL_ENTER) might be consumed by the [resizable\(\)](#) widget so that they are lost for widgets covered (overlapped) by the [resizable\(\)](#) widget.

Note

You can still resize widgets **inside** the [resizable\(\)](#) to zero width and/or height, i.e. box **2b** above to zero width and box **3a** to zero height.

See also

void [Fl_Group::resizable\(Fl_Widget &w\)](#)

Example for resizable with 20 pixel border distance:

```
int dx = 20, dy = dx;
Fl_Tile tile(50, 50, 300, 300);
// create resizable() box first
Fl_Box r(tile.x()+dx, tile.y()+dy, tile.w()-2*dx, tile.h()-2*dy);
tile.resizable(r);
// ... create widgets inside tile (see test/tile.cxx) ...
tile.end();
```

See also the complete example program in test/tile.cxx.

11.147.2 Constructor & Destructor Documentation

11.147.2.1 Fl_Tile()

```
Fl_Tile::Fl_Tile (
    int X,
```

```

    int Y,
    int W,
    int H,
    const char * L = 0)

```

Creates a new [Fl_Tile](#) widget using the given position, size, and label string.

The default boxtype is `FL_NO_BOX`.

The destructor *also deletes all the children*. This allows a whole tree to be deleted at once, without having to keep a pointer to all the children in the user code. A kludge has been done so the [Fl_Tile](#) and all of its children can be automatic (local) variables, but you must declare the [Fl_Tile](#) *first*, so that it is destroyed last.

See also

class [Fl_Group](#)

11.147.3 Member Function Documentation

11.147.3.1 cursor()

```

Fl_Cursor Fl_Tile::cursor (
    int n) [inline], [protected]

```

Returns the cursor for cursor index n.

See also

[Fl_Tile::set_cursor\(int\)](#)

11.147.3.2 drag_intersection()

```

void Fl_Tile::drag_intersection (
    int oldx,
    int oldy,
    int newx,
    int newy) [virtual]

```

Drags the intersection at (oldx,oldy) to (newx,newy).

See also

[Fl_Tile::move_intersection\(int oldx, int oldy, int newx, int newy\)](#) , but this method does not call [init_sizes\(\)](#) and is used for interactive [children](#) layout using the mouse.

Parameters

in	<i>oldx,oldy</i>	move the intersection at this coordinate, pass zero to disable drag in that direction.
in	<i>newx,newy</i>	move the intersection as close to this new coordinate as possible

11.147.3.3 handle()

```

int Fl_Tile::handle (
    int event) [virtual]

```

Handles the specified event.

You normally don't call this method directly, but instead let FLTK do it when the user interacts with the widget.

When implemented in a widget, this function must return 0 if the widget does not use the event or 1 otherwise.

Most of the time, you want to call the inherited [handle\(\)](#) method in your overridden method so that you don't short-circuit events that you don't handle. In this last case you should return the callee retval.

One exception to the rule in the previous paragraph is if you really want to *override* the behavior of the base class. This requires knowledge of the details of the inherited class.

In rare cases you may want to return 1 from your [handle\(\)](#) method although you don't really handle the event. The effect would be to *filter* event processing, for instance if you want to dismiss non-numeric characters (keypresses) in a numeric input widget. You may "ring the bell" or show another visual indication or drop the event silently. In such a case you must not call the [handle\(\)](#) method of the base class and tell FLTK that you *consumed* the event by returning 1 even if you didn't *do* anything with it.

Parameters

in	<i>event</i>	the kind of event received
----	--------------	----------------------------

Return values

0	if the event was not used or understood
1	if the event was used and can be deleted

See also

[Fl_Event](#)

Reimplemented from [Fl_Group](#).

11.147.3.4 init_size_range()

```
void Fl_Tile::init_size_range (
    int default_min_w = -1,
    int default_min_h = -1)
```

Initialize the size range mode of [Fl_Tile](#) and set the default minimum width and height.

The default minimum width and height is the size of the mouse pointer grab area at about 4 pixel units.

Parameters

in	<i>default_min_w, default_min_h</i>	default size range for widgets that don't have an individual range assigned
----	-------------------------------------	---

11.147.3.5 move_intersection()

```
void Fl_Tile::move_intersection (
    int oldx,
    int oldy,
    int newx,
    int newy) [virtual]
```

Drags the intersection at (oldx,oldy) to (newx,newy).

This redraws all the necessary children.

If no size ranges are set, the new intersection position is limited to the size of the tile group. The [resizable\(\)](#) option is not taken into account here.

If size ranges are set, the actual new position of the intersection will depend on the size range of every individual child. No child will be smaller than their minw and minh. After the new position is found, [move_intersection\(\)](#) will call [init_sizes\(\)](#). The [resizable\(\)](#) range is ignored.

Parameters

in	<i>oldx, oldy</i>	move the intersection at this coordinate, pass zero to disable drag in that direction.
in	<i>newx, newy</i>	move the intersection as close to this new coordinate as possible

11.147.3.6 on_insert()

```
int Fl_Tile::on_insert (
    Fl_Widget * candidate,
    int index) [protected], [virtual]
```

Insert a new entry in the size range list.

Reimplemented from [Fl_Group](#).

11.147.3.7 on_move()

```
int Fl_Tile::on_move (
    int oldIndex,
    int newIndex) [protected], [virtual]
```

Move the entry in the size range list.

Reimplemented from [Fl_Group](#).

11.147.3.8 on_remove()

```
void Fl_Tile::on_remove (
    int index) [protected], [virtual]
```

Remove the entry from the size range list.

Reimplemented from [Fl_Group](#).

11.147.3.9 position()

```
void Fl_Tile::position (
    int oldx,
    int oldy,
    int newx,
    int newy) [inline]
```

Deprecated "since 1.4.0 - use `move_intersection(p)` instead"

11.147.3.10 request_grow_b()

```
void Fl_Tile::request_grow_b (
    int old_b,
    int & new_b,
    Fl\_Rect * final_size) [protected]
```

Request for children to change their layout.

Parameters

in	<i>old_b</i>	grow all children with this current bottom edge toward the bottom edge of this tile
in, out	<i>new_b</i>	try to grow to this coordinate, return the maximum possible growth (currently maxh is ignored, so we always grow to new_b)
in, out	<i>final_size</i>	write the new position and size of all affected children into this list of Fl_Rect

11.147.3.11 request_grow_l()

```
void Fl_Tile::request_grow_l (
    int old_l,
    int & new_l,
    Fl\_Rect * final_size) [protected]
```

Request for children to change their layout.

Parameters

in	<i>old_l</i>	grow all children with this current left edge toward the left edge of this tile
in, out	<i>new_l</i>	try to grow to this coordinate, return the maximum possible growth (currently maxw is ignored, so we always grow to new_l)
in, out	<i>final_size</i>	write the new position and size of all affected children into this list of Fl_Rect

11.147.3.12 request_grow_r()

```
void Fl_Tile::request_grow_r (
    int old_r,
    int & new_r,
    Fl_Rect * final_size) [protected]
```

Request for children to change their layout.

Parameters

in	<i>old_r</i>	grow all children with this current right edge toward the right edge of this tile
in, out	<i>new_r</i>	try to grow to this coordinate, return the maximum possible growth (currently maxw is ignored, so we always grow to new_r)
in, out	<i>final_size</i>	write the new position and size of all affected children into this list of Fl_Rect

11.147.3.13 request_grow_t()

```
void Fl_Tile::request_grow_t (
    int old_t,
    int & new_t,
    Fl_Rect * final_size) [protected]
```

Request for children to change their layout.

Parameters

in	<i>old_t</i>	grow all children with this current top edge toward the top edge of this tile
in, out	<i>new_t</i>	try to grow to this coordinate, return the maximum possible growth (currently maxh is ignored, so we always grow to new_t)
in, out	<i>final_size</i>	write the new position and size of all affected children into this list of Fl_Rect

11.147.3.14 request_shrink_b()

```
void Fl_Tile::request_shrink_b (
    int old_b,
    int & new_b,
    Fl_Rect * final_size) [protected]
```

Request for children to change their layout.

See also

[Fl_Tile::request_shrink_l\(int old_l, int &new_l, Fl_Rect *final_size\)](#)

Parameters

in	<i>old_b</i>	shrink all children with this current bottom edge toward the top edge of this tile
in, out	<i>new_b</i>	try to shrink to this coordinate, return the maximum possible shrinkage
in, out	<i>final_size</i>	if not NULL, write the new position and size of all affected children into this list of Fl_Rect

11.147.3.15 request_shrink_l()

```
void Fl_Tile::request_shrink_l (
    int old_l,
    int & new_l,
    Fl_Rect * final_size) [protected]
```

Request for children to change their layout.

`drag_intersection` requests that all children with the left edge at `old_l` to shrink to `new_l` towards the right side of the tile. If the child can not shrink by that amount, it will ask all other children that touch its right side to shrink by the remainder (recursion). `new_l` will return the the maximum possible value while maintaining minimum width for all children involved.

`request_shrink_r` asks children to shrink toward the left, so that their right edge is as close as possible to `new_r`.

`request_shrink_t` and `request_shrink_b` provide the same functionality for vertical resizing.

Parameters

in	<i>old_l</i>	shrink all children with this current left edge
in, out	<i>new_l</i>	try to shrink to this coordinate, return the maximum possible shrinkage
in, out	<i>final_size</i>	if not NULL, write the new position and size of all affected children into this list of Fl_Rect

11.147.3.16 request_shrink_r()

```
void Fl_Tile::request_shrink_r (
    int old_r,
    int & new_r,
    Fl_Rect * final_size) [protected]
```

Request for children to change their layout.

See also

[Fl_Tile::request_shrink_l\(int old_l, int &new_l, Fl_Rect *final_size\)](#)

Parameters

in	<i>old_r</i>	shrink all children with this current right edge toward the left edge of this tile
in, out	<i>new_r</i>	try to shrink to this coordinate, return the maximum possible shrinkage
in, out	<i>final_size</i>	if not NULL, write the new position and size of all affected children into this list of Fl_Rect

11.147.3.17 request_shrink_t()

```
void Fl_Tile::request_shrink_t (
    int old_t,
    int & new_t,
    Fl_Rect * final_size) [protected]
```

Request for children to change their layout.

See also

[Fl_Tile::request_shrink_l\(int old_l, int &new_l, Fl_Rect *final_size\)](#)

Parameters

in	<i>old_t</i>	shrink all children with this current top edge toward the bottom edge of this tile
in, out	<i>new_t</i>	try to shrink to this coordinate, return the maximum possible shrinkage
in, out	<i>final_size</i>	if not NULL, write the new position and size of all affected children into this list of Fl_Rect

11.147.3.18 `resize()`

```
void Fl_Tile::resize (
    int X,
    int Y,
    int W,
    int H) [virtual]
```

Resizes the [Fl_Tile](#) widget and its children.

[Fl_Tile](#) implements its own [resize\(\)](#) method. It does not use [Fl_Group::resize\(\)](#) to resize itself and its children.

In `size_range` mode, the child marked [resizable\(\)](#) is resized first. Only if its minimum size is reached, other widgets in the tile will resize too.

In classic mode or when no resizable child is set, enlarging works by moving the lower-right corner and resizing the bottom and right border widgets accordingly.

Shrinking the [Fl_Tile](#) works in the opposite way by shrinking the bottom and right border widgets, unless they are reduced to zero width or height, resp. or to their minimal sizes defined by the [resizable\(\)](#) widget. In this case other widgets will be shrunk as well.

See the [Fl_Tile](#) class documentation about how the [resizable\(\)](#) works.

Reimplemented from [Fl_Group](#).

11.147.3.19 `set_cursor()`

```
void Fl_Tile::set_cursor (
    int n) [protected]
```

Set one of four cursors used for dragging etc. . .

[Fl_Tile](#) uses an array of four cursors that are set depending on user actions:

- 0: normal cursor
- 1: horizontal dragging
- 2: vertical dragging
- 3: dragging an intersection

This method sets the window cursor for the given index `n`.

11.147.3.20 `size_range()` [1/2]

```
void Fl_Tile::size_range (
    Fl_Widget * w,
    int minw,
    int minh,
    int maxw = 0x7FFFFFFF,
    int maxh = 0x7FFFFFFF)
```

Set the allowed size range for the give child widget.

[Fl_Tile](#) currently supports only the minimal width and height setting.

Parameters

in	<i>w</i>	set the range for this child widget
in	<i>minw,minh</i>	minimum width and height for that child
in	<i>maxw,maxh</i>	maximum size, defaults to infinite, currently ignored

11.147.3.21 `size_range()` [2/2]

```
void Fl_Tile::size_range (
    int index,
    int minw,
    int minh,
```

```
int maxw = 0x7FFFFFFF,
int maxh = 0x7FFFFFFF)
```

Set the allowed size range for the child at the given index.

[FL_Tile](#) currently supports only the minimal width and height setting.

Parameters

in	<i>index</i>	set the range for the child at this index
in	<i>minw,minh</i>	minimum width and height for that child
in	<i>maxw,maxh</i>	maximum size, defaults to infinite, currently ignored

The documentation for this class was generated from the following files:

11.148 FL_Tiled_Image Class Reference

This class supports tiling of images over a specified area.

```
#include <FL_Tiled_Image.H>
```

Inheritance diagram for [FL_Tiled_Image](#):

Public Member Functions

- void [color_average](#) ([FL_Color](#) c, float i) [FL_OVERRIDE](#)
The [color_average\(\)](#) method averages the colors in the image with the provided FLTK color value.
- [FL_Image](#) * [copy](#) () const
- [FL_Image](#) * [copy](#) (int W, int H) const [FL_OVERRIDE](#)
Creates a resized copy of the image.
- void [desaturate](#) () [FL_OVERRIDE](#)
The [desaturate\(\)](#) method converts an image to grayscale.
- void [draw](#) (int X, int Y)
- void [draw](#) (int X, int Y, int W, int H, int cx=0, int cy=0) [FL_OVERRIDE](#)
Draws a tiled image.
- [FL_Tiled_Image](#) ([FL_Image](#) *i, int W=0, int H=0)
The constructors create a new tiled image containing the specified image.
- [FL_Image](#) * [image](#) ()
Gets The image that is tiled.
- virtual ~[FL_Tiled_Image](#) ()
The destructor frees all memory and server resources that are used by the tiled image.

Public Member Functions inherited from [FL_Image](#)

- virtual class [FL_Shared_Image](#) * [as_shared_image](#) ()
Returns whether an image is an [FL_Shared_Image](#) or not.
- [FL_Image](#) * [copy](#) () const
Creates a copy of the image in the same size.
- int [count](#) () const

- Returns the number of data values associated with the image.*
- int **d** () const
 - Returns the image depth.*
- const char *const * **data** () const
 - Returns a pointer to the current image data array.*
- int **data_h** () const
 - Returns the height of the image data.*
- int **data_w** () const
 - Returns the width of the image data.*
- void **draw** (int X, int Y)
 - Draws the image to the current drawing surface.*
- int **fail** () const
 - Returns a value that is not 0 if there is currently no image available.*
- **Fl_Image** (int W, int H, int D)
 - The constructor creates an empty image with the specified width, height, and depth.*
- int **h** () const
 - Returns the current image drawing height in FLTK units.*
- void **inactive** ()
 - The **inactive()** method calls **color_average(FL_BACKGROUND_COLOR, 0.33f)** to produce an image that appears grayed out.*
- virtual void **label** (**Fl_Menu_Item** *m)
 - This method is an obsolete way to set the image attribute of a menu item.*
- virtual void **label** (**Fl_Widget** *w)
 - This method is an obsolete way to set the image attribute of a widget or menu item.*
- int **ld** () const
 - Returns the current line data size in bytes.*
- virtual void **release** ()
 - Releases an **Fl_Image** - the same as 'delete this'.*
- virtual void **scale** (int width, int height, int proportional=1, int can_expand=0)
 - Sets the drawing size of the image.*
- virtual void **uncache** ()
 - If the image has been cached for display, delete the cache data.*
- int **w** () const
 - Returns the current image drawing width in FLTK units.*
- virtual ~**Fl_Image** ()
 - The destructor is a virtual method that frees all memory used by the image.*

Protected Attributes

- int **alloc_image_**
- **Fl_Image** * **image_**

Additional Inherited Members

Static Public Member Functions inherited from **Fl_Image**

- static **Fl_Labeltype** **define_FL_IMAGE_LABEL** ()
- static **Fl_RGB_Scaling** **RGB_scaling** ()
 - Returns the currently used RGB image scaling method.*
- static void **RGB_scaling** (**Fl_RGB_Scaling**)
 - Sets the RGB image scaling method used for copy(int, int).*
- static **Fl_RGB_Scaling** **scaling_algorithm** ()
 - Gets what algorithm is used when resizing a source image to draw it.*
- static void **scaling_algorithm** (**Fl_RGB_Scaling** algorithm)
 - Sets what algorithm is used when resizing a source image to draw it.*

Static Public Attributes inherited from [Fl_Image](#)

- static const int **ERR_FILE_ACCESS** = -2
- static const int **ERR_FORMAT** = -3
- static const int **ERR_MEMORY_ACCESS** = -4
- static const int **ERR_NO_IMAGE** = -1
- static bool **register_images_done** = false
True after [fl_register_images\(\)](#) was called, false before.

Protected Member Functions inherited from [Fl_Image](#)

- void **d** (int D)
Sets the current image depth.
- void **data** (const char *const *p, int c)
Sets the current data pointer and count of pointers in the array.
- void **draw_empty** (int X, int Y)
The protected method [draw_empty\(\)](#) draws a box with an X in it.
- int **draw_scaled** (int X, int Y, int W, int H)
Draw the image to the current drawing surface rescaled to a given width and height.
- void **h** (int H)
Sets the height of the image data.
- void **ld** (int LD)
Sets the current line data size in bytes.
- void **w** (int W)
Sets the width of the image data.

Static Protected Member Functions inherited from [Fl_Image](#)

- static void **labeltype** (const [Fl_Label](#) *lo, int lx, int ly, int lw, int lh, [Fl_Align](#) la)
- static void **measure** (const [Fl_Label](#) *lo, int &lw, int &lh)

11.148.1 Detailed Description

This class supports tiling of images over a specified area.

The source (tile) image is **not** copied unless you call the [color_average\(\)](#), [desaturate\(\)](#), or [inactive\(\)](#) methods.

11.148.2 Constructor & Destructor Documentation

11.148.2.1 [Fl_Tiled_Image](#)()

```
Fl_Tiled_Image::Fl_Tiled_Image (
    Fl\_Image * i,
    int W = 0,
    int H = 0)
```

The constructors create a new tiled image containing the specified image.

Use a width and height of 0 to tile the whole window/widget.

Note

Due to implementation constraints in FLTK 1.3.3 and later width and height of 0 may not work as expected when used as background image in widgets other than windows. You may need to center and clip the image (label) and set the label type to `FL_NORMAL_LABEL`. Doing so will let the tiled image fill the whole widget as its background image. Other combinations of label flags may or may not work.

```
#include "bg.xpm"
Fl_Pixmap *bg_xpm = new Fl_Pixmap(bg_xpm);
Fl\_Tiled\_Image *bg_tiled = new Fl\_Tiled\_Image(bg_xpm, 0, 0);

Fl_Box *box = new Fl_Box(40, 40, 300, 100, "");
```

```
box->box(FL_UP_BOX);
box->labeltype(FL_NORMAL_LABEL);
box->align(FL_ALIGN_INSIDE | FL_ALIGN_CENTER | FL_ALIGN_CLIP);
box->image(bg_tiled);
```

Note

Setting an image (label) for a window may not work as expected due to implementation constraints in FLTK 1.3.x and maybe later. The reason is the way `Fl::scheme()` initializes the window's label type and image. A possible workaround is to use another `Fl_Group` as the only child widget and to set the background image for this group as described above.

Todo Fix `Fl_Tiled_Image` as background image for widgets and windows and fix the implementation of `Fl::scheme(const char *)`.

11.148.3 Member Function Documentation**11.148.3.1 color_average()**

```
void Fl_Tiled_Image::color_average (
    Fl_Color c,
    float i) [virtual]
```

The `color_average()` method averages the colors in the image with the provided FLTK color value.

The first argument specifies the FLTK color to be used.

The second argument specifies the amount of the original image to combine with the color, so a value of 1.0 results in no color blend, and a value of 0.0 results in a constant image of the specified color.

An internal copy is made of the original image data before changes are applied, to avoid modifying the original image data in memory.

Reimplemented from `Fl_Image`.

11.148.3.2 copy()

```
Fl_Image * Fl_Tiled_Image::copy (
    int W,
    int H) const [virtual]
```

Creates a resized copy of the image.

It is recommended not to call this member function to reduce the size of an image to the size of the area where this image will be drawn, and to use `Fl_Image::scale()` instead.

The new image should be released when you are done with it.

Note: since FLTK 1.4.0 you can use `Fl_Image::release()` for all types of images (i.e. all subclasses of `Fl_Image`) instead of operator `delete` for `Fl_Image`'s and `Fl_Image::release()` for `Fl_Shared_Image`'s.

The new image data will be converted to the requested size. RGB images are resized using the algorithm set by `Fl_Image::RGB_scaling()`.

For the new image the following equations are true:

- $w() == \text{data_w}() == \bar{W}$
- $h() == \text{data_h}() == H$

Parameters

in	W, H	Requested width and height of the new image
----	--------	---

Note

The returned image can be safely cast to the same image type as that of the source image provided this type is one of `Fl_RGB_Image`, `Fl_SVG_Image`, `Fl_Pixmap`, `Fl_Bitmap`, `Fl_Tiled_Image`, `Fl_Anim_GIF_Image` and `Fl_Shared_Image`. Returned objects copied from images of other, derived, image classes belong to the parent class appearing in this list. For example, the copy of an `Fl_GIF_Image` is an object of class `Fl_Pixmap`.

Since FLTK 1.4.0 this method is 'const'. If you derive your own class from `Fl_Image` or any subclass your overridden methods of `'Fl_Image::copy() const'` and `'Fl_Image::copy(int, int) const'` **must** also be 'const' for inheritance to work properly. This is different than in FLTK 1.3.x and earlier where these methods have not been 'const'.

Reimplemented from [Fl_Image](#).

11.148.3.3 desaturate()

```
void Fl_Tiled_Image::desaturate () [virtual]
```

The [desaturate\(\)](#) method converts an image to grayscale.

If the image contains an alpha channel (depth = 4), the alpha channel is preserved.

An internal copy is made of the original image data before changes are applied, to avoid modifying the original image data in memory.

Reimplemented from [Fl_Image](#).

11.148.3.4 draw()

```
void Fl_Tiled_Image::draw (
    int X,
    int Y,
    int W,
    int H,
    int cx = 0,
    int cy = 0) [virtual]
```

Draws a tiled image.

Tiled images can be used as background images for widgets and windows. However, due to implementation constraints, you must take care when setting label types and alignment flags. Only certain combinations work as expected, others may yield unexpected results and undefined behavior.

This draw method can draw multiple copies of one image in an area given by X, Y, W, H.

The optional arguments `cx` and `cy` can be used to crop the image starting at offsets (`cx`, `cy`). `cx` and `cy` must be ≥ 0 (negative values are ignored). If one of the values is greater than the image width or height resp. (`cx` \geq [image\(\)->w\(\)](#) or `cy` \geq [image\(\)->h\(\)](#)) nothing is drawn, because the resulting image would be empty.

After calculating the resulting image size the image is drawn as often as necessary to fill the given area, starting at the top left corner.

If both `W` and `H` are 0 the image is repeated as often as necessary to fill the entire window, unless there is a valid clip region. If you want to fill only one particular widget's background, then you should either set a clip region in your [draw\(\)](#) method or use the label alignment flags `FL_ALIGN_INSIDE`|`FL_ALIGN_CLIP` to make sure the image is clipped.

This may be improved in a later version of the library.

Reimplemented from [Fl_Image](#).

The documentation for this class was generated from the following files:

- [Fl_Tiled_Image.cxx](#)

11.149 Fl_Timeout Class Reference

The internal class [Fl_Timeout](#) handles all timeout related functions.

```
#include <Fl_Timeout.h>
```

Static Public Member Functions

- static void [add_timeout](#) (double time, [Fl_Timeout_Handler](#) cb, void *data)
Adds a one-shot timeout callback.
- static void [do_timeouts](#) ()
Elapse timers and call their callbacks if any timers are expired.
- static void [elapse_timeouts](#) ()
Elapse all timers w/o calling their callbacks.
- static int [has_timeout](#) ([Fl_Timeout_Handler](#) cb, void *data)
Returns true if the timeout exists and has not been called yet.
- static int [remove_next_timeout](#) ([Fl_Timeout_Handler](#) cb, void *data=NULL, void **data_return=NULL)

- Remove the next matching timeout callback and return its *data* pointer.
- static void [remove_timeout](#) ([FI_Timeout_Handler](#) cb, void *data)
 - Remove a timeout callback.
- static void [repeat_timeout](#) (double time, [FI_Timeout_Handler](#) cb, void *data)
 - Repeats a timeout callback from the expiration of the previous timeout, allowing for more accurate timing.
- static double [time_to_wait](#) (double ttw)
 - Returns the delay in seconds until the next timer expires, limited by *ttw*.

Protected Member Functions

- double **delay** ()
 - Get the timer's delay in seconds.
- void **delay** (double t)
 - Set the timer's delay in seconds.
- void [insert](#) ()
 - Insert this timer entry into the active timer queue.
- void [make_current](#) ()
 - Remove the timeout from the active timer queue and push it onto the stack of currently running callbacks.
- void [release](#) ()
 - Remove the top-most timeout from the stack of currently running timeout callbacks and insert it into the list of free timers.

Static Protected Member Functions

- static [FI_Timeout](#) * [current](#) ()
 - Returns the first (top-most) timeout from the current timeout stack.
- static [FI_Timeout](#) * [get](#) (double time, [FI_Timeout_Handler](#) cb, void *data)
 - Get an [FI_Timeout](#) instance for further handling.

Protected Attributes

- [FI_Timeout_Handler](#) **callback**
- void * **data**
- [FI_Timeout](#) * **next**
- int **skip**
- double **time**

Static Protected Attributes

- static [FI_Timeout](#) * [current_timeout](#) = 0
 - The list of current timeouts is used to store the timeout whose callback is called while the callback is executed.
- static [FI_Timeout](#) * [first_timeout](#) = 0
 - List of active timeouts.
- static [FI_Timeout](#) * [free_timeout](#) = 0
 - List of free timeouts after use.

11.149.1 Detailed Description

The internal class [FI_Timeout](#) handles all timeout related functions.

All code is platform independent except retrieving a timestamp which requires calling a system driver function and potentially results in different timer resolutions (from milliseconds to microseconds).

Related user documentation:

- [FI_Timeout_Handler](#)

- [Fl::add_timeout\(double time, Fl_Timeout_Handler cb, void *data\)](#)
- [Fl::repeat_timeout\(double time, Fl_Timeout_Handler cb, void *data\)](#)
- [Fl::has_timeout\(Fl_Timeout_Handler cb, void *data\)](#)
- [Fl::remove_timeout\(Fl_Timeout_Handler cb, void *data\)](#)
- [Fl::remove_next_timeout\(Fl_Timeout_Handler cb, void *data, void **data_return\)](#)

11.149.2 Member Function Documentation

11.149.2.1 add_timeout()

```
void Fl_Timeout::add_timeout (
    double time,
    Fl_Timeout_Handler cb,
    void * data) [static]
```

Adds a one-shot timeout callback.

The callback function `cb` will be called by [Fl::wait\(\)](#) at `time` seconds after this function is called.

Parameters

in	<i>time</i>	delta time in seconds until the timer expires
in	<i>cb</i>	callback function
in	<i>data</i>	optional user data (default: NULL)

Implements:

```
void Fl::add_timeout(double time, Fl_Timeout_Handler cb, void *data)
```

See also

[Fl::add_timeout\(double time, Fl_Timeout_Handler cb, void *data\)](#)

11.149.2.2 current()

```
Fl_Timeout * Fl_Timeout::current () [static], [protected]
```

Returns the first (top-most) timeout from the current timeout stack.

This returns a pointer to the timeout but does not remove it from the list of current timeouts. This should be the timeout that is currently executing its callback.

Returns

`Fl_Timeout*` The current timeout whose callback is running.

Return values

<code>NULL</code>	if no callback is currently running.
-------------------	--------------------------------------

11.149.2.3 elapse_timeouts()

```
void Fl_Timeout::elapse_timeouts () [static]
```

Elapse all timers w/o calling their callbacks.

All timer values are adjusted by the delta time since the last call. This method does **NOT** call timer callbacks if timers are expired.

This must be called before new timers are added to the timer queue to make sure that the next timer decrement does not count down too much time.

See also

[Fl_Timeout::do_timeouts\(\)](#)

11.149.2.4 get()

```
Fl_Timeout * Fl_Timeout::get (
    double time,
    Fl_Timeout_Handler cb,
    void * data) [static], [protected]
```

Get an [Fl_Timeout](#) instance for further handling.

The timer object will be initialized with the input parameters as given by [Fl::add_timeout\(\)](#) or [Fl::repeat_timeout\(\)](#).

[Fl_Timeout](#) objects are maintained in three queues:

- active timer queue
- list (stack, i.e. LIFO) of currently executing timer callbacks
- free timer entries.

When the FLTK program is launched all queues are empty. Whenever a new timer object is required the [get\(\)](#) method is called and a timer object is either found in the queue of free timer entries or a new timer object is created (operator new).

Active timer entries are inserted into the "active timer queue" until they expire and their callback is called.

Before the callback is called the timer entry is inserted into the list of current timers, i.e. it becomes the [Fl_Timeout::current\(\)](#) timeout. This can be used in [Fl::repeat_timeout\(\)](#) to find out if and how long the current timeout has been delayed.

When a timer is no longer used it is popped from the `current` list and inserted into the "free timer" list so it can be reused later.

Timer queue entries are never returned to the system, there's no garbage collection. The total number of timer objects is determined by the largest number of concurrently active timers.

Parameters

in	<i>time</i>	requested delta time
in	<i>cb</i>	timer callback
in	<i>data</i>	userdata for timer callback

Returns

[Fl_Timeout](#)* Timer entry

See also

[Fl::add_timeout\(\)](#), [Fl::repeat_timeout\(\)](#)

11.149.2.5 has_timeout()

```
int Fl_Timeout::has_timeout (
    Fl_Timeout_Handler cb,
    void * data) [static]
```

Returns true if the timeout exists and has not been called yet.

Parameters

in	<i>cb</i>	Timer callback (must match)
in	<i>data</i>	Callback user data (must match)

Returns

whether the timer was found in the queue

Return values

0	not found
1	found

Implements:

```
int Fl::has_timeout(Fl_Timeout_Handler cb, void *data)
```

See also

[Fl::has_timeout\(Fl_Timeout_Handler cb, void *data\)](#)

11.149.2.6 insert()

```
void Fl_Timeout::insert () [protected]
```

Insert this timer entry into the active timer queue.

The timer is inserted at the required position so the timer queue is always ordered by due time.

11.149.2.7 make_current()

```
void Fl_Timeout::make_current () [protected]
```

Remove the timeout from the active timer queue and push it onto the stack of currently running callbacks.

This becomes the [current\(\)](#) timeout which can be used in [Fl::repeat_timeout\(\)](#).

See also

[Fl_Timeout::current\(\)](#)

11.149.2.8 release()

```
void Fl_Timeout::release () [protected]
```

Remove the top-most timeout from the stack of currently running timeout callbacks and insert it into the list of free timers.

Typical code in the library would look like:

```
// The timeout \p Fl_Timeout *t has expired, run its callback
t->make_current();
(t->callback)(t->data);
t->release();
```

11.149.2.9 remove_next_timeout()

```
int Fl_Timeout::remove_next_timeout (
    Fl_Timeout_Handler cb,
    void * data = NULL,
    void ** data_return = NULL) [static]
```

Remove the next matching timeout callback and return its data pointer.

Implements:

```
int Fl::remove_next_timeout(Fl_Timeout_Handler cb, void *data, void **data_return)
```

Parameters

in	<i>cb</i>	Timer callback to be removed (must match)
in	<i>data</i>	Wildcard if NULL, must match otherwise
in, out	<i>data_return</i>	pointer to void * to receive the data value

Returns

non-zero if a timer was found and removed

Return values

<i>0</i>	no matching timer was found
<i>1</i>	the last matching timeout was found and removed
<i>N > 1</i>	a matching timeout was removed and there are (N - 1) matching timeouts pending

For details

See also

[Fl::remove_next_timeout\(Fl_Timeout_Handler cb, void *data, void **data_return\)](#)

11.149.2.10 remove_timeout()

```
void Fl_Timeout::remove_timeout (
    Fl_Timeout_Handler cb,
    void * data) [static]
```

Remove a timeout callback.

This method removes all matching timeouts, not just the first one. This may change in the future.

Parameters

in	<i>cb</i>	Timer callback to be removed (must match)
in	<i>data</i>	Wildcard if NULL, must match otherwise

Implements:

```
void Fl::remove_timeout(Fl_Timeout_Handler cb, void *data)
```

See also

[Fl::remove_timeout\(Fl_Timeout_Handler cb, void *data\)](#)

11.149.2.11 repeat_timeout()

```
void Fl_Timeout::repeat_timeout (
    double time,
    Fl_Timeout_Handler cb,
    void * data) [static]
```

Repeats a timeout callback from the expiration of the previous timeout, allowing for more accurate timing.

Parameters

in	<i>time</i>	delta time in seconds until the timer expires
in	<i>cb</i>	callback function
in	<i>data</i>	optional user data (default: NULL)

Implements:

```
void Fl::repeat_timeout(double time, Fl_Timeout_Handler cb, void *data)
```

See also

[Fl::repeat_timeout\(double time, Fl_Timeout_Handler cb, void *data\)](#)

11.149.2.12 time_to_wait()

```
double Fl_Timeout::time_to_wait (
    double ttw) [static]
```

Returns the delay in seconds until the next timer expires, limited by `ttw`.

This function calculates the time to wait for the FLTK event queue processing, depending on the given value `ttw`.

If at least one timer is active and its timeout value is smaller than `ttw` then this value is returned. [Fl::wait\(\)](#) will wait no longer than until the next timer expires.

If no timer is active this returns the input value `ttw` unchanged.

If at least one timer is expired this returns 0.0 so the event processing does not wait.

Parameters

<code>in</code>	<code>ttw</code>	time to wait from Fl::wait() etc. (upper limit)
-----------------	------------------	---

Returns

delay until next timeout or 0.0 (see description)

11.149.3 Member Data Documentation

11.149.3.1 current_timeout

```
Fl_Timeout * Fl_Timeout::current_timeout = 0 [static], [protected]
```

The list of current timeouts is used to store the timeout whose callback is called while the callback is executed.

This is used like a stack, the current timeout is pushed to the front of the list and once the callback is finished, that timeout is removed and entered into the free list.

Background: [Fl::repeat_timeout\(\)](#) needs to know which timeout triggered it and the exact schedule time and/or the delay of that timeout, i.e. how long the scheduled time was missed before the callback was called. A static, global variable is not sufficient since the user code can call other functions, e.g. dialogs, that run a nested event loop which can run another timeout callback. Hence this list of "current" timeouts is used like a stack (last in, first out).

See also

[Fl_Timeout::push\(\)](#) Member function (method)

11.149.3.2 first_timeout

```
Fl_Timeout * Fl_Timeout::first_timeout = 0 [static], [protected]
```

List of active timeouts.

These timeouts can be triggered when due, which calls their callbacks. The lifetime of a timeout:

- active, in this queue
- callback running, in queue `current_timeout`
- done, in list of free timeouts, ready to be reused.

11.149.3.3 free_timeout

```
Fl_Timeout * Fl_Timeout::free_timeout = 0 [static], [protected]
```

List of free timeouts after use.

Timeouts can be reused many times.

The documentation for this class was generated from the following files:

- [Fl_Timeout.h](#)
- [Fl_Timeout.cxx](#)

11.150 Fl_Timer Class Reference

This is provided only to emulate the Forms Timer widget.

```
#include <Fl_Timer.H>
```

Inheritance diagram for Fl_Timer:

Public Member Functions

- char [direction](#) () const
Gets or sets the direction of the timer.
- void [direction](#) (char d)
Gets or sets the direction of the timer.
- [Fl_Timer](#) (uchar t, int x, int y, int w, int h, const char *l)
Creates a new [Fl_Timer](#) widget using the given type, position, size, and label string.
- int [handle](#) (int) [FL_OVERRIDE](#)
Handles the specified event.
- char **suspended** () const
Gets or sets whether the timer is suspended.
- void **suspended** (char d)
Gets or sets whether the timer is suspended.
- double **value** () const
See void [Fl_Timer::value\(double\)](#)
- void **value** (double)
Sets the current timer value.
- ~[Fl_Timer](#) ()
Destroys the timer and removes the timeout.

Public Member Functions inherited from [Fl_Widget](#)

- void [_clear_fullscreen](#) ()
- void [_set_fullscreen](#) ()
- void [activate](#) ()
Activates the widget.
- unsigned int [active](#) () const
Returns whether the widget is active.
- int [active_r](#) () const
Returns whether the widget and all of its parents are active.
- [Fl_Align](#) [align](#) () const
Gets the label alignment.
- void [align](#) ([Fl_Align](#) alignment)
Sets the label alignment.
- long [argument](#) () const
Gets the current user data (long) argument that is passed to the callback function.
- void [argument](#) (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class [Fl_Gl_Window](#) * [as_gl_window](#) ()

Returns an *FI_GL_Window* pointer if this widget is an *FI_GL_Window*.

- virtual class *FI_GL_Window* const * **as_gl_window** () const
- virtual *FI_Group* * **as_group** ()

Returns an *FI_Group* pointer if this widget is an *FI_Group*.

- virtual *FI_Group* const * **as_group** () const
- virtual *FI_Window* * **as_window** ()

Returns an *FI_Window* pointer if this widget is an *FI_Window*.

- virtual *FI_Window* const * **as_window** () const
- void **bind_deimage** (*FI_Image* *img)

Sets the image to use as part of the widget label when in the inactive state.

- void **bind_deimage** (int f)

Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.

- void **bind_image** (*FI_Image* *img)

Sets the image to use as part of the widget label when in the active state.

- void **bind_image** (int f)

Bind the image to the widget, so the widget will delete the image when it is no longer needed.

- *FI_Boxtype* **box** () const

Gets the box type of the widget.

- void **box** (*FI_Boxtype* new_box)

Sets the box type for the widget.

- *FI_Callback_p* **callback** () const

Gets the current callback function for the widget.

- void **callback** (*FI_Callback* *cb)

Sets the current callback function for the widget.

- void **callback** (*FI_Callback* *cb, *FI_Callback_User_Data* *p, bool auto_free)

Sets the current callback function and managed user data for the widget.

- void **callback** (*FI_Callback* *cb, void *p)

Sets the current callback function and data for the widget.

- void **callback** (*FI_Callback0* *cb)

Sets the current callback function for the widget.

- void **callback** (*FI_Callback1* *cb, long p=0)

Sets the current callback function for the widget.

- unsigned int **changed** () const

Checks if the widget value changed since the last callback.

- void **clear_active** ()

Marks the widget as inactive without sending events or changing focus.

- void **clear_changed** ()

Marks the value of the widget as unchanged.

- void **clear_damage** (uchar c=0)

Clears or sets the damage flags.

- void **clear_output** ()

Sets a widget to accept input.

- void **clear_visible** ()

Hides the widget.

- void **clear_visible_focus** ()

Disables keyboard focus navigation with this widget.

- *FI_Color* **color** () const

Gets the background color of the widget.

- void **color** (*FI_Color* bg)

Sets the background color of the widget.

- void **color** (*FI_Color* bg, *FI_Color* sel)

- Sets the background and selection color of the widget.*
- `FL_Color color2 () const`
 - For back compatibility only.*
- `void color2 (unsigned a)`
 - For back compatibility only.*
- `int contains (const FL_Widget *w) const`
 - Checks if w is a child of this widget.*
- `void copy_label (const char *new_label)`
 - Sets the current label.*
- `void copy_tooltip (const char *text)`
 - Sets the current tooltip text.*
- `uchar damage () const`
 - Returns non-zero if `draw()` needs to be called.*
- `void damage (uchar c)`
 - Sets the damage bits for the widget.*
- `void damage (uchar c, int x, int y, int w, int h)`
 - Sets the damage bits for an area inside the widget.*
- `int damage_resize (int, int, int, int)`
 - Internal use only.*
- `void deactivate ()`
 - Deactivates the widget.*
- `FL_Image * deimage ()`
 - Gets the image that is used as part of the widget label when in the inactive state.*
- `const FL_Image * deimage () const`
 - Gets the image that is used as part of the widget label when in the inactive state.*
- `void deimage (FL_Image &img)`
 - Sets the image to use as part of the widget label when in the inactive state.*
- `void deimage (FL_Image *img)`
 - Sets the image to use as part of the widget label when in the inactive state.*
- `int deimage_bound () const`
 - Returns whether the inactive image is managed by the widget.*
- `void do_callback (FL_Callback_Reason reason=FL_REASON_UNKNOWN)`
 - Calls the widget callback function with default arguments.*
- `void do_callback (FL_Widget *widget, long arg, FL_Callback_Reason reason=FL_REASON_UNKNOWN)`
 - Calls the widget callback function with arbitrary arguments.*
- `void do_callback (FL_Widget *widget, void *arg=0, FL_Callback_Reason reason=FL_REASON_UNKNOWN)`
 - Calls the widget callback function with arbitrary arguments.*
- `void draw_label (int, int, int, int, FL_Align) const`
 - Draws the label in an arbitrary bounding box with an arbitrary alignment.*
- `int h () const`
 - Gets the widget height.*
- `virtual void hide ()`
 - Makes a widget invisible.*
- `int horizontal_label_margin ()`
 - Get the spacing between the label and the horizontal edge of the widget.*
- `void horizontal_label_margin (int px)`
 - Set the spacing between the label and the horizontal edge of the widget.*
- `FL_Image * image ()`
 - Gets the image that is used as part of the widget label when in the active state.*
- `const FL_Image * image () const`
 - Gets the image that is used as part of the widget label when in the active state.*

- void [image](#) ([Fl_Image](#) &img)
Sets the image to use as part of the widget label when in the active state.
- void [image](#) ([Fl_Image](#) *img)
Sets the image to use as part of the widget label when in the active state.
- int [image_bound](#) () const
Returns whether the image is managed by the widget.
- int [inside](#) (const [Fl_Widget](#) *wgt) const
Checks if this widget is a child of wgt.
- int [is_label_copied](#) () const
Returns whether the current label was assigned with [copy_label\(\)](#).
- const char * [label](#) () const
Gets the current label text.
- void [label](#) (const char *text)
Sets the current label pointer.
- void [label](#) ([Fl_Labeltype](#) a, const char *b)
Shortcut to set the label text and type in one call.
- int [label_image_spacing](#) ()
Return the gap size between the label and the image.
- void [label_image_spacing](#) (int gap)
Set the gap between the label and the image in pixels.
- [Fl_Color](#) [labelcolor](#) () const
Gets the label color.
- void [labelcolor](#) ([Fl_Color](#) c)
Sets the label color.
- [Fl_Font](#) [labelfont](#) () const
Gets the font to use.
- void [labelfont](#) ([Fl_Font](#) f)
Sets the font to use.
- [Fl_Fontsize](#) [labelsize](#) () const
Gets the font size in pixels.
- void [labelsize](#) ([Fl_Fontsize](#) pix)
Sets the font size in pixels.
- [Fl_Labeltype](#) [labeltype](#) () const
Gets the label type.
- void [labeltype](#) ([Fl_Labeltype](#) a)
Sets the label type.
- void [measure_label](#) (int &ww, int &hh) const
Sets width ww and height hh accordingly with the label size.
- bool [needs_keyboard](#) () const
Returns whether this widget needs a keyboard.
- void [needs_keyboard](#) (bool needs)
Sets whether this widget needs a keyboard.
- unsigned int [output](#) () const
Returns if a widget is used for output only.
- [Fl_Group](#) * [parent](#) () const
Returns a pointer to the parent widget.
- void [parent](#) ([Fl_Group](#) *p)
Internal use only - "for hacks only".
- void [position](#) (int X, int Y)
Repositions the window or widget.
- void [redraw](#) ()

- Schedules the drawing of the widget.*

 - void [redraw_label](#) ()
- Schedules the drawing of the label.*

 - virtual void [resize](#) (int [x](#), int [y](#), int [w](#), int [h](#))
- Changes the size or position of the widget.*

 - [FI_Color selection_color](#) () const
- Gets the selection color.*

 - void [selection_color](#) ([FI_Color](#) a)
- Sets the selection color.*

 - void [set_active](#) ()
- Marks the widget as active without sending events or changing focus.*

 - void [set_changed](#) ()
- Marks the value of the widget as changed.*

 - void [set_output](#) ()
- Sets a widget to output only.*

 - void [set_visible](#) ()
- Makes the widget visible.*

 - void [set_visible_focus](#) ()
- Enables keyboard focus navigation with this widget.*

 - int [shortcut_label](#) () const
- Returns whether the widget's label uses '&' to indicate shortcuts.*

 - void [shortcut_label](#) (int value)
- Sets whether the widget's label uses '&' to indicate shortcuts.*

 - virtual void [show](#) ()
- Makes a widget visible.*

 - void [size](#) (int W, int H)
- Changes the size of the widget.*

 - int [take_focus](#) ()
- Gives the widget the keyboard focus.*

 - unsigned int [takeevents](#) () const
- Returns if the widget is able to take events.*

 - int [test_shortcut](#) ()
- Returns true if the widget's label contains the entered '&x' shortcut.*

 - const char * [tooltip](#) () const
- Gets the current tooltip text.*

 - void [tooltip](#) (const char *text)
- Sets the current tooltip text.*

 - [FI_Window * top_window](#) () const
- Returns a pointer to the top-level window for the widget.*

 - [FI_Window * top_window_offset](#) (int &xoff, int &yoff) const
- Finds the x/y offset of the current widget relative to the top-level window.*

 - [uchar type](#) () const
- Gets the widget type.*

 - void [type](#) ([uchar](#) t)
- Sets the widget type.*

 - int [use_accents_menu](#) ()
- Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.*

 - void * [user_data](#) () const
- Gets the user data for this widget.*

 - void [user_data](#) ([FI_Callback_User_Data](#) *v, bool auto_free)
- Sets the user data for this widget.*

- void **user_data** (void *v)
Sets the user data for this widget.
- int **vertical_label_margin** ()
Get the spacing between the label and the vertical edge of the widget.
- void **vertical_label_margin** (int px)
Set the spacing between the label and the vertical edge of the widget.
- unsigned int **visible** () const
Returns whether a widget is visible.
- unsigned int **visible_focus** () const
Checks whether this widget has a visible focus.
- void **visible_focus** (int v)
Modifies keyboard focus navigation.
- int **visible_r** () const
Returns whether a widget and all its parents are visible.
- int **w** () const
Gets the widget width.
- **FL_When** when () const
Returns the conditions under which the callback is called.
- void **when** (uchar i)
Sets the flags used to decide when a callback is called.
- **FL_Window** * **window** () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int **x** () const
Gets the widget position in its window.
- int **y** () const
Gets the widget position in its window.
- virtual **~FL_Widget** ()
Destroys the widget.

Protected Member Functions

- void **draw** () **FL_OVERRIDE**
Draws the widget.

Protected Member Functions inherited from **FL_Widget**

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** (FL_Boxtype t, FL_Color c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** (FL_Boxtype t, int x, int y, int w, int h, FL_Color c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const
Draws a focus rectangle around the widget.
- void **draw_focus** (FL_Boxtype t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void **draw_focus** (FL_Boxtype t, int x, int y, int w, int h, FL_Color bg) const
Draws a focus box for the widget at the given position and size.

- void `draw_label` () const
Draws the widget's label at the defined label position.
- void `draw_label` (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- `FI_Widget` (int `x`, int `y`, int `w`, int `h`, const char *`label`=0L)
Creates a widget at the given position and size.
- unsigned int `flags` () const
Gets the widget flags mask.
- void `h` (int `v`)
Internal use only.
- void `set_flag` (unsigned int `c`)
Sets a flag in the flags mask.
- void `w` (int `v`)
Internal use only.
- void `x` (int `v`)
Internal use only.
- void `y` (int `v`)
Internal use only.

Additional Inherited Members

Static Public Member Functions inherited from `FI_Widget`

- static void `default_callback` (`FI_Widget` *`widget`, void *`data`)
The default callback for all widgets that don't set a callback.
- static unsigned int `label_shortcut` (const char *`t`)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int `test_shortcut` (const char *, const bool `require_alt`=false)
Returns true if the given text `t` contains the entered '&x' shortcut.

Protected Types inherited from `FI_Widget`

- enum {
`INACTIVE` = 1<<0 , `INVISIBLE` = 1<<1 , `OUTPUT` = 1<<2 , `NOBORDER` = 1<<3 ,
`FORCE_POSITION` = 1<<4 , `NON_MODAL` = 1<<5 , `SHORTCUT_LABEL` = 1<<6 , `CHANGED` = 1<<7
,
`OVERRIDE` = 1<<8 , `VISIBLE_FOCUS` = 1<<9 , `COPIED_LABEL` = 1<<10 , `CLIP_CHILDREN` = 1<<11
,
`MENU_WINDOW` = 1<<12 , `TOOLTIP_WINDOW` = 1<<13 , `MODAL` = 1<<14 , `NO_OVERLAY` = 1<<15
,
`GROUP_RELATIVE` = 1<<16 , `COPIED_TOOLTIP` = 1<<17 , `FULLSCREEN` = 1<<18 , `MAC_USE_ACCENTS_MENU`
= 1<<19 ,
`NEEDS_KEYBOARD` = 1<<20 , `IMAGE_BOUND` = 1<<21 , `DEIMAGE_BOUND` = 1<<22 ,
`AUTO_DELETE_USER_DATA` = 1<<23 ,
`MAXIMIZED` = 1<<24 , `POPUP` = 1<<25 , `USERFLAG3` = 1<<29 , `USERFLAG2` = 1<<30 ,
`USERFLAG1` = 1<<31 }
flags possible values enumeration.

11.150.1 Detailed Description

This is provided only to emulate the Forms Timer widget.

It works by making a timeout callback every 1/5 second. This is wasteful and inaccurate if you just want something to happen a fixed time in the future. You should directly call `FI::add_timeout()` instead.

11.150.2 Constructor & Destructor Documentation

11.150.2.1 Fl_Timer()

```
Fl_Timer::Fl_Timer (
    uchar t,
    int X,
    int Y,
    int W,
    int H,
    const char * l)
```

Creates a new [Fl_Timer](#) widget using the given type, position, size, and label string.

The type parameter can be any of the following symbolic constants:

- `FL_NORMAL_TIMER` - The timer just does the callback and displays the string "Timer" in the widget.
- `FL_VALUE_TIMER` - The timer does the callback and displays the current timer value in the widget.
- `FL_HIDDEN_TIMER` - The timer just does the callback and does not display anything.

11.150.3 Member Function Documentation

11.150.3.1 direction() [1/2]

```
char Fl_Timer::direction () const [inline]
```

Gets or sets the direction of the timer.

If the direction is zero then the timer will count up, otherwise it will count down from the initial [value\(\)](#).

11.150.3.2 direction() [2/2]

```
void Fl_Timer::direction (
    char d) [inline]
```

Gets or sets the direction of the timer.

If the direction is zero then the timer will count up, otherwise it will count down from the initial [value\(\)](#).

11.150.3.3 draw()

```
void Fl_Timer::draw () [protected], [virtual]
```

Draws the widget.

Never call this function directly. FLTK will schedule redrawing whenever needed. If your widget must be redrawn as soon as possible, call [redraw\(\)](#) instead.

Override this function to draw your own widgets.

If you ever need to call another widget's draw method *from within your own [draw\(\)](#) method*, e.g. for an embedded scrollbar, you can do it (because [draw\(\)](#) is virtual) like this:

```
Fl_Widget *s = &scrollbar; // scrollbar is an embedded Fl_Scrollbar
s->draw();                 // calls Fl_Scrollbar::draw()
```

Implements [Fl_Widget](#).

11.150.3.4 handle()

```
int Fl_Timer::handle (
    int event) [virtual]
```

Handles the specified event.

You normally don't call this method directly, but instead let FLTK do it when the user interacts with the widget.

When implemented in a widget, this function must return 0 if the widget does not use the event or 1 otherwise.

Most of the time, you want to call the inherited [handle\(\)](#) method in your overridden method so that you don't short-circuit events that you don't handle. In this last case you should return the callee retval.

One exception to the rule in the previous paragraph is if you really want to *override* the behavior of the base class. This requires knowledge of the details of the inherited class.

In rare cases you may want to return 1 from your [handle\(\)](#) method although you don't really handle the event. The effect would be to *filter* event processing, for instance if you want to dismiss non-numeric characters (keypresses)

in a numeric input widget. You may "ring the bell" or show another visual indication or drop the event silently. In such a case you must not call the [handle\(\)](#) method of the base class and tell FLTK that you *consumed* the event by returning 1 even if you didn't *do* anything with it.

Parameters

in	event	the kind of event received
--------------------	-----------------------	----------------------------

Return values

0	if the event was not used or understood
1	if the event was used and can be deleted

- [forms_timer.cxx](#)

11.151 Fl_Toggle_Button Class Reference

The toggle button is a push button that needs to be clicked once to toggle on, and one more time to toggle off.

```
#include <Fl_Toggle_Button.H>
```

Inheritance diagram for [Fl_Toggle_Button](#):

Public Member Functions

- [Fl_Toggle_Button](#) (int X, int Y, int W, int H, const char *l=0)
Creates a new [Fl_Toggle_Button](#) widget using the given position, size, and label string.

Public Member Functions inherited from [Fl_Button](#)

- int [clear](#) ()
Same as [value\(0\)](#).
- uchar [compact](#) ()
Return true if buttons are rendered as compact buttons.
- void [compact](#) (uchar v)
Decide if buttons should be rendered in compact mode.
- [Fl_Boxtype](#) [down_box](#) () const
Returns the current down box type, which is drawn when [value\(\)](#) is non-zero.
- void [down_box](#) ([Fl_Boxtype](#) b)
Sets the down box type.

- [FL_Color](#) **down_color** () const
(for backwards compatibility)
- void **down_color** (unsigned c)
(for backwards compatibility)
- [FL_Button](#) (int X, int Y, int W, int H, const char *L=0)
The constructor creates the button using the given position, size, and label.
- int **handle** (int) [FL_OVERRIDE](#)
Handles the specified event.
- int **set** ()
Same as `value (1)`.
- void **setonly** ()
Turns on this button and turns off all other radio buttons in the group (calling `value (1)` or `set ()` does not do this).
- int **shortcut** () const
Returns the current shortcut key for the button.
- void **shortcut** (const char *s)
(for backwards compatibility)
- void **shortcut** (int s)
Sets the shortcut key to `s`.
- char **value** () const
Returns the current value of the button (0 or 1).
- int **value** (int v)
Sets the current value of the button.

Public Member Functions inherited from [FL_Widget](#)

- void **_clear_fullscreen** ()
- void **_set_fullscreen** ()
- void **activate** ()
Activates the widget.
- unsigned int **active** () const
Returns whether the widget is active.
- int **active_r** () const
Returns whether the widget and all of its parents are active.
- [FL_Align](#) **align** () const
Gets the label alignment.
- void **align** ([FL_Align](#) alignment)
Sets the label alignment.
- long **argument** () const
Gets the current user data (long) argument that is passed to the callback function.
- void **argument** (long v)
Sets the current user data (long) argument that is passed to the callback function.
- virtual class [FL_Gl_Window](#) * **as_gl_window** ()
Returns an [FL_Gl_Window](#) pointer if this widget is an [FL_Gl_Window](#).
- virtual class [FL_Gl_Window](#) const * **as_gl_window** () const
- virtual [FL_Group](#) * **as_group** ()
Returns an [FL_Group](#) pointer if this widget is an [FL_Group](#).
- virtual [FL_Group](#) const * **as_group** () const
- virtual [FL_Window](#) * **as_window** ()
Returns an [FL_Window](#) pointer if this widget is an [FL_Window](#).
- virtual [FL_Window](#) const * **as_window** () const
- void **bind_deimage** ([FL_Image](#) *img)

- Sets the image to use as part of the widget label when in the inactive state.*

 - void [bind_deimage](#) (int f)

Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.
- void [bind_image](#) (FI_Image *img)

Sets the image to use as part of the widget label when in the active state.
- void [bind_image](#) (int f)

Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- [FI_Boxtype](#) [box](#) () const

Gets the box type of the widget.
- void [box](#) (FI_Boxtype new_box)

Sets the box type for the widget.
- [FI_Callback_p](#) [callback](#) () const

Gets the current callback function for the widget.
- void [callback](#) (FI_Callback *cb)

Sets the current callback function for the widget.
- void [callback](#) (FI_Callback *cb, FI_Callback_User_Data *p, bool auto_free)

Sets the current callback function and managed user data for the widget.
- void [callback](#) (FI_Callback *cb, void *p)

Sets the current callback function and data for the widget.
- void [callback](#) (FI_Callback0 *cb)

Sets the current callback function for the widget.
- void [callback](#) (FI_Callback1 *cb, long p=0)

Sets the current callback function for the widget.
- unsigned int [changed](#) () const

Checks if the widget value changed since the last callback.
- void [clear_active](#) ()

Marks the widget as inactive without sending events or changing focus.
- void [clear_changed](#) ()

Marks the value of the widget as unchanged.
- void [clear_damage](#) (uchar c=0)

Clears or sets the damage flags.
- void [clear_output](#) ()

Sets a widget to accept input.
- void [clear_visible](#) ()

Hides the widget.
- void [clear_visible_focus](#) ()

Disables keyboard focus navigation with this widget.
- [FI_Color](#) [color](#) () const

Gets the background color of the widget.
- void [color](#) (FI_Color bg)

Sets the background color of the widget.
- void [color](#) (FI_Color bg, FI_Color sel)

Sets the background and selection color of the widget.
- [FI_Color](#) [color2](#) () const

For back compatibility only.
- void [color2](#) (unsigned a)

For back compatibility only.
- int [contains](#) (const FI_Widget *w) const

Checks if w is a child of this widget.
- void [copy_label](#) (const char *new_label)

Sets the current label.

- void `copy_tooltip` (const char *text)
Sets the current tooltip text.
- `uchar damage` () const
Returns non-zero if `draw()` needs to be called.
- void `damage` (uchar c)
Sets the damage bits for the widget.
- void `damage` (uchar c, int x, int y, int w, int h)
Sets the damage bits for an area inside the widget.
- int `damage_resize` (int, int, int, int)
Internal use only.
- void `deactivate` ()
Deactivates the widget.
- `FL_Image * deimage` ()
Gets the image that is used as part of the widget label when in the inactive state.
- const `FL_Image * deimage` () const
Gets the image that is used as part of the widget label when in the inactive state.
- void `deimage` (FL_Image &img)
Sets the image to use as part of the widget label when in the inactive state.
- void `deimage` (FL_Image *img)
Sets the image to use as part of the widget label when in the inactive state.
- int `deimage_bound` () const
Returns whether the inactive image is managed by the widget.
- void `do_callback` (FL_Callback_Reason reason=FL_REASON_UNKNOWN)
Calls the widget callback function with default arguments.
- void `do_callback` (FL_Widget *widget, long arg, FL_Callback_Reason reason=FL_REASON_UNKNOWN)
Calls the widget callback function with arbitrary arguments.
- void `do_callback` (FL_Widget *widget, void *arg=0, FL_Callback_Reason reason=FL_REASON_UNKNOWN)
Calls the widget callback function with arbitrary arguments.
- void `draw_label` (int, int, int, int, FL_Align) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int `h` () const
Gets the widget height.
- virtual void `hide` ()
Makes a widget invisible.
- int `horizontal_label_margin` ()
Get the spacing between the label and the horizontal edge of the widget.
- void `horizontal_label_margin` (int px)
Set the spacing between the label and the horizontal edge of the widget.
- `FL_Image * image` ()
Gets the image that is used as part of the widget label when in the active state.
- const `FL_Image * image` () const
Gets the image that is used as part of the widget label when in the active state.
- void `image` (FL_Image &img)
Sets the image to use as part of the widget label when in the active state.
- void `image` (FL_Image *img)
Sets the image to use as part of the widget label when in the active state.
- int `image_bound` () const
Returns whether the image is managed by the widget.
- int `inside` (const FL_Widget *wgt) const
Checks if this widget is a child of wgt.
- int `is_label_copied` () const

- Returns whether the current label was assigned with [copy_label\(\)](#).*

 - const char * [label](#) () const

Gets the current label text.
- void [label](#) (const char *text)

Sets the current label pointer.
- void [label](#) (FL_Labeltype a, const char *b)

Shortcut to set the label text and type in one call.
- int [label_image_spacing](#) ()

Return the gap size between the label and the image.
- void [label_image_spacing](#) (int gap)

Set the gap between the label and the image in pixels.
- FL_Color [labelcolor](#) () const

Gets the label color.
- void [labelcolor](#) (FL_Color c)

Sets the label color.
- FL_Font [labelfont](#) () const

Gets the font to use.
- void [labelfont](#) (FL_Font f)

Sets the font to use.
- FL_Fonsize [labelsize](#) () const

Gets the font size in pixels.
- void [labelsize](#) (FL_Fonsize pix)

Sets the font size in pixels.
- FL_Labeltype [labeltype](#) () const

Gets the label type.
- void [labeltype](#) (FL_Labeltype a)

Sets the label type.
- void [measure_label](#) (int &ww, int &hh) const

Sets width ww and height hh accordingly with the label size.
- bool [needs_keyboard](#) () const

Returns whether this widget needs a keyboard.
- void [needs_keyboard](#) (bool needs)

Sets whether this widget needs a keyboard.
- unsigned int [output](#) () const

Returns if a widget is used for output only.
- FL_Group * [parent](#) () const

Returns a pointer to the parent widget.
- void [parent](#) (FL_Group *p)

Internal use only - "for hacks only".
- void [position](#) (int X, int Y)

Repositions the window or widget.
- void [redraw](#) ()

Schedules the drawing of the widget.
- void [redraw_label](#) ()

Schedules the drawing of the label.
- virtual void [resize](#) (int x, int y, int w, int h)

Changes the size or position of the widget.
- FL_Color [selection_color](#) () const

Gets the selection color.
- void [selection_color](#) (FL_Color a)

Sets the selection color.

- void [set_active](#) ()
Marks the widget as active without sending events or changing focus.
- void [set_changed](#) ()
Marks the value of the widget as changed.
- void [set_output](#) ()
Sets a widget to output only.
- void [set_visible](#) ()
Makes the widget visible.
- void [set_visible_focus](#) ()
Enables keyboard focus navigation with this widget.
- int [shortcut_label](#) () const
Returns whether the widget's label uses '&' to indicate shortcuts.
- void [shortcut_label](#) (int value)
Sets whether the widget's label uses '&' to indicate shortcuts.
- virtual void [show](#) ()
Makes a widget visible.
- void [size](#) (int W, int H)
Changes the size of the widget.
- int [take_focus](#) ()
Gives the widget the keyboard focus.
- unsigned int [takeevents](#) () const
Returns if the widget is able to take events.
- int [test_shortcut](#) ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * [tooltip](#) () const
Gets the current tooltip text.
- void [tooltip](#) (const char *text)
Sets the current tooltip text.
- [Fl_Window](#) * [top_window](#) () const
Returns a pointer to the top-level window for the widget.
- [Fl_Window](#) * [top_window_offset](#) (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- [uchar](#) [type](#) () const
Gets the widget type.
- void [type](#) ([uchar](#) t)
Sets the widget type.
- int [use_accents_menu](#) ()
Returns non zero if `MAC_USE_ACCENTS_MENU` flag is set, 0 otherwise.
- void * [user_data](#) () const
Gets the user data for this widget.
- void [user_data](#) ([Fl_Callback_User_Data](#) *v, bool auto_free)
Sets the user data for this widget.
- void [user_data](#) (void *v)
Sets the user data for this widget.
- int [vertical_label_margin](#) ()
Get the spacing between the label and the vertical edge of the widget.
- void [vertical_label_margin](#) (int px)
Set the spacing between the label and the vertical edge of the widget.
- unsigned int [visible](#) () const
Returns whether a widget is visible.
- unsigned int [visible_focus](#) () const

- *Checks whether this widget has a visible focus.*
- void `visible_focus` (int v)
Modifies keyboard focus navigation.
- int `visible_r` () const
Returns whether a widget and all its parents are visible.
- int `w` () const
Gets the widget width.
- `Fl_When when` () const
Returns the conditions under which the callback is called.
- void `when` (uchar i)
Sets the flags used to decide when a callback is called.
- `Fl_Window * window` () const
Returns a pointer to the nearest parent window up the widget hierarchy.
- int `x` () const
Gets the widget position in its window.
- int `y` () const
Gets the widget position in its window.
- virtual `~Fl_Widget` ()
Destroys the widget.

Additional Inherited Members

Static Public Member Functions inherited from `Fl_Widget`

- static void `default_callback` (`Fl_Widget *widget`, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int `label_shortcut` (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int `test_shortcut` (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from `Fl_Widget`

- enum {
`INACTIVE` = 1<<0 , `INVISIBLE` = 1<<1 , `OUTPUT` = 1<<2 , `NOBORDER` = 1<<3 ,
`FORCE_POSITION` = 1<<4 , `NON_MODAL` = 1<<5 , `SHORTCUT_LABEL` = 1<<6 , `CHANGED` = 1<<7
, `OVERRIDE` = 1<<8 , `VISIBLE_FOCUS` = 1<<9 , `COPIED_LABEL` = 1<<10 , `CLIP_CHILDREN` = 1<<11
, `MENU_WINDOW` = 1<<12 , `TOOLTIP_WINDOW` = 1<<13 , `MODAL` = 1<<14 , `NO_OVERLAY` = 1<<15
, `GROUP_RELATIVE` = 1<<16 , `COPIED_TOOLTIP` = 1<<17 , `FULLSCREEN` = 1<<18 , `MAC_USE_ACCENTS_MENU`
= 1<<19 ,
`NEEDS_KEYBOARD` = 1<<20 , `IMAGE_BOUND` = 1<<21 , `DEIMAGE_BOUND` = 1<<22 ,
`AUTO_DELETE_USER_DATA` = 1<<23 ,
`MAXIMIZED` = 1<<24 , `POPUP` = 1<<25 , `USERFLAG3` = 1<<29 , `USERFLAG2` = 1<<30 ,
`USERFLAG1` = 1<<31 }
flags possible values enumeration.

Protected Member Functions inherited from `Fl_Button`

- void `draw` () `FL_OVERRIDE`
Draws the widget.
- void `simulate_key_action` ()

Protected Member Functions inherited from [FI_Widget](#)

- void **clear_flag** (unsigned int c)
Clears a flag in the flags mask.
- void **draw_backdrop** () const
If FL_ALIGN_IMAGE_BACKDROP is set, the image or deimage will be drawn.
- void **draw_box** () const
Draws the widget box according its box style.
- void **draw_box** ([FI_Boxtype](#) t, [FI_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const
Draws a focus rectangle around the widget.
- void **draw_focus** ([FI_Boxtype](#) t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void **draw_focus** ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) bg) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [FI_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

Static Protected Member Functions inherited from [FI_Button](#)

- static void **key_release_timeout** (void *)

Static Protected Attributes inherited from [FI_Button](#)

- static [FI_Widget_Tracker](#) * **key_release_tracker** = 0

11.151.1 Detailed Description

The toggle button is a push button that needs to be clicked once to toggle on, and one more time to toggle off.

The [FI_Toggle_Button](#) subclass displays the "on" state by drawing a pushed-in button.

Buttons generate callbacks when they are clicked by the user. You control exactly when and how by changing the values for [type\(\)](#) and [when\(\)](#).

11.151.2 Constructor & Destructor Documentation

11.151.2.1 FL_Toggle_Button()

```
FL_Toggle_Button::FL_Toggle_Button (
    int X,
    int Y,
    int W,
    int H,
    const char * L = 0)
```

Creates a new [FL_Toggle_Button](#) widget using the given position, size, and label string. The constructor creates the button using the given position, size, and label. The inherited destructor deletes the toggle button. The Button [type\(\)](#) is set to FL_TOGGLE_BUTTON.

Parameters

in	<i>X,Y,W,H</i>	position and size of the widget
in	<i>L</i>	widget label, default is no label

The documentation for this class was generated from the following files:

- [FL_Toggle_Button.H](#)
- [FL_Button.cxx](#)

11.152 FL_Tooltip Class Reference

The [FL_Tooltip](#) class provides tooltip support for all FLTK widgets.

```
#include <FL_Tooltip.H>
```

Static Public Member Functions

- static [FL_Color](#) [color](#) ()
Gets the background color for tooltips.
- static void [color](#) ([FL_Color](#) c)
Sets the background color for tooltips.
- static [FL_Widget](#) * [current](#) ()
Gets the current widget target.
- static void [current](#) ([FL_Widget](#) *)
Sets the current widget target.
- static [FL_Window](#) * [current_window](#) (void)
Returns the window that is used for tooltips.
- static float [delay](#) ()
Gets the tooltip delay.
- static void [delay](#) (float f)
Sets the tooltip delay.
- static void [disable](#) ()
Same as enable(0), disables tooltips on all widgets.
- static void [enable](#) (int b=1)
Enables tooltips on all widgets (or disables if b is false).
- static int [enabled](#) ()
Returns non-zero if tooltips are enabled.
- static void [enter_area](#) ([FL_Widget](#) *w, int X, int Y, int W, int H, const char *tip)
You may be able to use this to provide tooltips for internal pieces of your widget.
- static [FL_Font](#) [font](#) ()

- Gets the typeface for the tooltip text.*
- static void **font** ([FL_Font](#) i)
 - Sets the typeface for the tooltip text.*
- static float [hidedelay](#) ()
 - Gets the time until an open tooltip hides again.*
- static void [hidedelay](#) (float f)
 - Sets the time until an open tooltip hides again.*
- static float [hoverdelay](#) ()
 - Gets the tooltip hover delay, the delay between tooltips.*
- static void [hoverdelay](#) (float f)
 - Sets the tooltip hover delay, the delay between tooltips.*
- static int [margin_height](#) ()
 - Gets the amount of extra space above and below the tooltip's text.*
- static void [margin_height](#) (int v)
 - Sets the amount of extra space above and below the tooltip's text.*
- static int [margin_width](#) ()
 - Gets the amount of extra space left/right of the tooltip's text.*
- static void [margin_width](#) (int v)
 - Sets the amount of extra space left/right of the tooltip's text.*
- static [FL_Fonsize](#) **size** ()
 - Gets the size of the tooltip text.*
- static void **size** ([FL_Fonsize](#) s)
 - Sets the size of the tooltip text.*
- static [FL_Color](#) **textcolor** ()
 - Gets the color of the text in the tooltip.*
- static void [textcolor](#) ([FL_Color](#) c)
 - Sets the color of the text in the tooltip.*
- static int [wrap_width](#) ()
 - Gets the maximum width for tooltip's text before it word wraps.*
- static void [wrap_width](#) (int v)
 - Sets the maximum width for tooltip's text before it word wraps.*

Static Public Attributes

- static void(* **enter**)([FL_Widget](#) *w) = nothing
- static void(* **exit**)([FL_Widget](#) *w) = nothing

Friends

- class [FL_TooltipBox](#)
- void [FL_Widget::copy_tooltip](#) (const char *)
- void [FL_Widget::tooltip](#) (const char *)

11.152.1 Detailed Description

The [FL_Tooltip](#) class provides tooltip support for all FLTK widgets. It contains only static methods.

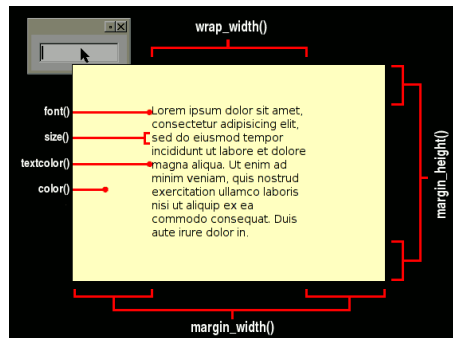

Figure 11.61 Fl_Tooltip Options

11.152.2 Member Function Documentation

11.152.2.1 `color()` [1/2]

```
static Fl_Color Fl_Tooltip::color () [inline], [static]
```

Gets the background color for tooltips.

The default background color is a pale yellow.

11.152.2.2 `color()` [2/2]

```
static void Fl_Tooltip::color (
    Fl_Color c) [inline], [static]
```

Sets the background color for tooltips.

The default background color is a pale yellow.

11.152.2.3 `current()`

```
void Fl_Tooltip::current (
    Fl_Widget * w) [static]
```

Sets the current widget target.

Acts as though `enter(widget)` was done but does not pop up a tooltip. This is useful to prevent a tooltip from reappearing when a modal overlapping window is deleted. FLTK does this automatically when you click the mouse button.

11.152.2.4 `delay()` [1/2]

```
static float Fl_Tooltip::delay () [inline], [static]
```

Gets the tooltip delay.

The default delay is 1.0 seconds.

11.152.2.5 `delay()` [2/2]

```
static void Fl_Tooltip::delay (
    float f) [inline], [static]
```

Sets the tooltip delay.

The default delay is 1.0 seconds.

11.152.2.6 `enter_area()`

```
void Fl_Tooltip::enter_area (
    Fl_Widget * wid,
    int x,
    int y,
    int w,
    int h,
    const char * t) [static]
```

You may be able to use this to provide tooltips for internal pieces of your widget.

Call this after setting `Fl::belowmouse()` to your widget (because that calls the above `enter()` method). Then figure out what thing the mouse is pointing at, and call this with the widget (this pointer is used to remove the tooltip if the widget is deleted or hidden, and to locate the tooltip), the rectangle surrounding the area, relative to the top-left corner of the widget (used to calculate where to put the tooltip), and the text of the tooltip (which must be a pointer to static data as it is not copied).

11.152.2.7 `hidedelay()` [1/2]

```
static float Fl_Tooltip::hidedelay () [inline], [static]
```

Gets the time until an open tooltip hides again.

The default delay is 12.0 seconds.

11.152.2.8 `hidedelay()` [2/2]

```
static void Fl_Tooltip::hidedelay (  
    float f) [inline], [static]
```

Sets the time until an open tooltip hides again.

The default delay is 12.0 seconds.

11.152.2.9 `hoverdelay()` [1/2]

```
static float Fl_Tooltip::hoverdelay () [inline], [static]
```

Gets the tooltip hover delay, the delay between tooltips.

The default delay is 0.2 seconds.

11.152.2.10 `hoverdelay()` [2/2]

```
static void Fl_Tooltip::hoverdelay (  
    float f) [inline], [static]
```

Sets the tooltip hover delay, the delay between tooltips.

The default delay is 0.2 seconds.

11.152.2.11 `margin_height()` [1/2]

```
static int Fl_Tooltip::margin_height () [inline], [static]
```

Gets the amount of extra space above and below the tooltip's text.

Default is 3.

11.152.2.12 `margin_height()` [2/2]

```
static void Fl_Tooltip::margin_height (  
    int v) [inline], [static]
```

Sets the amount of extra space above and below the tooltip's text.

Default is 3.

11.152.2.13 `margin_width()` [1/2]

```
static int Fl_Tooltip::margin_width () [inline], [static]
```

Gets the amount of extra space left/right of the tooltip's text.

Default is 3.

11.152.2.14 `margin_width()` [2/2]

```
static void Fl_Tooltip::margin_width (  
    int v) [inline], [static]
```

Sets the amount of extra space left/right of the tooltip's text.

Default is 3.

11.152.2.15 textcolor() [1/2]

```
static Fl_Color Fl_Tooltip::textcolor () [inline], [static]
```

Gets the color of the text in the tooltip.

The default is black.

11.152.2.16 textcolor() [2/2]

```
static void Fl_Tooltip::textcolor (
    Fl_Color c) [inline], [static]
```

Sets the color of the text in the tooltip.

The default is black.

11.152.2.17 wrap_width() [1/2]

```
static int Fl_Tooltip::wrap_width () [inline], [static]
```

Gets the maximum width for tooltip's text before it word wraps.

Default is 400.

11.152.2.18 wrap_width() [2/2]

```
static void Fl_Tooltip::wrap_width (
    int v) [inline], [static]
```

Sets the maximum width for tooltip's text before it word wraps.

Default is 400.

The documentation for this class was generated from the following files:

- Fl_Tooltip.H
- [Fl.cxx](#)
- Fl_Tooltip.cxx

11.153 Fl_Tree Class Reference

Tree widget.

```
#include <Fl_Tree.H>
```

Inheritance diagram for Fl_Tree:

**Public Member Functions**

- [Fl_Tree_Item](#) * [add](#) (const char *path, [Fl_Tree_Item](#) *newitem=0)
Adds a new item, given a menu style 'path'.
- [Fl_Tree_Item](#) * [add](#) ([Fl_Tree_Item](#) *parent_item, const char *name)
Add a new child item labeled 'name' to the specified 'parent_item'.
- void [calc_dimensions](#) ()
Recalculate widget dimensions and scrollbar visibility, normally managed automatically.
- void [calc_tree](#) ()
Recalculates the tree's sizes and scrollbar visibility, normally managed automatically.
- [Fl_Tree_Item](#) * [callback_item](#) ()

- Gets the item that caused the callback.*

 - void **callback_item** (**FI_Tree_Item** *item)
- Sets the item that was changed for this callback.*

 - **FI_Tree_Reason** **callback_reason** () const
- Gets the reason for this callback.*

 - void **callback_reason** (**FI_Tree_Reason** reason)
- Sets the reason for this callback.*

 - void **clear** ()
- Clear the entire tree's children, including the root.*

 - void **clear_children** (**FI_Tree_Item** *item)
- Clear all the children for 'item'.*

 - int **close** (const char *path, int docallback=1)
- Closes the item specified by 'path'.*

 - int **close** (**FI_Tree_Item** *item, int docallback=1)
- Closes the specified 'item'.*

 - **FI_Image** * **closeicon** () const
- Returns the icon to be used as the 'close' icon.*

 - void **closeicon** (**FI_Image** *val)
- Sets the icon to be used as the 'close' icon.*

 - **FI_Color** **connectorcolor** () const
- Get the connector color used for tree connection lines.*

 - void **connectorcolor** (**FI_Color** val)
- Set the connector color used for tree connection lines.*

 - **FI_Tree_Connector** **connectorstyle** () const
- Returns the line drawing style for inter-connecting items.*

 - void **connectorstyle** (**FI_Tree_Connector** val)
- Sets the line drawing style for inter-connecting items.*

 - int **connectorwidth** () const
- Gets the width of the horizontal connection lines (in pixels) that appear to the left of each tree item's label.*

 - void **connectorwidth** (int val)
- Sets the width of the horizontal connection lines (in pixels) that appear to the left of each tree item's label.*

 - int **deselect** (const char *path, int docallback=1)
- Deselect an item specified by 'path'.*

 - int **deselect** (**FI_Tree_Item** *item, int docallback=1)
- Deselect the specified item.*

 - int **deselect_all** (**FI_Tree_Item** *item=0, int docallback=1)
- Deselect 'item' and all its children.*

 - void **display** (**FI_Tree_Item** *item)
- Displays 'item', scrolling the tree as necessary.*

 - int **displayed** (**FI_Tree_Item** *item)
- See if 'item' is currently displayed on-screen (visible within the widget).*

 - int **extend_selection** (**FI_Tree_Item** *from, **FI_Tree_Item** *to, int val=1, bool visible=false)
- Extend a selection between 'from' and 'to' depending on 'visible'.*

 - int **extend_selection_dir** (**FI_Tree_Item** *from, **FI_Tree_Item** *to, int dir, int val, bool visible)
- Extend the selection between and including 'from' and 'to' depending on direction 'dir', 'val', and 'visible'.*

 - **FI_Tree_Item** * **find_clicked** (int yonly=0)
- Non-const version of **FI_Tree::find_clicked(int yonly)** const.*

 - const **FI_Tree_Item** * **find_clicked** (int yonly=0) const
- Find the item that was last clicked on.*

 - **FI_Tree_Item** * **find_item** (const char *path)

- Non-const version of *FL_Tree::find_item(const char *path) const*.
- `const FL_Tree_Item * find_item (const char *path) const`
Find the item, given a menu style path, e.g.
 - `FL_Tree_Item * first ()`
Returns the first item in the tree, or 0 if none.
 - `FL_Tree_Item * first_selected_item ()`
Returns the first selected item in the tree.
 - `FL_Tree_Item * first_visible ()`
Returns the first *open()*, visible item in the tree, or 0 if none.
 - `FL_Tree_Item * first_visible_item ()`
Returns the first *open()*, visible item in the tree, or 0 if none.
 - `FL_Tree (int X, int Y, int W, int H, const char *L=0)`
Constructor.
 - `FL_Tree_Item * get_item_focus () const`
Get the item that currently has keyboard focus.
 - `int get_selected_items (FL_Tree_Item_Array &items)`
Returns the currently selected items as an array of 'ret_items'.
 - `int handle (int e) FL_OVERRIDE`
Standard FLTK event handler for this widget.
 - `int hposition () const`
Returns the horizontal scroll position as a pixel offset.
 - `void hposition (int pos)`
Sets the horizontal scroll offset to position 'pos'.
 - `FL_Tree_Item * insert (FL_Tree_Item *item, const char *name, int pos)`
Insert a new item 'name' into 'item's children at position 'pos'.
 - `FL_Tree_Item * insert_above (FL_Tree_Item *above, const char *name)`
Inserts a new item 'name' above the specified *FL_Tree_Item* 'above'.
 - `int is_close (const char *path) const`
See if item specified by 'path' is closed.
 - `int is_close (FL_Tree_Item *item) const`
See if the specified 'item' is closed.
 - `int is_hscroll_visible () const`
See if the horizontal scrollbar is currently visible.
 - `int is_open (const char *path) const`
See if item specified by 'path' is open.
 - `int is_open (FL_Tree_Item *item) const`
See if 'item' is open.
 - `int is_scrollbar (FL_Widget *w)`
See if widget 'w' is one of the *FL_Tree* widget's scrollbars.
 - `int is_selected (const char *path)`
See if item specified by 'path' is selected.
 - `int is_selected (FL_Tree_Item *item) const`
See if the specified 'item' is selected.
 - `int is_vscroll_visible () const`
See if the vertical scrollbar is currently visible.
 - `FL_Tree_Item * item_clicked ()`
Return the item that was last clicked.
 - `FL_Tree_Item_Draw_Mode item_draw_mode () const`
Get the 'item draw mode' used for the tree.
 - `void item_draw_mode (FL_Tree_Item_Draw_Mode mode)`
Set the 'item draw mode' used for the tree to 'mode'.

- void **item_draw_mode** (int mode)
Set the 'item draw mode' used for the tree to integer 'mode'.
- void **item_labelbgcolor** (FL_Color val)
Set the default label background color used for creating new items.
- FL_Color **item_labelbgcolor** (void) const
Get the default label background color used for creating new items.
- void **item_labelfgcolor** (FL_Color val)
Set the default label foreground color used for creating new items.
- FL_Color **item_labelfgcolor** (void) const
Get the default label foreground color used for creating new items.
- FL_Font **item_labelfont** () const
Get the default font face used for creating new items.
- void **item_labelfont** (FL_Font val)
Set the default font face used for creating new items.
- FL_Fontsize **item_labelsize** () const
Get the default label fontsize used for creating new items.
- void **item_labelsize** (FL_Fontsize val)
Set the default label font size used for creating new items.
- int **item_pathname** (char *pathname, int pathnamelen, const FL_Tree_Item *item) const
Return 'pathname' of size 'pathnamelen' for the specified 'item'.
- FL_Tree_Item_Reselect_Mode **item_reselect_mode** () const
Returns the current item re/selection mode.
- void **item_reselect_mode** (FL_Tree_Item_Reselect_Mode mode)
Sets the item re/selection mode.
- int **labelmarginleft** () const
Get the amount of white space (in pixels) that should appear to the left of the label text.
- void **labelmarginleft** (int val)
Set the amount of white space (in pixels) that should appear to the left of the label text.
- FL_Tree_Item * **last** ()
Returns the last item in the tree.
- FL_Tree_Item * **last_selected_item** ()
Returns the last selected item in the tree.
- FL_Tree_Item * **last_visible** ()
Returns the last [open\(\)](#), visible item in the tree.
- FL_Tree_Item * **last_visible_item** ()
Returns the last [open\(\)](#), visible item in the tree.
- int **linespacing** () const
Get the amount of white space (in pixels) that should appear between items in the tree.
- void **linespacing** (int val)
Sets the amount of white space (in pixels) that should appear between items in the tree.
- void **load** (class FL_Preferences &)
Load FLTK preferences.
- int **marginbottom** () const
Get the amount of white space (in pixels) that should appear below the last visible item when the vertical scroller is scrolled to the bottom.
- void **marginbottom** (int val)
Sets the amount of white space (in pixels) that should appear below the last visible item when the vertical scroller is scrolled to the bottom.
- int **marginleft** () const
Get the amount of white space (in pixels) that should appear between the widget's left border and the tree's contents.
- void **marginleft** (int val)

- Set the amount of white space (in pixels) that should appear between the widget's left border and the left side of the tree's contents.*
- **int margintop () const**
Get the amount of white space (in pixels) that should appear between the widget's top border and the top of the tree's contents.
 - **void margintop (int val)**
Sets the amount of white space (in pixels) that should appear between the widget's top border and the top of the tree's contents.
 - **FL_Tree_Item * next (FL_Tree_Item *item=0)**
Return the next item after 'item', or 0 if no more items.
 - **FL_Tree_Item * next_item (FL_Tree_Item *item, int dir=FL_Down, bool visible=false)**
Returns next item after 'item' in direction 'dir' depending on 'visible'.
 - **FL_Tree_Item * next_selected_item (FL_Tree_Item *item=0, int dir=FL_Down)**
Returns the next selected item above or below 'item', depending on 'dir'.
 - **FL_Tree_Item * next_visible_item (FL_Tree_Item *start, int dir)**
Returns next [open\(\)](#), visible item above (dir==FL_Up) or below (dir==FL_Down) the specified 'item', or 0 if no more items.
 - **int open (const char *path, int docallback=1)**
Opens the item specified by 'path'.
 - **int open (FL_Tree_Item *item, int docallback=1)**
Open the specified 'item'.
 - **void open_toggle (FL_Tree_Item *item, int docallback=1)**
Toggle the open state of 'item'.
 - **int openchild_marginbottom () const**
Get the amount of white space (in pixels) that should appear below an open child tree's contents.
 - **void openchild_marginbottom (int val)**
Set the amount of white space (in pixels) that should appear below an open child tree's contents.
 - **FL_Image * openicon () const**
Returns the icon to be used as the 'open' icon.
 - **void openicon (FL_Image *val)**
Sets the icon to be used as the 'open' icon.
 - **const FL_Tree_Prefs & prefs () const**
 - **FL_Tree_Item * prev (FL_Tree_Item *item=0)**
Return the previous item before 'item', or 0 if no more items.
 - **void recalc_tree ()**
Schedule tree to recalc the entire tree size.
 - **int remove (FL_Tree_Item *item)**
Remove the specified 'item' from the tree.
 - **void resize (int, int, int, int) FL_OVERRIDE**
Resizes the [FL_Group](#) widget and all of its children.
 - **FL_Tree_Item * root ()**
Returns the root item.
 - **void root (FL_Tree_Item *newitem)**
Sets the root item to 'newitem'.
 - **void root_label (const char *new_label)**
Set the label for the root item to 'new_label'.
 - **int scrollbar_size () const**
Gets the default size of scrollbars' troughs for this widget in pixels.
 - **void scrollbar_size (int size)**
Sets the pixel size of the scrollbars' troughs to 'size' for this widget, in pixels.
 - **int select (const char *path, int docallback=1)**

- Select the item specified by 'path'.*

 - int **select** ([FI_Tree_Item](#) *item, int docallback=1)
- Select the specified 'item'.*

 - int **select_all** ([FI_Tree_Item](#) *item=0, int docallback=1)
- Select 'item' and all its children.*

 - int **select_only** ([FI_Tree_Item](#) *selitem, int docallback=1)
- Select only the specified item, deselecting all others that might be selected.*

 - void **select_toggle** ([FI_Tree_Item](#) *item, int docallback=1)
- Toggle the select state of the specified 'item'.*

 - [FI_Boxtype](#) **selectbox** () const
- Sets the style of box used to draw selected items.*

 - void **selectbox** ([FI_Boxtype](#) val)
- Gets the style of box used to draw selected items.*

 - [FI_Tree_Select](#) **selectmode** () const
- Gets the tree's current selection mode.*

 - void **selectmode** ([FI_Tree_Select](#) val)
- Sets the tree's selection mode.*

 - void **set_item_focus** ([FI_Tree_Item](#) *item)
- Set the item that currently should have keyboard focus.*

 - void **show_item** ([FI_Tree_Item](#) *item)
- Adjust the vertical scrollbar to show 'item' at the top of the display IF it is currently off-screen (for instance [show_item_top\(\)](#)).*

 - void **show_item** ([FI_Tree_Item](#) *item, int yoff)
- Adjust the vertical scrollbar so that 'item' is visible 'yoff' pixels from the top of the [FI_Tree](#) widget's display.*

 - void **show_item_bottom** ([FI_Tree_Item](#) *item)
- Adjust the vertical scrollbar so that 'item' is at the bottom of the display.*

 - void **show_item_middle** ([FI_Tree_Item](#) *item)
- Adjust the vertical scrollbar so that 'item' is in the middle of the display.*

 - void **show_item_top** ([FI_Tree_Item](#) *item)
- Adjust the vertical scrollbar so that 'item' is at the top of the display.*

 - void **show_self** ()
- Print the tree as 'ascii art' to stdout.*

 - int **showcollapse** () const
- Returns 1 if the collapse icon is enabled, 0 if not.*

 - void **showcollapse** (int val)
- Set if we should show the collapse icon or not.*

 - int **showroot** () const
- Returns 1 if the root item is to be shown, or 0 if not.*

 - void **showroot** (int val)
- Set if the root item should be shown or not.*

 - [FI_Tree_Sort](#) **sortorder** () const
- Set the default sort order used when items are added to the tree.*

 - void **sortorder** ([FI_Tree_Sort](#) val)
- Gets the sort order used to add items to the tree.*

 - [FI_Image](#) * **usericon** () const
- Returns the [FI_Image](#) being used as the default user icon for all newly created items.*

 - void **usericon** ([FI_Image](#) *val)
- Sets the [FI_Image](#) to be used as the default user icon for all newly created items.*

 - int **usericonmarginleft** () const
- Get the amount of white space (in pixels) that should appear to the left of the usericon.*

 - void **usericonmarginleft** (int val)

- *Set the amount of white space (in pixels) that should appear to the left of the usericon.*
- `int vposition () const`
Returns the vertical scroll position as a pixel offset.
- `void vposition (int pos)`
Sets the vertical scroll offset to position 'pos'.
- `int widgetmarginleft () const`
Get the amount of white space (in pixels) that should appear to the left of the child fltk widget (if any).
- `void widgetmarginleft (int val)`
Set the amount of white space (in pixels) that should appear to the left of the child fltk widget (if any).
- `~FL_Tree ()`
Destructor.

Public Member Functions inherited from FL_Group

- `FL_Widget *& _ddfdesign_kludge ()`
This is for forms compatibility only.
- `void add (FL_Widget &)`
The widget is removed from its current group (if any) and then added to the end of this group.
- `void add (FL_Widget *o)`
See void FL_Group::add(FL_Widget &w)
- `void add_resizable (FL_Widget &o)`
Adds a widget to the group and makes it the resizable widget.
- `FL_Widget *const * array () const`
Returns a pointer to the array of children.
- `FL_Group const * as_group () const FL_OVERRIDE`
- `FL_Group * as_group () FL_OVERRIDE`
Returns an FL_Group pointer if this widget is an FL_Group.
- `void begin ()`
Sets the current group so you can build the widget tree by just constructing the widgets.
- `FL_Widget * child (int n) const`
Returns the n'th child.
- `int children () const`
Returns how many child widgets the group has.
- `void clear ()`
Deletes all child widgets from memory recursively.
- `unsigned int clip_children ()`
Returns the current clipping mode.
- `void clip_children (int c)`
Controls whether the group widget clips the drawing of child widgets to its bounding box.
- `virtual int delete_child (int n)`
Removes the widget at index from the group and deletes it.
- `void end ()`
Exactly the same as current(this->parent()).
- `int find (const FL_Widget &o) const`
*See int FL_Group::find(const FL_Widget *w) const.*
- `int find (const FL_Widget *) const`
Searches the child array for the widget and returns the index.
- `FL_Group (int, int, int, int, const char *)`
Creates a new FL_Group widget using the given position, size, and label string.
- `void focus (FL_Widget *W)`
- `void forms_end ()`

- This is for forms compatibility only.*

 - void `init_sizes` ()

Resets the internal array of widget sizes and positions.
- void `insert` (`FI_Widget` &, int i)

The widget is removed from its current group (if any) and then inserted into this group.
- void `insert` (`FI_Widget` &o, `FI_Widget` *before)

This does insert(w, find(before)).
- void `remove` (`FI_Widget` &)

Removes a widget from the group but does not delete it.
- void `remove` (`FI_Widget` *o)

Removes the widget o from the group.
- void `remove` (int index)

Removes the widget at index from the group but does not delete it.
- `FI_Widget` * `resizable` () const

Returns the group's resizable widget.
- void `resizable` (`FI_Widget` &o)

Sets the group's resizable widget.
- void `resizable` (`FI_Widget` *o)

The resizable widget defines both the resizing box and the resizing behavior of the group and its children.
- virtual `~FI_Group` ()

The destructor also deletes all the children.

Public Member Functions inherited from `FI_Widget`

- void `_clear_fullscreen` ()
- void `_set_fullscreen` ()
- void `activate` ()
- Activates the widget.*
- unsigned int `active` () const
- Returns whether the widget is active.*
- int `active_r` () const
- Returns whether the widget and all of its parents are active.*
- `FI_Align` align () const
- Gets the label alignment.*
- void `align` (`FI_Align` alignment)
- Sets the label alignment.*
- long `argument` () const
- Gets the current user data (long) argument that is passed to the callback function.*
- void `argument` (long v)
- Sets the current user data (long) argument that is passed to the callback function.*
- virtual class `FI_GL_Window` * `as_gl_window` ()
- Returns an `FI_GL_Window` pointer if this widget is an `FI_GL_Window`.*
- virtual class `FI_GL_Window` const * `as_gl_window` () const
- virtual `FI_Window` * `as_window` ()
- Returns an `FI_Window` pointer if this widget is an `FI_Window`.*
- virtual `FI_Window` const * `as_window` () const
- void `bind_deimage` (`FI_Image` *img)
- Sets the image to use as part of the widget label when in the inactive state.*
- void `bind_deimage` (int f)
- Bind the inactive image to the widget, so the widget will delete the image when it is no longer needed.*
- void `bind_image` (`FI_Image` *img)

- Sets the image to use as part of the widget label when in the active state.*

 - void [bind_image](#) (int f)

Bind the image to the widget, so the widget will delete the image when it is no longer needed.
- [FL_Boxtype](#) [box](#) () const

Gets the box type of the widget.
- void [box](#) ([FL_Boxtype](#) new_box)

Sets the box type for the widget.
- [FL_Callback_p](#) [callback](#) () const

Gets the current callback function for the widget.
- void [callback](#) ([FL_Callback](#) *cb)

Sets the current callback function for the widget.
- void [callback](#) ([FL_Callback](#) *cb, [FL_Callback_User_Data](#) *p, bool auto_free)

Sets the current callback function and managed user data for the widget.
- void [callback](#) ([FL_Callback](#) *cb, void *p)

Sets the current callback function and data for the widget.
- void [callback](#) ([FL_Callback0](#) *cb)

Sets the current callback function for the widget.
- void [callback](#) ([FL_Callback1](#) *cb, long p=0)

Sets the current callback function for the widget.
- unsigned int [changed](#) () const

Checks if the widget value changed since the last callback.
- void [clear_active](#) ()

Marks the widget as inactive without sending events or changing focus.
- void [clear_changed](#) ()

Marks the value of the widget as unchanged.
- void [clear_damage](#) ([uchar](#) c=0)

Clears or sets the damage flags.
- void [clear_output](#) ()

Sets a widget to accept input.
- void [clear_visible](#) ()

Hides the widget.
- void [clear_visible_focus](#) ()

Disables keyboard focus navigation with this widget.
- [FL_Color](#) [color](#) () const

Gets the background color of the widget.
- void [color](#) ([FL_Color](#) bg)

Sets the background color of the widget.
- void [color](#) ([FL_Color](#) bg, [FL_Color](#) sel)

Sets the background and selection color of the widget.
- [FL_Color](#) [color2](#) () const

For back compatibility only.
- void [color2](#) (unsigned a)

For back compatibility only.
- int [contains](#) (const [FL_Widget](#) *w) const

Checks if w is a child of this widget.
- void [copy_label](#) (const char *new_label)

Sets the current label.
- void [copy_tooltip](#) (const char *text)

Sets the current tooltip text.
- [uchar](#) [damage](#) () const

Returns non-zero if [draw\(\)](#) needs to be called.

- void [damage](#) ([uchar](#) c)
Sets the damage bits for the widget.
- void [damage](#) ([uchar](#) c, int x, int y, int w, int h)
Sets the damage bits for an area inside the widget.
- int [damage_resize](#) (int, int, int, int)
Internal use only.
- void [deactivate](#) ()
Deactivates the widget.
- [FL_Image](#) * [deimage](#) ()
Gets the image that is used as part of the widget label when in the inactive state.
- const [FL_Image](#) * [deimage](#) () const
Gets the image that is used as part of the widget label when in the inactive state.
- void [deimage](#) ([FL_Image](#) &img)
Sets the image to use as part of the widget label when in the inactive state.
- void [deimage](#) ([FL_Image](#) *img)
Sets the image to use as part of the widget label when in the inactive state.
- int [deimage_bound](#) () const
Returns whether the inactive image is managed by the widget.
- void [do_callback](#) ([FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
Calls the widget callback function with default arguments.
- void [do_callback](#) ([FL_Widget](#) *widget, long arg, [FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
Calls the widget callback function with arbitrary arguments.
- void [do_callback](#) ([FL_Widget](#) *widget, void *arg=0, [FL_Callback_Reason](#) reason=[FL_REASON_UNKNOWN](#))
Calls the widget callback function with arbitrary arguments.
- void [draw_label](#) (int, int, int, int, [FL_Align](#)) const
Draws the label in an arbitrary bounding box with an arbitrary alignment.
- int [h](#) () const
Gets the widget height.
- virtual void [hide](#) ()
Makes a widget invisible.
- int [horizontal_label_margin](#) ()
Get the spacing between the label and the horizontal edge of the widget.
- void [horizontal_label_margin](#) (int px)
Set the spacing between the label and the horizontal edge of the widget.
- [FL_Image](#) * [image](#) ()
Gets the image that is used as part of the widget label when in the active state.
- const [FL_Image](#) * [image](#) () const
Gets the image that is used as part of the widget label when in the active state.
- void [image](#) ([FL_Image](#) &img)
Sets the image to use as part of the widget label when in the active state.
- void [image](#) ([FL_Image](#) *img)
Sets the image to use as part of the widget label when in the active state.
- int [image_bound](#) () const
Returns whether the image is managed by the widget.
- int [inside](#) (const [FL_Widget](#) *wgt) const
Checks if this widget is a child of wgt.
- int [is_label_copied](#) () const
Returns whether the current label was assigned with [copy_label\(\)](#).
- const char * [label](#) () const
Gets the current label text.
- void [label](#) (const char *text)

- Sets the current label pointer.*

 - void **label** ([Fl_Labeltype](#) a, const char *b)

Shortcut to set the label text and type in one call.
- int **label_image_spacing** ()

Return the gap size between the label and the image.
- void **label_image_spacing** (int gap)

Set the gap between the label and the image in pixels.
- [Fl_Color](#) **labelcolor** () const

Gets the label color.
- void **labelcolor** ([Fl_Color](#) c)

Sets the label color.
- [Fl_Font](#) **labelfont** () const

Gets the font to use.
- void **labelfont** ([Fl_Font](#) f)

Sets the font to use.
- [Fl_Fontsize](#) **labelsize** () const

Gets the font size in pixels.
- void **labelsize** ([Fl_Fontsize](#) pix)

Sets the font size in pixels.
- [Fl_Labeltype](#) **labeltype** () const

Gets the label type.
- void **labeltype** ([Fl_Labeltype](#) a)

Sets the label type.
- void **measure_label** (int &ww, int &hh) const

Sets width ww and height hh accordingly with the label size.
- bool **needs_keyboard** () const

Returns whether this widget needs a keyboard.
- void **needs_keyboard** (bool needs)

Sets whether this widget needs a keyboard.
- unsigned int **output** () const

Returns if a widget is used for output only.
- [Fl_Group](#) * **parent** () const

Returns a pointer to the parent widget.
- void **parent** ([Fl_Group](#) *p)

Internal use only - "for hacks only".
- void **position** (int X, int Y)

Repositions the window or widget.
- void **redraw** ()

Schedules the drawing of the widget.
- void **redraw_label** ()

Schedules the drawing of the label.
- [Fl_Color](#) **selection_color** () const

Gets the selection color.
- void **selection_color** ([Fl_Color](#) a)

Sets the selection color.
- void **set_active** ()

Marks the widget as active without sending events or changing focus.
- void **set_changed** ()

Marks the value of the widget as changed.
- void **set_output** ()

Sets a widget to output only.

- void [set_visible](#) ()
Makes the widget visible.
- void [set_visible_focus](#) ()
Enables keyboard focus navigation with this widget.
- int [shortcut_label](#) () const
Returns whether the widget's label uses '&' to indicate shortcuts.
- void [shortcut_label](#) (int value)
Sets whether the widget's label uses '&' to indicate shortcuts.
- virtual void [show](#) ()
Makes a widget visible.
- void [size](#) (int W, int H)
Changes the size of the widget.
- int [take_focus](#) ()
Gives the widget the keyboard focus.
- unsigned int [takeevents](#) () const
Returns if the widget is able to take events.
- int [test_shortcut](#) ()
Returns true if the widget's label contains the entered '&x' shortcut.
- const char * [tooltip](#) () const
Gets the current tooltip text.
- void [tooltip](#) (const char *text)
Sets the current tooltip text.
- [Fl_Window](#) * [top_window](#) () const
Returns a pointer to the top-level window for the widget.
- [Fl_Window](#) * [top_window_offset](#) (int &xoff, int &yoff) const
Finds the x/y offset of the current widget relative to the top-level window.
- [uchar](#) [type](#) () const
Gets the widget type.
- void [type](#) ([uchar](#) t)
Sets the widget type.
- int [use_accents_menu](#) ()
Returns non zero if MAC_USE_ACCENTS_MENU flag is set, 0 otherwise.
- void * [user_data](#) () const
Gets the user data for this widget.
- void [user_data](#) ([Fl_Callback_User_Data](#) *v, bool auto_free)
Sets the user data for this widget.
- void [user_data](#) (void *v)
Sets the user data for this widget.
- int [vertical_label_margin](#) ()
Get the spacing between the label and the vertical edge of the widget.
- void [vertical_label_margin](#) (int px)
Set the spacing between the label and the vertical edge of the widget.
- unsigned int [visible](#) () const
Returns whether a widget is visible.
- unsigned int [visible_focus](#) () const
Checks whether this widget has a visible focus.
- void [visible_focus](#) (int v)
Modifies keyboard focus navigation.
- int [visible_r](#) () const
Returns whether a widget and all its parents are visible.
- int [w](#) () const

- Gets the widget width.*
- `FL_When when () const`
Returns the conditions under which the callback is called.
- `void when (uchar i)`
Sets the flags used to decide when a callback is called.
- `FL_Window * window () const`
Returns a pointer to the nearest parent window up the widget hierarchy.
- `int x () const`
Gets the widget position in its window.
- `int y () const`
Gets the widget position in its window.
- `virtual ~FL_Widget ()`
Destroys the widget.

Protected Member Functions

- `void do_callback_for_item (FL_Tree_Item *item, FL_Tree_Reason reason)`
Do the callback for the specified 'item' using 'reason', setting the `callback_item()` and `callback_reason()`.
- `void draw () FL_OVERRIDE`
Standard FLTK `draw()` method, handles drawing the tree widget.
- `void item_clicked (FL_Tree_Item *val)`
Set the item that was last clicked.

Protected Member Functions inherited from FL_Group

- `FL_Rect * bounds ()`
Returns the internal array of widget sizes and positions.
- `void draw_child (FL_Widget &widget) const`
Forces a child to redraw.
- `void draw_children ()`
Draws all children of the group.
- `void draw_outside_label (const FL_Widget &widget) const`
Parents normally call this to draw outside labels of child widgets.
- `virtual int on_insert (FL_Widget *, int)`
Allow derived groups to act when a widget is added as a child.
- `virtual int on_move (int, int)`
Allow derived groups to act when a widget is moved within the group.
- `virtual void on_remove (int)`
Allow derived groups to act when a child widget is removed from the group.
- `int * sizes ()`
Returns the internal array of widget sizes and positions.
- `void update_child (FL_Widget &widget) const`
Draws a child only if it needs it.

Protected Member Functions inherited from FL_Widget

- `void clear_flag (unsigned int c)`
Clears a flag in the flags mask.
- `void draw_backdrop () const`
If `FL_ALIGN_IMAGE_BACKDROP` is set, the image or deimage will be drawn.
- `void draw_box () const`
Draws the widget box according its box style.

- void **draw_box** ([FI_Boxtype](#) t, [FI_Color](#) c) const
Draws a box of type t, of color c at the widget's position and size.
- void **draw_box** ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) c) const
Draws a box of type t, of color c at the position X,Y and size W,H.
- void **draw_focus** () const
Draws a focus rectangle around the widget.
- void **draw_focus** ([FI_Boxtype](#) t, int X, int Y, int W, int H) const
Draws a focus rectangle around the widget.
- void **draw_focus** ([FI_Boxtype](#) t, int x, int y, int w, int h, [FI_Color](#) bg) const
Draws a focus box for the widget at the given position and size.
- void **draw_label** () const
Draws the widget's label at the defined label position.
- void **draw_label** (int, int, int, int) const
Draws the label in an arbitrary bounding box.
- [FI_Widget](#) (int x, int y, int w, int h, const char *label=0L)
Creates a widget at the given position and size.
- unsigned int **flags** () const
Gets the widget flags mask.
- void **h** (int v)
Internal use only.
- void **set_flag** (unsigned int c)
Sets a flag in the flags mask.
- void **w** (int v)
Internal use only.
- void **x** (int v)
Internal use only.
- void **y** (int v)
Internal use only.

Protected Attributes

- [FI_Scrollbar](#) * **_hscroll**
Horizontal scrollbar.
- int **_tih**
Tree widget inner xywh dimension: inside borders + scrollbars.
- int **_tiw**
- int **_tix**
- int **_tiy**
- int **_toh**
Tree widget outer xywh dimension: outside scrollbars, inside widget border.
- int **_tow**
- int **_tox**
- int **_toy**
- int **_tree_h**
the calculated height of the entire tree hierarchy. See [calc_tree\(\)](#)
- int **_tree_w**
the calculated width of the entire tree hierarchy. See [calc_tree\(\)](#)
- [FI_Scrollbar](#) * **_vscroll**
Vertical scrollbar.

Friends

- class **FI_Tree_Item**

Additional Inherited Members

Static Public Member Functions inherited from [Fl_Group](#)

- static [Fl_Group](#) * [current](#) ()
Returns the currently active group.
- static void [current](#) ([Fl_Group](#) *g)
Sets the current group.

Static Public Member Functions inherited from [Fl_Widget](#)

- static void [default_callback](#) ([Fl_Widget](#) *widget, void *data)
The default callback for all widgets that don't set a callback.
- static unsigned int [label_shortcut](#) (const char *t)
Returns the Unicode value of the '&x' shortcut in a given text.
- static int [test_shortcut](#) (const char *, const bool require_alt=false)
Returns true if the given text t contains the entered '&x' shortcut.

Protected Types inherited from [Fl_Widget](#)

- enum {
[INACTIVE](#) = 1<<0 , [INVISIBLE](#) = 1<<1 , [OUTPUT](#) = 1<<2 , [NOBORDER](#) = 1<<3 ,

[USERFLAG1](#) = 1<<31 }
flags possible values enumeration.

11.153.1 Detailed Description

Tree widget.

Figure 11.62 Fl_Tree example program

```
Fl_Tree
|--- Fl_Tree_Item                                // Top level widget
                                                // Items in the tree
```

```

|--- Fl_Tree_Prefs                                // Preferences for the tree
|--- Fl_Tree_Connector (enum)                    // Connection modes
|--- Fl_Tree_Select (enum)                       // Selection modes
|--- Fl_Tree_Sort (enum)                        // Sort behavior

```

Similar to [Fl_Browser](#), [Fl_Tree](#) is a browser of [Fl_Tree_Item](#)'s arranged in a parented hierarchy, or 'tree'. Subtrees can be expanded or closed. Items can be added, deleted, inserted, sorted and re-ordered.

The tree items may also contain other FLTK widgets, like buttons, input fields, or even "custom" widgets.

The [callback\(\)](#) is invoked depending on the value of [when\(\)](#):

- [FL_WHEN_RELEASE](#) – callback invoked when left mouse button is released on an item
- [FL_WHEN_CHANGED](#) – callback invoked when left mouse changes selection state

The simple way to define a tree:

```

#include <FL/Fl_Tree.H>
[... ]
Fl_Tree tree(X,Y,W,H);
tree.begin();
    tree.add("Flintstones/Fred");
    tree.add("Flintstones/Wilma");
    tree.add("Flintstones/Pebbles");
    tree.add("Simpsons/Homer");
    tree.add("Simpsons/Marge");
    tree.add("Simpsons/Bart");
    tree.add("Simpsons/Lisa");
tree.end();

```

FEATURES

Items can be added with [add\(\)](#),
 removed with [remove\(\)](#),
 completely cleared with [clear\(\)](#),
 inserted with [insert\(\)](#) and [insert_above\(\)](#),
 selected/deselected with [select\(\)](#) and [deselect\(\)](#),
 open/closed with [open\(\)](#) and [close\(\)](#),
 positioned on the screen with [show_item_top\(\)](#), [show_item_middle\(\)](#) and [show_item_bottom\(\)](#),
 item children can be swapped around with [Fl_Tree_Item::swap_children\(\)](#),
 items can be moved around with [Fl_Tree_Item::move\(\)](#),
 an item's children can be walked with [Fl_Tree_Item::first\(\)](#) and [Fl_Tree_Item::next\(\)](#), an item's children can be indexed directly with [Fl_Tree_Item::child\(\)](#) and [Fl_Tree_Item::children\(\)](#),
 items can be moved from one subtree to another with [Fl_Tree_Item::deparent\(\)](#) and [Fl_Tree_Item::reparent\(\)](#),
 sorting can be controlled when items are [add\(\)](#)ed via [sortorder\(\)](#).
 You can walk the entire tree with [first\(\)](#) and [next\(\)](#).
 You can walk visible items with [first_visible_item\(\)](#) and [next_visible_item\(\)](#).
 You can walk selected items with [first_selected_item\(\)](#) and [next_selected_item\(\)](#).
 Items can be found by their pathname using [find_item\(const char*\)](#), and an item's pathname can be found with [item_pathname\(\)](#).
 The selected items' colors are controlled by [selection_color\(\)](#) (inherited from [Fl_Widget](#)).
 A hook is provided to allow you to redefine how item's labels are drawn via [Fl_Tree::item_draw_callback\(\)](#).
 Items can be interactively dragged using [FL_TREE_SELECT_SINGLE_DRAGGABLE](#).

SELECTION OF ITEMS

The tree can have different selection behaviors controlled by [selectmode\(\)](#). The background color used for selected items is the [Fl_Tree::selection_color\(\)](#). The foreground color for selected items is controlled internally with [fl_contrast\(\)](#).

CHILD WIDGETS

FLTK widgets (including custom widgets) can be assigned to tree items via [Fl_Tree_Item::widget\(\)](#).

When an `Fl_Tree_Item::widget()` is defined, the default behavior is for the `widget()` to be shown in place of the item's label (if it has one). Only the `widget()`'s width will be used; the `widget()`'s `x()` and `y()` position will be managed by the tree, and the `h()` will track the item's height. This default behavior can be altered (ABI 1.3.1): Setting `Fl_Tree::item_draw_mode()`'s `FL_TREE_ITEM_DRAW_LABEL_AND_WIDGET` flag causes the label + widget to be displayed together in that order, and adding the `FL_TREE_ITEM_HEIGHT_FROM_WIDGET` flag causes `widget()`'s height to define the `widget()`'s height.

ICONS

The tree's open/close icons can be redefined with `Fl_Tree::openicon()`, `Fl_Tree::closeicon()`. User icons can either be changed globally with `Fl_Tree::usericon()`, or on a per-item basis with `Fl_Tree_Item::usericon()`.

Various default preferences can be globally manipulated via `Fl_Tree_Prefs`, including colors, margins, icons, connection lines, etc.

FONTS AND COLORS

When adding new items to the tree, the new items get the defaults for fonts and colors from:

- `Fl_Tree::item_labelfont()` – The default item label font (default: `FL_HELVETICA`)
- `Fl_Tree::item_labelsize()` – The default item label size (default: `FL_NORMAL_SIZE`)
- `Fl_Tree::item_labelfgcolor()` – The default item label foreground color (default: `FL_FOREGROUND_COLOR`)
- `Fl_Tree::item_labelbgcolor()` – The default item label background color (default: `0xffffffff`, which tree uses as 'transparent')

Each item (`Fl_Tree_Item`) inherits a copy of these font/color attributes when created, and each item has its own methods to let the app change these values on a per-item basis using methods of the same name:

- `Fl_Tree_Item::labelfont()` – The item's label font (default: `FL_HELVETICA`)
- `Fl_Tree_Item::labelsize()` – The item's label size (default: `FL_NORMAL_SIZE`)
- `Fl_Tree_Item::labelfgcolor()` – The item's label foreground color (default: `FL_FOREGROUND_COLOR`)
- `Fl_Tree_Item::labelbgcolor()` – The item's label background color (default: `0xffffffff`, which uses the tree's own bg color)

CALLBACKS

The tree's `callback()` will be invoked when items change state or are open/closed. `when()` controls when mouse/keyboard events invoke the callback. `callback_item()` and `callback_reason()` can be used to determine the cause of the callback. e.g.

```
void MyTreeCallback(Fl_Widget *w, void *data) {
    Fl_Tree *tree = (Fl_Tree*)w;
    Fl_Tree_Item *item = (Fl_Tree_Item*)tree->callback_item();    // get selected item
    switch ( tree->callback_reason() ) {
        case FL_TREE_REASON_SELECTED: [...]
        case FL_TREE_REASON_DESELECTED: [...]
        case FL_TREE_REASON_RESELECTED: [...]
        case FL_TREE_REASON_OPENED: [...]
        case FL_TREE_REASON_CLOSED: [...]
    }
}
```

SIMPLE EXAMPLES

To find all the selected items:

```
for ( Fl_Tree_Item *i=first_selected_item(); i; i=next_selected_item(i) )
    printf("Item %s is selected\n", i->label());
```

To get an item's full menu pathname, use `Fl_Tree::item_pathname()`, e.g.

```
[..]
char pathname[256] = "???";
tree->item_pathname(pathname, sizeof(pathname), item);           // eg. "Parent/Child/Item"
[..]
```

To walk all the items of the tree from top to bottom:

```
// Walk all the items in the tree, and print their labels
for ( Fl_Tree_Item *item = tree->first(); item; item = tree->next(item) ) {
    printf("Item: %s\n", item->label());
}
```

To recursively walk all the children of a particular item, define a function that uses recursion:

```
// Find all of the item's children and print an indented report of their labels
void my_print_all_children(Fl_Tree_Item *item, int indent=0) {
    for ( int t=0; t<item->children(); t++ ) {
        printf("%*s Item: %s\n", indent, "", item->child(t)->label());
        my_print_all_children(item->child(t), indent+4);    // recurse
    }
}
```

To change the default label font and color when creating new items:

```
tree = new Fl_Tree(..);
tree->item_labelfont(FL_COURIER);           // Use Courier font for all new items
tree->item_labelcolor(FL_RED);              // Use red color for labels of all new items
[..]
// Now create the items in the tree using the above defaults.
tree->add("Aaa");
tree->add("Bbb");
```

To change the font and color of all existing items in the tree:

```
// Change the font and color of all items currently in the tree
for ( Fl_Tree_Item *item = tree->first(); item; item = tree->next(item) ) {
    item->labelfont(FL_COURIER);
    item->labelcolor(FL_RED);
}
```

DISPLAY DESCRIPTION

The following image shows the tree's various visual elements and the methods that control them:

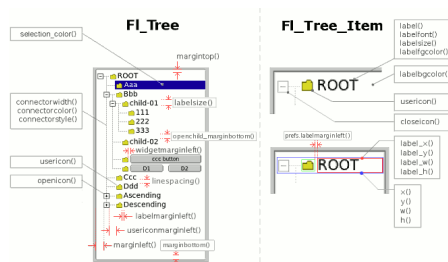

Figure 11.63 FI_Tree elements

The following shows the protected dimension variables 'tree inner' (tix..) and 'tree outer' (tox..):

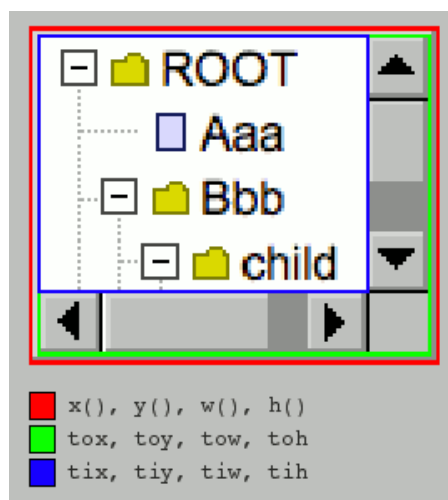

Figure 11.64 FI_Tree inner/outer dimensions

KEYBOARD BINDINGS

The following table lists keyboard bindings for navigating the tree:

Keyboard	FL_TREE_SELECT _MULTI	FL_TREE_SELECT _SINGLE	FL_TREE_SELECT _NONE
Ctrl-A (Linux/Windows)	Select all items	N/A	N/A
Command-A (Mac)	Select all items	N/A	N/A
Space	Selects item	Selects item	N/A
Ctrl-Space	Toggle item	Toggle item	N/A
Shift-Space	Extends selection	Selects item	N/A
Enter	Toggles open/close	Toggles open/close	Toggles open/close
Ctrl-Enter	Toggles open/close	Toggles open/close	Toggles open/close
Shift-Enter	Toggles open/close	Toggles open/close	Toggles open/close
Right / Left	Open/Close item	Open/Close item	Open/Close item
Up / Down	Move focus box up/down	Move focus box up/down	N/A
Shift-Up / Shift-Down	Extend selection up/down	Move focus up/down	N/A

Home / End	Move to top/bottom of tree	Move to top/bottom of tree	Move to top/bottom of tree
PageUp / PageDown	Page up/down	Page up/down	Page up/down

11.153.2 Member Function Documentation

11.153.2.1 add() [1/2]

```
Fl_Tree_Item * Fl_Tree::add (
    const char * path,
    Fl_Tree_Item * item = 0)
```

Adds a new item, given a menu style 'path'.

Any parent nodes that don't already exist are created automatically. Adds the item based on the value of [sortorder\(\)](#).

If 'item' is NULL, a new item is created.

To specify items or submenus that contain slashes ('/' or '\') use an escape character to protect them, e.g.

```
:
tree->add("/Holidays/Photos/12\\/25\\/2010");           // Adds item "12/25/2010"
tree->add("/Pathnames/c:\\\\Program Files\\\\MyApp"); // Adds item "c:\Program Files\MyApp"
:
```

Parameters

in	<i>path</i>	The path to the item, e.g. "Flintstone/Fred".
in	<i>item</i>	The new item to be added. If NULL, a new item is created with a name that is the last element in 'path'.

Returns

The new item added, or 0 on error.

Version

1.3.3

11.153.2.2 add() [2/2]

```
Fl_Tree_Item * Fl_Tree::add (
    Fl_Tree_Item * parent_item,
    const char * name)
```

Add a new child item labeled 'name' to the specified 'parent_item'.

Parameters

in	<i>parent_item</i>	The parent item the new child item will be added to. Must not be NULL.
in	<i>name</i>	The label for the new item

Returns

The new item added.

Version

1.3.0 release

11.153.2.3 calc_dimensions()

```
void Fl_Tree::calc_dimensions ()
```

Recalculate widget dimensions and scrollbar visibility, normally managed automatically.

Low overhead way to update the tree widget's outer/inner dimensions and re-determine scrollbar visibility based on these changes without recalculating the entire size of the tree data.

Assumes that either the tree's size in `_tree_w/_tree_h` are correct so that scrollbar visibility can be calculated easily, or are both zero indicating scrollbar visibility can't be calculated yet.

This method is called when the widget is [resize\(\)](#)ed or if the scrollbar's sizes are changed (affects tree widget's inner dimensions `tix/y/w/h`), and also used by [calc_tree\(\)](#).

Version

1.3.3 ABI feature

11.153.2.4 calc_tree()

```
void Fl_Tree::calc_tree ()
```

Recalculates the tree's sizes and scrollbar visibility, normally managed automatically.

On return:

- `_tree_w` will be the overall pixel width of the entire viewable tree
- `_tree_h` will be the overall pixel height ""
- scrollbar visibility and pan sizes are updated
- internal `_tix/_tiy/_tiw/_tih` dimensions are updated

`_tree_w/_tree_h` include the tree's margins (e.g. [marginleft\(\)](#)), whether items are open or closed, label contents and font sizes, etc.

The tree hierarchy's size is managed separately from the widget's size as an optimization; this way [resize\(\)](#) on the widget doesn't involve recalculating the tree's hierarchy needlessly, as widget size has no bearing on the tree hierarchy.

The tree hierarchy's size only changes when items are added/removed, open/closed, label contents or font sizes changed, margins changed, etc.

This calculation involves walking the *entire* tree from top to bottom, potentially a slow calculation if the tree has many items (potentially hundreds of thousands), and should therefore be called sparingly.

For this reason, [recalc_tree\(\)](#) is used as a way to /schedule/ calculation when changes affect the tree hierarchy's size.

Apps may want to call this method directly if the app makes changes to the tree's geometry, then immediately needs to work with the tree's new dimensions before an actual redraw (and recalc) occurs. (This use by an app should only rarely be needed)

11.153.2.5 callback_item() [1/2]

```
Fl_Tree_Item * Fl_Tree::callback_item ()
```

Gets the item that caused the callback.

The [callback\(\)](#) can use this value to see which item changed.

11.153.2.6 callback_item() [2/2]

```
void Fl_Tree::callback_item (
    Fl_Tree_Item * item)
```

Sets the item that was changed for this callback.

Used internally to pass the item that invoked the callback.

11.153.2.7 callback_reason() [1/2]

```
Fl_Tree_Reason Fl_Tree::callback_reason () const
```

Gets the reason for this callback.

The [callback\(\)](#) can use this value to see why it was called. Example:

```

:
void MyTreeCallback(Fl_Widget *w, void *userdata) {
    Fl_Tree *tree = (Fl_Tree*)w;
    Fl_Tree_Item *item = tree->callback_item();    // the item changed (can be NULL if more than one
item was changed!)
    switch ( tree->callback_reason() ) {           // reason callback was invoked
        case FL_TREE_REASON_OPENED: ..item was opened..
        case FL_TREE_REASON_CLOSED: ..item was closed..
        case FL_TREE_REASON_SELECTED: ..item was selected..
        case FL_TREE_REASON_RESELECTED: ..item was reselected (double-clicked, etc)..
        case FL_TREE_REASON_DESELECTED: ..item was deselected..
    }
}
:

```

See also

[item_reselect_mode\(\)](#) – enables `FL_TREE_REASON_RESELECTED` events

11.153.2.8 callback_reason() [2/2]

```

void Fl_Tree::callback_reason (
    Fl_Tree_Reason reason)

```

Sets the reason for this callback.

Used internally to pass the reason the callback was invoked.

11.153.2.9 clear()

```

void Fl_Tree::clear (
    void )

```

Clear the entire tree's children, including the root.

The tree will be left completely empty.

11.153.2.10 clear_children()

```

void Fl_Tree::clear_children (
    Fl_Tree_Item * item)

```

Clear all the children for 'item'.

Item may not be NULL.

11.153.2.11 close() [1/2]

```

int Fl_Tree::close (
    const char * path,
    int docallback = 1)

```

Closes the item specified by 'path'.

Invokes the callback depending on the value of optional parameter 'docallback'.

Handles calling [redraw\(\)](#) if anything changed.

Items or submenus that themselves contain slashes ('/' or '\') should be escaped, e.g. `close("Holidays/12\25\2010")`.

The callback can use [callback_item\(\)](#) and [callback_reason\(\)](#) respectively to determine the item changed and the reason the callback was called.

Parameters

in	<i>path</i>	– the tree item's pathname (e.g. "Flintstones/Fred")
in	<i>docallback</i>	– A flag that determines if the callback() is invoked or not: <ul style="list-style-type: none"> • 0 - callback() is not invoked • 1 - callback() is invoked if item changed (default), callback_reason() will be <code>FL_TREE_REASON_CLOSED</code>

Returns

- 1 – OK: item closed
- 0 – OK: item was already closed, no change
- -1 – ERROR: item was not found

See also

[open\(\)](#), [close\(\)](#), [is_open\(\)](#), [is_close\(\)](#), [callback_item\(\)](#), [callback_reason\(\)](#)

11.153.2.12 close() [2/2]

```
int Fl_Tree::close (
    Fl_Tree_Item * item,
    int docalldback = 1)
```

Closes the specified 'item'.

Invokes the callback depending on the value of optional parameter 'docalldback'.

Handles calling [redraw\(\)](#) if anything changed.

The callback can use [callback_item\(\)](#) and [callback_reason\(\)](#) respectively to determine the item changed and the reason the callback was called.

Parameters

in	<i>item</i>	– the item to be closed. Must not be NULL.
in	<i>docalldback</i>	– A flag that determines if the callback() is invoked or not: <ul style="list-style-type: none"> • 0 - callback() is not invoked • 1 - callback() is invoked if item changed (default), callback_reason() will be FL_TREE_REASON_CLOSED

Returns

- 1 – item was closed
- 0 – item was already closed, no change

See also

[open\(\)](#), [close\(\)](#), [is_open\(\)](#), [is_close\(\)](#), [callback_item\(\)](#), [callback_reason\(\)](#)

11.153.2.13 closeicon() [1/2]

```
Fl_Image * Fl_Tree::closeicon () const
```

Returns the icon to be used as the 'close' icon.

If none was set, the internal default is returned, a simple '[-]' icon.

11.153.2.14 closeicon() [2/2]

```
void Fl_Tree::closeicon (
    Fl_Image * val)
```

Sets the icon to be used as the 'close' icon.

This overrides the built in default '[-]' icon.

Parameters

in	<i>val</i>	– The new image, or zero to use the default '[-]' icon.
----	------------	---

11.153.2.15 connectorstyle()

```
void Fl_Tree::connectorstyle (
    Fl_Tree_Connector val)
```

Sets the line drawing style for inter-connecting items.

See [Fl_Tree_Connector](#) for possible values.

11.153.2.16 deselect() [1/2]

```
int Fl_Tree::deselect (
    const char * path,
    int dcallback = 1)
```

Deselect an item specified by 'path'.

Invokes the callback depending on the value of optional parameter 'dcallback'.

Handles calling [redraw\(\)](#) if anything changed.

Items or submenus that themselves contain slashes ('/' or '\') should be escaped, e.g. `deselect("← Holidays/12\V25\V2010")`.

The callback can use [callback_item\(\)](#) and [callback_reason\(\)](#) respectively to determine the item changed and the reason the callback was called.

Parameters

in	<i>path</i>	– the tree item's pathname (e.g. "Flintstones/Fred")
in	<i>dcallback</i>	– A flag that determines if the callback() is invoked or not: <ul style="list-style-type: none"> • 0 - the callback() is not invoked • 1 - the callback() is invoked if item changed state (default), callback_reason() will be <code>FL_TREE_REASON_DESELECTED</code>

Returns

- 1 - OK: item's state was changed
- 0 - OK: item was already deselected, no change was made
- -1 - ERROR: item was not found

11.153.2.17 deselect() [2/2]

```
int Fl_Tree::deselect (
    Fl_Tree_Item * item,
    int dcallback = 1)
```

Deselect the specified *item*.

Invokes the callback depending on the value of optional parameter 'dcallback'.

Handles calling [redraw\(\)](#) if anything changed.

The callback can use [callback_item\(\)](#) and [callback_reason\(\)](#) respectively to determine the item changed and the reason the callback was called.

Parameters

in	<i>item</i>	– the item to be deselected. Must not be NULL.
in	<i>dcallback</i>	– A flag that determines if the callback() is invoked or not: <ul style="list-style-type: none"> • 0 - the callback() is not invoked • 1 - the callback() is invoked if item changed state (default), callback_reason() will be <code>FL_TREE_REASON_DESELECTED</code>

Returns

- 0 - item was already deselected, no change was made
- 1 - item's state was changed

11.153.2.18 deselect_all()

```
int Fl_Tree::deselect_all (
    Fl_Tree_Item * item = 0,
    int docallback = 1)
```

Deselect 'item' and all its children.

If item is NULL, [first\(\)](#) is used.

Invokes the callback depending on the value of optional parameter 'docallback'.

Handles calling [redraw\(\)](#) if anything changed.

The callback can use [callback_item\(\)](#) and [callback_reason\(\)](#) respectively to determine the item changed and the reason the callback was called.

Parameters

in	<i>item</i>	The item that will be deselected (along with all its children). If NULL, first() is used.
in	<i>docallback</i>	– A flag that determines if the callback() is invoked or not: <ul style="list-style-type: none"> • 0 - the callback() is not invoked • 1 - the callback() is invoked for each item that changed state (default), callback_reason() will be FL_TREE_REASON_DESELECTED

Returns

Count of how many items were actually changed to the deselected state.

11.153.2.19 display()

```
void Fl_Tree::display (
    Fl_Tree_Item * item)
```

Displays 'item', scrolling the tree as necessary.

Parameters

in	<i>item</i>	The item to be displayed. If NULL, first() is used.
----	-------------	---

11.153.2.20 displayed()

```
int Fl_Tree::displayed (
    Fl_Tree_Item * item)
```

See if 'item' is currently displayed on-screen (visible within the widget).

This can be used to detect if the item is scrolled off-screen. Checks to see if the item's vertical position is within the top and bottom edges of the display window. This does NOT take into account the [hide\(\)](#) / [show\(\)](#) or [open\(\)](#) / [close\(\)](#) status of the item.

Parameters

in	<i>item</i>	The item to be checked. If NULL, first() is used.
----	-------------	---

Returns

1 if displayed, 0 if scrolled off screen or no items are in tree.

11.153.2.21 draw()

```
void Fl_Tree::draw (
    void ) [protected], [virtual]
```

Standard FLTK [draw\(\)](#) method, handles drawing the tree widget.
Reimplemented from [Fl_Group](#).

11.153.2.22 extend_selection()

```
int Fl_Tree::extend_selection (
    Fl_Tree_Item * from,
    Fl_Tree_Item * to,
    int val = 1,
    bool visible = false)
```

Extend a selection between 'from' and 'to' depending on 'visible'.

Similar to the more efficient [extend_selection_dir\(Fl_Tree_Item*,Fl_Tree_Item*,int dir,int val,bool vis\)](#) method, but direction (up or down) doesn't need to be known.

We're less efficient because we search the tree for to/from, then operate on items in between. The more efficient method avoids the "search", but necessitates a direction to be specified to find 'to'.

Used by SHIFT-click to extend a selection between two items inclusive.

Handles calling [redraw\(\)](#) if anything changed.

Parameters

in	<i>from</i>	Starting item
in	<i>to</i>	Ending item
in	<i>val</i>	Select or deselect items (0=deselect, 1=select, 2=toggle)
in	<i>visible</i>	true=affect only open() , visible items, false=affect open or closed items (default)

Returns

The number of items whose selection states were changed, if any.

Version

1.3.3 ABI feature

11.153.2.23 extend_selection_dir()

```
int Fl_Tree::extend_selection_dir (
    Fl_Tree_Item * from,
    Fl_Tree_Item * to,
    int dir,
    int val,
    bool visible)
```

Extend the selection between and including 'from' and 'to' depending on direction 'dir', 'val', and 'visible'.

Efficient: does not walk entire tree; starts with 'from' and stops at 'to' while moving in direction 'dir'. Dir must be specified though.

If dir cannot be known in advance, such as during SHIFT-click operations, the method [extend_selection\(Fl_Tree_Item*,Fl_Tree_Item*,i](#) should be used.

Handles calling [redraw\(\)](#) if anything changed.

Parameters

in	<i>from</i>	Starting item
in	<i>to</i>	Ending item

Parameters

in	<i>dir</i>	Direction to extend selection (FL_Up or FL_Down)
in	<i>val</i>	0=deselect, 1=select, 2=toggle
in	<i>visible</i>	true=affect only open() , visible items, false=affect open or closed items (default)

Returns

The number of items whose selection states were changed, if any.

Version

1.3.3

11.153.2.24 find_clicked()

```
const Fl_Tree_Item * Fl_Tree::find_clicked (
    int yonly = 0) const
```

Find the item that was last clicked on.

You should use [callback_item\(\)](#) instead, which is fast, and is meant to be used within a callback to determine the item clicked.

This method walks the entire tree looking for the first item that is under the mouse. (The value of the 'yonly' flag affects whether both x and y events are checked, or just y)

Use this method /only/ if you've subclassed [Fl_Tree](#), and are receiving events before [Fl_Tree](#) has been able to process and update [callback_item\(\)](#).

Parameters

in	<i>yonly</i>	– 0: check both event's X and Y values. – 1: only check event's Y value, don't care about X.
----	--------------	--

Returns

The item clicked, or NULL if no item was under the current event.

Version

1.3.0

1.3.3 ABI feature: added yonly parameter

11.153.2.25 find_item()

```
const Fl_Tree_Item * Fl_Tree::find_item (
    const char * path) const
```

Find the item, given a menu style path, e.g.

"/Parent/Child/item". There is both a const and non-const version of this method. Const version allows pure const methods to use this method to do lookups without causing compiler errors.

To specify items or submenus that contain slashes ('/' or '\') use an escape character to protect them, e.g.

```
:
tree->add("/Holidays/Photos/12\\25\\2010"); // Adds item "12/25/2010"
tree->add("/Pathnames/c:\\\\Program Files\\\\MyApp"); // Adds item "c:\Program Files\MyApp"
:
```

Parameters

<code>in</code>	<code>path</code>	– the tree item's pathname to be found (e.g. "Flintstones/Fred")
-----------------	-------------------	--

Returns

The item, or NULL if not found.

See also

[item_pathname\(\)](#)

11.153.2.26 first()

`Fl_Tree_Item * Fl_Tree::first ()`

Returns the first item in the tree, or 0 if none.

Use this to walk the tree in the forward direction, e.g.

```
:
for ( Fl_Tree_Item *item = tree->first(); item; item = tree->next(item) )
    printf("Item: %s\n", item->label());
:
```

Returns

First item in tree, or 0 if none (tree empty).

See also

[first\(\)](#), [next\(\)](#), [last\(\)](#), [prev\(\)](#)

11.153.2.27 first_selected_item()

`Fl_Tree_Item * Fl_Tree::first_selected_item ()`

Returns the first selected item in the tree.

Use this to walk the tree from top to bottom looking for all the selected items, e.g.

```
:
// Walk tree forward, from top to bottom
for ( Fl_Tree_Item *i=tree->first_selected_item(); i; i=tree->next_selected_item(i) )
    printf("Selected item: %s\n", i->label());
:
```

Returns

The first selected item, or 0 if none.

See also

[first_selected_item\(\)](#), [last_selected_item\(\)](#), [next_selected_item\(\)](#)

11.153.2.28 first_visible()

`Fl_Tree_Item * Fl_Tree::first_visible ()`

Returns the first [open\(\)](#), visible item in the tree, or 0 if none.

Deprecated in 1.3.3 ABI – use [first_visible_item\(\)](#) instead.

11.153.2.29 first_visible_item()

`Fl_Tree_Item * Fl_Tree::first_visible_item ()`

Returns the first [open\(\)](#), visible item in the tree, or 0 if none.

Returns

First visible item in tree, or 0 if none.

See also

[first_visible_item\(\)](#), [last_visible_item\(\)](#), [next_visible_item\(\)](#)

Version

1.3.3

11.153.2.30 get_selected_items()

```
int Fl_Tree::get_selected_items (
    Fl_Tree_Item_Array & ret_items)
```

Returns the currently selected items as an array of 'ret_items'.

Example:

```
:
// Get selected items as an array
Fl_Tree_Item_Array items;
tree->get_selected_items(items);
// Manipulate the returned array
for ( int t=0; t<items.total(); t++ ) {
    Fl_Tree_Item &item = items[t];
    ..do stuff with each selected item..
}
:
```

Parameters

out	<i>ret_items</i>	The returned array of selected items.
-----	------------------	---------------------------------------

Returns

The number of items in the returned array.

See also

[first_selected_item\(\)](#), [next_selected_item\(\)](#)

Version

1.3.3 ABI feature

11.153.2.31 handle()

```
int Fl_Tree::handle (
    int e) [virtual]
```

Standard FLTK event handler for this widget.

Todo add [Fl_Widget_Tracker](#) (see [Fl_Browser_cxx::handle\(\)](#))

Reimplemented from [Fl_Group](#).

11.153.2.32 hposition() [1/2]

```
int Fl_Tree::hposition () const
```

Returns the horizontal scroll position as a pixel offset.

The position returned is how many pixels of the tree are scrolled off the left edge of the screen.

See also

[hposition\(int\)](#), [vposition\(\)](#), [vposition\(int\)](#)

Note

Must be using FLTK ABI 1.3.3 or higher for this to be effective.

11.153.2.33 hposition() [2/2]

```
void Fl_Tree::hposition (
    int pos)
```

Sets the horizontal scroll offset to position 'pos'.

The position is how many pixels of the tree are scrolled off the left edge of the screen.

Parameters

in	pos	The vertical position (in pixels) to scroll the tree to.
----	-----	--

See also

[hposition\(\)](#), [vposition\(\)](#), [vposition\(int\)](#)

Note

Must be using FLTK ABI 1.3.3 or higher for this to be effective.

11.153.2.34 insert()

```
Fl_Tree_Item * Fl_Tree::insert (
    Fl_Tree_Item * item,
    const char * name,
    int pos)
```

Insert a new item 'name' into 'item's children at position 'pos'.

If pos is out of range the new item is

- prepended if pos < 0 or
- appended if pos > item->[children\(\)](#).

Note: pos == [children\(\)](#) is not considered out of range: the item is appended to the child list.

Example:

```
:
tree->add("Aaa/000");      // "000" is index 0 in Aaa's children
tree->add("Aaa/111");      // "111" is index 1 in Aaa's children
tree->add("Aaa/222");      // "222" is index 2 in Aaa's children
:
// How to use insert() to insert a new item between Aaa/111 + Aaa/222
Fl_Tree_Item *item = tree->find_item("Aaa"); // get parent item Aaa
if (item) tree->insert(item, "New item", 2); // insert as a child of Aaa at index #2
:
```

Parameters

in	<i>item</i>	The existing item to insert new child into. Must not be NULL.
in	<i>name</i>	The label for the new item
in	<i>pos</i>	The position of the new item in the child list

Returns

The new item added.

See also

[insert_above\(\)](#)

11.153.2.35 insert_above()

```
Fl_Tree_Item * Fl_Tree::insert_above (
    Fl_Tree_Item * above,
    const char * name)
```

Inserts a new item 'name' above the specified [Fl_Tree_Item](#) 'above'.

Example:

```
:
tree->add("Aaa/000");      // "000" is index 0 in Aaa's children
tree->add("Aaa/111");      // "111" is index 1 in Aaa's children
tree->add("Aaa/222");      // "222" is index 2 in Aaa's children
..
// How to use insert_above() to insert a new item above Aaa/222
Fl_Tree_Item *item = tree->find_item("Aaa/222"); // get item Aaa/222
if (item) tree->insert_above(item, "New item"); // insert new item above it
:
```

Parameters

in	<i>above</i>	– the item above which to insert the new item. Must not be NULL.
in	<i>name</i>	– the name of the new item

Returns

The new item added, or 0 if 'above' could not be found.

See also

[insert\(\)](#)

11.153.2.36 is_close() [1/2]

```
int Fl_Tree::is_close (
    const char * path) const
```

See if item specified by 'path' is closed.

Items or submenus that themselves contain slashes ('/' or '\') should be escaped, e.g. `is_close("Holidays/12\\V25\\V2010")`.

Parameters

in	<i>path</i>	– the tree item's pathname (e.g. "Flintstones/Fred")
----	-------------	--

Returns

- 1 - OK: item is closed
- 0 - OK: item is open
- -1 - ERROR: item was not found

11.153.2.37 is_close() [2/2]

```
int Fl_Tree::is_close (
    Fl_Tree_Item * item) const
```

See if the specified 'item' is closed.

Parameters

in	item	– the item to be tested. Must not be NULL.
----	------	--

Returns

- 1 : item is closed
- 0 : item is open

11.153.2.38 is_hscroll_visible()

```
int Fl_Tree::is_hscroll_visible () const
```

See if the horizontal scrollbar is currently visible.

Returns

1 if scrollbar visible, 0 if not.

Note

Must be using FLTK ABI 1.3.3 or higher for this to be effective.

11.153.2.39 is_open() [1/2]

```
int Fl_Tree::is_open (
    const char * path) const
```

See if item specified by 'path' is open.

Items or submenus that themselves contain slashes ('/' or '\') should be escaped, e.g. `is_open("Holidays/12\25\2010")`.

Items that are 'open' are themselves not necessarily visible; one of the item's parents might be closed.

Parameters

in	path	– the tree item's pathname (e.g. "Flintstones/Fred")
----	------	--

Returns

- 1 - OK: item is open
- 0 - OK: item is closed
- -1 - ERROR: item was not found

See also

[Fl_Tree_Item::visible_r\(\)](#)

11.153.2.40 is_open() [2/2]

```
int Fl_Tree::is_open (
    Fl_Tree_Item * item) const
```

See if 'item' is open.

Items that are 'open' are themselves not necessarily visible; one of the item's parents might be closed.

Parameters

in	<i>item</i>	– the item to be tested. Must not be NULL.
----	-------------	--

Returns

- 1 : item is open
- 0 : item is closed

11.153.2.41 is_scrollbar()

```
int Fl_Tree::is_scrollbar (
    Fl_Widget * w)
```

See if widget 'w' is one of the [Fl_Tree](#) widget's scrollbars.

Use this to skip over the scrollbars when walking the [child\(\)](#) array. Example:

```
:
for ( int i=0; i<tree->children(); i++ ) {    // walk children
    Fl_Widget *w = tree->child(i);
    if ( tree->is_scrollbar(w) ) continue;    // skip scrollbars
    ..do work here..
}
:
```

Parameters

in	<i>w</i>	Widget to test
----	----------	----------------

Returns

1 if w is a scrollbar, 0 if not.

Todo should be const

11.153.2.42 is_selected() [1/2]

```
int Fl_Tree::is_selected (
    const char * path)
```

See if item specified by 'path' is selected.

Items or submenus that themselves contain slashes ('/' or '\') should be escaped, e.g. `is_selected("← Holidays/12\\25\\2010")`.

Parameters

in	<i>path</i>	– the tree item's pathname (e.g. "Flintstones/Fred")
----	-------------	--

Returns

- 1 : item selected
- 0 : item deselected
- -1 : item was not found

11.153.2.43 is_selected() [2/2]

```
int Fl_Tree::is_selected (
    Fl_Tree_Item * item) const
```

See if the specified 'item' is selected.

Parameters

<code>in</code>	<code>item</code>	– the item to be tested. Must not be NULL.
-----------------	-------------------	--

Returns

- 1 : item selected
- 0 : item deselected

11.153.2.44 is_vscroll_visible()

```
int Fl_Tree::is_vscroll_visible () const
```

See if the vertical scrollbar is currently visible.

Returns

1 if scrollbar visible, 0 if not.

11.153.2.45 item_clicked() [1/2]

```
Fl_Tree_Item * Fl_Tree::item_clicked ()
```

Return the item that was last clicked.

Valid only from within the [callback\(\)](#).

Returns

The item clicked, or 0 if none. 0 may also be used to indicate several items were clicked/changed.

Deprecated in 1.3.3 ABI – use [callback_item\(\)](#) instead.

11.153.2.46 item_clicked() [2/2]

```
void Fl_Tree::item_clicked (
    Fl_Tree_Item * item) [protected]
```

Set the item that was last clicked.

Should only be used by subclasses needing to change this value. Normally [Fl_Tree](#) manages this value.

Deprecated in 1.3.3 ABI – use [callback_item\(\)](#) instead.

11.153.2.47 item_draw_mode() [1/3]

```
Fl_Tree_Item_Draw_Mode Fl_Tree::item_draw_mode () const
```

Get the 'item draw mode' used for the tree.

Version

1.3.1 ABI feature

11.153.2.48 item_draw_mode() [2/3]

```
void Fl_Tree::item_draw_mode (
    Fl_Tree_Item_Draw_Mode mode)
```

Set the 'item draw mode' used for the tree to 'mode'.

This affects how items in the tree are drawn, such as when a widget() is defined. See [Fl_Tree_Item_Draw_Mode](#) for possible values.

Version

1.3.1 ABI feature

11.153.2.49 item_draw_mode() [3/3]

```
void Fl_Tree::item_draw_mode (
    int mode)
```

Set the 'item draw mode' used for the tree to integer 'mode'.

This affects how items in the tree are drawn, such as when a widget() is defined. See [Fl_Tree_Item_Draw_Mode](#) for possible values.

Version

1.3.1 ABI feature

11.153.2.50 item_labelbgcolor() [1/2]

```
void Fl_Tree::item_labelbgcolor (
    Fl_Color val)
```

Set the default label background color used for creating new items.

A special case is made for color 0xffffffff (default) which is treated as 'transparent'. To change the background color on a per-item basis, use [Fl_Tree_Item::labelbgcolor\(Fl_Color\)](#)

11.153.2.51 item_labelbgcolor() [2/2]

```
Fl_Color Fl_Tree::item_labelbgcolor (
    void ) const
```

Get the default label background color used for creating new items.

If the color is 0xffffffff, it is 'transparent'.

11.153.2.52 item_labelfgcolor()

```
void Fl_Tree::item_labelfgcolor (
    Fl_Color val)
```

Set the default label foreground color used for creating new items.

To change the foreground color on a per-item basis, use [Fl_Tree_Item::labelfgcolor\(Fl_Color\)](#)

11.153.2.53 item_labelfont()

```
void Fl_Tree::item_labelfont (
    Fl_Font val)
```

Set the default font face used for creating new items.

To change the font face on a per-item basis, use [Fl_Tree_Item::labelfont\(Fl_Font\)](#)

11.153.2.54 item_labelsize()

```
void Fl_Tree::item_labelsize (
    Fl_Fontsize val)
```

Set the default label font size used for creating new items.

To change the font size on a per-item basis, use [Fl_Tree_Item::labelsize\(Fl_Fontsize\)](#)

11.153.2.55 item_pathname()

```
int Fl_Tree::item_pathname (
    char * pathname,
    int pathnamelen,
    const Fl_Tree_Item * item) const
```

Return 'pathname' of size 'pathnamelen' for the specified 'item'.

If 'item' is NULL, [root\(\)](#) is used.

The tree's root will be included in the pathname if [showroot\(\)](#) is on.

Menu items or submenus that contain slashes ('/' or '\') in their names will be escaped with a backslash. This is symmetrical with the [add\(\)](#) function which uses the same escape pattern to set names.

Parameters

out	<i>pathname</i>	The string to use to return the pathname
in	<i>pathnamelen</i>	The maximum length of the string (including NULL). Must not be zero.
in	<i>item</i>	The item whose pathname is to be returned.

Returns

- 0 : OK (*pathname* returns the item's pathname)
- -1 : item not found (*pathname*="")
- -2 : *pathname* not large enough (*pathname*="")

See also

[find_item\(\)](#)

11.153.2.56 item_reselect_mode() [1/2]

```
Fl_Tree_Item_Reselect_Mode Fl_Tree::item_reselect_mode () const
```

Returns the current item re/selection mode.

Version

1.3.1 ABI feature

11.153.2.57 item_reselect_mode() [2/2]

```
void Fl_Tree::item_reselect_mode (
    Fl_Tree_Item_Reselect_Mode mode)
```

Sets the item re/selection mode.

See [Fl_Tree_Item_Reselect_Mode](#) for possible values.

Version

1.3.1 ABI feature

11.153.2.58 last()

```
Fl_Tree_Item * Fl_Tree::last ()
```

Returns the last item in the tree.

This can be used to walk the tree in reverse, e.g.

```
for ( Fl_Tree_Item *item = tree->last(); item; item = tree->prev() )
    printf("Item: %s\n", item->label());
```

Returns

Last item in the tree, or 0 if none (tree empty).

See also

[first\(\)](#), [next\(\)](#), [last\(\)](#), [prev\(\)](#)

11.153.2.59 last_selected_item()

`Fl_Tree_Item * Fl_Tree::last_selected_item ()`

Returns the last selected item in the tree.

Use this to walk the tree in reverse from bottom to top looking for all the selected items, e.g.

```

:
// Walk tree in reverse, from bottom to top
for ( Fl_Tree_Item *i=tree->last_selected_item(); i; i=tree->next_selected_item(i, FL_Up) )
    printf("Selected item: %s\n", i->label());
:

```

Returns

The last selected item, or 0 if none.

See also

[first_selected_item\(\)](#), [last_selected_item\(\)](#), [next_selected_item\(\)](#)

Version

1.3.3

11.153.2.60 last_visible()

`Fl_Tree_Item * Fl_Tree::last_visible ()`

Returns the last [open\(\)](#), visible item in the tree.

Deprecated in 1.3.3 – use [last_visible_item\(\)](#) instead.

11.153.2.61 last_visible_item()

`Fl_Tree_Item * Fl_Tree::last_visible_item ()`

Returns the last [open\(\)](#), visible item in the tree.

Returns

Last visible item in the tree, or 0 if none.

See also

[first_visible_item\(\)](#), [last_visible_item\(\)](#), [next_visible_item\(\)](#)

Version

1.3.3

11.153.2.62 load()

```

void Fl_Tree::load (
    class Fl_Preferences & prefs)

```

Load FLTK preferences.

Read a preferences database into the tree widget.

A preferences database is a hierarchical collection of data which can be directly loaded into the tree view for inspection.

Parameters

<code>in</code>	<code>prefs</code>	the Fl_Preferences database
-----------------	--------------------	---

11.153.2.63 next()

```
Fl_Tree_Item * Fl_Tree::next (
    Fl_Tree_Item * item = 0)
```

Return the next item after 'item', or 0 if no more items.

Use this code to walk the entire tree:

```
:
for ( Fl_Tree_Item *i = tree->first(); i; i = tree->next(i) )
    printf("Item: %s\n", i->label());
:
```

Parameters

in	<i>item</i>	The item to use to find the next item. If NULL, returns 0.
----	-------------	--

Returns

Next item in tree, or 0 if at last item.

See also

[first\(\)](#), [next\(\)](#), [last\(\)](#), [prev\(\)](#)

11.153.2.64 next_item()

```
Fl_Tree_Item * Fl_Tree::next_item (
    Fl_Tree_Item * item,
    int dir = FL_Down,
    bool visible = false)
```

Returns next item after 'item' in direction 'dir' depending on 'visible'.

Next item will be above (if dir==FL_Up) or below (if dir==FL_Down). If 'visible' is true, only items whose parents are [open\(\)](#) will be returned. If 'visible' is false, even items whose parents are [close\(\)](#)ed will be returned.

If item is 0, the return value will be the result of this truth table:

	visible=true	visible=false
	-----	-----
dir=FL_Up:	last_visible_item()	last()
dir=FL_Down:	first_visible_item()	first()

Example use:

```
:
// Walk down the tree showing open(), visible items
for ( Fl_Tree_Item *i=tree->first_visible_item(); i; i=tree->next_item(i, FL_Down, true) )
    printf("Item: %s\n", i->label());

// Walk up the tree showing open(), visible items
for ( Fl_Tree_Item *i=tree->last_visible_item(); i; i=tree->next_item(i, FL_Up, true) )
    printf("Item: %s\n", i->label());

// Walk down the tree showing all items (open or closed)
for ( Fl_Tree_Item *i=tree->first(); i; i=tree->next_item(i, FL_Down, false) )
    printf("Item: %s\n", i->label());

// Walk up the tree showing all items (open or closed)
for ( Fl_Tree_Item *i=tree->last(); i; i=tree->next_item(i, FL_Up, false) )
    printf("Item: %s\n", i->label());
:
```

Parameters

in	<i>item</i>	The item to use to find the next item. If NULL, returns 0.
----	-------------	--

in	<i>dir</i>	Can be FL_Up or FL_Down (default=FL_Down or 'next')
in	<i>visible</i>	true=return only open() , visible items, false=return open or closed items (default)

Returns

Next item in tree in the direction and visibility specified, or 0 if no more items of specified visibility in that direction.

See also

[first\(\)](#), [last\(\)](#), [next\(\)](#),
[first_visible_item\(\)](#), [last_visible_item\(\)](#), [next_visible_item\(\)](#),
[first_selected_item\(\)](#), [last_selected_item\(\)](#), [next_selected_item\(\)](#)

Version

1.3.3

11.153.2.65 next_selected_item()

```
Fl_Tree_Item * Fl_Tree::next_selected_item (
    Fl_Tree_Item * item = 0,
    int dir = FL_Down)
```

Returns the next selected item above or below 'item', depending on 'dir'.

If 'item' is 0, search starts at either [first\(\)](#) or [last\(\)](#), depending on 'dir': [first\(\)](#) if 'dir' is FL_Down (default), [last\(\)](#) if 'dir' is FL_Up.

Use this to walk the tree looking for all the selected items, e.g.

```
:
// Walk down the tree (forwards)
for ( Fl_Tree_Item *i=tree->first_selected_item(); i; i=tree->next_selected_item(i, FL_Down) )
    printf("Item: %s\n", i->label());

// Walk up the tree (backwards)
for ( Fl_Tree_Item *i=tree->last_selected_item(); i; i=tree->next_selected_item(i, FL_Up) )
    printf("Item: %s\n", i->label());
:
```

Parameters

in	<i>item</i>	The item above or below which we'll find the next selected item. If NULL, first() is used if FL_Down, last() if FL_Up. (default=NULL)
in	<i>dir</i>	The direction to go. FL_Up for moving up the tree, FL_Down for down the tree (default)

Returns

The next selected item, or 0 if there are no more selected items.

See also

[first_selected_item\(\)](#), [last_selected_item\(\)](#), [next_selected_item\(\)](#)

Version

1.3.3

11.153.2.66 next_visible_item()

```
Fl_Tree_Item * Fl_Tree::next_visible_item (
    Fl_Tree_Item * item,
    int dir)
```

Returns next [open\(\)](#), visible item above (`dir==FL_Up`) or below (`dir==FL_Down`) the specified '`item`', or 0 if no more items.

If '`item`' is 0, returns [last\(\)](#) if '`dir`' is `FL_Up`, or [first\(\)](#) if `dir` is `FL_Down`.

```
:
// Walk down the tree (forwards)
for ( Fl_Tree_Item *i=tree->first_visible_item(); i; i=tree->next_visible_item(i, FL_Down) )
    printf("Item: %s\n", i->label());

// Walk up the tree (backwards)
for ( Fl_Tree_Item *i=tree->last_visible_item(); i; i=tree->next_visible_item(i, FL_Up) )
    printf("Item: %s\n", i->label());
:
```

Parameters

in	<i>item</i>	The item above/below which we'll find the next visible item
in	<i>dir</i>	The direction to search. Can be <code>FL_Up</code> or <code>FL_Down</code> .

Returns

The item found, or 0 if there's no visible items above/below the specified `item`.

Version

1.3.3

11.153.2.67 open() [1/2]

```
int Fl_Tree::open (
    const char * path,
    int docallback = 1)
```

Opens the item specified by '`path`'.

This causes the item's children (if any) to be shown.

Invokes the callback depending on the value of optional parameter '`docallback`'.

Handles calling [redraw\(\)](#) if anything changed.

Items or submenus that themselves contain slashes ('/' or '\') should be escaped, e.g. `open("Holidays/12\25\2010")`.

The callback can use [callback_item\(\)](#) and [callback_reason\(\)](#) respectively to determine the item changed and the reason the callback was called.

Parameters

in	<i>path</i>	– the tree item's pathname (e.g. "Flintstones/Fred")
in	<i>docallback</i>	– A flag that determines if the callback() is invoked or not: <ul style="list-style-type: none"> • 0 - callback() is not invoked • 1 - callback() is invoked if item changed (default), callback_reason() will be <code>FL_TREE_REASON_OPENED</code>

Returns

- 1 – OK: item opened
- 0 – OK: item was already open, no change
- -1 – ERROR: item was not found

See also

[open\(\)](#), [close\(\)](#), [is_open\(\)](#), [is_close\(\)](#), [callback_item\(\)](#), [callback_reason\(\)](#)

11.153.2.68 open() [2/2]

```
int Fl_Tree::open (
    Fl_Tree_Item * item,
    int docalldback = 1)
```

Open the specified 'item'.

This causes the item's children (if any) to be shown.

Invokes the callback depending on the value of optional parameter 'docalldback'.

Handles calling [redraw\(\)](#) if anything changed.

The callback can use [callback_item\(\)](#) and [callback_reason\(\)](#) respectively to determine the item changed and the reason the callback was called.

Parameters

in	<i>item</i>	– the item to be opened. Must not be NULL.
in	<i>docalldback</i>	– A flag that determines if the callback() is invoked or not: <ul style="list-style-type: none"> • 0 - callback() is not invoked • 1 - callback() is invoked if item changed (default), callback_reason() will be FL_TREE_REASON_OPENED

Returns

- 1 – item was opened
- 0 – item was already open, no change

See also

[open\(\)](#), [close\(\)](#), [is_open\(\)](#), [is_close\(\)](#), [callback_item\(\)](#), [callback_reason\(\)](#)

11.153.2.69 open_toggle()

```
void Fl_Tree::open_toggle (
    Fl_Tree_Item * item,
    int docalldback = 1)
```

Toggle the open state of 'item'.

Invokes the callback depending on the value of optional parameter 'docalldback'.

Handles calling [redraw\(\)](#) if anything changed.

The callback can use [callback_item\(\)](#) and [callback_reason\(\)](#) respectively to determine the item changed and the reason the callback was called.

Parameters

in	<i>item</i>	– the item whose open state is to be toggled. Must not be NULL.
in	<i>docalldback</i>	– A flag that determines if the callback() is invoked or not: <ul style="list-style-type: none"> • 0 - callback() is not invoked • 1 - callback() is invoked (default), callback_reason() will be either FL_TREE_REASON_OPENED or FL_TREE_REASON_CLOSED

[open\(\)](#), [close\(\)](#), [is_open\(\)](#), [is_close\(\)](#), [callback_item\(\)](#), [callback_reason\(\)](#)

11.153.2.70 openicon() [1/2]

```
Fl_Image * Fl_Tree::openicon () const
```

Returns the icon to be used as the 'open' icon.

If none was set, the internal default is returned, a simple '[+]' icon.

11.153.2.71 openicon() [2/2]

```
void Fl_Tree::openicon (
    Fl_Image * val)
```

Sets the icon to be used as the 'open' icon.

This overrides the built in default '[+]' icon.

Parameters

in	val	– The new image, or zero to use the default '[+]' icon.
----	-----	---

11.153.2.72 prev()

```
Fl_Tree_Item * Fl_Tree::prev (
    Fl_Tree_Item * item = 0)
```

Return the previous item before 'item', or 0 if no more items.

This can be used to walk the tree in reverse, e.g.

```
:
for ( Fl_Tree_Item *item = tree->first(); item; item = tree->prev(item) )
    printf("Item: %s\n", item->label());
:
```

Parameters

in	item	The item to use to find the previous item. If NULL, returns 0.
----	------	--

Returns

Previous item in tree, or 0 if at first item.

See also

[first\(\)](#), [next\(\)](#), [last\(\)](#), [prev\(\)](#)

11.153.2.73 recalc_tree()

```
void Fl_Tree::recalc_tree ()
```

Schedule tree to recalc the entire tree size.

Note

Must be using FLTK ABI 1.3.3 or higher for this to be effective.

11.153.2.74 remove()

```
int Fl_Tree::remove (
    Fl_Tree_Item * item)
```

Remove the specified 'item' from the tree.

item may not be NULL. If it has children, all those are removed too. If item being removed has focus, no item will have focus.

Returns

0 if done, -1 if 'item' not found.

11.153.2.75 `resize()`

```
void Fl_Tree::resize (
    int X,
    int Y,
    int W,
    int H) [virtual]
```

Resizes the [Fl_Group](#) widget and all of its children.

The [Fl_Group](#) widget first resizes itself, and then it moves and resizes all its children according to the rules documented for [Fl_Group::resizable\(Fl_Widget*\)](#)

See also

[Fl_Group::resizable\(Fl_Widget*\)](#)

[Fl_Group::resizable\(\)](#)

[Fl_Widget::resize\(int,int,int,int\)](#)

Reimplemented from [Fl_Group](#).

11.153.2.76 `root()`

```
void Fl_Tree::root (
    Fl_Tree_Item * newitem)
```

Sets the root item to 'newitem'.

If a root item already exists, [clear\(\)](#) is called first to clear it before replacing it with newitem.

Use this to install a custom item (derived from [Fl_Tree_Item](#)) as the root of the tree. This allows the derived class to implement custom drawing by overriding [Fl_Tree_Item::draw_item_content\(\)](#).

Version

1.3.3

11.153.2.77 `root_label()`

```
void Fl_Tree::root_label (
    const char * new_label)
```

Set the label for the root item to 'new_label'.

Makes an internally managed copy of 'new_label'.

11.153.2.78 `scrollbar_size()` [1/2]

```
int Fl_Tree::scrollbar_size () const
```

Gets the default size of scrollbars' troughs for this widget in pixels.

If this value is zero (default), this widget will use the global [Fl::scrollbar_size\(\)](#) value as the scrollbar's width.

Returns

Scrollbar size in pixels, or 0 if the global [Fl::scrollbar_size\(\)](#) is being used.

See also

[Fl::scrollbar_size\(int\)](#)

11.153.2.79 `scrollbar_size()` [2/2]

```
void Fl_Tree::scrollbar_size (
    int size)
```

Sets the pixel size of the scrollbars' troughs to 'size' for this widget, in pixels.

Normally you should not need this method, and should use the global [Fl::scrollbar_size\(int\)](#) instead to manage the size of ALL your widgets' scrollbars. This ensures your application has a consistent UI, and is the default behavior. Normally this is what you want.

Only use this method if you really need to override just THIS instance of the widget's scrollbar size. (This need should be rare.)

Setting *size* to the special value of 0 causes the widget to track the global [Fl::scrollbar_size\(\)](#), which is the default.

Parameters

<i>in</i>	<i>size</i>	Sets the scrollbar size in pixels. If 0 (default), scrollbar size tracks the global Fl::scrollbar_size()
-----------	-------------	---

[Fl::scrollbar_size\(\)](#)

11.153.2.80 [select\(\)](#) [1/2]

```
int Fl_Tree::select (
    const char * path,
    int docallback = 1)
```

Select the item specified by '*path*'.

Invokes the callback depending on the value of optional parameter '*docallback*'.

Handles calling [redraw\(\)](#) if anything changed.

Items or submenus that themselves contain slashes ('/' or '\') should be escaped, e.g. `select("← Holidays/12\25\2010")`.

The callback can use [callback_item\(\)](#) and [callback_reason\(\)](#) respectively to determine the item changed and the reason the callback was called.

Parameters

<i>in</i>	<i>path</i>	– the tree item's pathname (e.g. "Flintstones/Fred")
<i>in</i>	<i>docallback</i>	– A flag that determines if the callback() is invoked or not: <ul style="list-style-type: none"> • 0 - the callback() is not invoked • 1 - the callback() is invoked if item changed state (default), callback_reason() will be <code>FL_TREE_REASON_SELECTED</code>

Returns

- 1 : OK: item's state was changed
- 0 : OK: item was already selected, no change was made
- -1 : ERROR: item was not found

11.153.2.81 [select\(\)](#) [2/2]

```
int Fl_Tree::select (
    Fl_Tree_Item * item,
    int docallback = 1)
```

Select the specified '*item*'.

Use '[deselect\(\)](#)' to deselect it.

Invokes the callback depending on the value of optional parameter *docallback*.

Handles calling [redraw\(\)](#) if anything changed.

The callback can use [callback_item\(\)](#) and [callback_reason\(\)](#) respectively to determine the item changed and the reason the callback was called.

Parameters

<i>in</i>	<i>item</i>	– the item to be selected. Must not be NULL.
-----------	-------------	--

Parameters

in	<i>docalldback</i>	– A flag that determines if the callback() is invoked or not: <ul style="list-style-type: none"> • 0 - the callback() is not invoked • 1 - the callback() is invoked if item changed state, callback_reason() will be FL_TREE_REASON_SELECTED
----	--------------------	---

Returns

- 1 - item's state was changed
- 0 - item was already selected, no change was made

11.153.2.82 select_all()

```
int Fl_Tree::select_all (
    Fl_Tree_Item * item = 0,
    int docalldback = 1)
```

Select 'item' and all its children.

If item is NULL, [first\(\)](#) is used.

Invokes the callback depending on the value of optional parameter 'docalldback'.

Handles calling [redraw\(\)](#) if anything changed.

The callback can use [callback_item\(\)](#) and [callback_reason\(\)](#) respectively to determine the item changed and the reason the callback was called.

Parameters

in	<i>item</i>	The item that will be selected (along with all its children). If NULL, first() is used.
in	<i>docalldback</i>	– A flag that determines if the callback() is invoked or not: <ul style="list-style-type: none"> • 0 - the callback() is not invoked • 1 - the callback() is invoked for each item that changed state (default), callback_reason() will be FL_TREE_REASON_SELECTED

Returns

Count of how many items were actually changed to the selected state.

11.153.2.83 select_only()
